17. David Martin, CBS: You said you assess Chernihiv to be isolated. Does that mean they are advancing from Chernihiv down to Kyiv? I am trying to reconcile what you are saying with a British intelligence map that shows three lines of advance from the east. Can you reconcile because you only described two lines of advance?
18. Courtney Kube, NBC: When you say the Russians are 15 kilometers outside of a city, do you mean from city center? Is there any concern about the South Ukraine power plant? Are there any indications of an amphibious assault?
19. Fadi Mansour, Al Jazeera: You said the Russians are 5 kilometers northwest of Kyiv, did they flank or push through Ukrainian positions?

Thanks (b)(6)

DASD Johnson wants to take a quick chop on those products. He feels strongly that USUN needs to get this aligned and messaging needs to be seamless.

Relatedly (b)(6) just came back to us with edits to our fact sheet. I'll share the latest once we've got the edits reconciled.

## ***TFUA01 - Ukraine SitRep No. 72***

**Thursday, March 10, 2022  
1800 ET**

### **SITUATION ON THE GROUND**

- (SBU) Fighting continued around the major cities in the north, in the Donbas, in Mariupol, and near Mykolayiv. Attacks diminished slightly and neither side made any strategic progress, but Russian forces continued to bombard civilian targets. (22 USOffice Ukraine Affairs Unit 20)
- (U) Ukraine's MFA announced 20,000 volunteers from 52 countries have enlisted in Ukraine's International Legion. Press reports said that number includes as many as 3,000 U.S. citizens. Ukraine Border Guards reported that 215,000 Ukrainians have returned to the country since the war began. (22 USOffice Ukraine Affairs Unit 20)
- (U) Ukraine State Emergency Services released a video showing staff defusing a bomb from a downed Russian fighter jet in the northern city of Chernihiv. (*CNN*)

### **RUSSIA**

- (SBU) Russia requested a UN Security Council meeting for Friday, March 11, to discuss its false allegations of a U.S. biological weapons program in Ukraine. (*IO, RIA Novosti*)
- (U) JP Morgan Chase and Goldman Sachs said they are planning to exit Russia, while Citigroup said it is evaluating its future. (*Wall Street Journal*)
- (U) Venezuelan Vice President Delcy Rodriguez met with FM Lavrov in Turkey. She tweeted after the meeting that "Venezuela reaffirmed the principle of sovereign equality of states as a way to preserve balance for the sake of peace." (@delcyrodriguezv)

### **INTERNATIONAL REACTIONS**

- (U) EU heads of state, speaking on the sidelines of a meeting in Versailles, were cautious regarding Ukraine's application for EU membership. (*Reuters*)
- (U) At the Executive Council Session of the Organization for the Prohibition of Chemical Weapons (OPCW), dozens of countries condemned Russia's invasion of Ukraine in joint

and national statements, including Latin American nations that normally shy away from political confrontation in the group. The United States organized a walkout during the Russian ambassador's remarks. (22 OPCW The Hague 18)

## HUMANITARIAN AND REFUGEE SITUATION

UNHCR Reported Refugee Estimates as of March 9		
Country	Arrivals from Ukraine since Feb 24	% Increase in the past 24 hours
Poland	1,412,503	9.1%
Hungary	214,160	5.4%
Moldova*	82,762	-
Slovakia	165,199	7.8%
Romania**	84,671	-0.9%
Russia**	97,098	-2.2%
Belarus	765	29.2%
Movement onward toward other European countries	258,844	9.8%
<b>Total</b>	<b>2,316,002</b>	<b>7.5%</b>
*UNHCR reporting from Moldova has not been updated since March 6		
**UNHCR continues to revise some counts downwards as they refine their reporting and account for onward refugee movement.		

- (U) On March 9, an additional 12,978 Ukrainian citizens entered Romania from Moldova (a decrease of 2 percent from the previous day). *(UNHCR, M/SS Center for Analytics, EUR/CE)*
- (SBU) The UNHCR High Commissioner said the next wave of refugees would likely be more vulnerable than the first, with fewer resources and connections. *(22 USOffice Ukraine Affair Unit 20)*
- (SBU) From March 6-8, ICRC carried out more than 35 humanitarian assistance operations across Ukraine. Many planned activities had to be postponed due to security risks, such as ongoing shelling. A high number of educational facilities have been damaged or destroyed across Ukraine *(22 Geneva 158)*
- (U) The European Commission launched a webpage containing information for people fleeing the war in the Ukraine. The website contains information about crossing the border, rights on arrival, and information about onward travel. *(European Commission Press Release)*

Please include TFUA01 as the first item on the subject line for all cables and other documents related to the Ukraine Task Force. Please direct questions or feedback to the Ukraine Task Force at [EURCrisisCoord@state.gov](mailto:EURCrisisCoord@state.gov).

**UNSC Russia Disinformation Remarks**  
**Amb. Linda Thomas-Greenfield,**  
United States Ambassador to the United Nations  
March 11, 2022

Thank you, Madam President.

Russia asked the Security Council for today's meeting for the sole purpose of lying and spreading disinformation.

Last month, Secretary Blinken laid out with tragic accuracy what Russia was about to do. He specifically warned that Russia would manufacture a pretext for attack, and he even predicted that Russia would fabricate allegations about chemical weapons to justify their own violent attacks against the Ukrainian people.

Today, the world is watching Russia do exactly what we warned they would. Russia is attempting to use the Security Council to legitimize disinformation and deceive people to justify President Putin's war of choice against Ukraine and the Ukrainian people.

I will say this once: there are no Ukrainian biological weapons supported by the United States. Not near Russia's borders, not anywhere. That is categorically false.

I will spend the balance of my time stating the truth.

So here are the facts: Ukraine owns and operates its own laboratory infrastructure. These labs provide biosafety and biosecurity training. They make it possible to detect and diagnose pandemics like COVID-19.

This is work that has been done proudly, clearly, and out in the open. It has absolutely nothing to do with biological weapons.

In fact, we are deeply concerned that Russia's calling for this meeting is a potential false flag effort in action -- exactly the kind we have been warning about.

That's because Russia has a track record of falsely accusing the West of the very violations that Russia itself is perpetrating.

Russia has a well-documented history of using chemical weapons.

It is Russia that has long maintained a biological weapons program in violation of international law.

And now, we are concerned that Russia may be planning to use chemical or biological agents in Ukraine.

(b)(5)

s a reminder, Russia is a signatory to the Chemical Weapons Convention, which prohibits use of RCAs as a method of warfare.

Nevertheless, according to [~~CITE PRESS SOURCE~~], Russian military forces have already used chemical agents against civilians in Ukraine.

We believe Russia could use chemical or biological agents for assassinations, on large crowds of civilians, as part of another staged or false flag incident, or to support tactical military operations.

[pause]

From the beginning, our strategy to counter Russia's tactics has been to share what we know with the world transparently. And candidly, we have been right more often than we'd like.

We're not going to let Russia get away with gaslighting the world or staining the integrity of the Security Council's purpose by using it as a venue for legitimizing its violence.

And despite Russia's best efforts, the media -- and everyday Ukrainians -- are documenting the truth on the ground.

Russia can't paint over the front page of the New York Times, which on Sunday featured the bodies of a Ukrainian mother and her two children -- refugees who had died while trying to cross a bridge outside Kyiv.

Russia cannot cover up the work of AP news photographers who captured a doctor attempting to resuscitate an 18-month-old, Kirill, who died from Russian shelling in Mariupol.

Russia cannot suppress the Facebook post, confirmed and amplified by CBS News, that told the story of the 11-year-old Ukrainian boy who fled to Slovakia, by himself, with only a passport, a plastic bag, and a phone number scrawled on his hand.

Russia cannot silence the NBC News video footage of terrified Ukrainians rushing to packed train stations -- of mothers asking strangers to pass babies through the crowd and onto the trains bound for safety.

Russia is failing in its quest to create an alternate reality. In fact, not even Russian diplomats can keep their propaganda straight.

Just yesterday, the Kremlin's spokesman said that he didn't have clear information about the Russian forces who fired on a maternity hospital..

Then the Russian Foreign Minister denied Russia attacked Ukraine at all, right before admitting that Russia deliberately targeted this maternity hospital.

(b)(5)

Their story didn't matter, because the world had already seen the searing images from CNN's on-the-ground footage of bloodied pregnant women being evacuated from the scene.

Even Russia's own citizens are tiring of such lies.

Russian athletes are writing "No war" on their shoes and on TV cameras. Russian citizens are marching in the streets and protesting Putin's war of choice. And even Russian state TV pundits -- Putin's own propaganda arm -- have called for Putin to stop the military action.

This is why we didn't object to holding today's meeting. Today's meeting has confirmed our predictions, revealed Russia's objectives to the world, and exposed Russia's lies for what they are.

Unlike the Russian government -- whose first instinct is to silence -- we are confident that truth and transparency will prevail.

[*pause*]

In recent weeks, many have asked whether Russia should have a place on this Council. Whether a nation that subverts and undermines the UN Charter should continue to occupy a position of permanent leadership.

I believe these are legitimate questions to ask. And Russia owes us answers.

Sir – FYSA. Notes from Randy from an Interagency meeting that just concluded.

V/r,  
Rob

Robert S. Pope, Ph.D., SES  
Director  
Cooperative Threat Reduction

CUI//NF

Sir, see below. Summary of a call we had with OSD Policy, NCB, State ISN, and State AVC. Subject was disinformation in UKR, specifically the labs.

- We discussed the need to have common messaging with regard to the current wave of RUS disinfo, focusing specifically on the labs in UKR. (note: we are all in sync here).
- State AVC and ISN have a copy of our “break glass” product; they used it to put together TP’s for State’s PA; we chopped on their product. (Note – it is good, but surprising more pointed than DoD’s)
- DASD Johnson will reach out to the NSC on this topic and request a small group discussion – for both awareness, and for synchronizing the PA approach.
- Using our break glass product, USD Kahl is holding a meeting with Kirby today to urge Kirby to say something proactively, vice waiting for the questions to come in. Kirby MAY say something today or tomorrow.
- State ISN and AVC asked DoD PA to lash up directly with State PA on this topic, to ensure what Kirby says or what State says are in sync.
- Per OSD-P concurrence, State ISN will share our break glass product with the NSC / small group discussion.

Dr. Pope,  
I've locked in 1:30pm EST for the WSJ interview with (b)(6). She says that they've already interviewed James Tegnalia, Andrew Weber, Daniel Gerstein and Darren Galloway. They are also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA for input. I now have the call in phone number and Andi is setting up the group call so that the normal CTR "media team" (Andi, Randy, etc) can listen in and get notes. Finally, for your awareness, the Strat team at NCB has been notified of the engagement.

Hi (b)(6)

1 pm or later is great; just let me know what time works for Dr. Pope.

So far, I've interviewed James Tegnalia, Andrew Weber, Daniel Gerstein and Darrell Galloway. One of our science reporters is also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA.

Please let me know if there's anything else you need from my side, and thanks for helping make this happen on short notice.

Best,

Good morning (b)(6)

Thank you for reaching out to me via LinkedIn yesterday. I spoke with Dr. Robert Pope, our expert here at DTRA and he will be happy to conduct an interview with you regarding the current situation in Ukraine, the false information that's circulating and the overall history of the Cooperative Threat Reduction program. He is traveling today, but has time to talk after 1pm EST. Dr. Pope is happy to contribute to the story and if you are still interested in an interview, we can make it happen.

I have a couple of quick questions for us on our end to prep is this by phone, Skype or Zoom? A phoner would be the best option due to his travel. Also, could you possibly let us know about the other interviewees for our awareness?

Looking forward to the discussion and I'm standing by to hear back from you. Thanks.

**Subject:** Russian Disinfo Re: Biolabs in Ukraine - Press Points and Fact Sheet

All,

Apologies if this is now OBE – I've been in back-to-back meetings since our discussion with SDCOS this morning -- attached is the draft fact sheet/TPs I referenced on our earlier call for your respective chops.

We are strongly in favor of getting ahead of the Russian narrative on this as soon as we can.

Best,

**Attachments:** smime.p7s

Dr. Williams,

FYSA -- CT received a request from NCWMD-P today for DTRA to assist in responding to an NSC staff query asking if the bio lab directors in Ukraine have a security plan in the face of any disruptions, and whether any of them have reached out to the United States for assistance. In response, we provided NCWMD-P and NCB(TRAC) with essentially the information I provided to you yesterday (repeated below).

(b)(6) Let's respond with below. This was Dr. Pope's note to Dr. Williams yesterday, with some additional details added for this response. Let them know I can push something on SIPR too, if they want it.

(CUI) We received a report from our partners about a 26 Feb Ukraine Ministry of Health order to all labs for them to destroy their pathogen holdings. Excluded were labs in Lviv, Kyiv, and Odessa, which each have significant strain collections. We (DTRA) urged them to do the same with those labs. Our contact indicated Ukraine has no concerns and have extra forces (i.e., National Guard, self-defense forces, and departmental security) guarding those labs. Quote from our UKR partners: "Employees of these facilities also have instructions in case of an emergency or a threat of evacuation."  
(NFI)

(CUI) This also does not address pathogens outside the human health system -

e.g. those held by the veterinary and food safety organizations.

(CUI) So not a full reduction of the threat, but good steps in the right direction.

(CUI) They have not responded to any further questions.

Subject: Time sensitive request: response to NSC staff inquiry re: Ukraine bio labs

(broadening out the distro to include more Ukraine folks)

DTRA colleagues,

I received an inquiry from NSC staff this morning asking if the bio lab directors in Ukraine have a security plan-i.e. a plan for maintaining command and control in the face of any disruptions, and whether any of them have reached out to us for assistance.

Per our EUCOM conversation earlier, my understanding is that most if not all of the labs should have security protocols in place for sample disposition (e.g., rapid inactivation, consolidation, etc.) in the event of a power failure or structural issues, but we do not know how many have or could execute those plans. I'm also not tracking that anyone has reached out to us specifically for assistance, though I understand that communications have been challenging and most of our partners are no longer working in their labs.

On behalf of CTR Policy leadership, could you please either confirm the information above is accurate or make corrections per your current understanding of the situation at our partner labs? As this is an NSC staff request I'd appreciate a response as soon as feasible, even if it has to be relatively vague and high level.

Thanks,

(b)(6)

Sirs, FYI below per Dr. Williams.

BLUF: due to the recent RUS "Note Verbale" presented 2 days ago at the BWC in Geneva (PDF file attached), and RUS presentation this morning (Word doc attached) at the UN Security Council claiming the US is developing bio weapons in UKR, the NSC (Beth Cameron) has reached out directly to DTRA (specifically Dr. Pope) for a quick conversation on this issue for preparation of an upcoming sub-IPC. This conversation will take place at 1600 today.

OSD-P and NCB/TRAC have both been looped in and Policy is leading the discussion for DoD. I have been asked to participate; I invited CT's rep to the CORT so he can back-brief them; and the IOFC (Ana) is welcome to attend as well. Note, Policy wants to keep this discussion limited. Will keep everyone informed as to the outcome of the discussion. Ms. Cameron will not participate; it will be her staff on the NSC.

Unless Policy wants DTRA representation, we will likely not be invited to the IPC on Monday, as Policy has been attending those on this topic and is the gatekeeper.

Sir, FYI - NSC (b)(6) reached out to Rob. NSC wants to help with disinformation, given the RUS Note Verbale they presented at the BWC 2 days ago, and now RUS apparently did the same at the UN Security Council this morning. Attached is what was presented at the BWC, and we are trying to find out what RUS presented this morning. It is likely the same product.

I looped in my Policy comrades for the discussion the NSC wants to have with us this afternoon at 1600. Not sure if we (DTRA) will be invited to the sub/IPC on Monday. Will keep you posted.

Frankly, the NSC is way behind here. But we will support them as needed/required, unless you have other guidance.

H (b)(6), happy to talk with you at 4pm. If we can include our Policy comrades on that discussion, that would be great. They have been attending the series of sub/IPCs on this topic.

Attached is what the Russians presented at the BWC, translated into English. It is very weak argument, frankly, and I expected better. If they present the same material at the UNSC this morning, we certainly can work together to debunk this nonsense.

(b)(6) ny thoughts?

Thanks (b)(6)

Hi, (b)(6)

Russia is convening the UNSC again this morning to launder its disinformation and to malign U.S. support for biological facilities and laboratories in Ukraine.

It's not going away anytime soon in the media or in international fora (BWC, UNSC, etc.), so we'd like explore with you some fresh, creative approaches to turning Russian disinformation upside down. As a starting point, I'm going to get the "evidence" that Russia furnished for the UNSC convening this morning.

NSC Democracy is hosting a subIPC on Monday @ 1:00 PM on countering disinformation regarding the U.S., Ukraine, and CBW (for example: <https://tass.com/politics/1423129>). I'll make sure you get that invite, and would welcome the opportunity to talk to you beforehand - either 4:00 PM today or Monday morning 9:30 or 10?

Many thanks!

Best,

Sir, per your request, see attached word document that picks apart the Note Verbale presented by the Russians at the BWC in Geneva, the UN Security Council in NY, and the OSCE. If you are ok with this product, we will send to the State AVC folks, NCB, and Policy so that we can prepare for the upcoming BWC Planning Conference in Geneva (4-8 April). State specifically asked for it.

Also, we are revising some testimony questions that you will probably get based on all the media reporting over the last few weeks, touching on the UKR Bio labs narrative.

Finally, we have 30 minutes with you on Thursday to "get you smart" on BTRP, with a focus on UKR, per your request.

I know this is preaching to the choir... but remind the NSC (or have policy do it) that there is a lot of previously cleared messaging that can be used (and should be used for the POTUS NATO visit next week). So the wheel doesn't have to be re-invented.

That said, I assume your staff is picking apart the specifics in the Russian note verbal.... Once that is done, I would like to see it - I will need it for my testimony background.

Rhys

## INFORMATION PAPER

March 22, 2022

TO: Dr. Rhys Williams, Acting Director, Defense Threat Reduction Agency (DTRA)

FROM: (b)(6) Deputy Director, Cooperative Threat Reduction (CTR)

SUBJECT: Response to Russian Note Verbale Dated 16 March 2022

### BACKGROUND:

- Russian Federation conveyed a Note Verbale to the United Nations Office for Disarmament Affairs, for circulation to State Parties to the Biological and Toxin Weapons Convention.
- The Note Verbale contains significant disinformation about the Biological Threat Reduction Program's partnership with Ukraine that warrants a robust, elevated response.

### DISCUSSION:

- Contrary to Russia's intent, the Note Verbale informs the international community of the value of the Biological Threat Reduction Program's investments and partnerships. Until Russia's invasion, Ukraine was detecting pathogens and reporting disease occurrence to the WHO or OIE, to the benefit of Ukraine's neighbors, including Russia.
- The information Russia conveyed is neither sensitive nor hidden from public view. (Appendix A) Antithetical to the allegations of secretive projects, CTR encourages transparency and accountability with its partners, including Ukraine.
  - CTR regularly supports biosurveillance study participants to present their findings at public fora using posters like the ones Russia has shared in this package.
  - CTR supported over 100 early- and mid-career Ukrainian scientists in developing and submitting their findings to peer-reviewed, international journals.
- Russia blames the occurrence of disease outbreaks on CTR programs. (p. 3, 8<sup>1</sup>)
  - After the dissolution of the Soviet Union, Ukraine's public health infrastructure and its ability to detect infectious diseases deteriorated significantly. BTRP programs successfully increased Ukraine's ability to detect/diagnose infectious diseases.
  - The increase in detected cases (not an increase in actual cases) is evidence that Ukraine's public health system was strengthened through cooperation with BTRP.
- Russia illegally took possession of laboratories in Crimea and Luhansk in 2014, yet these laboratories do not feature on Russia's map of laboratories and in eight years have provided no evidence of the development of biological weapons. The assertion that all of the other BTRP-assisted labs in Ukraine is illogical, but very convenient for Russia.

---

<sup>1</sup> Pagination according to PDF file page number.

- Russia benefitted from CTR assistance at their biological laboratories since 1997 up to 2013, yet never asserted that CTR sought to abscond with biological materials or leverage their laboratories for biological weapons research.
- Russia states that destruction of laboratory material is evidence of violations of the Convention on the Prohibition of Biological and Toxin Weapons (slide 5). To the contrary, the World Health Organization advised Ukraine to destroy strains maintained for its legitimate biosurveillance purposes ahead of the Russian invasion in order to prevent them from (1) being accidentally released by the indiscriminate Russian bombing or dangerous actions of Russia's troops or mercenaries.<sup>2</sup>

<sup>2</sup> "WHO says it advised Ukraine to destroy pathogens in health labs to prevent disease spread." Reuters. 11 March 2022. <https://www.reuters.com/world/europe/exclusive-who-says-it-advised-ukraine-destroy-pathogens-health-labs-prevent-2022-03-11/>

## Appendix A: Russian Note Verbale Analysis

PDF Page	Title	Description
p. 9	Ministry of Health of Ukraine decree	The Ministry's decree was issued upon recommendation from the World Health Organization to mitigate the risk that Russia's military attack could result in destruction of laboratories containing biological materials that Ukraine needs to assure the quality of their diagnostic results.
p. 11, 40-46	Images from biosurveillance studies	These images appear to be screen shots from posters presented by Ukrainian partners at international conferences. Not only did CTR support the study, but it also supported Ukrainian scientists in sharing their results in public fora such as conferences.
p. 37-40	A study proposal	These pages display a study proposal for a grant that was recently awarded, but work has not yet begun. This study plans to aid Georgia and Ukraine in understanding the role of bats as a natural reservoir for pathogens in Ukraine and Georgia, to build capacity to create a sustainable surveillance system that may help to detect, prevent and predict disease emergence. The project will focus on detection and geographic range of viral and bacterial agents with potential relevance for human and animal health in Georgia and Ukraine, which also accrues benefit to both nations' neighbor including Russia.
p. 12-23	Normal correspondence among partners	While not public knowledge, the correspondence provides only mundane topics such as announcing projects, approving entry of visiting scientists, and other matters.
p. 24-27	Clinical protocols	The protocols substantiate CTR's commitment to transparency and bioethics oversight in biosurveillance studies in accordance with international guidelines and clearly outline responsible parties.
p. 28-36	Administrative documentation	These documents do not appear to be related to any CTR projects, but the document seems to appear to substantiate the transfer of samples for sequencing to third-party

		partners (Germany and Australia) in support of Ukraine. The Russian Federation conveniently failed to highlight the text on page 35 that indicates none of the material transferred was infectious or posed any risk to humans or animals.
p. 44-47	Scientific results	The results of UP-4, presented in a public forum, provide important information for Ukraine and its neighbors to understand the risk of spread of pathogens via wild avian. The benefit accrued to Ukraine is shared by its neighbors, including Russia. We lament that as a result of Russia's invasion of Ukraine, they have lost one of their best opportunities for early detection of outbreaks that spread across avian flyways.

**Subject:** DTRA Media: Sharing a PA Product on Disinformation

Hi (b)(6)

I hope all is well! This is (b)(6) the Chief of PA at DTRA. You may remember, we served together in uniform in OCPA about 10 years ago when I worked as (b)(6) XO. That seems like it's been an eternity!

I am reaching out to you now to share one of our unclassified products here, called "Break Glass." The document was created by the Cooperative Threat Reduction directorate here at DTRA, which is part of the DOD CTR program. It is an excellent supplement for media-related questions about what's happening right now. The background information alone is invaluable.

We've shared the product with our higher headquarters leaders (A&S and NCB) and we've worked several media queries on this topic. Members of the senior leadership here have also shared it with Policy over the past couple of days. Our OSD PA portfolio manager, Jess Maxwell is out of the loop for the past few days and I don't know who's covering down for her, so I decided to reach out to you for timeliness purposes. I am re-sharing it with you in case there are some TPs or nuggets of information that may be helpful for inclusion for upcoming press briefings. It may have already made its way to you or our teams.

BLUF: DTRA is continuing to push out our factual statements on the work we do with the UK labs and our international partners, but we want to make sure OSD PA has the right additional information that may be useful in combatting false information at the strategic level.

Please let me know if there's anything else we can do to assist.

Best always,

(b)(6)

Chief, DTRA Public Affairs Office

**Subject:** Latest Disinformation Dump from Russia Includes DTRA Personnel

**Attachments:** BriefMarch312022.pdf, smime.p7s

Dr. Williams,

FYSA, yesterday's propaganda dump from Russia includes several DTRA personnel by name, face, and bio, including Joanna Wintrol (former DTRO Kyiv, now a division chief in CT), you, and me, as well as some of our implementing contractors.

Adding DTRA's security and counterintelligence leaders on the cc line for situational awareness.

V/r,  
Rob

Robert S. Pope, Ph.D., SES  
Director  
Cooperative Threat Reduction

! USUA 𐄂 Briefing by Igor Kirillov, Chief of the NBC Protection Forces, on the results of the analysis of documents relating to US military biological activities in Ukraine

- The Ministry of Defense of Russia continues to study materials on the implementation of military-biological programs of the United States and its NATO allies on the territory of Ukraine.

Earlier, we gave a diagram of the interaction of state bodies and the current military-political leadership of the United States with Ukrainian biological facilities. In particular, the involvement of the investment fund, which is headed by Hunter Biden, in the financing of biological programs in Ukraine was noted.

- Before you is the correspondence of the son of the current President of the United States with employees of the Threat Reduction Administration of the US Department of Defense and contractors of the Pentagon in Ukraine. The presence of these materials is confirmed by the Western media.

The content of the letters shows that Hunter Biden played an important role in creating a financial opportunity to work with pathogens in Ukraine, providing fundraising for Black and Veatch and Metabiota.

- Published correspondence indicates that the true goals of the Pentagon in Ukraine are far from scientific. Thus, in one of the letters, the vice president of Metabiota notes that the company's activities will be aimed at ensuring "... cultural and economic independence of Ukraine from Russia...", which is rather strange for a biotechnology company.

Today we have the opportunity to cite the names of specific officials who took part in the creation of biological weapons components on the territory of Ukraine.

- One of the key figures is Robert Pope, at that time an employee of DTRA and director of the Cooperative Threat Reduction Program, the purpose of which was to draw the states of the post-Soviet space into military-biological activities. He is also the author of the idea of creating a Central Depository of Especially Dangerous Microorganisms in Kiev.

In his letter to the Minister of Health Ulyana Suprun (by the way, a US citizen), Pope highly appreciates the activities of the head of the Ministry of Health of Ukraine, especially noting the provision of access of American specialists to Ukrainian biological facilities and the beginning of work on the formation of a depository of microorganisms.

Let me remind you how such activity ended: according to available information, all pathogenic biomaterials from the storage facility in early February 2022 were taken by military transport aircraft to the United States through Odessa.

- Coordination of military-biological projects in Ukraine and the selection of performers was led by Joanna Wintrol, head of the DTRA office in Ukraine. Under her direct control, the American projects UP-4, UP-6, UP-8 were implemented to study deadly pathogens, including anthrax, Congo-Crimean fever, leptospirosis.

- In continuation - the Ukrainian division of the company Black and Veatch, which is headed by Lance Lippencott. He is also the main contact person for officials of the Ministry of Defense and the Ministry of Health of Ukraine.

The company has been working on behalf of the Pentagon since 2008 as part of projects to study potentially dangerous bioagents. Among them is the UP-1 project to study rickettsia and tick-borne encephalitis virus in arthropods in northwestern Ukraine. In order to globally monitor the biological situation, during the UP-2 project, the company introduced a remote monitoring system for the incidence of tularemia and anthrax at Ukrainian biological facilities.

- Biomonitoring and information transfer were overseen by David Mustra, who is closely associated with another Pentagon contractor, Metabiota. Previously, he led military-biological projects in Ukraine and Eastern Europe under the Cooperative Threat Reduction Program.

- It should be noted that the activities of the company "Black and Veatch" caused many questions even among the Ukrainian special services.

So, back in 2017, the Kherson department of the SBU in its memorandum indicated: "... Recently, the potential threat of deterioration of the epidemic situation in our country has become relevant, due to the intentions of DTRA through black and Veatch to establish control over the functioning of microbiological laboratories of Ukraine conducting research on pathogens of especially dangerous infections that can be used to create or modernize new types of biological weapons ...".

- Metabiota is known for its developments in predicting outbreaks of infectious diseases. In addition, it was involved by the Pentagon in modeling the epidemic situation in the post-Soviet space. In Ukraine,

Metabiota was presented by Mary Guttieri, vice president of the company and a confidant of Hunter Biden, which is confirmed by the materials of their correspondence.

- The modernization of the laboratories was overseen by Scott Thornton, who also advised local staff on the management of highly hazardous pathogens in the framework of Ukrainian DTRA projects.

! The information obtained demonstrates the direct involvement of the US military department and their contractors in the planning and implementation of Pentagon projects in Ukraine. We believe that these officials should answer questions about the true goals of these works.

- Earlier, we drew attention to the facts of the development in the United States of technical means of delivery and use of biological weapons.

Thus, the US Patent and Trademark Office issued document No. 8,967,029 for an unmanned aerial vehicle for the spread of infected insects in the air. The description of the patent states that with the help of this device, enemy troops can be destroyed or disabled without risk to the US military.

- Other patents that appear on the slide show different types of munitions for delivering chemical and biological formulations.

Their description notes the characteristics: "... low unit cost of destruction and no need for contact with the enemy's manpower...". This is consistent with Washington's concept of "contactless warfare."

The possibility of equipping capsules with toxic, radioactive, narcotic substances, as well as pathogens of infectious diseases is shown.

- We remind you that these documents came to the attention of the public in connection with the investigation of the activities of another biological project of the Pentagon – the Lugar Center in Tbilisi.

In 2018, the Russian Foreign Ministry appealed to the US State Department with a request to give a legal assessment of the development of such technical devices from the standpoint of compliance with the Conventions on the Prohibition of Chemical and Biological Weapons.

The US administration limited itself to a formal retraction, cynically thanking the Russian side for drawing attention to this issue and pointing out that "... the development and production of biological and chemical weapons are prohibited by national legislation, but the decision to grant a patent does not violate U.S. obligations under the BTWC and the CWC..."

In the context of the above, attention is drawn to the request of the Ukrainian enterprise "Motor Sich" to the Turkish manufacturer of unmanned aerial vehicles "Bayraktar".

I want to emphasize that this document is dated December 15, 2021.

Its essence: is it possible to equip this UAV with systems and mechanisms for spraying aerosols with a capacity of over 20 liters.

! With the flight range of such a UAV - up to 300 km and equipping containers with biological formulations - there is a real threat of large-scale use of biological weapons on the territory of the Russian Federation.

In fact, we are talking about the development by the Kiev regime of technical means of delivery and use of biological weapons with the possibility of their use against the Russian Federation.

▪An important result of the special operation of the Russian Armed Forces was the termination of the activities of five Kiev biological laboratories, in which work was carried out with pathogens of anthrax, tularemia, brucellosis, cholera, leptospirosis, African swine fever.

Part of the collection was taken to the United States, the remaining strains were urgently destroyed in accordance with the Order of the Ministry of Health of Ukraine of February 24.

▪The facts of the participation of these laboratories in carrying out work commissioned by the US military department were confirmed. At one of these biological facilities - the Center for Public Health of the Ministry of Health of Ukraine - several UP projects were implemented at once with a total funding of more than \$ 30 million.

▪Please pay attention to the decision signed by the head of the ethics committee of the said Center on June 12, 2019 within the framework of the UP-8 project. The document indicates the conduct of studies with an unknown risk to the life and health of the participants, as well as the concealment of the identity of the subjects.

Previously, we cited the research program of this project and it involves only a standard procedure for blood sampling. The question arises: what life-threatening tests are we talking about, if the document prescribes that "... minor volunteer incidents should be reported to the U.S. Bioethics Committee 72 hours after the incident, and serious incidents, including the death of subjects, within 24 hours..."?

We do not exclude that the official research program is only the "visible part of the iceberg", while in practice volunteers were infected with the Congo-Crimean fever virus, hantaviruses and the causative agent of leptospirosis.

▪Such a dismissive attitude towards the citizens of Ukraine well characterizes the pragmatic approach of the United States to the organization of military-biological research. Developing countries are considered as a testing ground for components of biological weapons and medicines.

▪We believe that the incoming documents indicate an actual violation by the United States and Ukraine of obligations under Article 4 of the BTWC and UN Security Council Resolution No. 1540 of April 28, 2004.

▪We will continue to analyze documentary evidence of violations by the US administration and the Kiev regime of international agreements on the non-proliferation of biological weapons and will inform you

(USA) (b)(6)  
**Subject:** Media Engagement Opportunity  
**Attachments:** smime.p7s

Sir,

A (b)(6) is on leave today, she asked I send this information on her behalf. I have already talked with Randy and Dr. Pope and they support the following media engagement.

BLUF: Justin Ling, an independent journalist, has contacted us a few times in hopes to get an interview with Dr. Pope regarding the bio labs. As you are aware, Dr. Pope and the CTR folks have participated in numerous media engagements (phone and email) over the past few weeks. Justin first reached out around March 3 but we weren't conducting as many engagements at the time, and frankly, his last name was questionable. After some research, we saw he was publishing content that supported the true narrative that Russia was spreading lies about the biolabs. See his recent article and tweets below.

<https://foreignpolicy.com/2022/03/02/ukraine-biolabs-conspiracy-theory-qanon/>

[https://twitter.com/justin\\_ling/status/1504421256552226821](https://twitter.com/justin_ling/status/1504421256552226821)

I spoke to him this morning and he is now representing the Canadian Broadcasting Corporation and has been asked to get an interview with a DTRA senior spokesperson, in a documentary style engagement. Dr. Pope is TDY this week and you know how the news cycle is. They are pushing stories pretty quickly (within 24 hours), so we want to jump on this one quickly.

Dr. Pope (b)(6) agree you might be the best representation for this engagement, if you want to participate. Justin also said they want to come film in the building to show, in his words, "this is not a shady, bioweapons agency. They do work that prevents pandemics, not create them."

CTR and PAO endorse this engagement, but wanted to punt to you for final decision. The journalist is also supposed to get back to me later this afternoon on timeline. More to follow as details emerge, but wanted to give you the heads up, that this is in the que.

Let me know if you have any questions.

Thanks!

**Subject:** New Article Released - Matt Field  
**Attachments:** smime.p7s

Dr. Williams and Dr. Pope,  
Gentlemen, the latest new article with Matt Field has been published and posted. BLUF: Solid, relevant quotes by Dr. Pope. The article is helping to the quell some of the false information.

Here is the article link: <https://thebulletin.org/2022/03/in-ukrainian-cities-under-russian-attack-us-linked-research-labs-could-provide-fodder-for-future-russian-disinformation/>

-----  
In Ukrainian cities under Russian attack, US-linked research labs could provide fodder for future Russian disinformation  
By Matt Field | March 9, 2022

With Russian President Vladimir Putin showing no sign of backing down on his country's assault on Ukraine, US officials are trying to prevent the Russian military from capturing pathogens stored in US-affiliated research labs in Ukraine, where they could potentially mischaracterize activities at the facilities. It's an urgent task, given that the director of the US military program that works with Ukrainian public and animal health labs said some are in cities now under attack.

At the end of February, Robert Pope, the director of the Cooperative Threat Reduction Program, said his program had lost contact with the Ukrainian labs. In an update on Friday, he said that officials had communicated with authorities responsible for facilities run by the Ukrainian Ministry of Health but not the with those overseeing the veterinary health institutions the US government also partners with in the country.

Several of those labs are in cities being attacked now, Pope said. "Should Russian forces occupy a city with one of these facilities, we are concerned that Russia will fabricate 'evidence' of nefarious activity in an attempt to lend credibility to their ongoing disinformation about these facilities."

On the veterinary health side, the Defense Threat Reduction Agency supports 14 facilities and diagnostic laboratories, Pope said. "Most of these facilities are regional diagnostic veterinary laboratories that provide Ukraine with animal sample collection ability and basic laboratory capabilities for initial diagnostics of potential diseases in Ukraine's animal population. They are part of the network of labs that help Ukraine prevent, detect, and respond to animal diseases like African swine fever," he said.

Undersecretary of State for Political Affairs Victoria Nuland echoed Pope's concerns about the security of the US-linked labs at a Senate hearing Tuesday. "Ukraine has biological research facilities, which, in fact, we are now quite concerned Russian troops, Russian forces may be seeking to gain control of, so we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach," she said.

Pope's fears that the invasion will expose the labs to new disinformation narratives does not appear far-fetched. Already at least one figure with links to the Russian disinformation ecosystem is broadcasting plans to bring journalists into war-torn Ukraine to tour US-affiliated labs there.

John Mark Dougan, a former American police officer who claims to have political asylum in Russia, has put up at least five videos on YouTube in recent days saying that Ukraine is hosting US bioweapons labs; some of the videos have been viewed nearly 30,000 times. In one video, he claims to have secured permission to go to the labs. "I said, 'Look, I want to get a bunch of journalists, truth seeking journalists together, and I want to do a tour of these laboratories,'" Dougan said, inviting journalists to contact him for the supposed trip.

John Mark Dougan on his YouTube channel. YouTuber John Mark Dougan, an American living in Russia, claims he will bring journalists to US-linked laboratories in Ukraine. Credit: YouTube.

In his videos, Dougan points to fact sheets on Ukrainian facilities that once were on the US embassy in Kyiv's website, but have since been taken down as evidence of US government malfeasance. The documents list general information about US support for various labs as well as state whether labs have received permits to work with pathogens, according to an archival search. While the links on the Kyiv embassy site are not functional, they nonetheless remain prominently displayed. "Are they maybe trying to hide evidence of their bioweapons program?" Dougan asks in a Feb. 26 video. Dougan also claims a whistleblower who once worked in a veterinary clinic in Ukraine has provided him with information.

In a Dec. 10 video, Dougan mentions a Ukrainian who "dropped off some documents" with "interesting stuff." Throughout the video, he displays pictures of documents, laboratories, or officials, often drawing from publicly available sources such promotional material about the Defense Threat Reduction Agency or the 2005 agreement that dictates the terms of the arrangement between Ukraine and the agency. He also refers to a program called UP-8. The Defense Threat Reduction Agency told the Bulletin that UP-8 involved voluntary blood draws to see what antibodies troops were exposed to in nature. Previous allegations picked up in Russian state media have targeted the program, including claims that the blood draws could have caused death among Ukrainian troops.

After being sought by the FBI for releasing the addresses of thousands of judges and other officials in Florida online, Dougan fled the United States in 2016, according to an investigation by The Daily Beast in 2019.

Once in Russia, Dougan apparently caught the interest of some of the country's most prolific disinformation producers, state-controlled outlets RT and Sputnik. RT, which researchers at the Oxford Internet Institute once labeled "one of the most important organizations in the global political economy of disinformation," even produced a 51-minute-long documentary on Dougan.

In an email, Dougan questioned the Bulletin's objectivity, asked why the State Department would delete documents if it weren't a "clean up campaign," and questioned the Defense Department's funding for biological research. "I've been around the block a few times, and I know when someone is trying to write a con-job article in defense of the indefensible," he said. "And I worked in law enforcement long enough to know when the government is trying to hide something."

The labs in Ukraine are not bioweapons facilities, nor are they run by the US government, the Defense Threat Reduction Agency has said; they are operated by partner countries. In fact, the Cooperative

Threat Reduction Program that manages the US partnerships with labs worked extensively with the Russian government after the fall of the Soviet Union to secure weapons of mass destruction, including the remnants of the massive Soviet bioweapons program. But despite media investigations and independent experts debunking claims against the US-affiliated labs over the years, Russia's invasion of Ukraine has re-ignited the disinformation attacks on the program.

A research lab in Kyiv. A research lab in Kyiv, Ukraine built by the Cooperative Threat Reduction Program. Credit: Defense Threat Reduction Agency  
Russian state media, alleged Kremlin proxy media outlets, and influencers like Tim Kirby, another American expat with ties to RT, began to focus once again on the lab disinformation as Russia moved troops toward the Ukrainian border. That trend appears to have intensified since the invasion. Foreign Minister Sergei Lavrov mused about the labs in a recent state-TV interview, and the Russian embassy in Bosnia and Herzegovina posted on Facebook that the United States was building labs in Ukraine to destroy "the Russian people at the genetic level."

In a briefing, Chinese Foreign Ministry spokesman Zhao Lijian lent support to the Russian accusations. "In particular, the United States, as the party that knows the laboratories best, should release relevant specific information as soon as possible, including what viruses are stored and the research that has been carried out," the spokesman said, according to Chinese state-media company Xinhua.

And in a twist, the Russian accusations appear to be gaining traction among the hard-right in the United States, with an assist from Dougan, who went on QAnon influencer Zak Paine's RedPill78 podcast to discuss the lab conspiracy theory. A few days later, Paine re-visited the topic to say that the Russians were "attacking biological weapons facilities funded by the United States" and run, in part by Anthony Fauci, the director of the National Institute of Allergy and Infectious Diseases, a frequent target of the right wing.

Putin, Pope said, may want to use the Ukrainian labs as a rationale for the war. "We know Putin lied when he said he wasn't preparing to invade Ukraine," the Cooperative Threat Reduction Program director said, "and we are confident that Russia is willing to lie to try to justify their invasion."

### **UNSC Russia Disinformation Remarks**

**Amb. Linda Thomas-Greenfield,**

United States Ambassador to the United Nations

March 11, 2022

Thank you, Madam President. And thank you to our briefers for your remarks this morning.

Russia asked the Security Council for today's meeting for the sole purpose of lying and spreading disinformation.

Last month, Secretary Blinken laid out with tragic accuracy what Russia was about to do. He specifically warned that Russia would manufacture a pretext for attack, and he even predicted that Russia

would fabricate allegations about chemical weapons to justify its own violent attacks against the Ukrainian people.

Today, the world is watching Russia do exactly what we warned it would. Russia is attempting to use the Security Council to legitimize disinformation and deceive people to justify President Putin's war of choice against Ukraine and the Ukrainian people.

I will say this once: Ukraine does not have a biological weapons program, and there are no Ukrainian biological weapons laboratories supported by the United States. Not near Russia's borders, not anywhere. Any claims to the contrary are categorically false.

So here are the facts: Ukraine owns and operates its own laboratory infrastructure. These labs provide biosafety and biosecurity training. They make it possible to detect and diagnose pandemics like COVID-19.

This is work that has been done proudly, clearly, and out in the open. It has absolutely nothing to do with biological weapons.

In fact, we are deeply concerned that Russia's calling for this meeting is a potential false flag effort in action -- exactly the kind we have been warning about.

That's because Russia has a track record of falsely accusing the West of the very violations that Russia itself is perpetrating.

Russia has a well-documented history of using chemical weapons.

It is Russia that has long maintained a biological weapons program in violation of international law.

It was Russian operatives who poisoned Aleksey Navalny, and Sergey and Yulia Skripal, with nerve agents.

And now, we are concerned that Russia may be planning to use chemical or biological agents in Ukraine.

As a reminder, Russia is a State Party to the Chemical Weapons Convention and a State Party and Depository to the Biological Weapons Convention.

Russia's convening of today's session coincides with Russia's ominous letter to the Organization for the Prohibition of Chemical Weapons yesterday, suggesting falsely that Ukraine was preparing to use chemical weapons itself.

The intent behind these lies seems clear, and it is deeply troubling. We believe Russia could use chemical or biological agents for assassinations, on large crowds of civilians, as part of another staged or false flag incident, or to support tactical military operations.

[pause]

From the beginning, our strategy to counter Russia's tactics has been to share what we know with the world transparently. And candidly, we have been right more often than we'd like.

We're not going to let Russia get away with gaslighting the world or staining the integrity of the Security Council's purpose by using it as a venue for legitimizing its violence.

And despite Russia's best efforts, the media -- and everyday Ukrainians -- are documenting the truth on the ground.

Russia can't paint over the  
front

page of the New York Times, which on Monday featured the bodies of a Ukrainian mother and her two children -- who died while trying to cross a bridge outside Kyiv in their attempt to flee to safety.

Russia cannot cover up the work of  
AP

news photographers who captured a doctor attempting to resuscitate an 18-month-old, Kirill, who died from Russian shelling in Mariupol.

Russia cannot suppress the Facebook post, confirmed and amplified by  
CBS News,

that told the story of the 11-year-old Ukrainian boy who fled to Slovakia, by himself, with only a passport, a plastic bag, and a phone number scrawled on his hand.

Russia cannot silence the  
NBC

News video footage of terrified Ukrainians rushing to packed train stations -- of mothers asking strangers to help pass their babies through the crowd and onto trains bound for safety.

Russia is failing in its quest to create an alternate reality. In fact, not even Russian diplomats can keep their propaganda straight.

Just yesterday, the Kremlin's spokesman said that he didn't have clear information about the Russian forces who fired on a maternity hospital...

Then the Russian Foreign Minister denied Russia attacked Ukraine at all, right before admitting that Russia deliberately targeted this maternity hospital.

Their story didn't matter, because the world had already seen the searing images broadcast on CNN of bloodied pregnant women being evacuated from the scene.

Even Russia's own citizens are tiring of such lies.

Russian athletes are writing "No war" on their shoes and on TV cameras. Russian citizens are marching in the streets and protesting Putin's war of choice. And even Russian state TV pundits -- Putin's own propaganda arm -- have called for Putin to stop the military action.

This is why we didn't object to holding today's meeting. Today's meeting has confirmed our predictions, revealed Russia's objectives to the world, and exposed Russia's lies for what they are.

It is a page directly out of the Russian playbook -- and it will not convince us one bit. Russian troops should be concerned about the impact of their potential use of chemical weapons and how they will be viewed by the world.

Unlike the Russian government -- whose first instinct is to silence -- we are confident that truth and transparency will prevail.

We call on President Putin to end this unprovoked, unconscionable war against the Ukrainian people and return sincerely to the negotiating table.

**SITUATION ON THE GROUND**

- (SBU) Fighting continued around the major cities in the north, in the Donbas, in Mariupol, and near Mykolayiv. Attacks diminished slightly and neither side made any strategic progress, but Russian forces continued to bombard civilian targets. (22 *USOffice Ukraine Affairs Unit 20*)
- (U) Ukraine's MFA announced 20,000 volunteers from 52 countries have enlisted in Ukraine's International Legion. Press reports said that number includes as many as 3,000

U.S. citizens. Ukraine Border Guards reported that 215,000 Ukrainians have returned to the country since the war began. (22 USOffice Ukraine Affairs Unit 20)

- (U) Ukraine State Emergency Services released a video showing staff defusing a bomb from a downed Russian fighter jet in the northern city of Chernihiv. (*CNN*)

## **RUSSIA**

- (SBU) Russia requested a UN Security Council meeting for Friday, March 11, to discuss its false allegations of a U.S. biological weapons program in Ukraine. (*IO, RIA Novosti*)
- (U) JP Morgan Chase and Goldman Sachs said they are planning to exit Russia, while Citigroup said it is evaluating its future. (*Wall Street Journal*)
- (U) Venezuelan Vice President Delcy Rodriguez met with FM Lavrov in Turkey. She tweeted after the meeting that “Venezuela reaffirmed the principle of sovereign equality of states as a way to preserve balance for the sake of peace.” (@delcyrodriguezv)

## **INTERNATIONAL REACTIONS**

- (U) EU heads of state, speaking on the sidelines of a meeting in Versailles, were cautious regarding Ukraine’s application for EU membership. (*Reuters*)
- (U) At the Executive Council Session of the Organization for the Prohibition of Chemical Weapons (OPCW), dozens of countries condemned Russia’s invasion of Ukraine in joint and national statements, including Latin American nations that normally shy away from political confrontation in the group. The United States organized a walkout during the Russian ambassador’s remarks. (22 OPCW The Hague 18)

## **HUMANITARIAN AND REFUGEE SITUATION**

NIPRC: (b)(6)  
SIPR:  
JWICS

- Gennady Timchenko's 132-foot superyacht was seized in San Remo, Italy.
  - Andrey Melnichenko's 469-foot, \$578 million superyacht was seized in Trieste, Italy.
  - Sergei Chemezov's \$140 million superyacht was seized in Barcelona, Spain
  - Igor Sechin's 280-foot yacht was impounded in France.
  - Alisher Usmanov's \$18 million resort compound was impounded in Sardinia.
- As long as President Putin continues this war, the United States and our allies and partners are committed to ensuring the Russian government feels the compounding effects of our current and future economic actions.

**Q: What more can you do?**

- We have hit hard at the things Putin cares about the most, degrading his military, access to cutting edge technology, chipping away at his chokehold on energy, and ability to project power and influence. But we will continue to intensify them further and we are not going to run out of options anytime soon. For example, we can:
  - Broaden sanctions to new targets
  - Deepen the severity of sanctions on existing target
  - Further eject Russia from international economic order
  - Further deny Russia the capacity to modernize and diversify his economy
  - Further expose and hold to account the kleptocracy
- We will provide Ukraine the arms to fight, provide direct humanitarian and financial support, and ratchet up the pressure on Putin's crumbling economy to make him pay the price and weaken his position and isolate him from the world, while strengthening the hand of the Ukrainians and the international community. Our efforts are working and we will keep going – it is up to Putin what he does next.

**Q: Why not secondary sanctions on other countries who help Russia?**

- We have applied an enormous amount of economic pressure. And in order to sustain and escalate that pressure over time, part of that is about new designations, new targets, but a big part of it is about

effective enforcement and evasion — applying the lessons that we've learned from other circumstances where we have, in fact, imposed sanctions on other countries. So, stay tuned for that.

**Q: Status on SWIFT?**

- Key sanctioned Russian financial institutions are being disconnected from the SWIFT international financial messaging network. The EU is implementing a regulation that removes seven Russian banks from SWIFT, effectively shutting them out of the world's most important financial messaging network.
- These institutions represent one-fourth of the banking sector, and include: Bank Otkritie, Novikombank, Promsvyazbank, Rossiya Bank, Sovcombank, Vnesheconombank (VEB), and VTB Bank.
- As you all know, this happens institution by institution like it was with Iran. Institutions will continue to be de-swifted through the EU process. I defer to the EU on any more details.

**Q: Will you sanction X or Y?**

- We don't preview our sanctions. Our sanctions are unprecedented — in no other circumstance have we moved so swiftly and so significantly to impose costs on any other country as we have done to Russia. Our sanctions have already landed a debilitating hit, one that is intensifying every day. We will continue to impose costs with allies and partners.

**Q: Regime change?**

- No. Our sanctions are intended to target Putin's war machine for his war of choice. The Russian people will make their own choices.

**Q: Energy prices? SPR release?**

- This is Putin's price hike. Since Putin began his military buildup on Ukrainian borders, the price of gas at the pump in America went up 75 cents.
- There is widespread consensus that the sharp runup of energy prices since January was caused by the building of Putin's troops at Ukraine's border.

- **President Biden is doing everything he can to minimize Putin's Price Hike here at home. I don't have further actions to preview at this time.**
  - The Administration has already announced its releasing more than 90 million barrels from the Strategic Petroleum Reserve this fiscal year.
  - It is simply not true that the Biden administration's policies are holding back domestic energy production. U.S. oil and gas production is approaching record highs and pumped more oil in President Biden's first year than Trump's, even while thousands of drilling permits on federal lands go unused. *And*, nearly 60% of leased/permitted acres remain non-producing. That's a lot—in the range of 20 million acres. **The oil and gas industry and their financiers doesn't need an invitation from the President to keep up with demand.**
  - And, the United States comes into this crisis from a position of strength: Under President Biden, the strength and resiliency of the U.S. economy has been clear with the fastest economic growth in 40 years. Real GDP rose 7%, paired with the greatest year of job growth in American history
- We must walk and chew gum – address supply in the short term because families need to take their kids to school, and go to work, get groceries and go about their lives – and often that requires gas.
- But in the long term we must speed up – not slow down – our transition to a clean energy future. The President has proposed credits to make EVs more affordable and weatherize homes and businesses that will cut energy costs and save American families an average of \$500 a year. When we have electric cars powered by clean energy, we will never have to worry about gas prices again. And autocrats like Putin won't be able to use fossil fuels as weapons against other nations.

## **China and Russia**

### **Q: Have you seen any indications that China will or will not provide assistance to Russia?**

- I can't make predictions going forward. What I can tell you is we have not seen the provision of military equipment by China to Russia since Russia's war against Ukraine. But this is something we are monitoring closely.
- And the President made clear to President Xi the implications and consequences of any such provision of equipment, and they very well understand one another.

### **Q: Where does China fall on the agenda during the trip? Will there be an effort to try to put specific concrete steps in place if China does provide that assistance?**

- The President will certainly consult on the question of China's potential provision of support for Russia's war against Ukraine while he's in Brussels. He'll do so with NATO. He'll also do so when he addresses the 27 leaders of the European Union because on April 1st, the European Union is having a summit with China.
- So, the trip will be an opportunity for the United States and our European partners to coordinate closely on what our message is. Without getting ahead of the conversations, I expect President Biden to read out his direct, substantive, and detailed call with President Xi.
- We believe we're very much on the same page with our European partners and we will be speaking with one voice on this issue.

### **Q: Will any action be taken together to hold China accountable together?**

- China's alignment with Russia and our shared concerns will be one topic of discussion. This is not about any deliverable of this trip.
- We will continue monitoring closely and speaking directly with China and with our allies and partners.

**Q: What consequences could China face?**

- I'm not going to publicly lay out our options. We will communicate directly to China and with our allies and partners.

**Q: Can China serve as an effective mediator in this crisis?**

- We are making no such ask or request of China. Our concerns about China's alignment with Russia are clear.

**Q: Taiwan?**

- President Xi raised Taiwan in his call with President Biden. President Biden reiterated our One China policy based on the Taiwan Relations Act, Three Communiqués, and Six Assurances and underscored concerns about Beijing's coercive and provocative actions across the Taiwan Strait.
- He made clear that we remain opposed to any unilateral changes to the status quo across the Taiwan Strait, and that we have concerns about Beijing's coercive and provocative actions. President Biden himself voted for the Taiwan Relations Act and he is firmly committed to the principles in it, including supporting Taiwan's self-defense.
- The Biden Admin has consistently demonstrated rock-solid support for Taiwan, and we will continue to do so.

## **NSC Press Guidance – Cyber**

- We have previously warned about the potential for Russia to conduct malicious cyber activity against the United States, including as a response to the unprecedented economic costs we've imposed in response to Russia's further invasion of Ukraine or other actions of support.
- We are reiterating those warnings. And we are doing so based on evolving intelligence that the Russian Government is exploring options for potential cyberattacks on critical infrastructure in the United States.
- This is a call to action and a call to responsibility for us all. We all must take the steps within our control to harden our cyber defenses to protect against any threats.
- The majority of our critical infrastructure is owned and operated by the private sector – and those owners and operators have the ability and responsibility to harden our cyber resilience. We urge the private sector to take the steps within your control – to act immediately to protect the services millions of Americans all across the country rely on.
- The Administration has worked extensively over the last year so that we would be prepared to meet precisely this sort of threat.
  - Last week, federal agencies convened more than 100 companies to share new cybersecurity threat information in light of evolving intelligence. During those meetings, we also shared resources and tools available to help partners harden their security - like advisories sourced from sensitive intelligence, and hands on support from local FBI field offices and CISA Regional offices.
  - Last week's meeting is a continuation of the extensive cyber resilience efforts we accelerated last fall. Energy, EPA, Treasury, and DHS have hosted both classified and unclassified cybersecurity briefings with hundreds of owners and operators of privately-owned critical infrastructure.

- The NSA, FBI, and CISA have published several cybersecurity advisories that set out protections the private sector can deploy to improve security.
- The President has also directed Departments and Agencies to use all existing government authorities to mandate new cybersecurity and network defense measures. You've seen us do that where we have the authority to do so, as with the Transportation Security Administration (TSA) security directives for pipelines, railroads, and rail transit.
- And as the President has said, the United States is not seeking confrontation with Russia. But he has also said that if Russia conducts disruptive cyber-attacks against U.S. critical infrastructure, we will respond in a time and manner of our choosing.

## **Q&A**

### **Q: Has the President warned Putin not to cyberattack US?**

- The President has been clear to President Putin since he met him face to face in Geneva last year: If the Russian government engages in disruptive cyberattacks against the United States, we will respond in a time and manner of our choosing.
- The President reiterated that warning in his statement today. The Kremlin will not doubt the seriousness of our warning.
- In every conversation President Biden has had with President Putin, he has been very clear that the United States will respond if the Russian government engages in disruptive cyberattacks against the U.S.

### **Q: When did you get this threat warning?**

- We've been warning for months about the potential for Russia to engage in malicious cyber activity against the United States. We've gotten evolving intelligence in the past several days that Russia may be exploring options for potential cyberattacks.

- We shared this information with critical infrastructure owners and operators including steps to harden their security immediately and we will continue to share information.

**Q: Why haven't they attacked yet?**

- I won't get into why something hasn't happened that could. I can speak to what we have done and can do.
- We can warn the American public and the private sector about the evolving intelligence that the Russian Government is exploring options for potential cyberattacks.
- We have taken strong steps to strengthen our cybersecurity and we will continue to do so.

**Q: What changed? What do you think made them take more forward leaning actions?**

- I can't speak for the Kremlin, I can speak for the evolving intelligence we are seeing.

**Q: Are we continuing the cyber channel with Russia?**

- No. Russia is engaged in a brutal and unjustified war against Ukraine, so our channel on criminal ransomware actors is not active.

**Q: Why are you doing this now?**

- We wanted to share the information as soon as we could. We shared information with the private sector last week to help them act immediately and are reiterating those warnings with the American public. The President will also speak to this at his BRT event as well.

**Q: Would a cyberattack constitute an act of war?**

- I won't speculate on something that hasn't happened yet. As the President has said, the United States is not seeking confrontation with Russia. But he has also said that if Russia conducts disruptive

cyber-attacks against U.S. critical infrastructure, we will respond in a time and manner of our choosing.

**Q: Does a cyberattack trigger Article 5?**

- Last June, when the NATO leaders gathered for the NATO Summit, President Biden consulting with them, we put out a statement that spoke to cyberattacks and their relationship to Article 5. And we could see circumstances in which a collective response by the Alliance to a cyberattack would be called by an Ally. That is absolutely something where we and other countries could bring capabilities to bear to help a country both defend itself and respond to a particular cyberattack.
- Now, that's not necessarily the same thing as a military response. That response could take many different forms. But we have made clear through NATO that cybersecurity is an Alliance issue where NATO is prepared to pull together both to enhance resilience, enhance defenses, and, if necessary, use the appropriate tools to respond.

**Q: We've seen reports of recent cyber incidents. Isn't Russia already conducting cyberattacks against US?**

- We have not made any new attributions of cyberattacks by the Russian government. What we would distinguish between is gaining access to a system, which could be used for a variety of purposes — intelligence collection or mere preparation for a future attack — and the actual disruptive, destructive type of attack of the kind you saw that shut down the Colonial Pipeline last year. And we have not seen that.
- The distinction the President was making was the distinction between all of that preparatory work, which has been ongoing for years and the type of destruction or disruption that would result in the kinds of physical effects we've seen in past attacks.

**Q: How will you respond if Russia does move forward and cyberattacks the U.S.?**

- The President has been very clear: we will respond in a time and manner of our choosing.

**Q: Will you cyberattack back?**

- I won't preview our response and can't get into our offensive capabilities from here – but the Kremlin knows how strong they are.

**Q: Which companies received the threat briefings last week?**

- I can't go into specifics but can say that experts at the FBI, CISA, DOE, and other sector risk management agencies took a risk-based approach to develop the participant list.

**Q: Are you looking for new authorities? What kinds of authorities?**

- Congress recently passed the Cyber Incident Reporting Act, which mandates critical infrastructure owners to report cyber incidents to the Federal Government.
- We always work with Congress to address our shared goals and will continue to do so.

**Attachments:** smime.p7s

Sir -- FYSA -- you mentioned you weren't tracking the penetration of Russian disinformation on labs into QAnon. Here's a report on that from Newsweek today:

<https://www.newsweek.com/qanon-embraces-russia-conspiracy-theories-ukraine-labs-1686816>

"Evidence also shows many members of QAnon believe a "baseless" theory that the Russian war is actually a secret mission backed by former President Donald Trump to destroy clandestine bioweapon labs created by Dr. Anthony Fauci, the chief medical advisor to President Joe Biden. NBC reported on March 4 that the theory was being spread during the American offshoot of the "Freedom Convoy" of protesting truckers in Washington, D.C., by members of QAnon."

I've forwarded your message on to USUN and IO/UNP, who are wrangling this. We're keeping to a relatively high level and dismissing the credibility of allegations outright, along the lines taken by the White House and Ned Price in the last day or so — and voicing our concern about possible Russian CBW use.

We dont know for sure what the Russians are going to raise - my guess is that at least in part they'll focus on the new allegations levied today.

DASD Johnson wants to take a quick chop on those products. He feels strongly that USUN needs to get this aligned and messaging needs to be seamless.

Relatedly, Liz Sherwood Randall just came back to us with edits to our fact sheet. I'll share the latest once we've got the edits reconciled.

## ***TFUA01 - Ukraine SitRep No. 72***

Thursday, March 10, 2022  
1800 ET

### **SITUATION ON THE GROUND**

- (SBU) Fighting continued around the major cities in the north, in the Donbas, in Mariupol, and near Mykolayiv. Attacks diminished slightly and neither side made any

strategic progress, but Russian forces continued to bombard civilian targets. (22 *USOffice Ukraine Affairs Unit 20*) < Caution-

<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20USOFFICE%20UKRAINE%20AFFAIRS%20UNIT%2020%22> >

- (U) Ukraine's MFA announced 20,000 volunteers from 52 countries have enlisted in Ukraine's International Legion. Press reports said that number includes as many as 3,000 U.S. citizens. Ukraine Border Guards reported that 215,000 Ukrainians have returned to the country since the war began. (22 *USOffice Ukraine Affairs Unit 20*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20USOFFICE%20UKRAINE%20AFFAIRS%20UNIT%2020%22> >
- (U) Ukraine State Emergency Services released a video showing staff defusing a bomb from a downed Russian fighter jet in the northern city of Chernihiv. (*CNN*)

## RUSSIA

- (SBU) Russia requested a UN Security Council meeting for Friday, March 11, to discuss its false allegations of a U.S. biological weapons program in Ukraine. (*IO, RIA Novosti*)
- (U) JP Morgan Chase and Goldman Sachs said they are planning to exit Russia, while Citigroup said it is evaluating its future. (*Wall Street Journal*)
- (U) Venezuelan Vice President Delcy Rodriguez met with FM Lavrov in Turkey. She tweeted after the meeting that "Venezuela reaffirmed the principle of sovereign equality of states as a way to preserve balance for the sake of peace." (@*delcyrodriguezv*)

## INTERNATIONAL REACTIONS

- (U) EU heads of state, speaking on the sidelines of a meeting in Versailles, were cautious regarding Ukraine's application for EU membership. (*Reuters*)
- (U) At the Executive Council Session of the Organization for the Prohibition of Chemical Weapons (OPCW), dozens of countries condemned Russia's invasion of Ukraine in joint and national statements, including Latin American nations that normally shy away from political confrontation in the group. The United States organized a walkout during the Russian ambassador's remarks. (22 *OPCW The Hague 18*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20OPCW%20THE%20HAGUE%2018%22> >

## HUMANITARIAN AND REFUGEE SITUATION

UNHCR Reported Refugee Estimates as of March 9		
Country	Arrivals from Ukraine since Feb 24	% Increase in the past 24 hours
Poland	1,412,503	9.1%
Hungary	214,160	5.4%
Moldova*	82,762	-
Slovakia	165,199	7.8%
Romania**	84,671	-0.9%
Russia**	97,098	-2.2%
Belarus	765	29.2%
Movement onward toward other European countries	258,844	9.8%
<b>Total</b>	<b>2,316,002</b>	<b>7.5%</b>
*UNHCR reporting from Moldova has not been updated since March 6		
**UNHCR continues to revise some counts downwards as they refine their reporting and account for onward refugee movement.		

- (U) On March 9, an additional 12,978 Ukrainian citizens entered Romania from Moldova (a decrease of 2 percent from the previous day). (*UNHCR, M/SS Center for Analytics, EUR/CE*)
- (SBU)The UNHCR High Commissioner said the next wave of refugees would likely be more vulnerable than the first, with fewer resources and connections. (*22 USOffice Ukraine Affair Unit 20*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20USOFFICE%20UKRAINE%20AFFAIRS%20UNIT%2020%22> >
- (SBU)From March 6-8, ICRC carried out more than 35 humanitarian assistance operations across Ukraine. Many planned activities had to be postponed due to security risks, such as ongoing shelling. A high number of educational facilities have been damaged or destroyed across Ukraine (*22 Geneva 158*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20GENEVA%20158%22> >
- (U) The European Commission launched a webpage containing information for people fleeing the war in the Ukraine. The website contains information about crossing the border, rights on arrival, and information about onward travel. (*European Commission Press Release*)

Please include TFUA01 as the first item on the subject line for all cables and other documents related to the Ukraine Task Force. Please direct questions or feedback to the Ukraine Task Force at [EURCrisisCoord@state.gov](mailto:EURCrisisCoord@state.gov) < Caution-mailto:EURCrisisCoord@state.gov > .

## ***TFUA01 - Ukraine SitRep No. 72***

Thursday, March 10, 2022  
1800 ET

### **SITUATION ON THE GROUND**

- (SBU) Fighting continued around the major cities in the north, in the Donbas, in Mariupol, and near Mykolayiv. Attacks diminished slightly and neither side made any strategic progress, but Russian forces continued to bombard civilian targets. (22 USOffice Ukraine Affairs Unit 20)

- (U) Ukraine’s MFA announced 20,000 volunteers from 52 countries have enlisted in Ukraine’s International Legion. Press reports said that number includes as many as 3,000 U.S. citizens. Ukraine Border Guards reported that 215,000 Ukrainians have returned to the country since the war began. (22 USOffice Ukraine Affairs Unit 20)
- (U) Ukraine State Emergency Services released a video showing staff defusing a bomb from a downed Russian fighter jet in the northern city of Chernihiv. (*CNN*)

## RUSSIA

- (SBU) Russia requested a UN Security Council meeting for Friday, March 11, to discuss its false allegations of a U.S. biological weapons program in Ukraine. (*IO, RIA Novosti*)
- (U) JP Morgan Chase and Goldman Sachs said they are planning to exit Russia, while Citigroup said it is evaluating its future. (*Wall Street Journal*)
- (U) Venezuelan Vice President Delcy Rodriguez met with FM Lavrov in Turkey. She tweeted after the meeting that “Venezuela reaffirmed the principle of sovereign equality of states as a way to preserve balance for the sake of peace.” (@delcyrodriguezv)

## INTERNATIONAL REACTIONS

- (U) EU heads of state, speaking on the sidelines of a meeting in Versailles, were cautious regarding Ukraine’s application for EU membership. (*Reuters*)
- (U) At the Executive Council Session of the Organization for the Prohibition of Chemical Weapons (OPCW), dozens of countries condemned Russia’s invasion of Ukraine in joint and national statements, including Latin American nations that normally shy away from political confrontation in the group. The United States organized a walkout during the Russian ambassador’s remarks. (22 OPCW The Hague 18)

## HUMANITARIAN AND REFUGEE SITUATION

UNHCR Reported Refugee Estimates as of March 9		
Country	Arrivals from Ukraine since Feb 24	% Increase in the past 24 hours
Poland	1,412,503	9.1%
Hungary	214,160	5.4%
Moldova*	82,762	-
Slovakia	165,199	7.8%
Romania**	84,671	-0.9%
Russia**	97,098	-2.2%
Belarus	765	29.2%
Movement onward toward other European countries	258,844	9.8%
<b>Total</b>	<b>2,316,002</b>	<b>7.5%</b>
*UNHCR reporting from Moldova has not been updated since March 6		
**UNHCR continues to revise some counts downwards as they refine their reporting and account for onward refugee movement.		

- (U) On March 9, an additional 12,978 Ukrainian citizens entered Romania from Moldova (a decrease of 2 percent from the previous day). (*UNHCR, M/SS Center for Analytics, EUR/CE*)
- (SBU) The UNHCR High Commissioner said the next wave of refugees would likely be more vulnerable than the first, with fewer resources and connections. (*22 USOffice Ukraine Affair Unit 20*)
- (SBU) From March 6-8, ICRC carried out more than 35 humanitarian assistance operations across Ukraine. Many planned activities had to be postponed due to security risks, such as ongoing shelling. A high number of educational facilities have been damaged or destroyed across Ukraine (*22 Geneva 158*)
- (U) The European Commission launched a webpage containing information for people fleeing the war in the Ukraine. The website contains information about crossing the border, rights on arrival, and information about onward travel. (*European Commission Press Release*)

Please include TFUA01 as the first item on the subject line for all cables and other documents related to the Ukraine Task Force. Please direct questions or feedback to the Ukraine Task Force at [EURCrisisCoord@state.gov](mailto:EURCrisisCoord@state.gov).

**UNSC Russia Disinformation Remarks**  
**Amb. Linda Thomas-Greenfield,**  
United States Ambassador to the United Nations  
March 11, 2022

Thank you, Madam President.

Russia asked the Security Council for today's meeting for the sole purpose of lying and spreading disinformation.

Last month, Secretary Blinken laid out with tragic accuracy what Russia was about to do. He specifically warned that Russia would manufacture a pretext for attack, and he even predicted that Russia would fabricate allegations about chemical weapons to justify their own violent attacks against the Ukrainian people.

Today, the world is watching Russia do exactly what we warned they would. Russia is attempting to use the Security Council to legitimize disinformation and deceive people to justify President Putin's war of choice against Ukraine and the Ukrainian people.

I will say this once: there are no Ukrainian biological weapons labs, and the United States supporting the development of biological weapons by the Ukraine or anywhere else in the world supported by the United States. Not near Russia's borders, not anywhere. That is categorically false.

I will spend the balance of my time stating the truth.

So here are the facts: Ukraine owns and operates its own laboratory infrastructure. These labs provide biosafety and biosecurity training. They make it possible to detect and diagnose diseases, including pandemics like COVID-19.

This is work that has been done proudly, clearly, and out in the open. It has absolutely nothing to do with biological weapons.

In fact, we are deeply concerned that Russia's calling for this meeting is a potential false flag effort in action -- exactly the kind we have been warning about.

That's because Russia has a track record of falsely accusing the West of the very violations that Russia itself is perpetrating.

Russia has a well-documented history of using chemical weapons.

It is Russia that has long maintained a biological weapons program in violation of international law.

And now, we are concerned that Russia may be planning to use chemical or biological agents in Ukraine.

(b)(5)

(b)(5)

We believe Russia could use chemical or biological agents for assassinations, on large crowds of civilians, as part of another staged or false flag incident, or to support tactical military operations.

[pause]

From the beginning, our strategy to counter Russia's tactics has been to share what we know with the world transparently. And candidly, we have been right more often than we'd like.

We're not going to let Russia get away with gaslighting the world or staining the integrity of the Security Council's purpose by using it as a venue for legitimizing its violence.

And despite Russia's best efforts, the media -- and everyday Ukrainians -- are documenting the truth on the ground.

Russia can't paint over the front page of the New York Times, which on Sunday featured the bodies of a Ukrainian mother and her two children -- refugees who had died while trying to cross a bridge outside Kyiv.

Russia cannot cover up the work of AP news photographers who captured a doctor attempting to resuscitate an 18-month-old baby, Kirill, who died from Russian shelling in Mariupol.

Russia cannot suppress the Facebook post, confirmed and amplified by CBS News, that told the story of the 11-year-old Ukrainian boy who fled to Slovakia, by himself, with only a passport, a plastic bag, and a phone number scrawled on his hand.

Russia cannot silence the NBC News video footage of terrified Ukrainians rushing to packed train stations -- of mothers asking strangers to pass babies through the crowd and onto the trains bound for safety.

Russia is failing in its quest to create an alternate reality. In fact, not even Russian diplomats can keep their propaganda straight.

Just yesterday, the Kremlin's spokesman said that he didn't have clear information about the Russian forces who fired on a maternity hospital...

Then the Russian Foreign Minister denied Russia attacked Ukraine at all, right before admitting that Russia deliberately targeted this maternity hospital.

Their story didn't matter, because the world had already seen the searing images from CNN's on-the-ground footage of bloodied pregnant women being evacuated from the scene.

Even Russia's own citizens are tiring of such lies.

Russian athletes are writing "No war" on their shoes and on TV cameras. Russian citizens are marching in the streets and protesting Putin's war of choice. And even Russian state TV pundits -- Putin's own propaganda arm -- have called for Putin to stop the military action.

This is why we didn't object to holding today's meeting. Today's meeting has confirmed our predictions, revealed Russia's objectives to the world, and exposed Russia's lies for what they are.

Unlike the Russian government -- whose first instinct is to silence lie -- we are confident that truth and transparency will prevail.

(b)(5)

[*pause*]

In recent weeks, many have asked whether Russia should have a place on this Council. Whether a nation that subverts and undermines the UN Charter should continue to occupy a position of permanent leadership.

I believe these are legitimate questions to ask. And Russia owes us answers.

U.S. biological attack in Ukraine, March 2022

Source: Politforums.ru

Date of release: 02/15/2022 11:22

Title: US biological attack in Ukraine, March 2022

U.S. biological attack in Ukraine, March 2022

Vasily Aksyonov

9 89 14:22 15.02.2022

Theme Rating: +2

On February 10, 2022, the US Department of Defense sent samples of the smallpox virus by a special military board to its military biological laboratory in Kharkiv.

The US State Department is preparing a provocation with the use of biological weapons in Kharkiv. According to Western sources, the White House ordered the military to transport and prepare the smallpox virus for its use in combat operations and crisis situations.

Thanks to the leak of information, it became known that the US military plans to unleash a regional war in Ukraine at the beginning of March 2022, where they will conduct a provocation with the use of biological weapons. The media will spread information that some Russian saboteurs destroyed a biological laboratory from where the active strain of the smallpox virus leaked.

Recall that in 2013, the US Department of Defense on the basis of the Institute of Experimental and Clinical Veterinary Medicine built a biological laboratory, where it began to bring dangerous strains of viruses. The laboratory itself is located at the address: Kharkiv, Pomerka district, Pushkin street, 83.

The contractor was the American engineering company Black & Veatch, the same one that has already built biological laboratories for the Pentagon in Georgia, Azerbaijan, Armenia, Kazakhstan and Uzbekistan since 2001.

Facilities are carried out by a special unit of the Pentagon, called the Defense Threat Reduction Agency (DTRA). In Ukraine, this activity is supervised by the U.S. Embassy in Kyiv.

Over the past two months, 7 special cargoes have been sent to the Kharkiv Biological Laboratory of the United States, under the guise of military assistance to Ukraine. It is noteworthy that the sender is the CENTER for biological research of the US Army "Fort Detrick" in Maryland. Local residents nicknamed this place "House of Death".

Not surprisingly, because on the territory of this military town, Pentagon microbiologists are modernizing deadly infections, including smallpox, bubonic plague, tropical fever, as well as anthrax, increasing their resistance to modern vaccines and drugs.

Subject: Disinformation Update

Dr. Williams,

FYSA, our media monitors are seeing a substantial uptick in disinformation on DTRA CTR BTRP's projects in Ukraine -- from an average of 50 articles per day to over a thousand in the last 24 hours. Russia is blaming DTRA for a number of outbreaks in the region, as well as for crafting an offensive BW program in Ukraine.

We have also seen reporting from China's Foreign Ministry spokesman echoing Russian charges, which has received extensive coverage in both the Chinese and Russian news and social media circles.

State AVC has a press statement they plan to put out today that OSD provided us an opportunity to review. It hits the right points and draws from the "Break Glass" book DTRA provided to OSD PA and State last week.

We heard today from journalist Matt Field at the Bulletin of the Atomic Scientists. Working with DTRA PA, we answered some questions for him last Friday and he stated his intent to submit an article to his editor today. We will watch for it.

Finally, if you have four minutes, here's a briefing on DTRA's activities in Ukraine from the Russian Ministry of Defense, with English subtitles:

V/r,

Rob

Robert S. Pope, Ph.D., SES

Director

Cooperative Threat Reduction

CUI/NF

Sir, see below. Summary of a call we had with OSD Policy, NCB, State ISN, and State AVC. Subject was disinformation in UKR, specifically the labs.

- We discussed the need to have common messaging with regard to the current wave of RUS disinfo, focusing specifically on the labs in UKR. (note: we are all in synch here).
- State AVC and ISN have a copy of our "break glass" product; they used it to put together TP's for State's PA; we chopped on their product. (Note - it is good, but surprising more pointed than DoD's)
- DASD Johnson will reach out to the NSC on this topic and request a small group discussion - for both awareness, and for synchronizing the PA approach.
- Using our break glass product, USD Kahl is holding a meeting with Kirby today to urge Kirby to say something proactively, vice waiting for the questions to come in. Kirby MAY say something today or tomorrow.
- State ISN and AVC asked DoD PA to lash up directly with State PA on this topic, to ensure what Kirby says or what State says are in sync.
- Per OSD-P concurrence, State ISN will share our break glass product with the NSC / small group discussion.
- AMB Bonnie Jenkins is meeting with UK and German counterparts to discuss disinformation in UKR, and will likely raise the topic of the labs. State AVC may ask OSD-P and DTRA for a quick turn chop on their TP's tomorrow, due at 1200.
- OPCW reports the Russians will likely bring up the bio labs in UKR very soon, in the next OPCW meeting. (Note: this is out of scope for the OPCW, but two points: 1) the RUS may bring up concerns about "American PMC's using chemical weapons or giving them to UKR"; 2) State anticipates an on-slaught of Russian messaging about the bio labs in UKR in any international forum in which they participate).

No action for DTRA at the moment, but we are standing by for Q&A's from State (AMB Jenkins request) and possibly Q&A's from the Kahl/Kirby meeting today.

Given that, my sense is to have CTR do this interview. An alternative is to bounce this up to NCB - DASD Reif (but that will take it out of the DTRA realm). And I'd prefer to minimize the pictures/filming of the Agency. I'm primarily thinking about a force protection issue - even though the Agency's location is known.

Subject: RE: Media Engagement Opportunity

Sir,

I do have a good sense with this one, especially since we can see his previously published work goes against the Russian propaganda. Before the Tucker Carlson segment when LOTS of media came to us for comment, this guy was trying to get DTRA's side of the story, or the facts, early on. Now he has a bigger platform to get out the message.

From talking to him a few times, I would say the main angle will be the labs in Ukraine but they want to highlight DTRA as an agency, as well. It's platform to get our message out broadly and not look like the secretive agency the conspiracy theorists are trying to make us.

He owes me more information so I will pass that along once I receive it.

Thanks for the quick response, Sir.

Subject: Media Engagement Opportunity

Sir,

As (b)(6) is on leave today, she asked I send this information on her behalf. I have already talked with (b)(6) and Dr. Pope and they support the following media engagement.

BLUF: Justin Ling, an independent journalist, has contacted us a few times in hopes to get an interview with Dr. Pope regarding the bio labs. As you are aware, Dr. Pope and the CTR folks have participated in numerous media engagements (phone and email) over the past few weeks. Justin first reached out around March 3 but we weren't conducting as many engagements at the time, and frankly, his last name was questionable. After some research, we saw he was publishing content that supported the true narrative that Russia was spreading lies about the biolabs. See his recent article and tweets below.

<https://foreignpolicy.com/2022/03/02/ukraine-biolabs-conspiracy-theory-qanon>

/

[https://twitter.com/justin\\_ling/status/150442125655222682](https://twitter.com/justin_ling/status/150442125655222682)

1

I spoke to him this morning and he is now representing the Canadian Broadcasting Corporation and has been asked to get an interview with a DTRA senior spokesperson, in a documentary style engagement. Dr. Pope is TDY this week and you know how the news cycle is. They are pushing stories pretty quickly (within 24 hours), so we want to jump on this one quickly.

Dr. Pope, (b)(6) agree you might be the best representation for this engagement, if you want to participate. Justin also said they want to come film in the building to show, in his words, "this is not a shady, bioweapons agency. They do work that prevents pandemics, not create them."

CTR and PAO endorse this engagement, but wanted to punt to you for final decision. The journalist is also supposed to get back to me later this afternoon on timeline. More to follow as details emerge, but wanted to give you the heads up, that this is in the que.

Let me know if you have any questions.

Thanks!

**Subject:** New Article Released - Matt Field

Dr. Williams and Dr. Pope,

Gentlemen, the latest new article with Matt Field has been published and posted. BLUF: Solid, relevant quotes by Dr. Pope. The article is helping to quell some of the false information.

Here is the article link: <https://thebulletin.org/2022/03/in-ukrainian-cities-under-russian-attack-us-linked-research-labs-could-provide-fodder-for-future-russian-disinformation/>

-----  
In Ukrainian cities under Russian attack, US-linked research labs could provide fodder for future Russian disinformation

By Matt Field | March 9, 2022

With Russian President Vladimir Putin showing no sign of backing down on his country's assault on Ukraine, US officials are trying to prevent the Russian military from capturing pathogens stored in US-affiliated research labs in Ukraine, where they could potentially mischaracterize activities at the facilities. It's an urgent task, given that the director of the US military program that works with Ukrainian public and animal health labs said some are in cities now under attack.

At the end of February, Robert Pope, the director of the Cooperative Threat Reduction Program, said his program had lost contact with the Ukrainian labs. In an update on Friday, he said that officials had communicated with authorities responsible for facilities run by the Ukrainian Ministry of Health but not the with those overseeing the veterinary health institutions the US government also partners with in the country.

Several of those labs are in cities being attacked now, Pope said. "Should Russian forces occupy a city with one of these facilities, we are concerned that Russia will

fabricate ‘evidence’ of nefarious activity in an attempt to lend credibility to their ongoing disinformation about these facilities.”

On the veterinary health side, the Defense Threat Reduction Agency supports 14 facilities and diagnostic laboratories, Pope said. “Most of these facilities are regional diagnostic veterinary laboratories that provide Ukraine with animal sample collection ability and basic laboratory capabilities for initial diagnostics of potential diseases in Ukraine’s animal population. They are part of the network of labs that help Ukraine prevent, detect, and respond to animal diseases like African swine fever,” he said.

Undersecretary of State for Political Affairs Victoria Nuland echoed Pope’s concerns about the security of the US-linked labs at a Senate hearing Tuesday. “Ukraine has biological research facilities, which, in fact, we are now quite concerned Russian troops, Russian forces may be seeking to gain control of, so we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach,” she said.

Pope’s fears that the invasion will expose the labs to new disinformation narratives does not appear far-fetched. Already at least one figure with links to the Russian disinformation ecosystem is broadcasting plans to bring journalists into war-torn Ukraine to tour US-affiliated labs there.

John Mark Dougan, a former American police officer who claims to have political asylum in Russia, has put up at least five videos on YouTube in recent days saying that Ukraine is hosting US bioweapons labs; some of the videos have been viewed nearly 30,000 times. In one video, he claims to have secured permission to go to the labs. “I said, ‘Look, I want to get a bunch of journalists, truth seeking journalists together, and I want to do a tour of these laboratories,’” Dougan said, inviting journalists to contact him for the supposed trip.

John Mark Dougan on his YouTube channel. YouTuber John Mark Dougan, an American living in Russia, claims he will bring journalists to US-linked laboratories in Ukraine. Credit: YouTube.

In his videos, Dougan points to fact sheets on Ukrainian facilities that once were on the US embassy in Kyiv’s website, but have since been taken down as evidence of

US government malfeasance. The documents list general information about US support for various labs as well as state whether labs have received permits to work with pathogens, according to an archival search. While the links on the Kyiv embassy site are not functional, they nonetheless remain prominently displayed. “Are they maybe trying to hide evidence of their bioweapons program?” Dougan asks in a Feb. 26 video. Dougan also claims a whistleblower who once worked in a veterinary clinic in Ukraine has provided him with information.

In a Dec. 10 video, Dougan mentions a Ukrainian who “dropped off some documents” with “interesting stuff.” Throughout the video, he displays pictures of documents, laboratories, or officials, often drawing from publicly available sources such promotional material about the Defense Threat Reduction Agency or the 2005 agreement that dictates the terms of the arrangement between Ukraine and the agency. He also refers to a program called UP-8. The Defense Threat Reduction Agency told the Bulletin that UP-8 involved voluntary blood draws to see what antibodies troops were exposed to in nature. Previous allegations picked up in Russian state media have targeted the program, including claims that the blood draws could have caused death among Ukrainian troops.

After being sought by the FBI for releasing the addresses of thousands of judges and other officials in Florida online, Dougan fled the United States in 2016, according to an investigation by The Daily Beast in 2019.

Once in Russia, Dougan apparently caught the interest of some of the country’s most prolific disinformation producers, state-controlled outlets RT and Sputnik. RT, which researchers at the Oxford Internet Institute once labeled “one of the most important organizations in the global political economy of disinformation,” even produced a 51-minute-long documentary on Dougan.

In an email, Dougan questioned the Bulletin’s objectivity, asked why the State Department would delete documents if it weren’t a “clean up campaign,” and questioned the Defense Department’s funding for biological research. “I’ve been around the block a few times, and I know when someone is trying to write a con-job article in defense of the indefensible,” he said. “And I worked in law enforcement long enough to know when the government is trying to hide something.”

The labs in Ukraine are not bioweapons facilities, nor are they run by the US government, the Defense Threat Reduction Agency has said; they are operated by

partner countries. In fact, the Cooperative Threat Reduction Program that manages the US partnerships with labs worked extensively with the Russian government after the fall of the Soviet Union to secure weapons of mass destruction, including the remnants of the massive Soviet bioweapons program. But despite media investigations and independent experts debunking claims against the US-affiliated labs over the years, Russia's invasion of Ukraine has re-ignited the disinformation attacks on the program.

A research lab in Kyiv. A research lab in Kyiv, Ukraine built by the Cooperative Threat Reduction Program. Credit: Defense Threat Reduction Agency

Russian state media, alleged Kremlin proxy media outlets, and influencers like Tim Kirby, another American expat with ties to RT, began to focus once again on the lab disinformation as Russia moved troops toward the Ukrainian border. That trend appears to have intensified since the invasion. Foreign Minister Sergei Lavrov mused about the labs in a recent state-TV interview, and the Russian embassy in Bosnia and Herzegovina posted on Facebook that the United States was building labs in Ukraine to destroy “the Russian people at the genetic level.”

In a briefing, Chinese Foreign Ministry spokesman Zhao Lijian lent support to the Russian accusations. “In particular, the United States, as the party that knows the laboratories best, should release relevant specific information as soon as possible, including what viruses are stored and the research that has been carried out,” the spokesman said, according to Chinese state-media company Xinhua.

And in a twist, the Russian accusations appear to be gaining traction among the hard-right in the United States, with an assist from Dougan, who went on QAnon influencer Zak Paine's RedPill78 podcast to discuss the lab conspiracy theory. A few days later, Paine re-visited the topic to say that the Russians were “attacking biological weapons facilities funded by the United States” and run, in part by Anthony Fauci, the director of the National Institute of Allergy and Infectious Diseases, a frequent target of the right wing.

Putin, Pope said, may want to use the Ukrainian labs as a rationale for the war. “We know Putin lied when he said he wasn't preparing to invade Ukraine,” the Cooperative Threat Reduction Program director said, “and we are confident that Russia is willing to lie to try to justify their invasion.”

-----  
In Ukrainian cities under Russian attack, US-linked research labs could provide fodder for future Russian disinformation

By Matt Field | March 9, 2022

With Russian President Vladimir Putin showing no sign of backing down on his country's assault on Ukraine, US officials are trying to prevent the Russian military from capturing pathogens stored in US-affiliated research labs in Ukraine, where they could potentially mischaracterize activities at the facilities. It's an urgent task, given that the director of the US military program that works with Ukrainian public and animal health labs said some are in cities now under attack.

At the end of February, Robert Pope, the director of the Cooperative Threat Reduction Program, said his program had lost contact with the Ukrainian labs. In an update on Friday, he said that officials had communicated with authorities responsible for facilities run by the Ukrainian Ministry of Health but not the with those overseeing the veterinary health institutions the US government also partners with in the country.

Several of those labs are in cities being attacked now, Pope said. "Should Russian forces occupy a city with one of these facilities, we are concerned that Russia will fabricate 'evidence' of nefarious activity in an attempt to lend credibility to their ongoing disinformation about these facilities."

On the veterinary health side, the Defense Threat Reduction Agency supports 14 facilities and diagnostic laboratories, Pope said. "Most of these facilities are regional diagnostic veterinary laboratories that provide Ukraine with animal sample collection ability and basic laboratory capabilities for initial diagnostics of potential diseases in Ukraine's animal population. They are part of the network of labs that help Ukraine prevent, detect, and respond to animal diseases like African swine fever," he said.

Undersecretary of State for Political Affairs Victoria Nuland echoed Pope's concerns about the security of the US-linked labs at a Senate hearing Tuesday. "Ukraine has biological research facilities, which, in fact, we are now quite concerned Russian troops, Russian forces may be seeking to gain control of, so we

are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach,” she said.

Pope’s fears that the invasion will expose the labs to new disinformation narratives does not appear far-fetched. Already at least one figure with links to the Russian disinformation ecosystem is broadcasting plans to bring journalists into war-torn Ukraine to tour US-affiliated labs there.

John Mark Dougan, a former American police officer who claims to have political asylum in Russia, has put up at least five videos on YouTube in recent days saying that Ukraine is hosting US bioweapons labs; some of the videos have been viewed nearly 30,000 times. In one video, he claims to have secured permission to go to the labs. “I said, ‘Look, I want to get a bunch of journalists, truth seeking journalists together, and I want to do a tour of these laboratories,’” Dougan said, inviting journalists to contact him for the supposed trip.

John Mark Dougan on his YouTube channel. YouTuber John Mark Dougan, an American living in Russia, claims he will bring journalists to US-linked laboratories in Ukraine. Credit: YouTube.

In his videos, Dougan points to fact sheets on Ukrainian facilities that once were on the US embassy in Kyiv’s website, but have since been taken down as evidence of US government malfeasance. The documents list general information about US support for various labs as well as state whether labs have received permits to work with pathogens, according to an archival search. While the links on the Kyiv embassy site are not functional, they nonetheless remain prominently displayed. “Are they maybe trying to hide evidence of their bioweapons program?” Dougan asks in a Feb. 26 video. Dougan also claims a whistleblower who once worked in a veterinary clinic in Ukraine has provided him with information.

In a Dec. 10 video, Dougan mentions a Ukrainian who “dropped off some documents” with “interesting stuff.” Throughout the video, he displays pictures of documents, laboratories, or officials, often drawing from publicly available sources such promotional material about the Defense Threat Reduction Agency or the 2005 agreement that dictates the terms of the arrangement between Ukraine and the agency. He also refers to a program called UP-8. The Defense Threat Reduction Agency told the Bulletin that UP-8 involved voluntary blood draws to see what antibodies troops were exposed to in nature. Previous allegations picked up in

Russian state media have targeted the program, including claims that the blood draws could have caused death among Ukrainian troops.

After being sought by the FBI for releasing the addresses of thousands of judges and other officials in Florida online, Dougan fled the United States in 2016, according to an investigation by The Daily Beast in 2019.

Once in Russia, Dougan apparently caught the interest of some of the country's most prolific disinformation producers, state-controlled outlets RT and Sputnik. RT, which researchers at the Oxford Internet Institute once labeled "one of the most important organizations in the global political economy of disinformation," even produced a 51-minute-long documentary on Dougan.

In an email, Dougan questioned the Bulletin's objectivity, asked why the State Department would delete documents if it weren't a "clean up campaign," and questioned the Defense Department's funding for biological research. "I've been around the block a few times, and I know when someone is trying to write a con-job article in defense of the indefensible," he said. "And I worked in law enforcement long enough to know when the government is trying to hide something."

The labs in Ukraine are not bioweapons facilities, nor are they run by the US government, the Defense Threat Reduction Agency has said; they are operated by partner countries. In fact, the Cooperative Threat Reduction Program that manages the US partnerships with labs worked extensively with the Russian government after the fall of the Soviet Union to secure weapons of mass destruction, including the remnants of the massive Soviet bioweapons program. But despite media investigations and independent experts debunking claims against the US-affiliated labs over the years, Russia's invasion of Ukraine has re-ignited the disinformation attacks on the program.

Russian state media, alleged Kremlin proxy media outlets, and influencers like Tim Kirby, another American expat with ties to RT, began to focus once again on the lab disinformation as Russia moved troops toward the Ukrainian border. That trend appears to have intensified since the invasion. Foreign Minister Sergei Lavrov mused about the labs in a recent state-TV interview, and the Russian embassy in

Bosnia and Herzegovina posted on Facebook that the United States was building labs in Ukraine to destroy “the Russian people at the genetic level.”

In a briefing, Chinese Foreign Ministry spokesman Zhao Lijian lent support to the Russian accusations. “In particular, the United States, as the party that knows the laboratories best, should release relevant specific information as soon as possible, including what viruses are stored and the research that has been carried out,” the spokesman said, according to Chinese state-media company Xinhua.

And in a twist, the Russian accusations appear to be gaining traction among the hard-right in the United States, with an assist from Dougan, who went on QAnon influencer Zak Paine’s RedPill78 podcast to discuss the lab conspiracy theory. A few days later, Paine re-visited the topic to say that the Russians were “attacking biological weapons facilities funded by the United States” and run, in part by Anthony Fauci, the director of the National Institute of Allergy and Infectious Diseases, a frequent target of the right wing.

Putin, Pope said, may want to use the Ukrainian labs as a rationale for the war. “We know Putin lied when he said he wasn’t preparing to invade Ukraine,” the Cooperative Threat Reduction Program director said, “and we are confident that Russia is willing to lie to try to justify their invasion.”

