799 U.S. adults who are likely voters in the 2016 general election

November 4-6, 2016

Margin of error: ±3.5 percentage points 982 general population contacts weighted by age and race

Poll Questions

Percentages may not add to 100% due to rounding.

First, I just need to confirm in what state you live. (**If needed:**) People sometimes take their phone number when they move to another state, so we just need to determine what state I'm talking to.

How likely is it you will vote in the November general election for president and other offices—will you definitely vote, probably vote, might or might not vote, probably not vote, or have you already voted?

Already voted Definitely vote Define as likely voter and Continue

- Probably vote
 - Might or might not vote
 - Probably not vote
 - Refused/not sure

(If definitely vote, ask:) If the general election were held today, and the candidates were [Hillary Clinton for the Democrats] and [Donald Trump for the Republicans], for whom would you vote? (Alternate candidate names every other interview.)

(If already voted, ask:) In the election for president, for whom did you vote—[Hillary Clinton for the Democrats/Donald Trump for the Republicans], or for someone else? (Rotate candidate names.) (If already voted and not sure, ask:) Do you just not want to tell, or do you not remember?

(If definitely vote and not sure or would not vote, ask:) Toward which do you lean?

	First choice	Lean	***Total***
Hillary Clinton	44	2	46
Donald Trump	42	1	43
Other/would not vote (VOL)	6	1	5

Methodology

November 7 (Bloomberg) -- The Bloomberg Politics Poll, conducted Nov. 4-6 for Bloomberg Politics by Selzer & Co. of Des Moines, IA, is based on interviews with 799 U.S. adults ages 18 or older who say they will definitely vote or have already voted in the 2016 general election.

Interviewers with Quantel Research contacted 982 U.S. adults with randomly selected landline and cell phone numbers supplied by Survey Sampling International. Responses from the full probability sample were weighted by age and race to reflect the general population based on recent census data. Interviews were administered in English.

Percentages based on the subsample of 799 likely voters in the 2016 general election may have a maximum margin of error of plus or minus 3.5 percentage points. This means that if this survey were repeated using the same questions and the same methodology, 19 times out of 20 times, the findings would not vary from the percentages shown here by more than plus or minus 3.5 percentage points. Results based on smaller samples of respondents—such as by gender or age—have a larger margin of error.