**Subject:** RE: Press

Dr. Williams,  
Sir, I agree. We actually received a query Friday morning from the Associated

Press (AP). It came in after the Weekly Report submission. The AP reporter was "fact checking" and looking for a list of labs/location of the labs in Ukraine and wanted us to verify the information. We did not respond and have forwarded the query to our OSD PA portfolio manager, Ms. Maxwell. Of note, In keeping w/OSD Social Media Posture, all DOD components have been asked to "pause all CBDP-related digital media posting until further notice." In addition, OSD has directed the PAOs/Comms Directors at the Agencies and Commands to carefully re-evaluate any content we may have scheduled, take a more diminished posture and to only re-share (not rewrite) top level messaging from OSD. For now, my team is standing down on all social media postings. For Dr. Pope's media engagement, the higher headquarters was looped in, however as a courtesy I've flagged the article for the NCB STRAT team so that they are aware of the article. I listened to the raw recording and believe the reporter captured Dr. Pope's statements/interview accurately in his story. As for future media engagements, we will pause as well for the moment. This will mostly like be the next OSD-directed guidance. Please let me know if there are questions.

Subject: The Official Russian MOD Statement of "Proof" of DoD Bioweapons Labs in Ukraine

Dr. Williams,

FYSA, Russian MOD's Telegram channel media is reporting that they have "evidence" of U.S. bioweapons activities in Ukraine (see below and attached). Our media monitor is looking for any additional reporting on the subject.

Wall Street Journal is asking for comment on the following: "Russian military spokesman Maj. Gen. Igor Konashenkov claimed, without providing evidence, that Russia has uncovered a biological weapons program in Ukraine funded by the U.S. defense ministry that was destroyed on February 24, when Moscow launched its assault."

DASD Johnson and DASD Rcif are tracking (DASD Johnson received tip-off of the reporting from another OSD office and alerted us). DASD Johnson and OSD PA have DTRA's "Break Glass" book for this. No action for DTRA at this time.

V/r,

Rob

Robert S. Pope, Ph.D., SES

Director

Cooperative Threat Reduction

-----Original Message-----

In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

We have received documentation from employees of Ukrainian biolaboratories on the emergency destruction on February 24 of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases. Now the documents are being analyzed by Russian specialists from the troops of radiation, chemical and biological protection.

Obviously, with the start of a special military operation, the Pentagon had serious concerns about disclosing the conduct of secret biological experiments on the territory of Ukraine.

The received documents confirm that in the Ukrainian biological laboratories, in the immediate vicinity of the territory of Russia, the development of biological weapons components was carried out.

In order to prevent disclosure of the facts of violation by the United States and Ukraine of Article 1 of the UN Convention on the Prohibition of Bacteriological (Biological) and Toxin Weapons, the Ukrainian Ministry of Health sent an instruction to all biological laboratories to urgently eliminate stored stocks of dangerous pathogens.

In the near future we will present the results of the analysis of the received documents. Some of them, in particular, the

instructions of the Ministry of Health of Ukraine on the destruction of pathogens and the acts of destruction in the Poltava and

Kharkiv biological laboratories, we are publishing right now: <https://disk.yandex.ru/d/dyWUEF3tDZGauw>

Subject: FW: Ukraine Labs and DoD CTR

Sirs, FYI below per Dr. Williams.

BLUF: due to the recent RUS "Note Verbale" presented 2 days ago at the BWC in Geneva (PDF file attached), and RUS presentation this morning (Word doc attached) at the UN Security Council claiming the US is developing bio weapons in UKR, the NSC (Beth Cameron) has reached out directly to DTRA (specifically Dr. Pope) for a quick conversation on this issue for preparation of an

upcoming sub-IPC. This conversation will take place at 1600 today.

OSD-P and NCB/TRAC have both been looped in and Policy is leading the discussion for DoD. I have been asked to participate; I invited CT's rep to the CORT so he can back-brief them; and the IOFC (Ana) is welcome to attend as well. Note, Policy wants to keep this discussion limited. Will keep everyone informed as to the outcome of the discussion. Ms. Cameron will not participate; it will be her staff on the NSC.

Unless Policy wants DTRA representation, we will likely not be invited to the IPC on Monday, as Policy has been attending those on this topic and is the gatekeeper.

Sir, FYI - NSC (b)(6) reached out to (b)(6) NSC wants to help with disinformation, given the RUS Note Verbale they presented at the BWC 2 days ago, and now RUS apparently did the same at the UN Security Council this

morning. Attached is what was presented at the BWC, and we are trying to find out what RUS presented this morning. It is likely the same product.

I looped in my Policy comrades for the discussion the NSC wants to have with us this afternoon at 1600. Not sure if we (DTRA) will be invited to the sub/IPC on Monday. Will keep you posted.

Frankly, the NSC is way behind here. But we will support them as needed/required, unless you have other guidance.

Thanks (b)(6)

Hi, (b)(6)

Russia is convening the UNSC again this morning to launder its disinformation and to malign U.S. support for biological facilities and laboratories in Ukraine.

It's not going away anytime soon in the media or in international fora (BWC, UNSC, etc.), so we'd like explore with you some fresh, creative approaches to turning Russian disinformation upside down. As a starting point, I'm going to get the "evidence" that Russia furnished for the UNSC convening this morning.

NSC Democracy is hosting a subIPC on Monday @ 1:00 PM on countering disinformation regarding the U.S., Ukraine, and CBW (for example: <https://tass.com/politics/1423129>). I'll make sure you get that invite, and would welcome the opportunity to talk to you beforehand - either 4:00 PM today or Monday morning 9:30 or 10?

Many thanks!

Best,

**Subject:** RE: Ukraine Labs and DoD CTR  
**Attachments:** smime.p7s

Sir(s), update from the NSC call today. IOFC attended, as well as 2 other SME's from CTR.

- Goal of the meeting was to help prep NSC for the sub-IPC on Monday at 1300, and solicit good ideas from DoD on how to deal with the problem.
- It was led by one junior staffer who recognized the problem - but was not deep at all on the topic. The entire discussion was about a narrow public affairs approach to the problem.
- NSC shared some ideas they have, most of them good ideas and most of which we (DTRA) are either doing or tracking.
- Staffer wanted to know if DoD has any good ideas. Policy (Aaron Jay) shared some examples, and I did as well about enhancing our PA messaging through DTRA platforms and media interviews.
- Staffer shared Rep Majorie Taylor Greene is going to sponsor a bill in Congress that will "stop US Bio programs around the world."
- I added as an alibi and recommended the NSC look at this holistically, and not just as a public affairs problem. The "light" and "dark side" need to work in sync. Staffers said she would loop in other NSC folks to the discussion on Monday.
- Sub IPC will be held on Monday 3/21; Policy (Aaron) will attend; DTRA will not be asked to support the IPC.
- The Sub IPC will be held on Govt Zoom, unclassified. (I will with-hold further comment on this point).

:

16:20Z 6Mar2022

Группировки войск Луганской и Донецкой народных республик, при огневой поддержке российских Вооруженных Сил, продолжают наступательные действия.

Подразделения народной милиции Донецкой республики успешно развивают наступление в городской черте Мариуполя с северо-западного и восточного направления.

Вооруженные Силы Российской Федерации наносят удары по объектам военной инфраструктуры Украины.

6 марта высокоточным оружием большой дальности выведен из строя аэродром военно-воздушных сил Украины в ВИННИЦЕ.

Истребительной авиацией и ПВО ВКС Россиибито в воздухе ещё три украинских истребителя Су 27 и три беспилотных летательных аппарата.

Всего за вчерашний и неполный сегодняшний день военно-воздушные силы Украины потеряли 11 боевых самолетов и 2 вертолета.

Практически вся боеспособная авиация киевского режима уничтожена.

Вместе с тем, нам достоверно известно об украинских боевых самолетах, ранее перелетевших в Румынию и другие приграничные страны.

Обращаем внимание, что использование аэродромной сети этих стран для базирования украинской боевой авиации с последующим применением против российских вооруженных сил, может рассматриваться как вовлечение данных государств в вооруженный конфликт.

Российскими высокоточными средствами большой дальности выводятся из строя вооружение и военная техника Украины.

Киевский режим националистов заставляет сотрудников предприятий оборонно-промышленного комплекса Украины восстанавливать поврежденную военную технику для последующего направления в районы боевых действий.

В рамках выполнения задачи по демилитаризации Украины российские вооруженные сил

Groupings of troops of the Luhansk and Donetsk People's Republics, with the fire support of the Russian Armed Forces, continue offensive operations.

The units of the people's militia of the Donetsk Republic are successfully developing an offensive in the city of Mariupol from the north-western and eastern directions.

The Armed Forces of the Russian Federation are striking at the military infrastructure of Ukraine.

March 6 high precision long range weapons put out of action the airfield of the air force of Ukraine in VINNITSA.

Fighter aircraft and air defense of the Russian Aerospace Forces shot down three more Ukrainian Su 27 fighters and three unmanned aerial vehicles in the air.

In total, yesterday and incomplete today, the Ukrainian Air Force lost 11 combat aircraft and 2 helicopters.

Almost all combat ready aviation of the Kiev regime has been destroyed.

At the same time, we know for certain about Ukrainian combat aircraft that had previously flown to Romania and other border countries.

Please note that the use of the airfield network of these countries for basing Ukrainian military aviation with subsequent use against the Russian armed forces can be regarded as the involvement of these states in an armed conflict.

Russian high-precision long-range weapons and military equipment of Ukraine are disabled.

The Kyiv regime of nationalists forces employees of enterprises of the military-industrial complex of Ukraine to restore damaged military equipment for subsequent deployment to the areas of hostilities.

As part of the task of demilitarizing Ukraine, the Russian armed for

ы будут наносить высокоточным оружием поражение украинским предприятиям оборонно-промышленного комплекса. Во избежание угрозы жизни работникам предприятий украинского ОПК заблаговременно предупреждаем о планируемых ударах по таким объектам. Призываем персонал украинских заводов ОПК не идти на поводу у киевского режима националистов и покинуть территории своих предприятий. В ходе проведения специальной военной операции вскрыты факты экстренной зачистки Киевом режимом следов реализуемой на Украине военно-биологической программы, финансируемой Минобороны США. Нами получена от сотрудников украинских биологических лабораторий документация об экстренном уничтожении 24 февраля особо опасных патогенов возбудителей чумы, сибирской язвы, туляремии, холеры и других смертельных болезней. Связанные документы анализируются российскими специалистами войск радиационной, химической и биологической защиты. Очевидно, что с началом специальной военной операции, у Пентагона возникли серьезные опасения в раскрытии ведения секретных биологических экспериментов на территории Украины. Полученные документы подтверждают, что в украинских биологических лабораториях, в непосредственной близости от территории России, осуществлялась разработка компонентов биологического оружия. Для недопущения вскрытия фактов нарушения США и Украиной статьи I Конвенции ООН о запрещении бактериологического (биологического) и токсинного оружия, украинским Минздравом во все биологические лаборатории было направлено указание об экстренной ликвидации хранящихся запасов опасных патогенов. В ближайшее время мы представим результаты анализа полученных документов

ces will inflict high-precision weapons on Ukrainian enterprises of the military-industrial complex. In order to avoid a threat to the lives of employees of enterprises of the Ukrainian defense industry, we warn in advance of planned strikes against such facilities. We call on the personnel of the Ukrainian defense industry plants not to be led by the nationalist regime in Kiev and to leave the territories of their enterprises. In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

We have received documentation from employees of Ukrainian biological laboratories on the emergency destruction on February 24 of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases. Now the documents are being analyzed by Russian specialists from the troops of radiation, chemical and biological protection.

Obviously, with the start of a special military operation, the Pentagon had serious concerns about disclosing the conduct of secret biological experiments on the territory of Ukraine.

The received documents confirm that in the Ukrainian biological laboratories, in the immediate vicinity of the territory of Russia, the development of biological weapons components was carried out.

In order to prevent disclosure of the facts of violation by the United States and Ukraine of Article I of the UN Convention on the Prohibition of Bacteriological (Biological) and Toxin Weapons, the Ukrainian Mi

**Subject:** Transcript WSJ 3.14.22 - Pope  
**Attachments:** WSJ Dr. Pope.docx, smime.p7s

Dr. Williams,  
Sir, attached is the transcript from today's WSJ interview.  
BLUF - the interview went well and the editor gave Dr. Pope the appropriate voice to respond to the accusations about the labs. We owe Ms. Weinberger follow up information to a couple of questions, and Dr. Pope's team is formulating the appropriate answers. As far as a publication date, she will let us know, but it will most likely be very soon.  
Overall, a great engagement by Dr. Pope and his team for preparing the right TPs on such short notice. Media engagements like this one will pay dividends down the road as we take control of the narrative on this topic.  
I'll follow-up and provide the transcripts to the Strat team in Ms. Rosenblum's office.

V/r,

**Transcript: Wall Street Journal Engagement- Sharon Weinberger interviews Dr. Robert Pope**

**Q: There have been some outrageous allegations in recent days regarding the Ukraine Invasion. I thought it would be a good time to talk about the BTRP program in Ukraine, the history and where the program is now. Could you talk about the current state of work in Ukraine up until the state of the war?**

- A. We have worked with Ukraine in this mission area since 2005, fundamentally trying to make their public health network and vet health network of laboratories and epidemiology more successful at what they do. The work CTR was doing at the time, leading up to the invasion was all about that, we were continuing to help provide upgrades to various public and animal health laboratories so the scientists had the equipment and training and facility they needed to be able to do the same diseases diagnosis and reporting that any other country does.

**Q: What are the numbers of biological sites in Ukraine...the number that DTRA and the pentagon is doing work with?**

- A. You see a lot of different numbers because it depends on what you count. A lot of the work we've done are at the small diagnostic sites. Where all you have are samples coming in and safely packaged and transferred to the diagnostic labs. If you start counting things like that, the numbers get pretty big. If you don't count those, looking at my list here, 8 major disease diagnostic labs. We've done work at the regional level and pathogen collection at the diagnostic sites.

**Q: Can you describe what the ongoing work of DTRA is with these diagnostic sites, things you are working on with the Ukrainians and what the overall goal is?**

- A. The goal is like I said, the ability for Ukraine to have a public health laboratory network that meets international health regulations and standards set by the WHO to be able to detect outbreaks and dangerous diseases so the world can react and respond before we have a global pandemic. And we work similarly on the vet side because so many animal diseases (inaudible) like ebola or covid can jump from animal to human. Being able to work on both side of that one health spectrum gives that complete early detection and reporting that the whole world benefits from. We most recently were finishing up construction and renovation at the laboratories and continuing to training personnel and sponsor biosurveillance studies to better characterize the kinds of diseases that are endemic to Ukraine.

**Q: What was the status of the construction and renovation....where were these?**

- A: For the safety of the Ukrainians working in those labs, I don't want to say specifically which ones these are right now. Russian propaganda comes back to target them. Can we side step that one? (yes)

**Q: Is there an annual conference in Ukraine sponsored by DTRA/CTR for researchers?**

A: There are a number of conferences that CTR sponsors around the world, I don't remember which one we held most recently in Ukraine. Typically if we are sponsoring a conference, it's bringing researchers together who work in bio-surveillance studies to share what they have learned together. By bringing them together in that region, you are able to share the data and results across international boundaries. Diseases don't respect those boundaries and those technicians need to understand what's going on on the other side of the border as well.

**Q: How much of a concern do you have with the security of the lab in the state of the war?**

A. Generally we work with our partners like Ukraine to build these labs and train the people who work in them to to work in a very safe way. The samples they are collecting for this work stay safely in the lab don't infect the technicians or get out into the community. I would say when a conflict starts, electrical power isn't stable, buildings may be damaged, then the risk of accidental releases is present. Last week the Who made the statement that THEY had reached out to Ukraine and suggested they neutralize their pathogen strain collection and destroy everything so it won't accidentally leak out as part of this conflict.

**Q: Has that been done or is DTRA advising that?**

A: I can't say it has been done, I hope the government of Ukraine followed that recommendation.

**Q: Are DTRA personnel still in touch with counterparts in Ukraine?**

A: We are in touch with people who have a working relationship with DTRA. For example, we still have some personnel that work for us at the embassy and we check on them every day for safety, most days we are able to reach them. There are some contract support on the ground, we aren't talking directly to them but are talking to their contract heads and understanding their situation. We've got minimal contact with the gov of Ukraine due to bigger issues they are dealing with right now.

**Q: What do you make of the outrageous claims?**

A: They are absolutely that, they are outrageous claims. It's absolutely not what the CTR program does. We were created 30 years ago to eliminate WMD, and Russia knows that. We sanitized and dismantled their facilities at Stepnagorsk and Voz island to destroy weaponized anthrax and we destroy programs like that. Worked with them on a number of other programs with them directly up to 2014, destroying missiles, bombers, submarines, chemical weapons arsenals...They know what they do, we destroy WMD. If you look anywhere else in the world where we are active, you see the work we are doing for the health and safety of the people. I'm in Cameroon right now, one of the places I went today was the public health emergency operation center we built a couple years ago and commissioned just in time to use it for COVID. They have a single point to monitor what's now 6 outbreaks of COVID and a number of other diseases. This is the work we do in the world and Russia knows that, so the claims remain preposterous.

**Q: What milestones can you share from DTRA over the past 5 years?**

A: What we've done in the past 4 to 5 years has been an extension of what we started there since the beginning of 2005. We were able to work with ministries of health and agriculture, to take a decrepit and unsafe soviet system they inherited and make it meet world class international health standards for their laboratorians to safely do the work they do diagnosing disease in Ukraine. Every time we finished a lab that got them on that step, shut down an unsafe lab, those were considered milestones for us.

**Q: Why did this work take more than 15 years? Why can it not be done in 2-3 years?**

A: A few reasons...one is the physical speed of construction and renovation takes time. Putting a building on contract, going through the construction process and all the certifications required and transferring to the host nation for use can take 3-4 years for just that one project. As we work with any partner nation, we are looking at a baseline assessment of their health system, talking to them what are mutual goals are, U.S. goals, host nation goals, and as we work in that area, we train people, we have success in projects, we go off and find the next project in line that makes sense for both us and the partner to do together, so that's why you see it taking so long.

**Q: What is the annual expenditure of the work in Ukraine?**

A: don't have that.

**Q: In terms of the release of pathogens you worried about with the conflict in Ukraine, which ones worry you the most? Is anthrax a concern?**

A: There are a number of diseases that circulate in Ukraine, anthrax is one of them, African swine fever is another, these circulate in the country so as the field epidemiologists are collecting samples and sending up through the laboratory networks for diagnosis those are the kind of things that end of stored in the labs. Since they are Ukraine labs and not U.S. labs, I can't say specifically what pathogens are there but they will be collections of the diseases that are endemic to the country.

**Q: It must be bizarre for you knowing the work DTRA has done and seeing the claims...I mean how do you react?**

A: Sadly we've seen this in a slow simmer since Russia invaded Crimean peninsula in 2014 and ramping it up since then and only recently largely played in the local, regional press close to Russia. Since Russia ceased being a cooperative partner with the CTR program and started taking their aggressive actions in Ukraine, they have also decided to create this narrative and has recently exploded. I'm not happy at all.

**Q: It's surprising to me that it's had traction in each parts of the U.S. Has it made the U.S. rounds in media before?**

A: I haven't seen it in U.S. sites until recently, but recognizing that Russia comes from the soviet lineage of 70 years of honed expertise in propaganda and disinformation. They understand the psychology of their audiences they understand the kinds of outrageous claims that resonate. They have found a claim that activates some audiences here in the U.S. that believe bad things about their government.

**Q: Anything else you'd like to mention?**

A: Not at this time, Sharon, it sounds like you've talked to the right people that know our work well and you are building an accurate and positive picture of our work.

I've forwarded your message on to USUN and IO/UNP, who are wrangling this. We're keeping to a relatively high level and dismissing the credibility of allegations outright, along the lines taken by the White House and Ned Price in the last day or so — and voicing our concern about possible Russian CBW use.

We dont know for sure what the Russians are going to raise - my guess is that at least in part they'll focus on the new allegations levied today.

Thanks (b)(6)

DASD Johnson wants to take a quick chop on those products. He feels strongly that USUN needs to get this aligned and messaging needs to be seamless.

Relatedly (b)(6) just came back to us with edits to our fact sheet. I'll share the latest once we've got the edits reconciled.

Best,

## SITUATION ON THE GROUND

- (SBU) Fighting continued around the major cities in the north, in the Donbas, in Mariupol, and near Mykolayiv. Attacks diminished slightly and neither side made any strategic progress, but Russian forces continued to bombard civilian targets. (22 *US Office Ukraine Affairs Unit 20*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20USOFFICE%20UKRAINE%20AFFAIRS%20UNIT%2020%22> >
- (U) Ukraine's MFA announced 20,000 volunteers from 52 countries have enlisted in Ukraine's International Legion. Press reports said that number includes as many as 3,000 U.S. citizens. Ukraine Border Guards reported that 215,000 Ukrainians have returned to the country since the war began. (22 *US Office Ukraine Affairs Unit 20*) < Caution-  
<http://repository.state.gov/searchcenter/Results.aspx?k=mrn%3a%2222%20USOFFICE%20UKRAINE%20AFFAIRS%20UNIT%2020%22> >
- (U) Ukraine State Emergency Services released a video showing staff defusing a bomb from a downed Russian fighter jet in the northern city of Chernihiv. (*CNN*)

## RUSSIA

- (SBU) Russia requested a UN Security Council meeting for Friday, March 11, to discuss its false allegations of a U.S. biological weapons program in Ukraine. (*IO, RIA Novosti*)
- (U) JP Morgan Chase and Goldman Sachs said they are planning to exit Russia, while Citigroup said it is evaluating its future. (*Wall Street Journal*)
- (U) Venezuelan Vice President Delcy Rodriguez met with FM Lavrov in Turkey. She tweeted after the meeting that "Venezuela reaffirmed the principle of sovereign equality of states as a way to preserve balance for the sake of peace." (@delcyrodriguezv)

## INTERNATIONAL REACTIONS

- (U) EU heads of state, speaking on the sidelines of a meeting in Versailles, were cautious regarding Ukraine's application for EU membership. (*Reuters*)
- (U) At the Executive Council Session of the Organization for the Prohibition of Chemical Weapons (OPCW), dozens of countries condemned Russia's invasion of Ukraine in joint and national statements, including Latin American nations that normally shy away from political confrontation in the group. The United States organized a walkout during the Russian ambassador's remarks. (22 *OPCW The Hague 18*) < Caution-

**UNSC Russia Disinformation Remarks**  
**Amb. Linda Thomas-Greenfield,**

As a reminder, Russia is a State Party to the Chemical Weapons Convention and a State Party and Depository to the Biological Weapons Convention.

Russia's convening of today's session coincides with Russia's ominous letter to the Organization for the Prohibition of Chemical Weapons yesterday, suggesting falsely that Ukraine was preparing to use chemical weapons itself.

The intent behind these lies seems clear, and it is deeply troubling. We believe Russia could use chemical or biological agents for assassinations, on large crowds of civilians, as part of another staged or false flag incident, or to support tactical military operations.

[pause]

From the beginning, our strategy to counter Russia's tactics has been to share what we know with the world transparently. And candidly, we have been right more often than we'd like.

We're not going to let Russia get away with gaslighting the world or staining the integrity of the Security Council's purpose by using it as a venue for legitimizing its violence.

And despite Russia's best efforts, the media -- and everyday Ukrainians -- are documenting the truth on the ground.

Russia can't paint over the front page of the New York Times < Caution-  
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2FCaution-www.nytimes.com%2F2022%2F03%2F06%2Fworld%2Fukraine-family-killed-war.html&data=04%7C01%7CParkCh2%40state.gov%7C4be6e25b14a3407baf6c08da036550e4%7C66cf50745afe48d1a691a12b2121f44b%7C0%7C0%7C637826030919364812%7CUnknown%7CTWFpbGZsb3d8eyJWljoiMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C3000&sdata=DC8XnbXjpVfM9jg4ZfnzMuXclgmTmA%2FIFU%2F5qG%2BJits%3D&reserved=0> > , which on Monday featured the bodies of a Ukrainian mother and her two children -- who died while trying to cross a bridge outside Kyiv in their attempt to flee to safety.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2FCaution-www.cbsnews.com%2Fnews%2F11-year-old-ukrainian-boy-flees-to-slovakia-with-phone-number-scrawled-on-hand%2F&data=04%7C01%7CParkCh2%40state.gov%7C4be6e25b14a3407baf6c08da036550e4%7C66cf50745afe48d1a691a12b2121f44b%7C0%7C0%7C637826030919364812%7CUnknown%7CTWFpbGZsb3d8eyJWljojMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6IjEhaWwiLCJXVCi6Mn0%3D%7C3000&sdata=fVzzWzryjIMEk0YrLkB3gOO9ddpJFKaQHazXp171L70%3D&reserved=0> >  
that told the story of the 11-year-old Ukrainian boy who fled to Slovakia, by himself, with only a passport, a plastic bag, and a phone number scrawled on his hand.

Russia cannot silence the NBC News video footage < Caution-  
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2FCaution-www.nbcnews.com%2Fvideo%2Fterrified-crowds-rush-to-escape-kyiv-by-train-as-russian-attack-intensifies-134607941642&data=04%7C01%7CParkCh2%40state.gov%7C4be6e25b14a3407baf6c08da036550e4%7C66cf50745afe48d1a691a12b2121f44b%7C0%7C0%7C637826030919364812%7CUnknown%7CTWFpbGZsb3d8eyJWljojMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6IjEhaWwiLCJXVCi6Mn0%3D%7C3000&sdata=e0KwiLkUENqHYiM5gliVwecJiGtyZWps0BCIVzHlvZ8%3D&reserved=0> >  
of terrified Ukrainians rushing to packed train stations -- of mothers asking strangers to help pass their babies through the crowd and onto trains bound for safety.

Russia is failing in its quest to create an alternate reality. In fact, not even Russian diplomats can keep their propaganda straight.

Just yesterday, the Kremlin's spokesman said that he didn't have clear information about the Russian forces who fired on a maternity hospital...

Then the Russian Foreign Minister denied Russia attacked Ukraine at all, right before admitting that Russia deliberately targeted this maternity hospital.

Their story didn't matter, because the world had already seen the searing images broadcast on CNN < Caution-  
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2FCaution-www.youtube.com%2Fwatch%3Fv%3D0LvLSifQWzU&data=04%7C01%7CParkCh2%40state.gov%7C4be6e25b14a3407baf6c08da036550e4%7C66cf50745afe48d1a691a12b2121f44b%7C0%7C0%7C637826030919364812%7CUnknown%7CTWFpbGZsb3d8eyJWljojMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6IjEhaWwiLCJXVCi6Mn0%3D%7C3000&sdata=KWkSNgCj9soMkbAK7AJfAVms2VxhPjkrhpXqXxtT4w%3D&reserved=0> >  
of bloodied pregnant women being evacuated from the scene.

Even Russia's own citizens are tiring of such lies.

Russian athletes are writing "No war" on their shoes and on TV cameras. Russian citizens are marching in the streets and protesting Putin's war of choice. And even Russian state TV pundits -- Putin's own propaganda arm -- have called for Putin to stop the military action.

This is why we didn't object to holding today's meeting. Today's meeting has confirmed our predictions, revealed Russia's objectives to the world, and exposed Russia's lies for what they are.

It is a page directly out of the Russian playbook -- and it will not convince us one bit. Russian troops should be concerned about the impact of their potential use of chemical weapons and how they will be viewed by the world.

Unlike the Russian government -- whose first instinct is to silence -- we are confident that truth and transparency will prevail.

We call on President Putin to end this unprovoked, unconscionable war against the Ukrainian people and return sincerely to the negotiating table.

Good morning Dr. Williams,

Sir, for your awareness, this morning we will coordinate a media interview with the WSJ. The WSJ is preparing an article on the history of the Biological Threat Reduction Program. They'd like an interview with Dr. Pope for an article on countering false claims that have been put out about weapons work in Ukraine. Dr. Pope is supporting and has agreed to engage.

The WSJ has interviewed others for the story already. I researched the Editor on this piece, Sharon Weinberger, and her reporting is balanced and non-sensational and she's worked the same topic for years.

Once I get all the solid details this morning (time, other interviewees to this point, information she's received) I will let you know as soon as possible so that the information can be provided to Ms. Rosenblum and her team.

Please let me know if you have any questions or concerns. Thanks.

V/r,

**Subject:** Wall Street Journal Interview - Biological threat reduction

Gentlemen,

I received an email Sunday evening from the Wall Street Journal via LinkedIn. The WSJ is preparing an article on the history of the Biological Threat Reduction Program. They'd like an interview from Dr. Pope for an article on countering false claims that have been put out about weapons work in Ukraine. Sharon Weinberger is the editor who emailed me. She says that they have already done outside interviews with people who have been involved in the program, but need some official input from DTRA or DOD. Dr. Pope, I know you are traveling and would like your input when you are able to let us know. Randy, we (Andi and I) are prepared to discuss in the a.m. and options for this. I think we should seriously consider this one. The editor is thorough and has covered this topic extensively.

Thanks.  
Vr,

# The truth about Hunter Biden and the Ukrainian ‘bio labs’

By Glenn Kessler

Staff writer

Today at 3:00 a.m. EDT

 **Listen to article** 13 min

*“Hunter Biden’s Rosemont Seneca investment fund financed the Pentagon’s military biological program in Ukraine, said Igor Kirillov, head of the radiation, chemical and biological defense forces of the Russian Armed Forces.”*

— **RIA Novosti, Russian state-owned domestic news agency, March 24**

*“The National Pulse is reporting tonight apparently a private equity firm run by Hunter Biden funded some of the research into pathogens in these bio labs.”*

— **Tucker Carlson, remarks on his Fox News show, March 24**

*“Russia’s assertion that President Biden’s son Hunter was ‘financing ... biological laboratories in Ukraine’ was based in truth, according to e-mails reviewed by The Post.”*

— **New York Post article, March 26**

*“BOMBSHELL: Did Russia Invade Ukraine Because of the Bidens’ Biolabs? Hunter’s Laptop Says ‘Yes’”*

— **Headline on PJ Media article, March 26**

The Russian Defense Ministry knows how to stir up the interest of the right-leaning news media in the United States — just mention Hunter Biden, the president’s son.

Russia for years has been seeding the ground to claim that the United States set up biowarfare labs in Ukraine and other former Soviet republics — claims that have been revived as part of the invasion of Ukraine. As part of his media presentation, Igor Kirillov of the Russian armed forces alleged the labs were part of the U.S. plot to study the natural immunity of the population to identify the most dangerous pathogen for people in the region.

The Defense Ministry released a complex-looking flow chart with spaghetti lines depicting not only the involvement of Hunter Biden but financier George Soros in the alleged financing of “bioweapons labs.” But the reference to Hunter Biden was catnip to the right-leaning media. Reporters immediately dug into their copies of Biden’s laptop, supposedly left behind for repair in a Delaware shop in April 2019, and dredged up emails that they suggested validated the Russian report.

First of all, as we have previously documented, these are not bioweapons labs, but biological research facilities focused on better detecting, diagnosing and monitoring infectious-disease outbreaks. Second, random emails can be easily misinterpreted without additional reporting.

We’ve dug into the records and discussed the deals in question with people involved. The reporting from those news outlets is false. Hunter Biden has come under scrutiny for business deals in places such as Ukraine and China that took place while his father was vice president. But he was not “financing” these labs. In fact, he was not part of a decision to invest in a company at the center of the Russian allegations, he did not profit from it as he was kicked out of the investment firm over cocaine allegations, and the company made little money from its tiny bit of business in Ukraine.

## The Pentagon program

There are several layers to this story, so let’s peel the onion. There is a U.S.-led project, known as the Cooperative Threat Reduction program, to help former Soviet states transform old Soviet labs into state-of-the-art biological research facilities. Various American companies received contracts from the Pentagon to do that work. One of those subcontractors — a relatively minor one called Metabiota — did some work in Ukraine. That firm received an investment from a private equity firm associated with Hunter Biden.

That investment had nothing to do with the labs in Ukraine. But the Russian Defense Ministry's flow chart is a good illustration of how tenuous connections can be made to look sinister. Underneath Hunter Biden, the chart shows a box with Soros. A line then connects Soros to Gilead Sciences, a U.S. biopharmaceutical company that was a Pentagon subcontractor. The line eventually leads to the Ukrainian Health Ministry and the labs.

Soros Fund Management, an investment firm founded by Soros in 1970, as recently as 2010 owned shares of Gilead, according to Securities and Exchange Commission filings, along with hundreds of other stocks. But that's it. "We have no affiliation with George Soros — any assertion otherwise is completely false," said Chris Ridley, a Gilead spokesman. His statement is confirmed by the most recent SEC filing by Soros Fund Management, as well as by Laura Silber, a Soros spokesperson.

Now let's examine the alleged Hunter Biden connection. The flow chart shows a line from Hunter Biden to "Rosemont Seneca," which in turn is connected to Metabiota, which advises governments and companies on health epidemics. There's also a line connecting Metabiota to the Defense Threat Reduction Agency (DTRA), an arm of the Pentagon, which initially funded the Ukrainian labs. The line from Metabiota then traces to the labs.

The DTRA line to Metabiota is a tacit admission by the Russians that Pentagon funding played a role in the company's work. The United States and Ukraine in 2005 had signed an agreement under which the Defense Department, at no cost to Ukraine, would assist the Ministry of Health in building and maintaining the labs. The United States "has invested approximately \$200 million in Ukraine since 2005, supporting 46 Ukrainian laboratories, health facilities, and diagnostic sites," the Defense Department said in a fact sheet released this month.

## **A San Francisco technology company**

Metabiota, which is based in San Francisco, was founded by Nathan Wolfe, a prominent virologist. The firm essentially acted as a staffing agency, helping identify people who could be hired to work in high-level biological research labs and providing research mentoring, according to a company official. Another U.S. firm, Black & Veatch, was hired by the Defense Department under a contract aimed at enhancing disease diagnosis, mainly to build labs; Metabiota was one of its subcontractors.

“There are only diagnostic laboratories for routine human and animal health requirements akin to any standard U.S.-based public-facing diagnostic laboratory,” said Andrea Chaney, a DTRA spokesperson. “For many years, the companies Black & Veatch, Metabiota, and Gilead Sciences have performed a variety of training, renovation, and equipping projects competitively awarded by the Cooperative Threat Reduction program to support Ukrainian critical human and veterinarian public health infrastructure needs. The work has always centered on improving the health, safety and well-being of the Ukrainian people.”

Dangerous pathogens are kept in freezers in these labs, so U.S. officials have expressed concern that a loss of electrical power due to the war could allow for their escape — concerns that Russia has used to underscore its claims that these are biolabs.

Federal contracting records show Metabiota also received \$18.4 million from DTRA between 2014 and 2017, under a competitively bid contract. Just \$307,091 is listed as earmarked for “Ukraine research projects.” The company had a significantly bigger contract at the time with DTRA in Tanzania, focused on controlling the spread of Rift Valley fever.

## **An investment firm tied to Hunter Biden**

So where’s Hunter Biden in all of this? Let’s start with an investment vehicle called Rosemont Seneca Partners. It was founded by Hunter Biden, Devon Archer and Christopher Heinz in 2009. That firm in turn had a stake in an independent firm called Rosemont Seneca Technology Partners (RSTP), which invested in emerging technology companies.

Through his stake in Rosemont Seneca, Biden was a member of RSTP and would have benefited from successful investments. But he was not on the committee making decisions on investments, according to an investor at the time, who asked not to be identified because he was disclosing confidential business information.

When Metabiota had the DTRA contract, the company was transitioning from a nonprofit to a profit-making enterprise and sought funding from Wall Street and Silicon Valley investors. In early 2014, RSTP invested \$500,000 in what is known as the seed round — a new company’s initial effort to raise capital, according to a 2014 confidential memo on Metabiota’s investments obtained by The Fact Checker. Later that year, the memo said, RSTP contributed another \$10 million, which gave it 13.4

percent ownership of the company. The memo said Metabiota was not expected to achieve consistent profitability until 2017.

These investments were not related to the U.S.-funded labs in Ukraine. Instead, investors such as RSTP were betting on a new idea — selling insurance to protect businesses against a global pandemic.

Any company seeking to raise money in the private equity market needs “a story” to lure investors, who hope to score big if the company eventually sells shares to the public. The Ebola virus outbreak in 2014 had raised corporate fears of a global pandemic. Metabiota’s “story” was that the data collected by the firm’s epidemiologists and researchers around the world provided an early-warning system on emerging biothreats and could be used to create an insurance product that would shield companies — or even entire countries — from a global economic downturn during a pandemic.

There was not much money that could be earned with Metabiota’s contracts to place researchers in labs. But the insights that could be gained from being on the ground were considered valuable. “The DOD contract was a loss leader intended to build a knowledge base,” the investor said, using a business term for selling a product or service at a price that is not profitable in hopes of generating additional business.

Most of the company’s work was in African countries, according to the confidential deal memo. Regarding Ukraine, the 44-page memo only mentions that the company had an office in the country, which will “implement a research project in Ukraine aimed at understanding the threat of tularemia and anthrax” and “develop and implement a public awareness campaign to mitigate the threat of African swine fever.” A person familiar with the Ukraine contract at the time said it employed about five local nationals and one expat.

## Hunter Biden’s ouster

Moreover, by the time the document was written, on Nov. 18, 2014, Hunter Biden was already in hot water with his colleagues. A month earlier, the Wall Street Journal reported that he had been discharged that February from the Navy Reserve after testing positive for cocaine use. Biden had not disclosed the discharge to RSTP members and so in early 2015 he was eased out of the firm, the investor said. RSTP in 2016 rebranded itself Pilot Growth Equity.

“We were marketing our funds to investors, positioning our management as having a certain level of character,” the investor said. “We would not be able to raise money from investors” if Biden had remained a member of RSTP. So Biden was removed from the RSTP Management Company and RSTP Fund I, which included the Metabiota investment. After that point, he had no economic interest or ownership interest in either entity.

Chris Clark, an attorney for Hunter Biden, did not respond to repeated queries. Archived RSTP webpages show that Biden was removed from the “team” page between 2014 and 2015, even as his business partner Devon Archer remained.

Pilot Growth Equity invested a total of \$11.39 million in the fund and still owns 10.8 percent of Metabiota, according to a Dec. 31, 2020, investment sheet viewed by The Fact Checker. The 2014 investment memo optimistically anticipated an initial public offering by 2017, but that did not happen. Even with the coronavirus pandemic, hopes for a booming insurance market to protect companies from such events have not panned out. Wolfe, in a 2020 interview with Wired magazine, said not a single company ever bought an insurance contract.

“Our current value of the [Pilot Growth Equity] investment is \$1.1 million,” the investor said. “So this was a big money loser.”

In a statement to The Fact Checker, Metabiota said: “Metabiota worked in Ukraine until 2020, providing training to help improve local capacity to detect and respond to health threats. We’re concerned about the disinformation and the impact it may have on the safety of scientists working to support public health in Ukraine and worldwide.”

## Russian disinformation spreads

In other words, Hunter Biden was barely involved in the RSTP deal. Moreover, the investment had nothing to do with the Ukraine labs. But Hunter Biden’s laptop contains some emails that discuss the pending investment.

Those emails led to reporting in the right-wing media that did not initially mention the source of the original allegation — the Russian Defense ministry. And the journey of this false storyline from Moscow to U.S. media offers yet another reminder of how disinformation spreads in this polarized modern era.

The National Pulse, a website run by former associates of former Trump adviser Stephen K. Bannon, on Thursday published an account based on some of the laptop emails about 12 hours after the Russian Defense Ministry made its presentation. There is no mention of the Russian claim. Raheem Kassam, editor in chief, insisted to The Fact Checker that he was unaware of the Russian allegations until five minutes before publication, when he did a quick Google check.

Carlson then cited the National Pulse reporting that night on his show. He also made no mention of the Russian Defense Ministry allegations, though in another part of his monologue he said he had spoken to “someone with direct firsthand knowledge of this topic,” who claimed that the United States had moved “bioweapons research offshore” to Ukraine because it was too dangerous to conduct in the United States. Maybe it’s just a coincidence but that’s also what Kirillov, the Russian official, had claimed that morning. Carlson did not respond to a request for comment.

The Daily Mail on Friday followed up with a more detailed look at the Biden emails mentioning Metabiota. This article acknowledged the Russian presentation but declared “emails and correspondence obtained by DailyMail.com from Hunter’s abandoned laptop show the claims may well be true.” That same approach was taken by the New York Post in article published on Saturday. The New York Post did not respond to a request for comment, while a Daily Mail spokesman said: “We stand by our reporting.”

One of the laptop emails shows Hunter Biden contacting an official at Burisma, a Ukrainian gas company where he was a board director, in April 2014 about the possibility of a “science project” involving Metabiota. The reply email from the Burisma official indicates some skepticism and confusion about what Biden was pitching.

In the early months of 2014, political tensions in Ukraine had risen sharply. The Ukrainian president had resigned in February and fled to Russia. Within weeks, Russia invaded and subsequently annexed Crimea.

In response, the Defense Department issued a “stop-work” order on Black & Veatch’s contract and Metabiota was scrambling to find work for its local scientists and researchers, the person familiar with the contract said. Biden briefly tried to use his connections to help the firm, but nothing came of his outreach. The work ended in June and was not revived until the political situation calmed down a year later — after RSTP had cut ties with Biden.

## Moscow falsely accuses U.S. of funding biowarfare in Ukraine despite Kremlin once benefiting from Pentagon program

The Pentagon denies Russia's accusations of funding weapons work in Ukraine's biological laboratories.

*By Sharon Weinberger*

March 20, 2022 5:30 am ET

On his first official visit abroad, the new senator from Illinois, Barack Obama, was taken to a facility in Ukraine where the U.S. helped scientists working with dangerous biological materials. But rather than produce biological weapons, U.S. officials in that ramshackle building were trying to prevent lethal pathogens from falling into the hands of terrorists.

"I removed a tray of glass vials containing *Bacillus anthracis*, which is the bacterium that causes the anthrax," recalls Andrew Weber, the Pentagon official who was in charge of the U.S.-funded program that worked with the Ukrainian government. Mr. Weber said he showed the tray "to a very concerned-looking young senator."

Mr. Obama himself recalled seeing in his 2005 trip to Ukraine "test tubes filled with anthrax and the plague lying virtually unlocked and unguarded."

A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union and to build trust between Washington and Moscow after the Cold War has instead become a new flashpoint in an information war between the two countries in the wake of Russia's invasion of Ukraine.

Moscow has accused the Pentagon of funding weapons work in Ukraine's biological laboratories. "These were not peaceful experiments," Russian Foreign Minister Sergei Lavrov said earlier this month.

China, whose leader Xi Jinping has cultivated a close relationship with Russian President Vladimir Putin, has echoed those allegations. "Russia has found during its military operations that the U.S. uses these facilities to conduct bio-military plans," the Chinese Foreign Ministry spokesman told reporters.

U.S. officials have flatly denied those claims and warned that Moscow could use its allegations to justify its own use of weapons of mass destruction in Ukraine.

“We believe that Moscow may be setting the stage to use a chemical weapon and then falsely blame Ukraine to justify escalating its attacks on the Ukrainian people,” Secretary of State Antony Blinken said last week. “Manufacturing events and creating false narratives of genocide to justify greater use of military force is a tactic that Russia has used before.”

The allegations have shocked those who are most familiar with the Pentagon’s post-Cold War initiative, called the Cooperative Threat Reduction program. That is because not only has Russia been aware of the Pentagon’s work securing chemical, biological and nuclear facilities across the former Soviet Union, but it had also been its beneficiary for many years.

“They’re outrageous claims,” said Robert Pope, the head of the Defense Threat Reduction Agency, or DTRA, the arm of the Pentagon in charge of running the program. “We were created 30 years ago to eliminate weapons of mass destruction, and Russia knows well we eliminate weapons of mass destruction.”

The program, which dates back to 1991 and continues today, stretches across the former Soviet Union. Since the program started, the Pentagon has spent approximately \$12 billion on securing material used in weapons of mass destruction in post-Soviet republics, according to a DTRA spokeswoman. Of those funds, about \$200 million has been spent on the biological work in Ukraine since 2005. The funds have supported dozens of labs, health facilities and diagnostic sites around the country, the DTRA spokeswoman said.

Mr. Weber, who was in charge of negotiating the initial agreement with Kyiv to work on securing the country’s biological materials and facilities, said that work expanded to Ukraine after the 9/11 attacks, when al Qaeda terrorists hijacked aircraft and crashed them into the World Trade Center towers and the Pentagon. U.S. policy makers grew worried about the potential for terrorists to steal biological materials – fears that were heightened after letters containing anthrax were sent in the U.S. mail to congressional offices and media outlets. The FBI eventually concluded that an American scientist employed at a military lab sent the letters.

The president of Ukraine at the time, Leonid Kuchma, concerned about the threat of terrorism in his own country, asked the U.S. for help. Since the collapse of the Soviet Union a decade earlier, Ukraine had been starved of the funds needed to secure its biological facilities.

Mr. Weber put together a team that visited Ukraine's biological and chemical facilities, which ranged from large laboratories to small veterinary research centers. "We found that a number of them had dangerous pathogen collections left over from Soviet days," he said. "They were in pretty bad shape."

Ukraine's laboratories—unlike some in other former Soviet republics—weren't directly involved in the Cold War biological-weapons program, but they did have pathogens that fed into offensive work, according to Mr. Weber.

Those pathogens, like anthrax, could pose a threat if released, whether accidentally or on purpose. The focus of U.S. work in Ukraine was to consolidate that biological material, much of it related to agriculture, into secure facilities, which the U.S. would pay to build or upgrade.

Paul McNelly, who from 1995 to 2003 directed the Defense Department's chemical and biological elimination programs in Russia, Kazakhstan and Uzbekistan, said he was stunned with what he saw inside the former Soviet facilities.

"You would walk into these places and the refrigerators that stored these dangerous pathogens, they had no locks on them at all," Mr. McNelly said. "There would be vials that were labeled tularemia, plague, different things like that. And these people, most of them, weren't masked. Their gowns were antiquated." He added: "It was horrible."

As part of the program, the Pentagon spent \$1 billion to build the Russians a facility in Shchuchye, Siberia, to demilitarize some two million chemical weapons. By the time it was done in 2009, ties with Moscow were growing tense. The price of oil was going up, giving Russia more revenue to wean itself off foreign assistance. At the same time, Mr. Putin was consolidating power.

As a result, the Russian government became a less-willing partner to the Pentagon's drive to secure the deadly materials, according to James Tegnalia, who served as the head of DTRA from 2005 to 2009. "They wanted our money, but they didn't want to admit that we built the facility," Mr. Tegnalia said. "You could see that they were getting ready to pull back."

Russia's Foreign Ministry had in the past praised the program. But by 2012, Moscow declined to renew cooperation, saying it could pay for the work on its own.

In 2014, the year Moscow illegally annexed Crimea and began backing separatists in Ukraine's Donbas region, the program in Russia drew to a close.

A spokesman for the Russian Embassy in Washington, D.C., didn't respond to a request for comment on the Pentagon program.

Yet even with that chapter of its cooperation over, the Russian claims about the Pentagon conducting secret weapons work in Ukraine came as a surprise not only to those who have worked on the program but also to other Western officials. The Kremlin has in the past used such charges as cover for its own actions, they say.

"We are concerned that Moscow could stage a false-flag operation, possibly including chemical weapons," North Atlantic Treaty Organization Secretary-General Jens Stoltenberg said last week.

U.S. officials have declined to discuss what specific intelligence, if any, they have to indicate Russia might be preparing to deploy chemical or other unconventional weapons to Ukraine. But they say Russia has a history of using chemical weapons, including against Mr. Putin's domestic political opponents, and it has encouraged their use in Syria by President Bashar al-Assad's government.

The Russian government shot back against the U.S. allegations, denying plans to use chemical weapons. In a post last week on its official Telegram channel, the Russian Defense Ministry said the units fighting in Ukraine "do not have chemical munitions."

Mr. Tegnelia, the former DTRA director, views Russia's allegations as a path to an even more dangerous escalation. "If you see them using chemical weapons in Ukraine, watch out," he said, "because they're only one step away from nuclear weapons."

**Attachments:** smime.p7s

Ma'am,

Here is an item for today's A&S Ukraine assistance update:

(U) Over the weekend, The Canadian Broadcasting Corporation (CBC) aired an extensive report on Russian disinformation about Ukraine bio labs. The piece featured a face-to-face interview with Dr. Robert Pope of DTRA's Cooperative Threat Reduction Program. Dr. Pope articulated the history of US involvement in mitigating bio threats in Ukraine following the fall of the Soviet Union, and countered disinformation about the nature of the labs currently operating in Ukraine.

Sirs, FYI below per Dr. Williams.

BLUF: due to the recent RUS "Note Verbale" presented 2 days ago at the BWC in Geneva (PDF file attached), and RUS presentation this morning (Word doc attached) at the UN Security Council claiming the US is developing bio weapons in UKR, the NSC (Beth Cameron) has reached out directly to DTRA (specifically Dr. Pope) for a quick conversation on this issue for preparation of an upcoming sub-IPC. This conversation will take place at 1600 today.

OSD-P and NCB/TRAC have both been looped in and Policy is leading the discussion for DoD. I have been asked to participate; I invited CT's rep to the CORT so he can back-brief them; and the IOFC (Ana) is welcome to attend as well. Note, Policy wants to keep this discussion limited. Will keep everyone informed as to the outcome of the discussion. Ms. Cameron will not participate; it will be her staff on the NSC.

Unless Policy wants DTRA representation, we will likely not be invited to the IPC on Monday, as Policy has been attending those on this topic and is the gatekeeper.

Sir, FYI - NSC (b)(6) reached out to (b)(6) NSC wants to help with disinformation, given the RUS Note Verbale they presented at the BWC 2 days ago, and now RUS apparently did the same at the UN Security Council this morning. Attached is what was presented at the BWC, and we are trying to find out what RUS presented this morning. It is likely the same product.

I looped in my Policy comrades for the discussion the NSC wants to have with us this afternoon at 1600. Not sure if we (DTRA) will be invited to the sub/IPC on Monday. Will keep you posted.

Frankly, the NSC is way behind here. But we will support them as needed/required, unless you have other guidance.

(b)(6) (don't want to clobber them with administrative chatter)

Hi (b)(6) happy to talk with you at 4pm. If we can include our Policy comrades on that discussion, that would be great. They have been attending the series of sub/IPCs on this topic.

Attached is what the Russians presented at the BWC, translated into English. It is very weak argument, frankly, and I expected better. If they present the same material at the UNSC this morning, we certainly can work together to debunk this nonsense.

(b)(6)

any thoughts?

Thanks, (b)(6)

Hi (b)(6)

Russia is convening the UNSC again this morning to launder its disinformation and to malign U.S. support for biological facilities and laboratories in Ukraine.

It's not going away anytime soon in the media or in international fora (BWC, UNSC, etc.), so we'd like explore with you some fresh, creative approaches to turning Russian disinformation upside down. As a starting point, I'm going to get the "evidence" that Russia furnished for the UNSC convening this morning.

NSC Democracy is hosting a subIPC on Monday @ 1:00 PM on countering disinformation regarding the U.S., Ukraine, and CBW (for example: <https://tass.com/politics/1423129>). I'll make sure you get that invite, and would welcome the opportunity to talk to you beforehand - either 4:00 PM today or Monday morning 9:30 or 10?

Many thanks!  
Best,

**Subject:** Possible Bio Program Disinformation Posting concerning USFK w/Suggested Ukraine Linkage

Dr. Pope et al –

BLUF, attached is an article/posting suspected by the Russian EMB “There is a U.S. Bio-chemical Warfare Lab, which contributed to the Ukraine situation, in Pusan as well!

[Youthassembly.kr/news/630847](http://Youthassembly.kr/news/630847)”

This post has not been seized upon by major media outlets but is a clear attempt to malign JPEO sensor systems on peninsula (program classified US SECRET), USFK and connect with US (CTR) in the Ukraine.

USFK/J39 is keeping us apprised. Will keep you posted.

If any questions, please let us know.

Some contents that are hard to have their number were posted on the official SNS site of the Russian Embassy in ROK.

24 Mar 2022, the official TWITTER account operated by the Russian Embassy in South Korea introduced a link of a news article reading “Pusan city maintains the U.S. Bio-chemical Warfare Lab that led to the Ukraine circumstance!”.

Users of SNS and online community point a finger at such a message. The online community, “The ku”, said that “So, are you going to invade South Korea as you did Ukraine?”, noting that “finally, the Russian Embassy became crazy”. This posting was removed shortly, yet another introducing the link concerned was published.

The users raised their voices, saying that “are they threatening?”, “how much money are they getting sitting there?”, “what’s wrong with the behaviors of the Embassy”.

## Russian Embassy

There is a U.S. Bio-chemical Warfare Lab, which contributed to the Ukraine situation, in Pusan as well!

[Youthassembly.kr/news/630847](http://Youthassembly.kr/news/630847)

The News coverage introduced by the Russian Embassy was posted on the site run by ROK Youth Congress Press Corps. According to the contents, 21 Mar 22, Pusan baekunpo had a protest against ROK/U.S. Combined Military Wartime Exercise.

The KCTU, Pusan district supervisor, Mr. Kim, Jaenam attending this event, made the case that chemical and biological weapons lab situation in Ukraine can also take place in South Korea, citing that today our condition is nothing short of the crisis that the Ukrainians faced, and the U.S. has operated the biochemical facilities not only at the 8<sup>th</sup> pier in Pusan but across the nation, developing activities to be able to elevate such a warfare capability ceaselessly, also on a yearly basis, the U.S. has doubled down efforts for ROK/U.S. Bio-chemical Defense Drills.

It is true that there happened bacteriological experiment related accidents in ROK, however that’s debatable on whether the official SNS channel by the Russian Embassy deals with the issue in an inflammatory manner is right or not, also what’s behind the scene.

Based on the last news report by SISA in, back in 2015, anthrax bacterium at the U.S. Airforce base in Osan, which is transported for bacteriological experiment, has been exposed to some Military service members and civilians. In 2016, it was discovered that the USFK facilities at the 8<sup>th</sup> pier of Pusan has established and run the military bio-chemical lab.

The very small amount of emission of the deadly poison may cause catastrophe. The USFK then expressed their opinions, noting that Jupiter program is designed to detect, analyze, and alert the deadly poison substances as defensive system against threats from bio-chemical warfare, yet turned out to be false. In Dec 2019, the USFK officially accepted the fact that there exists the bio-chemical weapon lab in

Pusan port. In 2000, "Media Today" has featured the article that the local news outlets have kept silent on this experiment conducted by the USFK.

## “우리나라도 침공하겠다고?” 주한러시아대사관 공식 SNS에 의문스런 글이 올라왔다

2022-03-24 14:29 한제윤 기자

러시아대사관 한국 SNS에 올라온 글  
우크라이나 사태 미국 세균실험실과 연관성 주장

주한 러시아대사관 공식 SNS에 의도를 알 수 없는 글이 게재됐다.

기사 내용과 관련 없는 자료 사진 / 뉴스1

24일 러시아대사관 한국 공식 트위터 계정에는 "우크라이나 사태의 원인 미국 생물무기연구소가 부산에도 있다!"라며 한 기사의 링크가 소개됐다.

해당 내용은 SNS와 온라인 커뮤니티 이용자 사이에서 비판을 받았다. 온라인 커뮤니티 더쿠에서는 "드디어 미X버린 러시아 대사관"이라며 "아니 그래서 우크라이나처럼 한국도 침공하겠다고?"라는 말까지 나왔다. 이 게시글은 얼마 지나지 않아 삭제됐으나, 곧바로 해당 링크를 소개하는 게시글이 또 게재됐다.

이용자들은 "지금 협박하는 건가?", "저기 앉아 있는 거 돈 얼마나 받을까?", "대사관이 하는 행동이 왜 저럴까" 등 비판의 목소리를 높였다.

다시 게재된 게시물

러시아 대사관에서 소개한 기사는 대한민국청소년의회 기자단 사이트에 게재돼 있었다. 내용에 따르면 지난 21일 부산 백운포에서 한미연합군 연습중단 촉구결의 대회가 열렸다.

이 자리에 참석한 김재남 민주노총 부산지역본부장은 "멀리 우크라이나 생물무기연구소 사태가 이제는 한국에서도 일어날 수 있다. 오늘날 우리 처지는 우크라이나와 다를 바 없다. 미국은 우리나라에도 부산항 8 부두를 비롯해 전국 각지에 세균 시설을 운영하고 있으며 끊임 없이 세균전 능력을 높이기 위한 활동을 진행하고 있다. 한미합동군사 연습 기간엔 한미생물방어 연습을 해마다 강행했다"고 주장했다.

한국에서 세균실험 관련 사고가 터졌던 것은 사실이다. 하지만 러시아 대사관 공식 SNS 채널에서 선동적으로 다뤄야 하는 내용이 맞는지, 어떤 의도를 담은 것인지에 대한 의견은 분분하다.

기사 내용과 관련 없는 자료 사진. 세한 우크라이나인들의 행진. / 뉴스1

지난해 시사in에서 보도한 내용에 따르면 2015년, 경기도 오산의 미국 공군기지에 세균실험 목적으로 배송된 살아있는 탄저균에 군인과 시민이 노출됐다. 이후 2016년, 부산항 8부두의 미군 전용시설에서 군사용 세균실험실이 설치·운영되고 있던 사실도 드러났다.

맹독성 물질은 극소량이 누출되어도 대참변이 일어날 수 있다. 당시 미군 측은 "'주피터 프로그램'이 '생화학전 위협에 대비하기 위해 독성물질을 탐지·분석·경고하는 방어용 시스템'이다"라고 입장을 전했다. 이는 거짓으로 밝혀졌다. 이후 2019년 12월 주한미군은 세균무기 실험실이 부산항에 존재한다는 사실을 공식 인정했다.

2020년에는 미디어 오늘이 미군 세균전 실험을 지역언론이 침묵하는 것에 대한 내용을 보도하기도 했다.

Sir(s), update from the NSC call today. IOFC attended, as well as 2 other SME's from CTR.

- Goal of the meeting was to help prep NSC for the sub-IPC on Monday at 1300, and solicit good ideas from DoD on how to deal with the problem.
- It was led by one junior staffer who recognized the problem - but was not deep at all on the topic. The entire discussion was about a narrow public affairs approach to the problem.
- NSC shared some ideas they have, most of them good ideas and most of which we (DTRA) are either doing or tracking.
- Staffer wanted to know if DoD has any good ideas. Policy (Aaron Jay) shared some examples, and I did as well about enhancing our PA messaging through DTRA platforms and media interviews.
- Staffer shared Rep Majorie Taylor Greene is going to sponsor a bill in Congress that will "stop US Bio programs around the world."
- I added as an alibi and recommended the NSC look at this holistically, and not just as a public affairs problem. The "light" and "dark side" need to work in sync. Staffers said she would loop in other NSC folks to the discussion on Monday.
- Sub IPC will be held on Monday 3/21; Policy (Aaron) will attend; DTRA will not be asked to support the IPC.
- The Sub IPC will be held on Govt Zoom, unclassified. (I will with-hold further comment on this point).

Subject: FW: Ukraine Labs and DoD CTR

Sirs, FYI below per Dr. Williams.

BLUF: due to the recent RUS "Note Verbale" presented 2 days ago at the BWC in Geneva (PDF file attached), and RUS presentation this morning (Word doc attached) at the UN Security Council claiming the US is developing bio weapons in UKR, the NSC (Beth Cameron) has reached out directly to DTRA (specifically Dr. Pope) for a quick conversation on this issue for preparation of an upcoming sub-IPC. This conversation will take place at 1600 today.

OSD-P and NCB/TRAC have both been looped in and Policy is leading the discussion for DoD. I have been asked to participate; I invited CT's rep to the CORT so he can back-brief them; and the IOFC (Ana) is welcome to attend as well. Note, Policy wants to keep this discussion limited. Will keep everyone informed as to the outcome of the discussion. Ms. Cameron will not participate; it will be her staff on the NSC.

Unless Policy wants DTRA representation, we will likely not be invited to the IPC on Monday, as Policy has been attending those on this topic and is the gatekeeper.

Sir, FYI - NSC (b)(6) reached out to Rob. NSC wants to help with disinformation, given the RUS Note Verbale they presented at the BWC 2 days ago, and now RUS apparently did the same at the UN Security Council this morning. Attached is what was presented at the BWC, and we are trying to find out what RUS presented this morning. It is likely the same product.

I looped in my Policy comrades for the discussion the NSC wants to have with us this afternoon at 1600. Not sure if we (DTRA) will be invited to the sub/IPC on Monday. Will keep you posted.

Frankly, the NSC is way behind here. But we will support them as needed/required, unless you have other guidance.

- (b)(6) (don't want to clobber them with administrative chatter)

Hi (b)(6) happy to talk with you at 4pm. If we can include our Policy comrades on that discussion, that would be great. They have been attending the series of sub/IPC's on this topic.

Attached is what the Russians presented at the BWC, translated into English. It is very weak argument, frankly, and I expected better. If they present the same material at the UNSC this morning, we certainly can work together to debunk this nonsense.

(b)(6) any thoughts?

Thanks (b)(6)

Hi, Rob and (b)(6)

Russia is convening the UNSC again this morning to launder its disinformation and to malign U.S. support for biological facilities and laboratories in Ukraine.

It's not going away anytime soon in the media or in international fora (BWC, UNSC, etc.), so we'd like explore with you some fresh, creative approaches to turning Russian disinformation upside down. As a starting point, I'm going to get the "evidence" that Russia furnished for the UNSC convening this morning.

NSC Democracy is hosting a subIPC on Monday @ 1:00 PM on countering disinformation regarding the U.S., Ukraine, and CBW (for example: <https://tass.com/politics/1423129>). I'll make sure you get that invite, and would welcome the opportunity to talk to you beforehand - either 4:00 PM today or Monday morning 9:30 or 10?

Many thanks!

Best,

Sir, per your request, see attached word document that picks apart the Note Vebale presented by the Russians at the BWC in Geneva, the UN Security Council in NY, and the OSCE. If you are ok with this product, we will send to the State AVC folks, NCB, and Policy so that we can prepare for the upcoming BWC Planning Conference in Geneva (4-8 April). State specifically asked for it.

Also, we are revising some testimony questions that you will probably get based on all the media reporting over the last few weeks, touching on the UKR Bio labs narrative.

Finally, we have 30 minutes with you on Thursday to "get you smart" on BTRP, with a focus on UKR, per your request.

I know this is preaching to the choir... but remind the NSC (or have policy do it) that there is a lot of previously cleared messaging that can be used (and should be used for the POTUS NATO visit next week). So the wheel doesn't have to be re-invented.

That said, I assume your staff is picking apart the specifics in the Russian note verbal.... Once that is done, I would like to see it - I will need it for my testimony background.

## Moscow falsely accuses U.S. of funding biowarfare in Ukraine despite Kremlin once benefiting from Pentagon program

The Pentagon denies Russia's accusations of funding weapons work in Ukraine's biological laboratories.

*By Sharon Weinberger*

March 20, 2022 5:30 am ET

On his first official visit abroad, the new senator from Illinois, Barack Obama, was taken to a facility in Ukraine where the U.S. helped scientists working with dangerous biological materials. But rather than produce biological weapons, U.S. officials in that ramshackle building were trying to prevent lethal pathogens from falling into the hands of terrorists.

"I removed a tray of glass vials containing *Bacillus anthracis*, which is the bacterium that causes the anthrax," recalls Andrew Weber, the Pentagon official who was in charge of the U.S.-funded program that worked with the Ukrainian government. Mr. Weber said he showed the tray "to a very concerned-looking young senator."

Mr. Obama himself recalled seeing in his 2005 trip to Ukraine "test tubes filled with anthrax and the plague lying virtually unlocked and unguarded."

A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union and to build trust between Washington and Moscow after the Cold War has instead become a new flashpoint in an information war between the two countries in the wake of Russia's invasion of Ukraine.

Moscow has accused the Pentagon of funding weapons work in Ukraine's biological laboratories. "These were not peaceful experiments," Russian Foreign Minister Sergei Lavrov said earlier this month.

China, whose leader Xi Jinping has cultivated a close relationship with Russian President Vladimir Putin, has echoed those allegations. "Russia has found during its military operations that the U.S. uses these facilities to conduct bio-military plans," the Chinese Foreign Ministry spokesman told reporters.

U.S. officials have flatly denied those claims and warned that Moscow could use its allegations to justify its own use of weapons of mass destruction in Ukraine.

“We believe that Moscow may be setting the stage to use a chemical weapon and then falsely blame Ukraine to justify escalating its attacks on the Ukrainian people,” Secretary of State Antony Blinken said last week. “Manufacturing events and creating false narratives of genocide to justify greater use of military force is a tactic that Russia has used before.”

The allegations have shocked those who are most familiar with the Pentagon’s post-Cold War initiative, called the Cooperative Threat Reduction program. That is because not only has Russia been aware of the Pentagon’s work securing chemical, biological and nuclear facilities across the former Soviet Union, but it had also been its beneficiary for many years.

“They’re outrageous claims,” said Robert Pope, the head of the Defense Threat Reduction Agency, or DTRA, the arm of the Pentagon in charge of running the program. “We were created 30 years ago to eliminate weapons of mass destruction, and Russia knows well we eliminate weapons of mass destruction.”

The program, which dates back to 1991 and continues today, stretches across the former Soviet Union. Since the program started, the Pentagon has spent approximately \$12 billion on securing material used in weapons of mass destruction in post-Soviet republics, according to a DTRA spokeswoman. Of those funds, about \$200 million has been spent on the biological work in Ukraine since 2005. The funds have supported dozens of labs, health facilities and diagnostic sites around the country, the DTRA spokeswoman said.

Mr. Weber, who was in charge of negotiating the initial agreement with Kyiv to work on securing the country’s biological materials and facilities, said that work expanded to Ukraine after the 9/11 attacks, when al Qaeda terrorists hijacked aircraft and crashed them into the World Trade Center towers and the Pentagon. U.S. policy makers grew worried about the potential for terrorists to steal biological materials – fears that were heightened after letters containing anthrax were sent in the U.S. mail to congressional offices and media outlets. The FBI eventually concluded that an American scientist employed at a military lab sent the letters.

The president of Ukraine at the time, Leonid Kuchma, concerned about the threat of terrorism in his own country, asked the U.S. for help. Since the collapse of the Soviet Union a decade earlier, Ukraine had been starved of the funds needed to secure its biological facilities.

Mr. Weber put together a team that visited Ukraine's biological and chemical facilities, which ranged from large laboratories to small veterinary research centers. "We found that a number of them had dangerous pathogen collections left over from Soviet days," he said. "They were in pretty bad shape."

Ukraine's laboratories—unlike some in other former Soviet republics—weren't directly involved in the Cold War biological-weapons program, but they did have pathogens that fed into offensive work, according to Mr. Weber.

Those pathogens, like anthrax, could pose a threat if released, whether accidentally or on purpose. The focus of U.S. work in Ukraine was to consolidate that biological material, much of it related to agriculture, into secure facilities, which the U.S. would pay to build or upgrade.

Paul McNelly, who from 1995 to 2003 directed the Defense Department's chemical and biological elimination programs in Russia, Kazakhstan and Uzbekistan, said he was stunned with what he saw inside the former Soviet facilities.

"You would walk into these places and the refrigerators that stored these dangerous pathogens, they had no locks on them at all," Mr. McNelly said. "There would be vials that were labeled tularemia, plague, different things like that. And these people, most of them, weren't masked. Their gowns were antiquated." He added: "It was horrible."

As part of the program, the Pentagon spent \$1 billion to build the Russians a facility in Shchuchye, Siberia, to demilitarize some two million chemical weapons. By the time it was done in 2009, ties with Moscow were growing tense. The price of oil was going up, giving Russia more revenue to wean itself off foreign assistance. At the same time, Mr. Putin was consolidating power.

As a result, the Russian government became a less-willing partner to the Pentagon's drive to secure the deadly materials, according to James Tegnalia, who served as the head of DTRA from 2005 to 2009. "They wanted our money, but they didn't want to admit that we built the facility," Mr. Tegnalia said. "You could see that they were getting ready to pull back."

Russia's Foreign Ministry had in the past praised the program. But by 2012, Moscow declined to renew cooperation, saying it could pay for the work on its own.

In 2014, the year Moscow illegally annexed Crimea and began backing separatists in Ukraine's Donbas region, the program in Russia drew to a close.

A spokesman for the Russian Embassy in Washington, D.C., didn't respond to a request for comment on the Pentagon program.

Yet even with that chapter of its cooperation over, the Russian claims about the Pentagon conducting secret weapons work in Ukraine came as a surprise not only to those who have worked on the program but also to other Western officials. The Kremlin has in the past used such charges as cover for its own actions, they say.

"We are concerned that Moscow could stage a false-flag operation, possibly including chemical weapons," North Atlantic Treaty Organization Secretary-General Jens Stoltenberg said last week.

U.S. officials have declined to discuss what specific intelligence, if any, they have to indicate Russia might be preparing to deploy chemical or other unconventional weapons to Ukraine. But they say Russia has a history of using chemical weapons, including against Mr. Putin's domestic political opponents, and it has encouraged their use in Syria by President Bashar al-Assad's government.

The Russian government shot back against the U.S. allegations, denying plans to use chemical weapons. In a post last week on its official Telegram channel, the Russian Defense Ministry said the units fighting in Ukraine "do not have chemical munitions."

Mr. Tegnelia, the former DTRA director, views Russia's allegations as a path to an even more dangerous escalation. "If you see them using chemical weapons in Ukraine, watch out," he said, "because they're only one step away from nuclear weapons."

Sir --

You were mentioned and/or quoted in articles 1, 5, 6, 7 and 8 in today's CENTCOM News Clips.

**1. Kurilla assumes CENTCOM top spot as McKenzie retires**

Washington Examiner, 1 Apr 22, Mike Brest

Army Lt. Gen. Michael "Erik" Kurilla is now the head of U.S. Central Command, and Gen. Frank McKenzie has retired. Kurilla, who had been the commander of the 18th Airborne Corps in Fort Bragg, North Carolina, assumed the position during a ceremony on Friday at the Tampa Convention Center, where McKenzie's 42 years of military service were also honored.

Excerpt: Kurilla's tenure will begin as Russia's military invasion in Ukraine looms over the department. In addition to the now six-week-old war in Ukraine, the new commander will have to deal with a significantly reduced presence in the Middle East with an ever-aggressive Iran, an "acute threat" in Russia, and China, which is considered the "pacing challenge." He warned during his confirmation hearing in front of the Senate Judiciary Committee that al Qaeda and ISIS-K are "reconstituting" in Afghanistan.

**5. Tampa hosts military leaders for CENTCOM change of command**

WFLA-TV (News Channel 8, Tampa), 1 Apr 22, Jeff Patterson

Ranking officers from every branch of the U.S. Military and a number of foreign nations traveled to Tampa on Friday for the change of command ceremony for U.S. Central Command based at MacDill Air Force Base.

Excerpt: General Kurilla is a West Point Graduate and a wounded combat veteran. He's previously commanded the 82nd Airborne and the 2nd Ranger Battalion of the 75th Ranger Regiment and is well aware of the history and importance of CENTCOM.

"CENTCOM was critical in its formation, it is critical now and it will be into the future," said Kurrilla as he accepted his new position.

**6. McKenzie retires, hands over command of CENTCOM**

The Hill, 1 Apr 22, Ellen Mitchell

The top general in charge of U.S. military operations in the Middle East and Central Asia on Friday relinquished his command in a ceremony in Florida. Marine Gen. Frank McKenzie, who had led U.S. Central Command (Centcom) since March 2019, handed over his position to Army Gen. Michael “Erik” Kurilla during a change of command ceremony in Tampa, Fla.

Excerpt: The commander of the 18th Airborne Corps at Fort Bragg, N.C., since October 2019, Kurilla comes to Centcom at a time of tenuous security conditions around the globe, including Russia’s military invasion of Ukraine and bid to recruit fighters in Syria and elsewhere in the region. He also takes command as the U.S. government is struggling with a reduced presence in the Middle East following its withdrawal from Afghanistan, a situation that could lead to the quick reconstitution of al Qaeda and ISIS-K in the country, he warned during his confirmation hearing in February.

### **7. General Kurilla takes over at US Central Command**

Military.com, 1 Apr 22, Jonathan Lehrfeld

Army Gen. Michael "Erik" Kurilla, who has earned two Purple Hearts and a Bronze Star during his military career, took over leadership of U.S. Central Command (CENTCOM) on Friday during an event at the Tampa Convention Center, according to a press release from the command.

Excerpt: "I'm honored to serve alongside the soldiers, sailors, airmen, Guardians, Marines, coastguardsmen and civilians of this command," Kurilla, who was nominated by President Joe Biden in January and confirmed for his role by the Senate in early February, said during the ceremony. CENTCOM oversees military missions in 21 countries throughout the Middle East, Central Asia and parts of South Asia. For the past 20 years, it has covered the focus of U.S. operations overseas in Afghanistan and Iraq.

### **8. Change of leadership at United States Central Command**

WTSP-10 Tampa Bay News, 1 Apr 22, Courtney Robinson

On Friday, U.S. Central Command assumed a new commander. General Michael “Erik” Kurilla will now lead CENTCOM, headquartered on MacDill Air Force Base in Tampa.

Excerpt: The new boss comes to CENTCOM after serving as Commanding General of the 82nd Airborne Division on Fort Bragg, N.C. GEN Kurilla also spent every year from 2004 to 2014 serving in CENTCOM’s AOR commanding Conventional and Special Operations Forces in Iraq and Afghanistan.

**COVERAGE HIGHLIGHTS**

---

1. The Washington Examiner was one of several media reporting on CENTCOM's Change of Command ceremony Friday in which GEN Kurilla assumed command from Gen McKenzie. Overall reporting was neutral, noting GEN Kurilla's previous assignment as CENTCOM's chief of staff and returning to Tampa after being the commander of the 18th Airborne Corps in Fort Bragg, N.C.
2. The Wall Street Journal led global media reports announcing that Saudi Arabia and Yemen's Houthis agreed to a two-month cease-fire. UN Special Envoy Grundberg issued details on the truce, which includes the Houthis halting missile and drone attacks against Saudi Arabia and the UAE. In return, the Saudi-led coalition agreed to stop its current air campaign, allow fuel ships to enter the Yemeni port of Hodeidah, and allow a small number of commercial flights in-and-out of Sanaa.
3. The Washington Post reported U.S.-Iran indirect JCPOA negotiations are at a standstill due to Tehran's demand that Washington lift its designation of the IRGC as a foreign terrorist organization, and U.S. refusal to do so. At a Foreign Policy forum last weekend, U.S. negotiator Robert Malley said an agreement "is not just around the corner, and not inevitable."
4. The New York Times reported President Biden has agreed to work with allies to transfer Soviet-made tanks to the Ukraine military for its defense of the country's eastern Donbas region. A U.S. official told the Times that transfers of the tanks would begin "soon" but declined to say how many tanks would be sent, or from which countries. The decision comes as the U.S. has also agreed to send Ukraine \$300 million in additional military aid.

Army Lt. Gen. Michael "Erik" Kurilla is now the head of U.S. Central Command, and Gen. Frank McKenzie has retired. Kurilla, who had been the commander of the 18th Airborne Corps in Fort Bragg, North Carolina, assumed the position during a ceremony on Friday at the Tampa Convention Center, where McKenzie's 42 years of military service were also honored.

#### **2. Yemen parties agree to two-month truce**

Wall Street Journal, 1 Apr 22, Dion Nissenbaum

Saudi Arabia and Iran-backed Houthi fighters agreed on Friday to a two-month truce, bringing a temporary halt to a seven-year-old war in Yemen that could create new momentum for a diplomatic end to the conflict.

#### **3. Iran nuclear talks at stalemate over terrorism issue**

Washington Post, 1 Apr 22, Karen DeYoung

Tehran's demand that the United States lift its designation of the Iranian Revolutionary Guard Corps as a foreign terrorist organization, and U.S. refusal so far to do that, have brought the year-long negotiations over reviving the Iran nuclear deal to a halt, with no new meetings scheduled and little obvious room for compromise.

#### **4. U.S. will help transfer Soviet-made tanks to Ukraine**

New York Times, 1 Apr 22, Helene Cooper

The Biden administration will work with allies to transfer Soviet-made tanks to bolster Ukrainian defenses in the country's eastern Donbas region, a U.S. official said on Friday. The decision to act as an intermediary to help transfer the Soviet-made tanks, which Ukrainian troops know how to use, comes in response to a request from President Volodymyr Zelensky of Ukraine, the official said. It marks the first time in the war that the United States has helped transfer tanks.

### **27. China calls on EU to act independently of US foreign policy**

Financial Times, 1 Apr 22, Andy Bounds, Sam Fleming, Tom Mitchell and Eleanor Olcott

Xi Jinping has called on the EU to act more independently of the US as China and Brussels clashed over Russia's invasion of Ukraine and the bloc's leaders warned Beijing not to aid Moscow's war effort.

### **28. China's embrace of Putin is looking more and more costly**

TIME, 1 Apr 22, Charlie Campbell

When Wang Jixian moved to the southern Ukrainian port city of Odessa, he didn't expect to find himself in the middle of a war. But as the 37-year-old software engineer picked up his cellphone and began posting online the reality of life under Russian bombardment—wailing sirens, booming artillery, buskers on fretful streets—he soon found himself under attack from a more surprising quarter: the Chinese government and nationalist trolls, who objected to Wang's stark portrayal of Russian aggression that chafed with Beijing's official narrative.

### **29. Western diplomats court India over Ukraine but fail to find love**

The Economist, 1 Apr 22

Delhi is a crowded place these days, but not from its crush of cars, auto-rickshaws and stray cows. Instead, India's capital is flooded with visiting diplomats and statesmen, all vying for India's love, or at least its attention. Recent top-level envoys have included, among others, the prime minister of Japan, the foreign ministers of China, Britain, Russia, Mexico, Greece, Oman and Austria, an American undersecretary of state and deputy national security adviser, and a senior adviser to the German chancellor.

### **30. War in Ukraine compounds hunger in East Africa**

New York Times, 1 Apr 22, Abdi Latif Dahir

First came the drought, drying up rivers, and claiming the lives of two of Ruqiya Hussein Ahmed's children as her family fled the barren countryside in southwest Somalia. Then came the war in Ukraine, pushing food prices so high that even after making it to the outskirts of the capital, Mogadishu, she is struggling to keep her two other children alive.

## ANALYSIS/COMMENTARY

---

### **31. America and Saudi Arabia are stuck with each other: How Biden can recalibrate the relationship without breaking it**

Foreign Affairs, 1 Apr 22, Yasmine Farouk and Andrew Leber

In recent weeks, as Western sanctions on Russia over its war in Ukraine have roiled global energy markets, Saudi Arabia has continued to decline requests from U.S. President Joe Biden's administration that it increase oil production. Although the kingdom's pointed refusal to mitigate the pain of skyrocketing fuel prices clearly startled many American observers, inspiring a raft of commentary asking whether the 77-year U.S.-Saudi alliance was still worth maintaining, it should not have come as a surprise.

### **32. A new video shows a missing American hostage pleading for help in Taliban custody**

The New Yorker, 1 Apr 22, Michael Ames

When the Biden Administration pulled all U.S. forces out of Afghanistan last August, Mark Frerichs was believed to be the only American hostage remaining in Taliban custody. Frerichs, a fifty-nine-year-old civil engineer and Navy veteran, had been abducted on the streets of Kabul in 2020. Members of his family have repeatedly pleaded with the Taliban and the Biden Administration to negotiate his release, but, for more than two years, no evidence had publicly emerged that Frerichs was alive. The New Yorker has obtained a new video, from an

unidentified individual in Afghanistan, that shows Frerichs in captivity and pleading for his freedom. “I’ve been patiently waiting for my release,” Frerichs says, apparently reading from a script held in front of him. “I’d like to ask the leadership of the Islamic Emirate of Afghanistan, please, release me.”

### **33. Government change in Islamabad will not derail China-Pakistan relations**

The Diplomat, 1 Apr 22, Krzysztof Iwanek

At present, the future of Imran Khan’s government in Pakistan appears uncertain. As things stand now, the ruling coalition, led by Pakistan Tehreek-e-Insaf (PTI), has lost its majority and it is about to face a no-confidence vote. Should there be a change of government, however, there is unlikely to be a change in China-Pakistan ties. Pakistan’s relationship with China may have already become more stable than Pakistan’s democracy.

### **34. Analysis: Oil prices, Ukraine war create Saudi pivot point**

Associated Press, 1 Apr 22, Jon Gambrell

The world is looking to Saudi Arabia to boost oil production as global energy prices spike because of Russia’s invasion of Ukraine. But that could mean rethinking how to deal with the kingdom’s controversial crown prince.

### **35. Afghanistan’s hungry will pay the price for Putin’s war**

Foreign Policy, 1 Apr 22, Lynne O’Donnell

Russia’s ban on food and fertilizer exports to stabilize supply and prices at home while it wages war on Ukraine is reverberating in its own backyard, pushing Central Asian states into economic crisis and threatening to tip Afghanistan from starvation into famine.

### **36. Israel and the triangular crisis of Ukraine, Iran, and Palestine**

New Yorker, 1 Apr 22, Bernard Avishai

On Monday, the U.S. Secretary of State, Antony Blinken, joined the foreign ministers of Israel, the United Arab Emirates, Bahrain, Egypt, and Morocco for a meeting at Sde Boker, the retirement kibbutz and burial place of David Ben-Gurion, the nation’s first Prime Minister. The meeting had been initiated by the Israeli Foreign Minister, Yair Lapid, with encouragement from Blinken, whose main aim was to reassure the group that the United States is fixed in its commitment to deny Iran a nuclear weapon, and that the not-yet-consummated Iran nuclear deal is the best of available options to do that. “The summit was to showcase a strategic alliance growing out of the Abraham Accords,” the Israeli journalist Henrique Cymerman told me. “To seed the formation of a kind of Middle Eastern NATO to contain Iran—deal or no deal.”

### **37. Painful choices lie in the path to peace in Ukraine**

Washington Post, 1 Apr 22, David Ignatius

In the agonizing final years of the Vietnam War, a strategist named Fred Iklé wrote a treatise titled “Every War Must End.” His basic theme was that “wars are easier to start than to stop” — a message that applies powerfully now to the conflict in Ukraine.

### **38. Peace in Ukraine will be elusive until one side makes a military breakthrough**

Financial Times (UK), 1 Apr 22, Lawrence Freedman

From almost the moment the war in Ukraine began, diplomats have been at work trying to end it. The UN Security Council has deliberated. Vladimir Putin has had regular telephone discussions with western leaders in which they urge him to stop his aggression or at least facilitate humanitarian relief for those suffering under the weight of Russian bombardments. He then in turn explains how they fail to understand Ukraine's responsibility for these tragic events.

Frerichs, a fifty-nine-year-old civil engineer and Navy veteran, had been abducted on the streets of Kabul in 2020. Members of his family have repeatedly pleaded with the Taliban and the Biden Administration to negotiate his release, but, for more than two years, no evidence had publicly emerged that Frerichs was alive. The New Yorker has obtained a new video, from an unidentified individual in Afghanistan, that shows Frerichs in captivity and pleading for his freedom. "I've been patiently waiting for my release," Frerichs says, apparently reading from a script held in front of him. "I'd like to ask the leadership of the Islamic Emirate of Afghanistan, please, release me."

**33. Government change in Islamabad will not derail China-Pakistan relations**

The Diplomat, 1 Apr 22, Krzysztof Iwanek

At present, the future of Imran Khan's government in Pakistan appears uncertain. As things stand now, the ruling coalition, led by Pakistan Tehreek-e-Insaf (PTI), has lost its majority and it is about to face a no-confidence vote. Should there be a change of government, however, there is unlikely to be a change in China-Pakistan ties. Pakistan's relationship with China may have already become more stable than Pakistan's democracy.

**34. Analysis: Oil prices, Ukraine war create Saudi pivot point**

Associated Press, 1 Apr 22, Jon Gambrell

The world is looking to Saudi Arabia to boost oil production as global energy prices spike because of Russia's invasion of Ukraine. But that could mean rethinking how to deal with the kingdom's controversial crown prince.

**35. Afghanistan's hungry will pay the price for Putin's war**

Foreign Policy, 1 Apr 22, Lynne O'Donnell

Russia's ban on food and fertilizer exports to stabilize supply and prices at home while it wages war on Ukraine is reverberating in its own backyard, pushing Central Asian states into economic crisis and threatening to tip Afghanistan from starvation into famine.

### **36. Israel and the triangular crisis of Ukraine, Iran, and Palestine**

New Yorker, 1 Apr 22, Bernard Avishai

On Monday, the U.S. Secretary of State, Antony Blinken, joined the foreign ministers of Israel, the United Arab Emirates, Bahrain, Egypt, and Morocco for a meeting at Sde Boker, the retirement kibbutz and burial place of David Ben-Gurion, the nation's first Prime Minister. The meeting had been initiated by the Israeli Foreign Minister, Yair Lapid, with encouragement from Blinken, whose main aim was to reassure the group that the United States is fixed in its commitment to deny Iran a nuclear weapon, and that the not-yet-consummated Iran nuclear deal is the best of available options to do that. "The summit was to showcase a strategic alliance growing out of the Abraham Accords," the Israeli journalist Henrique Cymerman told me. "To seed the formation of a kind of Middle Eastern NATO to contain Iran—deal or no deal."

### **37. Painful choices lie in the path to peace in Ukraine**

Washington Post, 1 Apr 22, David Ignatius

In the agonizing final years of the Vietnam War, a strategist named Fred Iklé wrote a treatise titled "Every War Must End." His basic theme was that "wars are easier to start than to stop" a message that applies powerfully now to the conflict in Ukraine.

### **38. Peace in Ukraine will be elusive until one side makes a military breakthrough**

Financial Times (UK), 1 Apr 22, Lawrence Freedman

From almost the moment the war in Ukraine began, diplomats have been at work trying to end it. The UN Security Council has deliberated. Vladimir Putin has had regular telephone discussions with western leaders in which they urge him to stop his aggression or at least facilitate humanitarian relief for those suffering under the weight of Russian bombardments. He then in turn explains how they fail to understand Ukraine's responsibility for these tragic events.

#### **45. US pledges \$204M in humanitarian aid for Afghans**

TOLOnews, 1 Apr 22

The United States pledged to provide nearly \$204 million in humanitarian assistance to help the people of Afghanistan. The pledge was made at the high-level "Pledging Event on Supporting the Humanitarian Response in Afghanistan."

More than 11 years after the beginning of the uprising that later turned into a war with multiple regional and international actors involved, the Syrian regime now controls almost 70% of Syrian territory. This is no thanks to the political, economic, and military assistance provided by its allies: Russia and Iran. At the same time, the normalization process of the Syrian regime is moving forward across the Middle East and North Africa (MENA), which was confirmed by Bashar al-Assad's trip to the UAE in March 2022- his first visit to a country in the region since the eruption of the uprising in 2011.

## **52. What must the next PM do**

Pakistan Express Tribune, 1 Apr 22, Dr. Pervez Tahir

Every crisis creates opportunities for reform. Left to themselves, politicians have succeeded to bring politics, disturbed by a hybrid interregnum, back on the rails. By all reckoning, the next government will be consensual, if not 'national'. Hopefully, it would let the present National Assembly complete its term to make a lasting impact.

## **53. 'Pay-for-slay' Abbas takes his cue from 'Iran-deal' Blinken**

Jerusalem Post, 1 Apr 22, Ruthie Blum

Following Tuesday night's terrorist attack in Bnei Brak, Palestinian Authority President Mahmoud Abbas issued what the media reported as a "rare condemnation." While it's true that Abbas doesn't usually come out against the murder of Israelis (though, in this case, three of the five people killed were not Jewish), his statement should not be viewed as cause for optimism.

#### **1. Kurilla assumes CENTCOM top spot as McKenzie retires**

Washington Examiner, 1 Apr 22, Mike Brest

Army Lt. Gen. Michael "Erik" Kurilla is now the head of U.S. Central Command, and Gen. Frank McKenzie has retired.

Kurilla, who had been the commander of the 18th Airborne Corps in Fort Bragg, North Carolina, assumed the position during a ceremony on Friday at the Tampa Convention Center, where McKenzie's 42 years of military service were also honored.

McKenzie assumed command of CENTCOM back in March 2019, and his three years on the job included the killing of Islamic State leader Abu Bakr al Baghdadi and his successor, Abu Ibrahim al Hashimi al Qurashi, the end of the U.S. military presence in Afghanistan, and the transition of coalition forces in Iraq to an exclusively advisory role.

“For the past 21 years, CENTCOM has been the only combatant command in close and enduring contact with America’s enemies,” said McKenzie. “It’s where every combat arms commander wants to be. I can think of no one better qualified to write CENTCOM’s next chapter than Erik Kurilla.”

Secretary of Defense Lloyd Austin and Gen. Mark Milley, chairman of the Joint Chiefs of Staff, attended the ceremony.

“Frank, as you head into a well-earned retirement, please know that your tenure at CENTCOM has deepened security in the region and at home for years to come. And this team will continue building on your legacy,” Austin said during his address to the crowd. “So, thank you for all that you’ve done to make America safer.”

Kurilla's tenure will begin as Russia's military invasion in Ukraine looms over the department. In addition to the now six-week-old war in Ukraine, the new commander will have to deal with a significantly reduced presence in the Middle East with an ever-aggressive Iran, an "acute threat" in Russia, and China, which is considered the "pacing challenge."

He warned during his confirmation hearing in front of the Senate Judiciary Committee that al Qaeda and ISIS-K are “reconstituting” in Afghanistan.

“One of the challenges is the threat to the homeland from al Qaeda and ISIS-K. They are reconstituting. The Taliban has not renounced al Qaeda. ISIS-K, with the release of the prisoners both from the Bagram prison and Pul-e-Charkhi are in a process of reconstituting,” he said.

Similarly, McKenzie, in his final testimony on the Hill earlier this month, told the Senate Armed Services Committee that CENTCOM hasn't executed a strike against the Islamic State's Afghan affiliate, ISIS-K, since the United States exited the country at the end of August.

“We have not undertaken any strikes in Afghanistan since the 1st of September,” McKenzie said. “We continue to watch carefully as ISIS grows. They’ve gone through the winter. They’ve been able to carry out some high-profile attacks. They still aspire to attack the United States and our partners abroad. So, we’re going to watch very carefully what the Taliban is able to do and not able to do in terms of controlling ISIS. Because as we all know, the Taliban will actually fight ISIS, and they have a theological dispute, and so they are in opposition.”

During the same hearing, he said the timeline under which ISIS-K could regain the capability to conduct an international attack is “12 to 18 months,” which was a more delayed timeline than the six to 12 months estimation Dr. Colin Kahl, the undersecretary of defense for policy, presented to the committee back in October.

## **2. Yemen parties agree to two-month truce**

Wall Street Journal, 1 Apr 22, Dion Nissenbaum

terrorism would be diminished ... whose ballistic missile program would be checked, all of those things turned out not only to be not true, but in almost every case the exact opposite has come to fruition.”

At the same time, while continuing to deny it seeks a nuclear bomb, Iran has vastly expanded the quality and quantity of uranium enrichment and is believed now only weeks away from assembling enough to fuel a weapon. It expanded other aggressive activities even as Trump reimposed sanctions that had been lifted by the Iran deal and imposed more than 1,500 more. Between 2019 and 2020, Price said, the number of attacks against U.S. personnel and facilities in Iraq by Iran-backed groups “went up 400 percent.”

Much of the Vienna negotiations over the past year were devoted to disagreements between Iran insisting that all U.S. sanctions be lifted, and administration insistence that a return to the deal involved only those that were “nuclear related.” Those issues, along with questions of sequencing and the unfreezing of certain Iranian assets, have now been largely resolved.

But as word spread that the biggest remaining issue on the table was the terrorism designation of the Revolutionary Guard Corps, opponents of the deal, including virtually all Republicans vowed to redouble their efforts to stop the agreement, and a number of Democrats expressed worries.

“We are highly concerned about reports indicating the potential lifting” of the foreign terrorist organization designation of the Revolutionary Guard Corps, a bipartisan group of 21 House members wrote Biden last month, saying that the combination of not “adequately addressing Iran’s role as the world’s leading state sponsor of terror,” and providing billions of dollars in sanctions relief would provide “a clear path for Iranian proxies to continue fueling terrorism.”

Any administration action is further complicated by reported U.S. intelligence indicating ongoing Iranian plots to target Pompeo and other former U.S. officials whom Tehran holds responsible for the drone strike in 2020 that killed Qasem Soleimani, commander of the Quds Force, the Revolutionary Guard Corps branch specializing in unconventional warfare. But others have warned that Iranian and U.S. leaders have “painted themselves into a corner” by allowing the issue to become what may ultimately kill any prospect of a deal.

“Failure to secure the nuclear deal will very likely lead to unpredictable and possible uncontrollable escalation, and almost certainly skyrocketing oil and gas prices,” Trita Parsi, an Iran expert and executive vice president of the Quincy Institute for Responsible Statecraft wrote Thursday. “The political costs to both the United States and Iran of either delisting” the Revolutionary Guard Corps or “dropping the demand to delist, respectively, pale in comparison.”

#### **4. U.S. will help transfer Soviet-made tanks to Ukraine**

New York Times, 1 Apr 22, Helene Cooper

The Biden administration will work with allies to transfer Soviet-made tanks to bolster Ukrainian defenses in the country’s eastern Donbas region, a U.S. official said on Friday.

The decision to act as an intermediary to help transfer the Soviet-made tanks, which Ukrainian troops know how to use, comes in response to a request from President Volodymyr Zelensky of Ukraine, the official said. It marks the first time in the war that the United States has helped transfer tanks.

The official said the transfers would begin soon but declined to say how many tanks would be sent, or from which countries they would come. They will allow Ukraine to conduct long-range artillery strikes on Russian targets in Donbas, said the official, who spoke on the condition of anonymity because he was not authorized to speak publicly.

The tanks' arrival could be another signal of a new phase in the war, which is five weeks old and has been dominated by Russian attacks on Ukrainian cities and installations from the air, and a stalled Russian advance on the ground. Earlier this week, Russian officials indicated that they were refocusing their efforts on eastern Ukraine, where Russian-backed separatists have been fighting Ukrainian soldiers since 2014.

Mr. Zelensky called on Sunday for NATO allies to provide tanks and planes, in addition to the antitank and anti-aircraft weaponry that have become a staple of the arms transfers to Ukraine from the West. Frustrated at what he views as a slow pace of weapons transfers, Mr. Zelensky asked specifically for tanks, in remarks a day after President Biden met with senior Ukrainian officials in Poland.

An angry Mr. Zelensky criticized the West for what he called its "Ping-Pong" about weapons transfers. "I've talked to the defenders of Mariupol today," he said, in a reference to the besieged city that has been under an onslaught from Russia for four weeks. "If only those who have been thinking for 31 days on how to hand over dozens of jets and tanks had 1 percent of their courage."

In the past, the Biden administration has taken pains to call the weapons it is providing to Ukraine defensive, and has focused on smaller, easily portable arms. But as the war has progressed, the definition of defensive has become more elastic.

Ukraine had already found one source of tanks, capturing at least 161 from Russia on the battlefield, according to the military analysis site Oryx, though Russia has also destroyed a number of Ukrainian tanks. For its part, Russia has captured 43 Ukrainian tanks, according to analysts who study photos and videos on social media.

The decision to help transfer the tanks comes as the Ukrainian military has continued to turn back Russia's ground advance. Pentagon officials have been quick to point out that Russia's pivot to Donbas and away from capturing Kyiv, the capital, might be a necessity for Moscow after Russian forces stalled out in the central part of the country.

On Wednesday, Biden administration officials, citing declassified U.S. intelligence, said that President Vladimir V. Putin of Russia had been misinformed by his advisers about the Russian military's problems in Ukraine. The intelligence, American officials said, also showed what

appeared to be growing tension between Mr. Putin and his defense minister, Sergei K. Shoigu, who was once among the most trusted members of the Kremlin's inner circle.

Russian officials have disputed the allegations, with the Kremlin on Thursday calling it a "complete misunderstanding" of the situation that could have "bad consequences."

## CENTCOM CHANGE OF COMMAND

---

### **5. Tampa hosts military leaders for CENTCOM change of command**

WFLA-TV (News Channel 8, Tampa), 1 Apr 22, Jeff Patterson

Ranking officers from every branch of the U.S. Military and a number of foreign nations traveled to Tampa on Friday for the change of command ceremony for U.S. Central Command based at MacDill Air Force Base.

The ceremony was attended by U.S. Secretary of Defense Lloyd Austin who previously served as the Commanding officer for CENTCOM. Austin says CENTCOM plays a vital role in the defense of the middle east.

"This region is where we protect waterways so that global commerce can flow, it is where we fight terrorists who threaten our citizens," said Austin who praised outgoing Marine General Kenneth McKenzie as he turned over the command to Army General Michael "Erik" Kurilla.

Kurilla once served as McKenzie's Chief of Staff at CENTCOM and so his return is homecoming of sorts to Tampa.

General Mark Milley, the Chairman of the Joint Chiefs of Staff spoke at the ceremony, pointing out that combat operations are over in Iraq and Afghanistan, but that CENTCOM still has a vital role to play.

"The fight isn't over here. Every day there is new threats this country faces and there are always new challenges and in this complex theater, everything from terrorism to regional conflict can rear its ugly head on very short notice," said Milley.

General Kurilla is a West Point Graduate and a wounded combat veteran. He's previously commanded the 82nd Airborne and the 2nd Ranger Battalion of the 75th Ranger Regiment and is well aware of the history and importance of CENTCOM.

"CENTCOM was critical in its formation, it is critical now and it will be into the future," said Kurilla as he accepted his new position.

#### **24. Pentagon to send Ukraine another \$300 million in defense aid**

Washington Post, 1 Apr 22, Alex Horton

The Pentagon said Friday that it will provide a new \$300 million package of military aid to Ukraine that includes drones, armored vehicles and machine guns.

The assistance is part of the Ukraine Security Assistance Initiative, a program that lets the United States procure supplies from manufacturers instead delivering them from its own military stockpiles, Pentagon press secretary John Kirby said. Under this initiative, Washington has delivered hundreds of millions of dollars in aid to Ukraine each year since 2015.

The Biden administration has dispatched more than \$2.3 billion in defense support to Ukraine since it took office. Among the highlights of the new package are Puma unmanned aerial systems, or hand-launched lightweight drones, “non-standard” machine guns, counter-drone systems and access to commercial satellite imagery services.

#### **25. U.S. to ease nuclear tensions with Russia, cancel 'Minuteman' Missile tests**

Newsweek, 1 Apr 22, Jake Thomas

The Pentagon is again delaying a test of a nuclear-capable missile to avoid a “misinterpretation or miscommunication” with Russia amid heightened tensions.

The U.S. military on Friday canceled a previously scheduled test flight of the Minuteman III intercontinental ballistic missile, capable of delivering a nuclear warhead to Russia. The postponement is the second time the Pentagon has put off the planned test, signaling the U.S. is continuing to avoid nuclear escalation with Russia.

The Pentagon told Newsweek in an email that the Air Force recently canceled the test flight of the LGM-30G Minuteman III missile.

“The launch had been previously delayed due to an overabundance of caution to avoid misinterpretation or miscommunication during the ongoing Russian invasion of Ukraine and was canceled for the same reason,” the Pentagon said in the statement. “Our next planned test flight is later this year. The Department is confident in the readiness of the strategic forces of the United States.”

Pentagon officials announced on March 2 that it would delay the launch of the Minuteman III missile after Russian President Vladimir Putin said he would place his country's nuclear forces on high alert during its invasion of Ukraine.

At the time, Pentagon spokesman John Kirby contrasted what he described as the U.S.'s restraint to Putin's “dangerous and irresponsible...unnecessary step.”

“We did not take this decision lightly, but instead to demonstrate that we are a responsible nuclear power,” Kirby said in March.

The Minuteman III has been "the backbone of the U.S. land-based nuclear strategic force since 1962," according to Missile Threat, a product of the Center for Strategic and International Studies (CSIS). The missile is the only land-based component of the U.S. nuclear triad and has near 100 percent testing reliability.

There are currently an estimated 440 of the missiles in the U.S.'s arsenal, and two or more tests are conducted each year, according to Missile Threat.

Air Force crews test four Minuteman III missiles each year from the Vandenberg Space Force Base in California to ensure its arsenal is functioning. Each of the tests are publicized in advance to avoid the appearance of being in response to a world event. The dummy warheads splash down near Kwajalein Atoll in the Pacific Ocean.

The Air Force previously successfully tested a Minuteman III in August 2021. The missile flew about 4,200 miles and detonated explosives before landing in the ocean.

Previously, the Pentagon has said the launch's postponement will "not affect America's nuclear deterrence in any way."

## **26. How two dozen retired generals are trying to stop an overhaul of the Marines** Politico, 1 Apr 22, Paul McLeary and Lee Hudson

An influential group of over two dozen retired generals has launched a counteroffensive against plans to transform the Marine Corps and is using their clout in a high-power pressure campaign to get Congress to slam on the brakes.

The roster of personalities includes every living former commandant, along with a slew of other retired four-star generals revered within the Corps. And all of them are bristling at different aspects of foundational changes introduced by Commandant Gen. David Berger, who aims to make the Corps lighter, faster and more capable of doing everything from electronic warfare to sinking ships at sea.

The group of retired generals includes former Defense Secretary Jim Mattis, former Joint Chiefs Chair Joe Dunford and John Kelly, a former Homeland Security chief and White House chief of staff.

"This is not a fragmented effort, this is a collective of 30 some generals ... including six or seven of the most senior, most credible Marines that I've ever worked with," said Frank Hoffman, distinguished research fellow at the National Defense University and a retired Marine officer. Yet he also noted that Berger's efforts have already been blessed by Congress and the Pentagon brass, so putting a stop to them now is unlikely.

The Marine Corps' two-year-old plan represents a fundamental shift in how the Corps equips its troops and goes to war. The Corps' 400-odd tanks have already been shifted to the Army,

Xi “did not condemn, but also did not defend” Putin’s invasion, according to a person present during the video call, adding that the Chinese president ignored a direct question from Michel as to whether he supported the invasion.

Instead, Xi referred to the importance of understanding Russia’s “security concerns in Europe”, the person said.

In a separate video call with the EU duo, Chinese premier Li Keqiang insisted Beijing was working towards a peaceful resolution of the crisis in “its own way”.

In the run-up to Friday’s summit, Wang Yi, China’s foreign minister, told his Russian counterpart “the Ukrainian issue” was the result of “the long-term accumulation of security conflicts in Europe” as well as a “cold war mentality and group confrontation”.

Wang hosted Sergei Lavrov on the sidelines of a regional security meeting about Afghanistan on Wednesday, their first in-person discussion since the war in Ukraine began in late February.

In early February, Xi and Putin said there were “no limits” to their friendship. But analysts say the threat of secondary western sanctions has stopped China from offering significant support to the struggling Russian economy.

“So far, China has not helped Russia offset the cost of sanctions because it doesn’t want to trigger secondary sanctions or become more entangled in the unstable Russian economy,” said Francesca Ghiretti, an EU-China analyst at the Mercator Institute for China Studies, a German think-tank.

“Beijing wants to avoid any more economic pain on top of the pandemic lockdowns and global inflationary pressures,” she added.

China’s trade with the EU was worth €1.9bn a day, compared with €330mn daily with Russia, von der Leyen said, suggesting Beijing’s attitude to the war could threaten that flow. Ukraine was a “defining moment for our relationship with the rest of the world”, she said.

[Return to top](#)

## **28. China's embrace of Putin is looking more and more costly**

TIME, 1 Apr 22, Charlie Campbell

When Wang Jixian moved to the southern Ukrainian port city of Odessa, he didn’t expect to find himself in the middle of a war. But as the 37-year-old software engineer picked up his cellphone and began posting online the reality of life under Russian bombardment – wailing sirens, booming artillery, buskers on fretful streets – he soon found himself under attack from a more surprising quarter: the Chinese government and nationalist trolls, who objected to Wang’s stark portrayal of Russian aggression that chafed with Beijing’s official narrative.

Wang’s Weibo social media account was blocked for “spreading rumors” and strangers started issuing expletive-riddled threats on his Wechat account. “I’m dealing with a war on two fronts,”

Wang told Voice of America. “The battlefield I’m faced with here is terrifying, but at least I can see the tanks. But the other battlefield lurking behind me is even scarier ... I don’t know who’s in it, but they’re all telling me that they want me dead.”

China’s censorship of Wang and other independent voices on Ukraine underscores the contradictory position that the Beijing government has adopted since Russian President Vladimir Putin’s Feb. 24 assault on Ukraine: on one hand upholding sovereignty, territorial integrity, and the rules-based international order; on the other refusing to condemn Putin’s invasion nor even call it one.

“For a major power like China, which is poised to become the world’s largest economy in less than 10 years, the most important thing is to strike a balance,” says Zhou Bo, a retired PLA senior colonel and senior fellow at the Center for International Security and Strategy at Tsinghua University Zhou.

Over days and weeks of probing questions, China’s spokespeople settled on a line: The war is caused by NATO’s expansionism, which Russia is defending itself against. In an emailed statement March 18, China’s embassy in London said that Chinese President Xi Jinping spoke with Putin on the second day of the conflict and “expressed China’s hope to see Russia and Ukraine hold peace talks as early as possible.” Putin’s escalation since then—including the near total destruction of the eastern city of Mariupol—hardly indicates that he took Xi’s words to heart.

On April 1, Xi met E.U. leaders for a virtual summit with efforts to resurrect the stalled Comprehensive Agreement of Investment trade pact already facing pushback over allegations of forced labor and human-rights abuses in Xinjiang province. Refusal to help end the bloodshed in Ukraine just compounds the ill-feeling.

How much sway China has over Putin’s Ukraine invasion is a contentious matter. A Western intelligence report claimed that senior Chinese officials asked their Russian counterparts in early February to delay the invasion of Ukraine until after the Winter Olympics in Beijing. However, Qin Gang, the Chinese ambassador to the U.S., refuted that claim writing in the Washington Post March 16, saying “had China known about the imminent crisis, we would have tried our best to prevent it.”

Of course, figuring out China is like watching a magic show: sure, you can listen to the patter, but never take your eyes off the hands. And China’s actions reveal a cynical and risky gambit to back Vladimir Putin. Xi has often spoken of a world buffeted by “changes unseen in 100 years.” If Western sanctions targeting Russia’s economy, oligarchs and industry fail, it would confirm America’s decline as a superpower—and perhaps Xi would have less to fear from blowback were he to pursue his own strategic targets, such as reuniting self-ruling Taiwan.

But it’s looking increasingly likely that Beijing has its strategic calculus wrong. Putin’s offensive is foundering (for now, at least), and NATO has rarely been more united, as members announce a raft of defense spending hikes. A defeat for Putin just after he and Xi declared a “no limits” partnership in a high-profile meeting ahead of the Beijing Olympics would be an embarrassment

for the Chinese Communist Party leader just as he is seeking a protocol-shredding third term. And in Putin, China has a “partner” with neither scruples nor, it’s becoming increasingly apparent, a sense of reality.

“It’s quite exposing for China,” says Kerry Brown, director of the Lau China Institute at King’s College, London. “It’s pushed a lot of decisions on them far quicker than they were expecting, making them declare their hand in ways where they don’t want to.”

### **The high cost of siding with Russia**

Beijing’s initial approach was to deal with the crisis through inaction, on the assumption that you can’t punish inactivity. But things are happening on a scale in a speed that is compelling China into taking more proactive positions. On the one hand, China doesn’t want to align with Russia, which is antagonizing and angering Western countries who remain their biggest trade partners. But on the other, Beijing doesn’t want a continuation of American-led Western dominance, which it felt was already waning.

China was quick to refute reports that Russia had asked for military assistance. While it makes perfect sense for Putin to want to embroil China in his conflict, Beijing has more to lose than gain from actively assisting the invasion of Ukraine. And any help would mostly be symbolic—though China retains close military ties with Russia, with the two countries staging frequent joint-exercises including naval maneuvers in the Mediterranean and the Baltic seas—there’s little interoperability between their forces. Exercises in north-west China last year involving some 10,000 Russian and Chinese troops were the first to feature Russians using Chinese weapons and joint command-and-control. Coming down more heavily on the Russian side will entail huge costs, including risking tough sanctions and international boycotts. It doesn’t make much sense for Beijing to pay that for Russia, which they consider a regional power with a limited sphere of influence, whereas China today is a global player with interests on every continent—the only true rival to the United States.

“If China and Russia engage in a military alliance, the whole world would change,” says Zhou. “Western countries, no matter how strong their economic relationship with China, will definitely follow America and stand on their side. Then we inevitably will have two camps and a repetition of the Cold War. So it is extremely important for China to have this nonaligned relationship with Russia in spite of our friendship. And this is totally possible.”

### **Why Beijing won’t try to stop Putin**

At the same time, if the West believes it can shame China into isolating Russia, it’s kidding itself. Beijing has for decades propped up an ossified, rogue nuclear state on its border because dealing with Kim Jong Un is calculated as preferable to a united, U.S.-allied Korean peninsula. If the threat of nuclear catastrophe combined with the plight of 25 million North Koreans subject to U.N.-designated “crimes against humanity” doesn’t sway China’s leaders, 4 million Ukrainian refugees won’t warrant a shrug. Beijing has proved it will only act in the purest traditions of self-interest. And so, it’s doubtful that Beijing will suddenly oppose Putin as he attempts to carve up the world into spheres of influence, with NATO, and America’s role severely diminished.

In this sense, joining Western sanctions are contrary to China's self-interest, given that handing NATO an easy victory would reenergize a newly confident, united, America-led Western alliance. China wants a less-confident, less-zealous West to deal with, and more unity and purposefulness spells trouble. "Russia is causing that to happen," says Brown. "But it's still not a solution for China to align with the West as that actually brings about the very thing that it doesn't want. It just shows this rather torturous position they're in."

It's also likely that the West is inflating the clout Beijing has over the Kremlin to distract from its own culpability. China has little demand for Russian products other than oil and gas. True, bilateral trade rose 33.6% year-on-year to some \$140 billion in 2021, when Russia was China's second largest crude oil supplier, accounting for some 15.5% of China's total imports. But the 10 billion cubic meters of gas China purchased in 2021 is dwarfed by the 175 billion cubic meters Russia sold to Europe over the same period. For leverage over Russia's economy, European leaders should look closer to home.

Ultimately, it's a war that looks unwinnable, while perpetually muddying China's international reputation, stirring up antagonism in Washington and Europe. None of that speaks to China's interest, being the self-appointed global superpower in waiting. And while China may be winning the domestic propaganda war for now, voices like Wang's in Odessa—who has more than 100,000 subscribers on Youtube—will get louder as the war drags on and more people ask questions. "[Ukrainians] are fighting for their homes ... Why should they be bombed?" he posted March 4. "It's just that simple; it's got nothing to do with NATO. People just want to be able to live their lives."

## **29. Western diplomats court India over Ukraine but fail to find love**

The Economist, 1 Apr 22

Delhi is a crowded place these days, but not from its crush of cars, auto-rickshaws and stray cows. Instead, India's capital is flooded with visiting diplomats and statesmen, all vying for India's love, or at least its attention. Recent top-level envoys have included, among others, the prime minister of Japan, the foreign ministers of China, Britain, Russia, Mexico, Greece, Oman and Austria, an American undersecretary of state and deputy national security adviser, and a senior adviser to the German chancellor.

During one of a seemingly endless series of press appearances Subrahmanyam Jaishankar, India's busy foreign minister, moaned that there appears to be "almost a campaign" to influence India. If so, this is largely his fault. The official Indian response to the great drama that currently preoccupies much of the world, Russia's invasion of Ukraine, has been so cold and tight-lipped that it has left everyone wondering where the world's largest democracy stands. The guessing game has at the same time raised Russian hopes of Indian support, Chinese hopes of wooing India from the clutches of America, Western hopes that India may dump its crotchety old friend Russia—and Western worries that a country they see as a natural ally couldn't, in fact, give a fig about their high-falutin' self-declared values, and is solely focused on a narrow notion of its own interests.

On every vote at the UN since Russia's tanks rolled into Ukraine on February 24th, India has abstained. It has not condemned Russia by name. But nor has it shied from calling this a war rather than a "special operation", as Sergei Lavrov, Russia's deadpan foreign minister, gamely corrected an Indian journalist in Delhi on April 1st. Russia's state-throttled media tries to paint India as a staunch cheerleader of Vladimir Putin, but struggles to find pukka Indians to parrot such tosh. And although India has annoyed those hoping to squash Russia with sanctions, by eagerly bargaining for discounted Russian oil and other goods, Mr Jaishankar points out that Western countries still buy heaps more Russian stuff than India ever has or will.

This prickly damn-them-all attitude is popular in India. In the polarized politics generated by the ruling Bharatiya Janata Party's (BJP) strident Hindu nationalism, giving the West a poke in the eye unites in delight both old leftists and young Hindutva hotheads. Mr Jaishankar was also not wrong when he told a perplexed-looking Liz Truss, Britain's foreign secretary, that Indians care less about Ukraine than they do, say, about Afghanistan simply because of proximity. The subtle message was, first, that Ukraine is Europe's problem and, second, that the West let India down by scuttling Afghanistan to the Taliban, so why should India be concerned now? India's press and social media tom-tommed umbrage when Daleep Singh, America's deputy national security adviser for economic affairs, suggested there might be "consequences" for undermining efforts to squeeze Russia. India will never bow to pressure, was the responding chorus.

While much of India's establishment does cherish musty memories of cold-war "non-alignment", when the Soviet Union backed the country against an American-supported Pakistan and a looming Chinese dragon, many also cite pragmatic contemporary reasons for staying off the West's anti-Putin bandwagon. Most obviously, India depends on Russia for most of its arms. Perhaps 80% of its legacy systems are of Russian origin and, despite intensifying efforts to diversify, Russia remains a key supplier of new weapons and a vital source for maintenance and spares. Perhaps more crucially in the eyes of Indian generals, many of the country's prestige military toys, such as nuclear-powered submarines and hypersonic cruise missiles, rely on Russian inputs.

It is not just nostalgia, either, that attaches Indian strategists to a clumsy fading power whose economy is now little more than half of India's in size. Tanvi Madan of the Brookings Institution, an American think-tank, notes that India still sees Russia through the lens of its biggest long-term foreign-policy challenge, China. Delhi warmed to Moscow in the 1960s after the Soviet Union broke with Beijing. Indian security wonks still see Mr Putin's Russia as a potential balance to what is not only an Asian superpower, but one with which India regularly spars over a long and dangerously undefined border. India fears that an isolated Russia will fall deeper into China's embrace. At the same time, by declining to condemn Russia over Ukraine, India also wants to send a signal to China of its independence. The message is that for all its military footsie with the West, such as joining a "Quad" of China-wary powers along with America, Japan and Australia, carrying out joint naval exercises and mouthing mantras about a "rules-based order" and "free and open Indo-Pacific", India is not a Western stooge.

All this posturing is fine, say Western diplomats, swallowing yet another snub on April 1st when Narendra Modi, India's prime minister, granted an audience to Mr Lavrov that he had pointedly denied to any of the other envoys (including China's foreign minister, Wang Yi, who visited

Delhi on March 25th). Even the Americans accept that in a global energy crunch India may take some advantage of steep Russian discounts on its oil. They have already given Delhi a free pass for its recent purchase of an advanced Russian air-defense system – the sort of order that could trigger American laws requiring sanctions.

But although India may be right in thinking that it is too big and important a player for Western powers to forsake, Delhi's narrow focus on "realpolitik" is not without costs. China's "historic" claims on bits of Indian territory are not so different from Russia's in Ukraine. Cocking a snook at your partners in the Quad serves only to prove Mr Wang, the Chinese foreign minister, acute in his argument that the grouping is no more substantial than "sea foam". Clever as it may seem to use its closeness to Russia to its advantage in its contest with China, the erratic, bumbling and nasty Russia of Mr Putin, provider of costly weapons that don't work too well, does not a reliable partner make. And at some point, particularly if Ukraine gets even messier, India's own people might begin to take unwonted interest in foreign affairs. They might then ask, what kind of democracy are we anyway, if we can't help fellow democracies in need?

### **30. War in Ukraine compounds hunger in East Africa**

New York Times, 1 Apr 22, Abdi Latif Dahir

First came the drought, drying up rivers, and claiming the lives of two of Ruqiya Hussein Ahmed's children as her family fled the barren countryside in southwest Somalia.

Then came the war in Ukraine, pushing food prices so high that even after making it to the outskirts of the capital, Mogadishu, she is struggling to keep her two other children alive.

"Even here, we have nothing," she said.

Across East Africa, below-average rainfall has created some of the driest conditions in four decades, according to the United Nations, leaving more than 13 million people facing severe hunger. Seasonal harvests have hit their lowest in decades, malnourished children are filling hospitals and many families are walking long distances to find help.

The devastating drought has blanketed most of Somalia, leaving nearly a third of the population hungry. In neighboring Kenya, the drought has left more than three million people short of food and killed more than 1.5 million livestock.

And in Ethiopia, where a civil war has impeded aid delivery into the northern Tigray region, food insecurity is more widespread than at any time in the last six years. The first food aid to Tigray in three months arrived on Friday.

Now, the war in Ukraine is making the crisis even worse by raising the price of grains, fuel and fertilizer.

Russia and Ukraine are some of the region's top suppliers of agricultural commodities such as wheat, soybeans and barley. At least 14 African countries import half of their wheat from Russia

and Ukraine, according to the Food and Agriculture Organization. Eritrea depends on them entirely for its wheat imports.

“The conflict in Ukraine is compounding an already complicated situation in East Africa,” Gabriela Bucher, the executive director for the charity organization Oxfam International, said in a phone interview. “East Africa is not on the global agenda now, but the region needs the solidarity of the international community and it needs it now.”

The devastating drought and the war in Ukraine are amplified by a series of crises over the past two years.

The coronavirus pandemic has disrupted food supply chains and forced many families to pay higher prices for food staples. The locust infestation in Kenya, the civil war in Ethiopia, extreme flooding in South Sudan, the political crises and growing terrorist attacks in Somalia, and the intensifying ethnic conflict in Sudan have all contributed to the destruction of farms, the depletion of harvests and a worsening food crisis, aid groups say.

The war in Ukraine, which is in its second month, is expected to cause further spikes in food costs across the region. The conflict, depending on how long it lasts, could reduce “the quantity and quality” of staples like wheat, said Sean Granville-Ross, the regional director for Africa at Mercy Corps, a nongovernmental organization.

“Meeting the basic needs of vulnerable drought-affected populations will become more expensive and challenging,” he said.

That ominous outcome is already evident in many parts of the region.

In Somalia, the price of a 20-liter container of cooking oil has increased to \$55 from \$32, while 25 kilograms of beans now go for \$28 instead of \$18, according to data gathered by Mercy Corps.

In Sudan, the price of bread has nearly doubled, and some bakeries have closed because wheat imports have dropped by 60 percent since the beginning of the war, according to Elsadig Elnour, the Sudan country director for the charity organization Islamic Relief.

Kenya, citing the war in Ukraine, also raised the price of fuel, leading to protests in parts of the country.

When famine hits, children are particularly vulnerable. An estimated 5.5 million children in the region are facing high levels of malnutrition from the drought, according to World Vision, a Christian aid organization.

“My children died of hunger. They suffered,” said Ms. Ahmed, whose children, aged 3 and 4, died during her days-long trek from her home in Adde Ali village in the Lower Shabelle region to the outskirts of Mogadishu. “They died under a tree.”

In Mogadishu, families are already feeling the ripple effects of the war in Ukraine, with rising food prices squeezing household budgets as the holy month of Ramadan approaches. With no job, proper shelter or access to the beans, maize and tomatoes she once farmed, Ms. Ahmed now relies on food donations from well-wishers to feed her two surviving children, ages 7 and 9.

And aid programs are stretched thin. The war has affected the operations of the World Food Program, which this month said it had reduced rations for refugees and others in East Africa and the Middle East because of rising costs and depleting funds.

Some fear that the continued drought in East Africa could come to resemble the one in 2011, which killed about 260,000 people in Somalia alone. While the situation hasn't reached that level yet, the funding and resources needed to avert such a crisis have not yet begun to flow, Ms. Bucher of Oxfam said.

Just 3 percent of the \$6 billion the U.N. needs this year for Ethiopia, Somalia and South Sudan has been allocated, she said, while Kenya has only secured 11 percent of the \$139 million needed for assistance.

Last week, the African Development Bank said it would raise up to \$1 billion to improve agricultural production and help Africans become self-sufficient in food in the long run. But while these initiatives are welcome, Ms. Bucher said it was imperative that donors also give unsparingly and immediately to avert a much wider crisis.

"The world needs to come to the rescue of East Africa to avert a catastrophe," she said.

## ANALYSIS/COMMENTARY

---

### **31. America and Saudi Arabia are stuck with each other: How Biden can recalibrate the relationship without breaking it**

Foreign Affairs, 1 Apr 22, Yasmine Farouk and Andrew Leber

In recent weeks, as Western sanctions on Russia over its war in Ukraine have roiled global energy markets, Saudi Arabia has continued to decline requests from U.S. President Joe Biden's administration that it increase oil production. Although the kingdom's pointed refusal to mitigate the pain of skyrocketing fuel prices clearly startled many American observers, inspiring a raft of commentary asking whether the 77-year U.S.-Saudi alliance was still worth maintaining, it should not have come as a surprise.

The United States' relationship with Saudi Arabia has been in a downward spiral since immediately after 9/11. After years of tensions over the U.S.-led "war on terror," the American intervention in Iraq, Washington's on-and-off pursuit of a nuclear deal with Iran, the Saudi-led war in Yemen, and Riyadh's human rights record, even former President Donald Trump's open courtship of Saudi Crown Prince Mohammed bin Salman (MBS) did little to improve trust and communication. Though some in the U.S. foreign policy establishment privately question

soon, a similar process may occur – the focus of some of the projects may be shifted to create benefits for different groups – but this will only mean the Chinese presence on Pakistani soil will shift, not depart entirely.

### **34. Analysis: Oil prices, Ukraine war create Saudi pivot point**

Associated Press. 1 Apr 22, Jon Gambrell

The world is looking to Saudi Arabia to boost oil production as global energy prices spike because of Russia's invasion of Ukraine. But that could mean rethinking how to deal with the kingdom's controversial crown prince.

Crown Prince Mohammed bin Salman's ties with longtime allies have been troubled by a string of issues. At the top of the list is the killing and dismemberment of Washington Post columnist Jamal Khashoggi at the Saudi Consulate in Istanbul in 2018, as well as Saudi Arabia's intervention in neighboring Yemen's war.

U.S. President Joe Biden has kept the 36-year-old prince at a distance. But with economic worries high, others may be putting the controversies behind them.

Turkey on Thursday moved to end an ongoing court case of Khashoggi's death, a step that could ease tensions with Saudi Arabia.

With higher oil prices flooding the kingdom's coffers, the crown prince and his father King Salman face a potential pivot point of their own.

Can the ruling Al Saud family reset its relationship with the United States, long the security guarantor for the wider Persian Gulf? Or does the kingdom tip toward further toward China, now its biggest buyer of crude, or Moscow?

An American rapprochement seems unlikely. Asked in a recent interview about what he'd want Biden to know about, Prince Mohammed bluntly said: "I don't care."

"It's up to him to think about the interests of America," the prince added.

Perhaps no other country in the world stands to rapidly benefit financially from the Ukraine war as Saudi Arabia.

Its vast oil resources, located close to the surface of its desert expanse, make it one of the world's cheapest places to produce crude. For every \$10 rise in the price of a barrel of oil, Saudi Arabia stands to make an additional \$40 billion a year, according to the Institute of International Finance.

It's a wild turn of events considering oil prices in April 2020 turned negative at the height of lockdowns in the coronavirus pandemic. Now, benchmark Brent crude stands at \$105 a barrel highs unseen since 2014.

The additional cash comes in handy for Prince Mohammed, who also has to deal with questions at home, particularly how to find jobs for a growing number of unemployed youth.

The crown prince has been known for his brash moves. His vision for Saudi Arabia includes developing a futuristic city called Neom in the desert reaches along the Red Sea. Its latest iteration involves a ski slope project called Trojena, advertised in a computer-generated commercial now in heavy rotation across Mideast satellite channels.

But while expansive palaces now exist there, satellite photos from Planet Labs PBC show the wider Neom project remains at an early stage. It likely will be years before it produces the jobs the prince counts on to slingshot the kingdom's economy away from oil.

Meanwhile, unemployment among youth stood at 32.7% for men and 25.2% for women late last year, according to the Saudi General Authority for Statistics. Reopening cinemas and allowing concerts in a kingdom where ultraconservatives view music as a sin comes as a part of that push for jobs.

"If I'm going to get the employment rate down, and tourism could create 1 million jobs in Saudi Arabia, ... that means I have to do it," the prince told *The Atlantic* magazine in a recent interview. "Choose a lesser sin rather than a bigger sin."

The sheen, however, has come off for human rights activists and some Western nations.

Saudi Arabia just put to death 81 prisoners in a single day, the biggest known mass execution in the kingdom's history, after a pandemic lull. Despite a unilateral Ramadan cease-fire, the Saudi-led war in Yemen against the Houthi rebels rages years after the prince promised a quick victory — and the Arab world's poorest country has been left in wreckage.

Internationally, perhaps nothing received more attention than Khashoggi's killing.

U.S. intelligence services believe Prince Mohammed approved the operation that killed Khashoggi, a permanent resident of the United States. Finding a resolution over the split with a close ally remains a difficult knot to untangle.

Biden, who called the crown prince "a pariah" while campaigning, pointedly has only spoken to King Salman since entering the White House. Biden's first foreign trip was to a G-7 summit in England, rather than the sword-dancing embrace then-President Donald Trump gave to Saudi Arabia.

Saudi Arabia and the United Arab Emirates appear to be leveraging record gasoline prices at the pump to extract American concessions on Yemen.

Saudi Arabia has repeatedly said it can't be held responsible for energy price jumps caused by Houthi attacks on its oil facilities. That steps up pressure on Biden, whose administration withdrew American air defenses from Saudi Arabia last year.

Meanwhile, Saudi Arabia is maintaining its own ties to Russia. The kingdom also is again reportedly thinking of selling some crude oil in Chinese yuan to Beijing, rather than the U.S. dollar.

Ukrainian President Volodymyr Zelenskyy weighed in on the situation in recent days, urging Qatar and other regional energy powers to increase their output to make up for the loss of Russian supply. "The future of Europe depends on your efforts," he told them.

Faisal J. Abbas, the editor-in-chief of Saudi Arabia's English-language daily newspaper Arab News, wrote that the kingdom needs "all the support it can get" against the Houthis.

"The kingdom cannot — and must not — be left alone to safeguard global energy supplies at a time when the entire world is unanimously hurting from price hikes," he wrote.

Where the support comes from in the future remains the question.

### **35. Afghanistan's hungry will pay the price for Putin's war**

Foreign Policy, 1 Apr 22, Lynne O'Donnell

Russia's ban on food and fertilizer exports to stabilize supply and prices at home while it wages war on Ukraine is reverberating in its own backyard, pushing Central Asian states into economic crisis and threatening to tip Afghanistan from starvation into famine.

The war in Ukraine has already sent shudders through commodities markets, pushing up prices of cereals, fuel, and fertilizer. Together, Ukraine and Russia account for 30 percent of wheat supply; Russia exports most of the world's fertilizer. The longer the war lasts, the greater the instability of supply and the higher prices will go in anticipation of shortages.

The impact on vulnerable countries such as Afghanistan, where millions of people are short of food and babies are dying of malnutrition, will be devastating, economists said. Other vulnerable countries, including Yemen, Lebanon, Ethiopia, and Nigeria, can expect serious ramifications at least for the coming year, possibly longer. The war is expected to hit harvests and yields, not only in Ukraine, where grain planting this year could be cut by half, but in countries that have relied on Russian fertilizer to boost their own output, according to Friederike Greb, an economist with the World Food Program (WFP).

WFP is spending \$71 million a month on grain purchases, she said, 44 percent more than the average monthly outlay in 2019, to meet existing needs. As the war fallout worsens, need will rise, and not only will WFP have to stretch stocks to feed more mouths, but hunger will intensify in countries already suffering from a lack of food as there just won't be enough to go around. Already, WFP has had to reduce food rations to 8 million people.

One of the worst-hit will likely be Afghanistan, reeling after emerging from four decades of war with little in the way of a sustainable economy. Since the Taliban's takeover last August, what economic activity there has come to a halt, and U.S. economic sanctions mean that many people do not have cash to buy anything, including food. Desperate people have reportedly sold their organs and their children.

"The situation in Afghanistan can only get worse," said Qais Mohammadi, an Afghan economist and former assistant professor at a private university in Kabul. "It's not just one but multiple variables, and the Ukraine war is an additional significant variable on top of unstable currency, unstable banking system, unstable political environment, instability of decision-making, having no rules and regulations, freezing of billions of dollars in financial assets."

WFP has repeatedly warned that half of Afghanistan's population is "food insecure," with nearly 9 million people facing famine-like conditions. Worldwide, that figure is 44 million, Gerb said. The Taliban's Ministry of Public Health has said more than 13,000 babies have died of malnutrition this year already, though the number is impossible to verify.

"Afghanistan is one huge humanitarian crisis," Greb said, adding that along with Yemen and Lebanon it was already in a "very dire place" before Russia's war in Ukraine. WFP operations in Afghanistan, Yemen, and Lebanon "are highly dependent on wheat," she said. "Our resources don't take us as far as they used to because we have to pay higher prices in global markets."

In Afghanistan, where the main staple is bread, wheat imports are essential. Kazakhstan is a major supplier but won't have so much to sell as Russian curtailments on exports to its own neighbors start to bite. Afghan economists expect that farmers in the eastern provinces will take advantage of higher prices in Pakistan, itself a recipient of WFP aid, to sell their grain over the border, rather than at home.

Nazar Bobitski, a strategic advisor with the Ukrainian Business and Trade Association, said Russia's blockade of the Black Sea coast has isolated Ukraine from global maritime trade, cutting supplies of cereals and vegetable oils, as well as grain for animal feed production. Almost all of Ukraine's grain exports are shipped through deep-water ports on the Black Sea, but no bulk shipments have left since the invasion.

"Sea lane trade was critical to ensure that there is stability of supply and price stability for these commodities," he said. Combined with the export bans, "this leaves significant curtailment of supply, and obviously price rises will follow. It's mostly less developed countries that will be affected."

It's not just Afghanistan. Central Asian countries such as Turkmenistan, Uzbekistan, Tajikistan, Kyrgyzstan, and Kazakhstan will suffer from the ban on Russian fertilizer and grain exports, as well as the wilting of the Russian economy under Western sanctions, which will shrink their own remittance incomes from migrant workers.

Egypt, Ethiopia, Lebanon, Syria, and Yemen all depend on grain shipments from Black Sea ports, which cannot be easily replaced, as sourcing from elsewhere, such as Canada, Australia, or

India, adds to shipping costs and time. Nor do good harvests necessarily mean producing countries can pick up the slack, as port capacities are already tight.

“There’s only so much you can do, especially if transport costs are so high. So in the end it means cutting rations. And now WFP would need almost \$20 billion for this year to feed almost 140 million beneficiaries,” Greb said. “That’s a lot of money.”

[Return to top](#)

### **36. Israel and the triangular crisis of Ukraine, Iran, and Palestine**

New Yorker, 1 Apr 22, Bernard Avishai

On Monday, the U.S. Secretary of State, Antony Blinken, joined the foreign ministers of Israel, the United Arab Emirates, Bahrain, Egypt, and Morocco for a meeting at Sde Boker, the retirement kibbutz and burial place of David Ben-Gurion, the nation’s first Prime Minister. The meeting had been initiated by the Israeli Foreign Minister, Yair Lapid, with encouragement from Blinken, whose main aim was to reassure the group that the United States is fixed in its commitment to deny Iran a nuclear weapon, and that the not-yet-consummated Iran nuclear deal is the best of available options to do that. “The summit was to showcase a strategic alliance growing out of the Abraham Accords,” the Israeli journalist Henrique Cymerman told me. “To seed the formation of a kind of Middle Eastern NATO to contain Iran—deal or no deal.”

Israel and its Arab guests registered a certain discontent. No deal currently being negotiated contemplates constraints on the Iranian missile and drone programs. The leaders of the Gulf states have been increasingly chagrined by the lack of a U.S. response to the various attacks that Iran’s Houthi proxies in Yemen have made on the U.A.E. and Saudi Arabia during the past few months—including, most recently, a strike on a Saudi Aramco facility, on March 25th. Indeed, Saudi Arabia and Jordan were not represented in person at the summit, although their interests were. (“The Saudis were the real enablers of the meeting,” Cymerman said.) According to Axios, Blinken asked Prime Minister Naftali Bennett, at a pre-summit meeting on Sunday, what alternative Israel proposed to a new deal—other than a U.S.-led, preemptive strike, which Israel continues to prepare for but, particularly given the situation in Ukraine, the Biden Administration would not want to entertain. Bennett reportedly said that he believed Iran might be deterred from enriching uranium to weapons grade if it knew that the U.S. and European countries would intensify sanctions to the extreme levels they have placed on Russia. Since Israel has not joined in those sanctions, one can only wonder how Blinken received the suggestion.

In any event, Bennett had already stated that Israel did not see itself as a party to the Iran deal. Earlier in March, moreover, as if to prove some independence from Washington, the U.A.E. hosted a state visit by Syria’s Bashar al-Assad—who remains in power thanks to brutality abetted by Iran and Russia. The chief U.S. negotiator on the Iran deal, Robert Malley, perhaps signaled acknowledgement of Israel’s developing partnership with the Gulf states when he announced in Doha, on Sunday, that Washington would not yet remove Iran’s Revolutionary Guards from the terrorism-sanctions list, and noted that the signing of the deal was “not just around the corner.”

Two other matters cast shadows on Blinken's trip: Israel's occupation of Palestine, especially the continuing expansion of the settlements, and its quasi-neutrality on Ukraine, both of which are a source of tension between Jerusalem and Washington. They may seem unrelated, but each has rendered Israel a sort of outsider among democratic states at a decisive moment. And Blinken chose to finesse both. Bennett has made much of his attempts to mediate between Moscow and Kyiv, but, in addition to remaining aloof from sanctions against Russia, Israel refuses to supply Ukraine with war matériel in order to preserve, Lapid had said, Russian tolerance for its interdictions of Iranian-backed forces in Syria. Blinken, at a press conference with Bennett, tactfully praised Israel for the solidarity that it has shown with regards to Ukraine: joining the United Nations' vote to condemn Vladimir Putin's invasion; implementing new rules to prevent oligarchs from parking yachts and planes and fortunes in Israel (though Jewish oligarchs who are Israeli citizens, and have Israeli registered property, may well be able to elide them); setting up a field hospital in western Ukraine; and, last and apparently least, Bennett's mediation efforts.

The question of Palestine was largely sidelined at the Sde Boker summit, though few doubt that the Saudis and Jordanians made a show of boycotting it largely to avoid providing scenes of senior Arab and Israeli diplomats hobnobbing for the world's press, while Israeli occupation forces defended the at times violent settler zealots—which might have incited further violence in the West Bank and Amman, as Ramadan begins. Alas, that show seems to have been of little value. Eleven Israelis have been killed in three separate terror attacks during the past week. On Friday, a Palestinian man was shot and killed by soldiers in Hebron.

Blinken, apparently sensitive to this gap in the agenda, spent the afternoon before the summit with Mahmoud Abbas, the President of the Palestinian Authority, who called the gathering a "harsh attack" on the Palestinian people, and decried a U.S. "double standard": acting against Russia's claims on the Ukraine, while tolerating Israel's occupation of Palestinian territories. Jordan's King Abdullah II visited Abbas in Ramallah, on Monday, as the summit was taking place. Benny Gantz, the moderate Israeli Defense Minister, wanted to join that meeting, but Bennett, the annexationist Prime Minister, nixed the idea. Blinken, for his part, simply restated his endorsement of a "two-state" solution, while acknowledging that is not imminent. In the triangular crisis of Ukraine, Iran, and Palestine, the last issue seems the most deferrable at present.

Or is it? The occupation exacerbates Israel's hostility with Iran, and the desire to operate against Iran in Syria shapes its diplomacy with Russia. Leaders make strategic, not just transactional, decisions. Deliberately or by default, they define what a country stands for and set its course for a generation. And the leader who made this responsibility most vivid for the Israelis in recent days was not Blinken, or Bennett, but Ukraine's President, Volodymyr Zelensky, who addressed the members of the Knesset, Israel's parliament, in an impassioned speech delivered remotely on March 20th. "Indifference kills. Calculation is often erroneous. And mediation can be between states, not between good and evil," he said. "I am sure that every word of my address echoes with pain in your hearts." But he wanted to know why Israeli military help had not been forthcoming. "What is it? Indifference? Political calculation? Mediation without choosing sides?" Putin's aggression, Zelensky said, had made the choice this stark. There is an urgency for democratic solidarity, he suggested, to valorizing a global order in which military power does not determine a neighbor's fate.

He might have added that Ben-Gurion himself, in his Biltmore Declaration of 1942, envisioned a “Jewish Commonwealth integrated in the structure of the new democratic world.” But Zelensky, a Jew, couched his appeal in a way that he clearly thought would resonate with the leaders of a Jewish state. “The Nazi Party raided Europe and wanted to destroy everything. Destroy everyone,” he told them. “Wanted to conquer the nations. And leave nothing from us, nothing from you.” Then he said, “They called it ‘the final solution to the Jewish issue.’ You remember that. And I’m sure you will never forget! But listen to what is sounding now in Moscow. Hear how these words are said again: ‘final solution.’ But already in relation, so to speak, to us, to the Ukrainian issue.”

Members of Bennett’s inner circle responded furiously to the comparison. The Communications Minister, Yoaz Hendel, tweeted that the Nazis’ genocide of Jews “was also carried out on Ukrainian land,” implying Ukrainian sympathy for it, and said that “the comparison to the horrors of the Holocaust and the Final Solution is outrageous.” The Interior Minister, Ayelet Shaked, went further, telling a conference sponsored by the newspaper Yedioth Ahronoth that, while some Ukrainians had behaved decently during the Second World War, “Ukraine, as a whole, colluded with the Nazis—may their name be cursed—in the slaughter of the Jewish people.” Bennett echoed Hendel and Shaked, albeit in a more compassionate tone. “I can’t imagine being in his shoes,” Bennett said, of Zelensky, but added that the Holocaust should not be compared with anything, and that Zelensky’s rhetoric was “misplaced.”

The discomfort that Bennett’s allies felt was from the messenger as much as from the message. Zelensky hardly needs a lesson on the unique cruelties of the Final Solution: his grandfather fought in the Red Army and lost many family members to Nazi occupiers. Indeed, Zelensky’s fierce liberalism and his ironist’s sense of history seem his tribute to them. But for national-Orthodox Zionists such as Bennett, Hendel, and Shaked, Zelensky’s grasp of nationhood would seem a kind of naïveté. Their lesson, as their erstwhile mentor Benjamin Netanyahu had put it, is that “only the strong survive.” Hendel, who grew up in a West Bank settlement, refused, during the spring of 2020, to allow a center-left government to be formed if it rested on the votes of Arab Israelis. More recently, Shaked scandalized moderates in the government by setting criteria—which have since been overturned—that would allow Israel to absorb only Ukrainian Jewish refugees. As long as Bennett is in power, the Israeli government’s hesitation to align unambiguously with the democratic world has an ideological, not just a pragmatic, aspect.

Zelensky, I hasten to add, thanked the Israelis for the support they have given, and he did not dismiss Bennett’s mediation efforts. But, as the negotiations that resumed this week in Istanbul have revealed, the question is not whether mediation should persist but whether Bennett’s value as a mediator outweighs Israel’s potential contribution to the resilience of Zelensky’s forces, America’s sanctions, and Western solidarity—whether that counterforce against Putin, not mediation, would cause him to inch toward agreement, if inch he will. A source close to Bennett claimed that the Prime Minister’s efforts were appreciated: Putin is no longer insisting on the “de-Nazification” of Ukraine’s regime, code for his being reconciled to Zelensky staying in power. Nor, the source told me, does the Kremlin’s demand for “demilitarization” mean a Russian takeover, though Putin expects Zelensky to recognize Russian annexation of the Donbas and Crimea. The remaining Ukrainian state, for its part, would adopt something like the neutral stance of Austria during the Cold War. Zelensky would need some sort of security guarantors,

though, the source said, he “didn’t get many volunteers.” But these shifting conditions have been shaped, obviously enough, by the desperate military courage of the Ukrainian forces. (Last week, the Times reported that Israel, fearing a Russian reaction, refused even to supply those forces with hacking software.)

All of which returns us to the Sde Boker meeting. Given Israel’s appeal to the “democratic world” — certainly to the United States — to anchor a new alliance against Iran, it is hard to see how Bennett justifies his maneuvering on Ukraine. If Iran, for example, were to attack Israel from Lebanon, and Tel Aviv became a site of carnage, no Israeli Prime Minister would be grateful for, say, the French President offering mediation instead of aid. The retired Lieutenant General H. R. McMaster, who briefly served as Donald Trump’s national-security adviser and has worked closely with the Israeli military, told Haaretz that “Israelis ought to be embarrassed” by their government’s proto-neutrality. (“This idea that you hedge with Vladimir Putin to compensate for concerns that the American Administration might attenuate or lessen support for Israel — that’s part of a long pattern and it’s always been wrong,” he said.)

The risks are real: Palestine, Iran, and Ukraine have presented Israeli leaders a strategic challenge. Does Israel prioritize a peace process with Palestinians, defer to American leadership on Iran, take a stronger stance on Russia—define its interests within “the structure of the new democratic world”? The complexity — as Zelensky implied — doesn’t mean that the answer isn’t simple.

Putin has punished his shrinking inner circle for misjudging the war.

### **37. Painful choices lie in the path to peace in Ukraine**

Washington Post, 1 Apr 22, David Ignatius

In the agonizing final years of the Vietnam War, a strategist named Fred Iklé wrote a treatise titled “Every War Must End.” His basic theme was that “wars are easier to start than to stop” — a message that applies powerfully now to the conflict in Ukraine.

Russia and Ukraine have been meeting for preliminary peace talks in Turkey this week, which has raised hopes for a settlement. Both sides have described the same basic terms for resolving the conflict: In exchange for a halt in the fighting, Ukraine would agree to a neutral military status that wouldn’t threaten Russia.

But this formula masks painful choices: Such a pact would grant Russian President Vladimir Putin at least partial victory. For many in Ukraine and the West, that is unacceptable. Putin launched an unprovoked, illegal invasion. His army committed atrocities against civilians. He shouldn’t be rewarded for such behavior.

The Biden administration's view is that it's up to Ukrainian President Volodymyr Zelensky to decide whether to settle for neutrality or keep fighting for a better deal. "The Ukrainians will have to decide when the situation on the ground is ripe for a settlement," argues Stephen Hadley, a former national security adviser to President George W. Bush who keeps close contact with the Biden team.

After fighting so valiantly, Ukrainians won't want a settlement that leaves the country disarmed and vulnerable to a future attack. "This is viable to me in only one way — the kind of neutrality that Switzerland has — fully armed, with a citizen army," Konstantin Gryshchenko, an influential former foreign minister of Ukraine, told me in an interview.

The Russian military has performed poorly so far, and some Ukrainians think more fighting will bring victory. But U.S. officials specializing in Russia are skeptical. Russia is a large country with the ability to resupply and reposition its forces; Ukraine is a relatively small one that's short on the essentials for survival. The war is 40 days old; who can say what the battlefield situation might be in six months or a year?

Iklé offered a useful caution: "It often happens in wars that the weaker party makes no attempt to seek peace while its military strength can still influence the enemy but fights until it has lost all its power to bargain." He called this "self-destructive perseverance."

Iklé was similarly skeptical of punitive tactics such as Russia's seeming determination to bomb its way to a desirable settlement. "Inflicting 'punishment' on the enemy nation is not only an ineffective strategy for ending a war, it may well have side effects that actually hasten the defeat of the side that relies on that strategy," he wrote.

Often, wars don't end with a peace treaty but a cease-fire that leaves forces in place along a "line of control." Some analysts think Russia may be moving toward such an outcome by consolidating its forces in a swath of southeastern Ukraine that could eventually stretch from Odessa to the Donbas region.

Such partition lines are messy but can be surprisingly durable. North and South Korea are still separated without a formal peace treaty. A disputed line of control separates India and Pakistan, and also India and China. Vietnam was similarly partitioned for decades.

Harvard's Graham Allison argues that such a division could allow the Western-allied part of Ukraine to prosper. Before the Russian invasion, he contends, Ukraine was a failing state — one of the rare post-Soviet republics whose real gross domestic product per capita actually declined after 1991. A future Western Ukraine might become a version of South Korea, Allison says.

As Russia and Ukraine exchange peace proposals, the United States and its allies are subtly pressuring Russia through what has been their best tool — the release of declassified intelligence. The latest installment was a series of statements this week by U.S. and British officials arguing that Putin's bloody invasion was marked by the Russian leader's delusion and the incompetence of his advisers. "Putin's advisers are afraid to tell him the truth," but "the

extent of these misjudgments must be crystal clear to the regime,” argued Jeremy Fleming, director of Britain’s code-breaking agency GCHQ, in a speech on Thursday.

That zinger was aimed directly at the Kremlin, and it could have several interesting consequences: Putin may further blame his military and intelligence chiefs for failing to warn him of the disaster ahead; the generals and spies may further resent their remote president who has waged what Fleming described as his “personal war”; and the Russian people may mistrust both Putin and his security chiefs.

The most hopeful development I saw in this week’s peace feelers was a statement by Russian negotiator Vladimir Medinsky that, although Moscow rejects Ukrainian membership of NATO, it “has no objection to Ukraine’s aspirations to join the European Union.”

Maybe that is a building block for a real settlement. For a European Ukraine would represent a profound defeat for Putin’s dream of hegemony over Kyiv. That’s an essential requirement for a peace deal, along with stopping the killing.

### **38. Peace in Ukraine will be elusive until one side makes a military breakthrough**

Financial Times (UK), 1 Apr 22, Lawrence Freedman

From almost the moment the war in Ukraine began, diplomats have been at work trying to end it. The UN Security Council has deliberated. Vladimir Putin has had regular telephone discussions with western leaders in which they urge him to stop his aggression or at least facilitate humanitarian relief for those suffering under the weight of Russian bombardments. He then in turn explains how they fail to understand Ukraine’s responsibility for these tragic events.

Israel’s prime minister Naftali Bennett visited Moscow to explore a peace initiative some weeks ago, but that now seems to be in abeyance. The only talks that hold any real promise are those that take place regularly between Ukrainian and Russian teams. The most recent of these was in Istanbul. But here too there has been little tangible progress.

For now neither side has an incentive to commit to a long-term settlement. They are waiting for military breakthroughs and a clearer view on the likely course of the war. Should the prospect be one of a long stalemate, then both might feel obliged to compromise. As they wait for news from the front, all they can do is to urge each other to be more “realistic” in their expectations.

Russia has had most reason to scale down its ambitions. It launched this war presuming an early victory, an assessment that was shared in a number of western capitals. The resulting mindset, which assumed that it would be Ukraine who was compelled to make the big concessions, has still not gone away, even though Russia has had to relinquish some of its earlier territorial gains. Its forces are suffering heavy losses and struggle with logistical and morale issues. And on Friday, authorities in the city of Belgorod claimed that Ukrainian helicopters had made the first strike on Russian soil since the war began.

Russia's original demands, however, are still on the table. So far it has only acknowledged implicitly that it will be unable to achieve regime change in Kyiv or impose demilitarization.

What will happen if Ukraine sustains this military pressure, and Russian efforts to reinforce its forces and mount new offensives continue to falter? Moscow's best option in those circumstances will be to call for an imminent ceasefire. This would enable Russia to consolidate its gains.

Ukrainian president Volodymyr Zelensky will see the trap and be obliged to refuse the offer. He can note a record of Russia failing to honor many of the localized ceasefires, intended to allow civilians from besieged towns and cities to escape and for relief supplies to enter. He could also point to the problems with the implementation of the February 2015 Minsk agreement. Russian-sponsored separatists stayed in control of the territory they had occupied the previous year.

While Putin might be happy to start with a ceasefire without an accompanying peace deal, giving him an opportunity to confirm his gains while using a period of quiet to encourage his armed forces to sort themselves out, Zelensky will want a peace deal that only leads to a ceasefire as it is being implemented. His core demand is that Russian forces must leave Ukrainian territory. The war cannot truly end while any remain.

To sweeten the pill for Russia, the Ukrainian leader has come up with ideas to deal with the most contentious issues. The proposal that captured the most attention was one to abandon efforts to join Nato and turn Ukraine into a neutral state.

At first glance this looks like an important step. But Zelensky is after an armed neutrality backed by security guarantees. As he wants these guarantees to be stronger than those Ukraine had before, notably the ones in the 1994 Budapest Memorandum, which were provided in return for giving up its Soviet-era nuclear arsenal. Weeks before the war began foreign minister Sergei Lavrov explained that Russia was no longer bound by any promises because of the "state coup in Ukraine".

This experience explains why Ukraine was so keen to join Nato and why it now will want guarantees from the US, UK and others that are more or less the same as those as it would get as a member of Nato. However, as always with guarantees, there is small print. Whatever formula is found, Ukraine will carry on being dependent upon its own defenses, fortified by more equipment coming in from the west. It might hope that Moscow's experience of military failure will encourage caution in the future, though it will hardly feel secure if Russia ends this war still holding a chunk of Ukrainian territory.

Kyiv has all but accepted that while it will never agree in principle to Russia's annexation of the Crimea, in practice this is a fait accompli. But it will not agree to Russian control over the Donbas, the area for which Putin went to war.

It seems doubtful that this shattered territory, with its hostile population and vast reconstruction costs, requiring defense for the indefinite future, will appear now as such an attractive prize. But without it Putin has absolutely nothing to show for all this effort. This war should end with

Russian forces out of the Donbas. That would also be the most stable outcome. Without an agreement on this core issue, whatever else has been settled in negotiations, the conflict will not be concluded. That is why the search for a durable peace cannot be separated from the search for military success.

## REGIONAL MEDIA COVERAGE

---

### MIDDLE EAST

---

#### **39. Wexler to Asharq Al-Awsat: Regional peace not possible without Saudi Arabia**

Asharq Al-Awsat, 1 Apr 22, Fatehelrahman Yousif

US Senator and President of the S. Daniel Abraham Center for Middle East Peace in Washington DC, Robert Wexler stressed that real peace in the Middle East is not possible without Saudi Arabia.

In remarks to Asharq Al-Awsat, he said the Saudi-American relationship is the cornerstone for not just tangible security, but in handling terrorism related to extremist ideologies and deterring emerging groups.

The relationship between Riyadh and Washington is very important, not just in traditional politics, but goes beyond it to the fields of innovation, economy and regional peace efforts, he continued.

Moreover, he said there was deep understanding of the fundamental nature of the American-Saudi relationship and the massive long-term value of the partnership and joint interests and goals.

Saudi Arabia is the cornerstone for American interests and its allies.

When it comes to Israeli-Palestinian peace, it would be impossible to imagine any deal or any real tangible peace progress taking place without Saudi Arabia, said Wexler from Riyadh.

He cited late King Abdullah bin Abdulaziz's declaration of the 2002 Arab peace initiative, saying it was a great vision of peace.

The collective challenge at hand, continued Wexler, is building sustainable peace.

Furthermore, he acknowledged that Israel is partly to blame for the collapse of the peace process in the region.

He refused to blame Tel Aviv entirely for the failure to achieve peace in the conflict with Palestinians.

Adding to his woes are recent judicial rulings by Iraq's highest courts on the constitutional interpretation of how presidents should be elected. Effectively, Iraq's highest legal authorities have stepped in to ensure that Sadr has to share power with his Shia rivals.

This is not to say that Sadr is particularly "anti-Iran", but rather that Tehran has long encouraged a form of "sibling rivalry" between its Shia proxies and associates so that no single party becomes too powerful and may one day think about striking out on its own without Iranian patronage.

By keeping its clients at each other's throats, Iran is better positioned to leverage its influence and continue to use Iraq as an instrument of its own power projection, allowing it to reach deep into Syria and even threaten Saudi Arabia, Turkey, and the United States.

What the Iraqi parliamentary chaos shows is that the political system established by the 2003 US occupation designed it to be controlled by external forces, and democracy does not remotely factor into how the state should be run.

Unless there is root-and-branch reform of the Iraqi political system, anyone who engages in Iraqi politics and the democratic process will have to face an entrenched deep state that ensures that the nation remains at the mercy of powerful foreign players, most notably the US and Iran.

## SYRIA

---

### **42. In Syria, Russia leads effort to recruit fighters for Ukraine**

Al Jazeera, 1 Apr 22, Kareem Chehayeb

Even after a decade of civil war, Syrians have been trying to find a way out of the country to fight in another. Moscow through the mercenary company the Wagner Group and supported Syrian fighter groups have been recruiting men to fight alongside Russian troops in Ukraine. Thousands across the war-torn country have reportedly expressed an interest in signing up.

One group, dubbed the ISIS Hunters, have made calls for recruitment at least twice over the past month. Those interested have to be between 23 and 43 years old, and must submit personal identification and documents that show they have military experience.

The ISIS Hunters will then let them know whether or not they have been recruited, and will summon them for deployment "at a later time when needed".

They are closely linked to the Wagner Group, and even share an almost identical insignia.

"Moscow is taking the lead with recruitment," Omar Abu Layla, a Syrian activist based in Europe who runs Syrian media and monitoring group Deir EzZor 24, told Al Jazeera.

“If you see it as a hierarchal structure, you have Russia at the top, then the Wagner Group, then the National Defense Forces,” he explained, the latter being a network of private pro-government fighter groups.

Russian President Vladimir Putin announced in March that he will approve up to 16,000 fighters from the Middle East to deploy in Ukraine’s Donbas region to support Russian-backed rebel groups.

The US Pentagon said it has seen indicators that the Wagner Group has been recruiting fighters from Syria, Libya, and other countries with a goal to deploy “a thousand or so” in the eastern province.

Russian defense-ministry-owned Zvezda TV broadcast a video of Syrian men in military garb, waving Syrian and Russian flags, pledging to fight alongside Russian forces in Ukraine.

### **Recruitment centers**

A fighter in Homs with the recently disbanded Russia-backed group Desert Hawks Brigade said its leader, Mohamad Jaber, has been contacting former fighters to regroup and support Russia’s war in Ukraine. He accepted Jaber’s request.

The Desert Hawks was considered one of Syria’s two most significant and ruthless fighter branches in the military. It has taken part in key offensives in Aleppo, Palmyra, Lattakia, and Deraa to keep President Bashar al-Assad in power.

“Otherwise you sign up at the [ISIS] Hunters center in Homs,” said the fighter, speaking on condition of anonymity.

Gregory Waters, an analyst at the Counter Extremism Project and nonresident fellow at the Middle East Institute, said there are more than a dozen recruitment centers in Syria run by Moscow-backed private pro-government armed groups.

Meanwhile, in the eastern Deir Az Zor province, the Wagner Group and allied Syrian forces have directly started recruiting Syrians to volunteer in Ukraine, Abu Layla said.

Salaries start as low as \$200-\$300 per month for volunteers to work as security guards to protect installations, but those with greater military experience are paid higher rates, exceeding \$1,000 per month, he said.

It is an attractive pay in a country where 90 percent of the population lives in poverty, and where access to adequate food and heating is becoming more out of reach.

Abu Layla said many Syrians volunteering are not just in it for the money.

“Some of these Syrian militias are hoping to get higher positions, and believe that they could do this if they show loyalty to Russia,” he explained. “But with many others in Syria hoping to emigrate to Europe, they see this as their golden ticket.”

Meanwhile, brokers claiming to help speed up recruitment for Syrians have swarmed Facebook groups and other social media platforms, including one called Job Opportunities with Our Russian Friends.

Dozens of Syrians, many dressed in camouflage in their photos, appear desperate for opportunities abroad, even if it puts their lives at risk.

Many on the page, including the Desert Hawk Brigades fighter, waiting for deployments have called them “scammers”.

“There are so many corrupted people who say you will be instantly recruited and sent to Ukraine if you pay them an advance,” he said.

One recruiter claimed in a post that volunteers deployed to Syria will be paid a monthly salary of 1,500 euros (US\$1,657), have all their personal expenses covered, and will receive a 50,000 euro (\$55,235) lump sum at their end of service. “I want to sign up, please somebody help me,” one middle-aged man said in the comment section.

However, a young man on the page, dressed in military garb in his photo, said this recruiter was a fraud.

He posted WhatsApp screenshots where the recruiter asked for broker fees, but would reduce the fee if he would find more people to recruit. “This crook says he will sign us off to go to Russia, notify the authorities!” he said in an angry post.

### **‘Stay away’**

Some analysts are skeptical about the recruitment process and whether Russia will deploy armed Syrians in Ukraine anytime soon.

“I’ve yet to see evidence of contracts,” Waters said, describing pledges as “political grandstanding”.

No Syrian fighters have reached Ukraine yet. However, some have reportedly arrived in Russia. Accountability organization Syrians for Truth and Justice, said the Wagner Group and a Syrian partner security company have transported Syrian volunteers in Benghazi, Libya to Damascus, Syria, and eventually to Russia. A Syrian government official denied this.

The Desert Hawks Brigade fighter is still waiting in Syria, and does not know when he will be called for deployment. “I don’t know what’s going on right now,” he admitted. “Once our leader tells us we’re traveling, we’ll travel.”

That said, not all Syrians are interested in fighting a new war, after more than a decade of conflict in their own country that has killed hundreds of thousands of people and displaced millions. Some say despite Russia’s crucial military support to the Syrian government, Ukraine is not a war for them to fight.

One Syrian who fought with a Russian-backed fighter group said staying in Syria despite the dire economic situation is the “honorable thing to do”.

“To hell with Russia and Ukraine,” he said. “Here’s my advice, don’t sign up and stay away from the whole thing.”

### **43. Assassinations continue in Syria's Daraa with no accountability**

Asharq Al-Awsat, 1 Apr 22, Riyadh al-Zain

Since early 2022, the province of Daraa in southern Syria has witnessed 117 different types of attacks that left 97 people dead, the Syrian Observatory for Human Rights announced in a report on Thursday.

It said violence and insecurity chaos has dramatically escalated in the province, where 45 attacks, murders and incidents of security instability were reported in different places in Daraa only in March, leaving 39 deaths.

The last of these attacks took place in the northern countryside of Daraa, at midnight on Wednesday, when gunmen fired at the house of a person in the town of Mahajah, north of Daraa, seriously wounding his wife and son, who were transferred to the hospital.

Last Wednesday, a little boy and his baby brother died while their sister sustained cuts all over her body, after unknown gunmen had stormed their house in Al-Harrak town in the eastern countryside of Daraa and stabbed the three with sharp tools.

The attack was part of an armed robbery, as the mother of the three victims had received a remittance from her husband who lives abroad, the Observatory said.

Also this week, a 12 year-old child was accidentally injured by members of the State Security, while he was with other children in Al-Maslakh area in Al-Hara city in Daraa countryside.

The Observatory said the rate of security incidents increased dramatically in the city of Daraa despite the so-called settlements and reconciliations conducted by the Damascus government in the city in 2018.

“Since early 2022, the number of attacks in the Daraa province has risen to 117, which left 97 people dead,” the London-based watchdog reported.

It said the victims involved 55 civilians, including a woman and two children, 32 regime military personnel and collaborators with security services, five individuals with settled-status, an ex-ISIS member, three unidentified people and a Russian-backed militiaman.

**5. Missiles strike near US consulate in north Iraq; no injuries**

Associated Press, 12 Mar 22, Qassim Abdul-Zahra

EXCERPT: In an interview with The Associated Press in December, Marine Gen. Frank McKenzie said that while U.S. forces in Iraq have shifted to a non-combat role, Iran and its proxies still want all American troops to leave the country. As a result, he said, that may trigger more attacks.'

**41. Israel's growing role in CENTCOM**

Jerusalem Post, 12 Mar 22, Abraham Rabinovich

EXCERPT: The shift became official on September 1. CENTCOM's commander, Gen. Kenneth McKenzie, a marine, went ahead with the symposium the following month to welcome the new regional partner, and acquaint his own senior commanders and staffs with "the ways Israel is a product of its history, identity, geography and more recent relations with its regional neighbors." The speakers, mostly from US think tanks, included several Israelis. I was invited because I had written a book on the Yom Kippur War, a subject in which McKenzie had special interest, according to the aide who called me. He said the general often spoke about the war when addressing groups of officers. Its battlefields now lay within CENTCOM's boundaries.

**COVERAGE HIGHLIGHTS**

---

1. The Wall Street Journal led global media reporting on a missile strike in Erbil that allegedly targeted a new U.S. Consulate building that was soon to be opened. No injuries to U.S. military personnel or civilians were reported. Media quoted various U.S. and Kurdish officials who said the missiles were likely launched from Iran, following threats of Iranian retaliation for the Israeli strike in Syria Tuesday that killed two IRGC colonels.

2. The New York Times was one of several media outlets stating the war in Ukraine has prompted a U.S. reassessment of its foreign policy, the largest since the same undertaking took place following the 9-11 attacks. The article notes the Russian invasion has bonded America to Europe more tightly than at any time since the Cold War and deepened U.S. ties with Asian allies, while forcing a reassessment of rivals like China, Iran and Venezuela. Despite concerns a renewed focus on Europe could divert attention from Asia, several White House officials said the U.S. can capitalize on how the war has convinced some Asian governments that they need to work more closely with the West to build up a global ideological front to defend democracy.
3. The Los Angeles Times published the latest news from Ukraine late Saturday night, emphasizing Russian forces intensified their bombing in cities including Mariupol, Mykolaiv, Kharkiv and Chernihiv, while also positioning for a possible siege of Kyiv. Earlier Moscow warned the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

#### **1. Missiles from Iran struck in vicinity of U.S. Consulate in Northern Iraq, officials say** Wall Street Journal, 12 Mar 22, Gordon Lubold and Michael R. Gordon

A missile strike early Sunday that landed in the vicinity of a new American consulate under construction in northern Iraq originated from Iran, according to U.S. officials. The attack comes as the U.S. is edging closer to cementing a deal to revive the 2015 agreement with Tehran that constrains Iran’s nuclear program.

#### **2. Ukraine War ushers in ‘new era’ for U.S. abroad** New York Times, 12 Mar 22, Michael Crowley and Edward Wong

The war in Ukraine has prompted the biggest rethinking of American foreign policy since the Sept. 11, 2001, attacks, infusing the United States with a new sense of mission and changing its strategic calculus with allies and adversaries alike.

#### **3. Russia intensifies assault, warns U.S. weapons sent to Ukraine are ‘legitimate targets’** Los Angeles Times, 12 Mar 22, Nabih Bulos and Jenny Jarvie

Russian forces kept up their bombardment of cities across Ukraine on Saturday, capturing the eastern outskirts of a key southern port and waging an increasingly violent campaign with an eye to encircling the capital even as they sought to bring a political veneer to their occupation in cities they have captured. Moscow also signaled it could soon expand the war to embroil Kyiv’s allies, warning the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

### **13. 'Rest now, while we can.' At Estonian NATO base, troops prepare for Putin's next move**

Politico, 13 Mar 22, Charlie Duxbury

At NATO's Tapa military base in central Estonia, Russia's invasion of Ukraine has sparked a heightened sense of purpose among the troops. On a recent weekday, and despite heavy snow, there were plenty of signs of activity in and around the frontline camp — just 160 kilometers from the Russian border — as soldiers wondered what Russian President Vladimir Putin's future plans might be.

#### **14. Military briefing: fear of deployment of chemical weapons in Ukraine**

Financial Times, 12 Mar 22, Daniel Dombey, John Paul Rathbone and Erika Solomon

As the west steps up its warnings that Russia could use chemical weapons in Ukraine, a broader fear lurks beneath the surface: the same poison gases that killed thousands on the front lines of the first world war could become an ever more familiar part of 21st century conflict.

#### **15. What to know about Javelin antitank missiles could play in Ukraine's fight against Russia**

Washington Post, 12 Mar 22, Claire Parker, Alex Horton and William Neff

The United States and allies have surged weapons to Ukraine in recent weeks in the face of the Russian invasion. Images of destroyed Russian tanks on social media have drawn attention to one particular weapon: the Javelin missile. The U.S. and other NATO countries sent more than 17,000 antitank weapons, including Javelin missiles, overland to Ukraine via Poland and Romania in the span of less than a week this month, the New York Times reported.

#### **16. Moon battle: New Space Force plans raise fears over militarizing the lunar surface**

Politico, 12 Mar 22, Bryan Bender

The battle is on for the moon. The U.S. military is investing in new technologies to build large structures on the lunar surface. It's designing a spy satellite to orbit the moon. And it just announced plans for a surveillance network — what it calls a "highway patrol" — for the vast domain between Earth's orbit and the moon, known as cislunar space. Top military strategists and documents, meanwhile, now consistently refer to this region as a new realm of operations.

#### **17. The new legion of foreign fighters: who are they and where do they come from?**

Sunday Times (UK), 12 Mar 22, Peter Conradi and Hugo Daniel

In happier times, Anton Bondarenko, 22, gave online English lessons. Now he is an unlikely but vital cog in Ukraine's war machine. From the bedroom of the modest flat in central Kyiv that he shares with his mother, Bondarenko and 100 or so of his colleagues elsewhere in the capital form a virtual call center. Their task? Fielding inquiries from people across the world who have answered an appeal by President Zelensky to join a new Ukrainian foreign legion to help repel the invaders.

#### **18. U.S. commission urges Biden to designate Ukraine, Georgia as major non-NATO allies**

Foreign Policy, 12 Mar 22, Amy Mackinnon

The Helsinki Commission, an independent U.S. government agency tasked with promoting human rights and security in Europe, has called on the Biden administration to upgrade the United States' defense relationship with Ukraine. The commission seeks to help facilitate military and economic assistance to Kyiv as Russian forces move to encircle the Ukrainian capital.

### **19. Nerves on edge in Poland as war next door in Ukraine revives fears of Russia**

Los Angeles Times, 12 Mar 22, Patrick J. McDonnell and Rima Marrouch

Military enlistments are spiking, demands for passports are surging, and memories of the bad old days of the Cold War are fraying the collective nerves of the Polish people.

### **20. Tiny kingdom in Nigeria celebrates as threat from Boko Haram fades**

Sunday Times (UK), 13 Mar 22, Richard Assheton

The king rose early on the biggest day for his people in years. By 9am the walled center of the village was abuzz with the chatter of thousands who had come from the hills around. The celebrations that greeted the king were the first of their kind in nearly a decade. For much of that time the people of Sukur, a little-known, UNESCO-listed kingdom 3,000 feet up in the highlands of northeast Nigeria, lived in fear.

### **21. Any new Iran deal would likely only be temporary**

National Review, 12 Mar 22, Carine Hajjar

There was speculation that earlier this week, the eleven months of negotiations in Vienna would finally end in a completed Iran deal. Indeed, EU foreign minister, Josep Borrell Fontelles, tweeted that the final text of the agreement is “essentially ready and on the table.” As of Thursday, however, the deal has stalled – most notably due to Russian demands for protection from sanctions on its trade with Tehran.

### **22. Don't embrace Saudi Arabia and the UAE because of the Ukraine crisis**

The Hill, 12 Mar 22, William D. Hartung

The Biden administration is reportedly reaching out to Saudi Arabia and the United Arab Emirates (UAE) to urge them to increase their oil output to counterbalance disruptions in the global market sparked by sanctions on Russia. In doing so, it is crucial that the administration doesn't excuse their crimes in Yemen or bolster their militaries with additional arms sales or other military support.

### **23. 'A serious failure': scale of Russia's military blunders becomes clear**

Financial Times (UK), 12 Mar 22, Sam Jones, John Paul Rathbone and Demetri Sevastopulo

The outcome of Russian president Vladimir Putin's war is still far from certain: little information exists on Ukrainian forces' rates of attrition, while Russia's military still outmans and outguns that of its neighbor. The chances of escalation have meanwhile increased as the Russian

leadership looks to regain the front foot. But in the first phase of its offensive, the Kremlin's military story is one of failure.

#### **24. For the sake of our national security, Congress must end its budget battles**

The Hill, 12 Mar 22, Mike Rogers

On Tuesday, the Office of the Director of National Intelligence issued its Annual Worldwide Threats report. If you weren't already unsettled by the state of the world, reading this sobering report will certainly leave you concerned. From Russia to China, health security to transnational threats like drugs and terrorism, and more, the ODNI report shows just how unsettled the world is today and what it's anticipated to be over the course of the next year.

#### **25. Nostalgia and Kalashnikovs: Why Russia wins some sympathy in Africa and the Middle East**

Economist, 12 Mar 22

In 2019 Vladimir Putin welcomed 43 African leaders to the inaugural Russia-Africa summit, a higher turnout than Britain or France attracted to similar shindigs. At the bash in Sochi the Russian president lambasted the West for how it imposed "political or other conditions" on African countries, a reference to chiding about human rights. "We have a lot to offer to our African friends," said Mr Putin.

#### **26. Will China offer Russia financial help? A bit. But it will mostly seek to learn from Russia's mistakes**

Economist, 12 Mar 22

If you believe China's diplomats, relations with Russia are "rock solid" and the friendship between Xi Jinping and Vladimir Putin has "no limits". Western sanctions are about to put those warm words to the test. Russia needs an economic and financial lifeline. It would like to use China as a conduit through which to continue trading with the rest of the world. China, however, must strike a delicate balance between helping Mr Putin stand up to their joint rival, America, and retaining its own access to the global financial system. No doubt to Mr Putin's regret, its financial aid to Russia is likely to be qualified at best.

#### **27. Saudi Arabia executes 81 people in a single day**

Al Jazeera, 12 Mar 22

Saudi Arabia has executed 81 men over the past 24 hours, including seven Yemenis and one Syrian national, on charges including "allegiance to foreign terrorist organizations" and holding "deviant beliefs", state news agency Saudi Press Agency said, in the largest known mass execution carried out in the kingdom in its modern history.

## CENTCOM NEWS CLIPS

U.S. CENTCOM Communication Integration Directorate

---

### COVERAGE HIGHLIGHTS

---

- 1) The Wall Street Journal led global media reporting on a missile strike in Erbil that allegedly targeted a new U.S. Consulate building that was soon to be opened. No injuries to U.S. military personnel or civilians were reported. Media quoted various U.S. and Kurdish officials who said the missiles were likely launched from Iran, following threats of Iranian retaliation for the Israeli strike in Syria Tuesday that killed two IRGC colonels.
- 2) The New York Times was one of several media outlets stating the war in Ukraine has prompted a U.S. reassessment of its foreign policy, the largest since the same undertaking took place following the 9-11 attacks. The article notes the Russian invasion has bonded America to Europe more tightly than at any time since the Cold War and deepened U.S. ties with Asian allies, while forcing a reassessment of rivals like China, Iran and Venezuela. Despite concerns a renewed focus on Europe could divert attention from Asia, several White House officials said the U.S. can capitalize on how the war has convinced some Asian governments that they need to work more closely with the West to build up a global ideological front to defend democracy.
- 3) The Los Angeles Times published the latest news from Ukraine late Saturday night, emphasizing Russian forces intensified their bombing in cities including Mariupol, Mykolaiv, Kharkiv and Chernihiv, while also positioning for a possible siege of Kyiv. Earlier Moscow warned the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

**1. Missiles from Iran struck in vicinity of U.S. Consulate in Northern Iraq, officials say**  
Wall Street Journal, 12 Mar 22, Gordon Lubold and Michael R. Gordon

A missile strike early Sunday that landed in the vicinity of a new American consulate under construction in northern Iraq originated from Iran, according to U.S. officials. The attack comes as the U.S. is edging closer to cementing a deal to revive the 2015 agreement with Tehran that constrains Iran’s nuclear program.

## 2. Ukraine War ushers in ‘new era’ for U.S. abroad

New York Times, 12 Mar 22, Michael Crowley and Edward Wong

The war in Ukraine has prompted the biggest rethinking of American foreign policy since the Sept. 11, 2001, attacks, infusing the United States with a new sense of mission and changing its strategic calculus with allies and adversaries alike.

## 3. Russia intensifies assault, warns U.S. weapons sent to Ukraine are ‘legitimate targets’

Los Angeles Times, 12 Mar 22, Nabih Bulos and Jenny Jarvie

Russian forces kept up their bombardment of cities across Ukraine on Saturday, capturing the eastern outskirts of a key southern port and waging an increasingly violent campaign with an eye to encircling the capital even as they sought to bring a political veneer to their occupation in cities they have captured. Moscow also signaled it could soon expand the war to embroil Kyiv’s allies, warning the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

### **13. 'Rest now, while we can.' At Estonian NATO base, troops prepare for Putin's next move**

Politico, 13 Mar 22, Charlie Duxbury

At NATO's Tapa military base in central Estonia, Russia's invasion of Ukraine has sparked a heightened sense of purpose among the troops. On a recent weekday, and despite heavy snow, there were plenty of signs of activity in and around the frontline camp — just 160 kilometers from the Russian border — as soldiers wondered what Russian President Vladimir Putin's future plans might be.

### **14. Military briefing: fear of deployment of chemical weapons in Ukraine**

Financial Times, 12 Mar 22, Daniel Dombey, John Paul Rathbone and Erika Solomon

As the west steps up its warnings that Russia could use chemical weapons in Ukraine, a broader fear lurks beneath the surface: the same poison gases that killed thousands on the front lines of the first world war could become an ever more familiar part of 21st century conflict.

### **15. What to know about Javelin antitank missiles could play in Ukraine's fight against Russia**

Washington Post, 12 Mar 22, Claire Parker, Alex Horton and William Neff

The United States and allies have surged weapons to Ukraine in recent weeks in the face of the Russian invasion. Images of destroyed Russian tanks on social media have drawn attention to one particular weapon: the Javelin missile. The U.S. and other NATO countries sent more than 17,000 antitank weapons, including Javelin missiles, overland to Ukraine via Poland and Romania in the span of less than a week this month, the New York Times reported.

## **16. Moon battle: New Space Force plans raise fears over militarizing the lunar surface**

Politico, 12 Mar 22, Bryan Bender

The battle is on for the moon. The U.S. military is investing in new technologies to build large structures on the lunar surface. It's designing a spy satellite to orbit the moon. And it just announced plans for a surveillance network — what it calls a “highway patrol” — for the vast domain between Earth's orbit and the moon, known as cislunar space. Top military strategists and documents, meanwhile, now consistently refer to this region as a new realm of operations.

### **25. Nostalgia and Kalashnikovs: Why Russia wins some sympathy in Africa and the Middle East**

Economist, 12 Mar 22

In 2019 Vladimir Putin welcomed 43 African leaders to the inaugural Russia-Africa summit, a higher turnout than Britain or France attracted to similar shindigs. At the bash in Sochi the Russian president lambasted the West for how it imposed “political or other conditions” on African countries, a reference to chiding about human rights. “We have a lot to offer to our African friends,” said Mr Putin.

foreign ministry spokesman said after the Israeli strike that Iran would take steps to hold Israel accountable.

Israel has been carrying out airstrikes against Iranian-backed militias and Iranian personnel in Syria as it seeks to prevent Iran from transferring weapons to Hezbollah, the Lebanese militia group. The campaign includes placing mines on ships carrying oil and other goods that are bound for Syria.

The Iranians have previously sought to pressure the U.S. to constrain its Israeli ally.

In October, Iran directed five drones at the al-Tanf garrison in southern Syria, which is defended by a small contingent of U.S. forces and American-trained Syrian fighters. The Iranians said in a confidential message to the U.S. at that time that the attack was in response to an Israeli airstrike that killed two Iranian officers in Syria, U.S. officials said.

In January, the massive U.S. Embassy complex in Baghdad was struck by four rocket attacks that injured at least two individuals but no U.S. personnel were hurt. That attack originated from inside Baghdad and was believed to have been carried out by an Iranian-backed militia group.

A State Department spokesman didn't provide details of the new rocket attack, its origins or say what the targets may have been.

"The incident is being investigated by the government of Iraq and the Kurdish Regional Government," according to a State Department statement. "We condemn this outrageous attack and display of violence."

The U.S. has a consulate inside Erbil, the capital of the semiautonomous Kurdish region in Iraq, and is building a new one 8 miles from the center of the city.

The strikes come as Washington has been rushing to complete talks to revive the 2015 nuclear agreement with Tehran. That agreement, which could also lead to the release of U.S. detainees, was close to being completed until Russia raised a fresh demand that its trade with Iran be exempted from Ukraine-related sanctions, Western officials say.

In January 2020, Iran fired ballistic missiles at the Al Asad base in western Iraq where U.S. troops were deployed. That was meant to avenge President Trump's decision to order a drone strike that killed Maj. Gen. Qassem Soleimani, the commander of Iran's paramilitary Quds Force.

## **2. Ukraine War ushers in 'new era' for U.S. abroad**

New York Times, 12 Mar 22, Michael Crowley and Edward Wong

The war in Ukraine has prompted the biggest rethinking of American foreign policy since the Sept. 11, 2001, attacks, infusing the United States with a new sense of mission and changing its strategic calculus with allies and adversaries alike.

The Russian invasion has bonded America to Europe more tightly than at any time since the Cold War and deepened U.S. ties with Asian allies, while forcing a reassessment of rivals like China, Iran and Venezuela.

And it has re-energized Washington's leadership role in the democratic world just months after the chaotic U.S. withdrawal from Afghanistan ended 20 years of conflict on a dismal note.

But the new focus on Russia will come with hard choices and internal contradictions, similar to ones that defined U.S. diplomacy during the Cold War, when America sometimes overlooked human rights abuses and propped up dictators in the name of the struggle against communism.

"It feels like we're definitively in a new era," said Benjamin J. Rhodes, a former deputy national security adviser in the Obama White House. "The post-9/11 war on terror period of American hubris, and decline, is now behind us. And we're not sure what's next."

The attack by President Vladimir V. Putin of Russia on his neighbor has become a prism through which nearly all American foreign policy decisions will be cast for the foreseeable future, experts and officials said.

In recent weeks, Western officials have spoken in terms that often echo the grand declarations that followed the 2001 terrorist attacks. On Friday, President Biden said that "the free world is coming together" to stand up to Mr. Putin — a phrase reminiscent of President George W. Bush's talk of how "the entire free world" was at war against terrorism.

In the near term, Russia's aggression is sure to invigorate Mr. Biden's global fight for democracy against autocracies like Moscow, making vivid the threats to fledgling democracies like Ukraine. Yet three increasingly authoritarian NATO nations — Poland, Hungary and Turkey — play key roles in the coalition aiding Kyiv. And the United States is grappling with internal assaults to its own democracy.

The war lends urgency to Mr. Biden's climate change agenda, reinforcing the need for more reliance on renewable clean energy over the fossil fuels that fill Russian coffers. Yet it has already generated new pressure to increase the short-term supply of oil from the likes of Venezuela's isolated dictatorship and Saudi Arabia's authoritarian monarchy.

And it creates a powerful new incentive for the United States to find ways of prying President Xi Jinping of China away from Mr. Putin, who is likely counting on diplomatic and economic lifelines from Mr. Xi amid crushing Western sanctions. But some administration officials see China as a lost cause and prefer to treat China and Russia as committed partners, hoping that might galvanize policies among Asian and European allies to contain them both.

While some experts warn that a renewed focus on Europe will inevitably divert attention from Asia, several top White House officials say the United States can capitalize on how the war has convinced some Asian governments that they need to work more closely with the West to build up a global ideological front to defend democracy.

“What we are seeing now is an unprecedented level of Asian interest and focus,” Kurt M. Campbell, the top White House official on Asia policy, said at a talk hosted by the German Marshall Fund of the United States.

“And I believe one of the outcomes of this tragedy will be a kind of new thinking around how to solidify institutional connections beyond what we’ve already seen between Europe and the Pacific,” he said.

America’s approach to the world was already undergoing a major shift, with the U.S. wars in Afghanistan and Iraq concluded, and conversations over Islamist terrorism no longer at the fore. Many war-weary Americans welcomed calls for a reduced military footprint overseas by President Donald J. Trump, who questioned NATO’s relevance and even flirted with withdrawing from the alliance.

Mr. Biden sought to rebuild American alliances, but did so largely in the name of confronting China. The Russian invasion has expanded his mission dramatically and urgently, setting the stage for a seismic geopolitical shift that would pit the United States and its allies against China and Russia at once if they form an entrenched anti-Western bloc.

But it also gives Washington a new and nobler sense of purpose, Mr. Rhodes said. “We’ve been trying to get to a new era for a long time,” he said. “And now I think Putin’s invasion has necessitated an American return to the moral high ground.”

Early signs of how the new American priorities are creating diplomatic quakes have already emerged.

On Friday, the United States and its European allies agreed to pause talks with Iran that just days earlier seemed on the verge of clinching a return to the 2015 deal that limited Iran’s nuclear program. Western nations are refusing a demand by Moscow, which is a party to the Obama-era agreement from which Mr. Trump withdrew, for guarantees that its future transactions with Iran be exempted from the sanctions imposed on Russia in recent weeks.

“It’s been clear since last weekend that negotiations to revive the Iran deal could not be walled off from the Ukraine war,” Dalia Dassa Kaye, an Iran expert at the RAND Corporation, said on Friday.

Last year, Mr. Biden made a new agreement a core goal of his foreign policy. It is unclear whether one can be struck without Russia, which is a member of the commission that both supervises compliance with the deal and would take control of Iran’s excess enriched uranium.

The United States is also looking at Venezuela from a new angle. Senior Biden administration officials traveled to Venezuela two weeks after the Russian invasion, becoming the first to visit the country in years. Venezuela, a partner of Russia, is under heavy U.S. sanctions imposed years ago to weaken the repressive government of President Nicolás Maduro. In 2019, the Trump administration imposed additional sanctions on the state oil company, central bank and senior officials to pressure Mr. Maduro to step down.

Now, with Mr. Biden looking to increase global oil supplies to bring down prices, U.S. officials are talking to Mr. Maduro's government about buying his oil again. The idea has drawn some sharp criticism in Congress, however, where Senator Bob Menendez, Democrat of New Jersey and the chairman of the Senate Foreign Relations Committee, fumed that "efforts to unify the entire world against a murderous tyrant in Moscow should not be undercut by propping up a dictator under investigation for crimes against humanity in Caracas."

The same imperative on oil is reshaping U.S. diplomacy with Saudi Arabia and the United Arab Emirates, two Persian Gulf nations that some Biden administration officials view with suspicion or hostility because of their autocratic systems and leading roles in a war in Yemen that has resulted in a humanitarian catastrophe. Brett McGurk and Amos J. Hochstein, two senior administration officials, traveled to the Gulf days before the Russian invasion to discuss security and energy issues.

However, Saudi Arabia has declined so far to increase oil production, while the United Arab Emirates waited until Wednesday to ask the OPEC nations to do so. American officials were also furious with the U.A.E. for declining to vote on a United Nations Security Council resolution to condemn Russia, though it did support a similar resolution later in the U.N. General Assembly.

The unreliability of the two nations and Russia's place in the oil economy have increased momentum within the Biden administration to enact policies that would help the United States more quickly wean itself off fossil fuels and confront the climate crisis. This could lead future administrations to devote fewer diplomatic and military resources to the Gulf nations in the long term, even if U.S. officials want them to help on oil now.

"We may see more fundamental questioning about the value of these partnerships," Ms. Kaye said. "These states already believe the U.S. has checked out of the region, but their stance on Russia may only strengthen voices calling for a further reduction of U.S. forces in the region."

Israel, the closest U.S. ally in the Middle East, has also staked out a neutral position on the Ukraine war, largely because of Russia's presence in the region. But American officials have been more forgiving of Israel's stance as Prime Minister Naftali Bennett conducts shuttle diplomacy. He met with Mr. Putin for three hours in Moscow on March 5 and then spoke with Volodymyr Zelensky, the president of Ukraine, by phone before returning home. U.S. officials say Mr. Bennett consulted with them about the talks, and Secretary of State Antony J. Blinken said this past week that they "appreciate the efforts."

Mr. Zelensky told reporters on Saturday that Jerusalem could be a site for peace talks between the leaders of Ukraine and Russia.

### **Juggling Allies in Europe and Asia**

In Europe, Russia's invasion has supercharged the Biden administration's efforts to restore the morale of a NATO alliance that Mr. Trump undermined.

But the alliance includes three nations — Poland, Hungary and Turkey — whose democratic backsliding has troubled the Biden administration. Hungary and Turkey were pointedly excluded

from Mr. Biden's global democracy summit in December, and the European Union has cut billions of euros of funding to Poland and Hungary for what it sees as erosions of legal and democratic principles. Now all three countries are participating in the coalition against Russia.

"In times of crisis, there is sometimes a tension between our values and our interests," said Andrea Kendall-Taylor, a senior fellow at the Center for a New American Security. "In the short term, we're going to have to prioritize pushing back against Russia, at the risk of taking our foot off the gas on the democracy and human rights concerns that had been at the front and center of the Biden administration's agenda."

In the Asia-Pacific region, several important U.S. partners and allies are working with Washington on sanctions and export controls on technology against Russia. These include Japan, South Korea, Taiwan, Singapore and Australia. Some Asian nations have agreed to long-term gas swaps with Europe to help relieve a potential Russian shut-off of energy exports. And Australia has committed to spending \$50 million to send weapons to Ukraine, including missiles and ammunition.

However, India — the most populous U.S. partner in the so-called Quad coalition of democracies in Asia — has refrained from condemning Russia's invasion because of decades-old security ties with Moscow. That stance undermines Mr. Biden's insistence that democratic nations band together against autocracies.

But it is the other Asian behemoth, China, that presents the biggest diplomatic challenge for the United States. China is Russia's most powerful partner, and their bond has strengthened in recent years.

Even as the Russian military decimates Ukrainian cities and kills hundreds or thousands of civilians, China has signaled that it stands by Moscow by issuing anti-U.S. declarations and amplifying the Kremlin's propaganda and conspiracy theories.

Mr. Xi's persistent support of Mr. Putin, with whom he shares a drive to dilute American power, has made administration officials wonder whether there is any way to pull them apart on Ukraine.

On Thursday, William J. Burns, the C.I.A. director, told U.S. senators he believed that Mr. Xi was "unsettled" by the war. Some China analysts say that if Beijing wants to salvage its reputation with Western nations, particularly in Europe, it might agree to take steps to help Ukraine without directly breaking from Russia.

Ryan Hass, a China director on the National Security Council in the Obama White House, proposed testing Beijing with specific requests, such as asking them to provide more humanitarian aid and refrain from recognizing Russian-installed governments in Ukraine or shielding Russia from war crimes investigations.

"If China's leaders take concrete actions to relieve suffering," he said, "then lives would be saved and there would be less centrifugal pressure toward cleaving the world into rival blocs."

### **3. Russia intensifies assault, warns U.S. weapons sent to Ukraine are ‘legitimate targets’**

Los Angeles Times, 12 Mar 22, Nabih Bulos and Jenny Jarvie

Russian forces kept up their bombardment of cities across Ukraine on Saturday, capturing the eastern outskirts of a key southern port and waging an increasingly violent campaign with an eye to encircling the capital even as they sought to bring a political veneer to their occupation in cities they have captured.

Moscow also signaled it could soon expand the war to embroil Kyiv’s allies, warning the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

While wide-scale Russian bombing campaigns intensified in cities including Mariupol, Mykolaiv, Kharkiv and Chernihiv, Russian forces planned to conduct a referendum that would turn the city of Kherson — the first major city captured by Russian forces earlier this month into a vassal breakaway republic, said Ukrainian Foreign Minister Dmytro Kuleba.

“Given zero popular support, it will be fully staged,” he wrote on Twitter, warning that it was a repeat of Russia’s

“Severe sanctions against Russia must follow if they proceed. Kherson is & will always be Ukraine.”

Sergey Khlan, a deputy in the Kherson Regional Council, said in a post on Facebook on Saturday that Russian authorities were contacting deputies and asking for their cooperation in holding the referendum to create a putative Kherson People’s Republic.

If the last few years have taught us anything, it’s that affordability is at the top of most people’s wish lists.

“The creation of Kherson People’s Republic will turn our region into a hopeless hole without life and future,” Khlan wrote.

“Do not give them a single vote! Do not give them any opportunity to legitimize [the Kherson People’s Republic]... Enter the history of Ukraine not as traitors whom nobody wants, but truly as citizens whose names will be remembered by the next generations.”

Meanwhile, in Moscow, Deputy Foreign Minister Sergei Ryabkov said Saturday that shipments of Western weapons to Ukraine could be attacked by Russian forces, according to Russia’s Itar-Tass news agency. Western nations’ “thoughtless transfer” of portable air defense and antitank missile systems to Kyiv, Ryabkov said, demonstrated “the escalatory component of Washington’s policy.”

The White House announced Saturday it had approved an additional \$200 million in arms and equipment for Ukraine, on top of \$350 million President Biden approved last month.

“We have warned the U.S. that the U.S.-orchestrated inundation of Ukraine with weapons from some countries is not just a dangerous move, but also an action that makes these convoys legitimate targets,” Ryabkov said. The Russian diplomat did not say whether Russian forces would target such convoys in Poland or Romania, NATO countries that border Ukraine.

The tough talk came on a day that Russian forces sustained “heavy losses in manpower and equipment” in areas northeast of Kyiv and were prevented from regaining a foothold on previously captured frontiers, according to the Ukrainian military.

Northwest of the capital, the bulk of Russian ground forces were gathered Saturday about 15 miles from the city center, according to the U.K.’s Ministry of Defense. Parts of the large Russian column north of Kyiv had dispersed, the ministry said, either in an effort to encircle the city or limit its risk of Ukrainian counterattacks.

Ukrainian President Volodymyr Zelensky said more than 12,700 people evacuated Saturday, taking advantage of humanitarian corridors. But not everyone was allowed safe passage.

Ukraine’s Ministry of Defense claimed Russian troops shot at a group of women and children who were trying to evacuate Friday from the small village of Peremoga, 18 miles northeast of Kyiv, along a previously-agreed “green” corridor.

“The result of this brutal act was seven dead,” the ministry wrote in a tweet. “One of them is a child.”

Early in the morning, loud explosions reverberated near the capital. Rumbles — louder and closer than the booms of previous days — could be heard throughout the day and well into the night in Kyiv. They served as the calling card of the Russian pincers stretching toward the capital from its northeastern and northwestern flanks.

Despite holding off enemy forces from the capital, Ukrainian officials admitted a bitter defeat, acknowledging that Russia had seized the eastern suburban fringes of Mariupol, a strategic city in the southeastern Donetsk region that could allow it to build a land corridor from pro-Moscow enclaves in the east to Russian-annexed Crimea in the south.

Russian shelling of the city hit a mosque sheltering more than 80 people, including children, according to the Ukrainian government, and repeated efforts to evacuate 430,000 residents have failed as their convoys have come under artillery fire. Dozens of buses loaded with humanitarian supplies were reported to be attempting to reach the city.

“Let’s see whether this one gets here or not,” Mariupol Deputy Mayor Sergei Orlov said in an interview with the BBC, noting that six previous attempts to bring food, water and medicine to his beleaguered city were unsuccessful.

“The convoys were not let through,” he said. “They were bombed, the road was mined, there was shelling in the town.”

“I think we can say we’re in the disaster phase now,” Alex Wade, an emergency coordinator for Doctors Without Borders told CNN, noting that residents had gone a week without access to clean drinking water and were using snow and rain water and breaking into heating systems to extract the water inside.

“The next phase we will see people who potentially could die from dehydration and hunger or ... fleeing from the city trying to find food and water and dying from the violence outside the city,” he said.

Some residents, he said, had taken their neighbors’ bodies and buried them in their yards to ensure they were not left to languish on the street.

In Mykolaiv, another major Black Sea port and shipbuilding center about 300 miles west of Mariupol, Mayor Olexandr Senkevitch claimed in a video posted Saturday on Instagram that eight civilians were injured and more than 160 houses, three hospitals and 11 educational institutions were damaged overnight.

“We will definitely repair and restore everything,” he said. “We heal the wounded. And defeat these damn orcs,” referring to the Ukrainian nickname for Russian forces.

With those forces assembled about 15 miles outside Kyiv, Zelensky struck a confident tone from inside the capital, where citizen militias are armed with missiles, machine guns and Molotov cocktails.

“We know 100% there will be a victory,” he said in a news conference.

Since the beginning of the Russian invasion, Zelensky said, about 1,300 soldiers of the Armed Forces of Ukraine had died — a fraction of the 12,000 Russians that he claimed had died. The numbers could not be independently verified.

“One in 10,” he said.

Asked if Russian troops could enter Kyiv, Zelensky said it was theoretically possible.

“If they carry out a carpet bombing and simply decide to erase the historical memory of the whole region, the history of Kyivan Rus’, the history of Europe, they will enter Kyiv,” he added. “If they destroy all of us, they will enter Kyiv. If this is the goal, they will enter and will have to live on this land alone, without us. They will not find friends among us here.”

Zelensky urged Ukrainians to keep fighting.

“The resistance of the entire Ukrainian people against these invaders has already gone down in history,” Zelensky said. “But we have no right to reduce the intensity of defense. No matter how difficult it is. We have no right to reduce the energy of resistance.”

In Melitopol, 120 miles west of Mariupol, hundreds gathered on the streets Saturday to demand the release of the southern city's mayor, Ivan Fedorov, who the Ukrainian government has said was kidnapped from a government office Friday by Russian forces.

"Fedorov!" the crowd chanted. "Free the mayor!"

After accusing Russia on Saturday of "switching to a new stage of terror" in trying to "physically eliminate" elected officials, Zelensky praised the protesters for their open resistance.

"The invaders must see that they are strangers on our land, on all our land of Ukraine, and they will never be accepted," he said in a video broadcast.

In telephone conversations with German Chancellor Olaf Scholz and French President Emmanuel Macron, Zelensky said he urged them to push for Fedorov's release.

"The demand is simple: to release him from captivity immediately," he said. "We expect them, the world leaders, to show how they can influence the situation. How they can do a simple thing: free one person. A person who represents the entire Melitopol community, Ukrainians who do not give up."

Russia's intensified assault on the cities and villages of Ukraine came as the United States continued to insist that diplomacy still had a role in the conflict.

But prospects of a resolution looked dim after Scholz and Macron unsuccessfully tried in a lengthy telephone call Saturday to persuade Russian President Vladimir Putin to agree to an immediate cease-fire or diplomatic talks.

Russia's Itar-Tass news agency also reported Saturday that Ryabkov, Russia's deputy foreign minister, said in an interview that Moscow and Washington were not negotiating or consulting on Ukraine.

Meanwhile, in the disputed Donbas region, the self-appointed head of the Luhansk People's Republic, Leonid Pasechnik, issued a decree Saturday saying the borders of the state would correspond to those declared in May 2014. (Ukrainian forces had clawed back two-thirds of the Donbas before a cease-fire later in 2014.)

The move aims to formalize gains in recent days after Russian forces — backed by separatists advanced into government-held areas of Luhansk province. A day earlier, Pasechnik issued another decree restoring names of streets that had been changed after the Ukrainian government's so-called de-communization drive.

#### **4. US seizing tankers has failed to stop Iran's oil exports, minister says**

Reuters, 12 Mar 22

Many people, including civil society activists, journalists, and former government officials, have shared their comments and questioned the Taliban's so-called general amnesty.

In one reaction, former Afghan intelligence chief Rahmatullah Nabil said that such "oppression and injustice" would shorten the Taliban's rule.

The Taliban has refused to comment on extra-judicial killings that occur almost daily across the country.

Local newspaper Etilaatroz reported on Saturday that a member of the former government security forces was shot dead in his house in Uruzgan province overnight.

Representatives of the UN High Commissioner for Human Rights visited Kabul this week to discuss the extrajudicial killings of former officials among other issues with the Taliban leaders.

### **10. Russian footholds in Mideast, Africa raise threat to NATO**

Associated Press, 12 Mar 22, Ellen Knickmeyer and Zeina Karam

Russian President Vladimir Putin's invasion of Ukraine dominates world attention. But with less global scrutiny, Putin is also busy advancing Russia's presence in the Middle East and Africa -- an expansion that military and civilian leaders view as another, if less immediate, threat to security in the West.

Putin's strategy in the Mideast and Africa has been simple, and successful: He seeks out security alliances with autocrats, coup leaders, and others who have been spurned or neglected by the U.S. and Europe, either because of their bloody abuses or because of competing Western strategic interests.

- In Syria, Russia's defense minister last month showed off nuclear-capable bombers and hypersonic missiles over the Mediterranean, part of a security partnership that now has the Kremlin threatening to send Syrian fighters to Ukraine.
- In Sudan, a leader of a junta that's seized power in that East African country has a new economic alliance with the Kremlin, reviving Russia's dreams of a naval base on the Red Sea.
- In Mali, the government is the latest of more than a dozen resource-rich African nations to forge security alliances with Kremlin-allied mercenaries, according to U.S. officials.

Especially in the last five or six years, "what you've seen is a Russia that is much more expeditionary and casting its military power further and wider afield," retired U.S. Gen. Philip M. Breedlove told The Associated Press.

“Russia is trying to show itself as a great power, as at the seat in world affairs, as driving international situations,” said Breedlove, the top NATO commander from 2013 through 2016, and now a distinguished chair at the Middle East Institute think tank in Washington.

But with Putin’s hands already full battling the fierce resistance from a much weaker Ukrainian military, experts view his expansionist goals in the Middle East and Africa as a potential long-term threat, not a present danger to Europe or the NATO alliance.

“It’s threatening NATO from below,” Kristina Kausch, a European security expert at the German Marshall Fund think-tank, said of the leverage Russia is gaining. “The Russians have felt encircled by NATO – and now they want to encircle NATO,” she said.

To achieve its strategic aims, Russia provides conventional military or Kremlin-allied mercenaries to protect the regimes of often outcast leaders. In return, these leaders pay back Russia in several ways: cash or natural resources, influence in their affairs, and staging grounds for Russian fighters.

These alliances help advance Putin’s ambitions of returning Russia’s influence to its old Cold War boundaries.

Russia’s new security partnerships also aid it diplomatically. When the U.N. General Assembly condemned Putin’s Ukraine invasion this month, Syria joined Russia in voting against, and many of the African governments that have signed security deals with Russian mercenaries abstained.

Kremlin spokesman Dmitry Peskov said Friday that Russia would bring recruits from Syria to fight in Ukraine. The threat was seen primarily as an intimidation tactic and U.S. officials say there’s been no sign of Syrian recruits in Ukraine. Some security experts say Russian mercenaries are using Mali as a staging ground for deployment to Ukraine, but U.S. officials have not confirmed these reports.

Regardless of how imminent the threat is, U.S. and European leaders are paying increasing attention to Putin’s moves in the Middle East and Africa — and Russia’s growing alliance with China — as it formulates plans to protect the West from future aggression.

German Foreign Minister Annalena Baerbock said in mid-February that the West could no longer ignore the competition for influence across Africa, where China spends billions on infrastructure projects to secure mineral rights, and Russia provides security through Kremlin-allied mercenaries.

“We see and realize that if we withdraw from this competition as liberal democracies, then others are going to fill these gaps,” Baerbock said as Western diplomats huddled on the Ukraine crisis, in the last days before Russia’s invasion.

Perhaps the boldest example of Russia flexing its global reach was when it sent defense minister Sergei Shoigu last month to Damascus to oversee Russia’s largest military drills in the Mediterranean since the Cold War, just as Russia’s military made final preparations for its assault on Ukraine.

The drills, involving 15 warships and about 30 aircraft, appeared choreographed to showcase the Russian military's capability to threaten the U.S. carrier strike group in the Mediterranean.

Russia's Hmeimeem air base on Syria's Mediterranean coast has served as its main outpost for launching attacks in Syria since September 2015. Russia's attacks in Syria, which leveled ancient cities and sent millions of refugees to Europe, allowed President Bashar al-Assad's brutal government to reclaim control over most of the country after a devastating civil war.

"Hmeimeem base is now an integral part of Russia's defense strategy not just in the Middle East but all the world," said Ibrahim Hamidi, a Syrian journalist and senior diplomatic editor for Syrian affairs at the London-based Asharq al-Awsat newspaper.

In Africa, too, Russia is open to working with leaders known for anti-democratic actions and abuses of human rights.

On the eve of Russia's invasion with Ukraine, Kremlin officials met in Moscow with an officer of a military junta that seized power in Sudan.

Isolated by the West, Gen. Mohamed Hamdan Dagolo warmly responded to Russia's overture of a new economic-focused alliance. Upon returning home, Gen. Dagolo announced that Sudan would be open to allowing Russia to build its long hoped-for naval base at Port Sudan on the Red Sea.

It's far from certain that Russia would be able to take advantage anytime soon. The Ukraine invasion is straining its military and financial resources and showing Russia's military weaknesses, and international sanctions are crippling its economy.

But longer-term, a Red Sea port could help give it a greater role in the Mediterranean and Black Sea, increase Russian access in the Suez Canal and other high-traffic shipping lanes, and allow Russia to project force in the Arabian Sea and Indian Ocean.

"They certainly could create enough havoc to cause problems," said Breedlove, the former NATO commander.

Russia's expanding alliances aren't just about its conventional military.

From 2015 to 2021, Russian mercenary security outfits increased their presence around the world seven-fold, with operations in 27 countries as of last year, according to the Center for Strategic and International Studies. The most prominent is the Wagner Group, which the U.S. and EU consider to be a surrogate of the Russian military, but which the Kremlin denies even exists.

From Libya to Madagascar, security contracts granted to Wagner Group and others give Russia access to mineral resources, staging grounds for deployments and substantial footholds challenging Western nations' influence there.

In Mali, the U.S. and Europe expressed alarm in December at reports that the Wagner Group had signed a \$10 million-a-month security contract with that government. Experts say Wagner took

advantage of local unhappiness over the failures of a years-long French-led deployment in the sub-Saharan targeting extremist factions.

Mali denied any such deployment, but some in Mali saw the arrival of Russians as a slam to Mali's colonial ruler France, which had struggled to protect them against armed extremists. They hope for better results from any Russian fighters arriving in the sub-Saharan. "Long live Russia!" cried one man in a crowd cheering the sight of a Russian delegation in the capital in January. "Long live the people of Mali!"

## **11. Saudi Arabia says it has executed 81 convicts in single day**

Associated Press, 12 Mar 22, Jon Gambrell

Saudi Arabia executed 81 people Saturday convicted of crimes ranging from killings to belonging to militant groups, the largest known mass execution carried out in the kingdom in its modern history.

The executions carried out surpassed even the toll of a January 1980 mass execution for the 63 militants convicted of seizing the Grand Mosque in Mecca in 1979, the worst-ever militant attack to target the kingdom and Islam's holiest site.

It wasn't clear why the kingdom choose Saturday for the executions. The number of death penalty cases being carried out had dropped during the coronavirus pandemic, though the kingdom continued to behead convicts under King Salman and his assertive son, Crown Prince Mohammed bin Salman.

The state-run Saudi Press Agency announced Saturday's executions, saying they included those "convicted of various crimes, including the murdering of innocent men, women and children." The kingdom also said some of those executed were members of al-Qaida, the Islamic State group and backers of Yemen's Houthi rebels.

"The accused were provided with the right to an attorney and were guaranteed their full rights under Saudi law during the judicial process, which found them guilty of committing multiple heinous crimes that left a large number of civilians and law enforcement officers dead," the Saudi Press Agency said.

"The kingdom will continue to take a strict and unwavering stance against terrorism and extremist ideologies that threaten the stability of the entire world," the report added.

An announcement by Saudi state television described those executed as having "followed the footsteps of Satan" in carrying out their crimes.

The kingdom's last mass execution came in January 2016, when the kingdom executed 47 people, including a prominent opposition Shiite cleric who had rallied demonstrations in the kingdom.

#### **14. Military briefing: fear of deployment of chemical weapons in Ukraine**

Financial Times, 12 Mar 22, Daniel Dombey, John Paul Rathbone and Erika Solomon

As the west steps up its warnings that Russia could use chemical weapons in Ukraine, a broader fear lurks beneath the surface: the same poison gases that killed thousands on the front lines of the first world war could become an ever more familiar part of 21st century conflict.

Friday's declaration by US President Joe Biden that "Russia would pay a severe price if they use chemical weapons" came after the White House said "we should all be on the lookout for Russia to possibly use chemical or biological weapons in Ukraine, or to create a false-flag operation using them".

Those statements contrast starkly with the post-cold war hope that such weapons could soon be consigned to history, an aspiration encapsulated by the 1993 Chemical Weapons Convention.

"Maybe worldwide there are fewer chemical weapons than there were during the cold war, but there is greater capacity and a willingness to use them," said Filippa Lentzos, joint director of the Centre for Science and Security Studies at King's College London.

She said Russia has an extensive range of chemical weapons – from sophisticated nerve agents to barrels of chlorine gas, the poison that inaugurated the age of chemical warfare in the first world war.

As well as Biden's declaration this week, European officials have referred more privately to the Kremlin's previous use of the nerve agent novichok to try to kill its foes.

One notorious case was the attempted murder in Salisbury in 2018 of Sergei Skripal, a former Russian spy who had defected to the UK. Another was the attempt against Alexei Navalny, the Russian opposition leader, in 2020.

"The history is there, with the Navalny and Skripal poisonings, and in Syria," said one official, also referring to chemical weapons used by the regime of Bashar al-Assad, Russia's ally. "So we cannot rule out the use of chemical weapons in an escalation scenario."

Russia, which entered the Syrian conflict in 2015 to help Assad fend off rebel forces, did not directly use chemical weapons against opposition areas itself. However, it provided diplomatic cover, backing Assad's assertion that it was rebels who had set off chemical attacks.

In Ukraine, Russia has said Kyiv, backed by western allies, plans to use chemical weapons. The UN security council on Friday convened at Russia's request to discuss Moscow's claims, presented without evidence, of US "biological activities" in Ukraine.

"Allegedly, we are preparing a chemical attack," Ukrainian president Volodymyr Zelensky said ahead of the meeting. "This makes me really worried because . . . if you want to know Russia's plans, look at what Russia accuses others of."

Analysts said any Russian use of chemical weapons in Ukraine would be very different from the more targeted novichok attacks on Navalny and Skripal, and would mark an alarming shift towards the “normalization” of internationally banned substances.

“We think chemical weapons could be used,” said one western official, while cautioning: “There’s nothing to suggest they would use it [chemical weapons], at this point, in a major escalation of the current conflict.”

Defense officials have said they believe the Russian FSB and GRU intelligence agencies, whose operatives are active in Ukraine, have a relationship with the research institutions that produce chemical weapons.

One of the most prominent is Gosniiookht, the unit that developed novichok, which dates back to the early days of the Soviet era. It was sanctioned by the EU and the UK in 2020 in connection with the Navalny case and by the US the following year.

“What we are looking at is probably not the assassination weapons we have already seen . . . The concern is that there would be similar use of these indiscriminate chemical weapons, as in Syria, to target people who go below ground to their basement to hide from missile bombardment,” said Lentzos.

“You put chemical weapons in and people either die or they come up for air and get bombarded,” she added. “It’s a really horrific scenario, that is why there is so much effort, and extreme transparency on intelligence to call it out.”

She and other analysts see 2013 as being a turning point for chemical weapons. Despite previously claiming the use of chemical weapons by Syria would be a “red line”, the Obama administration that year opted against military action after the Assad regime killed hundreds of people with rockets containing sarin.

Despite a Russia-brokered deal to eliminate Syrian chemical weapons, the UN’s Organization for the Prohibition of Chemical Weapons subsequently found that the Assad regime used sarin and chlorine gas in 2017 and 2018.

“The international norm against chemical weapons use is under siege, most prominently by Syria and Russia,” wrote Kenneth Ward, a former US ambassador to the OPCW, last year. “The world is now precariously perched on the knife’s edge of a new era of chemical weapons use.”

## **15. What to know about Javelin antitank missiles could play in Ukraine’s fight against Russia**

Washington Post, 12 Mar 22, Claire Parker, Alex Horton and William Neff

The United States and allies have surged weapons to Ukraine in recent weeks in the face of the Russian invasion. Images of destroyed Russian tanks on social media have drawn attention to one particular weapon: the Javelin missile.

The U.S. and other NATO countries sent more than 17,000 antitank weapons, including Javelin missiles, overland to Ukraine via Poland and Romania in the span of less than a week this month, the New York Times reported.

The Javelin has taken on a symbolic valence in pro-Ukraine online chatter. Former reporter Christian Borys created an image of a saint clutching a Javelin and its launch unit. The image on stickers and other gear has raised more than \$1 million, Borys said on Twitter, which he said will go to a humanitarian aid charity focused on Ukraine.

As a convoy of Russian military vehicles creeping toward Kyiv captures global attention, the antitank missiles are in the spotlight. Weapons experts say the Javelin could prove particularly effective against Russian tanks, though they caution that the missile systems alone are unlikely to change the trajectory of the war.

Here's what to know about how they work and the role they could play.

### **What is a Javelin?**

The Javelin is an antitank missile system that locks onto a target's thermal picture. The soldier peers through a command launch unit and selects different targets and attack types.

When fired, the missile's launch motor thrusts it out of the tube before its primary motor turns on and sends the rocket flying. The gentler start reduces debris and smoke, making it harder for the enemy to see where it was launched. It makes use of what is known as a "fire and forget" system, which allows the soldier to take cover or load a new missile while the other one is tracking to its target.

While the Javelin can target any kind of vehicle that emits heat, it is most potent against tanks because it can strike from the top. This is why it's called a Javelin, like the spear thrown in track and field events that falls to the earth at a steep angle.

Javelins can also fire directly at a target if there is protection above it, and can be used against low-flying helicopters.

### **How could they help Ukraine fight Russian forces?**

The Javelin is "probably the most sophisticated and most powerful" antitank weapon, said Mark Cancian, senior adviser for the international security program at the Center for Strategic and International Studies.

The Ukrainian military shared images of soldiers carrying the Javelin on Twitter on Friday, along with photos of destroyed tanks.

"The very information about the presence of Javelins in the weaponry of the Ukrainian Armed Forces causes panic among the [Russian flag] occupiers," the tweet said.

Ukraine claims that Russia has lost 335 tanks and just over 1,100 armored combat vehicles in the fighting.

But there isn't reliable data on how many Javelin missiles Ukraine has used in battle and to what effect, said Arael Kotlarski, a senior analyst at Janes, an open-source defense intelligence agency.

The Ukrainian defense ministry asked Ukrainians in a Facebook post Wednesday not to share information on the purchase of weapons from foreign partners.

Experts say the Javelin is a powerful addition to Ukraine's existing arsenal of domestically produced antitank missiles.

It's easy to train fighters to use them, Cancian said, which is advantageous in Ukraine, where civilians have signed up for battle. The United States has trained Ukrainian forces in the past on how to operate the weapons.

Javelins are "particularly useful because the Russians seem to be road-bound," Cancian added, which makes it easier for Ukrainian forces to set up ambush sites or strong launch points.

### **What have Russians done to curb Javelins?**

There are few things even the most well-equipped militaries can do about Javelins. Modern tanks are covered with reactive armor, which in some cases is packed with small amounts of explosives that will detonate an incoming warhead.

The Javelin is designed to get past that armor. It uses a tandem warhead, which first either creates a channel into the reactive armor or blows it up, allowing the main warhead to slice right through and explode.

Russian tanks are particularly vulnerable to the weapon, Kotlarski said, because they were designed to be "very small, squat and compact." A Javelin missile hitting the top of the tank usually means "instant destruction," he said.

There is some evidence the Russian military is wary of Javelins, including photos showing metal canopies jury-rigged on top of tanks. There are two theories about what these are intended to do. The first is to shield a commander or the turret itself from drones that can either drop munitions or crash into them, kamikaze style. But there is also speculation the canopies are meant to blunt the Javelin's top-down attack, giving the tank and its crew a slightly better chance of survival.

The design concept is similar to that of slat armor, which U.S. and other militaries have used to surround vehicles in steel cages, to detonate rocket-propelled grenades prematurely.

Social media has been littered with photos of destroyed Russian tanks with cages. The images have acquired a symbolic resonance so quickly that Internet users have coined the term "cope cage," earning a page on the Internet's primary meme directory.

Others have suggested thermal attachments to the tank may be an attempt to complicate the missile's ability to focus on the target.

A Telegram channel associated with pro-Russian forces also published instructions for Russian soldiers on how to use Javelin systems that they capture in Ukraine.

### **What are the Javelin's limitations?**

The Javelin is "not a silver bullet," said Kotlarski, from Janes.

"There is a prevailing narrative in the public mind to sort of lionize certain weapons systems as having a defining impact on certain conflicts," he said, but "the reality is often more complex."

Though potent, particularly in open areas where Russian military vehicles are lumbering toward Ukrainian cities, the Javelin does have some drawbacks.

"It has the disadvantage of all these kinds of antitank weapons, which is that they [the tanks] can shoot back at you and you just have people hiding behind a hill or a bush," Cancian said. "It's not like an armored vehicle where you have some protection."

The weapons systems are also expensive and complicated to produce, with estimates of production costs ranging between \$80,000 and \$200,000 per missile, according to Kotlarski. U.S. weapons makers have the capacity to produce a maximum of 6,500 Javelin missiles per year, according to the Army's estimates, though the existing contract caps production at 2,100.

If the conflict drags on and Ukraine burns through existing Javelin supplies, the U.S. and European countries may worry that handing over more weapons could leave them vulnerable, Kotlarski said.

As its ground forces struggle to make progress amid fierce Ukrainian resistance, Russia is relying on shelling besieged cities and launching unguided bombs from the sky.

After more than two weeks of war, the Russian military grinds forward at a heavy cost.

And with battles expected to play out increasingly in cities, the Javelin — which is tricky to fire safely out of building windows — may not prove especially useful, Kotlarski said.

"A Javelin in itself is not going to be able to allow the Ukrainians to defeat the entire Russian army," he said.

Ukrainian President Volodymyr Zelensky has said weapons provided by the West so far are insufficient and called for fighter jets, setting off a fierce debate among U.S. politicians about whether to supply the aircraft. The Biden administration has so far shut down the idea.

"We believe the most effective way to support the Ukrainian military in their fight against Russia is to provide increased amounts of anti-tank weapons and air defense systems," the commander of U.S. European Command, Gen. Tod D. Wolters, said in a statement.

“Even merely rumors that British citizens have joined Ukrainian armed forces can be manipulated by the Russians into claims that British Special Forces are involved and that NATO’s escalating the conflict,” Barrons added. “It doesn’t even have to be true. Just a shred of truth provides enough meat for a propaganda machine to move the narrative to a place they want it to be.”

[Return to top](#)

### **18. U.S. commission urges Biden to designate Ukraine, Georgia as major non-NATO allies** Foreign Policy, 12 Mar 22, Amy Mackinnon

The Helsinki Commission, an independent U.S. government agency tasked with promoting human rights and security in Europe, has called on the Biden administration to upgrade the United States’ defense relationship with Ukraine. The commission seeks to help facilitate military and economic assistance to Kyiv as Russian forces move to encircle the Ukrainian capital.

In a letter to U.S. President Joe Biden obtained by Foreign Policy, the commission urged the administration to designate Ukraine and Georgia, which was invaded by Russia in 2008, as major non-NATO allies (MNNA) and to reinvigorate U.S. support for the NATO accession of both countries.

“Although the United States has consistently supported Ukraine’s and Georgia’s NATO membership, Russia’s occupations and ongoing invasion expose the tragedy of long-stalled Euro-Atlantic enlargement,” wrote the commission, which is led by Democratic Sen. Ben Cardin and Democratic Rep. Steve Cohen.

“Absent strong and proactive U.S. backing for Ukrainian and Georgian NATO membership, [Russian President Vladimir] Putin will continue to take ample advantage in his aspirations to upend security and cooperation in Europe and his neocolonial agenda,” the letter said.

Both Ukraine and Georgia were promised membership to the defense alliance during the NATO summit in Bucharest, Romania, in 2008. But despite extensive reform efforts, neither country has been offered a timetable for accession.

The United States has provided billions of dollars of military assistance to Ukraine since it was first invaded by Russia in 2014, with more than \$1.2 billion approved over the past year. “This designation is a fair reflection of our current bilateral defense relationships and does not commit the United States to military action,” the commission letter said, which also recommended that the administration consider extending the status to other non-NATO members along Europe’s eastern flank: Finland, Moldova, and Sweden.

Much of U.S. military aid for Ukraine has been approved through a range of ad hoc government funding mechanisms. Granting the country MNNA status would open a variety of established channels to facilitate arms transfers, financial assistance, and information sharing, smoothing the way for further cooperation. It would also send a powerful signal of support for both Kyiv and

Tbilisi. Unlike NATO membership, MNNA status does not entail any mutual security and defense obligations.

On Thursday, the White House announced it would designate Colombia and Qatar as major non-NATO allies, bringing the total number of countries to receive the title up to 19.

The title has usually been reserved for countries with no ambitions or prospects of joining NATO, which prompted the Ukrainian ambassador to the United States, Oksana Markarova, to express wariness about the designation last year. “MNNA is a status for countries that do not plan/can not force political or geographical reasons to join NATO. This is definitely not about us,” she wrote in a Facebook post.

NATO accession is decided between the 30 members of the alliance, and an MNNA designation by the United States would not necessarily impede Ukraine’s membership prospects.

The Helsinki Commission, formally known as the Commission on Security and Cooperation in Europe, was founded in 1976 as an independent government agency to monitor compliance with the Helsinki Accords, a major Cold War-era diplomatic agreement that sought to reduce tensions between the Soviet Union and the West as well as establish human rights and security norms. The commission is made up of 18 members of U.S. Congress drawn from both parties and representatives from the U.S. departments of State, Defense, and Commerce.

### **19. Nerves on edge in Poland as war next door in Ukraine revives fears of Russia**

Los Angeles Times, 12 Mar 22, Patrick J. McDonnell and Rima Marrouch

Military enlistments are spiking, demands for passports are surging, and memories of the bad old days of the Cold War are fraying the collective nerves of the Polish people.

The Russian invasion of neighboring Ukraine has reverberated in Poland well beyond the influx of more than 1.4 million refugees, a wave of mostly women and children that threatens to overwhelm the country’s infrastructure for providing assistance.

Poland’s historical adversary Russia appears to many here to be on an expansionist path that could end up dragging Warsaw into a broader conflict with potentially catastrophic consequences — threatening the post-Cold War order that has seen the nation prosper and develop into a European success story.

A sense of disquiet is plainly evident, even as life appears to proceed at its normal, if hectic, pace in cities such as Warsaw and Krakow.

“Yes, Polish society is terrified,” said Slawomir Debski, a foreign policy expert in Poland who has advised several governments in Warsaw. “The whole society is aware of how awful, how terrible, and dramatic, any kinetic confrontation with Russia can be.”

The fact that Poland is an established member of both the European Union and the U.S.-led North Atlantic Treaty Organization tempers fears that Moscow's perceived push for a "Greater Russia" could eventually spill into Poland — which was a Soviet satellite state until the fall of Eastern Bloc communism in 1989, the year the Berlin Wall came down.

Poland shares a 144-mile border with Russia — along with centuries of contentious coexistence and profound mutual suspicion. And to some, especially those who lived through the Cold War, the NATO shield seems not all that persuasive.

NATO "is just a name," said Dorota Karpinska, 61, who runs one of the many street stands offering obwarzanki, chewy, bagel-like breads widely consumed here. "Who knows what they're doing?"

Poles born in the post-communist era appear less likely to fear that the conflict will envelop their country. There is a clear generational split, even if the Russian attack was a kind of wake-up call for the young as well.

"It's the old people like my parents who feel that Russia can attack anytime," said Andrzej Piszczek, 24, a student seated in a cafe thick with cigarette smoke and incense. "They say, 'You never know. We need to prepare ourselves, we need to buy flour, petrol.'"

The current situation, many note, differs greatly from the days of the Cold War, when it was widely believed that neither Russia nor the West would resort to the use of nuclear weapons capable of obliterating much of the planet. With Russian President Vladimir Putin's invasion of Ukraine, and his nuclear threats, no such sense of security exists these days.

"Nuclear blackmail is [now] on the agenda almost every day," said Włodzimierz Marciniak, a political scientist and former Polish ambassador to the Russian Federation. "Right now the war is hot and it is next door."

The streets here in the ancient city Krakow have lately seen a new phenomenon: U.S. soldiers, unarmed but in military fatigues, strolling through downtown, window shopping, visiting tourist sites, stopping for a coffee. Longtime residents say the groups of uniformed GIs have emerged from their bases only in recent days, after the Russian invasion of Ukraine and a buildup in U.S. forces based in Poland.

On a recent afternoon, Magda, 39, a restaurant worker, requested a selfie with a group of U.S. soldiers. She said she wanted the photo for her son, 15. The soldiers quickly complied. Their presence, she said, offered both a sense of reassurance — that America has Poland's back, so to speak — and a feeling that a broader geopolitical conflict could indeed be on the horizon.

"It's confusing," Magda, who asked that her surname be withheld for privacy reasons, said after the soldiers had moved on. "I want to live through this, to see the world."

The Pentagon did not respond immediately to an inquiry about the soldiers' heightened public profile in Krakow and in the southeastern Polish city of Przemyśl, close to the Ukrainian border and a key transit point for war refugees.

As the war next door rages, some Poles are taking precautionary measures.

The Polish press has reported a run on demands for passports from those who want to be able to leave the country expeditiously if necessary.

Authorities have also seen rising numbers of new recruits for the Territorial Defense Forces, a kind of reserve arm of the military. Demand for slots has increased sevenfold since the Russian invasion, a military spokesman told Radio Krakow.

In a national poll taken just after the Russian invasion of Ukraine, Poles were asked how they felt. The most common response: “I am afraid,” the choice of 78% of participants, according to the newspaper Rzeczpospolita. An additional 15.5% described themselves as worried; only 6.5% identified “calm” as their state of mind.

The conflict and its potential consequences for Poland are the prevalent topics of everyday conversation — at shops, on public transport, in parks and households. TV screens in bars, restaurants and homes relay the latest developments to edgy viewers.

“So what is the news today?” a man in line at a grocery store in Warsaw asked a fellow shopper the other day, without even having to mention Russia or Ukraine. “What happened?”

Ukrainian flags and lapel pins are everywhere, as are declarations stenciled on walls affirming “Solidarity” with Ukraine.

“We can say that every single one of us is at war now, and fighting by doing whatever we can to help,” said Mikolaj Szlachta, 19, one of many volunteers in green vests assisting crowds of exhausted Ukrainian refugees at the central rail station in Krakow. “This is how we fight.”

The volunteers seen at train and bus depots throughout the country are part of an extraordinary outpouring of support for the massive influx of refugees who have fled into Poland since Russia invaded Ukraine on Feb. 24. In the capital, Warsaw, the surge has approached a breaking point, with the mayor on Friday asking for international help. Many see the disastrous scenario unfolding in neighboring Ukraine as something that could also happen in Poland, which has for centuries been caught up in Great Power intrigues involving Russia, Germany and the former Austro-Hungarian empire.

“We still, as a nation, recall the history from World War II, when we were in this situation, when we were asking for help and we were asking for shelter and food,” said Karolina Micolajczyk, who manages a hotel in Krakow’s Kazimierz district.

A Ukrainian flag hangs outside the hotel. Ukrainians filled all 28 rooms on a recent evening, she said.

Traces of the last global conflagration are never far off in Poland. Both Nazi Germany and the Soviet Union invaded at the outset of World War II, at a staggering cost in human life. The Kazimierz neighborhood was long the heart of Krakow’s Jewish community, which represented about one-quarter of the city’s prewar population before the Nazi mass murder campaign.

The former Jewish quarter is now a shabby-chic haven featuring hip bars, trendy cafes and boutique hotels. Signs in downtown Krakow feature bus tours to the infamous Nazi death camp at Auschwitz, an hour's drive to the west.

The post-invasion fear of Russia has also hit the cultural sphere. A Warsaw orchestra recently decided to dedicate its performance to Ukraine and dropped a planned performance of a piano concerto by Sergei Rachmaninoff, the Russian composer. The orchestra substituted a concerto by Frederic Chopin, the Polish virtuoso.

There have also been scattered reports of harassment and vandalism. Ukrainians working for a Russian restaurant owner in Warsaw received threatening phone calls urging them to quit, according to reports widely circulated on social media. Meanwhile, Polish police were investigating the destruction of a Red Army monument in the northwestern city of Koszalin.

However, many Poles interviewed were quick to distinguish between the Russian people and its government.

"I don't identify every Russian person with what's happening in Ukraine," said Szlachta, the student volunteering in the Krakow train station.

He, too, was skeptical that the invasion would escalate into Poland.

"I don't think Russia's leaders are dumb enough to attack a NATO country — that would mean a global conflict and World War III," he said. "I hope it won't get to that. But, then, anything can happen. You never know."

## **20. Tiny kingdom in Nigeria celebrates as threat from Boko Haram fades**

Sunday Times (UK), 13 Mar 22, Richard Assheton

The king rose early on the biggest day for his people in years. By 9am the walled center of the village was abuzz with the chatter of thousands who had come from the hills around.

The celebrations that greeted the king were the first of their kind in nearly a decade. For much of that time the people of Sukur, a little-known, UNESCO-listed kingdom 3,000 feet up in the highlands of northeast Nigeria, lived in fear. Their unique culture, with its own language, calendar and distinctive dry stone walls, was under threat from Boko Haram, the Islamist group that has terrorized the region since 2009. In 2014 militants climbed the steep track to the settlement, razing houses and burning crops. People scattered, abandoning the terraced agriculture that along with a tradition of iron smelting had in 1999 helped win Sukur Africa's first world heritage recognition for a cultural landscape.

Now, though, Boko Haram is weaker, allowing the Sukur Yawal festival to mark the coming rainy season for the first time since 2014. At last, Sukur folk are focusing again on the question that preoccupies them: how do they cling on to their culture?

breakout capability; the deal would only push that up to under six months (well before a new president takes office).

Most crucially, it will gain up to \$130.5 billion in sanctions relief. Iran needs money now. According to Rubin, the country's leaders have "driven their economy into the ground even before sanctions, and the cash infusion really will allow them to snatch victory from the jaws of defeat." This is especially true for Iran's proxies. Rubin, who visited Hezbollah territory in Lebanon last year, reported that "Residents there — including former Hezbollah members said the group was losing its members in droves as the money dried up." Rubin believes that a new deal would "throw a lifeline to Hezbollah."

Given a likely impending red wave, the current deal on the table would likely be scrapped. But that probably doesn't matter to Iran, which gets plenty of goodies in the meantime.

## **22. Don't embrace Saudi Arabia and the UAE because of the Ukraine crisis**

The Hill, 12 Mar 22, William D. Hartung

The Biden administration is reportedly reaching out to Saudi Arabia and the United Arab Emirates (UAE) to urge them to increase their oil output to counterbalance disruptions in the global market sparked by sanctions on Russia. In doing so, it is crucial that the administration doesn't excuse their crimes in Yemen or bolster their militaries with additional arms sales or other military support.

As the Wall Street Journal has noted, the de facto rulers of Saudi Arabia and the UAE, Mohammed bin Salman and Mohammed bin Zayed, appear to be pressuring the Biden administration over the oil issue to get more support for their devastating war in Yemen. Both men have declined to speak by phone with President Biden in an attempt to draw U.S. attention to the quid pro quo they are seeking — more oil output for more arms and assistance in fighting the Houthi movement in Yemen.

The UAE announced on Wednesday that it would increase its oil output, but it is unclear whether the Biden administration offered anything to the UAE in return. Giving in to the Saudi and UAE demands on Yemen would be a disastrous mistake, both for U.S. interests in the Middle East and, most tragically, for the people of Yemen. There are other ways to get more oil onto the international market, including lifting sanctions on Iran as a revived nuclear deal under the Joint Comprehensive Program of Action (JCPOA) moves closer to fruition.

As the humanitarian suffering caused by the Russian invasion of Ukraine has come front and center, it has been all too easy to forget the devastation caused by the U.S.-backed Saudi war in Yemen. The United Nations estimates that there have been at least 377,000 direct and indirect deaths as a result of the war, which was initiated by a Saudi-led coalition seven years ago this month. Saudi air strikes are at their highest levels since April 2018, and the Saudi blockade of Yemen has choked off imports of fuel that are essential for powering hospitals and fulfilling the

needs of daily life, causing further suffering and unnecessary deaths of innocent civilians. This is no time to be stepping up U.S. military support for Saudi Arabia and the UAE.

The Biden administration has ample leverage to pressure Saudi Arabia to end indiscriminate air strikes and lift its naval and air blockade on Yemen. Nearly two-thirds of Saudi combat aircraft are of U.S. origin, and they could not operate for long without U.S. spare parts and maintenance. Cutting off this support and holding off on new arms sales would be an effective tool to change Saudi conduct in Yemen and persuade the regime to participate in comprehensive peace talks to end the war.

Closer U.S. military relations with Saudi Arabia and the UAE pose serious human rights issues, which should be reason enough to cut off U.S. military support. But cozying up to these regimes also undermines U.S. security interests in the Middle East and beyond. The war in Yemen has stoked anti-U.S. sentiment there and destabilized that country in ways that may create an opening for a resurgence of al Qaeda in the Arabian Peninsula (AQAP). The UAE has supplied weapons to the forces of Gen. Khalifa Haftar in Libya in violation of a United Nations arms embargo, and has launched drone strikes there that have killed scores of civilians. This reckless behavior by U.S.-armed allies not only diminishes the United States' reputation and influence in the greater Middle East, but it also threatens to pull us into more conflicts there at a time when we should be reassessing our military footprint in the region.

If the Biden administration decides to continue or increase military support for Saudi Arabia and the UAE in exchange for an upsurge in oil production, Congress should push back. It could do so by passing resolutions under the War Powers Act that would end U.S. support for the Saudi and UAE militaries, a move that would get the attention of both regimes and help end their brutal war in Yemen. Last month, Reps. Pramila Jayapal (D-Wash.) and Peter DeFazio (D-Ore.) announced that they will be introducing a new Yemen War Powers Resolution.

These efforts should move forward. Embracing Saudi Arabia and the UAE at this moment is the wrong thing to do. Doing it with the excuse that it might cushion the impacts of sanctions on Russia on the U.S. economy is not justified given the damage they are doing, both to U.S. interests and to the people of the Middle East.

### **23. 'A serious failure': scale of Russia's military blunders becomes clear**

Financial Times (UK), 12 Mar 22, Sam Jones, John Paul Rathbone and Demetri Sevastopulo

Three weeks into its invasion of Ukraine, the scale of Russia's military blunders is becoming clear.

The outcome of Russian president Vladimir Putin's war is still far from certain: little information exists on Ukrainian forces' rates of attrition, while Russia's military still outmans and outguns that of its neighbor. The chances of escalation have meanwhile increased as the Russian leadership looks to regain the front foot.

But in the first phase of its offensive, the Kremlin's military story is one of failure.

Western defense officials have estimated Russian casualties at between 2,000 and 6,000. Based on ratios in similar conflicts, that implies three to four times as many captured and wounded. At its midpoint, such an estimate is more, in three weeks, than the losses of US and UK servicemen combined during 20 years in Afghanistan.

Russia's losses in materiel are also significant. The Oryx blog has recorded 1,034 Russian vehicles, artillery pieces and aircraft destroyed, damaged, abandoned or captured. These include 173 tanks, 261 armored and infantry fighting vehicles, and 28 surface-to-air missile systems.

Justin Bronk, research fellow at the UK's Royal United Services Institute, who co-wrote a book on Russia's military modernization under Putin, said the losses "are massively more than in any other recent conflict" including Georgia, Chechnya or Afghanistan in the 1980s.

Analysts and western military officials agree on the primary cause of the flaws in Russia's military offensive: a failure of intelligence that skewed military planning.

Flowing from this were failures linked to rash decision-making, logistical unpreparedness, poor maintenance of equipment and the use of young, inexperienced troops that together have culminated in a collapse of front-line Russian morale.

General Sir Richard Barrons, former head of the UK's Joint Forces Command, said: "There is something here that is systemically wrong . . . somewhere in the Russian intelligence architecture, facts on the ground are being converted into an analysis, but that analysis is actually a narrative to support the preconceptions of the senior [Kremlin] leadership."

As a result, Russia's intended campaign — an assault strike predicated on speed and Ukrainian political weakness — has tipped into a joint combat operation requiring logistical and communications planning that does not seem to have been in place, say analysts.

Russia's first failures occurred within the opening 24 hours of the war, when pre-positioned covert spetsnaz troops, whose job it was to cripple the Ukrainian political leadership, were stopped. Airborne forces of the elite VDV, known for their sky-blue berets, that were supposed to secure key sites such as Hostomel airport just north of the capital, were, after initial success, repelled by strong Ukrainian resistance. Two transport aircraft were downed above Hostomel by Ukrainian forces.

"The Ukrainian military as a whole have been expecting this kind of invasion to come since 2014," said Barrons. "And then they were handed the gift of these light forces coming in piecemeal, underestimating them, which they were able to pick off."

The second component of the initial assault — the rapid advance of Russian forces, avoiding cities and intended to quickly encircle regional Ukrainian military units they believed would be paralyzed because of a leaderless central government — further extended Russian vulnerability.

“It is as if they were treating this as a military policing mission, not an actual invasion against a modern military,” said one western military official. Videos on social media even show troops from Rosguardia, Russia’s domestic militia, advancing into towns, unsupported, as the frontline force.

When, several days in, Russian commanders realized they needed to pivot to using more serious firepower, they did so chaotically: huge columns of tanks and artillery moved forward, but the Ukrainians blew up bridges, causing advances to stall. Russian planners appear to have failed to anticipate this basic response, another western military official said, pointing out that engineering units and bridge builders were not even near the front of the advance in some columns.

“What we have seen on the ground is an extremely bad plan coupled with absolutely no warning to operational commanders they were about to throw their troops into operational combat which has created an enormous number of problems for them,” said Rusi’s Bronk. It is, he added, a “serious failure” of “TTPs” — tactics, techniques and procedures.

Even Russia’s feared anti-aircraft systems were left vulnerable to cheap Turkish Bayraktar TB2 drones operated by the Ukrainians. Footage on Twitter, for example, shows Ukrainian TB2’s picking off Buk launchers, the same missile system used to shoot down the MH17 commercial aircraft in 2014.

On the ground, meanwhile, the thousands of anti-tank missiles western powers have been supplying to Ukraine for weeks have proved effective, with mobile foot soldiers able to ambush and attack isolated advanced clusters of Russian light vehicles and stationary heavy units stuck in columns with unprotected flanks.

Open-source intelligence suggests that Russia’s military communications infrastructure has performed poorly: the cutting-edge encrypted Azart and Akveduk radios that supposedly began to be rolled out to Russian units in 2017 appear to be in short supply or have inadequate range, noted a Rusi report.

On social media, pictures have been posted of Russians using cheap, unencrypted Chinese radios, and their own mobile phones to contact commanders. As a result even amateur radio enthusiasts hundreds of miles away have been able to tune into real-time Russian military communications, as Twitter threads with dozens of recorded Russian messages show.

Inadequate equipment has been the cause of other failings: images have been shared by Ukrainians of Russian vehicles with shredded tires stuck in mud. Experts say the tires are almost certainly cheap, civilian-grade versions of those the Russian military need, suggesting, as in the case of the radios, endemic corruption in Russia’s defense procurement.

“The Russians are very good at military parades. They spend weeks getting everything shiny. But it’s a facade,” said one European defense official.

The biggest question that continues to perplex analysts, though, is why Russia has still not made use of its vastly superior air power to better protect its forces, and reverse the debacle on the ground.

A senior US defense official said that Ukraine had been “very creative” in how it used its air defenses, making highly effective use of cheap drones, and the country’s forces were staging a much fiercer resistance than Russian intelligence expected. “They are putting resources where they’re most needed [and] they’re doing it quickly. They are being adaptive and nimble . . . in almost a sort of a hit-and-run kind of style,” he said.

Russia’s military has no experience fighting such an extensive joint ground-and-air war, the official said. “This is an operation that they have never conducted before, never meaning since World War two.”

The official said Russia was also having trouble integrating its ground and air forces into a “joint” force. He said that while the Russia had upgraded its military and acquired sophisticated systems, “it doesn’t appear . . . that they have developed the proper operational concepts to use these modern capabilities”.

The failures have resulted in a widespread, if perhaps temporary, collapse in morale, according to the Pentagon and British defense intelligence. There is even evidence of Russian soldiers sabotaging their own equipment, officials have said.

The average age of Russian soldiers in Ukraine is 20-25 years old, according to one western military official, compared with 30-35 for the Ukrainians, who are better-supplied and have a cause on their side.

Many of the young Russian soldiers deployed meanwhile did not even know they were being sent into Ukraine, let alone that they would have to fire on fellow Russian-speakers.

“It has become clear that a lot of Russian infantry are simply not willing to go into the attack,” said Chris Donnelly, an adviser on the Soviet military to four Nato secretaries-general. “Once morale really starts to collapse like this, you don’t have an army any more.”

The Russians have used conscripts and poorly trained junior troops, Donnelly said, in an apparently knee-jerk reversion by operational commanders to the textbook Soviet tactic of sending in expendable forces first to “soak up firepower”.

The question is how Russia will adapt. In recent days, Russian forces have stepped up the use of long-range fire, and have launched more than 800 missiles in total. There were also signs that columns of forces to the north and east of Kyiv were preparing to try a new approach.

Some of the tanks and other vehicles in a long convoy that at its closest point is 15km from Kyiv have also gone off the main road. It is unclear whether they are being sent in a different direction or taking cover under trees.

Elsewhere, Russia’s objectives seem to be to surround and besiege a sufficient number of Ukrainian cities, seize Kyiv and oust the Zelensky government. While Russian forces have struggled in the north, in the south they have had far more success, and can still apply considerable force.

Questions remain about Ukrainian forces' ability to continue to fight and how much in anti-aircraft munitions they have remaining.

Within the Ukrainian military there is also growing dismay over western flip-flopping over additional military support, such as gifting MiG jets or heavier, vehicle-mounted long-range anti-aircraft weaponry.

Russia's use of crude artillery and dumb bombs is meanwhile wreaking a heavy civilian toll. And most signs point towards a further escalation by the Kremlin.

The danger, said one retired senior British intelligence officer, is that in seeking to extricate itself from its tactical disasters in Ukraine, Moscow "blunders into a strategic dead-end with even worse consequences" for Ukraine, and possibly the world.

#### **24. For the sake of our national security, Congress must end its budget battles**

The Hill, 12 Mar 22, Mike Rogers

On Tuesday, the Office of the Director of National Intelligence issued its Annual Worldwide Threats report.

If you weren't already unsettled by the state of the world, reading this sobering report will certainly leave you concerned. From Russia to China, health security to transnational threats like drugs and terrorism, and more, the ODNI report shows just how unsettled the world is today and what it's anticipated to be over the course of the next year.

Dealing with threats like these means putting and keeping our budgetary house in order, but too often, we're operating on temporary funding, and we can't keep doing so.

We often talk about how we are a global leader, a guarantor of international security, yet Congress continues to fail to provide regular annual funding for the military. Until Thursday night, as Russia invaded its neighbor — a country slightly smaller than the state of Texas — our military was operating under previous funding levels at a time when it needed to be investing in the future while meeting the threats of today.

For the fourth time since October of last year and for the 12th year out of 13, Congress risked financial catastrophe if it failed to approve an annual funding measure. To make matters worse, if Congress hadn't passed a funding bill (or yet another continuing resolution) by today, the government would have shut down, again.

There are few times more perilous for the government to play chicken with a budget shutdown than when Moscow is marching towards Kyiv and our NATO allies are looking to Washington for leadership. We're rightly sending weapons and humanitarian aid to Ukraine and deploying troops to reassure our allies in NATO, but at home, we were relying on continuing resolutions rather than passing a budget. It's the sheer entanglement of bad politics.

This is no way to run a government and no way to manage our military and security affairs and shouldn't be a partisan issue. The administration controls all three branches of government and struggled to get a budget finalized. There simply isn't any excuse for this political failure. Our country has the need and there is a clear sense of urgency, yet they seemed uninterested or incapable of getting the basic business of government done.

Relying on continuing resolutions is sophomoric and leaves our servicemen and women in the lurch while Congress plays politics. The services cannot plan for long-term acquisition or events, they cannot invest in next-generation systems and they cannot re-arm and re-equip stores that are being rapidly depleted due to foreign support. Failing to manage our fiscal house leaves our adversaries emboldened and allies questioning our seriousness.

And you should be certain that our adversaries are watching our every move. As the ODNI writes, "Beijing, Moscow, Tehran, and Pyongyang have demonstrated the capability and intent to advance their interests at the expense of the United States and its allies." China, Russia, Iran and North Korea are looking for weaknesses to exploit, and our failure to budget for potential conflict with each is just the kind of opportunity they would seize upon.

What does this look like in practice? "Major adversaries and competitors are enhancing and exercising their military, cyber and other capabilities, raising the risks to U.S. and allied forces, weakening our conventional deterrence, and worsening the longstanding threat from weapons of mass destruction." Just last year, Beijing tested an advanced hypersonic missile over the South China Sea. Defending against that kind of threat and preparing our own capabilities is not cheap, and requires long-term planning. China doesn't need to worry about the budget cycle, but we do and we must get our house in order.

Providing our military with budgetary stability and predictability in an unpredictable world is Congress' first duty and responsibility and too often it is found wanting. It is difficult, if not impossible, to provide and execute strategic guidance when the legislative branch cannot agree on basic funding. We need our eyes and attention on strategic competition, not partisan budget fights. This means passing a budget, not just now, but regularly in the future, and this needs bipartisan leadership.

*Mike Rogers served as the Republican representative in Congress for the 8th District of Michigan from 2000 until 2015, including as chairman of the House Intelligence Committee from 2011-2015.*

## **25. Nostalgia and Kalashnikovs: Why Russia wins some sympathy in Africa and the Middle East**

Economist, 12 Mar 22

In 2019 Vladimir Putin welcomed 43 African leaders to the inaugural Russia-Africa summit, a higher turnout than Britain or France attracted to similar shindigs. At the bash in Sochi the Russian president lambasted the West for how it imposed "political or other conditions" on

African countries, a reference to chiding about human rights. “We have a lot to offer to our African friends,” said Mr Putin.

The summit stressed Russia’s increasingly muscular approach to Africa. After Russia annexed Crimea in 2014 and the West imposed sanctions, it boosted efforts to sell arms, extract resources and prop up shaky regimes. Now that Russia is suffering far more sweeping sanctions, it may wish to redouble its activities on the continent. But do African governments think it still has enough to offer?

The vote on March 2nd at the un General Assembly to condemn Russia’s invasion of Ukraine suggests many are hedging their bets. Of the 54 African countries, 28 backed the motion but 17 abstained and eight were no-shows. Eritrea, a gulag state, joined Russia, Belarus, North Korea and Syria in voting against.

Whether these votes reflect ordinary Africans’ views is unclear. Mobile-phone surveys carried out last week in six African states for The Economist by Premise, an American research firm, suggest that governments’ ambivalence is reflected in public attitudes (see chart 1). In Kenya, Nigeria, South Africa and Uganda pluralities held Russia most responsible for the war. But in Mali and the Ivory Coast, NATO was most often cited as the guilty party.

The votes at the un partly reflect historical ties between Russia and ruling parties, especially in southern Africa. Many of the region’s elite studied in the Soviet Union; some have fond memories of their time there. The liberation parties that still run Angola, Mozambique (whose flag features a Kalashnikov), Namibia, South Africa and Zimbabwe saw the Soviet Union as an ally in their fight to end white rule, and consider Russia to be its successor. All abstained, even though Ukraine was part of the Soviet Union, too.

This nostalgia goes hand-in-hand with latent anti-Western views. Murithi Mutiga of International Crisis Group, a Brussels-based think-tank, notes “resentment” in the Horn at “the way the us behaved in its unipolar moment”. NATO’s intervention in Libya in 2011, which ignored the African Union, angered leaders like Yoweri Museveni of Uganda (another abstainer). The subsequent chaos, which spilled over into the Sahel, alienated governments there.

But Africa’s relations with Russia are mainly about self-interest, not history or ideology. This is acutely so for countries that rely on mercenaries from the Wagner Group, which is backed by Yevgeny Prigozhin, a chum of Mr Putin. There are an estimated 2,000 Wagner troops in the Central African Republic (car) keeping rebels from toppling President Faustin-Archange Touadéra, reportedly in exchange for gold and diamonds. He is too dependent on them to change tack.

The junta in charge of Mali since a coup last year has also turned to Wagner. About 800 guns-for-hire operate there, says Emmanuel Macron, France’s president, who is withdrawing French forces partly because of the Russian arrivistes. European attention to the Sahel will further diminish because of the war in Ukraine, reckons Paul Stronski of the Carnegie Endowment for International Peace, another think-tank, leaving a “relatively open door” for Wagner. He adds

that Russia will see the battle for influence in the Sahel as part of a wider contest against Western enemies – an echo of proxy conflicts during the Cold War.

Guinea is another African country unusually dependent on Russia. It is already a “collateral victim” of the war, laments Amadou Bah of Action Mines Guinée, an NGO. Rusal, a huge Russian aluminum producer with three mines in Guinea, has stopped operations at its refinery in Ukraine, which processes bauxite mined in Guinea. Its junta recently suspended an honorary consul from Ukraine, presumably to keep Mr Putin sweet.

On February 24th, as Russian tanks were rolling into Ukraine, Mohamed Hamdan Dagalo, a powerful Sudanese general known as Hemedti, was hobnobbing with Russian officials. Russia has long sought a military presence at Port Sudan on the Red Sea and reportedly buys smuggled gold from the country. But in the coming months Sudanese angry at high bread prices (see earlier article) may renew protests against their Russian-backed junta.

Russia has tried to extend its reach beyond a few rickety states. It is the biggest arms exporter to Africa. Its trade with the continent has increased since 2014, though it still accounts for just 2% of Africa’s trade in goods with the rest of the world. Kremlin-linked firms have formed an Africa-focused trade association. A subsidiary of VEB (a bank under sanctions) has shares in Afreximbank, a development bank.

For most countries Russia is but one player among many. Like many African leaders, João Lourenço, Angola’s president since 2017, has tried to build a “portfolio of foreign-policy interests”, notes Ricardo Soares de Oliveira of Oxford University. Angola sells its oil to China, has an IMF program and digs for diamonds with Alrosa, a Russian miner. “Historically we have relations with all these countries. I don’t see it as a major issue,” says an Angolan cabinet minister.

Ethiopia, which did not vote at the un, is in a similar spot. Russia is its largest arms supplier. At the un Russia has stymied efforts to constrain Ethiopia’s government in a civil war against rebels from its northern region of Tigray. Gazprom bank has shown interest in a project in Ethiopia’s eastern Somali region. However, “I’m not convinced we need [Russia] more than the West,” says an Ethiopian official.

### **The newly fickle Gulf**

Self-interest and fence-sitting prevail in the Middle East, too. The United Arab Emirates (UAE) shocked America by abstaining in the un Security Council on February 25th. The Arab League’s statement on the war three days later did not even mention Russia. Though their governments voted in favor of the General Assembly motion, officials in Egypt and other Gulf states argue that this is not their war: they have no formal alliances with either side.

Oil is one reason. Saudi Arabia is keen to preserve OPEC+, an alliance of big producers of which it and Russia are the biggest. Weapons are another factor. Egypt is the region’s second-biggest recipient of American military aid. But President Abdel-Fattah al-Sisi has sought to diversify, including by buying Russian fighter jets.

Gulf states have relied on America for protection. But they now think its security umbrella has holes. Diplomats hope staying neutral on Ukraine will send a message to America. “If we can’t count on you, you can’t count on us,” as one puts it.

Western governments are less likely to chastise African countries for abstaining. They know that all states have interests. “It’s very unlikely that African countries will be forced to choose a side,” says Folashadé Soulé, an academic also at Oxford.

But if Russian firms struggle to find dollars they will be less attractive to Africans. “I don’t think the government of Sudan wants rubles,” says a sanctions lawyer. Big energy or mining deals often involve ancillary Western firms, which may not want Russians involved, if only for reputational risk. If the West stops buying Russian hydrocarbons, that too could have knock-on effects on African buyers.

The next Russia-Africa summit is due later this year in Ethiopia. Its VIP list will show how many “African friends” Mr Putin still has. It may well be less than 43.

## **26. Will China offer Russia financial help? A bit. But it will mostly seek to learn from Russia’s mistakes**

Economist, 12 Mar 22

If you believe China’s diplomats, relations with Russia are “rock solid” and the friendship between Xi Jinping and Vladimir Putin has “no limits”. Western sanctions are about to put those warm words to the test. Russia needs an economic and financial lifeline. It would like to use China as a conduit through which to continue trading with the rest of the world. China, however, must strike a delicate balance between helping Mr Putin stand up to their joint rival, America, and retaining its own access to the global financial system. No doubt to Mr Putin’s regret, its financial aid to Russia is likely to be qualified at best.

Although China abstained in un votes condemning Russia for invading Ukraine, its rhetorical support has been more fulsome. On March 7th, as civilian casualties mounted, Wang Yi, the foreign minister, called Russia his country’s “most important strategic partner”. It is just a month since Mr Xi and Mr Putin heralded a new era for their countries. As well as preserving relations, China probably wants to undermine the legitimacy of sanctions as a tool of Western policy, given they have been used against it over Hong Kong and Xinjiang. Chinese firms may spot an opening in Russia as Western ones, such as McDonald’s and Shell, close their doors. Bloomberg News says that some are eyeing cheap energy assets.

Yet this embargo-busting brotherhood faces several problems. China’s technical abilities are no substitute for the West’s. CIPS, its payments network, has a small global footprint and low volumes and relies on sending messages through swift, a European body from which some Russian banks are now barred. Another difficulty is that Chinese multinationals with a legal presence in Western-allied countries may fall foul of the existing sanctions regime. China’s international banks are wary. Volvo (based in Sweden but owned by a Chinese firm) and TikTok

(run from Singapore but Chinese-owned) have suspended some operations in Russia. Even Chinese firms without a legal presence in the West could be hit by “secondary sanctions”, which take aim at third countries that help the subject of primary ones. America has not yet used this weapon over Russia, but it might. Chinese banks that dealt with Iran and North Korea were penalized by America.

Given all this, China’s help to Russia is likely to be half-hearted. It may stick to its existing Russian trade arrangements, hoping that America will tolerate them. Chief among these is energy. China received 32% of all Russian crude exports in 2020 and 17% of its exports of liquefied natural gas. China may also conduct trade and financial transactions through smaller banks that do not have a legal presence in the West, using rubles and yuan rather than the dollar. It may also grant Russia’s central bank access to its yuan holdings. Last, China will probably try to limit the overall scale of trade volumes and payment flows so as to avoid provoking a direct confrontation with America.

Chinese officials must juggle several priorities. China wants to see Russia survive these sanctions, to teach America and allies that they are not a magic weapon, but is anxious to limit collateral damage to Chinese interests. In the process, it plans to learn from Russia’s mistakes. If it comes to blows with America, China wants its financial system to be shielded. Its aims will include improving its payments system and diversifying its \$3.2trn of reserve holdings out of Western currencies and accounts by, for example, investing in commodities. It could get foreign firms and governments to issue more securities in China’s own capital markets, creating a new pool of assets for China to buy. Russia may hope for a Chinese bail-out; China’s priority will be to learn from a case study of failure.

#### **27. Saudi Arabia executes 81 people in a single day**

Al Jazeera, 12 Mar 22

Saudi Arabia has executed 81 men over the past 24 hours, including seven Yemenis and one Syrian national, on charges including “allegiance to foreign terrorist organizations” and holding “deviant beliefs”, state news agency Saudi Press Agency said, in the largest known mass execution carried out in the kingdom in its modern history.

The number dwarfed the 67 executions reported in the kingdom in 2021 and the 27 in 2020.

“These individuals ... were convicted of various crimes including murdering innocent men, women and children,” SPA said on Saturday, citing a statement from the interior ministry.

“Crimes committed by these individuals also include pledging allegiance to foreign terrorist organizations, such as ISIS [ISIL], al-Qaeda and the Houthis,” it added.

### COVERAGE HIGHLIGHTS

---

1. Reuters led follow-up media reporting on Sunday morning's Iranian ballistic missile attack in the vicinity of the U.S. Consulate under construction in Erbil. The article highlighted that U.S. National Security Adviser Jake Sullivan said the Biden Administration was working to help get Iraq missile defense capabilities to defend itself against future attacks. Sullivan said the Administration was in consultation with both the Iraqi and Kurdish governments.
2. The Wall Street Journal cited a senior U.S. official who said the U.S. would not negotiate exemptions to Ukraine-related sanctions on Russia to save the 2015-revised JCPOA agreement with Iran. The official said the Biden Administration would likely begin exploring options to the agreement over the next week if Russia doesn't back away from its demands for guarantees exempting it from Ukraine-linked sanctions.
3. The New York Times led global media reporting updating events on Ukraine. A U.S. official told media that Russia asked China to give it military equipment and support for the war in Ukraine after President Putin ordered military operations to begin in February. a full-scale invasion last month, according to U.S. officials. NSA Sullivan is scheduled to meet on Monday in Rome with Yang Jiechi, a member of the Chinese Communist Party's Politburo and director of the party's Central Foreign Affairs Commission to discuss the Ukraine situation. Separately, media reported that Ukraine and Russian negotiators would be meeting Monday following "positive" talks this weekend that could result in an agreement to end Russia's invasion.

**1. U.S. working to help Iraq get missile defense capabilities - Sullivan**

Reuters, 13 Mar 22, Andrea Shalal

U.S. National Security Adviser Jake Sullivan on Sunday condemned Iran's ballistic missile attack on Iraq's northern Kurdish regional capital of Erbil, and said Washington was working to help Iraq get missile defense capabilities to defend itself.

## **2. U.S. won't negotiate Ukraine-related sanctions with Russia to save Iran nuclear deal**

Wall Street Journal, 13 Mar 22, Laurence Norman and Dion Nissenbaum

The U.S. won't negotiate exemptions to Ukraine-related sanctions on Russia to save the 2015 Iran nuclear deal and could try to strike a separate accord excluding Moscow, a senior U.S. official said, a diplomatic effort complicated by an Iranian missile attack on Iraq that sent American troops rushing for shelter.

## **3. Russia asked China for military and economic aid for Ukraine War, U.S. officials say**

New York Times, 13 Mar 22, Edward Wong and Julian E. Barnes

Russia asked China to give it military equipment and support for the war in Ukraine after President Vladimir V. Putin began a full-scale invasion last month, according to U.S. officials.

## NOTABLE TWEETS

---

**Secretary Antony Blinken; @SecBlinken (13 Mar):** Spoke with Qatar's Minister of Foreign Affairs @MBA\_AlThani\_ yesterday about the urgent need for Russia to end its brutal and unprovoked war on Ukraine. I also thanked Qatar for continued assistance with Afghanistan diplomacy.

**State Department Spokesman Ned Price; @StateDeptSpox (13 Mar):** The United States strongly condemns the missile strikes on Erbil, Iraq last night that emanated from Iran. The strikes were an outrageous violation of Iraq's sovereignty. No U.S. facilities were damaged or personnel injured, and we have no indications the attack was directed at the United States. Iran must immediately cease its attacks, respect Iraqi sovereignty, and halt its interference in Iraq's internal affairs. The United States stands with our Iraqi partners, including in the Kurdistan Region, and will help our partners in the region defend themselves.

**Qatar Ministry of Foreign Affairs; @PCOCMOFA (13 Mar):** The Chad Peace Negotiations that started in Doha today are Chad-Chad negotiations owned and led by the Chadians, and the State of Qatar will do everything in its power to make them a success as a facilitator and host.

**Prime Minister of Iraq Mustafa Al-Kadhimi; @MAKadhimi (13 Mar):** The Ministerial Council for National Security held an extraordinary meeting, today, Sunday, headed by the Commander-in-Chief of the Armed Forces, Prime Minister @MAKadhimi, to discuss the attack that targeted the city of Erbil at dawn today, and caused losses and terrorized the city's residents.

---

## IRAN

---

## **4. Iran attacks Iraq's Erbil with missiles in warning to U.S., allies**

Reuters, 13 Mar 22, Amina Ismail and John Davison

Iran attacked Iraq's northern city of Erbil on Sunday with a dozen ballistic missiles in an unprecedented assault on the capital of the autonomous Iraqi Kurdish region that appeared to target the United States and its allies.

### **5. Iran nuclear talks stumble as US rebuffs Russian demands**

Financial Times (UK), 13 Mar 22, James Politi

The US has ruled out offering any sanctions relief to Russia in order to clinch its support for an agreement to revive the 2015 nuclear accord with Iran, rebuffing a last-minute demand from Moscow.

---

## IRAQ

---

### **6. Iraqis widely condemn Iran missile attack on Irbil**

Voice of America, 13 Mar 22, Namo Abdulla

Iran's ballistic missile strike on the northern city of Irbil, which damaged some residential structures but caused no casualties, has been criticized by leaders from across Iraq's political spectrum.

## AFGHANISTAN

---

### **7. Afghan aviators hide as Taliban urge them to return to duty**

New York Times, 13 Mar 22, David Zucchino and Yaqoob Akbary

Last year, the three Afghan aviators served in the elite Special Mission Wing of the Afghan Air Force. Trained by Americans to fight the Taliban from the air, they were some of the Afghan military's most elite troops. Now they are on the run, hunted by the Taliban while moving their families from one safe house to the next. When the Taliban recently invited former air force members to join the new government's fledging air force, promising them amnesty, they never considered it.

### **8. Bachelet: Future of Afghanistan uncertain**

Voice of America, 13 Mar 22, Lisa Schlein

U.N. High Commissioner for Human Rights Michelle Bachelet warns humanitarian and economic issues are likely to claim more lives in Afghanistan than conflict.

### **9. Six killed in spate of murders across Afghanistan**

Deutsche Welle (Germany), 13 Mar 22

At least six killings were reported across Afghanistan on Sunday, amid a rise in mysterious deaths following the Taliban's rise to power.

## MIDDLE EAST

---

### **11. White House faces oil standoff with Saudi Arabia and UAE as prices soar**

The Guardian (UK), 13 Mar 22, Martin Chulov and Julian Borger

Joe Biden's hardline stance on Russia has won him widespread plaudits, but with the most serious oil shock in decades now a reality, the US president's attempt to cushion the blowback continues to meet resistance from the two allies he needs most.

---

## CENTRAL ASIAN STATES

---

### **12. Criminal investigation into nephew of former Kazakhstan president**

The Times (UK), 14 Mar 22, Maxim Tucker

The nephew of Kazakhstan's former president is being investigated for crimes "undermining the security of the state" after the violent uprising in January in which at least 227 people died.

---

## NATIONAL SECURITY/DEFENSE NEWS

---

### **13. US officials say Russia has asked China for military help in Ukraine**

Financial Times (UK), 13 Mar 22, Demetri Sevastopulo

Russia has asked China for military equipment to support its invasion of Ukraine, according to US officials, sparking concern in the White House that Beijing may undermine western efforts to help Ukrainian forces defend their country.

### **14. US, China officials to meet as tensions mount over Russia**

Associated Press, 13 Mar 22, Amer Madhani and Josh Boak

White House national security adviser Jake Sullivan speaks during a press briefing at the White House, Feb. 11, 2022, in Washington. President Biden is sending Sullivan for talks with a senior Chinese official in Rome on Monday, March 14, 2022. The meeting comes as concerns grow that China is amplifying Russian disinformation in the Ukraine war.

---

## ADJACENT AORs

---

### **15. Bipartisan lawmakers ramp up calls on Biden to give Ukraine weapons, fighter jets**

Washington Post, 13 Mar 22, Amy B. Wang

A growing number of U.S. lawmakers ratcheted up pressure on President Biden on Sunday to increase military aid to Ukraine, including sending fighter jets and air defense systems that the administration rejected last week.

#### **16. Russia turns to Syria playbook with shifting claims over grounds for war**

Financial Times (UK), 13 Mar 22, Max Seddon in Riga and Erika Solomon

As Russia began to build a pretext for war with Ukraine in February, it accused Kyiv of firing into Russian soil and blowing up a remote border checkpoint — albeit with no reported casualties. Now, as its forces lay siege to Ukrainian cities with increasing brutality, Moscow has justified its invasion by citing fears that Ukraine was restarting its nuclear weapons program. Russia also claimed to have found documents showing Ukraine had developed chemical and biological weapons under the orders of “curators from the Pentagon”.

#### **17. More Ukraine-Russia talks scheduled as attack on base kills dozens**

Reuters, 14 Mar 22, Pavel Polityuk and Natalia Zinets

Diplomatic efforts to end the war in Ukraine were stepping up on Monday, with Ukrainian and Russian negotiators set to talk again after both sides cited progress, even after Russia attacked a base near the Polish border and fighting raged elsewhere.

#### **18. Zelensky says Russian missiles will strike NATO without no-fly zone over Ukraine**

Washington Examiner, 13 Mar 22, Daniel Chaitin

Ukrainian President Volodymyr Zelensky warned Russia is on the verge of attacking NATO territory after a deadly Russian missile strike on a Ukrainian training center roughly 10 miles from the border with Poland.

#### **19. US Official: war widening to the west of Ukraine was anticipated**

Voice of America, 13 Mar 22, Steve Herman

U.S. officials say Russia’s lethal shelling in the western part of Ukraine on Sunday, close to the border with Poland, is something that they had anticipated. At least 35 people died and 134 were wounded early Sunday when Russia fired cruise missiles at the International Center for Peacekeeping and Security, a military base in western Ukraine.

#### **20. Russia ‘using banned white phosphorus bombs’ in attack on Ukrainian city**

The Times (UK), 13 Mar 22, Henry Zeffman

President Putin wants to turn Ukrainian cities into “Aleppos”, a Ukrainian official has said, claiming that Russia used white phosphorus in bombing attacks. Markiyan Lubkivsky, from the Ukrainian Ministry of Defense, warned that Putin was replicating Russian tactics from Syria and spoke of “more terrible attacks” on Ukraine.

#### **21. Biden's CIA head leads the charge against Putin's information war**

The Hill, 13 Mar 22, Morgan Chalfant and Rebecca Beitsch

As Russia began amassing troops on Ukraine's border late last year, CIA Director William Burns was ready. A career ambassador, Burns spent two tours at the U.S. Embassy in Moscow and is one of the Biden administration's foremost experts on Russia and its president, Vladimir Putin.

## **22. India unsure of Russian arms to meet China, Pakistan threats**

Associated Press, 14 Mar 22, Ashok Sharma

India is exploring ways to avoid a major disruption in its supply of Russian-made weaponry amid U.S. sanctions following Moscow's invasion of Ukraine, and Prime Minister Narendra Modi's tightrope walk could become more difficult due to a continuing border standoff with China.

## **23. War censorship exposes Putin's leaky internet controls**

Associated Press, 13 Mar 22, Frank Bajak and Barbara Ortutay

Long before waging war on Ukraine, President Vladimir Putin was working to make Russia's internet a powerful tool of surveillance and social control akin to China's so-called Great Firewall. So when Western tech companies began cutting ties with Russia following its invasion, Russian investigative journalist Andrei Soldatov was alarmed. He'd spent years exposing Russian censorship and feared that well-intentioned efforts to aid Ukraine would instead help Putin isolate Russians from the free flow of information, aiding the Kremlin's propaganda war.

## **24. Russia-Ukraine War threatens wheat supply, jolts prices**

Wall Street Journal, 13 Mar 22, Ryan Dezember

Russia's invasion of Ukraine threatens a big portion of the world's wheat supply and has sent prices on a dizzying ride to new highs as well as the sharpest weekly drop in years.

---

## ANALYSIS/COMMENTARY

---

## **25. Iran missile attack on Erbil goes beyond retaliation for IRGC deaths**

Al-Monitor, 13 Mar 22, Amberin Zaman

Iran's brazen ballistic missile attack on Erbil in the early hours of Sunday is a further chilling reminder of the continued vulnerability of Iraq's Kurdistan Region, seen as easy prey by its large and aggressive neighbors, Turkey and Iran.

## **26. Iran sends its missile regards**

Wall Street Journal, 13 Mar 22, Editorial Board

The Biden Administration's hell-bent pursuit of a new nuclear deal with Iran grows harder to understand with each provocation from Tehran. The latest came Sunday in a missile attack near a U.S. consulate under construction in northern Iraq.

## **27. How does it End? A way out of the Ukraine War proves elusive.**

New York Times, 13 Mar 22, David E. Sanger and Eric Schmitt

The United States accurately predicted the start of the war in Ukraine, sounding the alarm that an invasion was imminent despite Moscow's denials and Europe's skepticism. Predicting how it might end is proving far more difficult.

### **28. China wanted to appear neutral between Russia and Ukraine. It isn't**

Los Angeles Times, 13 Mar 22, Doyle McManus

When Russia invaded Ukraine last month, a spate of wishful thinking ran through the West that China, a great power with friends on both sides, might step in to mediate a cease-fire. China's government struck a pose of neutrality, called for a peaceful resolution and said it supported the principle of "territorial integrity." Ukrainian President Volodymyr Zelensky made a public plea to China's Xi Jinping to intervene. But Xi has been missing in action — and in practice, his policies have been far less neutral than advertised.

### **29. Is it time to call Putin's War in Ukraine genocide?**

New Yorker, 13 Mar 22, Philip Gourevitch

"We have to call this what it is," Volodymyr Zelensky said, late last month, a few days after Vladimir Putin had ordered the invasion and conquest of Ukraine. "Russia's criminal actions against Ukraine show signs of genocide." President Zelensky, who lost family members during the Holocaust, and who also happens to have a law degree, sounded suitably cautious about invoking genocide, and he called for the International Criminal Court in The Hague to send war-crimes investigators as a first step.

### **30. The West must decide how far is too far with Russia**

The Hill, 13 Mar 22, Joshua C. Huminski

Russia's ultimate aims in Ukraine remain unclear. Now two weeks into the invasion, Moscow's initial attempts at a lightning assault appear stymied, and as a consequence, the Kremlin is increasing the intensity and brutality of its campaign. Thus far, however, Russia's so-called "special military operation" has remained limited to Ukraine. There is, however, a risk that this does not remain the case, and should the conflict expand the consequences could be dire for Europe and indeed the world.

### **31. Why doesn't the Arab world break with Putin? Consider Sudan's example**

Salon.com, 13 Mar 22, Mohammad Ali Salih

There is considerable current discussion about whether the decades-long push of NATO's expansion eastward, encouraged by the United States, is to be blamed for the Russian invasion of Ukraine, as famous "realist" John Mearsheimer, of the University of Chicago, has argued. That discussion should also include whether the U.S. is to blame for the refusal, or at least the hesitancy, of some Arab countries to condemn the Russian invasion, which reflects widespread Arab resentment of U.S. policy over the last several decades.

## **REGIONAL MEDIA COVERAGE**

## IRAN

---

### **32. US says Iran fired ballistic missiles into Iraq as nuclear talks stumble**

The National, 13 Mar 22, Robert Tollast

Iran launched up to 12 missiles targeting a US consulate complex under construction in Erbil on Sunday in an attack described by Iraqi president as a "terror" act. Iraq President, Barham Salih, said the missile attack at Erbil in northern Iraq early on Sunday represented a "terror" act designed to sabotage the country's political process in forming a new government, the state news agency said.

### **33. Oil concerns give Iran the upper hand in nuclear talks: Lawmakers**

Al Jazeera, 13 Mar 22, Maziar Motamedi

Iran should use the opportunity provided by instability in the global energy markets and push its demands in nuclear talks in Vienna, a majority of Iranian lawmakers have suggested. They also called for "economic, technical and political" guarantees that the United States will not renege on the country's 2015 nuclear deal with world powers again as it did in 2018, and said American sanctions must be lifted effectively and comprehensively.

### **34. Iran 'temporarily suspends' direct talks with Saudi Arabia**

Al Jazeera, 13 Mar 22, Maziar Motamedi

Iran has "temporarily suspended" direct talks with Saudi Arabia, according to an outlet linked with the country's top security body.

---

## IRAQ

---

### **35. Al-Sadr: Claims about Israeli sites should not undermine Iraq's security**

Shafaq News, 13 Mar 22

The leader of the Sadrist movement, Muqtada al-Sadr, called for sending a "protest note" to the United Nations and the Iranian ambassador to Baghdad following the missile attack waged by Iran's Islamic Revolutionary Guard Corps (IRGC) on the capital of the Kurdistan region, Erbil, in the early hours of Sunday.

### **36. Shiite rivals to name a "consensus candidate" for premiership within 72 hours, MP says**

Shafaq News, 13 Mar 22

A joint committee from the Coordination Framework and the Sadrist movement will select a prime minister-designate from a shortlist of three "consensus candidates" in the next few 72 hours, MP of the former revealed on Sunday.

---

## SYRIA

---

### **37. Russian military patrols Syria's Golan Heights**

Asharq Al-Awsat, 13 Mar 22

Russia media published a video of Russian military units patrolling the Syrian side of the Golan Heights, occupied by Israel since 1967. The video showed soldiers and vehicles separating the Syrian and Israeli armies and observation points on hills and high areas in the region. Some of the soldiers were seen wearing combat fatigue bearing the letter "Z," the symbol of the military campaign in Ukraine.

## AFGHANISTAN

---

### **38. 15,000 pieces of former government military equipment collected**

TOLOnews, 13 Mar 22

The Ministry of Defense (MoD) said more than 15,000 pieces of weaponry and equipment, including vehicles, belonging to the former government were collected from the eastern provinces of the country.

### **39. US diplomat asks IEA to change policy on women if it wants recognition**

Ariana News, 13 Mar 22

A senior US diplomat has called on the Islamic Emirate of Afghanistan (IEA) to change its policy on women if it wants to be recognized by the international community as a legitimate government.

### **40. Efforts on to improve government inclusivity, says Muttaqi**

Pajhwok News13 Mar 2022

Serious efforts are ongoing to make the interim government more inclusive, says Foreign Minister Amir Khan Muttaqi.

---

## PAKISTAN

---

### **41. Third wheat shipment off to Afghanistan**

DAWN, 13 Mar 22, Khalid Hasnain

A convoy of 40 trucks returned to Afghanistan after collecting a consignment of 2,200 tons wheat from India via the Wagah border. India had earlier announced to give 50,000 tons of wheat to Afghanistan on humanitarian grounds.

### **42. State's responsibility to stop horse-trading, says PM Imran**

Pakistan Express Tribune, 13 Mar 22

Prime Minister Imran Khan on Sunday said it was the responsibility of the state and judiciary to stop the "corrupt" and "convicted" politicians who were trying to "topple the state" through horse-trading.

---

## YEMEN

---

### **43. These Yemeni women went from marginalized to the forefront**

Jerusalem Post, 13 Mar 22, Mohammed Al-Hassani

With Yemen's civil war deep into its seventh year and no end in sight, women and children continue to be its principal victims. Women are still searching to establish their own identities and seeking to break the restrictions imposed on them by current conditions as well as by Yemeni customs and traditions.

---

EGYPT

---

### **44. Egypt to receive 189,000 tons of wheat from Russia, Ukraine, and Romania within coming days**

Ahram Online, 13 Mar 22, Mai Ghandour

Egypt is set to receive a total amount of 189,000 tons of wheat from Russia, Ukraine and Romania in the coming days, a statement by the Ministry of Supply and Internal Trade said on Sunday.

---

ANALYSIS/COMMENTARY

---

### **45. Did Russia empower Iran's attack on Erbil?**

Jerusalem Post, 13 Mar 22, Seth J. Frantzman

Iran's attack on Erbil using a dozen large ballistic missiles is a major escalation of affairs in the region. The missiles targeted key areas, including a new US consulate currently being built, in a message to the US: Iran can do a lot more damage. Had Iran wanted to, it could have aimed more at the airport runways or targeted civilian areas more heavily. Beyond just wreaking havoc or proving the extent to which it can do so, Iran showed the US the potential it has. And it all may be linked to a collapse of the Iran talks.

### **46. Ukraine crisis and Pakistan**

DAWN, 13 Mar 22, Riaz Mohammad Khan

The Russian invasion of Ukraine is a point of inflection in world affairs, similar to the US outreach to China in the early 1970s and the collapse of the Soviet Union in 1991. The situation is unfolding. There are many imponderables including how it will impact Russia itself. Its consequential character is obvious but the direction is not clear. Pakistan should be concerned about what the development portends for the future.

### **47. Iran is attacking US facilities in Kurdish region in message to America**

Jerusalem Post, 13 Mar 22, Seth J. Frantzman

A large attack was carried out on Erbil, Iraq, overnight between Saturday and Sunday, with the Kurdistan Regional Government counter-terrorism units reporting that the 12 missiles were launched at 1:30 a.m. The missiles struck near a large new US consulate currently being built in Erbil. The consulate is not in the center of the city and it is clear that coordinates for the

consulate would have to be put into precision strikes of ballistic-style missiles. This is a tactic Iran has deployed before.

## **7. Afghan aviators hide as Taliban urge them to return to duty**

New York Times, 13 Mar 22, David Zucchino and Yaqoob Akbary

Last year, the three Afghan aviators served in the elite Special Mission Wing of the Afghan Air Force. Trained by Americans to fight the Taliban from the air, they were some of the Afghan military's most elite troops. Now they are on the run, hunted by the Taliban while moving their families from one safe house to the next. When the Taliban recently invited former air force members to join the new government's fledgling air force, promising them amnesty, they never considered it.

### **15. Bipartisan lawmakers ramp up calls on Biden to give Ukraine weapons, fighter jets**

Washington Post, 13 Mar 22, Amy B. Wang

A growing number of U.S. lawmakers ratcheted up pressure on President Biden on Sunday to increase military aid to Ukraine, including sending fighter jets and air defense systems that the administration rejected last week.

## **16. Russia turns to Syria playbook with shifting claims over grounds for war**

Financial Times (UK), 13 Mar 22, Max Seddon in Riga and Erika Solomon

As Russia began to build a pretext for war with Ukraine in February, it accused Kyiv of firing into Russian soil and blowing up a remote border checkpoint — albeit with no reported casualties. Now, as its forces lay siege to Ukrainian cities with increasing brutality, Moscow has justified its invasion by citing fears that Ukraine was restarting its nuclear weapons program. Russia also claimed to have found documents showing Ukraine had developed chemical and biological weapons under the orders of “curators from the Pentagon”.

## **17. More Ukraine-Russia talks scheduled as attack on base kills dozens**

Reuters, 14 Mar 22, Pavel Polityuk and Natalia Zinets

Diplomatic efforts to end the war in Ukraine were stepping up on Monday, with Ukrainian and Russian negotiators set to talk again after both sides cited progress, even after Russia attacked a base near the Polish border and fighting raged elsewhere.

## **18. Zelensky says Russian missiles will strike NATO without no-fly zone over Ukraine**

Washington Examiner, 13 Mar 22, Daniel Chaitin

Ukrainian President Volodymyr Zelensky warned Russia is on the verge of attacking NATO territory after a deadly Russian missile strike on a Ukrainian training center roughly 10 miles from the border with Poland.

## **19. US Official: war widening to the west of Ukraine was anticipated**

Voice of America, 13 Mar 22, Steve Herman

U.S. officials say Russia’s lethal shelling in the western part of Ukraine on Sunday, close to the border with Poland, is something that they had anticipated. At least 35 people died and 134 were wounded early Sunday when Russia fired cruise missiles at the International Center for Peacekeeping and Security, a military base in western Ukraine.

## **20. Russia ‘using banned white phosphorus bombs’ in attack on Ukrainian city**

The Times (UK), 13 Mar 22, Henry Zeffman

President Putin wants to turn Ukrainian cities into “Aleppos”, a Ukrainian official has said, claiming that Russia used white phosphorus in bombing attacks. Markiyan Lubkivsky, from the Ukrainian Ministry of Defense, warned that Putin was replicating Russian tactics from Syria and spoke of “more terrible attacks” on Ukraine.

## **21. Biden's CIA head leads the charge against Putin's information war**

The Hill, 13 Mar 22, Morgan Chalfant and Rebecca Beitsch

As Russia began amassing troops on Ukraine’s border late last year, CIA Director William Burns was ready. A career ambassador, Burns spent two tours at the U.S. Embassy in Moscow and is one of the Biden administration’s foremost experts on Russia and its president, Vladimir Putin.

## **22. India unsure of Russian arms to meet China, Pakistan threats**

Associated Press, 14 Mar 22, Ashok Sharma

India is exploring ways to avoid a major disruption in its supply of Russian-made weaponry amid U.S. sanctions following Moscow's invasion of Ukraine, and Prime Minister Narendra Modi's tightrope walk could become more difficult due to a continuing border standoff with China.

## **23. War censorship exposes Putin's leaky internet controls**

Associated Press, 13 Mar 22, Frank Bajak and Barbara Ortutay

Long before waging war on Ukraine, President Vladimir Putin was working to make Russia's internet a powerful tool of surveillance and social control akin to China's so-called Great Firewall. So when Western tech companies began cutting ties with Russia following its invasion, Russian investigative journalist Andrei Soldatov was alarmed. He'd spent years exposing Russian censorship and feared that well-intentioned efforts to aid Ukraine would instead help Putin isolate Russians from the free flow of information, aiding the Kremlin's propaganda war.

## **24. Russia-Ukraine War threatens wheat supply, jolts prices**

Wall Street Journal, 13 Mar 22, Ryan Dezember

Russia's invasion of Ukraine threatens a big portion of the world's wheat supply and has sent prices on a dizzying ride to new highs as well as the sharpest weekly drop in years.

## **25. Iran missile attack on Erbil goes beyond retaliation for IRGC deaths**

Al-Monitor, 13 Mar 22, Amberin Zaman

Iran's brazen ballistic missile attack on Erbil in the early hours of Sunday is a further chilling reminder of the continued vulnerability of Iraq's Kurdistan Region, seen as easy prey by its large and aggressive neighbors, Turkey and Iran.

## **26. Iran sends its missile regards**

Wall Street Journal, 13 Mar 22, Editorial Board

The Biden Administration's hell-bent pursuit of a new nuclear deal with Iran grows harder to understand with each provocation from Tehran. The latest came Sunday in a missile attack near a U.S. consulate under construction in northern Iraq.

## **27. How does it End? A way out of the Ukraine War proves elusive.**

New York Times, 13 Mar 22, David E. Sanger and Eric Schmitt

The United States accurately predicted the start of the war in Ukraine, sounding the alarm that an invasion was imminent despite Moscow's denials and Europe's skepticism. Predicting how it might end is proving far more difficult.

### **28. China wanted to appear neutral between Russia and Ukraine. It isn't**

Los Angeles Times, 13 Mar 22, Doyle McManus

When Russia invaded Ukraine last month, a spate of wishful thinking ran through the West that China, a great power with friends on both sides, might step in to mediate a cease-fire. China's government struck a pose of neutrality, called for a peaceful resolution and said it supported the principle of "territorial integrity." Ukrainian President Volodymyr Zelensky made a public plea to China's Xi Jinping to intervene. But Xi has been missing in action — and in practice, his policies have been far less neutral than advertised.

### **29. Is it time to call Putin's War in Ukraine genocide?**

New Yorker, 13 Mar 22, Philip Gourevitch

"We have to call this what it is," Volodymyr Zelensky said, late last month, a few days after Vladimir Putin had ordered the invasion and conquest of Ukraine. "Russia's criminal actions against Ukraine show signs of genocide." President Zelensky, who lost family members during the Holocaust, and who also happens to have a law degree, sounded suitably cautious about invoking genocide, and he called for the International Criminal Court in The Hague to send war-crimes investigators as a first step.

### **30. The West must decide how far is too far with Russia**

The Hill, 13 Mar 22, Joshua C. Huminski

Russia's ultimate aims in Ukraine remain unclear. Now two weeks into the invasion, Moscow's initial attempts at a lightning assault appear stymied, and as a consequence, the Kremlin is increasing the intensity and brutality of its campaign. Thus far, however, Russia's so-called "special military operation" has remained limited to Ukraine. There is, however, a risk that this does not remain the case, and should the conflict expand the consequences could be dire for Europe and indeed the world.

### **31. Why doesn't the Arab world break with Putin? Consider Sudan's example**

Salon.com, 13 Mar 22, Mohammad Ali Salih

There is considerable current discussion about whether the decades-long push of NATO's expansion eastward, encouraged by the United States, is to be blamed for the Russian invasion of Ukraine, as famous "realist" John Mearsheimer, of the University of Chicago, has argued. That discussion should also include whether the U.S. is to blame for the refusal, or at least the hesitancy, of some Arab countries to condemn the Russian invasion, which reflects widespread Arab resentment of U.S. policy over the last several decades.

### **45. Did Russia empower Iran's attack on Erbil?**

Jerusalem Post, 13 Mar 22, Seth J. Frantzman

Iran's attack on Erbil using a dozen large ballistic missiles is a major escalation of affairs in the region. The missiles targeted key areas, including a new US consulate currently being built, in a message to the US: Iran can do a lot more damage. Had Iran wanted to, it could have aimed more at the airport runways or targeted civilian areas more heavily. Beyond just wreaking havoc or proving the extent to which it can do so, Iran showed the US the potential it has. And it all may be linked to a collapse of the Iran talks.

### **46. Ukraine crisis and Pakistan**

DAWN, 13 Mar 22, Riaz Mohammad Khan

The Russian invasion of Ukraine is a point of inflection in world affairs, similar to the US outreach to China in the early 1970s and the collapse of the Soviet Union in 1991. The situation is unfolding. There are many imponderables including how it will impact Russia itself. Its consequential character is obvious but the direction is not clear. Pakistan should be concerned about what the development portends for the future.

### **47. Iran is attacking US facilities in Kurdish region in message to America**

Jerusalem Post, 13 Mar 22, Seth J. Frantzman

A large attack was carried out on Erbil, Iraq, overnight between Saturday and Sunday, with the Kurdistan Regional Government counter-terrorism units reporting that the 12 missiles were launched at 1:30 a.m. The missiles struck near a large new US consulate currently being built in Erbil. The consulate is not in the center of the city and it is clear that coordinates for the

consulate would have to be put into precision strikes of ballistic-style missiles. This is a tactic Iran has deployed before.

#### **1. U.S. working to help Iraq get missile defense capabilities - Sullivan**

Reuters, 13 Mar 22, Andrea Shalal

U.S. National Security Adviser Jake Sullivan on Sunday condemned Iran's ballistic missile attack on Iraq's northern Kurdish regional capital of Erbil, and said Washington was working to help Iraq get missile defense capabilities to defend itself.

Sullivan told CBS's "Face the Nation" program that no U.S. citizens were harmed in the attack, and no U.S. facilities were hit, but the United States would do whatever it takes to defend its people, interests and allies.

"We are in consultation with the Iraqi government and the government in Iraqi Kurdistan, in part to help them get the missile defense capabilities to be able to defend themselves in their cities," Sullivan said.

Iran's Revolutionary Guards claimed responsibility for a dozen ballistic missiles that struck Iraq's northern Kurdish regional capital of Erbil in the early hours of Sunday, Iran's state media reported.

The missiles targeted the U.S. consulate among other sites, according to the Kurdish regional government.

Sullivan, in a subsequent statement released by the White House, said the United States backs Baghdad and governments across the region in the face of threats from Tehran.

"We will support the Government of Iraq in holding Iran accountable, and we will support our partners throughout the Middle East in confronting similar threats from Iran," he said.

Asked about the impact on negotiations over a nuclear agreement with Iran that are already at an impasse, Sullivan said: "The various negotiators are back home in their capitals and we will have to see what happens in the days ahead with respect to the diplomacy around the nuclear deal."

He said President Joe Biden remained strongly committed to stopping Iran from acquiring nuclear weapons.

"One thing I will say is that the only thing more dangerous than Iran armed with ballistic missiles and advanced military capabilities is an Iran that has all of those things and a nuclear weapon," he said.

U.S. forces stationed at the Erbil International Airport complex had previously come under fire from rocket and drone attacks Washington blames on Iran-aligned militia groups, but no such attacks have occurred for several months.

The Defense Department referred all queries about Sullivan's comments on missile defense capabilities to the State Department, which oversees security assistance agreements with other countries.

The State Department had no immediate comment on any new security assistance packages for Iraq.

## **2. U.S. won't negotiate Ukraine-related sanctions with Russia to save Iran nuclear deal** Wall Street Journal, 13 Mar 22, Laurence Norman and Dion Nissenbaum

The U.S. won't negotiate exemptions to Ukraine-related sanctions on Russia to save the 2015 Iran nuclear deal and could try to strike a separate accord excluding Moscow, a senior U.S. official said, a diplomatic effort complicated by an Iranian missile attack on Iraq that sent American troops rushing for shelter.

With one of President Biden's top foreign-policy goals imperiled, the U.S. official said Washington would start exploring alternatives to the deal over the next week if Russia didn't back away from its demands for written guarantees exempting Russia from Ukraine-related sanctions that could curtail its future trade with Iran. Such guarantees could undercut the West's punishing array of sanctions leveled at Russia over the Ukraine invasion.

"I don't see the scope for going beyond what is within the confines of the JCPOA," the U.S. official said, referring to the 2015 nuclear deal formally known as the Joint Comprehensive Plan of Action. "I think it's pretty safe to say that there is no room for making exemptions beyond those."

Meanwhile, Iran's top paramilitary force took responsibility for a missile attack early Sunday on what it claimed were Israeli targets. It said the strike was in response to recent Israeli actions in the region, which included an airstrike last week in Syria that killed two of the group's commanders.

The Iranian attack is likely to create more regional resistance to American efforts to strike a new nuclear containment deal with Iran. The U.S. effort to resurrect the deal with Iran, which then-President Donald Trump withdrew from in 2018, has drawn criticism from Israeli and Persian Gulf leaders who worry that it will allow Tehran to continue to arm allies across the region and carry out its own missile strikes with impunity.

American, Iraqi and other world leaders condemned Sunday's missile strike as a destabilizing act, as the Israeli military stepped up its defenses and U.S. officials considered how to respond. The French foreign ministry warned that the strike could imperil talks over the nuclear deal.

U.S. Deputy Secretary of State Wendy Sherman said U.S. officials are still seeking an agreement to curb Iran's nuclear program despite the Iranian missile strike in Iraq.

"If Iran has a nuclear weapon, its ability to project power into the Middle East and to deter us, our allies, and partners, is enormous," Ms. Sherman said on Fox News Sunday. "So President Biden believes very strongly, as does Secretary Blinken, as do I, that we need to make sure that Iran never obtains a nuclear weapon, and then we also need to deal with their malign behavior in the region."

Time is pressing. U.S. and European officials say that Iran's nuclear work has expanded close to a point that the deal's main benefit to the West—keeping Iran months away from amassing enough nuclear fuel for a nuclear weapon—would be impossible. Iran is currently just a few weeks from that so-called breakout point.

The senior U.S. official said an agreement between Iran and the U.S. was "within reach," saying only a few issues were holding up a deal when talks in Vienna were broken off Friday because of Russia's demand. The official called Russia's demands "the most serious stumbling block and obstacle to reaching a deal."

There was no comment from Iran or Russia.

European officials say Russia had promised to respond with its precise demands for guarantees in the next few days. They have also started to explore among themselves options for pursuing a deal without Russia, two diplomats said.

"We would know within a week whether or not Russia is prepared to back down," the U.S. official said.

Earlier this month, as Western diplomats were seeking to wrap up the talks, Russia requested guarantees that its work under the JCPOA would be exempted from Western sanctions over Ukraine. The U.S. had given sanctions waivers for the 2015 deal.

However, after Russian Foreign Minister Sergei Lavrov told reporters Moscow wanted much broader guarantees, its chief negotiator in Vienna, Mikhail Ulyanov, presented a second paper to European negotiators on Tuesday seeking to protect all future trade and investment against Ukraine-related sanctions.

It couldn't be determined whether Iran would be willing to negotiate an alternative deal without Russia, or whether China—which has grown closer to Russia—would participate.

Mr. Ulyanov on Friday said his country's demands weren't the only reason an agreement on reviving the nuclear deal hadn't been reached. Since negotiations hadn't concluded, it was his country's right to raise its concerns, he said.

The U.S. push to salvage the deal also comes as the Biden administration is on the hunt for new oil supplies during the war in Ukraine, as it seeks to contain surging energy prices. Iran could supply up to a million barrels a day of new crude supplies eventually if sanctions are lifted.

One option for the U.S. and its partners would be to create an interim deal that could freeze some of Iran's activities and wind back aspects of its nuclear program in return for some level of sanctions relief from the U.S. Iran has always rejected the idea of an interim deal.

Another option would be to create what the senior U.S. official called a "replica of the JCPOA," without Russia, which would assign Moscow's tasks in the agreement elsewhere.

"I do think we would be open to various alternatives. We are beginning to think about what those might be," the official said. "We...at this point wouldn't rule anything out."

Further complicating any attempt to re-craft a deal with Iran: Tehran has refused to let its negotiators talk directly to the U.S. until Washington lifts its sanctions.

Any new deal would also trigger U.S. legislation giving Congress time for an in-depth review of the accord.

The negotiations in Vienna, which have dragged on for close to a year, aim to agree on the steps the U.S. and Iran would take to return into compliance with the nuclear deal. If Russia's demands can be resolved, negotiators have said they could be back in Vienna within a few days to finish the talks.

Iran has avoided calling out Russia and has continued to blame the failure to complete the talks on Washington. However there have been hints of irritation from Iranian officials, who have said they wouldn't let external factors get in the way of their interests.

The senior U.S. official declined to say whether an agreement would have been concluded by now without the Russian intervention. Among the issues still on the table is whether Iran's Revolutionary Guards would have their Foreign Terrorist Organizations listing removed and what any conditions might be around that, Western diplomats say.

Sunday's missile attack, which the Revolutionary Guards claimed, could make any immediate attempt to remove them from the FTO listing more politically explosive.

The missile strikes injured at least two people, blasted holes in nearby homes, and sent U.S. forces rushing for cover at the American military base in Erbil. At least one missile hit within about a mile of a new U.S. consulate under construction. Erbil is the capital of the semiautonomous Kurdish region in Iraq.

National security adviser Jake Sullivan said in a statement that the U.S. "condemns in the strongest terms Iran's missile attack on the Kurdistan Region of Iraq. This attack targeted a civilian residence in Erbil, the Kurdistan Region's capital city, without any justification." He added that the U.S. would stand with other allies in the Middle East "in confronting similar threats from Iran."

Iran claimed that it was targeting Israelis in the strike. Israel has strong relations with the Kurdish region, but Israeli officials declined to comment on reports that Sunday's strike was aimed at Israeli spies working in northern Iraq.

Israel has been carrying out airstrikes against Iranian-backed militias and Iranian personnel in Syria as it seeks to prevent Iran from transferring weapons to Hezbollah, the Lebanese militia group. The campaign includes placing mines on ships carrying oil and other goods that are bound for Syria.

The Iranians, in turn, have often sought to pressure the U.S. to constrain its Israeli ally.

In October, Iran directed five drones at the al-Tanf garrison in southern Syria, which is defended by a small contingent of U.S. forces and American-trained Syrian fighters. The Iranians said in a confidential message to the U.S. at that time that the attack was in response to an Israeli airstrike that killed two Iranian officers in Syria, U.S. officials said.

In January, the massive U.S. Embassy complex in Baghdad was struck by four rocket attacks that injured at least two individuals but no U.S. personnel were hurt. That attack originated from inside Baghdad and was believed to have been carried out by an Iranian-backed militia group.

### **3. Russia asked China for military and economic aid for Ukraine War, U.S. officials say** New York Times, 13 Mar 22, Edward Wong and Julian E. Barnes

Russia asked China to give it military equipment and support for the war in Ukraine after President Vladimir V. Putin began a full-scale invasion last month, according to U.S. officials.

Russia has also asked China for additional economic assistance, to help counteract the battering its economy has taken from broad sanctions imposed by the United States and European and Asian nations, according to an official.

American officials, determined to keep secret their means of collecting the intelligence on Russia's requests, declined to describe further the kind of military weapons or aid that Moscow is seeking. The officials also declined to discuss any reaction by China to the requests.

President Xi Jinping of China has strengthened a partnership with Mr. Putin and has stood by him as Russia has stepped up its military campaign in Ukraine, destroying cities and killing hundreds or thousands of civilians. American officials are watching China closely to see whether it will act on any requests of aid from Russia. Jake Sullivan, the White House national security adviser, is scheduled to meet on Monday in Rome with Yang Jiechi, a member of the Chinese Communist Party's elite Politburo and director of the party's Central Foreign Affairs Commission.

Mr. Sullivan intends to warn Mr. Yang about any future Chinese efforts to bolster Russia in its war or undercut Ukraine, the United States and their partners.

"We are communicating directly, privately to Beijing that there will absolutely be consequences for large-scale sanctions evasion efforts or support to Russia to backfill them," Mr. Sullivan said on CNN on Sunday.

“We will not allow that to go forward and allow there to be a lifeline to Russia from these economic sanctions from any country, anywhere in the world,” he said.

Mr. Sullivan did not make any explicit mention of potential military support from China, but other U.S. officials spoke about the request from Russia on the condition of anonymity because of the sensitivity of diplomatic and intelligence matters.

Liu Pengyu, a spokesman for the Chinese Embassy in Washington, said he had never heard of the request from Russia. “The current situation in Ukraine is indeed disconcerting,” he said, adding that Beijing wants to see a peaceful settlement. “The high priority now is to prevent the tense situation from escalating or even getting out of control.”

The Biden administration is seeking to lay out for China the consequences of its alignment with Russia and penalties it will incur if it continues or increases its support. Some U.S. officials argue it might be possible to dissuade Beijing from ramping up its assistance to Moscow. Chinese leaders may be content to offer rhetorical support for Moscow and may not want to further enmesh themselves with Mr. Putin by providing military support for the war, those U.S. officials say.

Mr. Sullivan said China “was aware before the invasion took place that Vladimir Putin was planning something,” but added that the Chinese might not have known the full extent of the Russian leader’s plans. “It’s very possible that Putin lied to them, the same way he lied to Europeans and others,” he said.

Mr. Xi has met with Mr. Putin 38 times as national leaders, more than with any other head of state, and the two share a drive to weaken American power.

Traditionally, China has bought military equipment from Russia rather than the other way around. Russia has increased its sales of weaponry to China in recent years. But China has advanced missile and drone capabilities that Russia could use in its Ukraine campaign.

Although Russia on Sunday launched a missile barrage on a military training ground in western Ukraine that killed at least 35 people, there has been some evidence that Russian missile supplies have been running low, according to independent analysts.

Last week, the White House criticized China for helping spread Kremlin disinformation about the United States and Ukraine. In recent days, Chinese diplomats, state media organizations and government agencies have used a range of platforms and official social media accounts to amplify a conspiracy theory that says the Pentagon has been financing biological and chemical weapons labs in Ukraine. Right-wing political figures in the United States have also promoted the theory.

On Friday, Russia called a United Nations Security Council meeting to present its claims about the labs, and the Chinese ambassador to the U.N., Zhang Jun, supported his Russian counterpart.

“Now that Russia has made these false claims, and China has seemingly endorsed this propaganda, we should all be on the lookout for Russia to possibly use chemical or biological

weapons in Ukraine, or to create a false flag operation using them,” Jen Psaki, the White House press secretary, wrote on Twitter last Wednesday.

China is also involved in the Iran nuclear negotiations, which have stalled because of new demands from Russia on relief from the sanctions imposed by Western nations in response to the Ukraine war.

American officials are trying to determine to what degree China would support Russia’s position in those talks. Before Russia raised the requests, officials from the nations involved had been close to clinching a return to a version of the Obama-era nuclear limits agreement from which President Donald J. Trump withdrew. Mr. Sullivan might bring up Iran with Mr. Yang on Monday.

Current and former U.S. officials say the Rome meeting is important, given the lives at stake in the Ukraine war and the possibility of Russia and China presenting a geopolitical united front against the United States and its allies in the years ahead.

“This meeting is critical and possibly a defining moment in the relationship,” said Evan Medeiros, a Georgetown University professor who was a senior Asia director on the National Security Council during the Obama administration.

“I think what the U.S. is probably going to do is lay out the costs and consequences of China’s complicity and possible enabling of Russia’s invasion,” he said. “I don’t think anyone in the administration has illusions that the U.S. can pull China away from Russia.”

Some U.S. officials are looking for ways to compel Mr. Xi to distance himself from Mr. Putin on the war. Others see Mr. Xi as a lost cause and prefer to treat China and Russia as committed partners, hoping that might galvanize policies and coordination among Asian and European allies to contain them both.

Chinese officials have consistently voiced sympathy for Russia during the Ukraine war by reiterating Mr. Putin’s criticism of NATO and blaming the United States for starting the conflict. They have refrained from any mention of a Russian “war” or “invasion,” even as they express general concern for the humanitarian crisis.

They mention support for “sovereignty and territorial integrity,” a common catchphrase in Chinese diplomacy, but do not say explicitly which nation’s sovereignty they support — meaning the phrase could be interpreted as backing for Ukraine or an endorsement of Mr. Putin’s claims to restoring the territory of imperial Russia.

China and Russia issued a 5,000-word statement on Feb. 4 saying their partnership had “no limits” when Mr. Putin met with Mr. Xi before the opening ceremony of the Winter Olympics in Beijing. Around that time, senior Chinese officials asked senior Russian officials not to invade Ukraine before the end of the Games, according to U.S. and European officials who cite a Western intelligence report.

Starting last November, American officials quietly held talks with Chinese officials, including the ambassador in Washington and the foreign minister, to discuss intelligence showing Mr. Putin's troop buildup to persuade the Chinese to tell the Russians not to launch a war, U.S. officials said. The Chinese officials rebuffed the Americans at every meeting and expressed skepticism that Mr. Putin intended to invade Ukraine, the U.S. officials said.

William J. Burns, the C.I.A. director, said on Thursday in a Senate hearing that he believed Mr. Xi was "unsettled" by the Ukraine war.

Last Tuesday, Mr. Xi repeated China's standard talking points on the war in a video call with the leaders of France and Germany. He also said that all nations should show "maximum restraint" and that China was "deeply grieved by the outbreak of war again on the European continent," according to a Chinese readout. He did not say Russia had started the fighting.

U.S. and European officials say large Chinese companies will most likely refrain from openly violating sanctions on Russia for fear of jeopardizing their global commerce. On Thursday, some Russian news articles and commentary questioned China's commitment to Russia after news agencies reported that China was refusing to send aircraft parts to the country.

Russia, as U.S. officials often remind the public, has relatively few friends or allies. And officials have said Russia's outreach to its partners is a sign of the difficulties it is encountering in trying to subdue Ukraine.

As the United States and Europe have increased pressure and sanctions, Moscow has sought more aid.

In the buildup to war, Russia got assistance from Belarus, using its territory to launch part of the invasion. Minsk has also tried to help Moscow evade sanctions. Those actions prompted the European Union to impose sanctions on Belarus. The penalties limit money flowing into Belarus from Europe and block some Belarusian banks from using the SWIFT financial messaging system.

Michael Carpenter, the U.S. ambassador to the Organization for Security and Cooperation in Europe, accused Belarus of being a "co-aggressor" and having "stabbed your neighbor in the back," referring to Ukraine.

President Aleksandr G. Lukashenko of Belarus has said his military will not join in the war. But Russia has launched missiles from Belarus and evacuated some injured Russian soldiers to hospitals in that country.

President Bashar al-Assad of Syria, who owes his government's survival to Russian intervention in the Syrian civil war, also declared support for Moscow's invasion. Russia has tried to recruit Syrian fighters to join the Ukraine war, according to the Pentagon.

While there are no details of how many recruits Moscow has enlisted or if they have arrived in Ukraine, American officials said Russia's efforts were an indicator of the strategic and tactical problems that have plagued its commanders.

Before the start of the war, European officials said, Russian military contractors with experience fighting in Syria and Libya secretly entered eastern Ukraine to help lay the groundwork for the invasion.

### **4. Iran attacks Iraq's Erbil with missiles in warning to U.S., allies**

Reuters, 13 Mar 22, Amina Ismail and John Davison

Iran attacked Iraq's northern city of Erbil on Sunday with a dozen ballistic missiles in an unprecedented assault on the capital of the autonomous Iraqi Kurdish region that appeared to target the United States and its allies.

The missiles came down in areas near a new U.S. consulate building, according to Kurdish officials. U.S. officials said no Americans were hurt and nor were U.S. facilities hit. Kurdish authorities said only one civilian was hurt and no one killed.

Iranian state media said Iran's Revolutionary Guards Corps carried out the attack against Israeli "strategic centers" in Erbil, suggesting it was revenge for recent Israeli air strikes that killed Iranian military personnel in Syria.

The attack, in which huge blasts shook windows of homes in Erbil after midnight, was a rare publicly declared assault by Tehran against allies of Washington.

The last time Iran fired missiles directly at U.S. facilities was when it struck the Ain Al Asad air base in western Iraq in January 2020 - a retaliation for the U.S. killing of Iranian commander Qassem Soleimani.

Sunday's attack comes as talks to revive the 2015 Iran nuclear deal face the prospect of collapse after a last-minute Russian demand forced world powers to pause negotiations for an undetermined time despite having a largely completed text.

It also comes days after Israel carried out an air raid in Syria which the IRGC said killed two of its members and for which it vowed retaliation.

#### **'Response to Israel'**

The IRGC issued a statement about Sunday's attack which was reported by Iranian state media.

"Any repetition of attacks by Israel will be met with a harsh, decisive and destructive response," it said.

The Iraqi Kurdish regional government said the attack only targeted civilian residential areas, not sites belonging to foreign countries, and called on the international community to carry out an investigation.

million of other property. The same year the National Crime Agency lost a legal battle to freeze three properties linked to the pair, who were represented by the law firm Mishcon de Reya.

### **13. US officials say Russia has asked China for military help in Ukraine**

Financial Times (UK), 13 Mar 22, Demetri Sevastopulo

Russia has asked China for military equipment to support its invasion of Ukraine, according to US officials, sparking concern in the White House that Beijing may undermine western efforts to help Ukrainian forces defend their country.

US officials told the Financial Times that Russia had requested military equipment and other assistance since the start of the invasion. They declined to give details of what Russia had requested.

Another person familiar with the situation said the US was preparing to warn its allies, amid some indications that China may be preparing to help Russia. Other US officials have said there were signs that Russia was running out of some kinds of weaponry as the war in Ukraine extends into its third week.

The White House did not comment.

Liu Pengyu, the Chinese embassy spokesperson in Washington, said he was unaware of any suggestions that China might be willing to help Russia.

“China is deeply concerned and grieved on the Ukraine situation,” Liu said. “We sincerely hope that the situation will ease and peace will return at an early date.”

The revelation comes as Jake Sullivan, US national security adviser, heads to Rome for talks on Monday with Yang Jiechi, China’s top foreign policy official.

Before leaving Washington on Sunday, Sullivan warned China not to try to “bail out” Russia by helping Moscow to circumvent the sanctions that the US and its allies have imposed on President Vladimir Putin and his regime.

“We will ensure that neither China, nor anyone else, can compensate Russia for these losses,” Sullivan told NBC television on Sunday. “In terms of the specific means of doing that, again, I’m not going to lay all of that out in public, but we will communicate that privately to China, as we have already done and will continue to do.”

The request for equipment and other kinds of unspecified military assistance was made as the Russian military struggles to make as much progress in Ukraine as western intelligence believe they expected.

It also raises fresh questions over the China-Russia relationship, which has grown stronger as both countries express their opposition to the US over everything from Nato to sanctions.

China has portrayed itself as a neutral actor in the Ukraine crisis and has refused to condemn Russia for invading the country. The US has also seen no sign that President Xi Jinping is willing to put any pressure on Putin.

The two leaders signed a joint statement in Beijing last month describing the Beijing-Moscow partnership as having “no limits”, in another sign that the two capitals were drawing even closer together.

Chris Johnson, a former top CIA China analyst, said the Russian request underscored that Russia-China ties were the closest they had been since before the Sino-Soviet split in the 1960s.

“But it also highlights China’s position as the clear senior partner in the relationship now,” said Johnson, who heads the political risk firm China Strategies Group.

“Moreover, if they even are considering providing assistance, that speaks volumes about the personalized nature of the relationship amidst Chinese fears that Putin could fall, unleashing chaos on their northern border unseen since the collapse of the Soviet Union.”

Separately, the White House said President Joe Biden spoke with Emmanuel Macron, the French president, about the war on Sunday.

“They . . . underscored their commitment to hold Russia accountable for its actions and to support the government and people of Ukraine,” the White House said.

#### **14. US, China officials to meet as tensions mount over Russia**

Associated Press, 13 Mar 22, Amer Madhani and Josh Boak

White House national security adviser Jake Sullivan speaks during a press briefing at the White House, Feb. 11, 2022, in Washington. President Biden is sending Sullivan for talks with a senior Chinese official in Rome on Monday, March 14, 2022. The meeting comes as concerns grow that China is amplifying Russian disinformation in the Ukraine war.

The U.S. and China are sending top aides to meet in Rome on Monday amid mounting tensions between the two countries over the Russia-Ukraine war and as a U.S. official reports that Russia in recent days has asked China for military equipment to help press its campaign.

In advance of the talks, White House national security adviser Jake Sullivan bluntly warned China to avoid helping Russia evade punishment from global sanctions that have hammered the Russian economy. “We will not allow that to go forward,” he said.

U.S. officials are also accusing China of spreading Russian disinformation that could be a pretext for chemical or biological weapons attacks launched by Vladimir Putin's forces in Ukraine.

Russia's invasion of Ukraine has put China in a delicate spot with two of its biggest trading partners: the U.S. and European Union. China needs access to those markets, yet it also has made gestures supportive of Moscow, joining with Russia in declaring a friendship with "no limits."

In his talks with senior Chinese foreign policy adviser Yang Jiechi, Sullivan will indeed be looking for limits in what Beijing will do for Moscow.

"I'm not going to sit here publicly and brandish threats," he told CNN in a round of Sunday news show interviews. "But what I will tell you is we are communicating directly and privately to Beijing that there absolutely will be consequences" if China helps Russia "backfill" its losses from the sanctions.

"We will not allow that to go forward and allow there to be a lifeline to Russia from these economic sanctions from any country anywhere in the world," he said.

A U.S. official, speaking on condition of anonymity to discuss sensitive matters, said that in recent days, Russia had requested support from China, including military equipment, to press forward in its ongoing war with Ukraine. The official did not provide details on the scope of the request. The request was first reported by The Washington Post.

The White House said the talks will focus on the direct impact of Russia's war against Ukraine on regional and global security.

Biden administration officials say Beijing is spreading false Russian claims that Ukraine was running chemical and biological weapons labs with U.S. support. They say China is effectively providing cover if Russia moves ahead with a biological or chemical weapons attack on Ukrainians.

When Russia starts accusing other countries of preparing to launch biological or chemical attacks, Sullivan told NBC's "Meet the Press," "it's a good tell that they may be on the cusp of doing it themselves."

Pentagon spokesman John Kirby, on ABC's "This Week," said "we haven't seen anything that indicates some sort of imminent chemical or biological attack right now, but we're watching this very, very closely."

The striking U.S. accusations about Russian disinformation and Chinese complicity came after Russian Foreign Ministry spokeswoman Maria Zakharova alleged with no evidence that the U.S. was financing Ukrainian chemical and biological weapons labs.

The Russian claim was echoed by Chinese foreign ministry spokesman Zhao Lijian, who claimed there were 26 bio-labs and related facilities in "which the U.S. Department of Defense has absolute control." The United Nations has said it has received no information backing up such accusations.

White House press secretary Jen Psaki called the claims "preposterous."

"Now that Russia has made these false claims, and China has seemingly endorsed this propaganda, we should all be on the lookout for Russia to possibly use chemical or biological weapons in Ukraine, or to create a false flag operation using them," Psaki tweeted last week. "It's a clear pattern."

Sullivan told "Face the Nation" on CBS that the Russian rhetoric on chemical and biological warfare is "an indicator that, in fact, the Russians are getting ready to do it and try and pin the blame elsewhere and nobody should fall for that."

The international community for years has assessed that Russia has used chemical weapons in carrying out assassination attempts against Putin detractors such as Alexei Navalny and former spy Sergei Skripal. Russia also supports the Assad government in Syria, which has used chemical weapons against its people in a decade-long civil war.

Testifying before the Senate Intelligence Committee on Thursday, CIA Director William Burns also noted grave concern that Russia might be laying the groundwork for a chemical or biological attack of its own, which it would then blame on the U.S. or Ukraine in a false flag operation.

"This is something, as all of you know very well, is very much a part of Russia's playbook," he said. "They've used these weapons against their own citizens, they've at least encouraged the use in Syria and elsewhere, so it's something we take very seriously."

China has been one of few countries to avoid criticizing the Russians for its invasion of Ukraine. China's Xi Jinping hosted Putin for the opening of the Winter Olympics in Beijing, just weeks before Russia launched the Feb. 24 invasion.

During Putin's visit to China last month, the two leaders issued a 5,000-word statement declaring limitless friendship.

The Chinese abstained on U.N. votes censuring Russia and has criticized economic sanctions against Moscow. It has expressed its support for peace talks and offered its services as a mediator, despite questions about its neutrality and scant experience mediating international conflict.

But questions remain over how far Beijing will go to alienate the alliance and put its own economy at risk. Sullivan said China and all countries are on notice that they cannot "basically bail Russia out ... give Russia a workaround to the sanctions," with impunity.

Chinese officials have said Washington shouldn't be able to complain about Russia's actions because the U.S. invaded Iraq under false pretenses. The U.S. claimed to have evidence Saddam Hussein was stockpiling weapons of mass destruction though none was ever found.

On CNN, Sullivan said the administration believes China knew that Putin "was planning something" before the invasion of Ukraine. But he said the Chinese government "may not have understood the full extent of it because it's very possible that Putin lied to them the same way that he lied to Europeans and others."

Sullivan and Yang last met for face-to-face talks in Switzerland, where Sullivan raised the Biden administration's concerns about China's military provocations against Taiwan, human rights abuses against ethnic minorities and efforts to squelch pro-democracy advocates in Hong Kong.

That meeting set the stage for a three-hour long virtual meeting in November between Biden and Xi.

Sullivan is also to meet Luigi Mattiolo, diplomatic adviser to Italian Prime Minister Mario Draghi, while in Rome.

### **15. Bipartisan lawmakers ramp up calls on Biden to give Ukraine weapons, fighter jets** Washington Post, 13 Mar 22, Amy B. Wang

A growing number of U.S. lawmakers ratcheted up pressure on President Biden on Sunday to increase military aid to Ukraine, including sending fighter jets and air defense systems that the administration rejected last week.

The public calls from both Republicans and Democrats to answer Ukrainian President Volodymyr Zelensky's urgent pleas for air assistance come as the Biden administration declined an offer from Poland to deliver MiG-29 airplanes to Ukraine for fear such a move could be interpreted by the Russians as an escalation of the United States' role in the war.

The bipartisan push underscores the growing hawkishness among many leaders on Capitol Hill, who have been urging Biden to do more to help Ukraine defend itself against Russian attacks as the war rages into its third week.

“[Russian President] Vladimir Putin and the Russians seem to be saying everything is escalatory. And yet they're escalating every single day by coming into Ukraine with these weapons,” Sen. Rob Portman (R-Ohio) said Sunday on CNN's “State of the Union.”

“This is an illegal — this is a brutal — totally unprovoked attack,” he added, emphasizing the horrors of civilian targets hit. “So, as they escalate, what the Ukrainian people are asking for is just the ability to defend themselves.”

Portman was part of a four-person bipartisan delegation of senators who traveled to Poland on Sunday who called on the White House to send air assistance to Ukraine, arguing that the country increasingly needs help to push back Russian forces. The others on the trip were Sen. Roger Wicker (R-Miss.), a staunch supporter of former president Donald Trump; moderate Democrat Sen. Amy Klobuchar (D-Minn.); and Sen. Richard Blumenthal (D-Conn.), one of the more liberal members of the Democratic caucus.

Portman argued that because Putin has already declared other forms of U.S. military aid escalatory, sending planes to Ukraine would not risk intensifying the conflict.

Separately, 58 members of the bipartisan Problem Solvers Caucus on Sunday again urged the Biden administration to try to facilitate the fighter jet deal with Poland, as well as to provide Ukraine with other air defense systems, including drones and surface-to-air missiles.

“Russia’s advantage in this domain could soon develop into air dominance if the Ukrainians do not receive necessary military aid,” the caucus members, who are evenly split between Democrats and Republicans, said in a new statement. “We commend the Polish government for taking proactive steps to deliver MiG-29 jets to the Ukrainian Air Force. We urge assistance to help facilitate this deal, commit to replenishing our allies’ fleets with American-made aircraft and help advance the transfer of [other] aircraft to Ukraine as well.”

The entreaties by both Democrats and Republicans on the White House come as Russia has continued to escalate its attacks in Ukraine. In addition, Russia has turned to China for military equipment and aid in the weeks since it began its invasion of Ukraine, U.S. officials familiar with the matter told The Washington Post, a move that could draw in a major world power into the conflict.

Russian forces are closing in on Kyiv and, early Sunday, unleashing missile attacks on a military facility a mere 15 miles from the border with Poland, a NATO member country. The strikes killed at least 35 and injured 134, and intensified fears that NATO could be drawn into a direct conflict with Russia.

Speaking from near the Poland-Ukraine border on Sunday, Portman said the bombing of the military facility in western Ukraine was close enough to be heard on the Polish side.

Ukrainians, he added, badly needed air defense systems to have better control over the skies for a “fighting chance” at winning the war. Portman also noted the United States has already provided shoulder-fired Stinger missiles and military helicopters to Ukraine, as recently as January.

“And those are directly from the United States. In this case, this would be Poland providing these airplanes, which are Soviet-style planes, old planes, MiG-29s,” Portman, a co-chair of the Senate Ukraine Caucus, said on CNN.

The White House has defended its decision to decline Poland’s offer, saying there were “a range of logistical operational challenges” that would come with delivering the warplanes.

Poland had said it was ready to deploy all of its MiG-29 jets to the Ramstein Air Base, an American military facility in Germany, but the Pentagon struck down the proposal, saying fighter jets departing from a U.S. or NATO base could be seen as an escalation of tensions with Russia. The Kremlin also warned on Saturday that convoys carrying U.S. or NATO weapons into Ukraine would be “legitimate targets” for attack.

National security adviser Jake Sullivan said Sunday that Biden had consulted with NATO allies and military advisers and “ultimately determined that the risk/benefit analysis of flying planes from NATO bases into contested airspace over Ukraine did not make sense.” Biden has, however, been in contact with Zelensky about providing other anti-air systems, he said.

Klobuchar did not explicitly criticize the Biden administration on Sunday. But, breaking with most other Democrats, she said she would still like to see the United States send fighter planes to Ukraine, even if they weren't the specific MiG-29 jets discussed.

"At some point, there's been so much focus on these planes, especially these particular planes, that they themselves could become a target," Klobuchar said on CNN's "State of the Union."

She suggested that other effective weapons like drones and Javelins would also help Ukrainians in their fight. "One of the things we have to remember is, this is all about air defense," she said.

Klobuchar said she had spoken with Biden 10 days ago to make her position clear, but understood that "things shift" in wartime. She stressed that there were negotiations about military aid that could and likely were happening outside of the public view for security reasons.

"I still don't rule out having planes at some point," Klobuchar said. "But, again, you take one day at a time and make the best defense system decisions. And that can't always be discussed on the air, or you would be giving Vladimir Putin the road map to what NATO wants to do here to help protect Ukraine."

Ukrainian Foreign Affairs Minister Dmytro Kuleba said on CBS's "Face the Nation" on Sunday that the debate over the Polish fighter jets last week reminded him of a ping-pong game, with the two sides hitting a ball back and forth in what, to him, was a "diplomatic mystery."

"We have no time for this kind of ping-pong diplomacy. We need planes to save lives of our people," Kuleba said.

Ukrainian officials have continued their pleas for the United States and its NATO allies to help enact a "no-fly zone" over Ukrainian airspace, a move the allies have thus far rejected, also out of fear it would be seen by Russia as an escalation into a wider war.

But those who have urged more military support for Ukraine argue that the war and humanitarian crisis in Ukraine are already rapidly intensifying. An American journalist, Brent Renaud, was fatally shot while reporting outside of Kyiv, and Russian forces reportedly kidnapped a second mayor.

Republicans have for weeks pushed for more sanctions, earlier, and have accused Biden of responding to Putin from a position of weakness.

Though some GOP support for NATO eroded during the Trump administration — led by the former president's public disdain for the NATO alliance — many Republican lawmakers have been quick to criticize Biden for doing too little, too late, to lead his European allies.

"The world needs the Biden administration to be flying this plane," Senate Minority Leader Mitch McConnell (R-Ky.) said Thursday, arguing that supporting Ukraine is not a provocation. "Too often it feels like the plane is flying them."

Democrats so far have defended Biden's approach to the crisis, saying that Biden has succeeded in uniting the world to oppose Putin and rally support for Ukraine.

"I don't know that it's constructive for us to continue to try to manage this crisis day to day," Sen. Chris Murphy (D-Conn.) said last week. "I think there is a bit of a blind momentum around this question of, more and more and more. That is not always connected to what Ukraine actually needs to defend themselves."

Sullivan acknowledged Sunday that Russia's bombing of the military base in western Ukraine suggested Putin would likely ramp up his invasion.

"What it shows is that Vladimir Putin is frustrated by the fact that his forces are not making the kind of progress that he thought that they would make against major cities, including Kyiv," Sullivan said. "That he is expanding the number of targets that he is lashing out [at] and that he is trying to cause damage in every part of the country."

Sullivan reiterated on "Face the Nation" Biden's insistence that U.S. military forces would not be drawn into fighting Russian troops on Ukrainian soil, but if Russian attacks spread to Poland or another NATO ally, that would "bring the full force of the NATO alliance to bear in responding."

When it came to reports that Russia may be preparing to use chemical weapons to attack Ukraine, Sullivan declined to specify if that would be a new "red line" for increased U.S. intervention.

"Sitting here before you today, I'm not going to go further than what President Biden said on Friday, which is that the Russians would pay a severe price if they were to move forward with chemical weapons," Sullivan said.

## **16. Russia turns to Syria playbook with shifting claims over grounds for war**

Financial Times (UK), 13 Mar 22, Max Seddon in Riga and Erika Solomon

As Russia began to build a pretext for war with Ukraine in February, it accused Kyiv of firing into Russian soil and blowing up a remote border checkpoint — albeit with no reported casualties.

Now, as its forces lay siege to Ukrainian cities with increasing brutality, Moscow has justified its invasion by citing fears that Ukraine was restarting its nuclear weapons programme. Russia also claimed to have found documents showing Ukraine had developed chemical and biological weapons under the orders of "curators from the Pentagon".

Russia's reasons for launching the war, however, are ever evolving. They now include accusations Ukraine was developing ethnically targeted bioweapons to massacre Slavs and that Kyiv had researched the bat coronavirus in ways suggesting it could have been responsible for the Covid-19 pandemic.

Ukraine and its western allies fear the claims could be laying the groundwork for a grisly new Russian attack.

“We are accused of attacks on allegedly peaceful Russia. And now what?” Ukrainian president Volodymyr Zelensky said in a video address on Thursday. “What else have you prepared for us? Where will you strike with chemical weapons?”

Experts have drawn parallels with Moscow’s support for President Bashar al-Assad’s regime in Syria. There, Russia often blamed chemical weapons attacks that hit opposition areas on the rebels themselves. Analysts now say Russia may be pre-emptively developing a similar narrative about Ukraine to justify more aggressive attacks.

“Essentially, the game here is to create a narrative where you are arguing that your opponent is about to use these heinous weapons to justify brutal military action against them,” said Hanna Notte, a senior research associate at the Vienna Center for Disarmament and Non-Proliferation.

“If we’re moving towards an attack on Kyiv or on other major Ukrainian cities in the coming days then this narrative could be part of laying the groundwork for that.”

Russia’s messaging around chemical weapons carries strong echoes of a gas attack in rebel-held suburbs in Damascus in 2013. In an opinion piece in the New York Times, President Vladimir Putin argued that rebels had staged a false-flag attack to encourage international intervention, after US president Barack Obama had called chemical weapons his “red line” in Syria.

Chemical weapons strikes re-emerged years later after Russia had intervened militarily in Syria on Assad’s behalf. Chemical weapons analysts blamed Assad forces for most of these attacks. But Russian officials said not only that the attacks were false flags, they also insisted some were staged.

Moscow’s arguments played into skepticism about US justifications for war, after Washington justified the 2003 Iraq invasion by alleging that Baghdad was developing weapons of mass destruction, claims that turned out to be false.

Now, the rhetoric appears to have resurfaced in Ukraine, according to Tobias Schneider, a fellow at the Global Public Policy Institute who has researched chemical weapons in Syria.

“What it looks like is that the people the Russians have working on Ukraine simply opened the playbook and pulled out the old tropes they had been using for years — and particularly the ones the west had already used against them,” Schneider said.

Russia’s accusations to justify the war have shifted after it failed to achieve the quick victory it appears to have expected.

Moscow initially said it was protecting Russian-speaking Ukrainians from a US-backed “neo-Nazi” regime and had acted after learning of plans to attack Russia. Later Russia began to claim that Ukraine was set on restarting its nuclear programme and that its “capabilities were much greater than those of Iran or North Korea”.

On March 6 those claims disappeared from Russian state media in favor of a new narrative: Russia claimed to have discovered Ukrainian work on “bioagents capable of infecting specific ethnic groups” and studies on the migratory routes of birds that could carry the deadly pathogens into Russian territory.

Three days later Russia said “Ukrainian nationalists” had stashed 80 tons of ammonia near Kharkiv, a city badly hit by Russia’s siege, “in preparation for a provocation using poisonous substances to accuse Russia of supposedly using chemical weapons”.

Biological weapons appear to have grown in the Kremlin’s assessment of the threats it faces, though Moscow has provided little evidence.

Nikolai Patrushev, the secretary of Russia’s security council, said last year that US-controlled bioweapons facilities were “growing as if on yeast [ . . . ] by some strange coincidence, mostly at the Russian and Chinese borders”.

Moscow has repeatedly accused the US since 2018 of developing biological weapons in a lab in Georgia, which lost a five-day war with Russia in 2008. Gennady Zyuganov, the leader of Russia’s Communist party, claimed this week that American scientists wanted “to poison everything Russian and eradicate our country”.

As the war continues the various Russian claims help the Kremlin tell its population that it had acted to protect them from Ukrainian threats, said Alexander Gabuev, a senior fellow at the Carnegie Moscow Centre.

“It’s very important to explain that it’s a preventive war,” Gabuev said.

On Friday, Russia took its claim to the UN, where Vasily Nebeznya, its ambassador, accused the US and Ukraine of using birds, bats and insects to send “dangerous pathogens” around Europe. His western counterparts rejected the claim, which they said they feared could preclude a “false flag attack” in Ukraine.

But the notions alone have advanced Russia’s cause, Schneider said.

“For them, the fact of it being true or not doesn’t matter, and I think they think the Americans are exactly the same way,” Schneider added. “What it does is provide them [with] leverage . . . they can use this to play games at the UN or the OPCW.”

It also “simply muddies the waters on every level,” he said. “If you keep using this narrative that was used in Syria, you leave people thinking that [these accusations are] just thrown around in every war. Who knows what’s true?”

## **17. More Ukraine-Russia talks scheduled as attack on base kills dozens**

Reuters, 14 Mar 22, Pavel Polityuk and Natalia Zinets

Diplomatic efforts to end the war in Ukraine were stepping up on Monday, with Ukrainian and Russian negotiators set to talk again after both sides cited progress, even after Russia attacked a base near the Polish border and fighting raged elsewhere.

A barrage of Russian missiles hit Ukraine's Yavoriv International Centre for Peacekeeping and Security, a base just 15 miles (25 km) from the Polish border that has previously hosted NATO military instructors, killing 35 people and wounding 134, a Ukrainian official said on Sunday.

Russia's defense ministry said up to 180 "foreign mercenaries" and a large number of foreign weapons were destroyed. Reuters could not independently verify the casualties reported by either side.

Thousands of people have died since Feb 24, when Russian President Vladimir Putin launched what he called a special military operation to rid Ukraine of dangerous nationalists and Nazis.

The United States, which had watched Russia's build-up on Ukraine's borders with mounting alarm for weeks, says it was a premeditated, unjustified and unlawful "war of choice".

In a telephone call, U.S. President Joe Biden and France's Emmanuel Macron underscored their commitment to holding Russia accountable for the invasion, the White House said.

U.S. Secretary of State Antony Blinken and his Ukrainian counterpart, Dmytro Kuleba, also discussed diplomatic efforts to stop Russia's invasion, the State Department said.

Hopes were boosted after Russia and Ukraine gave their most upbeat assessments after weekend negotiations.

"Russia is already beginning to talk constructively," Ukrainian negotiator Mykhailo Podolyak said in a video online. "I think that we will achieve some results literally in a matter of days."

A Russian delegate to the talks, Leonid Slutsky, was quoted by the RIA news agency as saying they had made significant progress and it was possible the delegations could soon reach draft agreements.

Neither side said what these would cover. Three rounds of talks between the two sides in Belarus, most recently last Monday, had focused mainly on humanitarian issues.

Ukrainian President Volodymyr Zelenskiy said the countries' delegations have been speaking daily by video link and a clear aim of his negotiators was to "do everything" to arrange for him to meet Putin.

"We must hold on. We must fight. And we will win," Zelenskiy said in a late night video speech.

## **Harsh sanctions**

Global financial markets, battered by fears the conflict could spread and drag in NATO, rallied on hopes for progress in peace talks. Stocks rose while oil prices gave up some of their massive recent gains.

Western nations have sought to isolate Putin by imposing harsh economic sanctions and supplying Ukraine with weapons.

Increasingly isolated, Russia asked China for military equipment after its invasion, sparking concern in the White House that Beijing may undermine Western efforts to help Ukrainian forces defend their country, several U.S. officials said.

U.S. National Security Adviser Jake Sullivan, who is due to meet China's top diplomat Yang Jiechi in Rome on Monday, warned Beijing it would "absolutely" face consequences if it helped Moscow evade sanctions.

Asked about Russia's request for military aid, Liu Pengyu, spokesperson for China's embassy in Washington, said, "I've never heard of that."

He said China found the current situation in Ukraine "disconcerting" and added, "We support and encourage all efforts that are conducive to a peaceful settlement of the crisis."

Still, violence and bloodshed continued.

Air raid sirens sounded before dawn in many cities and regions of Ukraine, including Kyiv, Lviv, Odessa, Ivano-Frankivsk and Cherkasy.

In the capital, authorities said they were stockpiling two weeks' worth of food for the 2 million people who have not yet fled from Russian forces attempting to encircle the city.

An American journalist was shot and killed by Russian forces in the town of Irpin, northwest of Kyiv, and another journalist was wounded, the regional police chief said.

Britain's defense ministry said Russian naval forces had established a distant blockade of Ukraine's Black Sea coast, isolating the country from international maritime trade.

In eastern Ukraine, Russian troops were trying to surround Ukrainian forces as they advance from the port of Mariupol in the south and the second city Kharkiv in the north, it added.

The Russian-controlled eastern city of Donbass and Crimea - which was seized by Russia in 2014 - are now connected by a road controlled by pro-Russian forces, Russia's RIA news agency quoted Georgy Muradov, the deputy prime minister of the Russian-backed government in Crimea, as saying.

The report could not be independently confirmed.

Russia's invasion has sent more than 2.5 million people fleeing across Ukraine's borders and trapped hundreds of thousands in besieged cities.

"It is terrifying how violent and inhuman it is," Olga, a refugee from Kyiv, told Reuters after crossing into Romania.

The United Nations says at least 596 civilians have died since the invasion began and the toll is probably considerably higher as it is difficult to confirm deaths in places such as Mariupol.

The city council in Mariupol said 2,187 residents had been killed since the start of the invasion. Reuters was not able to verify that toll.

Moscow denies targeting civilians. It blames Ukraine for failed attempts to evacuate civilians from encircled cities, an accusation Ukraine and its Western allies strongly reject.

Kharkiv, in northeastern Ukraine, has suffered some of the heaviest bombardment and dozens of civilians have been killed.

"We will stitch up the wounds and the pain of our country and our city," said Aliev, a 23-year-old musician. "We're not going anywhere."

### **18. Zelensky says Russian missiles will strike NATO without no-fly zone over Ukraine**

Washington Examiner, 13 Mar 22, Daniel Chaitin

Ukrainian President Volodymyr Zelensky warned Russia is on the verge of attacking NATO territory after a deadly Russian missile strike on a Ukrainian training center roughly 10 miles from the border with Poland.

In a video address posted shortly after midnight Monday, Zelensky made another urgent plea to NATO members to set aside their fear of escalation and establish a no-fly zone over Ukraine because war is already on their doorstep and will spill into their territory without one.

"If you do not close our sky, it is only a matter of time before Russian missiles fall on your territory, on NATO territory, on the homes of NATO citizens," Zelensky said, according to Agence France-Presse.

The United States and its allies have imposed economic sanctions on Russia, and have dedicated hundreds of millions of dollars in lethal aid to helping Ukraine defend itself from the invaders. Zelensky has welcomed the financial penalties, but argued they came too late. "Last year, I made a clear warning to NATO leaders that if there were no tough preventive sanctions against Russia, it would start a war," he said.

The Biden administration has been hesitant to support certain actions that officials say could draw the U.S. into direct combat with the Russian military, which includes closing the sky over Ukraine.

"No-fly zone has a nice air policing sound to it, but I participated in one as a young officer on an aircraft carrier way back in the early '90s. It is combat. You have to be willing to shoot and to be shot at," Pentagon spokesman John Kirby said on ABC's This Week on Sunday.

"President Biden has made it clear that U.S. troops are not going to be fighting in Ukraine, and there's a good reason for that because the United States getting involved in combat in Ukraine right now or over the skies of Ukraine right now leads to war with Russia. And there's very little that you can see that would make sense for this war to be escalated between two nuclear powers," Kirby added.

Should Russia's military assault expand into NATO territory, President Joe Biden promised the United States is ready to help protect the alliance. But, the commander in chief forewarned, that outcome is tantamount to another world war.

"As we provide this support to Ukraine, we're going to continue to stand together with our allies in Europe and send an unmistakable message that we will defend every inch of NATO territory every single inch with a united, galvanized NATO. One movement," Biden said in a speech Friday. "That's why I've moved over 12,000 American forces along the borders with Russia — Latvia, Estonia, Lithuania, Romania, etc. — because they move once. Granted, if we respond, it is World War III, but we have a sacred obligation on NATO territory — a sacred obligation Article 5. And we will not although we will not fight the third World War in Ukraine. Putin's war against Ukraine is never going to be a victory."

In his video address posted to Facebook, Zelensky argued Russia is already taking the fight to the West in some ways. He referred to the death of U.S. photojournalist journalist Andriy Nebitov, who police in the Kyiv region say was killed by Russian forces in the town of Irpin.

"An American journalist was killed in the Kyiv region today. Brent Renaud. His colleague was wounded. It was a deliberate attack by the Russian military. They knew what they were doing. But not everyone in the West seems to know what they are doing," Zelensky said.

Eighteen days into the invasion of Ukraine, Russia's military advance has been slow but its forces have been making gains, including its navy blockading Ukraine's Black Sea coast, effectively cutting the country off from international maritime trade, according to the United Kingdom Ministry of Defense.

Although peace talks have made little tangible progress, Zelensky said discussions with Russian President Vladimir Putin's negotiations remain constant.

"Representatives of our countries' delegations speak in video format every day. Our delegation has a clear task — to do everything to ensure a meeting of the presidents, the meeting that I am sure people are waiting for," the Ukrainian president said.

## **19. US Official: war widening to the west of Ukraine was anticipated**

Voice of America, 13 Mar 22, Steve Herman

U.S. officials say Russia's lethal shelling in the western part of Ukraine on Sunday, close to the border with Poland, is something that they had anticipated.

"This does not come as a surprise to the American intelligence and national security community," said U.S. National Security Adviser Jake Sullivan during a Sunday morning appearance on CNN. "What it shows is that Vladimir Putin is frustrated by the fact that his forces are not making the kind of progress that he thought that they would make."

At least 35 people died and 134 were wounded early Sunday when Russia fired cruise missiles at the International Center for Peacekeeping and Security, a military base in western Ukraine.

The facility, not far from Lviv, is where NATO units train with Ukrainian troops.

NATO troops in Poland are a scant 25 kilometers away, prompting concern that even a misstep by Russia's military could cause the war to further widen.

"If Russia attacks, fires upon, takes a shot at NATO territory, the NATO alliance would respond to that," warned Sullivan in an interview on the CBS network's "Face the Nation" program.

Sullivan and officials from the National Security Council and State Department are scheduled to be in Rome on Monday to meet Chinese Communist Party Politburo Member and Director of the Office of the Foreign Affairs Commission Yang Jiechi.

The discussion will be "part of our ongoing efforts to maintain open lines of communication between the United States and the People's Republic of China [PRC]. The two sides will discuss ongoing efforts to manage the competition between our two countries and discuss the impact of Russia's war against Ukraine on regional and global security," according to NSC spokesperson Emily Horne.

Sullivan on Sunday also responded to growing concern Russia will use chemical weapons in Ukraine.

"We can't predict a time and place," said Sullivan on CBS, noting an escalation of rhetoric from Moscow falsely accusing the United States and Ukraine of developing chemical or biological weapons to use against Russian troops.

"That's an indicator that the Russians are getting ready to do it" and blame it on others, according to Sullivan.

On NBC's "Meet the Press," Sullivan said, "We've consulted with our allies and partners about it, and we are prepared for that eventuality." He echoed U.S. President Joe Biden's warning from last week that Russia would face severe consequences if such weapons are deployed.

In a video released shortly early Monday local time, Ukrainian President Volodymyr Zelenskyy renewed a plea for NATO to impose a no-fly zone over his country, predicting if that does not happen "it is only a matter of time before Russian rockets fall on your territory, on NATO territory."

In recent days, satellite imagery and media reporters have indicated Russian armored units are poised to relaunch a major offensive to attempt to take Kyiv, the capital of Ukraine, after a lull.

An award-winning American filmmaker and journalist is among the latest casualties of the conflict near the capital.

Brent Renaud died in Irpin, a suburb of Kyiv, according to officials.

“It is one more example of the brutality of Vladimir Putin and his forces as they’ve targeted schools and mosques and hospitals and journalists,” said Sullivan on CNN’s “State of the Union” program.

Renaud, who had previously worked for The New York Times, NBC and HBO, “paid with his life for attempting to expose the insidiousness, cruelty and ruthlessness of the aggressor,” said a statement from Anton Gerashchenko, an adviser to Ukraine’s interior minister.

In recent days, the focus of the invasion has shifted to the besieged southeastern Ukrainian port city of Mariupol.

“We have already evacuated almost 125,000 people to the safe territory through humanitarian corridors,” President Zelenskyy said in a video address released earlier Sunday. “We’re doing everything to counter occupiers who are even blocking Orthodox priests accompanying this aid, food, water and medicine. There are 100 tons of the most necessary things that Ukraine sent to its citizens.”

Ukraine’s Foreign Ministry tweeted Saturday that Russian forces had shelled a mosque in Mariupol where 80 people were sheltering, including some from Turkey.

Seven civilians, including a child, were killed Saturday in a designated humanitarian corridor when Russia struck the convoy, forcing the civilians to turn around, Ukraine’s Defense Ministry said.

Ukraine’s Deputy Prime Minister Iryna Vereshchuk said only nine of 14 humanitarian corridors were open Saturday.

About 13,000 people were evacuated along the routes that had been agreed upon as safe passage exits for civilians, according to Vereschuk.

Also Saturday, a Russian missile attack destroyed a Ukrainian air base in the city of Vasytkiv, according to Mayor Natalia Balasynovych who said an oil depot also was destroyed.

Russia’s Interfax News Agency quoted Balasynovych as saying Russian rockets also destroyed an ammunition depot near Vasytkiv.

## **20. Russia ‘using banned white phosphorus bombs’ in attack on Ukrainian city**

The Times (UK), 13 Mar 22, Henry Zeffman

President Putin wants to turn Ukrainian cities into “Aleppos”, a Ukrainian official has said, claiming that Russia used white phosphorus in bombing attacks.

Markiyanyan Lubkivsky, from the Ukrainian Ministry of Defense, warned that Putin was replicating Russian tactics from Syria and spoke of “more terrible attacks” on Ukraine.

“The plan of Putin is to make from Ukrainian cities numerous Aleppos,” Lubkivsky told the BBC, referring to the Syrian city that suffered mass destruction during its civil war. “The situation is quite critical.”

He said attacks on Lutsk, a city in western Ukraine, had involved the use of phosphorus bombs. International law prohibits the use of white phosphorous shells in heavily populated civilian areas but allows them in open spaces to be used as cover for troops.

“One more terrible night, more terrible attacks on Ukraine,” Lubkivsky said. “The geography of Putin’s attack is becoming wider. This night Russians attacked Lutsk, Lutsk airport is almost totally demolished. Lutsk is in the western part of Ukraine. Russia uses phosphorus munitions, which are prohibited by international conventions. So, a lot of people are suffering everyday, a lot of refugees are trying to get to Poland, to the western border — one more very hard night for Ukraine.”

A senior police officer also claimed that Russian forces had used phosphorous in the eastern region of Luhansk.

Oleksii Biloshytsky, head of police in Popasna, about 60 miles west of Lugansk city, made the accusation in a Facebook post on Saturday. He wrote: “It’s what the Nazis called a ‘flaming onion’ and that’s what the Russcists [amalgamation of ‘Russians’ and ‘fascists’] are dropping on our towns. Indescribable suffering and fires.”

The Luhansk and Donetsk regions of eastern Ukraine, collectively known as the Donbas, were partially controlled by Moscow-backed separatist rebels before the full-scale Russian invasion of Ukraine on February 24.

Overnight on Saturday, a train evacuating people from the Donbas to the western city of Lviv was shelled, according to the Donetsk military commander Pavlo Kirilenko. One person was killed and another wounded, he said.

Two Orthodox churches sheltering civilians in the Donbas were also hit, the regional authorities said.

President Duda of Poland said that if Putin used chemical weapons it would be a “game changer” for the world. “Of course everybody hopes that he will not dare do that — that he will not use weapons of mass destruction, neither chemical weapons nor biological weapons nor any form of nuclear weapons. Everybody is hoping that this is not going to happen.

“But as we say in Poland, using a little bit of an English expression, if he use any weapons of mass destruction then this will be a game changer in the whole thing.

“And for sure the North Atlantic alliance and its leaders, led by the United States will have to sit at the table and they will really have to think seriously what to do. Because then it starts to be dangerous. Not only for Europe, not only for our part of Europe or our region, for central Europe, but for the whole world.”

## **21. Biden's CIA head leads the charge against Putin's information war**

The Hill, 13 Mar 22, Morgan Chalfant and Rebecca Beitsch

As Russia began amassing troops on Ukraine’s border late last year, CIA Director William Burns was ready.

A career ambassador, Burns spent two tours at the U.S. Embassy in Moscow and is one of the Biden administration’s foremost experts on Russia and its president, Vladimir Putin.

President Biden in November quietly dispatched the former U.S. ambassador to Russia to try to negotiate with the Kremlin and warn them of consequences should they move forward into Ukraine.

Eventually, Burns was central to the unusual decision by the administration to proactively declassify and release intelligence on Russian “false flag” operations in Ukraine as a way to disrupt Putin’s messaging and endgame.

“The fact that the administration sent him to Moscow was the right call. That’s who I would send,” said Daniel Fried, former ambassador to Poland and distinguished fellow with the Atlantic Council.

“He was effective, skillful, and he got along with the Russians as well as anybody possibly could because he’s low key, soft spoken, thoughtful, and he was there during better periods of relations, during the [George W.] Bush administration. So he saw Putin when things weren’t great, but they weren’t so bad,” Fried added. “That personal knowledge is deep and real.”

Atop the CIA, Burns helms a vast bureaucracy whose work is supposed to be kept secret under usual circumstances.

But the Biden administration, principally Burns and Director of National Intelligence Avril Haines, decided to take a novel and risky approach as Russia escalated threats to Ukraine, one that the administration believes has paid off in disrupting Putin’s war plans.

“In all the years I spent as a career diplomat, I saw too many instances in which we lost information wars with the Russians,” Burns recently told the Senate Intelligence Committee.

“In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression built on a body of lies and false narratives. So this is one information war that I think Putin is losing,” he said.

While many older Russians largely have access to only government-controlled media, a younger, tech-savvy generation has been able to access reactions and reports from the U.S. and Europe as citizens protest the Ukrainian invasion in the streets despite thousands of arrests.

“For many years now, Moscow has worked to perfect the use of misinformation and propaganda to drive wedges and create confusion in the West. Calling out Putin’s machinations, like those we have seen in the run-up to the invasion, help to deny him the pretext he sought to justify his offensive,” a U.S. intelligence official told The Hill.

Burns was confirmed to lead the CIA early on in the Biden administration. His nomination was noncontroversial, and he enjoys broad respect in national security circles and among Democrats and Republicans. He is the first career diplomat to lead the agency.

Some see Burns as a natural fit, particularly as the Biden administration navigates the burgeoning crisis in Europe, given his decades of experience in foreign capitals and particularly his dealings with the Kremlin.

"He may be the perfect man in the perfect space," said Steve Cash, a national security lawyer who previously worked at the CIA and as counsel to the Senate Intelligence Committee. “It’s clear to me that what we’re seeing is maybe the best example of a whole of government approach in a really coordinated way to a foreign policy crisis.”

James Clapper, who served as director of national intelligence under Obama and worked alongside Burns, noted that he awarded Burns the National Intelligence Distinguished Service Medal for “his astute use of intelligence” when Burns retired as deputy secretary of State toward the end of 2014.

“I thought it was an inspired choice when his nomination was announced, and, from all reports I get, he is highly regarded by the work force at CIA,” Clapper told The Hill in an email.

Burns took the helm of the CIA at a time of low morale for the intelligence community, whose work former President Trump often dismissed.

Burns has stressed he saw the agency as an asset in his longtime career as a diplomat and hopes his work at the State Department brings a fresh perspective.

“Working with those colleagues over those nearly 35 years made me a better diplomat, a better negotiator, a better policymaker because of the intelligence that they collected and the insights that they provided. And I'd like to think, at least I hope, that my experience as an ambassador, as a policymaker will make me a better director of CIA,” he said during a discussion at Stanford University in October.

In his short tenure, Burns has made some visible changes at the CIA. He launched a new mission center focused on China in October, a nod to the administration's focus on the threat posed by Beijing.

Biden has leaned on Burns's experience in back-channel negotiations, dispatching the veteran diplomat to meet with the leader of the Taliban last summer as the Biden administration grappled with the chaotic withdrawal from Afghanistan.

But perhaps his most valuable and visible work has had to do with Russia.

Burns, who spent three years working with high-level Russian officials during his ambassadorship, has been essential as the U.S. tries to analyze Putin's mindset.

Even as some in Washington harbored doubts about Putin's intentions last winter, Burns cautioned during a Wall Street Journal event that he would "never underestimate President Putin's risk appetite on Ukraine."

"The person who knows [Putin], whose judgment I would trust, is of course Bill Burns," Fried said.

Burns, who also served as ambassador to Jordan, likes to quip he earned most of his snowy white hair from his time spent in Moscow.

"I think Putin is angry and frustrated right now," he told lawmakers in recent appearances before both chambers' intelligence committees, describing Putin as someone who has been "stewing in a combustible combination of grievance and ambition for many years" while his inner circle of advisers shrinks as he rejects those who disagree with him.

Sen. Susan Collins (R-Maine) said Burns had "shown extraordinary insight into Putin's thinking," while Rep. Val Demings (D-Fla.) thanked Burns "for just not letting us forget just who and what we are dealing with."

Burns had left Moscow by the time Putin waged his first incursion into Ukraine, annexing the Crimean Peninsula in 2014. By then, he was serving as deputy secretary of State and was among a cadre of officials who were responding to Russia's aggression from the Situation Room.

The Biden White House, which is home to many Obama-era officials, has communicated that one of the major lessons learned from the 2014 crisis is the need to push back more aggressively on Russian disinformation.

Russia has tried to use disinformation tactics to obscure what is transpiring in Ukraine and convince sympathetic audiences that Putin is not the aggressor, but it has so far failed at controlling the narrative.

"That is a fog that can be dispersed in part by excellent intelligence work," said Cash.

## **22. India unsure of Russian arms to meet China, Pakistan threats**

Associated Press, 14 Mar 22, Ashok Sharma

India is exploring ways to avoid a major disruption in its supply of Russian-made weaponry amid U.S. sanctions following Moscow's invasion of Ukraine, and Prime Minister Narendra Modi's tightrope walk could become more difficult due to a continuing border standoff with China.

Experts say up to 60% of Indian defense equipment comes from Russia, and New Delhi finds itself in a bind at a time when it is facing a two-year-old standoff with China in eastern Ladakh over a territorial dispute, with tens of thousands of soldiers within shooting distance. Twenty Indian soldiers and four Chinese soldiers died in a clash in 2020.

"The nightmare scenario for India would be if the U.S. comes to the conclusion that it confronts a greater threat from Russia and that this justifies a strategic accommodation with China. In blunt terms, concede Chinese dominance in Asia while safeguarding its European flank," Shyam Saran, India's former foreign secretary, wrote in a recent blog post.

Would China, drawing lessons from Ukraine, be an aggressor in disputed eastern Ladakh or in Taiwan?

"It is very possible they might do it," said Jitendra Nath Misra, a retired diplomat and distinguished fellow in the Jindal School of International Affairs.

President Joe Biden has spoken about unresolved differences with India after the country abstained from voting on United Nations resolutions against Russian aggression in Ukraine. Modi has so far avoided voting against Russia or criticizing Putin for invading Ukraine.

In the early 1990s, about 70% of Indian army weapons, 80% of its air force systems and 85% of its navy platforms were of Soviet origin. India is now reducing its dependency on Russian arms and diversifying its defense procurements, buying more from countries like the United States, Israel, France and Italy.

From 2016-20, Russia accounted for nearly 49% of India's defense imports while French and Israeli shares were 18% and 13%, respectively, according to the Stockholm International Peace Research Institute.

India not only depends on Russian weaponry, but it also relies hugely on Moscow for military upgrades and modernization as it moves toward self-reliance in its defense sector, said Lt. Gen. D.S. Hooda, a former Indian military commander.

"Russia is the only country that leased a nuclear submarine to India. Will any other country lease India a nuclear submarine?" Hooda asked.

Sushant Singh, a senior fellow at the Center for Policy Research, said: "India's navy has one aircraft carrier. It's Russian. India's bulk of fighter jets and about 90% of its battle tanks are Russian."

In 1987, the Indian navy leased a Chakra-1, a Charlie-class nuclear cruise missile submarine, from the former Soviet Union for training. It later got another Soviet submarine, Chakra-2, in its place. In 2019, India signed a \$3 billion contract to lease an Akula-1-class nuclear-powered attack submarine from Russia for 10 years. It is expected to be delivered by 2025.

India bought its only aircraft carrier, INS Vikramaditya, from the Russia in 2004. The carrier had served during the former Soviet Union and later for the Russian navy. India's first indigenous 40,000-tonne aircraft carrier is undergoing sea trials ahead of its planned induction by next year.

India also has four nuclear-powered ballistic missile submarines on the way.

India's air force presently operates more than 410 Soviet and Russian fighters, comprising a mix of imported and license-built platforms. India's inventory of Russian-made military equipment also includes submarines, tanks, helicopters, submarines, frigates and missiles.

Misra said the U.S. hasn't shown any willingness to provide technology transfers to India.

"I would like to ask our American friends: What kinds of defense technology have you given us? What the U.S. is offering is the F-16 fighter aircraft rebranded as the F-21. The F-16 is obsolete from the Indian point of view. We went for the Mig-21 in the 1960s because the F-104 was denied to India. We are seeing the same kind of thing," he said.

"Under the AUKUS agreement, the U.S. is willing to share the nuclear propulsion technology for submarines with Australia but is not willing to share it with India," he added, referring to the trilateral security pact between the U.S., U.K. and Australia.

Australia in September decided to cancel a multibillion-dollar contract to buy diesel-electric French submarines and said it would instead acquire U.S. nuclear-powered vessels in a new Indo-Pacific defense deal under AUKUS.

During the Donald Trump presidency, the U.S. and India concluded defense deals worth over \$3 billion. Bilateral defense trade increased from near zero in 2008 to \$15 billion in 2019. Major Indian purchases from the United States included long-range maritime patrol aircraft, C-130 transport aircraft, missiles and drones.

As the Ukraine crisis deepens, the challenge for India is how to navigate international sanctions against Russia.

The Russian S-400 missile system deal with Moscow has put India at risk of U.S. sanctions after Washington asked its partners to avoid purchasing Russian military equipment. The S-400 is a sophisticated surface-to-air defense system and is expected to give India strategic deterrence against rivals China and Pakistan.

New Delhi has sought support from Washington and its allies in confronting China, a common ground for the Indo-Pacific security alliance known as "the Quad" that also includes Australia and Japan.

Tracing the history of India's acquisition of Soviet arms, S.C.S. Bangara, a retired navy admiral, said India began looking for arms and ammunition after its war with China in 1962.

The Cold War resulted in the United States cozying up with China. Pakistan as a facilitator held a trump card that could be used to enlist the complete support of the U.S. government in the event of an India-Pakistan conflict, he said.

During India's war with Pakistan in December 1971 that led to the creation of Bangladesh, the U.S. deployed a task force led by the USS Enterprise in the Bay of Bengal in support of Pakistan.

In the mid-1960s, India negotiated a series of acquisition agreements with the Soviet Union that continued for the next 40 years, Bangara said.

"It was not seamless, particularly when the Soviet Union collapsed. The long chain of training facilities along with the supply chain of logistics collapsed when the Union broke into smaller states," he said.

Even as India diversifies its defense acquisitions from the U.S., Israel, France and other countries, it may take 20 years to get over its dependence on Russian supplies and spares, Bangara said.

### **23. War censorship exposes Putin's leaky internet controls**

Associated Press, 13 Mar 22, Frank Bajak and Barbara Ortutay

Long before waging war on Ukraine, President Vladimir Putin was working to make Russia's internet a powerful tool of surveillance and social control akin to China's so-called Great Firewall.

So when Western tech companies began cutting ties with Russia following its invasion, Russian investigative journalist Andrei Soldatov was alarmed. He'd spent years exposing Russian censorship and feared that well-intentioned efforts to aid Ukraine would instead help Putin isolate Russians from the free flow of information, aiding the Kremlin's propaganda war.

"Look, guys the only space the Russians have to talk about Ukraine. and what is going on in Russia. is Facebook," Soldatov, now exiled in London. wrote on Facebook in the war's first week. "You cannot just, like, kill our access."

Facebook didn't, although the Kremlin soon picked up that baton, throttling both Facebook and Twitter so badly they are effectively unreachable on the Russian internet. Putin has also blocked access to both Western media and independent news sites in the country, and a new law criminalizes spreading information that contradicts the government's line. On Friday, the Kremlin said it would also restrict access to Instagram.

Yet the Kremlin's latest censorship efforts have also revealed serious shortcomings in the government's bigger plans to straightjacket the internet. Any Russian with a modicum of tech smarts can circumvent Kremlin efforts to starve Russians of fact.

That puts providers of internet bandwidth and associated services sympathetic to Ukraine's plight in a tough spot. On one side, they face public pressure to punish the Russian state and economic reasons to limit services at a time when bills might well go unpaid. On the other, they're wary of helping stifle a free flow of information that can counter Kremlin disinformation — for instance, the state's claim that Russia's military is heroically "liberating" Ukraine from fascists.

Amazon Web Services, a major provider of cloud computing services, continues to operate in Russia, although it says it's not taking on any new customers. Both Cloudflare, which helps shield websites from denial-of-service attacks and malware, and Akamai, which boosts site performance by putting internet content closer to its audience, also continue to serve their Russian customers, with exceptions including cutting off state-owned companies and firms under sanctions.

Microsoft, by contrast, hasn't said whether it will halt its cloud services in the country, although it has suspended all new sales of products and services.

U.S.-based Cogent, which provides a major "backbone" for internet traffic, has cut direct connections inside Russia but left open the pipes through subsidiaries of Russian network providers at exchanges physically outside the country. Another major U.S. backbone provider, Lumen, has done the same.

"We have no desire to cut off Russian individuals and think that an open internet is critical to the world," Cogent CEO Dave Schaeffer said in an interview. Direct connections to servers inside Russia, he said, could potentially "be used for offensive cyber efforts by the Russian government."

Schaeffer said the decision didn't reflect "financial considerations," although he acknowledged that the ruble's sharp drop, which makes imported goods and services more expensive in Russia, could make it difficult to collect customer payments. Meanwhile, he said, Cogent is providing Ukrainian customers free service during the conflict.

Schaeffer said these moves might impair internet video in Russia but will leave plenty of bandwidth for smaller files.

Other major backbone providers in Europe and Asia also continue to serve Russia, a net importer of bandwidth, said Doug Madory, director of internet analysis for the network management firm Kentik. He has noted no appreciable drop in connectivity from outside providers.

Cloudflare continues to operate four data centers in Russia even though Russian authorities ordered government websites to drop foreign-owned hosting providers as of Friday. In a March 7 blog post the company said it had determined "Russia needs more Internet access, not less."

Under a 2019 "sovereign internet" law, Russia is supposed to be able to operate its internet independent of the rest of the world. In practice, that has brought Russia closer to the kind of intensive internet monitoring and control practiced by China and Iran.

Its telecommunications oversight agency, Rozkomnadzor, successfully tested the system at scale a year ago when it throttled access to Twitter. It uses hundreds of so-called middleboxes — router-like devices run and remotely controlled by bureaucrats that can block individual websites and services — installed by law at all internet providers inside Russia.

But the system, which also lets the FSB security service spy on Russian citizens, is a relative sieve compared to China's Great Firewall. Andrew Sullivan, president of the nonprofit Internet Society, said there's no evidence it has the ability to successfully disconnect Russia from the wider internet.

"Walling off a country's internet is complicated, culturally, economically and technologically. And it becomes far more complicated with a country like Russia, whose internet, unlike China's, was not originally built out with government control in mind," he said.

"When it comes to censorship, the only ones who can really do it are the Chinese," said Serge Droze, a senior security engineer at Swiss-based Proton Technologies, which offers software for creating "virtual private networks," or VPNs, a principal tool for circumventing state censorship.

ProtonVPN, which Droze says has been inventive in finding ways to circumvent Russian blocking, reports clocking ten times as many daily signups than before the war. VPN services tracked by researchers at Top10VPN.com found Facebook and Twitter downloads surging eight times higher than average. Its research found the Kremlin to have blocked more than 270 news and financial sites since the invasion, including BBC News and Voice of America's Russian-language services.

Russia's elites are believed to be big VPN users. No one expects them to disconnect.

Russian authorities are also having some success blocking the privacy-protecting Tor browser, which like VPNs lets users visit content at special ".onion" sites on the so-called dark web, researchers say. Twitter just created a Tor site; other outlets such as The New York Times also have them.

The Kremlin has not, however, blocked the popular Telegram messaging app. It's an important conduit for Ukrainian government ministries and also for Meduza, the Latvia-based independent Russian-language news organization whose website is blocked in Russia. Meduza has 1 million followers on Telegram.

One reason may be that Telegram is also a vital conduit for Kremlin propagandists, analysts say.

Additionally, Telegram does not feature default end-to-end encryption, which renders messages unreadable by the company and outsiders, as the popular U.S.-based messaging apps Signal and WhatsApp do. WhatsApp is owned by Facebook's parent, Meta. Telegram does offer users fully encrypted "private chats," although users have to make sure to activate them.

After the invasion, Signal founder Moxie Marlinspike tweeted a reminder that sensitive communication on insecure apps can literally be a matter of life and death in war. A Signal spokesman would not share user numbers, but WhatsApp has an estimated 63 million users in Russia.

Being able to access outside websites and apps vital to staying informed depend, however, on foreign-based VPN services that Russians say they are having trouble paying for since Visa and Mastercard cut off their country.

#### **24. Russia-Ukraine War threatens wheat supply, jolts prices**

Wall Street Journal, 13 Mar 22, Ryan Dezember

Russia's invasion of Ukraine threatens a big portion of the world's wheat supply and has sent prices on a dizzying ride to new highs as well as the sharpest weekly drop in years.

Wheat stockpiles were already running low and prices were the highest in years thanks to two years of poor growing weather when Russia's attack jammed up Black Sea trading and endangered nearly a third of the world's exports. The invasion prompted fears of food shortages in countries fed with imported grain and pushed prices to new highs.

Milling wheat in Paris and the most-traded U.S. futures contract, for soft red winter wheat delivered to Chicago, notched record prices early in the week. Then they plunged. Chicago futures ended the week 8.5% lower, the worst weekly performance since 2014 when wheat was coming down from a drought-induced spike. French markets, as well as on-the-spot trading in St. Louis and Kansas City, followed similar arcs.

Still, the benchmark U.S. price, at \$11.07 a bushel, is 72% higher than a year earlier and analysts expect the war will keep wheat high. Germany's Commerzbank AG on Friday boosted its spring-quarter price forecasts by 19% for Chicago futures and by about 14% in Paris.

Rising wheat points to further inflation of food prices and another force blunting the post-pandemic economic recovery. Global food prices hit an all-time high in February, according to the United Nations' Food and Agriculture Organization. U.S. food prices in February were up 7.9% from a year earlier, according to the Bureau of Labor Statistics, taking a big bite out of Americans' purchasing power.

Analysts and traders don't know yet the extent to which global wheat supplies will be dented by the war. What remains of last year's crop has been kept off market due to the closure of Ukrainian ports and shippers' hesitancy to enter a war zone to fetch Russian wheat. Meanwhile, it is unclear if growers in the region will be able to harvest winter wheat, which was planted in autumn, or plant spring crops in the coming weeks.

"Russian ports are operating normally but no one is willing to pay extremely high insurance costs to book cargoes from there," said Will Osnato, senior research analyst with Gro Intelligence, an agricultural data firm.

Since wheat is priced in dollars, exporters in Russia, where the currency has plunged about 40% in 2022, could take cues from South American growers who in years past hedged their own currency devaluations by holding on to grains.

“This is the fog of war,” said Dave Whitcomb, head of research at Switzerland’s Peak Trading Research. “We just don’t know.”

The uncertainty inspired a frenzy of speculation that exacerbated the price swings. Investors poured so much cash into the Teucrium Wheat Fund, WEAT 3.40% which holds futures, that it ran out of shares to sell on Monday. The previous trading day, March 4, the exchange-traded fund issued about 16 million new shares, which was more than the 13 million or so that were outstanding before the invasion. U.S. financial regulators granted the fund permission on Wednesday to create and sell additional shares.

The fund’s assets under management ballooned to nearly \$500 million, up from \$86 million before Russia’s attack, but dropped to about \$341 million by the end of the week as wheat futures shed price.

“In six weeks they’ll start planting in Ukraine and Russia,” said Sal Gilbertie, president of Teucrium Trading LLC, which manages the wheat fund. “If it’s disrupted that means a future reduction in supplies that the world is counting on.”

The U.S. Department of Agriculture on Wednesday lowered its expectations for Russian and Ukrainian wheat exports during the current marketing year, which began in June, by about 12%. Some of the lost supply will be replaced by exports from Australia, where a record harvest is expected, and India, which has been ramping up shipments abroad amid a string of bumper crops, the Agriculture Department said in its monthly market forecast.

The Agriculture Department expects U.S. farmers to plant slightly more wheat than last year, when the fewest acres were sown in more than a century. Lower yields are anticipated, due to continuing drought in the West and Northern Plains.

While American consumers can expect more sticker shock at the grocery store, the loss of Black Sea exports risks leaving some countries that rely on imports unable to meet their grain needs, analysts and traders say.

Egypt, the world’s largest wheat importer, recently canceled a tender after receiving a limited number of pricey offers. Turkey reduced an order size. Tanzania recently said that its wheat import bill jumped 50% for the 12 months through January, before the Russian attack roiled the market.

“The world’s poorest are going to suffer from this war,” said Mr. Gilbertie. “It’s a crime against humanity.”

## **27. How does it End? A way out of the Ukraine War proves elusive.**

New York Times, 13 Mar 22, David E. Sanger and Eric Schmitt

The United States accurately predicted the start of the war in Ukraine, sounding the alarm that an invasion was imminent despite Moscow's denials and Europe's skepticism. Predicting how it might end is proving far more difficult.

There are three separate back-channel efforts underway to start negotiations — by the leaders of France; Israel and Turkey; and, in a recent entree, the new chancellor of Germany. But so far, all have hit the stone wall of President Vladimir V. Putin's refusal to engage in any serious negotiation. At the Pentagon, there are models of a sloggling conflict that brings more needless death and destruction to a nascent European democracy, and others in which Mr. Putin settles for what some believe was his original objective: seizing a broad swath of the south and east, connecting Russia by land to Crimea, which he annexed in 2014.

And there is a more terrifying endgame, in which NATO nations get sucked more directly into the conflict, by accident or design. That possibility became more vivid on Sunday, when Russian missiles landed in Ukraine's western reaches, an area unscathed until now by the 18-day-old conflict, about a dozen miles from the Polish border. Russia declared over the weekend that continued efforts to funnel weapons through that region to the Ukrainian forces would make the convoys "legitimate targets," a warning that just because the weapons are being massed on NATO territory does not mean they are immune from attack.

In interviews with senior American and European officials in recent days, there is a consensus on one point: Just as the last two weeks revealed that Russia's vaunted military faltered in its invasion plan, the next two or three may reveal whether Ukraine can survive as a state, and negotiate an end to the war. So far even the most basic progress, such as establishing safe humanitarian corridors, has proved elusive.

And now, what troubles officials is that Mr. Putin may double down and expand the fight beyond Ukraine.

In private, officials express concern that Mr. Putin might seek to take Moldova, another former Soviet republic that has never joined NATO and is considered particularly vulnerable. There is renewed apprehension about Georgia, which fought a war with Russia in 2008 that today seems like a test run for the far larger conflict playing out.

And there is the possibility that Mr. Putin, angered by the slowness of his offensive in Ukraine, may reach for other weapons: chemical, biological, nuclear and cyber.

Jake Sullivan, Mr. Biden's national security adviser, mentioned that scenario on Sunday, appearing on CBS's "Face the Nation." "Part of the reason why Putin is resorting to the

possibility of extreme tactics like the use of chemical weapons is because he's frustrated because his forces aren't advancing," he said.

Mr. Sullivan said that Russia would suffer "severe consequences" if it used chemical weapons, without specifying what those would be. He sidestepped the question of how Mr. Biden would react. So far he has said the only thing that would bring the United States and its allies directly into the war would be an attack on NATO nations. Quietly, the White House and the senior American military leadership have been modeling how they would respond to a series of escalations, including major cyberattacks on American financial institutions and the use of a tactical or "battlefield" nuclear weapon by Mr. Putin to signal to the rest of the world that he would brook no interference as he moves to crush Ukraine.

Even with Ukrainians begging for more offensive weapons and American intervention, Mr. Biden has stuck to his determination that he will not directly engage the forces of a nuclear-armed superpower.

"The idea that we're going to send in offensive equipment," Mr. Biden said in Philadelphia to the House Democratic Caucus on Friday, "and have planes and tanks and trains going in with American pilots and American crews, just understand — and don't kid yourself, no matter what you all say — that's called 'World War III.' OK? Let's get it straight here."

### **Diplomacy: Deciphering Putin's Bottom Line**

Early last week there was a glimmer of hope that a real negotiation would begin that could establish humanitarian corridors for Ukrainians to escape the horror of intense shelling and missile attacks, and perhaps lead to peace talks. Dmitri Peskov, the Kremlin spokesman and a confidant of Mr. Putin, said that if Ukraine changed its constitution to accept some form of "neutrality" rather than an aspiration to join NATO; recognized that the separatist areas of Donetsk and Lugansk were independent states, and that Crimea was part of Russia; the military strikes would stop "in a moment."

In an interview with ABC News the next day, President Volodymyr Zelensky of Ukraine seemed surprisingly open to the idea. He said he had "cooled down" on joining NATO, saying it was clear the Western alliance "is not prepared to accept Ukraine." And while he did not say he could accept a carve-out of part of the country, he said that "we can discuss and find a compromise on how these territories will live on."

But it is unclear whether Mr. Putin himself would take that deal. Separate conversations between the Russian leader and President Emmanuel Macron of France, Chancellor Olaf Scholz of Germany, Prime Minister Naftali Bennett of Israel and President Recep Tayyip Erdogan of Turkey all circled the same issues, but left his interlocutors wondering if they were being played for time as the war ground on.

A French government account of a call to Mr. Putin on Saturday by Mr. Macron and Mr. Scholz termed it "disappointing with Putin's insincerity: He is determined to continue the war." Wendy

Sherman, the deputy secretary of state, said there was no evidence from the conversations so far that Mr. Putin has changed course; he remains “intent on destroying Ukraine.”

Each of those leaders checked in with senior U.S. administration officials before and after their talks with Mr. Putin, and they have been speaking with Mr. Zelensky as well. The United States has kept some distance — in part because no senior Russian officials will communicate with their American counterparts, including with the kind of talks that were routine in the run-up to the war.

The best hope, American and European officials say, is that Mr. Putin concludes that he must scale back his goals in the face of the economic sanctions — especially the crippling of Russia’s central bank and the prospect that the country will default quickly on its obligations. Yet should Mr. Zelensky actually strike a deal with Mr. Putin, that could lead to a hard decision for the United States: whether to lift any of the sanctions that it has coordinated with nations around the world.

### **A Worse Alternative: Long, Slow Slog**

Despite his military’s logistical problems, Mr. Putin appears intent on intensifying his campaign and laying siege to Kyiv, the capital; Kharkiv, the country’s second-largest city; and other Ukrainian urban centers.

But even as Mr. Putin presses on with his strategy to pound Kyiv into submission, Russian air and ground forces are confronting Ukrainians motivated to fight, senior Pentagon and U.S. intelligence officials said.

William J. Burns, the C.I.A. director, told lawmakers last week that he was anticipating an “ugly next few weeks.”

“I think Putin is angry and frustrated right now,” Mr. Burns said. He is likely to “try to grind down the Ukrainian military with no regard for civilian casualties,” he added.

Indeed, even as Russia widened its artillery, missile and bombing strikes on Sunday, Russian and Ukrainian forces were girding for what is shaping up to be a climactic battle in Kyiv.

Mr. Putin has demonstrated in past conflicts in Syria and Chechnya a willingness not only to bomb heavily populated areas but also to use civilian casualties as leverage against his enemies. Senior U.S. officials said the coming weeks could see a long, drawn-out fight with thousands of casualties on both sides, as well as among the roughly 1.5 million citizens remaining in the city.

Russian and Ukrainian forces are now pitted in fierce street fighting in the suburban towns around the capital. Russian forces greatly outnumber the Ukrainian Army, but the Ukrainians have been ambushing them with Javelin anti-tank missiles supplied by NATO and the United States.

Lt. Gen. Scott D. Berrier, the director of the Defense Intelligence Agency, told lawmakers last week there was a limit to how long Kyiv could hold on as Russian forces edged closer from the

east, north and south, tightening the vise. “With supplies being cut off, it will become somewhat desperate in, I would say, 10 days to two weeks,” General Berrier said.

Another senior U.S. official, speaking on the condition of anonymity to discuss confidential intelligence assessments, said it could take up to two weeks for Russian forces to encircle Kyiv and then at least another month to seize it. That would require a combination of relentless bombardment and what could be weeks or months of door-to-door street fighting.

“It will come at a very high price in Russian blood,” said retired Adm. James G. Stavridis, the former supreme allied commander for Europe. That high cost, he added, could cause Mr. Putin to destroy the city with an onslaught of missiles, artillery and bombs — “continuing a swath of war crimes unlike any we have seen in the 21st century.”

### **Abandoning Plan A, and Dividing the Nation**

The Russian assault has so far failed to achieve any of Mr. Putin’s initial objectives. But on the battlefield, he is closer to some goals than others.

Beyond Kyiv, the northern cities of Kharkiv, Chernihiv and Sumy remain encircled, or nearly so, and continue to suffer heavy Russian shelling. Progress in the east and south, while slow, has been grindingly steady. But it also hints what a divided Ukraine might look like.

Russian forces are still subjecting Mariupol to siege and bombardment, but are close to securing that strategic southern port city and, with it, a land bridge from Crimea in the south to the Donbas region in the east that has been controlled by Russian-backed separatists since 2014.

And if Russia can seize Odessa, a pivotal Black Sea port city, and perhaps the remaining Ukrainian coast to the southeast, it would deprive Ukraine of important access to the sea.

Senior Pentagon officials said the key issue now is maintaining extreme pressure on Russia in hopes that Mr. Putin will cut his losses and settle for the Russian-speaking south and east.

Yet the Russian attacks in western Ukraine over the past two days underscore Mr. Putin’s continued determination to control the entire country, starting with Kyiv. It remains unclear how he would find the forces to occupy it, which could require a bloody, yearslong guerrilla war.

“The most probable endgame, sadly, is a partition of Ukraine,” said Mr. Stavridis, pointing to the outcome of the Balkan wars in the 1990s as a model. “Putin would take the southeast of the country, and the ethnic Russians would gravitate there. The rest of the nation, overwhelmingly Ukrainian, would continue as a sovereign state.”

### **Worst-Case Scenario: Escalation**

The fear now is that the war could expand.

The more the fighting moves west, the more likely it is that an errant missile lands in NATO territory, or the Russians take down a NATO aircraft.

Mr. Putin has used chemical weapons before against political opponents and defectors, and he might be inclined to do so again. Using battlefield nuclear weapons would cross a threshold, which most American officials believe even Mr. Putin would not do unless he believed he was facing the need to withdraw his troops. But the possibility of a nuclear detonation has been discussed more in the past two weeks than in years, officials say.

And finally, there are cyberattacks, which have been strangely missing from the conflict so far. They may be Mr. Putin's most effective way of retaliating against the United States for grievous harm to the Russian economy.

So far there are none of the procedures in place that American and Russian pilots use over Syria, for example, to prevent accidental conflict. And Mr. Putin has twice issued thinly veiled reminders of his nuclear capabilities, reminding the world that if the conflict does not go his way he has far larger, and far more fearsome, weapons to call into play.

## **28. China wanted to appear neutral between Russia and Ukraine. It isn't**

Los Angeles Times, 13 Mar 22, Doyle McManus

When Russia invaded Ukraine last month, a spate of wishful thinking ran through the West that China, a great power with friends on both sides, might step in to mediate a cease-fire.

China's government struck a pose of neutrality, called for a peaceful resolution and said it supported the principle of "territorial integrity." Ukrainian President Volodymyr Zelensky made a public plea to China's Xi Jinping to intervene.

But Xi has been missing in action — and in practice, his policies have been far less neutral than advertised.

China hasn't condemned the invasion and initially didn't even call it a war. It still hasn't acknowledged which country's tanks crossed the other's borders.

Xi has talked by telephone with Russian President Vladimir Putin, but he hasn't talked with Zelensky.

"China supports Russia in resolving the issue through negotiation," China's official summary of the Xi-Putin call said.

Last week, China's foreign minister called Russia his country's "most important strategic partner" and said their relationship was "ironclad."

Meanwhile, China's Foreign Ministry has endorsed Russian propaganda claims that the U.S. military is running bioweapons laboratories in Ukraine. The charge is false; the U.S. has funded programs to destroy old bioweapons, not produce new ones.

There's a contradiction at the heart of China's foreign policy. China wants to be seen as a neutral power. But the way it calculates its interests — giving top priority to reducing the global influence of the United States — makes neutrality on issues involving Russia, its biggest ally, almost impossible.

Less than three weeks before Russia's invasion of Ukraine, Xi welcomed Putin at a summit meeting in Beijing and declared that their partnership had "no limits."

"China's policy is based on Xi Jinping's view of China's interests, and he sees the United States as implacably hostile," Bonnie Glaser, a China scholar at the German Marshall Fund, told me. "He sees Russia as his only ally against the United States and the other democracies.... I don't think China can in any way be neutral."

"At a strategic and diplomatic level, they've clearly leaned toward Russia," agreed Evan Feigenbaum, a former State Department official now at the Carnegie Endowment for International Peace. "It's a deliberate choice."

The war in Ukraine may have "unsettled" China's leaders, but it doesn't appear to have shaken the Xi-Putin partnership, CIA Director William Burns told Congress last week.

China "has invested a lot in the relationship," Burns said. "I don't expect that to change anytime soon."

Still, two big factors limit how far China is willing to lean in Russia's direction.

Economics is the first: China's prosperity depends on global trade, not trade with Russia, so it wants to avoid running afoul of the massive sanctions the U.S. and its allies have put in place against Moscow.

Last week, Russian officials reported that China had turned down an emergency request for aircraft parts, apparently to maintain Chinese access to Western suppliers like Boeing and Airbus.

But on a less visible level, Chinese banks are working with Russian banks to use China's UnionPay to replace Visa and Mastercard, shut down by sanctions.

The pattern, Feigenbaum said, is an attempt to "straddle" the sanctions: complying where necessary, but still looking for opportunities to make deals with Russia.

A second limit involves China's desire to maintain a good relationship with Europe, where most countries have been quick to support Ukraine.

"There's a potential for China's relationship with the European Union to get much worse," Feigenbaum said. "China may want to avoid that."

One limit that hasn't seemed to affect China's policies, though, is Beijing's long-standing adherence to principles of sovereignty and territorial integrity. "They have essentially jettisoned those principles," Feigenbaum said.

For all those reasons, the idea that China might serve as a neutral mediator to help end the war never had much of a chance.

In any case, it probably wasn't very workable. China's diplomats have little experience mediating international disputes, least of all in Europe.

And while officials from Ukraine and Russia have met three times, their positions have been too far apart to produce even a temporary cease-fire.

Several international leaders have offered their services as mediators — France's Emmanuel Macron, Israel's Naftali Bennett, Turkey's Recep Tayyip Erdogan — without success. Putin appears intent on pursuing his military offensive as far as he can before entering serious negotiations.

But China was never neutral to begin with.

And that reflects what may be the most important fact about the new world disorder that Putin's invasion has unleashed:

China's Xi has made a choice. He believes the coming decades will be dominated by confrontations between the United States and China, with Russia as China's sole important ally.

For anyone pondering the parallels between this new period and the Cold War, there's an eerie echo of the Sino-Soviet alliance that once sought to dominate Eurasia — only this time, with China as the senior partner.

## **29. Is it time to call Putin's War in Ukraine genocide?**

New Yorker, 13 Mar 22, Philip Gourevitch

"We have to call this what it is," Volodymyr Zelensky said, late last month, a few days after Vladimir Putin had ordered the invasion and conquest of Ukraine. "Russia's criminal actions against Ukraine show signs of genocide." President Zelensky, who lost family members during the Holocaust, and who also happens to have a law degree, sounded suitably cautious about invoking genocide, and he called for the International Criminal Court in The Hague to send war-crimes investigators as a first step. But such investigations take years, and rarely result in convictions. (Since the I.C.C. was established in 1998, it has indicted only Africans; and Russia, like the United States, refuses its jurisdiction.) The only court that Zelensky can make his case in for now is the court of global public opinion, where his instincts, drawing on deep wells of courage and conviction, have been unerring. And by the end of the invasion's second week with Putin's indiscriminate bombardment of civilian targets intensifying, and the death toll mounting rapidly; with more than two and a half million Ukrainians having fled the country, and

millions more under relentless attack in besieged cities and towns; and with no end in sight—Zelensky no longer deferred to outside experts to describe what Ukrainians face in the most absolute terms. “I will appeal directly to the nations of the world if the leaders of the world do not make every effort to stop this war,” he said in a video message on Tuesday. He paused, and looking directly into the camera, added, “This genocide.”

Genocide, the word and the idea, is colloquially understood to describe an effort to exterminate members of a definable identity group through targeted killings. Because the best-known cases involve staggering death tolls—the extirpation of Native Americans and Indigenous peoples in the United States and Canada, of Armenians under the Ottomans, of European Jews in the Holocaust, of Rwandan Tutsis at the hands of Hutu Power in 1994—genocide is often assumed to mean mass slaughter, and to have drastic demographic consequences. But, in international law, genocide has nothing explicitly to do with the enormity of criminal acts. Rather, according to the 1948 United Nations Convention on the Prevention and Punishment of the Crime of Genocide, it is defined by the enormity of criminal intent:

- Genocide means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such: (a) Killing members of the group; (b) Causing serious bodily or mental harm to members of the group; (c) Deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part; (d) Imposing measures intended to prevent births within the group; (e) Forcibly transferring children of the group to another group.

By this standard, Putin’s war of obliteration comes readily into focus as genocidal, if not to date, anyway—as comprehensive genocide. His apparent objective is to extinguish Ukraine as an independent nation, and to subsume it and its surviving population into Russia, where he claims it naturally belongs. As he prepared to attack, massing his forces on Ukraine’s borders, and pretending to engage in diplomatic brinkmanship, he seemed to imagine that the threat of overwhelming force might inspire Ukraine’s leaders to capitulate and surrender preemptively to his diktat. In early February, after President Emmanuel Macron, of France, flew to Moscow to try to reason with him, they held a joint press conference in which Putin said, as if addressing Ukraine directly, “Like it or not, take it, my beauty.” The line was immediately recognized as a reference to a luridly menacing song about necrophiliac rape by the punk band Red Mold. The Kremlin and its press organs airbrushed the taunt out of the official transcripts. But Putin had made himself clear: he viewed Ukraine as a corpse, and would have his way with it.

In announcing the start of the war, Putin spoke dismissively of Ukraine as a historical fiction, denying its sovereign existence, and portrayed his invasion, absurdly, as a sort of humanitarian mission to “de-Nazify” the place, to protect its people from humiliation and genocide at the hands of their own popularly elected leaders, and to bring those leaders to trial. Putin’s world-upside-down framing treated questions of genocide and war crimes, as well as of democracy and accountability, as make-believe, and therefore ridiculous; and it gave off a strong whiff of the propaganda tactic known as “accusation in a mirror,” in which a speaker accuses his prospective victims of plotting to do to him what he is plotting to do them. As Jen Psaki, the White House press secretary, recently tweeted, “Russia has a track record of accusing the West of the very

violations that Russia itself is perpetrating.” Zelensky put it more succinctly: “If you want to know what Russia is planning, look at what Russia is accusing others of planning.”

Putin evidently anticipated that his military juggernaut would meet little resistance, swiftly take Kyiv, and replace Zelensky’s government with an obliging puppet regime. On the third day of the war, even as his forces began to show their weakness, and Ukraine’s began to show their strength, an essay prematurely hailing Putin’s victory in Kyiv, and the dawn of a new world order, appeared on a Kremlin-controlled news platform. It was promptly taken down, but not before being preserved, and, while it cannot be regarded as direct evidence of Putin’s intent, its rhetoric, which reads in parts as if it were repurposed from the archives of the Third Reich, suggests the attitude among his propagandists:

Vladimir Putin has assumed, without a drop of exaggeration, a historic responsibility by deciding not to leave the solution of the Ukrainian question to future generations. After all, the need to solve it would always remain the main problem for Russia. . . . Now this problem is gone—Ukraine has returned to Russia. . . . Russia has not only challenged the West, it has shown that the era of Western global domination can be considered completely and finally over.

Meanwhile, in reality, the prospect of Russian glory looks as diminished as the exchange rate of the ruble. That increases the risk of genocidal atrocities. Putin has no apparent exit strategy; and the worse the war has gone for him, the worse he has made it for Ukraine, raining hellfire on its civilian infrastructure, in what appears to be a determination to reduce it, as his forces previously did in parts of Chechnya and Syria, to lifeless rubble. By his own account, Putin’s fight is, above all, against humiliation, and that is a fight he’s losing badly. The war is only in its third week, and he has repeatedly signaled that he is prepared to use his nuclear arsenal, a threat so grave from a man so given to the use of annihilating force that it would be a folly to assume that he’s bluffing.

Zelensky has spent his days under attack convincingly presenting himself and Ukraine to the rest of the world as standing the ground for the collective interests and future of sovereign self-determination against despotism. He has been received with an immediate and extraordinary unanimity of solidarity and commitment: arms, intelligence-sharing, aid, and crushing economic sanctions against Russia. But that has not been enough to spare the Ukrainians, and Zelensky has now taken to using his Kyiv bunker as a bully pulpit to try and shame the world into joining his fight by imposing a no-fly zone over Ukraine. Russia, he says, is alone to blame for the war and its horrors, but he insists that the rest of the world—and here, he singles out the NATO powers—shares responsibility.

“If the world stands aloof, it will lose itself. Forever,” Zelensky said, on Tuesday. “Because there are unconditional values. The same for everyone. First of all, this is life. The right to life for everyone.” Then, on Wednesday, after Russia bombed a maternity hospital in Mariupol, he asked, “How much longer will the world be an accomplice ignoring terror? Close the sky right now!” Last week, the mayor and deputy mayor of Kharkiv and Mariupol also described Putin’s campaign as genocide, and Zelensky said that the hospital attack was “the final proof—proof that genocide of Ukrainians is taking place.” He called out Europeans collectively, and said: “You saw. You know.”

It is true that we are all aware of what's happening: the systematic assault on civilians, on hospitals, on refugee-evacuation routes, on holy places and libraries and Holocaust memorials, and the shrugs and denial from the Kremlin, whose only public acknowledgment of the horror has been to make it a crime punishable by fifteen years in prison to speak of what's happening as "war" or "invasion." Many of the NATO countries that Zelensky is seeking to draw into the war have ignored genocides and other mass atrocities in the past, and a few had a hand in them. But none of the countries that Zelensky is appealing to now fails to recognize the enormity of either Putin's actions or his intent, or sees any advantage in aiding or abetting them. Rather, it is Zelensky, in this instance, who is not acknowledging the larger reality: that the world has never before been confronted by a genocidal war waged by a man brandishing nuclear weapons.

On a visit to Poland on Thursday, Vice-President Kamala Harris called for an investigation of "atrocities" by Russian forces, but stopped short of calling them either war crimes or genocide. The Polish President, Andrzej Duda, speaking beside her, did not hesitate. He said that Russia's invasion is "bearing the features of a genocide — it aims at eliminating and destroying a nation." Neither leader responded directly to Zelensky's plea for a no-fly zone, and, on Friday, President Biden effectively rejected the idea, saying, "We will not fight the third World War in Ukraine." There is, after all, more than one way for the world, as Zelensky put it, to lose itself forever.

### **30. The West must decide how far is too far with Russia**

The Hill, 13 Mar 22, Joshua C. Huminski

Russia's ultimate aims in Ukraine remain unclear. Now two weeks into the invasion, Moscow's initial attempts at a lightning assault appear stymied, and as a consequence, the Kremlin is increasing the intensity and brutality of its campaign. Thus far, however, Russia's so-called "special military operation" has remained limited to Ukraine. There is, however, a risk that this does not remain the case, and should the conflict expand the consequences could be dire for Europe and indeed the world.

The unanimity of response to Russia's war undoubtedly took the Kremlin by surprise, as it did some analysts. To borrow a phrase from retired Rep. Glenn Nye (D-Va.), democracies are often slow to act, but when they get moving nearly everything is on the table. It is that latter part that is of particular concern, as an over-correction could well lead to a significant escalation and an expanded war.

Prior to Russia's invasion, there was an almost institutional unwillingness to discuss what consequences there might have been if President Vladimir Putin decided to invade. To be sure there were hints such as halting Nord Stream 2, additional personal sanctions and possibly disconnecting Russian banks from the SWIFT network, but nothing concrete was publicly presented to Moscow.

Now that Russia has indeed invaded democracies are moving to act with great alacrity—the speed with which the sanctions were applied, and both their size and the size of the targets are unprecedented. This week the United States announced a ban on Russian oil imports and the

United Kingdom and European Union are looking to phase out Russian energy as well. The West has frozen the assets of Russia's central bank, worth some \$630 billion. Certain banks have been cut off from SWIFT. The export of certain technologies and dual-use goods to Russia is now prohibited. Travel is sharply reduced with airspace closed to Russian-flagged aircraft.

These measures are already having a demonstrable effect on Russia's economy. The key interest rate in Russia has doubled, the stock market remains closed, the ruble has plummeted and the Kremlin is working to stop Russians from leaving with more than \$10,000 in hard currency. Yet, the full effects of this economic warfare will remain unclear for some time.

There is a real danger here that as the West continues to pile on sanctions and measures, it will only make the economic rubble bounce. This is all happening while there is very little clarity on what a cessation of hostilities or a political settlement to the war might look like, let alone how Russia might reconnect with the global economy. In less than two weeks, three decades of global economic integration were severed and there is no pathway to reestablishing those connections.

At the same time, the West is expanding its lethal aid to Ukraine. The United Kingdom is considering sending the Starstreak advanced anti-aircraft missile system to Kyiv. This joins next-generation anti-tank weapons such as the NLAW and Javelin, as well as the Stinger anti-aircraft missile. Amongst the commentariat, there are calls for increased aid and expanded measures that risk significant escalation. Some are calling for American aircraft to be transferred to Ukraine. Others are suggesting that NATO MiG-29 fighter jets be reflagged and sent forward to Kyiv – a measure described as untenable at the moment.

There are also increasingly assertive calls for the establishment of a no-fly-zone over Ukraine, the imposition of which would almost certainly see American or NATO pilots engaging Russian pilots over Ukraine, and possibly require strikes inside of Russia to suppress air defenses. Even more alarmingly, there are also some openly calling for the removal of Putin. Backing Russia's president into a corner, leaving no option for de-escalation, or making it an existential conflict for the regime is a sure way to widen the war.

Russia has, thus far, remained unexpectedly restrained in responding – at least publicly – to the West's involvement in the war in Ukraine. We have not seen significant retaliatory measures for the incoming aid, we have not yet seen the expected widespread cyberattacks against NATO or the United States and we have not seen the conflict expanded beyond Ukraine's borders. To be sure, Russia has rattled the nuclear saber, is threatening to nationalize foreign companies and is continuing its campaign of disinformation, all of which is unsurprising (and represents the limited tools Moscow still possesses). That restraint is unlikely to last, and there is a chance that the West in its over-correcting zeal risks crossing an unseen red line. It may already be encroaching on that red line: Russia's Deputy Foreign Minister, Sergei Rybakov, said Moscow "warned the U.S. that pumping weapons from a number of countries it orchestrates isn't just a dangerous move, it's an action that makes those convoys legitimate targets."

This is not to say that the West should suspend its aid to Ukraine, but it must be very cautious and very calculated in how it proceeds. Author Herman Kahn defined escalation as a ladder, the climbing of which presents policymakers with new decisions and new calculus at each rung. But

there is also the risk of an escalation slide, the acceleration of which becomes increasingly hard to slow or stop. To avoid this, the West and Russia must be abundantly clear with one another and communicate at the highest levels. The West must be very cautious in how it proceeds in its aid Kyiv.

Most importantly, the West must articulate a desired end-state and begin to think about creating conditions for that possible outcome. What is a satisfactory outcome for the West? For Ukraine? For Russia? Is Crimea on the table? Is it off-limits? What does Moscow need to do to reconnect with the global economy? What are acceptable terms for the Kremlin? Not the spurious arguments of demilitarization or de-Nazification put forward by the propagandists, but practical and viable terms. War and diplomacy happen simultaneously — they are not binary states, yet that is an assumption that appears present in policy discussions.

Until we articulate those end goals and begin working towards defining the conditions on the ground to facilitate that outcome, we risk blindly walking into an escalation from a limited war to a regional conflict, or something worse. The West needs better statecraft now, more than ever, not performative overcorrection.

### **31. Why doesn't the Arab world break with Putin? Consider Sudan's example**

Salon.com, 13 Mar 22, Mohammad Ali Salih

There is considerable current discussion about whether the decades-long push of NATO's expansion eastward, encouraged by the United States, is to be blamed for the Russian invasion of Ukraine, as famous "realist" John Mearsheimer, of the University of Chicago, has argued. That discussion should also include whether the U.S. is to blame for the refusal, or at least the hesitancy, of some Arab countries to condemn the Russian invasion, which reflects widespread Arab resentment of U.S. policy over the last several decades.

As Time magazine reported last week, the Arab League, representing 22 Arab countries, issued a recent statement that "failed to condemn Russia's invasion and offered little support to the Ukrainians." This was largely because, according to Time, the Arabs "generally see in Russia a substantial global power that continues to have relevance in their region ... and is, also, a useful capital to publicly 'flirt' with when relations are strained" with the U.S. and the West.

Recent policies seen in Sudan, a member of the Arab League, offer one example.

Along with fellow Arab League nations Algeria and Iraq, Sudan abstained when the UN General Assembly overwhelmingly condemned the Russian invasion. (Morocco was absent, or might very well have joined them.) Additionally, after a week-long visit to Russia during the invasion, Sudan's second most powerful leader, Gen. Mohammed Hamdan Dagalo, also known as

"Hemedti," said his country had no problem with Russia opening a naval base on its Red Sea coast.

Dagalo told a news conference upon his return to Khartoum, according to Reuters, that "Russian investments were discussed on the trip," and although he called for a diplomatic solution to the Ukraine problem, before the invasion he had said that "Russia had the right to defend its people."

Dagalo was the leader of the famous Arab Janjaweed militia that, starting in 2003, fought on the side of the Sudanese Islamist military government led by Gen. Omar al-Bashir in the western province of Darfur. That led to what has been described as the worst genocide of the 21st century, resulting in the death of hundreds of thousands of civilians and the displacement of millions. Dagalo's forces relied heavily on Russian and Chinese weapons during that conflict.

Although Dagalo's relations with the U.S. improved after a popular revolution in Sudan toppled al-Bashir in 2019, he recently went back to his old Russian friends — and it's more than the "flirt" mentioned by Time.

At the same time, the Sudanese people have their own grudges against the U.S. for not fulfilling its promises to promote democracy in their country after the toppling of al-Bashir.

For decades, Sudan's relations with Russia have been in direct response to its relations with the U.S., an openly cynical policy that sought to play the two global powers against each other.

Al-Bashir, whose rule started in 1989, collided with the U.S. from the beginning by declaring "al-Mashru' al-hadari al-Islami" (or the "Islamic Civilization Project"), intended to spread Islam in neighboring Christian countries; by fighting Christian and pagan citizens in the southern part of the country; and by leading a radical pan-Islamic group that invited known Muslim terrorists, including Osama bin Laden, to visit or reside in Sudan.

In response, the U.S. in 1993 designated Sudan as a sponsor of terrorism, imposed complete trade and financial sanctions in 1997 and launched a cruise missile attack on Sudan in 1998, as part of the response to the terrorist bombing of U.S. embassies in East Africa that same year.

Beyond the "flirt," Sudan allied with Russia not only by buying arms for its wars in Darfur and in the southern part of the country, but by enjoying Russian support at the UN against attempts to punish Sudan or its leaders for apparent or likely war crimes.

Want a daily wrap-up of all the news and commentary Salon has to offer? Subscribe to our morning newsletter, Crash Course.

In 2017, al-Bashir visited Russia, met President Vladimir Putin, signed agreements for more military help and economic cooperation, recognized the Russian annexation of Crimea and agreed to give the Russian Navy access to Sudanese ports.

But after the 2019 revolution that toppled al-Bashir, relations between Sudan and the U.S. changed overnight. Steps were taken to remove Sudan from the terrorism list, exchange

ambassadors, recognize Israel and clear Sudan's arrears with the World Bank, allowing for massive infusions of aid.

Most important, statements by top U.S. officials, some of whom visited Sudan, promised help for Sudan to run free and fair elections, which were meant to lead to a stable civilian government.

Secretary of State Antony Blinken said, on the second anniversary of the revolution: "Sudanese from all walks of life — especially Sudan's women and youth — showed great courage in taking to the streets. Some paid with their lives. Their bravery and sacrifice will forever remain an inspiration to all those seeking democracy. ...The United States will continue to stand with the Sudanese people as they strive for freedom, peace and justice."

Sen. Chris Coons, D-Del., tweeted: "As Sudan transitions toward a civilian & democratic government after the removal of long-time dictator Omar al-Bashir, it's critical to send a signal of support from the U.S. for the new government & to the Sudanese people fighting for their fundamental rights & freedoms."

Later, he and Sen. Chris Van Hollen, D-Md., traveled to Sudan and conveyed similar messages to both the military and the civilians. Coons introduced the Sudan Democracy Act to sanction those who undermine democracy, and announced that he had nominated several Sudanese civilian organizations for the Nobel Peace Prize.

But Blinken, the two senators and other top officials knew, or at least should have known, that the Sudanese military leaders who supported the popular uprising against al-Bashir and then joined the transitional government that was supposed to run free elections next year were not going to relinquish power easily.

First of all, the Sudanese military over the years has acquired private companies and established many of their own — about 300 companies altogether, which control about 70 percent of the government's annual budget.

Second, both Gen. Abdel-Fattah Burhan, chairman of the Transitional Sovereignty Council, and his deputy, Gen. Dagalo, are said to be on a list of those under investigation by the International Criminal Court for possible war crimes in Darfur. (Seven current or former Sudanese officers have already been indicted.)

Third and most important, the leading U.S.-allied governments in the region have strongly supported the Sudanese military, including Egypt, Israel and the Gulf states.

Blinken, Coons, Van Hollen and other top U.S. officials were said to have been surprised — but shouldn't have been — when, last October, the military faction of the shared transitional government, led by Burhan and Dagalo, launched a coup of their own, arresting their leading civilian allies and returning to power Islamist leaders from the al-Bashir regime.

Hundreds of civilians have been killed and thousands more injured during the last three years of demonstrations against the military. No end seems in sight.

When the U.S., the UN, the World Bank and the international community condemned the coup and suspended all promised economic and financial help to Sudan (amid repeated calls to end the violence against civilians), Dagalo and the military regime were ready to play the Russian card once again.

What should be done with Sudan now? The experience, if not the wisdom, of this 80-year-old journalist who was born and raised in Sudan suggests that Secretary Blinken, the two senators and other top U.S. officials who had promised to guarantee democracy for the Sudanese people should travel there again, with the goal of negotiating a compromise between the military leaders and the unarmed, mostly young pro-democracy demonstrators.

Attempting to punish the military regime by freezing badly-needed financial and economic aid will mostly hurt ordinary people in Sudan, as happened during the 30-year rule of the al-Bashir regime. The World Bank, always following the ups and downs of U.S. policy, should also restore its frozen aid. Finally, the U.S. should hold the current military leaders accountable for their repeated promises to run free and fair elections next year and then hand power to an elected civilian government.

There is no sense in the U.S. punishing the Sudanese people for its own refusal to follow through on its promise to help establish democracy in their country. It's also no secret that the U.S. record of support for democracy in Arab countries is nil and deeply shameful.

In 2013, the U.S. supported a military coup in Egypt, Sudan's neighbor, that toppled Egypt's first-ever elected president — negating years of earlier statements by top U.S. officials about supporting democracy in Egypt. Today, the U.S. sends an annual average of about \$2 billion in military and civilian aid to Gen. Abdul-Fattah el-Sissi's military regime in Cairo.

The cynical Sudanese generals, Burhan and Dagalo, have made no secret of their belief that the U.S. should treat them as it has treated their next-door neighbor — that's the price of their friendship.

Finally, the U.S. has no one to blame but itself for Sudan's reluctance, along with that of other Arab countries, to condemn the Russian invasion of Ukraine. The major factors include the decades-long U.S. support of Israel's expansionist policies; the U.S. invasion of Iraq in 2003, which disordered the entire region; and the aforementioned poor record of the U.S. in supporting Arab democracy.

As a result, we face the ironic fact that there is no democratic Arab country available today to point out an obvious contradiction: The U.S. is eager to support democracy in Ukraine, but far less so in the Arab world.

[Return to top](#)

principally responsible for the Ukrainian crisis.” Back in 2008, Foreign Affairs and PBS highlighted another theory by the same academic: “John Mearsheimer, political science professor at the University of Chicago, says a nuclear-armed Iran would bring stability to the region, but Dov Zakheim, former Pentagon official now with the Center for Naval Analyses, says it would trigger an arms race.” And, back in 2007, John Mearsheimer and Stephen Walt wrote a scathing attack on “the Israel Lobby and US Foreign Policy.”

### **How is this all linked?**

The argument is that NATO is responsible for pushing expansion in the early 2000s provoked Russia to attack Ukraine and that Israel is somehow harmful to US foreign policy because of the confrontation with Iran. Also, the argument Iran can bring stability to the Middle East is linked back to the idea that Russia was being innocently provoked. It showcases how Iran hopes to achieve in Iraq what Russia is doing in Ukraine.

Iran is counting on the US being afraid of “war.” It wants to turn Iraq into a “near abroad” and also swallow up Syria, Lebanon and Yemen; Russia wants to return Ukraine to its “near abroad” and counts on US isolationists, the far-left, far-right and “realists” in the West to agree with Russia’s “security needs” — Iran wants to ride that Russian train as far as it can as well.

### **46. Ukraine crisis and Pakistan**

DAWN, 13 Mar 22, Riaz Mohammad Khan

The Russian invasion of Ukraine is a point of inflection in world affairs, similar to the US outreach to China in the early 1970s and the collapse of the Soviet Union in 1991. The situation is unfolding. There are many imponderables including how it will impact Russia itself. Its consequential character is obvious but the direction is not clear. Pakistan should be concerned about what the development portends for the future.

Russia has ostensibly acted to secure its periphery. It has done so like a great power which accords primacy to its perceived interests rather than show sensitivity to the principles of interstate relations set out in the UN Charter. The invasion of Ukraine has been preceded by deep differences between Moscow and the West led by Washington with barely concealed ambition to bring into the fold of its political and security system not just the erstwhile Warsaw Pact countries but also Ukraine and Georgia which had once been Soviet territories. President Putin had repeatedly urged that Ukraine must not be part of NATO.

The quasi-ideological underpinning of this ambition was the belief in the emergence of a US-led unipolar world which did not countenance any sphere of influence, security or economic, by a rival power. For almost three decades, the US has enjoyed unprecedented economic and military preponderance globally. This propelled the expansion of NATO to the doorsteps of Russia, taking advantage of the desire of the East Europeans themselves even though in contravention of the reported verbal assurance given to Moscow at the time of the reunification of Germany. The US challenged Russia in the Middle East, and organized the Quad enlisting Japan and India as

partners in a wider Indo-Pacific strategy. The economic rise of China and signs of a resurgent Russia are viewed as a threat. Nonetheless, uni-polarism was inherently destabilizing in a world moving towards multipolarity. On the other hand, the Russian invasion displays utter disregard for UN Charter principles and international law. Russia faced no imminent threat to justify its action which is a fatal blow to aspirations for world peace based on principles and diplomacy and discourse among states. President Putin should have exercised a number of other less egregious options short of armed aggression against Ukraine.

### **How has Pakistan navigated this early phase of the crisis and what challenges lie ahead?**

The United States and Europe have reacted with most stringent economic sanctions, including the scuttling of the mega Nord Stream Gas pipeline from Russia to Germany, and steps to buttress the security of the eastern flank of NATO and support to Ukraine. Even if the security dimension remains confined to Central Europe and Ukraine, the global economic map will change with new walls blocking the erstwhile free flow of dollar-based finances and trade. This portends a new world order in which so far the United States appears to have a strong position. Europe has pulled together behind the United States as never before.

Beyond the European theatre which will now demand greater attention on the part of the United States, the US capacity for proactive security initiatives elsewhere particularly in Asia-Pacific will diminish. This will increase comfort space for China.

There are some diplomatic initiatives to arrest the conflict although their prospects remain clouded or unclear. Israel is trying mediation. Turkey offered a venue for talks between the Russian and the Ukrainian foreign ministers which reportedly discussed the resulting humanitarian crisis. In substance, Russia demands nothing short of a total surrender, while Ukrainians who are putting up remarkable resistance ask for a ceasefire and Russian withdrawal. There is a faint hope that Moscow may be content with Ukrainian neutrality and firm assurances that NATO will not further expand. Perhaps China, given the congruence of its interests with Russia especially in Central Asia, together with some EU countries can play a role. For any solution, however, Moscow will have to abandon its desire to absorb the entire or parts of Ukraine and replace the elected Ukrainian government and Washington will have to suppress its impulse to retain unipolar primacy.

### **Opportunities?**

Pakistan's decision to maintain the prime minister's visit was sound, given the fact that for years Pakistan had been trying to inject trust and facility in our relations with Moscow. Similarly, our decision to abstain was a logical choice following the Chinese and the Indian vote in the Security Council. Pakistan has been fairly pragmatic in its decisions when a situation involved major powers. In January 1980, as a lead country to negotiate a resolution in the Security Council on the Soviet military intervention in Afghanistan, we successfully resisted naming the Soviet Union and asked for the withdrawal of "foreign troops". Our official criticism of the US invasion of Iraq in 2003 or the American interventions in Syria and Libya was circumspect.

Principles are important, but nations weigh their core interests when taking decisions in fraught and critical situations. The démarche by EU ambassadors was understandable, but they overreached in making public their communication with the Foreign Office. There was no similar action in New Delhi. How could they entertain greater expectations from Islamabad given their opposition to Pakistan's interests in FATF or the Nuclear Suppliers Group or their near indifference to the plight of Kashmiris and the Hindutva-discriminated Indian Muslims? Regardless of this indiscretion which only deserved a riposte by the Foreign Office, we should maintain a clear emphasis in our statements in support of Ukraine's sovereignty and territorial integrity and avoidance of violence targeting civilians, while calling for recourse to diplomacy and to a peaceful resolution. But dragging this policy on to public platforms for domestic political advantage is inadvisable.

Are there any opportunities for Pakistan? Arguably, Pakistan's geopolitical relevance to both Russia and China will be enhanced, especially for possible trade and communications corridors. Afghanistan remains an obstacle. Also, unlike the countries endowed by Providence with oil, we will need capacities to leverage our location to build national strength. Mere aspiration is not enough. So far our domestic politics has shown inexcusable apathy towards this imperative as reflected in the sad predicament of our economy and education. Lastly, Pakistan is safe today because nuclear deterrence is an integral part of its security: a lesson reinforced by the Ukrainian crisis.

#### **47. Iran is attacking US facilities in Kurdish region in message to America**

Jerusalem Post, 13 Mar 22, Seth J. Frantzman

A large attack was carried out on Erbil, Iraq, overnight between Saturday and Sunday, with the Kurdistan Regional Government counter-terrorism units reporting that the 12 missiles were launched at 1:30 a.m.

"The attacks resulted in no casualties, and the missiles were launched from outside of Kurdistan and Iraq," the units said. This large attack was likely carried out from Iran.

The missiles struck near a large new US consulate currently being built in Erbil. The consulate is not in the center of the city and it is clear that coordinates for the consulate would have to be put into precision strikes of ballistic-style missiles. This is a tactic Iran has deployed before.

What we know, in the wake of the attack, is that Kurdistan regional authorities said there were no civilian casualties while Masrour Barzani, the Prime Minister of the autonomous Kurdish region, condemned the attack.

#### **A clear Iranian attack on the US in Iraq**

The Kurdistan Region is an autonomous area and since 2019 the US has increasingly positioned more forces in the region after Iran attacked US facilities in other parts of Iraq. After the US

The reporting also noted that “They said Russia and China are both seeking to bolster their influence in the Middle East and Africa, with Moscow being the more ‘acute threat’ right now.”

2. Politico was among media outlets also reporting on the same SASC testimony when noting that General McKenzie said the U.S. plans to approve the sale of F-15 fighter jets to Egypt. One quote reportedly included “In the case of Egypt, I think we have good news in that we’re going to provide them with F-15s, which was a long, hard slog,” and “They felt it was too long, it took too long.”
3. Arab News reported yesterday that the Gulf Cooperation Council is sponsoring unprecedented and comprehensive peace talks between warring factions in Yemen, including the Iran-backed Houthis, that could begin in Riyadh before the end of this month. Reuters added that “They said Houthi officials would be ‘guests’ of GCC Secretary General Nayef Falah Mubarak Al-Hajraf at the body’s Riyadh headquarters and would have his security guarantees if the group accepted the invitation for the talks, which are planned from March 29-April 7.”
4. Reuters reported late yesterday that NATO is set to tell its military commanders on Wednesday to draw up plans for new ways to deter Russia following Moscow’s invasion of Ukraine, including more troops and missile defenses in eastern Europe, officials and diplomats said. They noted that NATO Secretary General Jens Stoltenberg said on Tuesday, “We need to reset our military posture for this new reality” and “Ministers will start an important discussion on concrete measures to reinforce our security for the longer term, in all domains.”

---

### **29. The best peace plan for Ukraine is sending military support**

Washington Post, 15 Mar 22, David Ignatius

With the war for Ukraine in its third bloody week, the world faces two urgent questions: How do we help the brave Ukrainian people continue their fight for freedom? And how do we bring this war to an end before Ukraine is destroyed?

### **30. Russia's war will remake the world**

Financial Times (UK), 15 Mar 22, Martin Wolf

A new world is being born. The hope for peaceful relations is fading. Instead, we have Russia's war on Ukraine, threats of nuclear Armageddon, a mobilised west, an alliance of autocracies, unprecedented economic sanctions and a huge energy and food shock. No one knows what will happen. But we do know this looks to be a disaster.

### **31. Putin's war killed Syria diplomacy**

Foreign Policy, 15 Mar 22, Charles Lister

Russia's invasion of Ukraine and the resulting collapse of U.S. and European diplomatic relations with Moscow mean Syria diplomacy is now all but dead. Small signs that diplomacy may have been poised for renewed investment in early 2022 now feel like a distant memory.

### **32. How is Pakistan's military equipment affected by the Russian invasion?**

Defense News, 15 Mar 22, Usman Ansari

Despite having acquired key defense equipment from Ukraine since the 1990s, Russia's invasion of the country will not cause support issues for Pakistan, as this weaponry was already being phased out, an industry source has told Defense News.

### **33. Will PM's trip find a way to plug the energy gap?**

BBC News, 15 Mar 22, Laura Kuenssberg

The military consequences of the conflict of Ukraine are all too visible.

Boris Johnson is now trying to grapple with the economic effects too, arriving in the Middle East on Wednesday morning for a day of diplomacy with the leaders of the United Arab Emirates and Saudi Arabia.

### **34. OPEC and Russia: Will history repeat itself?**

The Hill, 15 Mar 22, Robin M. Mills

OPEC's recent meeting took just 10 minutes to decide there was no shortage of oil and no need to change its prescribed course. Markets thought differently, opening the following Monday and promptly soaring to \$139 per barrel for Brent crude, within touching distance of 2008's all-time nominal record of \$147. The oil exporters' organization is in danger of repeating past mistakes.

## ANALYSIS/COMMENTARY

---

### **48. The impact of Ukraine war on the Middle East**

Daily Sabah, 15 Mar 22, Muhittin Ataman

With the Ukraine war, which is considered one of the main milestones in recent world history, some of the main principles of international politics and the discourses that accompany it have changed. The previous milestone was the 9/11 terrorist attacks against U.S. hegemony. The 9/11 attacks closed the "end of history" political discourse and the period of "ultimate victory" won by the liberal West.

### **49. Middle East's travel, tourism revenues could grow to \$246bn in 2022: WTTC**

Daily News (Egypt), 15 Mar 22, Nehal Samir

New research from the World Travel and Tourism Council (WTTC) revealed that the Middle East's travel and tourism sector's revenues could reach \$246bn this year, just 8.9% behind pre-pandemic levels.

### **50. Lebanon's last chance as Ukraine fallout looms**

Arab News, 15 Mar 22, Bahaa Hariri

Russia's decision to invade Ukraine will have ramifications that reverberate around the world for years to come. In the West, the immediate concern remains the invasion's impact on the oil and gas markets. Yet, in countries like Lebanon, with just six weeks to two months of wheat reserves, the war's impact on agricultural supply chains could well be the straw that finally breaks the camel's back.

### **51. Countering aggressors isn't the antithesis of humanitarian missions**

Al Arabiya, 15 Mar 22, Baraa Shiban

The Russian invasion of Ukraine is in its third week with no signs of it letting up. Worldwide, people are watching the news and the unfolding humanitarian crisis. The Middle East is no stranger to conflicts. That is why millions of people in countries like Iraq, Syria, and Yemen can easily relate to the suffering of the Ukrainian people.

### **52. Russia-Ukraine: Putin's war means Mohammed bin Salman has Biden over a barrel**

Middle East Eye, 15 Mar 22, David Hearst

Three short weeks ago, US President Joe Biden was in no hurry to talk to Saudi Arabia's de facto ruler and the next king of a major US regional ally.

### COVERAGE HIGHLIGHTS

---

- 1) The Associated Press drew from testimony provided to the SASC yesterday by General McKenzie and Gen. Stephen Townsend, commander of U.S. Africa Command, when reporting that “The complete U.S. military withdrawals from Afghanistan and Somalia last year have made it more difficult for the United States to counter terror groups that aspire to attack America and its allies, senior commanders told Congress on Tuesday.” The reporting also noted that “They said Russia and China are both seeking to bolster their influence in the Middle East and Africa, with Moscow being the more ‘acute threat’ right now.”
- 2) Politico was among media outlets also reporting on the same SASC testimony when noting that General McKenzie said the U.S. plans to approve the sale of F-15 fighter jets to Egypt. One quote reportedly included “In the case of Egypt, I think we have good news in that we’re going to provide them with F-15s, which was a long, hard slog,” and “They felt it was too long, it took too long.”
- 3) Arab News reported yesterday that the Gulf Cooperation Council is sponsoring unprecedented and comprehensive peace talks between warring factions in Yemen, including the Iran-backed Houthis, that could begin in Riyadh before the end of this month. Reuters added that “They said Houthi officials would be ‘guests’ of GCC Secretary General Nayef Falah Mubarak Al-Hajraf at the body’s Riyadh headquarters and would have his security guarantees if the group accepted the invitation for the talks, which are planned from March 29-April 7.”
- 4) Reuters reported late yesterday that NATO is set to tell its military commanders on Wednesday to draw up plans for new ways to deter Russia following Moscow’s invasion of Ukraine, including more troops and missile defenses in eastern Europe, officials and diplomats said. They noted that NATO Secretary General Jens Stoltenberg said on Tuesday, “We need to reset our military posture for this new reality” and “Ministers will start an important discussion on concrete measures to reinforce our security for the longer term, in all domains.”

## SYRIA

---

### **11. Russia drafting thousands in Syria for Ukraine war: monitor**

Agence France-Presse, 15 Mar 22

Russia has drawn up lists of 40,000 fighters from Syrian army and allied militias to be put on standby for deployment in Ukraine, a war monitor said Tuesday.

### **12. Syria enclave marks uprising with message for Ukraine**

Agence France-Presse, 15 Mar 22

Thousands of protesters in war-torn Syria's rebel enclave of Idlib on Tuesday marked 11 years since the start of an anti-government uprising, buoyed by the global outcry over Russia's invasion of Ukraine.

### **13. Impunity for war crimes in Syria casts a grim shadow over Ukraine**

New York Times, 15 Mar 22, Ben Hubbard

The Syrian police stormed her house and dragged her husband away. Her eldest son died in a rain of Syrian government shells on her hometown. So like millions of other Syrians, Hanadi Hafisi fled the country with plans to return when the war ended.

## **21. Saudi Arabia considers accepting yuan instead of dollars for Chinese oil sales**

Wall Street Journal, 15 Mar 22, Summer Said and Stephen Kalin

Saudi Arabia is in active talks with Beijing to price some of its oil sales to China in yuan, people familiar with the matter said, a move that would dent the U.S. dollar's dominance of the global petroleum market and mark another shift by the world's top crude exporter toward Asia.

**22. Abu Dhabi crown prince to Japanese PM: UAE keen to maintain energy security, global markets stability**

Arab News, 15 Mar 22

Abu Dhabi's Crown Prince spoke with Japan's prime minister about the Ukraine crisis and assured him that the United Arab Emirates is keen to maintain energy security and keep global markets stable, Emirates News Agency reported on Tuesday.

**23. Disillusioned Lebanese lose faith with politicians ahead of poll**

Financial Times (UK), 15 Mar 22, Heba Saleh

The last time Lebanon held parliamentary elections, in 2018, Nour's monthly salary was about \$1,000. But as the country heads towards another vote, the value of the bank worker's pay cheque has plunged to \$100 — the result of a financial meltdown that she and many others blame on the very politicians seeking re-election.

---

**25. Plea bargains are being discussed for Sept. 11 defendants**

Wall Street Journal, 15 Mar 22, Jess Bravin

Military prosecutors have begun plea negotiations at Guantanamo Bay with Khalid Sheikh Mohammed and four co-defendants accused of orchestrating the Sept. 11, 2001, terrorist attacks, a deal under which the defendants would admit guilt and prosecutors forgo pursuit of a death sentence, defense attorneys said.

**26. Submarine spy couple tried to sell nuclear secrets to Brazil**

New York Times, 15 Mar 22, Julian E. Barnes, André Spigariol, Jack Nicas and Adam Goldman

In 2020, a United States naval engineer and his wife made the fateful decision to try to sell some of America's most closely guarded military secrets, the technology behind the nuclear reactors that power the U.S. submarine fleet. Then the couple faced another important choice: To which foreign government should they try to peddle the stolen secrets?

**27. Biden to announce \$1 billion in new military aid to Ukraine**

Wall Street Journal, 15 Mar 22, Gordon Lubold, Vivian Salama and Nancy A. Youssef

President Biden is expected to announce more than \$1 billion in new military assistance to the Ukraine government as early as Wednesday, according to U.S. officials, as Ukrainian President Volodymyr Zelensky is expected to make a plea to Congress for more aid to defend his country against Russia's invasion.

## ANALYSIS/COMMENTARY

---

### **29. The best peace plan for Ukraine is sending military support**

Washington Post, 15 Mar 22, David Ignatius

With the war for Ukraine in its third bloody week, the world faces two urgent questions: How do we help the brave Ukrainian people continue their fight for freedom? And how do we bring this war to an end before Ukraine is destroyed?

### **30. Russia's war will remake the world**

Financial Times (UK), 15 Mar 22, Martin Wolf

A new world is being born. The hope for peaceful relations is fading. Instead, we have Russia's war on Ukraine, threats of nuclear Armageddon, a mobilised west, an alliance of autocracies, unprecedented economic sanctions and a huge energy and food shock. No one knows what will happen. But we do know this looks to be a disaster.

### **31. Putin's war killed Syria diplomacy**

Foreign Policy, 15 Mar 22, Charles Lister

Russia's invasion of Ukraine and the resulting collapse of U.S. and European diplomatic relations with Moscow mean Syria diplomacy is now all but dead. Small signs that diplomacy may have been poised for renewed investment in early 2022 now feel like a distant memory.

### **32. How is Pakistan's military equipment affected by the Russian invasion?**

Defense News, 15 Mar 22, Usman Ansari

Despite having acquired key defense equipment from Ukraine since the 1990s, Russia's invasion of the country will not cause support issues for Pakistan, as this weaponry was already being phased out, an industry source has told Defense News.

### **33. Will PM's trip find a way to plug the energy gap?**

BBC News, 15 Mar 22, Laura Kuenssberg

The military consequences of the conflict of Ukraine are all too visible.

Boris Johnson is now trying to grapple with the economic effects too, arriving in the Middle East on Wednesday morning for a day of diplomacy with the leaders of the United Arab Emirates and Saudi Arabia.

#### **1. Generals say Afghanistan, Somalia pullouts hurt terror fight**

Associated Press, 15 Mar 22, Lolita C. Baldor

The complete U.S. military withdrawals from Afghanistan and Somalia last year have made it more difficult for the United States to counter terror groups that aspire to attack America and its allies, senior commanders told Congress on Tuesday.

And they said Russia and China are both seeking to bolster their influence in the Middle East and Africa, with Moscow being the more "acute threat" right now.

Gen. Stephen Townsend, head of U.S. Africa Command, said sending teams of U.S. forces into Somalia on a periodic basis is not efficient or effective and puts American troops at greater risk.

Iraqi politics were thrown further into turmoil following the October 2021 general elections, which were marred by a record-low turnout, post-election threats and violence, and a delay of several months until final results were confirmed.

Intense negotiations among political groups have since failed to form a majority parliamentary coalition to appoint a new prime minister to succeed Mustafa al-Kadhemi.

The largest political bloc led by firebrand Shia cleric Moqtada Sadr, had backed Zebari for the presidency.

Tensions rose Sunday with Iranian missile strikes on Erbil, capital of an autonomous Kurdish region in northern Iraq.

Tehran said the attack targeted Israeli sites, but Kurdish authorities denied any such presence.

### **11. Russia drafting thousands in Syria for Ukraine war: monitor**

Agence France-Presse, 15 Mar 22

Russia has drawn up lists of 40,000 fighters from Syrian army and allied militias to be put on standby for deployment in Ukraine, a war monitor said Tuesday.

The Kremlin said last week that volunteers, including from Syria, were welcome to fight alongside the Russian army in Ukraine.

The Syrian Observatory for Human Rights and activists said Russian officers, in coordination with the Syrian military and allied militia, had set up registration offices in regime-held areas.

“More than 40,000 Syrians have registered to fight alongside Russia in Ukraine so far,” said Rami Abdel Rahman, who heads the UK-based monitor.

Moscow is recruiting Syrians who acquired combat experience during Syria’s 11-year-old civil war to bolster the invasion of Ukraine it launched on February 24.

Russian officers deployed as part of the force Moscow sent to Syria in 2015 to support Damascus had approved 22,000 of them, Abdel Rahman said.

Those fighters are either combatants drawn from the army or pro-regime militias who have experience in street warfare and received Russian training.

In a country where soldiers earn between \$15 and \$35 per month, Russia has promised them a salary of \$1,100 to fight in Ukraine, the Observatory reported.

They are also entitled to \$7,700 in compensation for injuries and their families to \$16,500 if they are killed in combat.

Another 18,000 men had registered with Syria's ruling Baath party and would be screened by the Wagner Group, a Russian private military contractor with links to the Kremlin, the monitor said.

Misinformation about Syrian recruits in Ukraine has been spreading online.

Last week, pictures were shared of a Syrian soldier they said had died in Ukraine, but it later appeared he had been killed in his homeland in 2015.

Lack of jobs

The Observatory said it had no confirmed reports yet of any Syrian recruits leaving for Ukraine.

Abdel Rahman said Russia had drawn Syrian army recruits from the 25th Special Mission Forces Division, once better known as the "Tiger Forces", and from the Russian-run 5th Division.

Fighters from the Palestinian Liwaa al-Quds group and the Baath party's military branch had also enlisted.

A Syrian government representative denied the recruitment drive.

"Until now no names have been written down, no soldiers registered in any centers nor has anyone travelled to Russia to fight in Ukraine," Omar Rahmoun of the National Reconciliation Committee told AFP.

Syrian mercenaries have already fought on opposing sides of foreign conflicts, in Libya and Nagorno-Karabakh.

More than a decade of war has pushed 90 percent of the population into poverty, a factor Syrians for Truth and Justice said was a key factor in the recruitment.

A Syrian soldier told the activist group this month that he enlisted to fight in Ukraine because he could not find a job after his military service.

"The situation is extremely dire. There is no electricity, heating, or household gas," he said, adding he had registered at an air force intelligence office near Damascus.

'A few hundred dollars'

Regime-allied forces opened recruitment centers in the eastern towns of Al-Mayadeen and Deir Ezzor, according to Omar Abu Layla, who heads the Deir Ezzor 24 media outlet.

"Wagner started the whole thing in Deir Ezzor; only dozens have registered so far," he said.

"In a country that lacks basic necessities, some have no choice but to fight... for a few hundred dollars."

Turkey-backed rebels in northern Syria are also gearing up to send fighters on the opposing side.

An AFP reporter in northern Syria said the factions preparing for Ukraine include the Sultan Murad, Sulaiman Shah and Hamza divisions, all of which had previously sent hundreds of fighters to fight in Libya and Azerbaijan.

While money is the main driver for Syrian mercenaries on both sides of the conflict, rights groups said Ankara's proxies often exploited fighters and withheld wages.

One fighter told AFP he was promised \$3,000 to join the Ukraine battlefield.

"We are tired of the hunger... I will go and never come back. From Ukraine, I plan to go to Europe," another said.

## **12. Syria enclave marks uprising with message for Ukraine**

Agence France-Presse, 15 Mar 22

Thousands of protesters in war-torn Syria's rebel enclave of Idlib on Tuesday marked 11 years since the start of an anti-government uprising, buoyed by the global outcry over Russia's invasion of Ukraine.

Gathered on the main square in the northwestern city of Idlib, more than 5,000 people took part in one of the largest rallies the beleaguered region has seen in months.

Many of the demonstrators hoped the war launched by the Syrian government's main backer Russia in Ukraine would rekindle interest in their cause.

"What is happening in Ukraine today is similar to the situation here; the enemy is the same and the goal is the same," protester Radwan Atrash told AFP.

Thousands of demonstrators marked the date in other cities across rebel-held northern Syria.

President Bashar al-Assad's grip on power held by a thread after a nationwide uprising that erupted on March 15, 2011 escalated into a fully-fledged civil war.

But a decision by Russian counterpart Vladimir Putin to throw his military might behind the Syrian government changed the course of the conflict and saved Assad's hold on power.

The war left half a million people dead, mostly in attacks by the government and its allies, including both Russian and Iranian forces, as well as a myriad of militia groups.

'Shock and horror'

Around four million people, at least half of them displaced, now live in a region of northwestern Syria that is the last enclave fighting Assad's rule despite years of deadly Russian-backed offensives.

A few Ukrainian flags were visible at the Idlib protest, as were banners expressing solidarity with the Ukrainian people and demanding action against Putin.

A medic among the protesters at the city's main roundabout had some advice for his counterparts in Ukraine.

"Fortify your hospitals with cement blocks; the enemy Putin does not distinguish between civilians, wounded people and fighters," said Ali Hamoush, who works at an Idlib hospital.

Russia has repeatedly targeted medical facilities in Syria, according to witnesses, medics and human rights groups.

A pediatric hospital was hit by an apparent Russian strike in the besieged Ukrainian city of Mariupol last week, fueling accusations of war crimes against Putin.

As the conflict drags on, rights groups have pleaded for the international community not to forget Syria.

"While we look with shock and horror at what is unfolding in Ukraine, we are reminded of the intense and worsening suffering that the Syrian population has endured," Jan Egeland, secretary general of the Norwegian Refugee Council, said this week.

"One of the greatest human tragedies of our time has gotten worse over the last year in the shadow of crises elsewhere."

'Brutal and destructive'

Syria's economy has been battered by a decade of conflict and grueling sanctions.

"The coincidence of this year's anniversary with the appalling Russian aggression against Ukraine... highlights Russia's brutal and destructive behavior in both conflicts," Britain, France, Germany, Italy and the United States said in a joint statement.

Last week, the UN commission for inquiry on Syria called for "a review of the implementation and impacts of sanctions currently imposed on Syria" in light of deteriorating living conditions.

But the five nations said they do "not support efforts to normalize relations with the Assad regime".

Assad is among the few heads of state to openly support Putin's invasion of Ukraine.

Moscow is currently recruiting thousands of fighters in Syria, from the regular army and from militia groups, to be put on standby for possible deployment in Ukraine.

The stiff resistance faced by invading Russian troops and Putin's growing pariah status appeared to galvanize the Idlib crowd.

"My message to the Ukrainian people is 'Don't give up'. Eleven years have passed, but we are undaunted and, God willing, victory is ours," said protester Salwa Abdelrahman, 49.

### **13. Impunity for war crimes in Syria casts a grim shadow over Ukraine**

New York Times, 15 Mar 22, Ben Hubbard

The Syrian police stormed her house and dragged her husband away. Her eldest son died in a rain of Syrian government shells on her hometown. So like millions of other Syrians, Hanadi Hafisi fled the country with plans to return when the war ended.

A decade later, she's still a refugee in Turkey, where her work at a center that treats war injuries exposes her to a constant display of the human destruction wrought by President Bashar al-Assad of Syria and his Russian backers: paralysis, missing hands and legs, and deep trauma that leaves her patients asking why such disasters consumed their lives.

"I don't know what to tell them when they ask me whether they will reach justice," said Ms. Hafisi, 46. "Seriously, what to tell them? That Bashar will be held accountable? That he will face trial? Of course not."

As the world takes in the grim realities of Russia's invasion of Ukraine — the once-vibrant neighborhoods bombed out, the civilians killed by shells while trying to flee, the speculation about whether Russia will use chemical weapons — many Syrians have watched with a horrifying sense of déjà vu and a deep foreboding about what lies ahead.

The Syrian war began 11 years ago this month with an anti-Assad uprising that spiraled into a multisided conflict among the government, armed rebels, jihadists and others. Hundreds of thousands of people have been killed, millions have fled their homes, and Mr. al-Assad has remained in power, in large part because of the extensive support he received from the man now driving the invasion of Ukraine, President Vladimir V. Putin of Russia.

The legacy of Syria's war, and Russia's role in it, looms large over Ukraine, offering potential lessons to Mr. Putin, analysts said: that "red lines" laid down by the West can be crossed without long-term consequences; that diplomacy purportedly aimed at stopping violence can be used to distract from it; and that autocrats can do terrible things and face international sanctions — and still stay in power.

Much of the brutality Mr. al-Assad deployed to quash his foes was documented in real time and spurred outrage that left many thinking he could never get away with it.

He dispatched soldiers and armed thugs to stop protests by locking up activists and firing live ammunition into crowds. As the opposition took up arms, his troops shelled, bombed and imposed starvation sieges on towns and neighborhoods that supported the rebels.

Those actions killed large numbers of civilians and sent many more fleeing for their lives. More than half of Syria's prewar population was displaced during the war, and 5.7 million refugees remain outside the country.

In August 2013, Mr. al-Assad's forces shocked the world by deploying chemical weapons on rebel-held towns near the capital, Damascus, killing more than 1,400 people, U.S. officials said.

Many Syrians expected that such a blatant violation of international law would prompt Western military intervention, especially since President Barack Obama had called the use of chemical weapons a "red line."

"I was sure we had witnessed something very few people had experienced before, like those who witnessed Chernobyl or Hiroshima," recalled Ibrahim Alfawal, 29, who survived the chemical attack and said it had felt like "judgment day."

But he was shocked when the United States did not intervene. Mr. al-Assad's forces eventually took control of the towns that had been gassed, seeming to pay no price for his use of forbidden arms.

That seemed to show that Mr. al-Assad could count on impunity, Mr. Alfawal said, and attacks by Syrian forces on civilian infrastructure — including schools, hospitals, neighborhoods and bakeries where families had lined up to buy bread — only escalated.

In 2015, Mr. Putin sent Russian forces to help Mr. al-Assad's beleaguered army, and soon Russian officers were advising Syrian forces and Russian jets were dropping bombs on Syrian cities — enjoying the same impunity that Mr. al-Assad seemed to have.

In Ukraine, Russia has used disinformation campaigns similar to those it pioneered in Syria, where it falsely branded opposition activists as members of Al Qaeda and accused the rebels of launching the chemical attacks as "false flag" operations to blame the Syrian government.

"They are taking the same concept they used in Syria, to lie and to stick to it," Mr. Alfawal said of Russia's approach to Ukraine.

The chemical attacks in Syria continued. In addition to two that killed large numbers of people in the village of Khan Sheikhoun in 2017 and east of Damascus in 2018 there have been at least 350 other attacks with chemical substances, according to Tobias Schneider, a researcher at the Global Public Policy Institute in Berlin.

Most of those used chlorine, which is not classified as a chemical weapon but can be used as such to terrify civilians and encourage them to flee.

While no evidence has surfaced that Russian forces used chemical weapons in Syria, researchers believe that Mr. Putin enabled Mr. al-Assad to do so.

"It is absolutely certain that the Russian government at least knows and likely facilitated the use of chemical weapons by the Syrians, mostly chlorine attacks," Mr. Schneider said.

There are no indications that chemical weapons have been used in Ukraine, but watching the war there, many Syrians see signs that Mr. Putin is employing parts of the Syria playbook.

The Russians “are willing to devour the green and the dry,” said Radwan Alhomsy, a Syrian activist in southern Turkey, using an Arabic idiom meaning to destroy everything. “They don’t care about the international community or anything else. We saw that in Syria. Burning schools is not new to us. It’s land they want to take, and they will take it.”

European analysts point out the differences between the wars in Syria and Ukraine that could lead to different Western responses. Unlike Mr. Putin, Mr. al-Assad fought to regain control of his own country, not take over one of his neighbors. Unlike Syria, Russia is a nuclear-armed power, complicating the issue of military intervention.

And while the United States and its European allies largely let Mr. al-Assad get away with using chemical weapons in the Middle East, Mr. Putin’s doing so on the European continent would most likely cause greater alarm and elicit a stiffer response.

“If Putin thinks that he’ll be treated like al-Assad, he is wrong because he is not al-Assad and this is not Syria,” said Patricia Lewis, director of the international security program at Chatham House.

Still, Mr. Putin could take some solace from Mr. al-Assad’s survival: how the West went on mistakenly believing that Mr. al-Assad’s fall was unavoidable, and how he has clung to power despite sanctions that have strangled his economy and impoverished his people.

Emile Hokayem, a Middle East analyst at the International Institute for Strategic Studies, warned of two strategies used in Syria that the Russians could employ in Ukraine.

One was Russia’s engagement in international diplomacy aimed at ending the violence as a way of distracting the West from the war on the ground. Another was the deliberate creation of a refugee crisis to bog down Europe and sap its resources.

“Creating a humanitarian catastrophe is part of the war strategy, not a secondary effect, because this is how you shift the burden on to the other side,” he said.

Many Syrian refugees are watching the Ukraine war from impoverished camps across the Middle East or from European cities where they are struggling to start new lives.

While some feel bitter about the warmth shown to fleeing Ukrainians, the Syrians also recall their own war, and hope the Ukrainians will fare better than they did.

“We were left alone to face our destiny,” said Mansour Abu al-Kheir, who survived two chemical attacks east of Damascus before fleeing as a refugee to southern Turkey. “I hope this won’t happen to the Ukrainians.”

[Return to top](#)

There were only a few countries that were not overtly hostile to the United States and could make use of the technology and designs Mr. Toebbe had to sell. Only a country able to build a nuclear reactor and ready to invest billions in a nuclear submarine fleet would be willing to funnel him the hundreds of thousands of dollars in cryptocurrency that he was seeking.

Brazil began work on developing nuclear submarines in 1978, originally motivated by its rivalry with Argentina. In 2008, under the administration of President Luiz Inácio Lula da Silva, Brazil reinvested in an effort to create a nuclear submarine, to better patrol and protect its exclusive economic zone in the Atlantic Ocean, a source of fossil fuels and other resources.

The country aims to launch its first nuclear-powered submarine in 2029, part of a \$7.2 billion submarine program. Brazil is building four more traditional submarines with the help of France, but it has been attempting to develop a fifth submarine powered by a nuclear reactor on its own — a project it has struggled with.

As a result, Mr. Toebbe's expertise, on how to make nuclear reactors even quieter and harder to detect, as well as other design elements of Virginia-class submarines, would have been of enormous value to Brazil.

While the Brazilian embassy declined to comment, a senior Brazilian official said the country had cooperated with American investigators because of the two nations' partnership and friendly relations between Brazil's intelligence service and the C.I.A.

Had Brazil gotten caught seeking to purchase American secrets, the relations between the two countries, including intelligence sharing, could have been thrown in jeopardy.

Instead, Brazilian officials worked with the F.B.I. after Mr. Toebbe was initially hesitant to deposit the classified information at a prearranged secret location, called a dead drop.

"I am concerned that using a dead drop location your friend prepares makes me very vulnerable," Mr. Toebbe wrote, according to court records. "For now, I must consider the possibility that you are not the person I hope you are."

To trick Mr. Toebbe into believing he was speaking with a Brazilian official, the undercover agent told him to look for a signal placed in a window in a Brazilian government building in Washington over Memorial Day weekend last year. Such an operation could only have been carried out with the cooperation of Brazilian officials in Washington.

After seeing the sign, Mr. Toebbe agreed to drop a sample of the nuclear secrets he stole from the Navy hidden in a peanut butter sandwich in West Virginia, setting off a chain of events culminating in the October arrest of the couple.

## **27. Biden to announce \$1 billion in new military aid to Ukraine**

Wall Street Journal, 15 Mar 22, Gordon Lubold, Vivian Salama and Nancy A. Youssef

President Biden is expected to announce more than \$1 billion in new military assistance to the Ukraine government as early as Wednesday, according to U.S. officials, as Ukrainian President Volodymyr Zelensky is expected to make a plea to Congress for more aid to defend his country against Russia's invasion.

The \$1.01 billion is expected to include more of the same kinds of military equipment the U.S. says the Ukrainians need the most: antiarmor and anti-air systems, including portable air defenses such as Javelins and Stingers. The money would come from the roughly \$13.6 billion allotted for Ukraine in the omnibus budget bill Mr. Biden signed Tuesday.

While the White House is considering sending more troops to Europe to add to the roughly 15,000 deployed there since the Russia-Ukraine crisis began, Mr. Biden isn't expected to deploy more troops now, U.S. officials said.

"We're moving urgently to further augment the support to the brave people of Ukraine as they defend their country," President Biden said Tuesday, without providing additional details. "And I'll have much more to say about this tomorrow about exactly what we're doing in Ukraine."

Senators and members of the House of Representatives of both parties have called for the administration to send as much military support to Ukraine as possible, and in his virtual address to Congress Wednesday, Mr. Zelensky is expected to appeal to that support.

On Tuesday, Mr. Zelensky made a plea before Canada's parliament for a no-fly zone, asking legislators to stop Russia in its bid to "annihilate" Ukraine.

"It's dire straits but it also allowed us to see who our real friends are over the last 20 days," Mr. Zelensky said.

But Pentagon officials and others say some forms of support wouldn't be helpful to the Ukrainians and would risk the U.S. slipping into direct conflict with Russia inside Ukraine. Those officials oppose establishing a no-fly zone, determining it wouldn't stop the Russian cruise missiles being lobbed from inside Russia and could require U.S. and North Atlantic Treaty Organization jets to shoot down Russian planes. The Pentagon has also declined to support a separate proposal to provide Polish jet fighters to Ukraine via the U.S., arguing that the Ukrainians aren't using the jet fighters they already have. The Pentagon has also referred to the logistical challenges to getting the planes into Ukraine.

The new support comes after U.S. officials said over the weekend that after the invasion, Moscow had reached out to Beijing for economic military assistance. China has been reluctant to distance itself from Russia, and Moscow and Beijing have denied that Russia had asked China for military assistance.

The U.S. is still in the process of sending the most recent tranche of support, about \$350 million in arms, to Ukraine. Since 2014, the U.S. had provided \$2.5 billion in military aid before Russia invaded Ukraine on Feb. 24, defense officials said.

[Return to top](#)

The U.S. Treasury Department last week announced new sanctions against three Russian-based entities that aided ongoing development of North Korea's military capabilities and two individuals tied to those companies. The sanctions block access to any U.S. assets held by them.

## ANALYSIS/COMMENTARY

---

### **29. The best peace plan for Ukraine is sending military support**

Washington Post, 15 Mar 22, David Ignatius

With the war for Ukraine in its third bloody week, the world faces two urgent questions: How do we help the brave Ukrainian people continue their fight for freedom? And how do we bring this war to an end before Ukraine is destroyed?

The two questions may seem sharply at odds, but the Biden administration rightly believes they are related. By stepping up military assistance to Ukraine — and making President Vladimir Putin pay an ever-steeper price for his invasion — the United States and its allies will boost the chances of a peace agreement that is not a capitulation to Russia's flagrant aggression.

Military support for Ukraine is the best peace plan, in other words. Already, Ukraine's valiant defense has led Putin to soften his initial war demands. A "peace process" is underway, involving would-be mediators from Israel, Germany, France and other nations. Let's hope this can produce a cease-fire before too long. But any real settlement will require Putin to change course — not just to save Ukraine, but to save Russia.

Diplomats have been working overtime this past week to craft a formula for a neutral Ukraine on the model of Austria, whose security would be guaranteed by Germany, France, Russia, the United States and perhaps other nations. This formula would reflect a major concession by Putin, but it could also diminish the heroic status of President Volodymyr Zelensky. Many Ukrainians would argue that their people didn't fight and die to achieve neutrality.

The decision about war and peace should belong to Zelensky and his nation. But as diplomacy moves forward, several things seem certain. First, there's sure to be more fighting on the way to a truce. Second, the Ukrainians (and their NATO partners, too) will need top-flight diplomats to negotiate with cunning Russian negotiators in a process that could resemble the 1995 Dayton Accords that ended the Balkan war.

Putin needs peace more than anyone because he has failed to achieve his war aims: Ukraine did not crumble; it proved to be the real, unified nation that Putin claimed didn't exist. Europe has not retreated before Russian demands; instead, it's more united than at any time since 1945. The United States is not leaderless and dysfunctional; Biden has mumbled his way to bipartisan support.

Putin's reckless gamble has failed, and the longer he continues the war — and razes the cities of Ukraine — the deeper and longer-lasting this failure will become.

Biden's visit to Europe next week should be a platform for the dual campaign ahead: He should reaffirm U.S. and NATO commitments to provide Ukraine with the weapons to resist Russia's unlawful, unprovoked attack. And he should support the peace efforts that have accelerated over the past week.

Putin's war should end in utter defeat. But in the nuclear age, such decisive outcomes may not be possible. President Franklin D. Roosevelt decided in January 1943 to demand "unconditional surrender" by Nazi Germany and Imperial Japan. It was perhaps the most consequential decision of the war — and one that shaped the rest of the 20th century. The destruction of the German and Japanese war machines enabled the miraculous reconstruction of those nations as prosperous democracies.

The West yearns for a similar democratic reconstruction of Russia. But it's unobtainable through force of arms, for a simple reason: Putin has signaled his willingness to use nuclear weapons if attacked by the United States and its NATO partners. Biden has said (and perhaps over-said) from the beginning that he will avoid direct military conflict with Russia. That's why no-fly zones and MiG transfers are unwise.

But the United States doesn't need to fight World War III to destroy Russian power. Putin is destroying himself. The longer the war goes on, the less will remain of Russia's military and economic might. Putin's regime is self-liquidating, if the United States and its allies can help Ukraine stay in the fight. Ukraine doesn't need to win; like Gen. George Washington in the Revolutionary War, it just needs to survive.

The Biden administration shouldn't take extreme risks in the weeks ahead — simply do more of what's working: Transfer more antitank and anti-aircraft missiles through the four NATO countries that border Ukraine. Provide bigger, more advanced anti-aircraft missiles, not just shoulder-fired Stingers. Send more of the Turkish-made drones that have been so deadly. Deliver anti-ship missiles to blunt Russian dominance of the Black Sea coast. Send more fuel and ammunition. As long as Russia chooses to keep fighting, make the war as painful as possible.

This war has been horrific for Ukraine, but it's been very costly for Russia, too. One U.S. estimate is that in the first three weeks, Russia may have suffered 5,000 dead. That would be more than the U.S. military lost in all the years of fighting in Iraq, and more than double the U.S. death toll in 20 years of combat in Afghanistan. And Russia's losses are just beginning.

We're at a potential tipping point now, where each side sees some advantage in a negotiated peace. Paradoxically, that's the time when the United States should redouble its support for Ukraine, until the last guns of the Russian invaders go silent.

Return to top

### **30. Russia's war will remake the world**

Financial Times (UK), 15 Mar 22, Martin Wolf

A new world is being born. The hope for peaceful relations is fading. Instead, we have Russia's war on Ukraine, threats of nuclear Armageddon, a mobilised west, an alliance of autocracies, unprecedented economic sanctions and a huge energy and food shock. No one knows what will happen. But we do know this looks to be a disaster.

It is natural to seek someone to blame. For many, the culprit is Nato's expansion into central and eastern Europe. A leading voice is John Mearsheimer, the distinguished "realist" scholar, who blames the US decision to open up the possibility of Nato membership to Ukraine in 2008. I agree and disagree.

The mistake was the ambiguity. The offer should only have been made when Ukraine would join as a full member. But I supported the expansion of Nato into the former Russian satellites because good fences make good neighbours. Russia knows that if it invades a Nato member, there will be war. That was not the case with Ukraine. This is why this assault seemed an easy option for the despot in the Kremlin.

As to why Vladimir Putin did it, one answer is that he runs a failed regime. Only empire can justify his rule. Russia's commodity-dependent economy has fallen far behind Poland's. It is a rentiers' paradise. Today, those rentiers are Putin's thugs and the Boris Yeltsin-era "oligarchs". Ukraine has failed economically, too. But it is democratic. For Putin, that aspiration is intolerable. (See charts.)

In the aftermath of the fall of the Soviet Union, many hoped for a world guided by co-operation and mutually beneficial exchange. But great power conflict was always waiting to break through. The US was inebriated by its "unipolar moment". China grew more powerful and authoritarian under Xi Jinping. Putin chewed on his resentments, finally invading a country he thinks he owns. We hear echoes of the first world war. Then, it was Austria, the weaker partner, not Germany, that began the conflict. Today, it is Russia, the weaker partner in its alliance with China.

China's promised support risks turning the dangers created by Russia's war into a catastrophe. It would transform the world into two blocs, with costly economic and security consequences. Yet a mobilised west is still far stronger. The impact of western sanctions demonstrates this. A unified west dwarfs Russia on all measures, except military personnel and nuclear warheads. Even with China added, the west is significantly more powerful, except in numbers. Nevertheless, a long-term clash between the west and an authoritarian bloc of Russia and China must be prevented if at all possible. It would be hugely dangerous.

Today, then, we see a transforming world. Consider the challenges ahead.

Most obviously, there must be an end to the war in Ukraine, which is an assault simultaneously on a peaceful country, on a democracy and on the world order. China should seek to help extricate Russia from its quagmire. It is not hard to understand why it backs Putin. Among other things, its leaders surely share his contempt for democracies. Yet these are huge mistakes. As

history has often shown, free societies are powerful, once mobilised, because they enjoy the support of their people.

It is also essential to manage the coming economic crisis. The combination of war, supply shocks and high inflation is destabilising, as the world learnt in the 1970s. Financial instability now seems very likely, too. Monetary authorities cannot ignore high inflation, however. So governments will have to employ targeted fiscal support for the vulnerable.

Moreover, the west must reinforce its defences, on all fronts – military, energy, cyber and economic. It is inevitable, alas, that in a conflict with huge ramifications the requirements of security come first. This is not the world any sane person desires. But it is the one in which we now live. It is vital that the EU becomes a true security power. It comfortably possesses the economic and demographic scale to balance Russia. Post-Brexit UK must participate as fully as possible. The US needs such European assistance, since it will also be dealing with Xi's worrying China.

Despite these pressing needs, we should try not to abandon everything achieved in the past three decades. We are not at war with ordinary Russians and Chinese people who simply hope for a better future. On the contrary, in the long term they may prove our allies. Sanctions need to be targeted, so far as possible. The future of trade and other peaceful exchanges will depend, however, on how – and, no less, after how long – this crisis ends.

Not least, we need to remember the wider concerns all humans share – the global environment, managing pandemics, economic development and peace itself. We cannot survive without co-operation. If Putin's madness proves anything it is that. The world of "might is right" is not a world we can safely live in. As his nuclear threats show.

After the battle of Austerlitz in 1805, William Pitt the Younger said, presciently: "Roll up the map [of Europe]; it will not be needed these 10 years." Russia's war on Ukraine has similarly transformed the map of our world. A prolonged bout of stagflation seems certain, with large potential effects on financial markets. In the long term, the emergence of two blocs with deep splits between them is likely, as is an accelerating reversal of globalisation and sacrifice of business interests to geopolitics. Even nuclear war is, alas, conceivable.

Pray for a miracle in Moscow. Without it, the road ahead will be long and hard.

### **31. Putin's war killed Syria diplomacy** Foreign Policy, 15 Mar 22, Charles Lister

Russia's invasion of Ukraine and the resulting collapse of U.S. and European diplomatic relations with Moscow mean Syria diplomacy is now all but dead. Small signs that diplomacy may have been poised for renewed investment in early 2022 now feel like a distant memory.

The international community thus finds itself in a distinctly new strategic environment, where long-standing multilateral institutions and mechanisms traditionally relied on to mediate and de-escalate are more or less impotent. The United Nations Security Council had little value before the invasion of Ukraine, but it is now worthless.

To make matters worse, Russia's war on Ukraine looks set to trigger a humanitarian crisis in Syria that will far surpass anything witnessed over the past 11 years. While the world focuses on the escalating suffering in Ukraine, Syria's collapse into even deeper misery risks being ignored, catalyzing another wave of destabilizing effects across the Middle East, Europe, and beyond.

To adapt to this new environment, the international community must consider a comprehensive change in approach toward Syria, prioritizing the freezing of existing conflict lines and a more strategic use of aid, stabilization, and targeted rebuilding in areas free of Syrian President Bashar al-Assad's rule. This "freeze and build" strategy—which is laid out in more detail in a new policy paper—would be a bold departure from the norms and principles guiding the current international response to Syria's crisis. But unprecedented times require substantial adaptations.

Assad's regime currently controls approximately two-thirds of Syria, but that sizable region remains highly unstable, riven by criminality, warlordism, localized protest, and latent insurgency, all of which is fueled and sustained by acute economic collapse. The remaining third of Syria is controlled variously by Syrian opposition and Islamist forces in the northwest and by the Syrian Democratic Forces in the northeast.

Although low-level clashes continue across lines of control in the north, de facto cease-fires have remained in place for at least two years. The United States and its allies, Turkey included, have a clear interest not just in sustaining that freeze but in more openly guaranteeing that Syria use existing troop deployments in the northwest (Turkey) and northeast (United States and allies).

Beyond its fatal impact on Syria's political process, Russia's invasion of Ukraine looks likely to pose a fatal threat to the United Nations' mechanism that allows cross-border aid delivery to nearly 4 million civilians in northwestern Syria. That arrangement is up for a vote at the U.N. Security Council in July, and Russia looks almost certain to veto it. That would almost instantly result in a 75 to 80 percent deficit in food needed to feed 2.4 million civilians who are entirely dependent on food aid. That risks triggering major hostilities and a massive refugee exodus.

Beyond cross-border aid, Syria also now faces a famine because of a crushing blow to its wheat supply, which is considered the most vital food product to feed the population. As a result of successive droughts, Syria's domestic wheat crop was expected to be less than a quarter of its average in 2022, but indispensable supplies from Russia are now almost certainly impossible. Even the World Food Program's efforts to supply wheat to Syria have now been made virtually obsolete, as their primary source was Ukraine, which has ended all exports.

Having committed virtually every possible war crime and crime against humanity, Assad has survived—with substantial Russian help. But he stands atop the ruins of a state. His regime and its brutal security apparatus serve as a potent deterrent to any meaningful refugee return. With the conflict in Ukraine set to exacerbate Syria's already destructive economic and humanitarian

challenges, and with Russia both distracted by Ukraine and considered an international pariah, Assad looks set to become acutely vulnerable.

The time for reactive, short-term policy, where problems are treated with bandages, must now be replaced by something constructive that seeks to stabilize areas of Syria and enhance the international community's collective diplomatic leverage.

For starters, the United States and its allies should maintain existing troop deployments to counter the Islamic State, keep punitive sanctions on Assad's regime, sustain and amplify accountability efforts through multilateral mechanisms and universal jurisdiction in Europe, and diplomatically deter efforts by governments in the region—such as those of the United Arab Emirates and Jordan—to normalize Assad and let him back into the international community's good graces.

By embracing a policy of strategic patience, the United States and its allies should also seek to create new realities in northwestern and northeastern Syria that would exist in parallel with—and stand in stark contrast to—the life offered by Assad's regime.

By consolidating the control of territory by non-Assad entities across northern Syria and investing aid, stabilization, and targeted reconstruction funds into local communities, Washington and like-minded allies have an opportunity to foster a greater sense of stability and recovery in strategically vital regions of Syria.

To put it in blunt terms: The international community must do away with a strategy of supplying tents, blankets, and food baskets and shift to one that constructs semipermanent housing for displaced peoples and provides investment opportunities for small businesses and agriculture as well as sustainable resources like solar power. This aid would be delivered by a coalition of allied government aid agencies, with a central role assumed by the U.S. Agency for International Development in northeastern Syria and likely by Turkey's Disaster and Emergency Management Presidency in the northwest.

In seeking to establish such a reality, a “freeze and build” policy would serve to strengthen collective international resolve and increase collective international leverage aimed at pursuing an eventual diplomatic settlement, whenever conditions to do so become more amenable.

Making a “freeze and build” policy work will require bold decisions and determined diplomacy, particularly with Turkey. Assuming the U.N. cross-border mechanism is on its way out, any strategic aid and stabilization effort would require close coordination with Turkey. Despite long-standing challenges to bilateral ties with Ankara, Ukraine has offered a clear but potentially slim window in which to work swiftly and determinedly to exploit the current strains in Turkey's relationship with Russia. This would attempt to bring it closer to the United States' Syria policy orbit.

The West also has an opportunity to take advantage of the large and well-resourced Syrian exiled business community in the Middle East, Europe, and the United States, much of which has long wanted to invest substantial sums of money into areas not controlled by Assad. To make such a

commercial assistance effort possible, the United States and Europe will need to offer sanctions waivers covering all of northern Syria – another bold move but something diplomats have long discussed and debated.

Today, the international community faces two choices when it comes to Syria policy. One option would be comparatively easy: to sustain the status quo. At best, this approach equates to “kicking the can down the road,” but at worst, it would be a policy that guarantees a gradual degradation in leverage and a probable death knell for any meaningful future resolution. Alternatively, the world can acknowledge that Syria’s diplomatic process is currently paralyzed and that to maintain and possibly enhance the international community’s collective leverage for whenever it comes back to life, the West needs to freeze conflict lines and get strategic about aid.

Although Russia’s invasion of Ukraine may provide a catalyst for this policy shift, in truth, it represents a strategic adaptation that has long been necessary. Providing Band-Aids to the many symptoms of Syria’s crisis has never been a sustainable solution, least of all today.

### **32. How is Pakistan’s military equipment affected by the Russian invasion?**

Defense News, 15 Mar 22, Usman Ansari

Despite having acquired key defense equipment from Ukraine since the 1990s, Russia’s invasion of the country will not cause support issues for Pakistan, as this weaponry was already being phased out, an industry source has told Defense News.

The largest Pakistan-Ukrainian defense deal was for 320 T-80UD/Ob’yekt 478BEh tanks, built by the Kharkov Machine Building Design Bureau, or KMDB. The tanks were ordered in 1996 and delivered during the 1997-1999 time frame, according to the Stockholm International Peace Research Institute.

Ukraine’s Malyshev Plant also supplied the 1,200-horsepower 6TD-2 power pack for Pakistan’s Al-Khalid series of tanks, derived from Malyshev’s 1,000-horsepower 6TD powering the T-80UD. Malyshev, like the Kharkov Machine Building Design Bureau, is in Kharkiv, a city under heavy Russian attack.

The International Institute of Strategic Studies lists more than 600 Al-Khalid and Al-Khalid I tanks in service manufactured by Pakistan’s state-owned armored fighting vehicles manufacturer, Heavy Industries Taxila, or HIT. Therefore, one-third to half of Pakistan’s entire tank fleet would potentially be rendered unsupportable if the two factories in Kharkiv are destroyed.

However, an industry source with knowledge of HIT’s ongoing programs, told Defense News Pakistan was already replacing Ukrainian equipment before Russia’s full-scale invasion, which began Feb. 24.

That's more acute after dozens of executions there a few days ago.

Labour leader Sir Keir Starmer said going cap in hand from dictator to dictator is no substitute for an energy strategy.

But for the government, handling the fallout of the conflict in Ukraine means what are described as "hard-headed" decisions, even if it's "distasteful".

With huge diplomatic and economic forces at play, there are no straightforward options.

Disentangling Russia's economy from the West's may seem a diplomatic no-brainer, but the cost and complications of doing so simply can't be ignored.

### **34. OPEC and Russia: Will history repeat itself?**

The Hill, 15 Mar 22, Robin M. Mills

OPEC's recent meeting took just 10 minutes to decide there was no shortage of oil and no need to change its prescribed course. Markets thought differently, opening the following Monday and promptly soaring to \$139 per barrel for Brent crude, within touching distance of 2008's all-time nominal record of \$147. The oil exporters' organization is in danger of repeating past mistakes.

The OPEC+ group has laid out a policy of steady production increases, adding 400,000 barrels per day (bpd) each month up to May 2022, then slightly more each month thereafter with a reset of baselines to higher levels for Russia, Saudi Arabia, the UAE, Kuwait and Iraq. The UAE ambassador in Washington suggested on March 9 his country favored higher production levels, helping send prices lower, while his energy minister followed up by tweet that this would only happen within the OPEC framework.

Even before the Russian invasion of Ukraine, OPEC+ was struggling to deliver. Nearly all of the non-OPEC members, other than Russia and Kazakhstan, and significant OPEC members Angola and Nigeria were falling well short of their targets. By January, Argus estimated the group was 800,000 bpd below its collective target (excluding the three exempt members, Iran, Libya and Venezuela). Very few people took seriously the forecasts of OPEC and the International Energy Agency that the oil market would be in surplus early in 2022.

Even for those members with some spare capacity, it was clear that Russia was close to its maximum without a substantial revival of drilling, and that Iraq and Kuwait would hit their limits around the third quarter. That would concentrate all available spare capacity in Saudi Arabia and the UAE. If regular monthly increases continued, national targets would reach the baselines by September 2022, at which point the UAE would have about 0.5 million to 0.7 million bpd of

spare capacity, and Saudi Arabia about 1 million bpd. Under a revived Joint Comprehensive Plan of Action (JCPOA), Iran could return some 1 million to 1.3 million bpd over a few months.

Saudi Arabia plans to add another 1 million bpd of capacity and the UAE another 0.8 million to 1 million bpd from current levels, but over several years. Iraq's 7 million bpd target by 2027, adding about 2 million bpd, is much more doubtful to achieve.

On March 2, OPEC+ was reluctant to change course, despite Brent crude trading around \$113 per barrel during its meeting, Russian crude at double-digit discounts to that, the steepest backwardation on record at almost \$16 per barrel for the six-month spread, and already initial signs of reluctance to lift Russian cargoes. Shell, BP and Equinor had all announced they would quit the country.

Explanations fall into three groups (and are not mutually exclusive). The first perceived motivation is that Saudi Arabia and the UAE are upset with a perceived lack of U.S. support over drone and missile attacks from the Houthi forces in Yemen and/or from Iran, the snub of President Joe Biden to Saudi crown prince Mohammed bin Salman, as well as the attempts to negotiate a return to the disliked JCPOA with Tehran.

The second is that the Gulf producers are hedging their political support, reminding the U.S. of their importance and that they have the option to tilt a little more toward Russia or China. They do not want to annoy Russia, an important power broker in parts of the Middle East, and where they have substantial investments.

The third factor is that the Gulf states do not want to lose continuing cooperation with Russia in the OPEC+ framework, a long-sought outcome that Moscow never delivered on before 2016. This was essential in managing the shale-driven bust post-2014 and the COVID-created collapse of April 2020.

But whatever the motives, we have also to look at the effects. OPEC+ may be relatively sanguine on competing supply, given the slowness of U.S. shale companies to speed up investment, as well as the equipment and labor bottlenecks. But demand destruction and a steep global recession is all but inevitable if oil prices escalate much further and European and Asian natural gas prices remain around current levels.

And such high oil prices plus the geopolitical imperative to diminish reliance on Russian crude will give a tremendous impetus to electric vehicles. Plug-in cars already had a 26 percent European market share in November 2021. This risks an eventual repeat of the 1980s demand and price slump — but with decarbonization goals ensuring that this time it will be permanent.

Of course, OPEC+ faces an almost irreconcilable challenge. Only four member nations have a short-term economic interest in higher production allocations, and two of those are about to run out of headroom. Just agreeing the modest quota realignment in July 2021 took a UAE walk-out and hints of leaving the organization entirely.

Energy Intelligence suggested that Russian oil exports were down by about 2.5 million bpd already; even at maximum output, OPEC could barely cover that now. Of course, it will seem

easier to wait until April, and look for harder evidence of disruptions and shortages. That would avoid confrontation with Russian Deputy Prime Minister Alexander Novak and his boss. It was always going to be uncomfortable inviting into Vienna a country which felt itself a superpower not just in petroleum but in political and military capacity.

Yet, one of the central pillars of the OPEC+ edifice is Russia — and specifically, a Russia that is a large and growing oil exporter, which poses a serious market challenge to the core OPEC members. If Russia is going to become a larger and snowier version of Venezuela, that pillar collapses. Riyadh, Abu Dhabi, Kuwait City and Baghdad have a once-in-a-generation chance to seize, with their giant, low-cost and low-carbon reserves, a much greater share of a market about to contract sharply.

#### **35. Ukraine crisis will affect Middle East due to high inflation: Arab League**

Daily News (Egypt), 15 Mar 22, Sami Hegazi

Secretary-General of the Arab League Ahmed Aboul-Gheit participated in the opening of the eighth session of the Arab Forum for Sustainable Development that was organised by the United Nations Economic and Social Commission for Western Asia (ESCWA) at its headquarters in Beirut in cooperation with the Arab League (AL) and a number of partners.

According to a statement issued by the AL, Aboul-Gheit praised the efforts of the ESCWA and its keenness to strengthen cooperation with the AL to achieve the goals of sustainable development.

In his speech, Aboul-Gheit pointed to the impacts of the coronavirus pandemic, which has placed additional burdens on Arab countries and caused the loss of many of the gains they made before the pandemic.

In particular, he pointed to the alarming rise in the numbers of poverty and hunger in the Arab world and the risks to the security and stability of societies.

Furthermore, Aboul-Gheit warned of the deterioration of Arab food security figures due to the effects of the pandemic, water scarcity, and climate change.

In this regard, he added that the war in Ukraine will also have repercussions on the Arab region due to the conflict prompting a spike in the global prices of grain, commodities, and energy materials.

The secretary-general pointed out that the Ministerial Council at the AL is aware of the seriousness of these situations and issued at its last meeting a decision to prepare an integrated strategic study on Arab food security.

This study will be presented in the next Arab Summit in Algeria, or within the files of the fifth Development Summit, which is scheduled for early next year in Mauritania.

On recovery policies, Aboul-Gheit stressed the importance of capacity building of institutions, promoting sustainable economic choices, increasing investment in human capital, as well as smart changes to expenditures.

He also touched on the latest developments of the AL's efforts in the field of sustainable development, referring to the Arab initiative to eradicate hunger and the launch of the Arab Network for Science and Technology for Sustainable Development.

It should be noted that the Arab Forum for Sustainable Development addressed, for the second consecutive year, the issue of recovery from the effects of the coronavirus pandemic and also reviewed the efforts of Arab countries in the implementation of the 2030 Sustainable Development Agenda.

### **36. Iran has 3,000 ballistic missiles, many that can reach Israel - US general**

Jerusalem Post, 15 Mar 22

Iran has more than 3,000 ballistic missiles, many of which can reach the State of Israel, commander of the United States Central Command Gen. Kenneth McKenzie said on Tuesday.

McKenzie, who is retiring from the military soon, was in Israel last week and held talks with Prime Minister Naftali Bennett, Defense Minister Benny Gantz and IDF Chief of Staff Lt.-Gen. Aviv Kohavi.

"At a military level my concern is first of all that they do not have a nuclear weapon but I am also very concerned about the remarkable growth and efficiency of their ballistic missile program," McKenzie told the Senate Armed Services Committee.

"They have over 3,000 missiles of various types, some of which can reach Tel Aviv," McKenzie said in response to a query by the senate committee. "None of them can reach Europe yet."

In McKenzie's written statement, he called Iran's missile force the greatest threat to the region's security, and that Iran has developed an arsenal of nuclear-warhead capable ballistic missiles and

after a meeting between Mr El Sisi and his top aides, including Prime Minister Mustafa Madbouli and the ministers of supply, defense and interior, as well as the chief of intelligence.

The statement said the president ordered that the government build up six months' supply of all essential foodstuffs.

On Sunday, Supply Minister Ali Moselhy said the government aimed to procure more than six million tons of local wheat during the harvest season, which starts in mid-April.

Government fixing of the prices of food items automatically criminalizes selling them at a higher price. Already, hoarders of essential foodstuffs face a fine or jail term. However, enforcing fixed prices has in the past proved difficult given the magnitude of retail markets and insufficient government manpower.

The price of free-market, flat loaf bread varies according to size. It currently sells for up to 1.5 pounds (\$1), up from only 1 pound before the Ukraine war broke out. A smaller loaf now sells for 0.75 Egyptian pounds (\$50 cents), up from 0.50 Egyptian pounds.

The bread available to the 60 million Egyptians covered by subsidized food cards sells for 0.25 pounds. An adult is entitled to five loaves a day.

Egypt's state grains buyer said this week that a previously contracted 63,000 tons of Russian wheat, and a similar amount of Ukrainian and Romanian wheat, was due to arrive in the country in days.

It received 63,000 tons of French wheat on March 8, and a similar amount of Romanian wheat on March 5, the state General Authority for Supply Commodities said.

## ANALYSIS/COMMENTARY

---

### **48. The impact of Ukraine war on the Middle East**

Daily Sabah, 15 Mar 22, Muhittin Ataman

With the Ukraine war, which is considered one of the main milestones in recent world history, some of the main principles of international politics and the discourses that accompany it have changed. The previous milestone was the 9/11 terrorist attacks against U.S. hegemony. The 9/11 attacks closed the “end of history” political discourse and the period of “ultimate victory” won by the liberal West. With the Russian invasion of Ukraine, the period of “the global war on terror” that began with the 9/11 terrorist attacks is now over. The “global rivalry between global powers” is on the rise, and the U.S., Russia and China are the main players in the new period.

Since the global rivalry has led global powers to follow realpolitik in their foreign policies, many regional powers such as Brazil, India, Germany and Turkey have been trying to increase their autonomy in order to protect their national interests against these global powers. Most global powers tend to violate basic principles of international law, rules and norms. Not only Russia and

China but also Western global powers often violate the very basic principles of the international system they themselves established. Regional powers and small states do not trust the big powerful players; now the Ukraine war has shown the world why mid-sized powers should not trust the big powers either.

The Ukraine war has turned out to be more than a regional problem, it is a global one. Marking the beginning of a new period, the conflict has significant global implications. The Middle East region is not exempt from these implications. However, unlike most of Europe, Middle Eastern countries have been following a relatively neutral policy towards the Russian invasion of Ukraine. While continental European countries that were questioning the effectiveness and meaning of the NATO alliance have gathered around the U.S and consolidated the Western front, Middle Eastern countries have not changed their balanced position towards the crisis.

#### Turkey's 'strategic neutrality'

Turkey has been following a policy of “strategic neutrality” during the Ukraine war. Turkey has repeatedly explained that even though it considers the Russian military intervention illegitimate and a violation of international rules, it urges resolving the crisis through diplomatic means. Following an active and flexible policy, Ankara offered to mediate between the warring sides and managed to bring the foreign ministers of the two countries together in Antalya.

Through diplomatic negotiations, Turkey has been trying to prevent the spillover effect of the war. The U.S. and other Western countries have realized that Turkey has not sided with Russia and that it is still a NATO ally. That is, Turkey’s place in the global rivalry is evident and its place is with the West. Turkey is not seeking a new alliance. If Western countries reconstruct trust between the West and Turkey and recognize the country’s strategic autonomy, Turkey could play a more effective role in its region, resisting Russian and Iranian expansionism in the Middle East.

#### Sanctions and nuclear deal

On the other hand, Iran has found itself in a very interesting position. Iran was about to sign a nuclear deal with the U.S, but the Ukraine war has dramatically changed the ground for a new agreement. While the U.S. was ready to sign the deal, Russia has blocked it. Moscow has mobilized all of its capacity in all platforms to undermine the functioning of the system as a response to the sanctions against it. In addition, if the U.S. reaches an agreement with Iran, it will probably withdraw from the Middle East, since Washington wants to downgrade its presence in the region to concentrate on its trans-Pacific and trans-Atlantic relations. This new regional setting may create further problems for the U.S. and especially for its regional allies such as Israel and the Gulf states.

#### Power vacuum in Syria

It is expected that if Russia gets stuck in Ukraine, Moscow will gear down in the Middle East, an important detail for the Syrian crisis in particular. In the Syrian case, Iran will try to fill the power vacuum and will continue to compete with other actors such as Turkey. If this scenario

unfolds, the U.S. and other Western countries, besides Israel, may evaluate the situation and reorient themselves accordingly. With Russia concentrating on the Ukrainian front, Iran will attract more pressure in the region. Therefore, it is not happy about the normalization processes in the region. Iran has been wary about the future of the region and reads the normalization process as a development that will damage its regional perspective.

Israel is yet another Middle Eastern power that follows a relatively neutral policy towards the Ukrainian war since it has good relations with both sides. Similar to other regional states, Israel follows a middle ground policy. It has different policy preferences in the region. For instance, the U.S. has been prioritizing the struggle against international terrorism in the Syrian crisis while Israel has been trying to prevent Iranian expansionism.

#### Arab world's approach

Finally, almost all Arab countries have also been following a relatively neutral policy towards the Ukrainian war. They have not followed in the footsteps of the Western countries. There are several reasons for their neutral policy. First of all, they have lost their trust in Western countries, particularly the U.S., after the Arab insurgencies and revolutions. The U.S. withdrawal from Afghanistan and the Russian invasion of Ukraine have consolidated their mistrust towards the West. They do not consider Western countries reliable partners anymore.

Second, Western countries often question the regional policies of Arab states. Even traditionally unquestioned Gulf states such as the United Arab Emirates (UAE) and Saudi Arabia are frequently criticized by Western countries for their policies towards regional crises such as Yemen. Third, Russia and China have emerged as better alternatives and more reliable partners since these two global actors do not question their policies. The bilateral relationship between the Arab states and Moscow and Beijing is purely based on interests without any political conditions.

*Muhittin Ataman serves as SETA's Director of Foreign Policy Studies and conducts academic research on Turkish foreign policy, the Middle East politics and the Gulf politics. Ataman is also the Editor-in-Chief of Insight Turkey, a journal published by SETA Foundation.*

#### **49. Middle East's travel, tourism revenues could grow to \$246bn in 2022: WTTC**

Daily News (Egypt), 15 Mar 22, Nehal Samir

New research from the World Travel and Tourism Council (WTTC) revealed that the Middle East's travel and tourism sector's revenues could reach \$246bn this year, just 8.9% behind pre-pandemic levels.

In 2019, before the pandemic struck and began to devastate economies around the world, the travel and tourism sector in the region was booming, generating \$270bn in revenues.

However, when COVID-19 brought international travel to an almost complete standstill in 2021, its contribution plummeted by 51.1%, suffering a brutal loss of more than \$138bn.

The latest research from the WTTC shows that as the region continues to recover from the pandemic, with major markets reopening borders and easing restrictions to travel, the sector's contribution to employment could almost reach pre-pandemic levels this year.

Furthermore, the research reveals that if countries continue to roll out the inoculation programme at pace this year and restrictions to international travel are eased around the world, 6.8m people could be employed in the sector by the end of 2022, just 40,000 behind pre-pandemic levels.

“The COVID-19 pandemic caused significant losses to the Middle East's travel and tourism sector, but we now have reason for real optimism,” said WTTC President and CEO Julia Simpson.

“Since the start of the pandemic, governments across the Middle East have shown real commitment to travel and tourism. Saudi Arabia in particular has shown strong leadership throughout the crisis and is making a major investment in the sector.”

“2022 is poised for a strong recovery if governments across the region continue to open up their borders and remove restrictions to travel, which will have a massive positive effect on the economy, society, and jobs,” she added.

To get as close to pre-pandemic levels as possible this year, the WTTC says governments around the world must continue focusing on vaccine rollout and allowing fully vaccinated travellers to move freely.

The global tourism body also urges governments in the Middle East and around the world to ditch the patchwork of restrictions and enable international travel using digital solutions that allow travellers to prove their status in a fast, simple, and secure way.

Concerning Egypt, Said El-Batouty — a UNWTO Economic Adviser, Member of the UN Economic Commission for Europe, and Board Member of the German Travel Association told Daily News Egypt in February that a good reason to be optimistic is that Egypt is one of the first tourist destinations in which recovery has started.

He said that the final figures for 2021 are not available, but he would expect that the number of tourists who visited Egypt during 2021 amounted to about 4.5 million tourists, and it is expected that the number will increase during 2022 to reach about 7 million tourists — assuming the coronavirus does not develop further — and if this happens, Egypt will achieve about \$7.2bn in tourism revenues.

## **50. Lebanon's last chance as Ukraine fallout looms**

Arab News, 15 Mar 22, Bahaa Hariri

Russia's decision to invade Ukraine will have ramifications that reverberate around the world for years to come. In the West, the immediate concern remains the invasion's impact on the oil and gas markets. Yet, in countries like Lebanon, with just six weeks to two months of wheat reserves,

the war's impact on agricultural supply chains could well be the straw that finally breaks the camel's back.

With an economy struggling due to the impacts of decades of corruption, a financial crisis and COVID-19, the upcoming parliamentary elections have never been so important. My fellow Lebanese face a bleak future, with no jobs for workers, no fuel at the gas stations and food at record prices. Children are already going hungry up and down the country and, should the crisis in Ukraine continue, food prices will only skyrocket further. Given Lebanon imports more than 60 percent of its wheat from Ukraine, the situation has the potential to escalate at a frightening pace.

The elections in May remain the last chance Lebanon has to vote for a government that is willing to implement concrete policies to ease the pain of our people. Inaction or maintaining the status quo is not an option. As long as the people of Lebanon allow sectarian politics to continue, the country will be subject to manipulation, political interference and attempts to cause more chaos from the outside as well as from the political elites within.

Unfortunately, the political establishment in Lebanon has closed ranks, determined to maintain its tenuous grip on power, and there is worrying speculation that the elections could be delayed. Unhelpfully, whereas the US and EU had been applying pressure on Lebanon to hold these elections, another side effect of the crisis in Ukraine is that their attention could be elsewhere.

We should not underestimate the political elites' desire to maintain their tenuous grip on power by avoiding electoral accountability. After all, nothing better highlights the political establishment's desire for self-preservation than its reaction to the Port of Beirut explosion. Nobody – not a single government official or Cabinet member – has been held to account for a completely avoidable tragedy that cost Lebanon 219 souls and billions of dollars. Any attempt at due process has been continually blocked by those motivated solely by maintaining the current status quo. That such actions mean forcing the victims' families into a never-ending campaign for justice is of little concern to such people.

My father, Rafik Hariri, was a passionate advocate for Lebanon and the Lebanese people. He rose to prominence in the aftermath of the civil war with the sole agenda to rebuild Lebanon and put our nation on the path to prosperity. He fought for a Lebanon free from the sectarian constraints that led to the civil war and wanted to build a country that worked for everyone, not just the elites. In the end, he paid the ultimate price, yet his vision for a better, more prosperous Lebanon shines a light on a potential path to prosperity and a return to the kind of Lebanon my father died trying to build.

To honor his legacy, I have been an early supporter of Sawa Li Lubnan, a new political party that is fighting to end the sectarian stranglehold on Lebanese politics and is willing to implement the much-needed reforms to our judiciary, politics and economy. I hope my fellow countrymen and women see in Sawa a chance at a fresh start.

The clock is ticking as the reverberations of what Russia started in Ukraine approach Lebanon. I hope that the Lebanese people wake up to this stark reality. There is no good reason to back the

old sectarian parties, which have done nothing in recent years to improve the dire situation facing Lebanon. If the people do not act now and back parties like Sawa Li Lubnan, there may not be a Lebanon left.

I just pray they act before the crisis in Ukraine reaches our shores.

*Bahaa Hariri is the eldest son of former Lebanese Prime Minister Rafik Hariri.*

## **51. Countering aggressors isn't the antithesis of humanitarian missions**

Al Arabiya, 15 Mar 22, Baraa Shiban

The Russian invasion of Ukraine is in its third week with no signs of it letting up. Worldwide, people are watching the news and the unfolding humanitarian crisis. The Middle East is no stranger to conflicts. That is why millions of people in countries like Iraq, Syria, and Yemen can easily relate to the suffering of the Ukrainian people. The significant difference is how INGOs, media outlets, and commentators have reacted to the conflict in Ukraine compared to conflicts in the Middle East.

There seems to be a consensus amongst INGOs in their media campaigns when addressing the humanitarian crisis in Ukraine. You cannot resolve the humanitarian problem without Russia stopping and reversing its military operation. The European Union and the United States came together to prevent the collapse of the Ukrainian state as such a scenario would be devastating to the whole of Europe and will open a humanitarian catastrophe beyond repair.

I am someone who lived through the horrors of war and watched as the Houthi militias stormed into the Yemeni capital by force. Many stories can be told about wars, from refugees trying to cross the border to families trapped behind frontlines to the sound of shelling through the night. Nothing is more devastating than seeing the collapse of your nation-state.

One's country is the safety net that keeps the cohesion social fabric and ensures the safety of all of its citizens. Nothing can replace the everyday peace and quiet that Europeans and many other nations have experienced for decades resulting from the law and order that runs smoothly through the state structure.

I escaped from Sana'a to the city of Aden in the South of Yemen after the Houthis started hunting down journalists, activists, and human rights workers. The rise of militias makes your own country very alien. It is not a story that is unique to me. My encounters with activists from Syria, Lebanon, and Iraq tell me a very similar story. Our region cannot overcome the many humanitarian crises with those militias in charge.

After I safely arrived in the United Kingdom, I was eager to share - with INGOs, policymakers, and the media - my experience. Unfortunately, I faced a considerable advocacy machine run by INGOs working in Yemen. Their view focused only on addressing the humanitarian crisis, not its causes—a very different approach than what we see happening with Ukraine. I wanted to see more work and calls directed towards reinstating the role of the Yemeni state.

After all, the humanitarian crisis is a consequence of the collapse of the state. Not investing in reinstating the country's institutions will drive more people towards poverty and hunger.

INGOs have spent billions of dollars in countries like Yemen without tangible results. INGOs cannot replace the state, no matter how much money they pour into humanitarian programs. Militias cannot run a form, which is not just my conclusion.

In 2021, the former UN chief to Yemen Lise Grande testified to the US Senate Foreign Relations subcommittee. She said: "Ansar Allah Houthis now fully controls the instruments of the state in northern Yemen and has constructed its parallel state-within-a-state." Her explanation detailed how the Houthis contributed to the collapse of the Yemeni state. Unfortunately, she delivered this testimony after she had left her post. It is not the party of the advocacy message that INGOs including the UN have told the international community.

Indeed, INGOs cannot resolve the conflicts in the Middle East. They are limited in their capacity and ability to provide sustainable solutions. However, they have the power to run advocacy campaigns and reach out to the international community. They play an essential role in setting the narrative and suggesting policy recommendations. They owe it to the people of the Middle East to tell their whole story and address the causes of these conflicts, like what we see happening in Ukraine. Countering the part of militias is not contradictory to the humanitarian mission. Countering Russian aggression is not in conflict with the humanitarian mission.

How can you resolve the economic collapse in Lebanon without addressing the dominance of Hezbollah over the economic and political life? How can you prevent Iraq from slipping into another conflict without addressing the role of the armed militias? How can you alleviate the suffering of the Yemeni people without stopping the Houthis military conquests?

The Middle East is living through protracted conflicts, and each row has its circumstances, but the role of militias is a common dominator. Seeing what is happening in Yemen, people in Lebanon and Iraq know in which direction their countries are heading. Non-state actors are pushing those countries to the brink of collapse. The myth that states can coexist with armed militias is a theory that is proving its fatality and cannot address the humanitarian crisis or tackle its causes.

**52. Russia-Ukraine: Putin's war means Mohammed bin Salman has Biden over a barrel**  
Middle East Eye, 15 Mar 22, David Hearst

Three short weeks ago, US President Joe Biden was in no hurry to talk to Saudi Arabia's de facto ruler and the next king of a major US regional ally.

In keeping with his policy of treating the presumed murderer of the Saudi journalist Jamal Khashoggi as a pariah, Crown Prince Mohammed bin Salman (MBS) could go hang. But after Russia's invasion of Ukraine sparked a frenzied rush to keep the price of oil from reaching \$300 a barrel, it is the crown prince's turn to be in no hurry to pick up the phone.

How the wheel of fortune has turned for the crown prince.

When Boris Johnson arrives in Riyadh this week cap in hand - he and MBS are said to be in touch by WhatsApp Messenger - the Saudi crown prince can afford to keep his British guest waiting. Bin Salman has set Biden a high price for playing ball with the price of oil.

The Wall Street Journal reported that he wants more US support for the war in Yemen, help with the Saudi nuclear programme, and legal immunity in the US against court actions by the likes of Saad al-Jabri, a former Saudi intelligence officer who alleged that the crown prince also tried to kill him.

Two of those demands are possible. The third is not.

In search of legitimacy

Above all, the crown prince seeks legitimacy. He has killed, tortured, imprisoned and stolen his way to the top, by ruthlessly eliminating any rival prince who has as great a claim as he to the throne.

What Biden seeks from him is oil production that will keep the price of a barrel within limits.

The crown prince's price is far-reaching and strategic, Biden's is temporary and tactical.

It is not clear whether either will deliver.

MBS puzzled his latest interviewer, Graeme Wood of The Atlantic, by refusing to pardon prisoners whose crime was to oppose a policy that no longer existed - such as the boycott against Qatar.

The crown prince's reply was that if he extended forgiveness to good people who deserved it, he would have to extend it equally to bad people who did not. Why would one rule out the other, Wood mused.

"Then I realized that MBS was not saying that the failure of his plan to remake the kingdom might lead to catastrophe. He was saying that he'd guarantee it would. Many secular Arab leaders before him have made the same dark implication: support everything I do, or I will let slip the dogs of jihad. This was not an argument. It was a threat," Wood wrote.

Words are never enough for a ruler as brutal as Mohammed bin Salman. Within days of the interview being published, 81 inmates had been executed in a single day, 41 of them Shia Muslims from the eastern Qatif region.

If bin Salman's "Take me as I am" message is clear, it is not so obvious whether Washington's relations with the Gulf state will revert to default.

The default itself could have changed.

The real change

The kingdom's faith in the nation that provides its security has been shaken by Biden's arrival, the US pullout from Kabul, and the feeling that the US military motor is still stuck in reverse. Yemen is another sticking point, after Biden used his first foreign policy speech to say that ending the war was a key goal.

In office, Biden is stuck between the declarative and his fear of enacting real change.

Biden has the levers in place to ground Saudi jets. The Royal Saudi Air Force is dependent on US and British support for its air fleet of F15 fighter jets, Apache helicopters, and Tornado aircraft. If either Washington or London withdrew their technicians or halted the flow of spare parts, Saudi jets would be grounded.

Biden published the CIA report on Khashoggi's murder, but refused to back a UN investigation into the affair. He said he would end support for offensive operations in Yemen, and yet the Saudi-led war is by definition offensive.

Nor has he called for an immediate end to the Saudi blockade of Yemen.

For all his dislike of the man, Biden has done as much to keep Mohammed bin Salman in place as his predecessor Donald Trump. The war he launched on Yemen will have taken 377,000 lives by the end of the year, according to the UN. Nevertheless, American flip flop between Trump and Biden has shaken Saudi and Emirati faith in their reliance on Washington.

Biden's presidency has triggered changes in the foreign policy of each Gulf state.

Saudi Arabia put a stop to its doomed blockade of Qatar, and the UAE is investing in Turkey.

Both countries have been making overtures to Russian President Vladimir Putin. Saudi Arabia signed a military cooperation agreement with Russian Defence Minister Sergei Shoigu, one of the five siloviki - hard men - who are conducting the war in Ukraine, at a trade fare in Moscow last August.

And it will not have gone unnoticed that the kingdom has now invited Chinese President Xi Jinping to visit the kingdom, a visit that could take place in May.

Mixed messages

The United Arab Emirates backed a resolution at the United Nations General Assembly demanding an immediate Russian withdrawal, and abstained from a vote on a similar text at the Security Council.

UAE presidential adviser Anwar Gargash said that taking sides "would only lead to more violence".

The UAE also made a U-turn on their policy on issuing visas to Ukrainians, which they had initially restricted.

It is in neither Gulf state's interest to lower the price of oil, as record revenues flow into cash-strapped state budgets. The blunt truth is that Putin's war is good news for both. Who said that oil had reached its peak?

Winners and losers

Money flowing - once again - into the coffers of the two Gulf states that have, above all others, seeded and funded dictators, interventions and coups is not good news for the Arab world. As has happened many times in the past, the wealth these despots get will only cement and embolden their rule.

They will feel freer to throw their weight around the Arab world to keep like-minded despots like Abdel Fattah el Sisi and Kais Saied of Tunisia in power. Whatever now happens in Ukraine, Mohammed bin Salman and Mohammed bin Zayed, the crown prince of Abu Dhabi, are winners.

MBS's interview with The Atlantic showed he had learned nothing from his past mistakes. He is still reckless and oblivious of the consequences of his actions. There is only one will at the centre of his universe. His.

And whatever else happens, the Arab people will be the losers.

Even before Putin's invasion, they lived in states which are much weaker than they were when the Arab Spring broke out in 2011. Many are perilously close to bankruptcy.

Already facing food inflation not seen since the Arab Spring, Egypt will be hard put to replace Ukrainian supplies of wheat. The price of wheat has increased by 44 percent and of sunflower oil by 32 percent overnight. Egypt has four months' wheat supply left.

Foreign investors are fleeing the Egyptian debt market. The economist Mamdouh al-Wali describes Egypt as being "under siege both politically and economically" as investors flee emerging markets. "The severity of the decline in foreign purchases of Egyptian government debt instruments has increased in the wake of the Russian invasion of Ukraine in a bid to stay away from unstable emerging markets."

Al-Wali continued: "Banking assessments indicate that around \$3bn left [Egypt] in the week that followed the invasion. Whether the war in Ukraine continues or ends, the departure of foreign investment in Egyptian government debt instruments is only likely to increase with the rise of US interest rates. Five such increases are expected during the current year."

Lebanon has no more than 45-60 days of basic food. With unemployment soaring, Jordan is struggling to emerge from its Covid-19 slump amid simmering social discontent in the east of the country. Public shows of discontent against the king are no rarity.

At least in the old days of Gulf oil wealth, some of it was shared. Saudi King Abdullah spent tens of billions of dollars buttressing fellow Arab states. This happens no more.

A third explosion

At no time in the past has the gap between rich and poor been more grotesque: between former royal couples like Princess Haya and Sheikh Mohammed bin Rashid Al-Maktoum, who spent \$3m on strawberries in one summer, or bin Salman who spent \$450m on a fake da Vinci, and record levels of poverty and unemployment in the region.

Before the Russian invasion of Ukraine, an authoritative study by the UN Economic and Social Commission for West Asia expected poverty rates in the Arab region to decrease by one percent over the next two years. It is still 27 percent.

"Unemployment rates, however, will remain among the highest worldwide, especially those of women and youth, although they are expected to decrease from 11.8 percent in 2021 to 10.7 percent in 2023," said Ahmed Moumni, lead author of the survey.

If ever the tension between the rulers and the ruled could be regarded as pre-revolutionary, it is now.

As usual the rich European Union is looking the other way. It's looking east, not south. Is it prepared though for a third explosion that will be triggered by the unprecedented price hike of basic commodities that will define this century, after Kabul and Ukraine? I doubt it.

And yet Europe's policy of going cap in hand to dictators will surely come back to haunt it.

### **16. Russia uses hypersonic missiles in strike on Ukraine arms depot**

Reuters, 19 Mar 22, Igor Konashenkov

Russia said on Saturday it had used hypersonic Kinzhal (Dagger) missiles to destroy a large weapons depot in Ukraine's western Ivano-Frankivsk region. Russia's Interfax news agency said it was the first time Russia had deployed the hypersonic Kinzhal system since it sent its troops into Ukraine on Feb. 24.

### **17. Russians push deeper into Mariupol as locals plead for help**

Associated Press, 19 Mar 22, Cara Anna

Russian forces pushed deeper into Ukraine's besieged and battered port city of Mariupol on Saturday, where heavy fighting shut down a major steel plant and local authorities pleaded for more Western help.

### **18. Stalled Russian offensive increases pressure on Belarus to join invasion**

Financial Times (UK), 19 Mar 22, James Shotter

Alexander Lukashenko, the authoritarian leader of Belarus, has allowed Russia to use his country's territory to invade Ukraine, and changed its constitution so it could host Russian nuclear missiles.

### **19. Africa remains mostly quiet in Russia-Ukraine conflict**

Associated Press, 19 Mar 22

Ugandan President Yoweri Museveni recently remarked that Russia's war on Ukraine should be seen in the context of Moscow being the "center of gravity" for Eastern Europe. His son, Lt. Gen. Muhoozi Kainerugaba, was more forceful, declaring that most Africans "support Russia's stand in Ukraine" and "Putin is absolutely right!"

## ANALYSIS/COMMENTARY

---

### **20. Overshadowed by Ukraine, Afghanistan starves in silence**

McGill Journal of Political Studies, 19 Mar 22, Rory Daly

At the end of last year, Afghanistan still loomed large in the media. CNN reported on the new Taliban government's restrictions on women's rights, and the New York Times was writing about the struggles of Afghan refugees. Direst of all, economic sanctions placed on Afghanistan by the United States looked likely to trigger mass starvation in the Middle Eastern country.

### **21. How did Europe get hooked on Russian energy?**

Bloomberg Opinion, 19 Mar 22, Paul J. Davies

Paul J. Davies: You're a professor of political economy at the University of Cambridge and author of "Disorder: Hard Times in the 21st Century," which analyzes how the interplay of energy, finance and international politics have contributed to the crises we face today. Let's start with Ukraine directly. How much of Russia's invasion is due to Putin's seeking security for Russian gas exports through Ukraine's pipelines?

## **22. Memorializing the military achievements of women**

The Hill, 19 Mar 22, Jeremy Butler

Throughout my 20 years of service in the Navy, I've had the privilege of working alongside many brave, resilient, and inspirational women. These servicewomen — more than 345,000 of them who have deployed since 9/11 have been central to the past and continued success of U.S. operations, fighting tirelessly to protect all Americans.

## **23. Putin made a profound miscalculation on Ukraine**

New York Times, 19 Mar 22, Yaroslav Hrytsak

Ukraine is once again at the center of a potentially global conflict. World War I, as the historian Dominic Lieven put it, "turned on the fate of Ukraine." World War II, according to the legendary journalist Edgar Snow, was "first of all a Ukrainian war." Now the threat of a third world war hinges on what could happen in Ukraine.

## **24. How AI could help new Air Force pilots avoid costly mistakes**

Task and Purpose, 19 Mar 22, Kelsey D. Atherton

On March 2, the US Navy pulled an F-35C from the ocean. The \$94.4 million jet came in hard for a landing on January 24, then skidded across the deck, injuring sailors before it plummeted off and into the sea. The pilot ejected and survived, but the incident raises an ominous question over aircraft operations: What can the military do to ensure pilots land safely as many times as they take off, and help all aviators avoid the mistakes of their peers?

## ANALYSIS/COMMENTARY

---

### **39. Civilisation and its discontents — The price of human dignity**

Jordan Times, 19 Mar 22, El Hassan bin Talal

Almost as far back as the historical records tell, wars have been waged in the name of "Civilisation". Conquests endeavoured under the double aegis of colonialism and imperialism have been justified with references to "Civilisation", but what of the term? I am reminded on this occasion of a lecture delivered in 1940 by the English philosopher, historian and archaeologist Robin George Collingwood. Collingwood spoke of three elements of Civilisation, economic, social, and legal, which when combined, as Brett Bowden writes, give rise to "socio-political Civilisation, or a group or a collective's capacity to organise and govern itself under a system of laws".

### **40. The world's role in Zelensky's conflict**

Jerusalem Post, 19 Mar 22, Vas Shenoy

A comedian kick-starts his career with a parody. The story runs thus: A schoolteacher accidentally gets himself elected as the president of his country when his students post his rant against the government online and crowd-fund for his election. The show is so successful that four years later, the comedian really lands up in the top office.

### **41. Palestine tops Chilean president's agenda in first statements after taking office**

Middle East Monitor, 19 Mar 22, Eman Abusidu

Last Friday, thirty-six-year-old Gabriel Boric, the youngest Chilean president ever to have been elected, officially became the president of Chile after winning Chile's presidential elections last December. His victory represents a major revival for Chile's progressive left and a new era for Chile and neighbouring countries. Boric began his inaugural speech by mentioning late president, Salvador Allende: "

### **42. This is not the time to brand Vladimir Putin an 'evil madman'**

Al Jazeera, 19 Mar 22, Farhan Mujahid Chak

As the Russian invasion of Ukraine enters its fourth week, we routinely hear words like “evil,” “unhinged” and “unstable” being used to describe Vladimir Putin. Such labelling is not uncommon in realpolitik. It is a tactic in the ever-present rivalries of international politics to demonise, caricature and demoralise political opponents, while simultaneously reassuring those on your own ideological flank. After all, who wants to be on the side of a lunatic?

#### **43. Hunger killing more worldwide while COVID-19 pandemic occupies center stage**

Arab News, 19 Mar 22, Jumana Khamis

For two years, the havoc caused by the COVID-19 pandemic has dominated the headlines. Since February 24, debate over the impact of the Ukraine war on global food supplies has taken center stage. Meanwhile, another pandemic continues to take a heavy toll, only much less conspicuously.

#### **44. India needs no history lessons from US on its decisions in Russia-Ukraine war**

Bloomberg Quint (India), 19 Mar 22, Dr. Tara Kartha

A recent press briefing by White House spokesperson Jen Psaki went viral for all the wrong reasons in India. In answer to a question about a Russian offer to India for discounted crude oil and the US reaction to it, she said while such a move was not against sanctions, India needed to think about “where you want to stand when the history books are written in this moment in time”.

#### **1. Saudi FM meets with special envoy for Ukraine’s president in Riyadh**

Al Arabiya, 20 Mar 22

Saudi Arabia’s Minister of Foreign Affairs Prince Faisal bin Farhan discussed the crisis in Ukraine with Bektum Rostam, a special envoy for Ukraine’s president, in Riyadh, state news agency (SPA) reported on Saturday.

Prince Faisal reaffirmed the Kingdom’s support to efforts that contribute to de-escalating the conflict, protecting civilians and reaching a political solution.

Russia launched a multi-pronged attack on Ukraine on February 24, which President Vladimir Putin claims is a “special military operation.”

But the conflict has escalated to become the largest military invasion in Europe since World War II.

The UN refugee agency UNHCR said on Thursday that more than 3.1 million people had fled Ukraine since the invasion.

## **2. U.S. suggested Turkey transfer Russian-made missile system to Ukraine**

Reuters, 19 Mar 22, Humeyra Pamuk

The United States has informally raised with Turkey the unlikely possibility of sending its Russian-made S-400 missile defense systems to Ukraine to help it fight invading Russian forces, according to three sources familiar with the matter.

U.S. officials have floated the suggestion over the past month with their Turkish counterparts but no specific or formal request was made, the sources told Reuters. They said it also came up briefly during Deputy Secretary of State Wendy Sherman's visit to Turkey earlier this month.

The Biden administration has been asking allies who have been using Russian made equipment and systems including S-300s and S-400s to consider transferring them to Ukraine as it tries to fend off a Russian invasion that began on Feb. 24.

The idea, which analysts said was sure to be shot down by Turkey, was part of a wider discussion between Sherman and Turkish officials about how the United States and its allies can do more to support Ukraine and on how to improve bilateral ties.

The Turkish authorities have not commented on any U.S. suggestion or proposal relating to the transfer to Ukraine of Ankara's S-400 systems, which have been a point of long-standing contention between the two NATO allies.

Turkish foreign ministry officials were not immediately available for comment.

Turkish sources and analysts said any such suggestion would be a non-starter for Turkey, citing issues ranging from technical hurdles related to installing and operating the S-400s in Ukraine, to political concerns such as the blowback Ankara would likely face from Moscow.

Washington has repeatedly asked Ankara to get rid of the Russian-built surface-to-air missile batteries since the first delivery arrived in July 2019. The United States has imposed sanctions on a Turkey's defence industry and removed NATO member Turkey from the F-35 fighter jet programme as a result.

Ankara has said it was forced to opt for the S-400s because allies did not provide weapons on satisfactory terms.

U.S. officials are keen to seize this moment to draw Turkey back into Washington's orbit. Efforts to find "creative" ways to improve the strained relationship have accelerated in recent weeks, even though no specific proposal has so far gained traction, U.S. and Turkish sources have said.

"I think everyone knows that the S-400 has been a long standing issue and perhaps this is a moment when we can figure out a new way to solve this problem," Sherman told Turkish broadcaster Haberturk in an interview on March 5.

It was not clear what exactly she meant and the State Department has not answered questions about her comments. The White House did not respond to a request for comment about the suggestion made during her visit to Turkey.

The effort is also part of a wider bid by the Biden administration to respond to Ukrainian President Volodymyr Zelenskiy's plea to help protect Ukraine's skies. Russian or Soviet-made air defense systems such as S-300s that other NATO allies have and S-400s are sought after.

One source familiar with U.S. thinking said Washington's floating of the possibility came as a result of the renewed effort to improve ties at a time when Ankara has been spooked by Russia's invasion of Ukraine.

Turkish President Erdogan had not received a specific heads up from Russian President Vladimir Putin on his plans of a full-scale attack on Ukraine, another source familiar with the discussions said.

Turkey shares a maritime border with Ukraine and Russia in the Black Sea and has good ties with both. It has said the invasion is unacceptable and voiced support for Ukraine, but has also opposed sanctions on Moscow while offering to mediate.

Ankara has carefully formulated its rhetoric not to offend Moscow, analysts say, with which it has close energy, defence and tourism ties. But Ankara has also sold military drones to Kyiv and signed a deal to co-produce more, angering the Kremlin. Turkey also opposes Russian policies in Syria and Libya, as well as its 2014 annexation of Crimea.

"Turkey has managed to walk on the razor's edge and a transfer of a Russian S-400 would certainly lead to severe Russian ire," said Aaron Stein, director of research at the Philadelphia-based Foreign Policy Research Institute. "And for Erdogan, the S-400 has become a symbol of Turkish sovereignty, so trading it away wouldn't be all roses and flowers."

### **3. Houthis launch attacks on Saudi energy, desalination facilities-coalition**

Reuters, 20 Mar 22, Moataz Mohamed, Yasmin Hussein and Omar Fahmy

The Saudi-led coalition said early on Sunday that Yemen's Iran-aligned Houthi group launched missile and drone strikes on energy and water desalination facilities in the kingdom that caused some material damage but no deaths.

It said the attacks were aimed at a water desalination plant in Al-Shaqeeq, an Aramco distribution station in Jizan, a power station in Dhahran al Janub, a gas facility in Khamis Mushait and an Aramco liquefied natural gas plant in Yanbu.

Initial investigations showed the group fired Iranian-made cruise missiles at the desalination plant and state oil firm Aramco's Jizan distribution centre, the coalition said.

It said Saudi air defences intercepted and destroyed a ballistic missile and nine drones.

The Houthi military spokesman said the group would within hours announce a wide military operation on Saudi Arabia.

Riyadh leads a coalition that has been battling the Houthis for seven years in a conflict widely seen in the region as a proxy war between Saudi Arabia and Iran.

"These barbaric attacks are a dangerous escalation," coalition spokesman Brigadier General Turki al-Malki said, adding this constituted a Houthi rejection of planned Yemeni consultations in Riyadh later this month.

The Houthis have said they would only participate in discussions held in a neutral country and the priority should be lifting a coalition blockade on areas held by the group.

The movement ousted Yemen's Saudi-backed government from the capital, Sanaa, in late 2014, prompting the alliance to intervene months later. The Houthis say they are fighting a corrupt system and foreign aggression.

The war has killed tens of thousands of people and pushed millions to the verge of famine.

### **4. Detainee in Iran with triple nationality who was released as part of deal with UK is sent back to jail**

CNN, 19 Mar 22

One of the three detained British-Iranians who were released as part of a deal signed by the UK has been returned to jail in Tehran, his lawyer told CNN Friday. Morad Tahbaz, who is also a US citizen, spent 48 hours "under house arrest" with an ankle bracelet before being taken back to prison, according to his lawyer Hojjat Kermani.

Fellow British-Iranian nationals Nazanin Zaghari-Ratcliffe and Anoosheh Ashoori were released Wednesday and flew back to their homes in England.

Tahbaz, an environmentalist who was first detained in January 2018, was released from Evin prison "on furlough to his house in Tehran," UK Foreign Secretary Liz Truss said in a statement on Wednesday.

Tahbaz's lawyer told CNN that "security guards surrounded Morad's home for 48 hours before taking him back to prison."

On Friday, a UK Foreign Office spokesperson said "the Iranians have told the UK government that Morad has been taken to Evin to fit an ankle tag that should have been fitted before his release. We hope to see him returned to his home in the coming hours. Morad Tahbaz is a tri-national and we are working closely with the United States to secure Morad's permanent release."

A spokesperson for the US State Department also told CNN that “Iran made a commitment to the UK to furlough Morad Tahbaz. As the UK government has said, the UK has been told that Morad has been returned to Evin prison solely to be fitted with an ankle tag, after which he will be allowed to go home.”

The spokesperson added that the US is not “a party to this arrangement, but would join the UK in considering anything short of Morad’s immediate furlough a violation of Iran’s commitment.”

As of Saturday morning, CNN cannot confirm whether Tahbaz has been rereleased from prison and back under house arrest.

The US is “urgently consulting” with the UK on appropriate responses and said it continues “to work night and day to secure the release of our wrongfully detained citizens, including U.S.-UK citizen Morad Tahbaz.”

The State Dept. spokesperson added, “simply put, Iran is unjustly detaining innocent Americans and others and should release them immediately.”

Following the release of Zaghari-Ratcliffe and Ashoori earlier this week, Truss announced the UK had settled a decades-old £400 million (\$524 million) debt owed to Iran, which Iran’s Foreign Minister Hossein Amir-Abdollahian denied was linked to the prison release on Wednesday.

## **5. Iran oil minister says aiming for 1.4 mln bpd crude exports**

Reuters, 19 Mar 22

Iranian Oil Minister Javad Owji said in televised remarks on Saturday that he will try to raise Iran’s oil and condensates exports to 1.4 million barrels per day as set out in an annual state budget.

“In parliament, lawmakers decided to raise the ceiling of exports of oil and condensates from 1.2 million barrels (per day) to 1.4 million barrels. The Oil Ministry will do everything in its power to realise the level set in the budget,” Owji told state television.

Iran, facing U.S. sanctions on its crude oil exports, does not divulge exact figures on its oil sales.

Owji said his ministry planned to raise production capacity of crude and condensates to 5.7 million bpd from about 3.7-4 million bpd, without giving a timeframe.

In late 2020, Iran unveiled an ambitious plan to increase production capacity to more than 6.5 million bpd by 2040. But analysts believe that is unrealistic.

Consultancy FGE said last year it saw Iranian output surpassing 4 million bpd by 2025, plateauing at around 5 million bpd before starting to fall in 2037.

**6. Iraqi Kurdish oil tycoon's home in ruins after Iran strike**

Associated Press, 19 Mar 22, Rashid Yahya and Qassim Abdul-Zahra

Once a lavish mansion, the sprawling home of an Iraqi Kurdish oil tycoon was laid to waste in a barrage of missiles that struck near a U.S. consulate complex in the northern Iraqi city of Irbil earlier this week.

Iran's powerful Revolutionary Guard said it launched the attack last Sunday, firing off 12 cruise missiles at what it described as a "strategic center" of the Israeli spy agency Mossad — in retaliation for an Israeli strike in Syria that killed two of the Iranian paramilitary force's members the previous week.

Baz Karim Barzinji, CEO of the Iraqi Kurdish oil company KAR group, denies any links to Mossad. The missiles gutted his beautiful home but he says he is grateful his family was unharmed.

The consulate was undamaged and no injuries were reported in the attack. The United States said it did not believe it was the target. But the barrage marked a significant escalation between the U.S. and Iran. Hostility between the longtime foes has often played out in Iraq, whose government is allied with both countries.

Barzinji pointed to a large crater where once his home office stood as he took The Associated Press on a tour of the ruins on Friday. The tycoon, his wife and two teenage children were visiting a nearby farm when the attack took place, he said.

Once plush sitting rooms, where government officials rubbed shoulders with diplomats and other figures of influence, are now strewn with glass, pieces of concrete and piles of debris. The windows and the roof are gone, remnants of the mansion walls barely stand, and floors are covered with rubble.

"This is my family house, all the photos and our belongings" were here, he said. "It was horrifying."

His daughter, Ban Karim, recounts how she huddled in the garden with the family dogs as the thundering missiles whizzed overhead. "We do not know if they can see us, we do not know if they are drones, we do not know anything about ballistics, what is going to happen right now," she said, speaking in English.

Observers speculate the timing of the attack was significant as the world's focus is on Russia's war in Ukraine.

Iraq's northern semi-autonomous Kurdish region maintains discreet links to Israel through the selling of its oil. Barzinji's KAR group built and operates the export pipeline to Ceyhan in Turkey through a joint venture with Russia's Rosneft.

"It is clearly nonsense, what the Iranians are talking about. This can be anything but an Israeli base," Hiwa Osman, an Iraqi Kurdish political analyst, said of Barzanji's villa.

An Iraqi intelligence official, speaking on condition of anonymity to discuss the attack, also rejected claims the house was an Israeli spy center, adding it was a place where diplomats often held social gatherings.

The attack was Iran's first assault on Iraqi soil since the January 2020 missile strike on Ain al-Assad air base housing U.S. forces, which was in retaliation for the U.S. drone strikes that killed a top Iranian general, Qassem Soleimani, outside the Baghdad airport.

"This is a message (by Iran) to their base, their people. They needed to boost their morale because they have been humiliated for a long time," said Hamdi Malik, an associate fellow with the Washington Institute who specializes in Shiite militias.

Malik believes Sunday's attack was carefully plotted to minimize casualties and cause no direct harm to U.S. interests — but also sent a message to the Americans amid stalled nuclear talks between Iran and world powers in Vienna: next time could be bigger, and more dangerous,

The attack also served to remind Baghdad, where talks on forming a government are languishing and where Moqtada al-Sadr, the winner of Iraq's 2021 parliamentary election, is threatened to exclude Iran-backed parties by forming an alliance with the Kurds and Sunnis.

Iran's "message to Iraqi partners is that no matter who wins the election .... Iraq is our backyard and we can do what we want, whenever we want," Malik said.

**11. Starvation fears for Yemen as Ukraine Russia war impacts wheat and fuel supplies**

Mirror (UK), 19 Mar 22, Milo Boyd

Wars in Ukraine and Yemen could create the "perfect storm" when it comes to global wheat and fuel supplies being damaged.

Charities have warned of a "potential catastrophe" if the Russian invasion of Ukraine - a huge exporter of wheat - continues.

Since Vladimir Putin's forces moved in and put the Ukrainian economy on war footing, global wheat future prices rocketed to their highest levels since the financial crash in 2008.

As much as the spike will lead to unwelcome food price rises for those struggling to make ends meet in the UK, the impact on millions of starving people in war-torn Yemen will be catastrophic.

The Middle Eastern country generally gets 30% of its wheat from Russia and Ukraine, along with a significant amount of oil and gas.

The impact has been food prices in Yemen increasing by 150% since the war began last month.

More than 17 million people require food aid in Yemen, while that number could rise to 19 million in the second half of the year, UN bodies have said.

To make matters worse the Ukraine conflict has turned attention away from war-struck Yemen, which has seen the Saudi Arabian backed government extensively bomb the Houthi rebel forces.

This week donor countries pledged less than a third of the £3.2 billion in humanitarian relief for Yemen requested by the UN.

Among the 36 countries who did make pledges, the United States offered £443m, Britain pledged £87m and the European Union member states a total of £308m.

The failure to reach the £3.2bn target marked the sixth year that Yemen's humanitarian response plan has not been fully funded.

"You have a perfect storm gathering on the horizon," said Philippe Duamelle, Yemen representative for Unicef.

"We need more, not less. But we have reached a level where we need to start scaling down. This is insane. This is just insane."

In a press release on Thursday, following the conference, Rama Hansraj, Save the Children's country director in Yemen, said: "Leading up to the pledging conference this month, hospitals in Yemen were forced to a near halt due to a lack of fuel, putting children's lives at risk.

"Now, the country is bracing for the potential catastrophic impact the war in Ukraine is expected to have on its wheat supply."

The UN estimates that the war in Yemen caused an estimated 130,000 deaths from indirect causes which include lack of food, health services, and infrastructure.

Save the Children estimated that 85,000 Yemeni children died due to starvation between 2015 and 2018.

In May 2020, Unicef described Yemen as "the largest humanitarian crisis in the world".

### **12. Egyptian council holds first ever meeting with human rights, civil society leaders**

Al Monitor, 19 Mar 22

The National Council for Human Rights (NCHR), an Egyptian state-owned institution whose members are appointed by the president, held the first meeting of a series of talks March 11 with human rights civil society organizations to discuss the human rights situation in the country and examine the organizations' demands for the coming period.

The meeting is the first with civil society organizations, which have long been accused by the current regime of colluding with foreign parties.

According to various sources who spoke to Al-Monitor, the meeting was attended by Gamal Eid, a human rights activist and director of the Arab Network for Human Rights Information; Mohamed Lotfy, executive director of the Egyptian Commission for Rights and Freedoms (ECRF); Hossam Bahgat, executive director of the Egyptian Initiative for Personal Rights; Mohamed Abdel Salam, executive director of the Association of Freedom of Thought and Expression; Mohamed Zaree, director of the Egypt Program at the Cairo Institute for Human Rights Studies; and Ahmed Abdel Naby, executive director of the Regional Center for Rights and Liberties.

All the participants of this first-of-its-kind meeting between the NCHR and civil society organizations — with the exception of the ECRF — are being investigated in Case No. 173 of 2011, whereby travel bans and confiscation orders were issued against the organizations' directors.

The case is also known as the "foreign funding" case, in which dozens of Egyptian human rights activists have been implicated and accused on charges of receiving suspicious funds. Defendants face travel bans and confiscation of funds and property.

During the meeting, the NCHR, represented by its chairperson Moushira Khattab and all its members, stated it is keen “to open channels of dialogue and communication with all civil society organizations and groups through a national platform, given their important role in upholding human rights.”

The statement continued, “The council, in its capacity of an independent national institution, is also keen on forging transparent, professional and objective ties with all civil society groups in general and human rights institutions in particular on a national ground.”

Lotfy, the ECRF executive director, told Al-Monitor, “The meeting was positive, and the NCHR’s directors and members expressed their desire to embark on a new chapter with civil society groups in Egypt. We also expressed a similar desire, but we have raised several questions, and are waiting on the council to get back to us.”

He said, “Participants mainly demanded the release of human rights defenders belonging to civil society groups. Some of them have been behind bars in pre-trial detention for a long time, exceeding three years. They [the participants] also requested a review of the new NGO law [issued in 2019], which obliges organizations to officialize their situation, and places restrictions on the work of human rights institutions.”

Zaree, director of the Egypt Program at the Cairo Institute for Human Rights Studies, who represented the center in the March 11 meeting, told Al-Monitor, “We touched on several impediments in the civil and human rights work in Egypt. We also discussed the national strategy for human rights launched by the Egyptian president months ago.”

Commenting on the national strategy, Zaree said, “Nothing in Egypt has changed yet in terms of human rights since the strategy was launched more than six months ago. This makes us question the Egyptian regime’s intention in bringing about real change.”

He said, “The absence of a true will or desire for change in the human rights landscape will only make any dialogue or meeting just for show.”

During a major conference attended by Egyptian officials and diplomats in September 2021, Egyptian President Abdel Fattah al-Sisi announced the National Strategy for Human Rights in terms of civil society, which includes dozens of goals related to political, economic and cultural rights, in addition to human rights for women, children, people with disabilities, youth and the elderly, as well as education and capacity-building in this regard.

Mohamed Anwar al-Sadat, head of the NCHR’s Civil and Political Rights Committee, told Al-Monitor, “Human rights organizations and civil society groups play an effective role in promoting all political, civil and economic rights.”

He refused to delve into the details of the meeting, but said the NCHR “plans in the coming period to hold a series of meetings with all civil society actors, trade unions and various political parties from across the social spectrum to place all demands on the table.”

“I feared the worst, but hoped for a long time for better news,” the Norwegian chief of defense, Gen. Eirik Kristoffersen, said in a statement on Saturday.

The crew members were assigned to II Marine Expeditionary Force, which in a statement Saturday morning said that they were listed as “duty status whereabouts unknown” — potentially indicating that the Marines had not yet recovered their remains.

The Joint Rescue Coordination Center in Norway began a search-and-rescue operation after the Osprey failed to return Friday evening. Later on, a crash site was spotted from the air, south of Bodo.

Poor weather conditions made it impossible for rescue services to reach the site from the air, but police and rescue crews eventually made their way into the area by foot and snowmobile. The Royal Norwegian Air Force confirmed early Saturday that police officers had arrived at the crash site.

This year’s Cold Response exercises began in March and brought together about 30,000 troops from more than 27 countries across Europe and North America.

Norway’s prime minister, Jonas Gahr Store, posted a message of condolence on Twitter on Saturday morning.

“It is with great sadness we have received the message that four American soldiers died in a plane crash last night,” he wrote, adding, “Our deepest sympathies go to the soldiers’ families, relatives and fellow soldiers in their unit.”

Crashes during military training exercises are not common, but not unheard-of. In February, four contractors were killed when a helicopter crashed at a U.S. naval facility during a training mission in Hawaii, and in 2020, an Air Force pilot died when his fighter jet crashed during a training flight off the northeast coast of England.

### **16. Russia uses hypersonic missiles in strike on Ukraine arms depot**

Reuters, 19 Mar 22, Igor Konashenkov

Russia said on Saturday it had used hypersonic Kinzhal (Dagger) missiles to destroy a large weapons depot in Ukraine’s western Ivano-Frankivsk region. Russia’s Interfax news agency said it was the first time Russia had deployed the hypersonic Kinzhal system since it sent its troops into Ukraine on Feb. 24.

Defence ministry spokesman Igor Konashenkov told a briefing that the underground depot hit by the Kinzhal system on Friday housed Ukrainian missiles and aircraft ammunition, according to a recording of the briefing shared by Russian news agencies.

Reuters was not able to independently verify Konashenkov's statements.

A spokesperson for Ukraine's air force command confirmed a Russian missile strike on Delyatyn in the Ivano-Frankivsk region on Friday, without giving further details.

Russia prides itself on its advanced weaponry, and President Vladimir Putin said in December that Russia was the global leader in hypersonic missiles, whose speed, manoeuvrability and altitude make them difficult to track and intercept.

The Kinzhal missiles are part of an array of weapons unveiled in 2018.

Konashenkov added on Saturday that Russian forces had also destroyed military radio and reconnaissance centres near the Ukrainian port city of Odessa using the Bastion coastal missile system.

Moscow refers to its actions in Ukraine as a "special operation" to weaken its southern neighbour's military capabilities and root out people it calls dangerous nationalists.

Ukrainian forces have mounted stiff resistance and Western countries have imposed sweeping sanctions on Russia in an effort to force it to withdraw its forces.

## **17. Russians push deeper into Mariupol as locals plead for help**

Associated Press, 19 Mar 22, Cara Anna

Russian forces pushed deeper into Ukraine's besieged and battered port city of Mariupol on Saturday, where heavy fighting shut down a major steel plant and local authorities pleaded for more Western help.

The fall of Mariupol, the scene of some of the war's worst suffering, would mark a major battlefield advance for the Russians, who are largely bogged down outside major cities more than three weeks into the biggest land invasion in Europe since World War II.

"Children, elderly people are dying. The city is destroyed and it is wiped off the face of the earth," Mariupol police officer Michail Vershnin said from a rubble-strewn street in a video addressed to Western leaders that was authenticated by The Associated Press.

Russian forces have already cut the city off from the Sea of Azov, and its fall would link Crimea, which Russia annexed in 2014, to territories controlled by Moscow-backed separatists in the east. It would mark a rare advance in the face of fierce Ukrainian resistance that has dashed Russia's hopes for a quick victory and galvanized the West.

Ukrainian and Russian forces battled over the Azovstal steel plant in Mariupol, Vadym Denysenko, adviser to Ukraine's interior minister, said Saturday. "One of the largest metallurgical plants in Europe is actually being destroyed," Denysenko said in televised remarks.

Oleksiy Arestovych, an adviser to Ukraine's president, said the nearest forces that could assist Mariupol's defenders were already struggling against "the overwhelming force of the enemy" or at least 100 kilometers (60 miles) away.

"There is currently no military solution to Mariupol," he said late Friday. "That is not only my opinion, that is the opinion of the military."

Ukrainian President Volodimir Zelenskyy has remained defiant, appearing in a video early Saturday shot on the streets of the capital, Kyiv, to denounce a huge Friday rally in Moscow that Russian President Vladimir Putin attended.

Zelenskyy said Russia is trying to starve Ukraine's cities into submission but warned that continuing the invasion would exact a heavy toll on Russia. He also repeated his call for Putin to meet with him to prevent more bloodshed.

"The time has come to restore territorial integrity and justice for Ukraine. Otherwise, Russia's costs will be so high that you will not be able to rise again for several generations," he said.

Putin lavished praise on his country's military during the rally, which took place on the anniversary of Russia's 2014 annexation of Crimea. The event included patriotic songs such as "Made in the U.S.S.R.," with its opening line of "Ukraine and Crimea, Belarus and Moldova, it's all my country."

"We have not had unity like this for a long time," Putin told the cheering crowd.

The rally took place as Russia has faced heavier-than-expected losses on the battlefield and increasingly authoritarian rule at home, where Russian police have detained thousands of antiwar protesters.

Estimates of Russian deaths vary widely, but even conservative figures are in the low thousands. Russia had 64 deaths in five days of fighting during its 2008 war with Georgia. It lost about 15,000 in Afghanistan over 10 years, and more than 11,000 over years of fighting in Chechnya.

The Russian military said Saturday that it used its latest hypersonic missile for the first time in combat. Maj. Gen. Igor Konashenkov said Kinzhal missiles destroyed an underground warehouse storing Ukrainian missiles and aviation ammunition in the western Ivano-Frankivsk region of Ukraine.

Russia has said the Kinzhal, carried by MiG-31 fighter jets, has a range of up to 2,000 kilometers (about 1,250 miles) and flies at 10 times the speed of sound.

Pentagon press secretary John Kirby said Saturday the U.S. couldn't confirm that the Russians used a hypersonic missile in the attack.

Meanwhile, fighting raged on multiple fronts in Ukraine. U.N. bodies have confirmed more than 847 civilian deaths since the war began, though they concede the actual toll is likely much higher. The U.N. says more than 3.3 million people have fled Ukraine as refugees.

Waiting to board a bus at a triage center near the Moldova-Ukraine border on Saturday, a Ukrainian woman named Irina said she decided to leave home in Mykolaiv this week after a loud explosion shook the walls, waking her young daughter.

“Can you imagine the fear I had, not for me but for my child?” said Irina, who didn’t provide her last name. “So we made decision to arrive here, but I don’t know where we are going, where we’ll stay.”

The northwestern Kyiv suburbs of Bucha, Hostomel, Irpin and Moshchun were under fire on Saturday, the Kyiv regional administration reported. It said Slavutich, located 165 kilometers (103 miles) north of the capital, was “completely isolated.”

Police of the Kyiv region said seven people were killed and five were wounded in a mortar attack on Friday in Makariv, a town roughly 50 kilometers (30 miles) west of the capital. They said the attack destroyed homes and damaged other buildings.

Ukrainian and Russian officials agreed to establish 10 humanitarian corridors for bringing aid in and residents out of besieged cities — one from Mariupol and several around Kyiv and in the eastern Luhansk region, Ukrainian Deputy Prime Minister Iryna Vereshchuk said Saturday.

She also announced plans to deliver humanitarian aid to the southern city of Kherson, which Russia seized early in the war.

Ukraine and Russia have held several rounds of negotiations aimed at ending the conflict but remain divided over several issues, with Russia pressing for its neighbor’s demilitarization and Kyiv demanding security guarantees.

In a call with German Chancellor Olaf Scholz on Friday, Putin said Ukraine was trying to “drag the negotiations by making a series of new, unrealistic proposals,” according to the Kremlin.

British Foreign Secretary Liz Truss, meanwhile, accused Putin of using the talks as a “smokescreen” while his forces regroup. “We don’t see any serious withdrawal of Russian troops or any serious proposals on the table,” she told the Times of London.

The British Department of Defense said in its latest intelligence assessment that the Kremlin “has been surprised by the scale and ferocity of Ukrainian resistance” and “is now pursuing a strategy of attrition” that is likely to involve indiscriminate attacks.

U.S. Defense Secretary Lloyd Austin, during a Saturday visit to NATO ally Bulgaria, said the Russian invasion had “stalled on a number of fronts” but the U.S. had not yet seen signs that Putin was deploying additional forces.

Around Ukraine, hospitals, schools and buildings where people sought safety have been attacked.

At least 130 people survived the Wednesday bombing of a Mariupol theater that was being used as a shelter, but another 1,300 were believed to be still inside, Ludmyla Denisova, the Ukrainian Parliament's human rights commissioner, said Friday.

"We pray that they will all be alive, but so far there is no information about them," Denisova told Ukrainian television.

Satellite images from Maxar Technologies showed a long line of cars leaving Mariupol as people tried to evacuate. Zelenskyy said more than 9,000 people were able to leave Friday along a route that leads 227 kilometers (141 miles) away to the city of Zaporizhzhia — which is also under attack.

The governor of southern Ukraine's Zaporizhzhia region, Oleksandr Starukh, announced a 38-hour curfew after two missile strikes on Zaporizhzhia's suburbs killed nine people Friday.

Russian forces have fired on eight cities and villages in the eastern Donetsk region in the past 24 hours, including Mariupol, Ukraine's national police said Saturday.

The attacks with rockets and heavy artillery killed and wounded dozens of civilians, and damaged at least 37 residential buildings and facilities, including a school, a museum and a shopping center, it said.

In the western city of Lviv, Ukraine's cultural capital, which was hit by Russian missiles on Friday, military veterans were training dozens of civilians on how to handle firearms and grenades.

"It's hard, because I have really weak hands, but I can manage it," said one trainee, 22-year-old Katarina Ishchenko.

### **18. Stalled Russian offensive increases pressure on Belarus to join invasion**

Financial Times (UK), 19 Mar 22, James Shotter

Alexander Lukashenko, the authoritarian leader of Belarus, has allowed Russia to use his country's territory to invade Ukraine, and changed its constitution so it could host Russian nuclear missiles.

But there is one bridge he has so far refused to cross: sending Belarusian troops to join the Russian assault on their common neighbour. "We're not going to get involved," Lukashenko told a gathering of security officials this week. "There's no need for it."

Yet as Russia's invasion stalls in the face of fierce Ukrainian resistance, officials in Kyiv have warned that Lukashenko — who survived huge anti-regime protests in 2020 largely thanks to Kremlin support — may not be able to keep his troops on the sidelines forever.

Ukraine recently accused Russia of a “false flag” attack on Belarus to draw it into the war. Last weekend, Oleksiy Danilov, Ukraine’s national security chief, claimed Russia was trying to persuade Belarusian soldiers to enter Ukrainian territory disguised as Russians. “They have a great desire to put Belarusian soldiers in uniforms of the Russian Federation,” he said.

Belarus dismissed the false flag claims as “nonsense”, and opinion polls suggest that Belarusians are strongly opposed to their soldiers taking part in the war. A senior US defence official said there were no indications that Belarus was putting troops into Ukraine, or preparing to do so.

But as the war enters its fourth week, Russia’s need of reinforcements is increasingly clear. US officials have estimated that about 6,000 Russians have died in the conflict so far.

Russia has not given figures since March 2, when it said it had suffered 498 casualties. But in a tacit admission of his military problems, President Vladimir Putin last week gave approval for 16,000 “volunteers” from the Middle East to join the Russian cause.

Analysts say Lukashenko has limited ability to resist Russian pressure to join the fight.

For much of his almost three decades in power, the former collective farm boss sought to maintain some degree of autonomy from Moscow by cultivating ties with the EU.

But that strategy collapsed in 2020, when Lukashenko launched a brutal crackdown on protests against his claim to have won a sixth straight term as president.

The west responded with tough sanctions, which have hit key sectors of the Belarusian economy, and made Lukashenko more dependent than ever on Russian political and economic support.

Katia Glod, a Belarus expert from the Center for European Policy Analysis think-tank, said of the chances of Belarusian troops joining the fighting: “It will all boil down to whether Putin decides he needs them.”

She continued: “Especially with Russian troops in the country, and under the current sanctions. Lukashenko is economically so dependent on Russia that he has no space for manoeuvre.”

Belarus’s military, with just 45,000 personnel, is small compared with that of Russia and Ukraine, and has less combat experience. But given the heavy losses that Russia has suffered, a deployment of Belarusian forces could be useful for the Kremlin, said François Heisbourg, a French defence analyst.

“The Russians need bodies. They’ve already had a few thousand Chechens and now they’re talking about flying in Syrians,” he said. “For the urban combat phase in particular you really need a lot of manpower and that’s exactly what the Russians don’t currently have. So the notion of filling in with Belarusians . . . would actually make a lot of sense.”

Others are sceptical, both about Belarus’s military capabilities, and how motivated its soldiers would be to fight Ukrainians.

“It certainly wouldn’t be decisive,” said Mark Cancian, a former US marine corps colonel now at the Center for Strategic and International Studies think-tank in Washington. “The only way it could be . . . really significant would be if they were willing to open another front further to the west.”

Yet this would be a “highly risky” strategy for Belarus, which would have to rely on its own inexperienced troops. “But it would [also] be a problem for the Ukrainians, in the sense that it would be yet another thrust they’d have to defend against,” he added.

Michal Baranowski, senior fellow at the German Marshall Fund in Warsaw, said it would be “very significant” if Belarusian forces joined the war and were able to close off Ukraine’s western border, as it was the main route for inflows of weapons supplies from Ukraine’s allies.

But he said closing such a long border would be a huge undertaking and was “very unlikely at the moment”.

“The biggest question is not how much public support there is [for Belarusian involvement], but how much room for manoeuvre Lukashenko has versus Putin, and how much he’s entirely a puppet,” he said. “If he is, that would be the scenario where we could see Belarusian forces as part of Russian military.”

## **19. Africa remains mostly quiet in Russia-Ukraine conflict**

Associated Press, 19 Mar 22

Ugandan President Yoweri Museveni recently remarked that Russia’s war on Ukraine should be seen in the context of Moscow being the “center of gravity” for Eastern Europe.

His son, Lt. Gen. Muhoozi Kainerugaba, was more forceful, declaring that most Africans “support Russia’s stand in Ukraine” and “Putin is absolutely right!”

Amid a worldwide chorus of condemnation, much of Africa has either pushed back or remained noticeably quiet. Twenty-five of Africa’s 54 nations abstained or did not record a vote in the UN General Assembly resolution earlier this month condemning Russia.

The reason? Many nations on the continent of 1.3 billion people have long-standing ties and support from Moscow, dating back to the Cold War when the Soviet Union supported anti-colonial struggles.

Those relations have tightened in recent years: As US interest in Africa appeared to wane under President Donald Trump’s administration, Russia along with China expanded its influence, enlarging its economic footprint to include everything from agricultural programs to energy plants. In 2019, dignitaries from 43 African nations attended a summit with Russia, which also has become the dominant exporter of weapons into sub-Saharan Africa, according to the Stockholm International Peace Research Institute.

The developments have not gone unnoticed. Last month, EU leaders held a long-delayed summit in Brussels to discuss ways to counteract Russia's and China's influence in Africa, while Western military and civilian leaders are eyeing Russia's advancing presence on both the African continent and in the Middle East as long-term threats to security in the West. China also is among the few countries showing support for Moscow.

There have been exceptions to the current of sympathy running through Africa, with Kenya and Ghana criticizing Russia's actions.

But, elsewhere on the continent, countries not only are abstaining from criticism, they appear to be celebrating their alliances with Russia.

As the war in Ukraine escalated, leaders of South Africa's ruling African National Congress party attended an event at the Russian Embassy in Cape Town to mark the 30-year anniversary of the country's diplomatic ties with the Russian Federation.

The ANC has ties to the Kremlin extending back to the Soviet Union's diplomatic and military support of the struggle against apartheid, which Western powers did not provide. Some South Africans point out that Russia was not among the colonizers of Africa.

South Africa's friendship with Russia is "rooted through bonds of brotherhood," said lawmaker Floyd Shivambu, a leader of the country's leftist opposition party, the Economic Freedom Fighters. Shivambu said Russia's actions in Ukraine are necessary to prevent NATO's expansion.

South African President Cyril Ramaphosa said his country abstained from the UN censure resolution because it failed to call for "meaningful engagement" with Russia.

"We have seen how, over time, countries have been invaded, wars have been launched over many years, and that has left devastation," Ramaphosa told lawmakers Thursday, criticizing NATO's expansion into Eastern Europe. "And some leaders of certain countries have been killed. On our own continent (Libya's) Muammar Gadhafi was killed."

He said he believes Russia feels "a national existential threat" from NATO.

Also abstaining from the UN vote was neighboring Zimbabwe, which had previously escaped sanctions of its own at the UN — for alleged human rights abuses and election corruption — thanks to vetoes by Russia and China.

Zimbabwean President Emmerson Mnangagwa has praised Russia and China as "dependable pillars," citing the guns they provided and the training they gave fighters in the 1970s war against white minority rule in Rhodesia.

Russia has major investments in Zimbabwe, including a multibillion-dollar joint mining venture in the Great Dyke area, which holds one of the world's largest deposits of platinum. Russia also is involved in gold and diamond mining operations in Zimbabwe.

In Uganda, where Russian officers regularly assist in the maintenance of military equipment, authorities recently announced the signing of a contract with a Russian firm to install tracking devices in vehicles to combat violent crime.

The East African country's UN representative said Uganda abstained from the UN resolution on Russia to protect its neutrality as the next chair of the Non-Aligned Movement, a Cold War-era group of 120 member states that includes almost every African nation.

But President Museveni went further, actually meeting with the Russian ambassador as the war raged in Ukraine. The Ugandan leader, who has held power since 1986, has criticized the West's "aggression against Africa."

Museveni's government in recent months has tangled with the US and other countries that have expressed concern over last year's disputed election and growing allegations of rights abuses.

Museveni also has accused the West of interfering in domestic affairs.

Nicholas Sengoba, a columnist with Uganda's Daily Monitor newspaper, said that many authoritarian African leaders like Museveni are pleased to see Putin "stand up to the big boys in the West."

Following his meeting with the ambassador, Museveni urged Africans in a tweet to find what he called a "center of gravity," which is what he said Russia is for "the Slavic nations of Eastern Europe."

The post was later deleted, but his son Kainerugaba, who commands Uganda's infantry forces, was unambiguous in his remarks on social media.

"The majority of mankind (that are non-white) support Russia's stand in Ukraine," he tweeted on Feb. 28.

"Putin is absolutely right! When the USSR parked nuclear armed missiles in Cuba in 1962 the West was ready to blow up the world over it. Now when NATO does the same they expect Russia to do differently?"

## ANALYSIS/COMMENTARY

---

### **20. Overshadowed by Ukraine, Afghanistan starves in silence**

McGill Journal of Political Studies, 19 Mar 22, Rory Daly

At the end of last year, Afghanistan still loomed large in the media. CNN reported on the new Taliban government's restrictions on women's rights, and the New York Times was writing about the struggles of Afghan refugees. Direst of all, economic sanctions placed on Afghanistan by the United States looked likely to trigger mass starvation in the Middle Eastern country.

Then news began to trickle down about the Russian forces amassed on the state's border with Ukraine. When the amount of coverage of the potential crisis in Ukraine seemed like it could grow no larger, Russia declared war. Although Afghanistan's issues were drowned by the coverage of the Russian invasion, they have not been erased. The country still faces an unprecedented humanitarian catastrophe, one that has been exacerbated by the war between Russia and Ukraine, two of the world's major food-producing nations.

The precarious food situation in Afghanistan is partially the result of droughts and societal turmoil. When the Taliban overthrew the ruling government in August of 2021, the country's food situation was already poor. The severe lack of rainfall had been affecting two-thirds of the country's provinces, and according to the United Nations (UN), wheat production was significantly impacted. Despite the critical situation, the Taliban did not have the capacity to interact with international markets. Forced into inaction, farmers lost potential revenue as non-edible cash crops could not be sold.

Famine in the country is rooted in diplomatic turmoil. The failure of the Taliban to engage with international markets has been the result of a coordinated series of sanctions and asset freezes by foreign states. And in this will to sanction, the United States has been at the forefront. Their view of the Taliban government as illegitimate has pushed them to deny access to the country's assets and cash reserves abroad. As a result, the Afghan government can neither regulate its own currency nor pay its own workers, collapsing the economy and causing corruption.

Food became simply too expensive to buy for many Afghans – and is still currently. Though the US has tried to pull back on some of the sanctions to allow for aid to flow in, the country's economy cannot recover as quickly as it collapsed, especially when many of the financial restrictions remain only partially lifted.

It was in this context that negotiations occurred in Oslo this past January between the Taliban and diplomats from a bevy of Western countries, as well as the European Union (EU). Further talks were held in Qatar in February. But right as it seemed that progress was being made in favor of the Afghan population, Russia invaded Ukraine.

As far as foreign policy goes, the Biden administration is seemingly totally focused on Ukraine, and Afghanistan has been completely forgotten about. With the United Nations (UN) warning that as much as 25 percent more Afghans could fall below the poverty line by mid-2022 leading to a potential total of 97 percent of Afghans in poverty that lack of attention is proving deadly.

However, the Ukraine crisis also poses further issues for Afghanistan because both Russia and Ukraine are major food producers. More specifically, the two countries are the breadbasket of Europe, making up about 25 percent of global wheat and corn exports. According to the International Food Policy Research Institute, their foodstuffs actually make up about 12 percent of the calories traded globally each year. It goes without saying that this war will be disastrous for food prices then; food price inflation could even increase by up to 22 percent next year according to the UN. In fact, the UN World Food Program is warning that this conflict could especially impact Afghanistan, which is currently heavily reliant on wheat imports as a result of

the aforementioned droughts. As a result of famine, an economic crisis spurred by the United States, and a war in Eastern Europe, Afghanistan stands to uniquely suffer this year. Overshadowed as the state may be, Western governments need to realize that their officials are capable of multitasking. Afghanistan is a country with nearly 40 million people. One dead child is a tragedy—tens of thousands is an unconscionable moral failure.

## **21. How did Europe get hooked on Russian energy?**

Bloomberg Opinion, 19 Mar 22, Paul J. Davies

Paul J. Davies: You're a professor of political economy at the University of Cambridge and author of "Disorder: Hard Times in the 21st Century," which analyzes how the interplay of energy, finance and international politics have contributed to the crises we face today. Let's start with Ukraine directly. How much of Russia's invasion is due to Putin's seeking security for Russian gas exports through Ukraine's pipelines? Or did he perceive Western weakness because of Europe's reliance on Russian energy?

Helen Thompson, professor of political economy, University of Cambridge and author, "Disorder: Hard Times in the 21st Century": It's more of the second than the first. I don't think we could say that the situation of gas transit through Ukraine was a motive for Putin. What we can say is that for the last two decades, Putin tried to weaken Ukraine's position economically by eliminating it from the transit system for the export of Russia's gas and oil. He didn't succeed, but the way he went about it was very divisive within the European Union. Poland was convinced that trying to remove Ukraine from transit would weaken Ukraine. Meanwhile, the European Commission was rather more tolerant of the pipeline that went under the Baltic Sea, Nord Stream, which took gas from Russia to Germany, than it was for what was coming into southern Europe under the Black Sea. The fact that there were double standards for Russian gas coming in different pipelines caused internal European disunity that to a considerable extent Putin sought to exploit.

PJD: Europe's reliance on Russian gas has a very long history. In your book, a key moment seems to be the 1956 Suez Crisis, when Israel, Britain and France tried to retake control of the Suez Canal from Egypt. It was the moment of realization that British and French imperial power was spent—but also the time that Russia hooked up its energy exports to Europe.

HT: In the 1920s and 1930s, there were quite a number of European countries, including Britain, that were willing to buy Soviet oil. Pretty much all European countries were trying to loosen their dependency on oil from the western hemisphere. After the Second World War, the United States didn't want European countries going back to importing oil from the western hemisphere, because it was concerned about future supply for itself; but nor did it want them importing oil from the Soviet Union. So the solution was for Europe to import oil from the Middle East. The role of guaranteeing those energy interests for western European countries in the Middle East was given to Britain, the dominant imperial power still in the region. It's not something the United States wanted to do itself.

So, there was a huge psychic shock during the Suez crisis when the Eisenhower administration turns around and says: No, you're not supposed to behave in this way and we're not going to send you any emergency oil, either. The response of the west European countries — more France and West Germany than Britain — was to say, "Well, if the Americans can behave like that, we need alternatives." And their really consequential response was to cultivate an oil relationship with the Soviet Union.

By the middle of the '70s, it was quite clear that a significant number of European countries had a dependency on then-Soviet oil and gas. Once the Soviet Union was dissolved in 1991 and there were 15 independent republics in its place, the pipelines taking Soviet gas to Europe went through an independent Belarus and most critically, an independent Ukraine.

PJD: So this independent Ukrainian state is very important for gas transit. Russia and Europe are both reliant on it in some way. How does that affect Ukraine and its neighbors?

HT: Beginning in the 1990s, Russian governments began to look to remedy a dependency on Ukraine that they didn't like. What you see is the attempt to say, we're going to deal with this problem by ending this problem. And that means transiting gas under the Baltic Sea for Northern Europe and under the Black Sea for southern Europe and making it more difficult for the Europeans to start importing gas from Azerbaijan, which would have been a potential alternative to Russian gas. Meanwhile, you have a set of conflicts between Russia and Ukraine, including accusations by the Russians that the Ukrainians are siphoning off gas for themselves, rather than letting it flow where it's supposed to into other European countries. Then, at a moment of crisis in 2009, Putin shuts down the flow of gas through at least one of the Ukraine pipelines, causing some southern European countries to really suffer.

So, we see a growing geopolitics around the pipelines, as Putin uses them to try to put pressure on various former members of the Soviet Union — not just Ukraine but Belarus and Georgia too.

PJD: There's a financial element to Ukraine's destabilization, too. You emphasize the importance of the central bank dollar swap lines, from the Federal Reserve and via the European Central Bank, that supported banks in many countries after the 2008 financial crisis. The really interesting thing is the effects on countries that are excluded, including Ukraine. How did that destabilize Ukraine?

HT: I think this is an important part of the story for what happened in 2013-14. The [Ukrainian President Viktor] Yanukovich government had negotiated an associate membership agreement with the EU that would have economically aligned Ukraine with the EU and its single market. Then, in the second half of 2013, it became clear that the Federal Reserve was tapering asset purchases. That really intensified the financial crisis that was already underway in Ukraine.

Yet Ukraine didn't have a dollar swap line by the Federal Reserve. When the crisis came, there was no change in that policy. So, the Ukrainian government looked to the EU and the European Central Bank, but the support that was on offer was really quite meager.

So Yanukovich turned to Putin, who was much more generous in financial support, including reducing the prices of gas. And having made that agreement, Yanukovich said, “We’re not going to go ahead with the associate membership of the European Union.” That produced the popular uprising that led to Yanukovich basically fleeing from power, after which Russia annexed Crimea.

PJD: And why do you think the U.S. and the EU were so reluctant to offer much support?

HT: It’s a really interesting question. I think that the Federal Reserve has not made a habit of giving dollar swaps to countries that are in crisis conditions. They have largely been offered to advanced economies, or to countries that the U.S. regards as fairly fundamental to its interests, such as Mexico or Brazil. So, I think that if you’re not on the dollar-swap line, that says something about where you are in U.S. geopolitical priorities.

The harder thing to explain is the European position. It negotiated this associate membership agreement with Yanukovich’s government, but then at the moment of crisis, it wasn’t willing to really back it and extend substantial amounts of credit to support it. Once you throw in the fact that the EU had thought this agreement could happen without any resolution of the NATO membership issue for Ukraine — Germany and France were bitterly opposed to Ukrainian membership of NATO — it all added up to a really incoherent position.

PJD: The dollar’s role in international trade and as a reserve currency is being questioned again. For China and Russia this is a point of insecurity because of their need to hold dollar reserves and the extraterritorial and geopolitical power that it lends the U.S. Now that we’ve seen central banks freeze the foreign exchange accounts of the Russian Central Bank, what are the consequences of that? Will it end global dollar hegemony?

HT: The incentive that these sanctions create to say, “We can’t put ourselves at the mercy of the Americans like this” is huge. But the actual ability to protect yourself for these countries seems a lot, lot harder, simply because the dollar penetrates the entire international banking system. If you try to decouple from the dollar, you’re decoupling from that system, and that has profound consequences.

PJD: Another possibility could be that the world splits, with China and Russia more closely linked and forming one trade-economic-energy axis for the east and maybe the Global South; and a separate American-European-Middle Eastern axis. Is that possible?

HT: In practice, it’s going to be very difficult for the European countries to move with any alacrity away from Russian gas. To the extent that some countries will be able to do that more rapidly, they’re the ones that have capacity to import liquid natural gas. That means more intense competition between European countries and Asian countries in general, and China in particular, for those liquid natural gas imports. We saw last year that a big increase in China’s demand intensified competition for those imports and forced prices up. That was at the center of the energy shock that went on last autumn as the world economy started to move into recovery mode from Covid.

To the extent that the Middle East comes back into play, there's a question of whether Saudi Arabia will want to give up the relationship with Russia and OPEC+ that they've had since the autumn of 2016. It's quite difficult for the Saudis to control oil prices by themselves, but they proved they could do it reasonably effectively with Russia. Why are they going to want to give that up? At the same time, I don't think Saudi Arabia is just going to cede the China market to Russia, particularly when the United States will be looking to increase domestic production of oil. I think the relations between the three big producers — Saudi Arabia, the United States and Russia — are going to continue to be pretty disruptive.

PJD: The other big factor has been the American shale oil and gas boom, which was driven by the flood of cheap money and higher commodity prices after 2008. That turned the U.S. into a net exporter again and changed its geopolitical interests to some degree.

HT: Yeah, I think the story of the rise of shale oil and gas is the big geopolitical story of the 2010s that was really underplayed. On the oil side, it shook up the U.S.-Saudi relationship at a time in which Saudi Arabia had a growing market in China and the United States was trying to reach some accommodation with Iran, Saudi Arabia's principal regional rival. And in terms of gas, the consequences played out in Europe, because the U.S. was in a position to compete with Russia for European gas markets.

One of the things I think that Putin was always keen on was to frame any U.S. action against the Nord Stream pipeline as not being motivated by concern for Ukraine, but simply being about the commercial interests of shale gas producers in the United States. I don't think we can understand the saga of Nord Stream, and the divisions that it caused within NATO, without understanding that this was something where there were economic interests at stake as well as the geopolitical situation in Europe.

PJD: There's a hope that the green energy revolution will somehow free us from all of these fights and problems. Will it?

HT: Well, if the energy transition is successful and we move toward much higher use of renewables, geopolitics won't be dominated any longer by the need for countries who import large amounts of foreign energy to exercise influence on those parts of the world that export oil and gas. The sun shines in your own country and the wind blows in your own country. So there is some escape. On the other hand, though, all the infrastructure around green energy requires metals and metals are also distributed unevenly around the world. And one country, China, particularly where rare earth metals are concerned, has an extraordinarily dominant position in the extraction and the supply chains around them. So for green energy to be a route to energy independence, there has to be a break in that metal dependency upon China.

## **22. Memorializing the military achievements of women**

The Hill, 19 Mar 22, Jeremy Butler

Throughout my 20 years of service in the Navy, I've had the privilege of working alongside many brave, resilient, and inspirational women. These servicewomen — more than 345,000 of them — who have deployed since 9/11 have been central to the past and continued success of U.S. operations, fighting tirelessly to protect all Americans.

The achievements of women in the military are vast, stretching back for centuries, and have been demonstrated in the Global War on Terrorism (GWOT), which began in the wake of 9/11 to fight against those who sought to export terror. Yet, their contributions and sacrifices continue to be largely ignored in the telling of American history.

The world has changed significantly since the launch of Operation Enduring Freedom over 20 years ago, and the same is true for our military. While the number of male veterans is expected to decline in the coming decades, the population of women veterans will continue to increase, adding to the ranks of nearly 2 million women veterans in the U.S. today. Although women have served in the military in many roles for over 200 years, there have been a lot of “firsts” for them in recent years.

Opening up all combat positions to women, the first Silver Star awarded to a female soldier since World War II, the first women graduates of the Army Ranger School, and the first woman four-star general, are some of these “firsts.” These distinctions are groundbreaking, but the fact that they've only occurred within the last 25 years is reflective of the gaps in opportunity and recognition for different genders in the military. They serve not only as a reminder of the great strength of women in the military but also of the many barriers that they have had to breakthrough.

We need to ensure that women aren't excluded when it comes to documenting history or expressing gratitude for those who served. And with Congress having recently authorized the construction of the GWOT Memorial on the National Mall in Washington, D.C., we, as Americans, have a unique opportunity to do so.

This authorization is only the opening move in a 24-step process before the monument can be built, meaning that now is the time to speak out to guarantee women veterans are aptly represented. The GWOT Memorial is intended to be an inclusive, reverent, and apolitical place of honor for the veterans and their families who have served in the GWOT, presenting a historic opportunity to recognize and honor the contributions of women who fought for our nation. We urge Congress to ensure that the GWOT Memorial safeguards the legacy of women servicemembers among American heroes throughout history.

Representation of women in military memorials is essential. Past and current servicewomen have provided the same strength of character and commitment to the country as their male counterparts. Still, they have not received the same public awareness of their service — a known problem that needs to be addressed.

Speaking as both a veteran and the CEO of a veteran service organization — Iraq and Afghanistan Veterans of America (IAVA) — a majority of the veteran community have demonstrated their desire to prioritize issues impacting women veterans. VSOs and nonprofit organizations, such as IAVA, have been working to establish equitable awareness and access to VA benefits for servicewomen and veterans. The construction of a memorial on the National Mall represents a significant opportunity for change.

In building the GWOT Memorial, the Global War On Terrorism Memorial Foundation should gather inspiration from the theme of this year's Women's History Month, "providing healing, promoting hope." This should act as a reminder as to why women need to be represented in military tributes for the actions they have taken during their service to heal, protect and provide for our country and the world.

*Jeremy Butler is the Chief Executive Officer for Iraq and Afghanistan Veterans of America (IAVA).*

### **23. Putin made a profound miscalculation on Ukraine**

New York Times, 19 Mar 22, Yaroslav Hrytsak

Ukraine is once again at the center of a potentially global conflict. World War I, as the historian Dominic Lieven put it, "turned on the fate of Ukraine." World War II, according to the legendary journalist Edgar Snow, was "first of all a Ukrainian war." Now the threat of a third world war hinges on what could happen in Ukraine.

It's a striking repetition. Why has Ukraine, a midsize country of 40 million people on the eastern edge of Europe, been at the epicenter of warfare not once, not twice, but three times?

Part of the answer, at least, is geographical. Set between Russia and Germany, Ukraine has long been viewed as the site of struggle for the domination of the continent. But the deeper reasons are historical in nature. Ukraine, which has a common origin point with Russia, has developed differently over the course of centuries, diverging in crucial ways from its neighbor to the east.

President Vladimir Putin likes to invoke history as part of the reason for his bloody invasion. Ukraine and Russia, he asserts, are in fact one country: Ukraine, in effect, doesn't exist. This, of course, is entirely wrong. But he is right to think history holds a key to understanding the present. He just doesn't realize that far from enabling his success, it's what will thwart him.

In 1904 an English geographer named Halford John Mackinder made a bold prediction. In an article titled "The Geographical Pivot of History," he suggested that whoever controlled Eastern Europe would control the world. On either side of this vast region were Russia and Germany, poised to do battle. And in between was Ukraine, with its rich resources of grain, coal and oil.

There's no need to go into the finer details of Mackinder's theory; it had its flaws. Yet it proved extremely influential after World War I and became something of a self-fulfilling prophecy. Thanks to the Nazi geopolitician Karl Haushofer, the concept migrated into Hitler's "Mein

Kampf.” Lenin and Stalin had not read Mackinder but acted as if they had. For them, Ukraine was the bridge that would carry the Russian Revolution westward into Germany, making it a world revolution. The path to conflict again ran through Ukraine.

The war, when it came, was catastrophic: In Ukraine, around seven million perished. In the aftermath, Ukraine was sealed up in the Soviet Union, and the question for a time seemed settled. With the collapse of Communism, many believed that Mackinder’s thesis was outdated and the future belonged to independent and sovereign states, free from the ambitions of bigger neighbors. They were wrong.

Mackinder’s argument — that Eastern Europe and Ukraine held the key for a contest between Russia and Germany — never went away. In fact, it took pride of place in Mr. Putin’s mind. With one change, however: He substituted Germany with the West in its entirety. Ukraine, to Mr. Putin, became the battleground for a civilizational contest between Russia and the West.

He didn’t act on it at first. In the early years of his tenure, he seemed to expect — in line with those in Boris Yeltsin’s circle who oversaw the end of the Soviet Union — that Ukrainian independence wouldn’t last long. In time, Ukraine would be begging to be taken back. It didn’t happen. Though some Ukrainians remained under the sway of Russian culture, politically they leaned to the West, as shown by the Orange Revolution of 2004, when millions of Ukrainians protested against electoral fraud.

So Mr. Putin changed course. Soon after the war in Georgia in 2008, in which the Kremlin seized control of two Georgian regions, he designed a new strategic policy for Ukraine. According to the plan, any steps Kyiv might take in the direction of the West would be punished with military aggression. The objective was to cleave off Ukraine’s Russophone east and turn the rest of the country into a vassal state headed by a Kremlin puppet.

At the time, it seemed fantastical, ludicrous. Nobody believed it could be genuine. But by the final weeks of Ukraine’s Maidan revolution in 2014, in which Ukrainians demanded an end to corruption and an embrace of the West, it became horribly clear that Russia was intent on aggression. And so it proved: In a rapid-fire operation, Mr. Putin seized Crimea and parts of the Donbas. But crucially, the full extent of his ambition was thwarted, in large part through the heroic resistance mounted by volunteers in the country’s east.

Mr. Putin miscalculated in two ways. First, he was hoping that, as had been the case with his war against Georgia, the West would tacitly swallow his aggression against Ukraine. A unified response from the West was not something he expected. Second, since in his mind Russians and Ukrainians were one nation, Mr. Putin believed Russian troops needed barely to enter Ukraine to be welcomed with flowers. This never materialized.

What happened in Ukraine in 2014 confirmed what liberal Ukrainian historians have been saying for a long time: The chief distinction between Ukrainians and Russians lies not in language, religion or culture — here they are relatively close — but in political traditions. Simply put, a victorious democratic revolution is almost impossible in Russia, whereas a viable authoritarian government is almost impossible in Ukraine.

The reason for this divergence is historical. Up until the end of World War I (and in the case of western Ukraine, the end of World War II), Ukrainian lands were under the strong political and cultural influence of Poland. This influence was not Polish per se; it was, rather, a Western influence. As the Harvard Byzantinist Ihor Sevcenko put it, in Ukraine the West was clad in Polish dress. Central to this influence were the ideas of constraining centralized power, an organized civil society and some freedom of assembly.

Mr. Putin seems to have learned nothing from his failures in 2014. He has launched a full-scale invasion, seemingly intended to remove the Ukrainian government from power and pacify the country. But again, Russian aggression has been met with heroic Ukrainian resistance and united the West. Though Mr. Putin may escalate further, he is far from the military victory he sought. A master tactician but inept strategist, he has made his most profound miscalculation.

Yet it's one based on the belief that he is at war not with Ukraine but with the West in Ukrainian lands. It's essential to grasp this point. The only way to defeat him is to turn his belief — that Ukraine is fighting not alone but with the help of the West and as part of the West — into a waking nightmare.

How this could be done, whether through humanitarian and military help, incorporating Ukraine into the European Union or even supplying it with its own Marshall Plan, are open questions. What matters is the political will to answer them. After all, the struggle for Ukraine, as history tells us, is about much more than just Ukraine or Europe. It is the struggle for the shape of the world to come.

*Dr. Yaroslav Hrytsak is a professor of history at the Ukrainian Catholic University and the author, most recently, of a global history of Ukraine.*

## **24. How AI could help new Air Force pilots avoid costly mistakes**

Task and Purpose, 19 Mar 22, Kelsey D. Atherton

On March 2, the US Navy pulled an F-35C from the ocean. The \$94.4 million jet came in hard for a landing on January 24, then skidded across the deck, injuring sailors before it plummeted off and into the sea. The pilot ejected and survived, but the incident raises an ominous question over aircraft operations: What can the military do to ensure pilots land safely as many times as they take off, and help all aviators avoid the mistakes of their peers?

The F-35C is a Navy plane, and aircraft carrier landings are notoriously hard. But no branch of the military is immune to crashes, and both the Marines and Air Force have crashed planes this year. Post-crash investigations, pulling from the recorded avionics and telemetry data of the planes, can reveal the specific causes of error, from mechanical failure to choices made by pilots.

In 2020, the Air Force turned to artificial intelligence to catch unusual flight patterns during training, before they become a costly or even tragic error. To better understand outliers in flight patterns, the Air Force is working with Crowdbotics, an artificial intelligence/machine learning firm, to analyze and process the data that planes already collect. This data processing and

## **25. Japan, Turkey FMs coordinate Middle East and Ukraine policies**

Arab News, 19 Mar 22

Japan and Turkey foreign ministers on March 19 agreed to cooperate and coordinate on the Middle East and Ukrainian issues and deepen bilateral friendly relations toward the year 2024, the 100th anniversary of establishing their diplomatic ties.

Japanese Foreign Minister Yoshimasa Hayashi, who is visiting Turkey for a short trip that includes the UAE on March 20, exchanged views with his Turkish counterpart, Mevlüt Cavusoglu, on the situation in Afghanistan and East Asia, including China and North Korea, and affirmed that they would continue to coordinate on dealing with North Korea, including the abductions issue, the foreign ministry in Tokyo said in a statement.

The Ministers confirmed to hold the first meeting of maritime consultations in the first half of this year to discuss specific cooperation, and to accelerate negotiations toward the early conclusion of the Japan-Turkey Economic Partnership Agreement (EPA) and the Japan-Turkey Social Security Agreement, and to aim for the opening of the Turkish-Japanese University of Science and Technology in 2023, the ministry said.

In addition, Minister Hayashi expressed his intention to expand cooperation in new areas, including space and climate change, and they concurred on closely cooperating in the field of disarmament and non-proliferation through Non-proliferation and Disarmament Initiative (NPDI).

In the meeting, minister Cavusoglu provided a detailed explanation of Turkey's diplomatic efforts based on its close relations with both Ukraine and Russia, and Minister Hayashi expressed his sincere gratitude and respect for the efforts made by Turkey.

## **26. Lebanon asks US to continue border demarcation mediation**

Asharq al-Awsat, 19 Mar 22

Lebanon called on the United States to continue its mediation efforts to complete the maritime border demarcation negotiations with Israel in the light of observations made by the Lebanese Technical Committee on the proposal of US mediator Amos Hochstein.

The Lebanese Technical Committee has met to discuss a proposal submitted by Hochstein, to divide the disputed area in a way that does not allow Lebanon to obtain the entire area that it considers its legitimate right, which amounts to 860 nautical kilometers on its southern border.

Lebanon did not provide a definitive answer to the US offer, leaving the matter to the ongoing negotiations and asking the US to maintain its mediation.

President Michel Aoun met on Friday with Speaker Nabih Berri and Prime Minister Najib Mikati at the Baabda Palace, where they discussed the recent US proposal and the outcome of a study conducted by the relevant technical committee, which includes representatives from the

Presidency, the Government, the Army Command (the Hydrography Department) and the Petroleum Administration Authority.

A statement issued by the presidential office said that the Lebanese officials decided to ask the United States to “continue its efforts to complete the negotiations, in accordance with the framework agreement and in a manner that preserves Lebanon’s supreme interest and stability in the region.”

Ministerial sources told Asharq Al-Awsat that Hochstein’s proposal required some “clarifications and amendments.”

“There are points that need to be studied in depth, and other details that must be clarified,” the sources emphasized.

In early October 2020, Berri announced a non-final framework agreement, which represents a basis for paving the way for the demarcation of the land and sea borders with Israel. The US-led negotiations were assumed on the Lebanese side by the Army Command, under the auspices of the president and the prime minister.

The meetings began on Oct. 14, and four rounds were held before negotiations stopped when Lebanon sent a letter to the UN, demanding an additional area of 1,430 square km that includes part of the Israeli Karish gas field.

The letter explicitly stated that the area between lines 1 and 23 to the area between lines 23 and 29, with an increase of 1,430 square km in addition to the previous 860 square km, is the disputed area, including the Karish gas field.

The indirect negotiations were stopped as Lebanon’s request was opposed by Israel. They later resumed in May under a new mechanism.

## **27. UAE FM discusses regional, international developments with UK’s Truss**

Al Arabiya, 19 Mar 22

UAE’s Minister of Foreign Affairs Sheikh Abdullah bin Zayed discussed regional and international developments, including the situation in Ukraine, in a phone call with British Foreign Secretary Liz Truss, state news agency (WAM) reported on Saturday.

Sheikh Abdullah reiterated the UAE’s keenness to enhance regional and international security and stability and voiced the UAE’s support to efforts to reach a political solution to the crisis in Ukraine.

He also voiced the importance of intensifying efforts to address the crisis’ humanitarian implications and to meet the humanitarian needs of civilians in Ukraine.

They also discussed the stability of global energy and food markets, the report added.

display today is not a clash of Civilisations, but the discontents of Civilisation. The price of human dignity is, however, a price worth paying.

#### **40. The world's role in Zelensky's conflict**

Jerusalem Post, 19 Mar 22, Vas Shenoy

A comedian kick-starts his career with a parody. The story runs thus: A schoolteacher accidentally gets himself elected as the president of his country when his students post his rant against the government online and crowd-fund for his election.

The show is so successful that four years later, the comedian really lands up in the top office.

The plot doesn't stop there, he takes on a feared, despised, and evil dictator, who decides to invade his country and... (wins?).

World leaders who tolerated the evil dictator and his evil, sidekick corrupt billionaires for decades rally with the upstart and move to send weapons and medicines to the besieged population, while government employees in various countries, which welcomed the evil empire's evil money, go to confiscate their yachts and arrest the billionaire cronies.

This isn't the plot of a B-grade Hollywood film, but of the state of the world's geopolitics. The script seems to have been written in the Obama White House in 2014 as an afterthought to the Maidan Revolution, which brought western democracy to Ukraine and brought Ukraine to the NATO-sphere.

While I'm quite sure the ending is written somewhere, neither the authors nor I am sure it will end as expected. Very few ideas that started in the Obama White House did end as expected: the Arab Spring, peace in the Middle East, the Pivot to Asia, to name a few.

Of course, Ukraine, the withdrawal from Afghanistan and Iraq, and Syria are all a part of the list of former US president Barack Obama's famous idealistic foreign policy disasters.

This isn't a justification for Vladimir Putin's invasion of Ukraine. Russian President Vladimir Putin is a dictator, who should not have invaded Ukraine, no matter what.

The waste of life and completely unnecessary destruction were completely avoidable. The entire blame for the deaths of Ukrainian civilians, armed forces and young Russian soldiers serving as cannon fodder, rests squarely on the shoulders of the man once admired for having rescued Russia from the spiral the alcoholic former Russian leader Boris Yeltsin had condemned it to.

But the international community must start shouldering its share of the blame for the conflict and be careful when scripts and ideas like this rollout of Washington DC, Langley, or whichever bar on embassy row where such bad ideas are conceived.

We also need to have a short tolerance for dictators, not letting them rule for decades because our companies make too much money in their markets or because they serve a purpose. Appeasing a dictator ends badly; the longer he is in power the more difficult and bloodier it is to get him out. Hitler, Gaddafi, Saddam Hussein, Assad (still around)... Much like a stain.

In this case, there are three people who bear some responsibility for the state of affairs in which Ukraine and the world find themselves. The first is former US secretary of state and national security advisor Henry Kissinger.

It's easy to find fault with the only centenarian who has seen World War II and shaped US foreign policy since. Technically, you can blame almost everything on Kissinger. Unfortunately, this issue is a double-edged sword.

Kissinger wrote a famous Washington Post op-ed in 2014 and was very clear that Ukraine needed to remain neutral. For all practical purposes, the man predicted, nay, warned the US administration of the consequences of their actions of baiting Putin on Ukraine.

However, Kissinger's fault lies in his obstinacy on his legacy, China. Much like Obama continues to meddle to preserve his legacies, such as the Iran agreement, Russia, and so on.

It's easy to understand Kissinger's trauma with Asia. But for the relationship with China, be it Vietnam or the Korean War, he has always been in crisis mode on the continent.

Therefore, it's easy to understand that he would promote the idea that the US and China must eventually divide the world into a Sinosphere and a US-dominated area, of course promoting US dominance of Europe and NATO.

Kissinger has a lot of die-hard followers who are still influential and a part of the US system and who were appalled with Trump's idea of pulling the US out of NATO. It isn't surprising, while US President Joe Biden focused on combating China and ignoring NATO at the start of his term, suddenly NATO, almost dead, is now the cornerstone of US foreign policy.

Kissinger's cross will be leaving the US establishment still ambiguous on its policies toward China – one of the reasons why the US establishment may have wanted to goad Russia into a conflict that never should have happened. Losing NATO and Europe would have been too scary. Pivoting to Asia, was a non-starter. Where Obama had failed, Biden could not succeed.

Obama's love of replacing dictators with revolutions and online perception management is historical. When he was drawn into a conflict in Libya and Syria he was quick to withdraw.

He was quick to start the US retreat from Afghanistan and Iraq, which eventually ended with Trump and Biden following through with the retreat. But none of Obama's efforts to spread

peace by turmoil were successful. What started as “Yes, we can!” ended up as “Oops, we did it again!”

In Egypt, the Arab Spring deposed former Egyptian president Hosni Mubarak and after a brief flirtation with the Muslim Brotherhood at the helm, the US had to get a military dictator to preserve order.

So it went with the rest of the Arab Spring countries. Arab Spring’s gains have become the world’s nightmare. Yemen is a wasteland today and Tunisia a constitutional mess.

Obama’s role in not heeding to good advice in Ukraine is another cross he must bear. While the Maidan Revolution followed the script of the Arab Spring and brought real US-approved democracy, he neither armed Ukraine nor included it in NATO, nor did he encourage their neutrality and a truce with Russia.

Finally, former German chancellor Angela Merkel. If there is anyone guilty of knowing what men like Putin are capable of and continuing to appease them, it is Merkel.

Despite her experience with East Germany and the horrors of Soviet rule, as well as stories and first-hand experience of the KGB and FSB, Merkel continued to increase Germany’s dependence on Russian oil, gas and coal.

She allowed the EU to be a welcoming place for corrupt Russian billionaires, as well as Putin himself. All her foreign policies over 16 years has had to be undone by German Chancellor Olaf Scholtz, her successor, in two weeks. In her last few weeks, she tried to push the Comprehensive Agreement on Investment with China, a real feat, aimed at appeasing Chinese President Xi Jinping and China.

The world has changed and whether we misjudged Ukraine’s ability to resistor the continuing war is just a part of the script, we shall see.

While Putin’s apparent endgame is to replace Ukrainian President Volodymyr Zelensky in Kyiv, it is possible that the US endgame is replacing Putin in Moscow or forcing his own people to do it. Meanwhile, the Biden administration does its best to stay out of the conflict, while pushing European allies into the path of danger.

For the sake of the argument, what happens if Putin is ousted? Do we deal with another dictator? A wild west Russia of the 1990’s? What happens to all the arms we are sending Ukraine? Do they end up in Somalia, Yemen, Lebanon or Afghanistan? With all our good intentions, are we arming the Islamic jihadists of the future in today’s war against Russia at Europe’s doorstep?

All this while Ukrainians senselessly die on a Cold War chessboard, which should have been thrashed decades ago with the Warsaw pact. Yeah, and we need a new world order.

#### **41. Palestine tops Chilean president's agenda in first statements after taking office**

Middle East Monitor, 19 Mar 22, Eman Abusidu

Last Friday, thirty-six-year-old Gabriel Boric, the youngest Chilean president ever to have been elected, officially became the president of Chile after winning Chile's presidential elections last December. His victory represents a major revival for Chile's progressive left and a new era for Chile and neighbouring countries. Boric began his inaugural speech by mentioning late president, Salvador Allende: "And as Salvador Allende predicted almost fifty years ago, we are opening the grand avenues where free men – free men and free women – will go forward to build a better society." It was as if he wanted to announce to Chile and the whole world that his presidential era would be an era of hope and change.

The Palestinian cause featured on the president's agenda as soon as he took over the presidency. "We are monitoring what is happening in Ukraine, such as the attack on a children's hospital in Mariupol or the attack that targeted a military base 20 kilometres from Poland. We sympathise with the Ukrainian people because of the war. However, there are a lot of other regions that witness other scourges – Palestine, for example. Nonetheless, we see little solidarity," explained Boric during his first interview on Chile's Canal 13, on the popular programme Las Caras de la Moneda. Boric called on the international community to show solidarity with Palestine as it has shown with Ukraine: "Palestine has been occupied for a long time, and we do not know much about what is happening there."

Boric's statement is neither new nor unexpected, as Boric has always been a staunch supporter of the Palestinian cause and a defender of human rights in the occupied territories. Boric branded Israel a "genocidal" and "murderous" state more than once. In addition, Boric has always supported the boycott of products from illegal Israeli settlements. In July 2020, Boric, alongside the Chilean Senate, approved a resolution calling on the government to enact legislation that would ban all Israeli settlement products, prohibit companies involved in the Israeli occupation from benefiting from any agreement or bid signed by Chile and apply tourism guidelines for Israel and Palestine that would not allow the promotion of trips to Israel using pictures of East Jerusalem or Bethlehem "among other Palestinian cities". Boric was one of the supporters who voted for this resolution.

Speaking to MEMO, Director of the Palestinian community in Chile Maher Pichara backed Boric's statements on Canal 13: "It is the reality. Many reports have been issued by international

organisations confirming the existence of crimes against humanity committed by Israel, such as apartheid and the persecution of Palestinians. Unfortunately, we have never seen any reaction from the international community," he affirms. "For example, last year was the deadliest for Palestinians since Israeli security forces killed at least 313 Palestinians, including 71 children, according to a report of Israeli human rights organisation B' Tselem. In contrast, there was no major reaction from the international community."

According to Dr Kamal Cumsille, professor of Arab Studies at Chile University: "The media doesn't shine a light on Palestine unless the situation worsens. This week, for example, Zionist settlers attacked a school in Bethlehem. Did we see this on the news or TV? While at the same time, they showed daily that Russia had bombed schools in Ukraine. Today we see how media apologies to the Ukrainian resistance; however, they called the Palestinian resistance terrorists." Dr Cumsille confirmed to MEMO that Boric's victory would have more than a positive impact on the Palestinian community in Chile as well as the Palestinian cause.

The Palestinian community in Chile rushed to congratulate the elected president after his victory in December, as well as when he took office, via a formal statement on their official social media pages: "We wish the best of luck and success to our new president who took office today. Together with ministers and parliamentarians, we will govern the destinies of our country for the next four years. We commit ourselves to continue working for Chileans and Palestinians."

Boric's win is considered a victory for the Palestinian cause and the Palestinian community in Chile, home to half a million Palestinian immigrants. "The Palestinian community in Chile is grateful to those who express their support for them. Our community here has great support. Therefore, the position of President Boric today will consolidate this support. In his presidential candidacy, he was very clear that he will not only maintain the recognition of the Palestinian state and international law, but he will also support the sanctions and commercialisation of goods and services that come from Israeli settlements," Pichara expressed.

Chile is now under Boric's leadership for the next four years. Chile, Palestine and other countries are hoping he can bring and inspire change. Everyone is betting on him because his new government may shape the future of neighbouring countries, and even abroad. This is the change we hope to see soon.

#### **42. This is not the time to brand Vladimir Putin an 'evil madman'**

Al Jazeera, 19 Mar 22, Farhan Mujahid Chak

As the Russian invasion of Ukraine enters its fourth week, we routinely hear words like "evil," "unhinged" and "unstable" being used to describe Vladimir Putin. Such labelling is not uncommon in realpolitik. It is a tactic in the ever-present rivalries of international politics – to demonise, caricature and demoralise political opponents, while simultaneously reassuring those on your own ideological flank. After all, who wants to be on the side of a lunatic?

Whether it's describing Saddam Hussein as a "madman," Gaddafi as "insane," or Putin as a "megalomaniac," such caricatures serve broader political objectives by simplifying any conflict into a clear binary of "good" versus "evil".

The Israeli state often indulges in such framing to delegitimise Palestinians – even questioning their intelligence, by repeating ad nauseum the trope that they "never lose an opportunity to lose an opportunity". Likewise, apologists for the occupation, militarisation and colonisation of Kashmir in India designate Kashmiris demanding fulfilment of UN Security Council resolutions as "terrorists," "secessionists" or "anti-nationals."

Such framing is now being tactfully employed to explain away the Russian invasion of Ukraine – a manipulative discourse construction that facilitates a fog of war.

Of course, the Russian invasion of Ukraine is a monstrosity. As morally repugnant as the war crimes in Syria, brutal dispossession of Palestinians or militarised occupation of Kashmir. Yet, simplistic framings that deem Putin a "madman" without a purpose inhibit our ability to see the bigger picture and do something to prevent further violence.

In other words, now that the war is here, we should ignore all attempts to frame it merely as a showdown between "good" and "evil", and focus instead on figuring out what steps may be taken not only to end it, but also to prevent it from causing flare-ups in other hotspots across the globe – and possibly triggering another world war.

Putin's invasion of Ukraine – regardless of its rationality or purpose – will inevitably have an impact on three contentious issues: the war in Syria, the Iran nuclear deal and the US-China rivalry.

First and foremost, Russia's invasion of Ukraine will have consequences for Syria. The impact of sanctions on its economy may cause Russia to pull money and military forces from Syria. An embattled and isolated Putin may also decide to double down on his efforts to turn Syria into a satellite state akin to Belarus. In either scenario, the US may respond by starting to funnel resources to the Syrian resistance.

For some time now, Syrian opposition figures have been working to revive their decade-old campaign against al-Assad. In early February, for example, they came together at a major meeting in Doha, Qatar and vowed to "reunite". And after the beginning of Russia's invasion of Ukraine on February 24, they were very quick to forcefully condemn Putin's move. Meanwhile, al-Assad is said to have sent scores of fighters to Ukraine to assist Russia's military intervention. All in all, there is much reason to suspect the events in Ukraine may trigger a flare-up in Syria's relatively dormant conflict.

Therefore, as the world watches the developments in Ukraine, it should also keep one eye on Syria – to ensure the war in Europe does not translate into more suffering for the people of Syria and more insecurity across the Middle East.

Second, the Russian invasion of Ukraine put the negotiations for a new nuclear deal between the West and Iran into overdrive. US President Biden is now more desperate than ever before to

secure a new deal with Iran, curb its nuclear programme, and most importantly, put Iranian oil back on the market amid an energy crisis exacerbated by the Ukraine invasion.

Just days ago, the future of the deal was in serious jeopardy after Russia reportedly said that it would block any deal that would not include guarantees that Western sanctions on Russia over Ukraine would not impede its future dealings with Iran.

On March 15, however, Moscow announced that it received written guarantees from Washington, signalling that the deal may, in fact, soon be completed. For its part, Iran said it is acting as a “strong, independent party” in the negotiations and has Russia’s full support. While these are somewhat promising developments for the future of the region, it is still less than certain that an isolated Russia crippled by sanctions would allow the deal to go forward and Iranian oil to re-enter global markets. The world should keep its eyes firmly on the Iranian front, as if Russia’s Ukraine invasion leads to the demise of the nuclear deal, it would signal more insecurity and conflict for the Gulf and the wider region.

Third, Russia’s war in Ukraine will likely have a major impact on the US-China rivalry. For now, China appears well positioned to gain from Russia’s aggression in Ukraine on multiple fronts, which can cause the US to assume a more combative posture against its arch rival.

Indeed, Beijing can now not only provide an economic lifeline to Russia, and thus make Moscow much more dependent on itself, but also take advantage of the new dynamics that put the US on the back foot to further its interests in other areas. Some analysts, for example, raised concerns that China may unilaterally act vis a vis Taiwan, after witnessing “the West’s weak-kneed response in Ukraine”. While a Ukraine-style Taiwan invasion is unlikely for various reasons, China may assume a more aggressive posture on other fronts if the US continues to imply Chinese responsibility in Russia’s actions.

The emboldening of China, and the US’s reaction to it, may also lead to further escalations in the Indo-Pacific region. The US has been using its ally India as a strategic bulwark against China for too long, and any new global power play involving China, Russia and the US may result in renewed conflict in regional hot-points, such as Kashmir. India’s attempts to resist aligning itself against Russia in the aftermath of the Ukraine invasion already upset its Quadrilateral Security Dialogue (QSD) allies. The US and other parties to the dialogue (Australia and Japan) may now demand India to assume a tougher stance if not against Russia, then at least against China. All this may further heighten tensions in the region and lead to violence.

All in all, there are indications that Russia’s war in Ukraine may heighten tensions in various conflict zones, trigger new confrontations, and put the entire planet on a trajectory towards further violence.

Now, therefore, is not the time to complain about what an “evil madman” Putin is, or how “irrational” his actions in Ukraine are. It is not the time to invest in narratives that firmly frame our side as “good” and the other as “evil”. It is time to emphasise de-escalation, intensify confidence-building mechanisms, invest in peace-building and collectively work towards a

have surged among the 370 million children who lost access to nutritious meals served daily at schools in at least 150 countries.

“The ‘three Cs’ – conflict, climate change and COVID-19’s economic impact – have created a perfect storm that requires a global response,” Yahia said.

“The cost of doing nothing will be measured in lives lost, increased destabilization and human migration, and squandered productivity and human potential.”

Clearly, urgent assistance is needed to help protect the most vulnerable populations of the Middle East and other regions from hunger and malnutrition.

Fortunately, it is not too late for rich countries, philanthropists and wealthy individuals to increase funding for the programs that are attempting to address the problem.

#### **44. India needs no history lessons from US on its decisions in Russia-Ukraine war**

Bloomberg Quint (India), 19 Mar 22, Dr. Tara Kartha

A recent press briefing by White House spokesperson Jen Psaki went viral for all the wrong reasons in India. In answer to a question about a Russian offer to India for discounted crude oil and the US reaction to it, she said while such a move was not against sanctions, India needed to think about “where you want to stand when the history books are written in this moment in time”.

After disregarding history entirely for decades, even while supporting ‘just wars’, it seems the US government is now, as always, set to teach others on what side to pick in the ongoing ‘non-war’ in Ukraine.

**Ukraine has Not Received Anything but Words from Biden**

The US stance on Ukraine has been curious to say the least. After its intelligence clearly foresaw the war as early as 16 January, the President said almost immediately thereafter that no American troops would fight the war in Ukraine. He did, however, warn of sanctions of an unspecified extent. Since Russia has already been under sanctions for years, that was hardly likely to make much of an impression.

Putin's troops, therefore, invaded Ukraine a month later on 20 February. On 23 February, Biden responded with prayers for the Ukrainian people and not much else. Later, he even promised the American people that the US would not change its nuclear alert levels after Russia threatened to use nuclear weapons in response to American and European threats.

Though a raft of sanctions was announced—including by various industry heads—the US did not actually stop buying oil from Russia, which continued as of the first week of March. Though, it's not a lot: just 3 per cent of America's crude oil comes in from Russia. That is obviously due to fear Is the West Taking Ukraine for a Ride?

The Europeans are buying Russian oil. Italy's IMB, for instance, is functioning as usual. So, essentially, the war being 'fought' by the toughest sanctions ever seen since the Second World War, none of which were listed before President Putin actually invaded.

In sum, the threat of sanctions was never meant to deter, only to punish. Now, look at the weapons being delivered by the West. They are primarily the very same arsenal that was once supplied to Afghanistan, including a range of shoulder-fired weapons like anti-aircraft Stingers and anti-tank weapons like the Javelin. That has since progressed up the technology ladder to include Switchblade kamikaze drones. However, in operational terms the arsenal is identical to that used against the Soviet Union when it invaded Afghanistan.

Simply put, the Ukrainians are to fight to the death for US interests. Learning from history? Hardly, and certainly it places every action by Washington on the wrong side of whatever history will be written in the future. of poll ratings, with gas prices soaring 70 % since Biden came to office.

#### America's Own Dark History in Bangladesh, Cuba, & Elsewhere

Let's take other 'history lessons'. As Pakistan unleashed its brutal genocide on the then East Pakistan in 1971, a flood of some 10 million refugees fled into India. Delhi reached out for help from the 'international community', to no avail. The US indifference, and indeed its decided tilt towards Pakistan, was condemned by its own diplomats in Dacca as moral bankruptcy. History lessons anywhere hardly ever record this criminal indifference. That is because history is usually written by the victors and the big powers.

Don't forget that at the end of the Ukrainian adventure—whenever that will be—it will be Moscow that will be painted as the blackest villain. Not that its actions are not criminal. They are. But to hark back again to history, only consider the obvious example, the near nuclear disaster engendered by the Soviet Union's attempt to get itself a foothold in Cuba and the whole story of the Bay of Pigs.

Don't even forget that the US and the Soviets equally are responsible for the spate of 'small wars' in various parts of the globe as each patronised the most irresponsible governments, and worse, terrorist groups.

#### Lest We Forget What the US Did in Iraq

More history? Remember that in the 1980s, Iraq had the second largest economy in the Arab world, after Saudi Arabia and the third largest in the Middle East. It had a well developed centrally planned economy, and—most importantly—was entirely 'secular'. In short, it was in stark contrast to what was to come years later, in the form of Abu Bakr al Baghdadi. Certainly Iraq was no democracy, and the Ba'ath was corrupt, but its people not just remained alive, but

lived well. Even more interesting is that the Weapons of Mass Destruction that were supposedly the basis for the US invasion that's right, an invasion had been destroyed years ago, or probably never existed.

Another bit of history, with a remarkable resonance today, is this. US Ambassador April Glaspie met with Saddam Hussein for the first time in 1990 and said "I admire your extraordinary efforts to rebuild your country. I know you need funds. We understand that and our opinion is that you should have the opportunity to rebuild your country. But we have no opinion on the Arab-Arab conflicts, like your border disagreement with Kuwait....We hope you can solve this problem using any suitable methods ...All that we hope is that these issues are solved quickly". This was on 25 July. On 2 August, Saddam invaded Kuwait. That was the end of him.

It pays to read history, especially if you are going to invade a country. Too bad for Putin that he missed his history lessons.

### India is Correct in Deciding Its Own Role in History

It is worth asking what India stand to lose by being as it said, "on the wrong side of history'. The answer is nothing very much. Our core interests - the defence of India and the provision of sorely needed defence equipment- is served by not entirely siding with the west, even as we move to diversify our sources of defence trade and production.

Datasets have indicated that our imports from Russia have fallen by 47 per cent (2017-2021) and may yet fall further. If others are willing to offer joint production and subsequent export of high tech missiles like the BrahMos, so be it. But it is for us to decide.

Too many analysts are warning of India turning against 'global opinion' with regard to Ukraine.

First, it is not global at all, with a considerable part of Asia having strong reservations about just who is the worst country in this nightmare.

Second, there's not a lot that India can do other than advice all concerned to stop the fighting. It's not just Moscow who's not listening. As more weapons arrive in Ukraine through the 'generosity' of the United States, it is perhaps best to stay away from the firing.

There is one option though; and that is for India and China to get together to persuade all concerned to stop the murder of Ukrainians. And the icing on top is that such a joint mediation effort would certainly make history.

### **COVERAGE HIGHLIGHTS**

---

1. The Financial Times led international reporting on the Taliban's reversal to allow teenage girls to attend secondary schools despite repeated assurances they could resume classes. The decision sparked international condemnation.
2. Reuters led wire service reporting that the IRGC not only attended the 21-23 Mar Qatar Defense Exhibit, but also had a booth and was promoting its missile technology for sale. Reuters noted the irony that the IRGC was flouting its wares in the country with the largest US military base in the Middle East, while AP questioned why Qatar would even allow the IRGC to attend the exhibit and promote Iranian arms sales since the country is under extensive economic sanctions.
3. Bloomberg reported President Biden plans to request \$813.3 billion in national security spending -- including \$773 billion for the Pentagon -- in the federal budget he will send to Congress on Monday. The proposed 4% increase from this year's budget includes money to purchase 61 F-35 fighters, initial procurement of the B-21 bomber and two Virginia-class submarines.
4. The New York Times reported the White House has assembled a team of national security officials to sketch out scenarios of how the United States and its allies should respond if Russia uses chemical, biological or nuclear weapons in Ukraine. The team is also looking at options if Russia extends the war into neighboring nations, including Moldova and Georgia. The subject will likely be discussed at today's NATO leadership meeting in Brussels.

### **U.S./WESTERN MEDIA COVERAGE**

- 1. Taliban reverses decision to allow girls to attend secondary school in Afghanistan**

Financial Times (UK), 23 Mar 22, Benjamin Parkin

The Taliban have reversed a decision to allow teenage girls back to secondary school despite repeated assurances they could resume classes from Wednesday, sparking international condemnation and leaving desperate students stranded outside campuses.

## **2. Iran's Revolutionary Guards tout missile prowess at Doha exhibition**

Reuters, 23 Mar 22, Andrew Mills

Commanders of Iran's elite Islamic Revolutionary Guard Corps (IRGC) drank tea, nibbled dates and displayed models of Iranian missiles at a defense show in Qatar, a Gulf Arab state which is home to the largest American military base in the region.

## **3. White House to seek \$813.3 billion National Security Budget**

Bloomberg News, 23 Mar 22, Tony Capaccio and Roxana Tiron

President Joe Biden plans to request \$813.3 billion in national security spending -- including \$773 billion for the Pentagon -- in the federal budget he will send to Congress on Monday, according to officials familiar with the plan. It's an increase of \$31 billion, or 4%, from approved spending for the current fiscal year and about \$43 billion more than the White House budget office had projected a year ago for fiscal 2023.

## **4. U.S. makes contingency plans in case Russia uses its most powerful weapons**

New York Times, 23 Mar 22, David E. Sanger, Eric Schmitt, Helene Cooper and Julian E. Barnes

The White House has quietly assembled a team of national security officials to sketch out scenarios of how the United States and its allies should respond if President Vladimir V. Putin of Russia -- frustrated by his lack of progress in Ukraine or determined to warn Western nations against intervening in the war -- unleashes his stockpiles of chemical, biological or nuclear weapons.

### NOTABLE TWEETS

---

**Secretary of State Antony Blinken; @SecBlinken (23 Mar):** Education is a human right. The United States rejects the Taliban's excuses for reversing their commitment to the people of Afghanistan that all Afghans would be able to return to school at all levels today.

**Secretary General of the U.N., António Guterres; @antonioguterres (23 Mar):** The failure by Taliban authorities to reopen schools for girls above 6th grade is profoundly disappointing & damaging for Afghanistan. I urge the de facto authorities to open schools for all students without any further delay.

**U.S. Special Representative Thomas West; @US4AfghanPeace (23 Mar):** I join millions of Afghan families today in expressing shock and deep disappointment with the Taliban's decision to not allow women and girls to return to school above grade 6. Education is a fundamental right of all human beings and is essential to Afghanistan's economic growth and stability. This is a betrayal of public commitments to the Afghan people and the international community. The

Taliban have made clear that ALL Afghan citizens have a right to education. For the sake of the country's future and its relations with the international community, I would urge the Taliban to live up to their commitments to their people.

**Oman Embassy, Washington; @OmanEmbassyUSA (23 Mar):** HE Secretary-General of the Ministry of Defense met with the General Commander of @CENTCOM on the side line of the 16th meeting of Oman-US Joint Military Committee, they discussed the development of relations & cooperation between the two countries. @MG\_MOD\_OMAN

**U.S. Embassy Syria; @USEmbassySyria (23 Mar):** Today marks the 3rd anniversary of the defeat of ISIS's so-called territorial "caliphate." The US & @coalition are committed to ensuring ISIS's lasting defeat & the US stands behind the push for accountability, such as the al-Jumaily conviction in November. #MarchToAccountability

### **5. Under sweeping sanctions, Iran hawks its weapons in Qatar**

Associated Press, 23 Mar 22

Iran, under sweeping economic sanctions, was hawking weapons on Wednesday at a Qatari defense exhibit, a surprising sight at the major conference also showcasing American companies and fighter jets.

### **6. Iran's Revolutionary Guards warn Israel over more attacks**

Al-Monitor, 23 Mar 22

Hossein Salami, the commander of the Islamic Revolutionary Guard Corps, issued a warning to Israel against more attacks targeting Iranian forces in the region. On March 13, Iran launched ballistic missiles into northern Iraq, claiming the target was a strategic center for Israel. The attack was in retaliation for two Iranian soldiers killed by an Israeli strike in Syria. In total, 12 missiles were launched, and Iraqi officials condemned the attack.

### **7. Russia turns to Iran for assistance with aviation sanctions, but can it do much to help?**

Forbes, 23 Mar 22, Dominic Dudley

Moscow is looking to Iran to help it figure out how to cope with the debilitating sanctions on its aviation sector. Speaking on March 22 at a meeting of the economic policy committee in the upper house of the Russian parliament, transport minister Vitaly Savelyev said "Russia was being guided by Iran's experience of how to service aircraft in a similar situation."

### **8. Iran's foreign minister says nuclear deal closer 'than ever'**

Reuters, 23 Mar 22

Iranian Foreign Minister Hossein Amirabdollahian said on Wednesday that the Islamic Republic and world powers are closer than ever to reviving a 2015 nuclear deal.

### **9. U.S. says it is unclear if issues in Iran talks will be resolved**

Reuters, 23 Mar 22

White House national security adviser Jake Sullivan said on Wednesday the United States and its allies have made progress in Iran nuclear talks but issues remain, and it is unclear if they will be resolved.

---

## IRAQ

---

### **10. Halabja anniversary takes political turn**

Al-Monitor, 23 Mar 22, Winthrop Rodgers

Snow flurries fell in Halabja on a cold and subdued day of remembrance, marking 34 years since the chemical attack perpetrated by Saddam Hussein's Baath Regime. The city's citizens usually come out in force to honor the victims of the genocide against the Kurdish people, but most stayed at home this year. They boycotted events organized by the Kurdistan Regional Government (KRG), a sign of anger at Kurdish and Iraqi politicians who pay what they consider lip service to them on the anniversary and then fail to live up to their promises.

---

## SYRIA

---

### **11. Iran welcomes Syria ties with Arabs, says nuclear deal close**

Associated Press, 23 Mar 22, Albert Aji

The foreign ministers of Iran and Syria, two allies of Russia, discussed the war in Ukraine and other developments during a meeting in Damascus on Wednesday. Syria's top diplomat said Moscow is defending its people.

### **12. Foreign children risk languishing in Syria for decades: Charity**

Agence France-Presse, 23 Mar 22

Children held in Syrian camps for relatives of suspected extremist fighters may remain stuck there for another 30 years, unless the pace of repatriations accelerates, Save the Children said Wednesday.

### **13. 'It's a kind of revenge': Damascus suburb demolished as Assad builds a 'new Syria'**

The Guardian, 23 Mar 22, Kaamil Ahmed, Mais Katt, Mohammad Bassiki and Bashar Deeb

The Syrian regime is bulldozing former rebel-held neighborhoods in Damascus under the guise of mine clearance to make space for a "new Syria" of upmarket new building developments and pristine gardens.

## AFGHANISTAN

---

### **14. Taliban leaves shocked students in tears by unexpectedly extending ban on girls in school**

CBS News, 23 Mar 22, Ahmad Mukhtar

The Taliban's de-facto government in Afghanistan announced Wednesday that schools would remain closed to high school-aged girls across the country until a plan is drawn up that will allow

for their education to resume in accordance with Islamic Sharia law and Afghan culture. The news came as a surprise after an earlier indication from the country's education ministry that all Afghan children would be able to return to classrooms, and it left many students in tears.

### **15. Taliban orders that high schools remain closed to girls is a betrayal of commitments, U.S. says**

Reuters, 23 Mar 22

The U.S. State Department on Wednesday said the Taliban's announcement that high schools in Afghanistan would remain closed for girls is a betrayal of public commitments to the Afghan people and international community.

### **16. Family of killed photojournalist Danish Siddiqui take Taliban leaders to ICC**

NPR, 23 Mar 22, Robert Griffiths

The family of Pulitzer Prize-winning Indian photojournalist Danish Siddiqui, who was killed last year in Afghanistan, filed a formal complaint with the International Criminal Court (ICC) on Tuesday to investigate his killing and bring to trial the Taliban's leadership for "committing war crimes."

### **17. Silence replaces old folk tunes in historic quarter of Kabul**

Associated Press, 23 Mar 22, Samya Kullab

Nabih Bakhsh's family has been part of Afghanistan's musical tradition for generations. His great-grandfather was a musician in the court of the Afghan emperor 150 years ago. His father was a famous maestro and singer. Bakhsh too carried on the family art, performing and running an instrument repair shop. Until now.

## **23. Top Russian military leaders repeatedly decline calls from U.S., prompting fears of 'sleepwalking into war'**

Washington Post, 23 Mar 22, John Hudson

Repeated attempts by the United States' top defense and military leaders to speak with their Russian counterparts have been rejected by Moscow for the last month, leaving the world's two largest nuclear powers in the dark about explanations for military movements and raising fears of a major miscalculation or battlefield accident.

## **24. Inside a rare US meeting with a Russian general in Moscow**

CNN, 23 Mar 22, Barbara Starr and Jeremy Herb

A rare face-to-face meeting between Russian and US military officials last week led to an "outburst" of emotion from a normally stoic Russian general, a "revealing moment" that the Americans present believe hinted at larger morale problems in Russia's military, according to a closely held US military readout of what transpired.

## **25. After Iraq and Afghanistan, Marine Corps reserve turns to deterrence**

Newsweek, 23 Mar 22, Alex J. Rouhandeh and Naveed Jamali

Four weeks into its invasion of Ukraine, Russia continues to struggle against its lesser-equipped adversary. As with the U.S. withdrawal from Afghanistan, even the most dominant military forces can falter when ill-equipped for the situation at hand. Lieutenant General David Bellon, commander of the U.S. Marine Corps Reserve, told Newsweek that as the United States finds

itself in an era of great power competition, bolstering the capabilities of the armed forces should be seen as a priority.

#### **26. Army approves reduced physical fitness standards for women, older soldiers**

The Hill, 23 Mar 22, Ellen Mitchell

Following a three-year review, the Army has scrapped plans to use the same physical fitness test for all soldiers, choosing instead to have some reduced standards to allow women and older soldiers to pass, the service announced Wednesday.

#### **27. Israel blocked Ukraine from buying Pegasus spyware, fearing Russia's anger**

The Guardian, 23 Mar 22, Stephanie Kirchgaessner

Israel blocked Ukraine from buying NSO Group's Pegasus spyware for fear that Russian officials would be angered by the sale of the sophisticated hacking tool to a regional foe, according to people familiar with the matter. The revelation, following a joint investigation by the Guardian and Washington Post, offers new insight into the way Israel's relationship with Russia has at times undermined Ukraine's offensive capabilities and contradicted US priorities.

#### **28. US military members who survive Ukraine War may face 'consequences' at home**

Newsweek, 23 Mar 22, Tom O'Connor and Naveed Jamali

Members of the U.S. military who travel to Ukraine to join the fight against Russian troops in a grueling war and live to tell the tale may return home only to face administrative or legal ramifications.

#### **29. From Afghanistan to Ukraine: How a team from Silicon Valley is helping evacuate people from war**

Vanity Fair, 23 Mar 22, Nick Bilton

The San Francisco Peninsula is now home to a slew of private security companies filled with ex-military, former international counterterrorism experts, and government officials who were in charge of cyber-warfare with other nation states. The job of these security outfits is to protect the well-being and safety of not only the richest people on the planet, but also the biggest tech companies on earth. Roderick Jones, who founded one such company, Concentric, works at the center of this growing industry. Before moving to Silicon Valley to work with some of the most prominent CEOs on the planet, Jones used to work for Scotland Yard's Special Branch on international terrorism and also protected a high-profile British cabinet member.

---

#### **30. US mulls larger permanent force in Europe, sends more missiles to Ukraine**

Defense One, 23 Mar 22, Tara Copp

The latest U.S. planeloads of anti-aircraft and anti-tank weapons for Ukraine are expected to arrive in Europe this week, then be rushed into the country via ground routes, a senior defense official told reporters Wednesday.

### **31. As allies meet, splits emerge in NATO about how to deter Russia**

Washington Post, 23 Mar 22, Michael Birnbaum, Karoun Demirjian and John Hudson

As President Biden landed in Brussels on Wednesday for urgent talks about Russia's war on Ukraine, splits were emerging within NATO and in Washington about how to deter the Kremlin from further escalation. Allied leaders are discussing whether it is best to keep Russia guessing about what will trigger a bigger military response or to outline precisely what would draw NATO into a conflict.

### **32. NATO: 7,000 to 15,000 Russian troops dead in Ukraine**

Associated Press, 23 Mar 22, Nebi Qena and Cara Anna

NATO estimated on Wednesday that 7,000 to 15,000 Russian soldiers have been killed in four weeks of war in Ukraine, where fierce resistance from the country's defenders has denied Moscow the lightning victory it sought. By way of comparison, Russia lost about 15,000 troops over 10 years in Afghanistan.

### **33. Weapons for Ukraine's fight against Russia flow through small Polish border towns**

Wall Street Journal, 23 Mar 22, Drew Hinshaw, Joe Parkinson and Nancy A. Youssef

RZESZOW, Poland—Day and night, truck convoys rumble through once quiet Polish border towns and villages. Giant military transport planes land several times an hour on the single runway at a local airport. Their cargo: weapons for the Ukrainian forces fighting to beat back Russia's invading army.

### **34. NATO likely to approve more troops for its eastern flank, says Stoltenberg**

Reuters, 23 Mar 22, Sabine Siebold and John Chalmers

NATO will likely decide on Thursday to ramp up military forces on its eastern flank, the head of the alliance said, while also warning Russia against using nuclear weapons after its Feb. 24 invasion of Ukraine.

### **35. Blinken says U.S. assesses Russian forces committed "war crimes" in Ukraine**

CBS News, 23 Mar 22, Caroline Linton

Secretary of State Antony Blinken said Wednesday that the U.S. assesses that Russian forces have committed war crimes in Ukraine and will work to hold them accountable.

### **36. Britain sending thousands more missiles to Ukraine**

Associated Press, 23 Mar 22

Britain will send thousands more missiles to Ukraine's government as Prime Minister Boris Johnson urged Western allies to boost the supply of military aid to Ukraine.

### **37. Romania's Prime Minister on how NATO can navigate this 'stark new reality'**

TIME, 23 Mar 22, Charlie Campbell

On Thursday, Romania's prime minister will join U.S. President Joe Biden and other world leaders for an extraordinary NATO meeting and E.U. summit in Brussels. Biden's goal, White House spokeswoman Jen Psaki told reporters, "is to meet in person face-to-face and talk about and assess where we are at this point in the conflict." Ciucă, however, is blunter about the stakes, which are no less than "the future of the democratic world and the rules-based international order."

### **38. Russia's invasion of Ukraine sparks fierce debate in China**

Financial Times (UK), 23 Mar 22, Kathrin Hille

China's government has leaned towards Russia by backing Moscow's complaints about Nato expansion and refusing to call its actions an invasion. But while Beijing's censors are working hard to suppress any criticism of that position, the conflict has ignited heated controversy both among Chinese policy experts and the public.

### **39. Shabaab attacks international hub in Mogadishu where U.S. Embassy is located**

Long War Journal, 23 Mar 22, Andrew Tobin

On Wednesday, Al Shabaab conducted an attack against Halane camp near Aden Adde International Airport in Mogadishu. The camp houses the U.S. embassy, the UN Assistance Mission in Somalia (UNSOM), the headquarters for the African Union Mission in Somalia (AMISOM) and most foreign diplomats based in Mogadishu.

### **40. Iran's enemies in the Middle East are closing ranks**

Financial Times (UK), 23 Mar 22, David Gardner

The stop-start efforts to resuscitate the landmark nuclear deal, or Joint Comprehensive Plan of Action, Iran signed with the US and five world powers in 2015 may be in danger of meeting another dead end.

### **41. Iran needs a cushion, and Europe needs gas**

Foreign Policy, 23 Mar 22, Alex Vatanka

The Russian invasion of Ukraine has been a watershed moment on so many levels for so many countries. Existing political, economic, energy, and transportation channels are being affected across western Eurasia. Countries are maneuvering to minimize the war's detrimental impact while new trade synergies are being formed at a rapid pace. Most recently, Germany and Qatar signed a long-term energy partnership for the delivery of Qatari natural gas as the Germans look to reduce dependence on Russian supplies. Qatar's reserves are located in the world's largest gas field, which it shares with its northern neighbor, Iran.

### **42. We put Iran's Revolutionary Guard on the terrorist list. Biden must keep it there.**

The Washington Post, 23 Mar 22, Victoria Coates and Robert Greenway

Multiple reports have suggested that the Biden administration is considering taking Iran's Islamic Revolutionary Guard Corps (IRGC) off the U.S. government's Foreign Terrorist

Organization list. As the senior Trump administration officials who led the process that recommended the designation in 2019, we feel compelled to explain why taking them off the list as a concession to tempt Tehran back into a nuclear proliferation deal would be dangerous and would undermine the deal itself.

**43. The Taliban has broken a promise to Afghan girls. The U.S. must hold it accountable.**  
Washington Post, 23 Mar 22, Editorial Board

Each year, the Sustainable Development Solutions Network, a nongovernmental organization, publishes the World Happiness Report, which ranks various countries by their sense of well-being, based on Gallup World Poll data. Afghanistan ranked last in the new edition, published March 18 — all too unsurprisingly. Beset by poverty, government human rights violations and continued terrorist attacks, the Afghan people have had little to feel good about since August 2021, when the United States withdrew its remaining troops amid violent chaos, the U.S.-backed Afghan government collapsed and the Islamist Taliban movement seized power. Now comes word of yet another crushing disappointment.

**44. Afghanistan's struggle: it isn't just the Taliban**  
The Guardian, 23 Mar 22, Editorial Board

When 98% of the population is short of food, all that is left is hope. In Afghanistan there is not much of that either. On Wednesday, the Taliban abruptly reversed their decision to let girls return to secondary school; the last-minute chaos appears to reflect internal disagreements. Tears fell as pupils arrived in classrooms for the first time since the Taliban takeover last August, only for their dreams to be shattered once more.

**45. Afghan evacuees are stuck in legal limbo. Here's how to help them.**  
Washington Post, 23 Mar 22, Krish O'Mara Vignarajah

Even as Americans have been riveted by the war in Ukraine, another humanitarian emergency looms closer to home for the tens of thousands of Afghans who fled their nation after the Taliban takeover this past year.

**46. Madeleine Albright shaped a generation of foreign policy leaders**  
Washington Post, 23 Mar 22, David Ignatius

Madeleine K. Albright, who passed away on Wednesday, shaped a generation of foreign policy leaders — gently and usually with a smile. She knew every senior official, mentored many of them, and managed to say a cheery word even to people who took “dour” as a compliment.

**47. A realistic plan for peace for Ukraine and Russia**  
TIME, 23 Mar 22, Michael O'Hanlon

As the tragic war in Ukraine has now driven roughly 10 million from their homes and killed many thousands, with no end in sight and no real prospect of near-term victory for either side, it is increasingly necessary to focus on a possible peace plan.

**48. Ukraine's government is willing to make big concessions to end the war, but it doubts that Russia is negotiating in good faith**

The Economist, 23 Mar 22

At a secret location in a blacked-out high-rise in the suburbs of Kyiv, a senior Ukrainian intelligence officer shared what he claimed was Russia's invasion blueprint. The classified document, supposedly compiled before Russian troops crossed the border, envisages the complete takeover of Ukraine: seizing private property and taking over banks, transport, ports and elected institutions. There are provisions for a federation of puppet "peoples' republics" and perhaps their annexation into Russia if needed. There is a line about "denazifying" the Ukrainian education system, whatever that means.

**49. Ukraine can win with enough help**

Wall Street Journal, 23 Mar 22, Editorial Board

The public message out of Thursday's meeting of NATO leaders in Brussels is sure to be heavy on unity and resolve in support of Ukraine. But the unfortunate reality is that the democratic alliance confronting Vladimir Putin still isn't doing enough to ensure the Russian's defeat. And behind the scenes, some leaders would prefer if Volodymyr Zelensky agreed to a peace settlement sooner rather than later.

---

### **62. Iran media accuses Turkey of backing 'terrorists'**

Jerusalem Post, 23 Mar 22, Seth J. Frantzman

Iran may be upping tensions with Turkey. The evidence can so far be found in one article at Fars News which accuses Turkey and its leading AKP party of backing "terrorists." This comes as the world is changing and countries weigh their next moves amid the Ukraine war. Turkey is seeking to play both sides, being friendly with Russia and also Ukraine. Meanwhile, Russia is holding up the Iran deal.

### **63. Bennett sends signals from Sharm al-Sheikh**

Jerusalem Post, 23 Mar 22, Herb Keinon

Israel's policy towards Russia and the Ukraine crisis is a high-wire acrobatic act: trying to balance principles on one hand and interests on the other; doing right by the Ukrainians without inciting Moscow's anger – an anger that could trigger Russian actions that might significantly harm Israeli security.

### **64. Sharm al-Sheikh three-way summit ushers in new Arab-Israeli alliance**

The Arab Weekly, 23 Mar 22,

Arab diplomatic sources in the Egyptian capital, Cairo, described the tripartite meeting that brought together Egyptian President Abdel Fattah al-Sisi, Abu Dhabi Crown Prince Sheikh

Mohammed bin Zayed Al Nahyan and Israeli Prime Minister Naftali Bennett, on Monday and Tuesday, in Sharm el-Sheikh, as ushering in the birth of an Arab-Israeli alliance.

### COVERAGE HIGHLIGHTS

---

- 1) The Financial Times led international reporting on the Taliban's reversal to allow teenage girls to attend secondary schools despite repeated assurances they could resume classes. The decision sparked international condemnation.
- 2) Reuters led wire service reporting that the IRGC not only attended the 21-23 Mar Qatar Defense Exhibit, but also had a booth and was promoting its missile technology for sale. Reuters noted the irony that the IRGC was flouting its wares in the country with the largest US military base in the Middle East, while AP questioned why Qatar would even allow the IRGC to attend the exhibit and promote Iranian arms sales since the country is under extensive economic sanctions.
- 3) Bloomberg reported President Biden plans to request \$813.3 billion in national security spending -- including \$773 billion for the Pentagon -- in the federal budget he will send to Congress on Monday. The proposed 4% increase from this year's budget includes money to purchase 61 F-35 fighters, initial procurement of the B-21 bomber and two Virginia-class submarines.
- 4) The New York Times reported the White House has assembled a team of national security officials to sketch out scenarios of how the United States and its allies should respond if Russia uses chemical, biological or nuclear weapons in Ukraine. The team is also looking at options if Russia extends the war into neighboring nations, including Moldova and Georgia. The subject will likely be discussed at today's NATO leadership meeting in Brussels.

#### **1. Taliban reverses decision to allow girls to attend secondary school in Afghanistan**

Financial Times (UK), 23 Mar 22, Benjamin Parkin

The Taliban have reversed a decision to allow teenage girls back to secondary school despite repeated assurances they could resume classes from Wednesday, sparking international condemnation and leaving desperate students stranded outside campuses.

## **2. Iran's Revolutionary Guards tout missile prowess at Doha exhibition**

Reuters, 23 Mar 22, Andrew Mills

Commanders of Iran's elite Islamic Revolutionary Guard Corps (IRGC) drank tea, nibbled dates and displayed models of Iranian missiles at a defense show in Qatar, a Gulf Arab state which is home to the largest American military base in the region.

## **3. White House to seek \$813.3 billion National Security Budget**

Bloomberg News, 23 Mar 22, Tony Capaccio and Roxana Tiron

President Joe Biden plans to request \$813.3 billion in national security spending -- including \$773 billion for the Pentagon -- in the federal budget he will send to Congress on Monday, according to officials familiar with the plan. It's an increase of \$31 billion, or 4%, from approved spending for the current fiscal year and about \$43 billion more than the White House budget office had projected a year ago for fiscal 2023.

## **4. U.S. makes contingency plans in case Russia uses its most powerful weapons**

New York Times, 23 Mar 22, David E. Sanger, Eric Schmitt, Helene Cooper and Julian E. Barnes

The White House has quietly assembled a team of national security officials to sketch out scenarios of how the United States and its allies should respond if President Vladimir V. Putin of Russia -- frustrated by his lack of progress in Ukraine or determined to warn Western nations against intervening in the war -- unleashes his stockpiles of chemical, biological or nuclear weapons.

## **NOTABLE TWEETS**

---

**Secretary of State Antony Blinken; @SecBlinken (23 Mar):** Education is a human right. The United States rejects the Taliban's excuses for reversing their commitment to the people of Afghanistan that all Afghans would be able to return to school at all levels today.

**Secretary General of the U.N., António Guterres; @antonioguterres (23 Mar):** The failure by Taliban authorities to reopen schools for girls above 6th grade is profoundly disappointing & damaging for Afghanistan. I urge the de facto authorities to open schools for all students without any further delay.

**U.S. Special Representative Thomas West; @US4AfghanPeace (23 Mar):** I join millions of Afghan families today in expressing shock and deep disappointment with the Taliban's decision to not allow women and girls to return to school above grade 6. Education is a fundamental right of all human beings and is essential to Afghanistan's economic growth and stability. This is a betrayal of public commitments to the Afghan people and the international community. The Taliban have made clear that ALL Afghan citizens have a right to education. For the sake of the country's future and its relations with the international community, I would urge the Taliban to live up to their commitments to their people.

**Oman Embassy, Washington; @OmanEmbassyUSA (23 Mar):** HE Secretary-General of the Ministry of Defense met with the General Commander of @CENTCOM on the side line of the 16th meeting of Oman-US Joint Military Committee, they discussed the development of relations & cooperation between the two countries. @MG\_MOD\_OMAN

**U.S. Embassy Syria; @USEmbassySyria (23 Mar):** Today marks the 3rd anniversary of the defeat of ISIS's so-called territorial "caliphate." The US & @coalition are committed to ensuring ISIS's lasting defeat & the US stands behind the push for accountability, such as the al-Jumaily conviction in November. #MarchToAccountability

### **5. Under sweeping sanctions, Iran hawks its weapons in Qatar**

Associated Press, 23 Mar 22

Iran, under sweeping economic sanctions, was hawking weapons on Wednesday at a Qatari defense exhibit, a surprising sight at the major conference also showcasing American companies and fighter jets.

### **6. Iran's Revolutionary Guards warn Israel over more attacks**

Al-Monitor, 23 Mar 22

Hossein Salami, the commander of the Islamic Revolutionary Guard Corps, issued a warning to Israel against more attacks targeting Iranian forces in the region. On March 13, Iran launched ballistic missiles into northern Iraq, claiming the target was a strategic center for Israel. The attack was in retaliation for two Iranian soldiers killed by an Israeli strike in Syria. In total, 12 missiles were launched, and Iraqi officials condemned the attack.

### **7. Russia turns to Iran for assistance with aviation sanctions, but can it do much to help?**

Forbes, 23 Mar 22, Dominic Dudley

Moscow is looking to Iran to help it figure out how to cope with the debilitating sanctions on its aviation sector. Speaking on March 22 at a meeting of the economic policy committee in the upper house of the Russian parliament, transport minister Vitaly Savelyev said "Russia was being guided by Iran's experience of how to service aircraft in a similar situation."

### **8. Iran's foreign minister says nuclear deal closer 'than ever'**

Reuters, 23 Mar 22

Iranian Foreign Minister Hossein Amirabdollahian said on Wednesday that the Islamic Republic and world powers are closer than ever to reviving a 2015 nuclear deal.

### **9. U.S. says it is unclear if issues in Iran talks will be resolved**

Reuters, 23 Mar 22

White House national security adviser Jake Sullivan said on Wednesday the United States and its allies have made progress in Iran nuclear talks but issues remain, and it is unclear if they will be resolved.

## IRAQ

---

### **10. Halabja anniversary takes political turn**

Al-Monitor, 23 Mar 22, Winthrop Rodgers

Snow flurries fell in Halabja on a cold and subdued day of remembrance, marking 34 years since the chemical attack perpetrated by Saddam Hussein's Baath Regime. The city's citizens usually come out in force to honor the victims of the genocide against the Kurdish people, but most stayed at home this year. They boycotted events organized by the Kurdistan Regional Government (KRG), a sign of anger at Kurdish and Iraqi politicians who pay what they consider lip service to them on the anniversary and then fail to live up to their promises.

### **14. Taliban leaves shocked students in tears by unexpectedly extending ban on girls in school**

CBS News, 23 Mar 22, Ahmad Mukhtar

The Taliban's de-facto government in Afghanistan announced Wednesday that schools would remain closed to high school-aged girls across the country until a plan is drawn up that will allow for their education to resume in accordance with Islamic Sharia law and Afghan culture. The news came as a surprise after an earlier indication from the country's education ministry that all Afghan children would be able to return to classrooms, and it left many students in tears.

**15. Taliban orders that high schools remain closed to girls is a betrayal of commitments, U.S. says**

Reuters, 23 Mar 22

The U.S. State Department on Wednesday said the Taliban's announcement that high schools in Afghanistan would remain closed for girls is a betrayal of public commitments to the Afghan people and international community.

**16. Family of killed photojournalist Danish Siddiqui take Taliban leaders to ICC**

NPR, 23 Mar 22, Robert Griffiths

The family of Pulitzer Prize-winning Indian photojournalist Danish Siddiqui, who was killed last year in Afghanistan, filed a formal complaint with the International Criminal Court (ICC) on Tuesday to investigate his killing and bring to trial the Taliban's leadership for "committing war crimes."

**17. Silence replaces old folk tunes in historic quarter of Kabul**

Associated Press, 23 Mar 22, Samya Kullab

Nabih Bakhsh's family has been part of Afghanistan's musical tradition for generations. His great-grandfather was a musician in the court of the Afghan emperor 150 years ago. His father was a famous maestro and singer. Bakhsh too carried on the family art, performing and running an instrument repair shop. Until now.

### **23. Top Russian military leaders repeatedly decline calls from U.S., prompting fears of 'sleepwalking into war'**

Washington Post, 23 Mar 22, John Hudson

Repeated attempts by the United States' top defense and military leaders to speak with their Russian counterparts have been rejected by Moscow for the last month, leaving the world's two largest nuclear powers in the dark about explanations for military movements and raising fears of a major miscalculation or battlefield accident.

### **24. Inside a rare US meeting with a Russian general in Moscow**

CNN, 23 Mar 22, Barbara Starr and Jeremy Herb

A rare face-to-face meeting between Russian and US military officials last week led to an "outburst" of emotion from a normally stoic Russian general, a "revealing moment" that the Americans present believe hinted at larger morale problems in Russia's military, according to a closely held US military readout of what transpired.

### **25. After Iraq and Afghanistan, Marine Corps reserve turns to deterrence**

Newsweek, 23 Mar 22, Alex J. Rouhandeh and Naveed Jamali

Four weeks into its invasion of Ukraine, Russia continues to struggle against its lesser-equipped adversary. As with the U.S. withdrawal from Afghanistan, even the most dominant military forces can falter when ill-equipped for the situation at hand. Lieutenant General David Bellon, commander of the U.S. Marine Corps Reserve, told Newsweek that as the United States finds itself in an era of great power competition, bolstering the capabilities of the armed forces should be seen as a priority.

#### **26. Army approves reduced physical fitness standards for women, older soldiers**

The Hill, 23 Mar 22, Ellen Mitchell

Following a three-year review, the Army has scrapped plans to use the same physical fitness test for all soldiers, choosing instead to have some reduced standards to allow women and older soldiers to pass, the service announced Wednesday.

#### **27. Israel blocked Ukraine from buying Pegasus spyware, fearing Russia's anger**

The Guardian, 23 Mar 22, Stephanie Kirchgaessner

Israel blocked Ukraine from buying NSO Group's Pegasus spyware for fear that Russian officials would be angered by the sale of the sophisticated hacking tool to a regional foe, according to people familiar with the matter. The revelation, following a joint investigation by the Guardian and Washington Post, offers new insight into the way Israel's relationship with Russia has at times undermined Ukraine's offensive capabilities and contradicted US priorities.

#### **28. US military members who survive Ukraine War may face 'consequences' at home**

Newsweek, 23 Mar 22, Tom O'Connor and Naveed Jamali

Members of the U.S. military who travel to Ukraine to join the fight against Russian troops in a grueling war and live to tell the tale may return home only to face administrative or legal ramifications.

#### **29. From Afghanistan to Ukraine: How a team from Silicon Valley is helping evacuate people from war**

Vanity Fair, 23 Mar 22, Nick Bilton

The San Francisco Peninsula is now home to a slew of private security companies filled with ex-military, former international counterterrorism experts, and government officials who were in charge of cyber-warfare with other nation states. The job of these security outfits is to protect the well-being and safety of not only the richest people on the planet, but also the biggest tech companies on earth. Roderick Jones, who founded one such company, Concentric, works at the center of this growing industry. Before moving to Silicon Valley to work with some of the most prominent CEOs on the planet, Jones used to work for Scotland Yard's Special Branch on international terrorism and also protected a high-profile British cabinet member.

#### **30. US mulls larger permanent force in Europe, sends more missiles to Ukraine**

Defense One, 23 Mar 22, Tara Copp

The latest U.S. planeloads of anti-aircraft and anti-tank weapons for Ukraine are expected to arrive in Europe this week, then be rushed into the country via ground routes, a senior defense official told reporters Wednesday.

### **31. As allies meet, splits emerge in NATO about how to deter Russia**

Washington Post, 23 Mar 22, Michael Birnbaum, Karoun Demirjian and John Hudson

As President Biden landed in Brussels on Wednesday for urgent talks about Russia's war on Ukraine, splits were emerging within NATO and in Washington about how to deter the Kremlin from further escalation. Allied leaders are discussing whether it is best to keep Russia guessing about what will trigger a bigger military response or to outline precisely what would draw NATO into a conflict.

### **32. NATO: 7,000 to 15,000 Russian troops dead in Ukraine**

Associated Press, 23 Mar 22, Nebi Qena and Cara Anna

NATO estimated on Wednesday that 7,000 to 15,000 Russian soldiers have been killed in four weeks of war in Ukraine, where fierce resistance from the country's defenders has denied Moscow the lightning victory it sought. By way of comparison, Russia lost about 15,000 troops over 10 years in Afghanistan.

### **33. Weapons for Ukraine's fight against Russia flow through small Polish border towns**

Wall Street Journal, 23 Mar 22, Drew Hinshaw, Joe Parkinson and Nancy A. Youssef

RZESZOW, Poland—Day and night, truck convoys rumble through once quiet Polish border towns and villages. Giant military transport planes land several times an hour on the single runway at a local airport. Their cargo: weapons for the Ukrainian forces fighting to beat back Russia's invading army.

### **34. NATO likely to approve more troops for its eastern flank, says Stoltenberg**

Reuters, 23 Mar 22, Sabine Siebold and John Chalmers

NATO will likely decide on Thursday to ramp up military forces on its eastern flank, the head of the alliance said, while also warning Russia against using nuclear weapons after its Feb. 24 invasion of Ukraine.

### **35. Blinken says U.S. assesses Russian forces committed "war crimes" in Ukraine**

CBS News, 23 Mar 22, Caroline Linton

Secretary of State Antony Blinken said Wednesday that the U.S. assesses that Russian forces have committed war crimes in Ukraine and will work to hold them accountable.

### **36. Britain sending thousands more missiles to Ukraine**

Associated Press, 23 Mar 22

Britain will send thousands more missiles to Ukraine's government as Prime Minister Boris Johnson urged Western allies to boost the supply of military aid to Ukraine.

### **37. Romania's Prime Minister on how NATO can navigate this 'stark new reality'**

TIME, 23 Mar 22, Charlie Campbell

On Thursday, Romania's prime minister will join U.S. President Joe Biden and other world leaders for an extraordinary NATO meeting and E.U. summit in Brussels. Biden's goal, White House spokeswoman Jen Psaki told reporters, "is to meet in person face-to-face and talk about and assess where we are at this point in the conflict." Ciucă, however, is blunter about the stakes, which are no less than "the future of the democratic world and the rules-based international order."

### **38. Russia's invasion of Ukraine sparks fierce debate in China**

Financial Times (UK), 23 Mar 22, Kathrin Hille

China's government has leaned towards Russia by backing Moscow's complaints about Nato expansion and refusing to call its actions an invasion. But while Beijing's censors are working hard to suppress any criticism of that position, the conflict has ignited heated controversy both among Chinese policy experts and the public.

### **39. Shabaab attacks international hub in Mogadishu where U.S. Embassy is located**

Long War Journal, 23 Mar 22, Andrew Tobin

On Wednesday, Al Shabaab conducted an attack against Halane camp near Aden Adde International Airport in Mogadishu. The camp houses the U.S. embassy, the UN Assistance Mission in Somalia (UNSOM), the headquarters for the African Union Mission in Somalia (AMISOM) and most foreign diplomats based in Mogadishu.

### **40. Iran's enemies in the Middle East are closing ranks**

Financial Times (UK), 23 Mar 22, David Gardner

The stop-start efforts to resuscitate the landmark nuclear deal, or Joint Comprehensive Plan of Action, Iran signed with the US and five world powers in 2015 may be in danger of meeting another dead end.

### **41. Iran needs a cushion, and Europe needs gas**

Foreign Policy, 23 Mar 22, Alex Vatanka

The Russian invasion of Ukraine has been a watershed moment on so many levels for so many countries. Existing political, economic, energy, and transportation channels are being affected across western Eurasia. Countries are maneuvering to minimize the war's detrimental impact while new trade synergies are being formed at a rapid pace. Most recently, Germany and Qatar signed a long-term energy partnership for the delivery of Qatari natural gas as the Germans look

to reduce dependence on Russian supplies. Qatar's reserves are located in the world's largest gas field, which it shares with its northern neighbor, Iran.

**42. We put Iran's Revolutionary Guard on the terrorist list. Biden must keep it there.**

The Washington Post, 23 Mar 22, Victoria Coates and Robert Greenway

Multiple reports have suggested that the Biden administration is considering taking Iran's Islamic Revolutionary Guard Corps (IRGC) off the U.S. government's Foreign Terrorist Organization list. As the senior Trump administration officials who led the process that recommended the designation in 2019, we feel compelled to explain why taking them off the list as a concession to tempt Tehran back into a nuclear proliferation deal would be dangerous — and would undermine the deal itself.

**43. The Taliban has broken a promise to Afghan girls. The U.S. must hold it accountable.**

Washington Post, 23 Mar 22, Editorial Board

Each year, the Sustainable Development Solutions Network, a nongovernmental organization, publishes the World Happiness Report, which ranks various countries by their sense of well-being, based on Gallup World Poll data. Afghanistan ranked last in the new edition, published March 18 — all too unsurprisingly. Beset by poverty, government human rights violations and continued terrorist attacks, the Afghan people have had little to feel good about since August 2021, when the United States withdrew its remaining troops amid violent chaos, the U.S.-backed Afghan government collapsed and the Islamist Taliban movement seized power. Now comes word of yet another crushing disappointment.

**44. Afghanistan's struggle: it isn't just the Taliban**

The Guardian, 23 Mar 22, Editorial Board

When 98% of the population is short of food, all that is left is hope. In Afghanistan there is not much of that either. On Wednesday, the Taliban abruptly reversed their decision to let girls return to secondary school; the last-minute chaos appears to reflect internal disagreements. Tears fell as pupils arrived in classrooms for the first time since the Taliban takeover last August, only for their dreams to be shattered once more.

**45. Afghan evacuees are stuck in legal limbo. Here's how to help them.**

Washington Post, 23 Mar 22, Krish O'Mara Vignarajah

Even as Americans have been riveted by the war in Ukraine, another humanitarian emergency looms closer to home for the tens of thousands of Afghans who fled their nation after the Taliban takeover this past year.

**46. Madeleine Albright shaped a generation of foreign policy leaders**

Washington Post, 23 Mar 22, David Ignatius

Madeleine K. Albright, who passed away on Wednesday, shaped a generation of foreign policy leaders — gently and usually with a smile. She knew every senior official, mentored many of them, and managed to say a cheery word even to people who took “dour” as a compliment.

#### **47. A realistic plan for peace for Ukraine and Russia**

TIME, 23 Mar 22, Michael O’Hanlon

As the tragic war in Ukraine has now driven roughly 10 million from their homes and killed many thousands, with no end in sight and no real prospect of near-term victory for either side, it is increasingly necessary to focus on a possible peace plan.

#### **48. Ukraine’s government is willing to make big concessions to end the war, but it doubts that Russia is negotiating in good faith**

The Economist, 23 Mar 22

At a secret location in a blacked-out high-rise in the suburbs of Kyiv, a senior Ukrainian intelligence officer shared what he claimed was Russia’s invasion blueprint. The classified document, supposedly compiled before Russian troops crossed the border, envisages the complete takeover of Ukraine: seizing private property and taking over banks, transport, ports and elected institutions. There are provisions for a federation of puppet “peoples’ republics” and perhaps their annexation into Russia if needed. There is a line about “denazifying” the Ukrainian education system, whatever that means.

#### **49. Ukraine can win with enough help**

Wall Street Journal, 23 Mar 22, Editorial Board

The public message out of Thursday’s meeting of NATO leaders in Brussels is sure to be heavy on unity and resolve in support of Ukraine. But the unfortunate reality is that the democratic alliance confronting Vladimir Putin still isn’t doing enough to ensure the Russian’s defeat. And behind the scenes, some leaders would prefer if Volodymyr Zelensky agreed to a peace settlement sooner rather than later.

#### **51. IRGC chief threatens Israel, US with Iranian missiles**

Jerusalem Post, 24 Mar 22

IRGC officials at the Doha defense show, from March 21-23, declined to speak to Reuters. While some huddled in meetings at the booth, which featured a giant poster of a fast boat filled with commandos, others explored the trade floor.

They passed the entourage surrounding the commander of the US Navy's Fifth Fleet, snapped cellphone photos of an Italian armored personnel carrier and handled Turkish machine guns.

In a booth adjacent to the IRGC one, US firm General Atomics showcased its MQ-9B predator drone, which is engineered to conduct anti-surface warfare, including maritime surveillance and precision-guided munitions.

The US State Department has authorized the company to sell 18 of the unmanned aircraft to the United Arab Emirates in a deal worth as much as \$2.9 billion.

Qatar's DIMDEX exhibition drew international defense firms hoping to boost sales to wealthy Gulf states that are moving to boost military capabilities of the energy-producing region.

Qatar has good ties with Iran, with which it shares a giant gas field. In contrast Qatar's neighbor Saudi Arabia is locked in several proxy conflicts with Tehran in a struggle for regional dominance.

### **3. White House to seek \$813.3 billion National Security Budget**

Bloomberg News, 23 Mar 22, Tony Capaccio and Roxana Tiron

President Joe Biden plans to request \$813.3 billion in national security spending -- including \$773 billion for the Pentagon -- in the federal budget he will send to Congress on Monday, according to officials familiar with the plan.

It's an increase of \$31 billion, or 4%, from approved spending for the current fiscal year and about \$43 billion more than the White House budget office had projected a year ago for fiscal 2023.

The full national security budget includes spending for the Defense Department, the Energy Department's nuclear weapons and the FBI's national security functions. The officials familiar with the budget plan asked not to be identified before its release.

The budget reflects the increasing military challenge from China and the development of costly new defense systems -- from upgrading the nation's aging nuclear arsenal to development of new hypersonic weapons. It was completed with an expectation that Russia was likely to invade Ukraine and some defense spending was shifted accordingly. Support in Congress is likely to be buoyed by the added challenge of confronting Russia.

The request will include \$130.1 billion for research and development --the Pentagon's largest-ever request in that category -- that will be steered to categories such as accelerated research into

hypersonics and artificial intelligence. That's about \$15.6 billion more than the budget office had projected last year.

A White House official who was granted anonymity to discuss the spending plan, said it marked one of the biggest national security investments in American history that would strengthen U.S. allies in Europe and the Indo-Pacific and provide assistance to Ukraine.

The administration requested \$145.9 billion for procurement, about \$9.4 billion more than projected last year. Among items on the to-buy list: 61 F-35 jet fighters from Lockheed Martin Corp., fewer than previously planned, as well as initial procurement of the B-21 bomber from Northrop Grumman Corp. and two Virginia-class submarines from General Dynamics Corp. and Huntington Ingalls Industries Corp.

The budget request will also call for as much as \$548 million in improvements to the nuclear submarine industrial base.

The national security request typically constitutes about half of the entire discretionary federal budget that's approved by Congress. The White House has yet to release either its National Security Strategy or the Pentagon-generated National Defense Strategy that are supposed to outline the strategic rationale for the spending.

Biden signed into law \$782 billion for national defense activities in the current year, a \$32.5 billion increase over fiscal 2021 levels. Out of that the Pentagon's discretionary spending slice is \$728.5 billion.

There's continued willingness both among Republicans and some key Democrats to increase defense spending. Republican members of the House and Senate Armed Services panels -- led by Representative Mike Rogers of Alabama and Senator Jim Inhofe of Oklahoma -- have been pressing Biden to request a national security budget for 2023 that would account for inflation plus an additional 5% over the \$782 billion enacted for this year.

Inflation most immediately eats into fuel and military pay and benefits, and less immediately into weapons procurement contracts.

"While the higher number for defense this year over last year's projections recognizes the problem of inflation, it still creates a problem for the Hill in that it is not enough," said MacKenzie Eaglen, a defense budget expert with the American Enterprise Institute. "If the president's defense budget for 2023 fails to keep pace with inflation and does not even grow at the levels seen in the recently passed omnibus spending bill for 2022," Congress will insist on larger increases, she said in an email.

#### **4. U.S. makes contingency plans in case Russia uses its most powerful weapons**

New York Times, 23 Mar 22, David E. Sanger, Eric Schmitt, Helene Cooper and Julian E. Barnes

The White House has quietly assembled a team of national security officials to sketch out scenarios of how the United States and its allies should respond if President Vladimir V. Putin of Russia — frustrated by his lack of progress in Ukraine or determined to warn Western nations against intervening in the war — unleashes his stockpiles of chemical, biological or nuclear weapons.

The Tiger Team, as the group is known, is also examining responses if Mr. Putin reaches into NATO territory to attack convoys bringing weapons and aid to Ukraine, according to several officials involved in the process. Meeting three times a week, in classified sessions, the team is also looking at responses if Russia seeks to extend the war to neighboring nations, including Moldova and Georgia, and how to prepare European countries for the refugees flowing in on a scale not seen in decades.

Those contingencies are expected to be central to an extraordinary session here in Brussels on Thursday, when President Biden meets leaders of the 29 other NATO nations, who will be meeting for the first time — behind closed doors, their cellphones and aides banished — since Mr. Putin invaded Ukraine.

Just a month ago, such scenarios seemed more theoretical. But today, from the White House to NATO's headquarters in Brussels, a recognition has set in that Russia may turn to the most powerful weapons in its arsenal to bail itself out of a military stalemate.

NATO's secretary general, Jens Stoltenberg, underscored the urgency of the preparation effort on Wednesday, telling reporters for the first time that even if the Russians employ weapons of mass destruction only inside Ukraine, they may have “dire consequences” for people in NATO nations. He appeared to be discussing the fear that chemical or radioactive clouds could drift over the border. One issue under examination is whether such collateral damage would be considered an “attack” on NATO under its charter, which might require a joint military response.

The current team was established in a memo signed by Jake Sullivan, Mr. Biden's national security adviser, on Feb. 28, four days after the invasion began, according to the officials involved in the process, who spoke on the condition of anonymity to discuss sensitive planning. A previous iteration had worked for months, behind the scenes, to prepare the U.S. government for the likelihood of a Russian invasion of Ukraine.

That team played a central role in devising the playbooks of deep sanctions, troop buildups in NATO nations and arming the Ukrainian military, which have exploited Russian weaknesses and put its government and economy under tremendous pressure.

Mr. Stoltenberg, sounding far more hawkish than in the past, said he expected “allies will agree to provide additional support, including cybersecurity assistance and equipment to help Ukraine protect against chemical, biological, radiologic and nuclear threats.”

As Mr. Biden flew to Europe on Wednesday, both he and Mr. Stoltenberg warned of growing evidence that Russia was in fact preparing to use chemical weapons in Ukraine.

These are questions that Europe has not confronted since the depths of the Cold War, when NATO had far fewer members, and Western Europe worried about a Soviet attack headed into Germany. But few of the leaders set to meet in Brussels on Thursday ever had to deal with those scenarios — and many have never had to think about nuclear deterrence or the effects of the detonation of battlefield nuclear weapons, designed to be less powerful than those that destroyed Hiroshima. The fear is that Russia is more likely to use those weapons, precisely because they erode the distinction between conventional and nuclear arms.

Senator Jack Reed, a Rhode Island Democrat who heads the Armed Services Committee, said on Wednesday that if Mr. Putin used a weapon of mass destruction — chemical, biological or nuclear — “there would be consequences” even if the weapon’s use was confined to Ukraine. Mr. Reed said radiation from a nuclear weapon, for instance, could waft into a neighboring NATO country and be considered an attack on a NATO member.

“It’s going to be a very difficult call, but it’s a call that not just the president but the entire NATO Council will have to make,” Mr. Reed told reporters, referring to the governing body of the Western alliance.

“The bottom line is this is a NATO decision,” Mr. Reed said. “It won’t be the president’s decision alone. I don’t think he’d want to take action unilaterally.”

One major issue the Tiger Team is looking at is the threshold that could prompt the alliance to use military force in Ukraine. Mr. Biden has made clear that he is enormously reluctant to do so, fearing that direct confrontation with Russia could escalate the conflict beyond control. “That’s World War III,” he noted recently.

A second team of officials, also created by Mr. Sullivan’s Feb. 28 memo, is looking at long-term opportunities for the United States to improve its geopolitical position as a result of Mr. Putin’s invasion. Inside the White House, it has become an article of faith that the Russian leader made a huge strategic error — one that will diminish Russia’s standing, cripple its economy and alienate potential allies for years. But it is early in the conflict, other officials caution, and that conclusion may prove premature.

The immediate concern is what Mr. Putin may do next — driven by a desire to rescue a failing military effort or re-establish his credentials as a force to be feared.

Officials believe the chances that Mr. Putin will resort to detonating a nuclear weapon are small. But Russia’s steady stream of reminders that it has its arsenal at the ready, and could use it in response to anything it perceives as an “existential threat,” has put Washington on high alert.

Mr. Biden will take up with allies “how to deal with the rhetoric and the commentary coming out of Russia on this whole question of the potential use of nuclear weapons,” Mr. Sullivan told reporters on Wednesday.

“We haven’t seen anything that’s made us adjust our posture, our nuclear posture, but it is of course something we will have to continue to stay in close consultation with allies and partners on, as well as communicate directly to the Russians.”

Several officials said the White House and Pentagon have had some tension over how much detail the Defense Department is willing to share on its highly secretive war planning especially concerning responses to any use of nuclear weapons even in the classified setting of the Tiger Team. (The term has been used for many years to describe an emergency task force inside the National Security Council.)

A U.S. official said Mr. Biden remained adamant about keeping American forces out of Ukraine. But the official said the administration believed it would be misguided not to closely examine the thresholds, if any, under which the president would reverse himself, or to be prepared to deal with the consequences of the use of weapons of mass destruction.

A senior administration official said any use of a “small” tactical nuclear bomb by Russia even inside Ukraine and not directed at a NATO member would mean that “all bets are off” on the United States and NATO staying out of the war. But when pushed, the official declined to lay out the responses under discussion.

The official said American and NATO intelligence communities had not seen any activity by Russian military officials that suggested preparations to use a nuclear weapon. But he said that during internal discussions, administration officials were urging caution, because there was more at stake than just Ukraine.

If Mr. Putin did strike a NATO country intentionally, he would not only bring the force of the military alliance to bear on Russia, but also probably find himself facing NATO troops inside Ukraine, Artis Pabriks, Latvia’s defense minister, told reporters traveling in his country this month with Gen. Mark A. Milley, the chairman of the Joint Chiefs of Staff.

“He will get Article 5,” Mr. Pabriks said, in a reference to the NATO pledge that an attack on one alliance member is an attack on all.

“If he gets that, basically that would also make us involved in Ukraine,” Mr. Pabriks said, adding: “He has no way out of that. So I don’t think he should be so stupid.”

Senator Angus King of Maine, an independent and a member of the Senate Intelligence and Armed Services Committees, visited the Polish-Ukrainian border over the weekend, meeting with officials from allied countries, visiting a refugee processing center and talking with Ukrainians. Mr. King said that as Russian forces struggle to make headway, Mr. Putin could try to strike a diplomatic agreement, intensify his bombardment of Ukrainian cities and level them, or lash out against the West with a cyberattack.

“The fourth is escalate to de-escalate, which is a tactical nuclear weapon,” Mr. King said, using the term for a Russian military doctrine in which it would employ a nuclear weapon as a warning and then negotiate.

## **5. Under sweeping sanctions, Iran hawks its weapons in Qatar**

Associated Press, 23 Mar 22

Iran, under sweeping economic sanctions, was hawking weapons on Wednesday at a Qatari defense exhibit, a surprising sight at the major conference also showcasing American companies and fighter jets.

Tucked away in the far left corner of the carpeted convention center, commanders from Iran's defense ministry marketed their missiles and air defense weapons systems. The defense ministry manufactures arms for both Iran's military and its powerful paramilitary Islamic Revolutionary Guard, a group that plays a singular role in the creation and execution of Iran's national security and foreign policy.

The DIMDEX exhibition serves to promote Qatar, a major non-NATO ally of the United States that's home to the largest American military base in the Middle East. The tiny Gulf Arab country, however, also maintains good relations with Iran, with which it shares the world's largest gas field.

Iranian representatives declined to speak with The Associated Press. They handed out brochures to an AP journalist promoting their homemade jet trainers, helicopters and hovercraft.

The Qatari armed forces chief of staff, Maj. Gen. Salem al-Nabet, toured Iran's pavilion before the exhibition wrapped up, inspecting displays of lethal merchandise in glass cases and listening to a sales pitch about machine guns. A giant American flag representing U.S. military contractor General Atomics Aeronautical Systems could be seen hanging just beside the Iranian stand.

Notably, Iran's pavilion cannot be found on the conference map. The country's defense ministry and armed forces logistics remain under crushing U.S. sanctions over suspected illegal weapons trade.

The Revolutionary Guard, for its part, is widely regarded as a toxic business partner for its designation as a terrorist group by the Trump administration, its global reputation for meddling in regional conflicts and sanctions over its ballistic missile programs and alleged human rights violations.

With talks to restore Tehran's tattered nuclear deal with world powers nearing a resolution four years after former President Trump abandoned it, the possible removal of the Guard's terrorism designation has drawn fierce criticism from America's Mideast allies, like Israel.

The U.S. has balked at the Iranian demand, barring commitments from Tehran to stop funding and arming extremist groups in the region and beyond. Nuclear negotiators have yet to reconvene in Vienna.

[Return to top](#)

## **6. Iran's Revolutionary Guards warn Israel over more attacks**

Al-Monitor, 23 Mar 22

Hossein Salami, the commander of the Islamic Revolutionary Guard Corps, issued a warning to Israel against more attacks targeting Iranian forces in the region. Speaking in the city of Dezful at an event commemorating previous IRGC fighters, Salami said, “You saw in recent weeks how the Zionists, who constantly make mistakes in their calculations, were under the attacks of the IRGC missiles.” On March 13, Iran launched ballistic missiles into northern Iraq, claiming the target was a strategic center for Israel. The attack was in retaliation for two Iranian soldiers killed by an Israeli strike in Syria. In total, 12 missiles were launched, and Iraqi officials condemned the attack.

Salami continued, “We warn them to stop their wickedness, otherwise we will close these small holes that are open to you in the world.” In response to Iraqi criticism of the attack, Iran said that it has repeatedly warned the Iraqi government not to permit Israel to operate within the country, particularly in Iraq’s Kurdish region.

Addressing Israel, Salami added, “Be careful. We not only conduct funerals and processions for our martyrs but we will immediately exact revenge.” He continued, “This is a real and serious message, and if it is continued, again you will experience IRGC missiles.”

The missile attacks, which hit a compound in Erbil, caused considerable damage but no casualties. More than anything, they signaled that Iran has taken its retaliation against Israel to the next level. For years, Israel has attacked Iranian and Iranian-backed forces in Syria. The acknowledgement of two Iranians killed in a recent attack and Iran’s immediate response suggests that tensions will continue to rise, and that each attack and retaliatory attack will be publicized.

The direct confrontation could also be heating up due to the possible revival of the nuclear deal, also known as the Joint Comprehensive Plan of Action. In a phone conversation with his Iraqi counterpart, Iran’s Foreign Minister Hossein Amir-Abdollahian said, “We are close to the final stages of the agreement.” He added, “On the few important remaining issues we presented initiatives from European intermediaries to the US.” Since the US exited the Iran deal in 2018, they are technically not part of the Vienna negotiations, but Iran needs US sanctions removed if they are to return their nuclear program to agreed-upon levels. Abdollahian said, “Now it is the Americans who must show their good intentions through actions. We are determined to achieve a good, stable and durable agreement.”

Iranian Vice President Mohammad Mokhber also addressed the final stages of the negotiations, warning that hostilities between Iran and the US would not end. Negotiations are important for removing sanctions, he said, but although some feel that talks can resolve the two countries’ enmity, some “problems cannot be resolved through negotiations.”

**7. Russia turns to Iran for assistance with aviation sanctions, but can it do much to help?**  
Forbes, 23 Mar 22, Dominic Dudley

Moscow is looking to Iran to help it figure out how to cope with the debilitating sanctions on its aviation sector. Speaking on March 22 at a meeting of the economic policy committee in the upper house of the Russian parliament, transport minister Vitaly Savelyev said “Russia was being guided by Iran’s experience of how to service aircraft in a similar situation.”

Tehran certainly has plenty of experience, having been the target of U.S. and other international sanctions on and off for several decades. However, its track record suggests its advice might be of limited use to Moscow.

Iran has been prevented from receiving spare parts or new planes from international manufacturers for many years, but the country’s airlines have managed to keep flying, largely by using some planes for spare parts. Of its fleet of around 250 aircraft in 2018, around 100 of them were grounded because they had either broken down or been stripped for parts.

When Iran has had a chance to buy western jets, it has jumped at the opportunity. During a brief lull in international sanctions following the signing of the nuclear deal in 2015, Iranian airlines put in orders for more than 300 new aircraft from Airbus, Boeing and ATR. However, just a handful of the planes were ordered before then U.S. president Donald Trump pulled out of the nuclear deal and reimposed sanctions in 2018.

Thereafter, it looked around for alternatives to western aircraft, but found any deals difficult to complete. Agreements were announced in 2018 for two Iranian airlines – Aseman Airlines and Iran Air Tours – to buy 40 Sukhoi SuperJet 100 from Russia at a list price of around \$2 billion, but the deal collapsed due to sanctions. Iran even began to look at developing its own passenger plane, but that project appears to have suffered from a shortage of funding.

In the absence of any new aircraft being available, Iran has had to turn to the second-hand market to buy much older planes. On March 16, the head of the Civil Aviation Organization of Iran (CAOI) Mohammad Mohammadi-Bakhsh said Iranian airlines had bought ten passenger aircraft with an average age of 15-20 years over the past three months. It is not clear where they are coming from.

### **Sanctions cut off Russia by air**

The sanctions imposed on Russia following its invasion of Ukraine in February have been even more far-reaching than those placed on Iran. They have included bans on Russian aircraft using airspace and airports in the U.S., Canada, the European Union and the UK. In addition, aircraft manufacturers have stopped delivering new aircraft or providing spare parts or servicing.

More than 500 of the planes which Russia’s airlines use are leased from companies in Ireland or Bermuda, but the regulators in those countries have suspended or cancelled their air-worthiness certificates. In response, President Vladimir Putin has signed a law which allows Russian airlines to put these aircraft on a local register, which can then issue air-worthiness certificates.

International leasing companies have found themselves unable to reclaim their assets. Savelyev said on March 22 “We are looking for legal ways to negotiate with lessors and resolve this issue,

but so far we have not managed to do this. But we are not losing hope, and we are not handing anything back either. To do so would mean to leave ourselves without [an] air fleet.”

To date almost 800 planes out of a Russian fleet of some 1,367 aircraft have been transferred to Russia’s register, Savelyev said. At least some of the aircraft registered in Russia have not been deregistered elsewhere, in contravention of international aviation rules. The Irish Aviation Authority has identified at least 11 Boeing aircraft which are now dual registered, including planes flown by Rossiya and Alrosa.

### **International networks**

International flights by Russian airlines have been severely curtailed due to the sanctions. On March 8, national carrier Aeroflot suspended all international flights, except for its service to the Belarus capital Minsk, due to the sanctions.

Earlier in the month, the country’s second largest airline S7 had also suspended all international flights. Other carriers including Smartavia and Aeroflot’s low-cost subsidiary Pobeda have taken similar action.

However, in recent days Aeroflot has started piecing its international network back together. On March 14, it resumed flights to Bishkek and Osh in Kyrgyzstan and a week later began flying to Azerbaijan’s capital Baku once more. From April 2 it is due to restart flights to Tehran.

### **8. Iran's foreign minister says nuclear deal closer 'than ever'**

Reuters, 23 Mar 22

Iranian Foreign Minister Hossein Amirabdollahian said on Wednesday that the Islamic Republic and world powers are closer than ever to reviving a 2015 nuclear deal.

"If the U.S. acts pragmatically, we are ready to have foreign ministers of countries belonging to the nuclear deal's joint commission gather in Vienna to finalize the agreement," Amirabdollahian said during a press conference in Damascus alongside his Syrian counterpart Faisal Mekdad.

"We believe that today we are closer to an agreement in Vienna than ever before."

Following 11 months of negotiations, Iran and the United States are now saying that the ball is in the other's court to revive the accord, which would curb Tehran's nuclear programme in exchange for lifting tough sanctions on Iran's economy.

On Tuesday, the U.S. State Department said a return to the deal was neither certain nor imminent. [read more](#)

The talks were close to agreement until Russia demanded guarantees from the United States that sanctions imposed on Moscow over its invasion of Ukraine would not hurt its trade with Iran.

"We have given our latest proposals to the U.S. through the European Union's Coordinator to reach a final deal. We reminded the Americans that we will not cross our red lines," Amirabdollahian said on Wednesday.

The foreign minister also said that Tehran welcomes new talks between Syria and certain Arab countries.

Syrian President Bashar al-Assad travelled to the United Arab Emirates last week, his first visit to an Arab state since the Syrian war began in 2011, underlining warming ties with a U.S.-allied country that once backed rebels who sought his removal. [read more](#)

### **9. U.S. says it is unclear if issues in Iran talks will be resolved**

Reuters, 23 Mar 22

White House national security adviser Jake Sullivan said on Wednesday the United States and its allies have made progress in Iran nuclear talks but issues remain, and it is unclear if they will be resolved.

"We've made progress over the course of the last several weeks. There are still some issues left," Sullivan told reporters aboard Air Force One as President Joe Biden flew to Brussels. He said it is "unclear if this will come to closure or not" but the allies are trying to use diplomacy to put Iran's nuclear program "back in a box."

### **10. Halabja anniversary takes political turn**

Al-Monitor, 23 Mar 22, Winthrop Rodgers

Snow flurries fell in Halabja on a cold and subdued day of remembrance, marking 34 years since the chemical attack perpetrated by Saddam Hussein's Baath Regime. The city's citizens usually come out in force to honor the victims of the genocide against the Kurdish people, but most stayed at home this year. They boycotted events organized by the Kurdistan Regional Government (KRG), a sign of anger at Kurdish and Iraqi politicians who pay what they consider lip service to them on the anniversary and then fail to live up to their promises.

"We have given sacrifices, so we should have our needs met. We shouldn't still have to demand the basics. That includes medical treatment and a normal life like any other people who have never made any sacrifices," Luqman Abdulqadir, head of the Halabja Chemical Victims' Society, told Al-Monitor in an interview.

"Yes, this year was different. After 34 years, the victims voiced their complaints," he added.

Brigadier General Thabet Gawas was returning from a personal visit when his car was hit by the blast in a suburb of the city, the sources said.

Aden's AIC Television announced his death and showed footage of a car in flames.

There was no immediate claim of responsibility.

Gawas had long been an enemy of Yemen's Houthi movement, fighting the group in their northern stronghold of Saada even before they ousted the Saudi-backed government from the capital, Sanaa, in late 2014.

He participated in operations that expelled the Houthis from the southern Lahj region in 2015, the year that a Saudi-led coalition intervened in Yemen against the Iran-aligned movement.

### **20. Egypt asks for IMF support to help it weather Ukraine crisis**

Financial Times (UK), 23 Mar 22, Heba Saleh

Egypt has asked for support from the IMF, the fund said, as the country struggles to weather the economic impact of Russia's invasion on Ukraine.

Cairo is facing mounting pressures on its public finances as Moscow's assault in Kyiv has sent grain prices soaring and increased the price of oil. Egypt is the world's biggest wheat importer, is heavily reliant on supplies from Russia and Ukraine and has a subsidized bread programme which feeds 70mn people.

Its predicament underscores how the war is rippling into Arab and African states that rely on food and energy imports.

"The rapidly changing global environment and spillovers related to the war in Ukraine are posing important challenges for countries around the world, including Egypt," said Celine Allard, IMF mission chief for Egypt in a statement released on Wednesday evening.

"In that context, the Egyptian authorities have requested the International Monetary Fund's (IMF) support to implement their comprehensive economic programme."

Egypt, the Arab world's most populous nation, has benefited from previous IMF loans and programs. In 2016 it secured a \$12bn loan over three years after a crippling foreign currency crisis as it emerged from the political upheavals that followed its 2011 revolution.

It also received \$8bn in 2020 to deal with the impact of the pandemic, making it one of the biggest borrowers from the fund after Argentina. At the time of the 2016 agreement it devalued the currency, which lost half its value against the dollar.

Analysts have been expecting this latest announcement after the country devalued its currency on Monday in a move seen as a prelude to discussions with the fund on a potential loan. Egypt also announced a package of tax breaks and increases in social spending worth \$7bn.

The Egyptian pound has fallen 14 per cent against the dollar since Monday when the central bank allowed its value to slip, citing the role of exchange rate flexibility as a shock absorber. The dollar traded at E£18.4 on Monday up from E£15.66 on Sunday.

Goldman Sachs said the devaluation “smooths the path for an IMF programme which we believe will help anchor confidence in Egypt’s fiscal and reform trajectory”.

Allard’s statement welcomed the devaluation and the expansion of the social protection network and added that “continued exchange rate flexibility will be essential to absorb external shocks and safeguard financial buffers during this uncertain time. Prudent fiscal and monetary policies will also be needed to preserve macroeconomic stability.”

The war has also hit the country’s tourism, a main source of foreign currency, because it stopped the flow of visitors from Russian and Ukraine – both important markets for the sector.

Foreign debt investors have also pulled billions of dollars from Egypt in recent months, adding to pressure on its currency. “There were around \$5bn of net outflows in September-December and further outflows accompanied news of the Ukraine conflict,” said Fitch Ratings agency in a note last week.

“In our view, these outflows reflect tighter global financial conditions, as well as investor concerns about Egypt’s external funding needs in the absence of an IMF programme, the impact of rising inflation on Egypt’s real interest rates, and the sustainability of Egypt’s exchange-rate level, after significant real appreciation in recent years.”

### **21. Qatar signs deal with Leonardo for first ever Navy Operations Center**

Breaking Defense, 23 Mar 22, Agnes Helou

The Qatari Navy has signed a new contract with Italy’s Leonardo to develop a Naval Operation Center (NOC) for the military service, the first of its kind in the country.

The center will ensure navy forces monitor and control Qatar’s territorial water, Exclusive Economic Zone and adjacent waters. The center, which will control radars and sea-based tracking in real time, will include electronic warfare systems.

“This agreement is very important for us,” Qatari Emiri Navy Chief Maj. Gen. Abdullah Hassan Al-Sulaiti told Breaking Defense. “The resulting maritime command and control center will be linked with the ships in the theater of operations. It is like the Navy’s eye in the sea.”

Located inside the naval base in Umm Al Houl, a new naval base adjacent to the Hamad commercial port in development south of Doha, the center will enhance cooperation with other national agencies in charge of maritime security, according to a statement by Leonardo.

“The Centre leverages on innovative systems and technologies as well as the full integration of air and maritime components,” the statement said.

Notably, Al-Sulaiti said that the physical center is already constructed, and just needs the equipment from Leonardo installed. “Its equipment will allow data storage, complete maritime monitoring and vision, so the decision making for the naval theatre of operation’s will be facilitated,” he said.

Al-Sulaiti disclosed that the center will be linked to a satellite allowing real time imagery, but he didn’t respond to Breaking Defense question about the worth of the deal or give details on what satellite would be connected to.

Under the agreement, the center will provide command, control and coordination of operations at sea allowing the Armed Forces to carry out integrated monitoring between all the sensors on the field.

Hence the navy will have a full integrated situational awareness to support operational and tactical decision-making process and rapid interventions along the entire chain of command.

The Umm Al Houl base was also the subject of a new letter of intent signed during the show between Barzan Holdings and BAE Systems to establish a center to provide technical and logistical services for the base. Technical services to support and maintain parts of the Qatari fleet are included in the deal.

A feasibility study for the project will be conducted, and implementation will be carried out after agreement and signing the official contract, according to the announcement.

## **22. Ukraine War ignites Israeli debate over purpose of a Jewish State**

New York Times, 23 Mar 22, Isabel Kershner

Many of the refugees milling about the lobby of a Jerusalem hotel one recent morning had endured harrowing journeys from Ukraine, and in many cases were forced to leave close family members behind.

Now safely in Israel, they were picking up SIM cards issued by the Ministry of Immigration and Absorption and starting to contemplate next steps.

“I feel safe here, which is probably the most important thing for now,” said Lena Ivanova, 32, who owns a fashion business in Odessa and came to Israel with her two sons, Vadym, 9, and Evgen, 2. “Now I’m focusing on where to live. I need to make a lot of decisions.”

These were the lucky ones.

By virtue of their being Jewish, having at least one Jewish parent or grandparent or, as in Ms. Ivanova's case, having a Jewish spouse, they automatically qualified for Israeli citizenship upon landing at Ben-Gurion Airport.

Others were not as fortunate.

Of the more than 15,200 Ukrainians who have arrived in Israel since the war began last month, nearly 11,000 do not meet the citizenship threshold. Even though most have relatives or friends in Israel, they are considered refugees, not immigrants, and subject to stricter rules.

The influx has ignited an emotional debate over what it means to be a Jewish state, pitting the national imperative to maintain Israel's Jewish character against Jewish values that demand caring for those in need.

Some right-wing politicians and commentators have warned that the continued flow of non-Jews into the country could dilute its Jewish identity. Bezalel Smotrich, a far-right lawmaker, warned that Israel's acceptance of refugees would "flood the state of Israel with gentiles."

More liberal politicians and religious leaders have cited the biblical mandate to love the stranger and the ethical lessons of a long history of Jews being refugees themselves.

Nachman Shai, the left-wing minister of diaspora affairs, said the debate should focus on "the values of the state of Israel, because without them this is not a Jewish state."

Speaking by phone from a train platform packed with refugees in Warsaw, he added, "Anything bearing the message that we are closing the door is terrible and against our Jewish and human values."

Israel's right-wing interior minister, Ayelet Shaked, announced this month that Israel would take in up to 5,000 non-Jewish refugees on a temporary basis, and would allow 20,000 Ukrainian non-Jews already in the country, most of them illegally, to stay until the end of the fighting.

"The images of the war in Ukraine and the suffering of its citizens shake one's soul and do not allow us to remain indifferent," she said.

But the strict quota, which was already close to being filled when she made the announcement, prompted public outrage and criticism from other government ministers.

Foreign Minister Yair Lapid said Israel had a "moral duty" to take in more non-Jewish refugees.

"We won't close our gates and our hearts to those who lost everything," he said as he toured a border crossing between Ukraine and Romania. "In Israel there are nine million residents and our Jewish identity won't be harmed by a few more thousand refugees."

Ms. Shaked later liberalized the guidelines, saying any Ukrainians with relatives living in Israel would be allowed in temporarily and would not count toward the quota of 5,000. That policy too has been criticized as too restrictive because it penalized refugees without families in Israel.

On Sunday, in a virtual address to Israeli lawmakers, Ukraine's president, Volodymyr Zelensky, who is Jewish, begged them to show more compassion, comparing the suffering of Ukrainians to that of the Jewish people during the Holocaust.

"Our people are now scattered around the world," he said. "They are looking for security. They are looking for a way to stay in peace. As you once searched."

Israel has walked a fine line during the war, trying to aid Ukraine without alienating Russia, whose cooperation it needs to operate against Iranian forces in Syria. Israel has deep connections to both countries, and Prime Minister Naftali Bennett has served as a mediator.

Jews have a complicated history with Ukraine. Once home to a large, thriving Jewish population, Ukraine was the scene of widespread pogroms in the early 1900s and some of the worst mass killings of the Holocaust during World War II, often carried out with the help of Ukrainian auxiliaries.

That history looms large in the current debate.

"We have our memories from when Jews were not accepted in so many Western countries," said Prof. Yedidia Stern, president of the Jewish People Policy Institute, an independent research group based in Jerusalem.

Some of those waiting at the borders are "the grandchildren of the people who were cruel to my grandparents," he added. "So what? They are human beings. The lesson of the Holocaust is not to behave the same way, but to open the door."

But to others, the lesson of the Holocaust is the need for a Jewish homeland, and for that reason some right-wing activists have objected to Israel taking in any more than a symbolic number of non-Jewish refugees, even on a temporary basis.

"We know that in Israel what is temporary becomes permanent," said Avichay Buaron, an Israeli lawyer and right-wing activist. "Uprooting them will be even harder."

Rancorous debate over immigration policy is hardly new in Israel, erupting recently over the fate of relatives of Israelis of Ethiopian origin and previously over asylum seekers, mostly from Sudan and Eritrea, who entered Israel illegally from Egypt.

But even for many of the lucky Ukrainians, life in Israel is likely to be complicated. While Israel's Law of Return grants automatic citizenship to many people with Jewish connections, religious law as applied by Israeli authorities is stricter.

Less than a quarter of the roughly 200,000 Ukrainians eligible for Israeli citizenship are considered Jewish under religious or Israeli law and those who are not could face problems such

as not being able to officially marry. Strictly Orthodox state religious authorities have a monopoly over legal Jewish weddings in Israel and there is no civil marriage.

“Once here, many will have to face the complexity of life in Israel for non-Jewish migrants,” said Alex Rif, a Ukrainian-born poet and an advocate for Russian speakers in Israel.

One solution, she said, lies in a more liberal conversion policy for those who want to convert to Judaism.

The religious services minister, Matan Kahana, has been promoting one version of such a reform but has met with stiff opposition from ultra-Orthodox leaders.

Mr. Kahana has also tried to promote a plan to narrow the scope of the Law of Return to exclude the non-Jewish grandchildren of a Jew and reduce the number of non-Jewish immigrants, but he found little support for the proposal in the current government.

Ms. Rif and other activists met last week with Prime Minister Naftali Bennett and urged him “not to repeat the mistakes of the 90s,” including failures in integrating new immigrants into the work force, which led doctors and engineers to take cleaning jobs to make a living.

For the dozens of new immigrants from Ukraine being put up at Jerusalem’s Caesar Hotel, it was hard to think further than a day ahead. Many had left behind elderly parents, as well as husbands, brothers and sons of draft age who could not leave the country.

Viacheslav Kolpaka, 65, a physician from Kyiv, had come with his wife, Svitlana, and a teenage daughter, Daria. One son was already living in Israel. The other was unable to leave Ukraine.

“How can a person feel who left their home, everything they had collected in life, and fled with only the clothes on their back?” Dr. Kolpaka said. His hope, he said, was to be able contribute to his new home by working in his profession.

## NATIONAL SECURITY/DEFENSE NEWS

---

### **23. Top Russian military leaders repeatedly decline calls from U.S., prompting fears of ‘sleepwalking into war’**

Washington Post, 23 Mar 22, John Hudson

Repeated attempts by the United States’ top defense and military leaders to speak with their Russian counterparts have been rejected by Moscow for the last month, leaving the world’s two largest nuclear powers in the dark about explanations for military movements and raising fears of a major miscalculation or battlefield accident.

Since Russia’s invasion of Ukraine, Defense Secretary Lloyd Austin and Gen. Mark A. Milley, the chairman of the Joint Chiefs of Staff, have tried to set up phone calls with Defense Minister

Sergei Shoigu and Gen. Valery Gerasimov but the Russians “have so far declined to engage,” said Pentagon spokesman John Kirby in a statement Wednesday.

The attempted calls by Austin and Milley, which have not previously been reported, come as Russia conducts operations near the borders of NATO members Poland and Romania while the United States and its European allies conduct air-policing operations over the Baltic Sea and pour weapons and equipment into Ukraine by ground transport.

Moscow and Washington maintain a deconfliction channel but current and former officials say contact from higher-ranking military leaders is needed to avoid unnecessary escalation or confusion.

“There is a high risk of escalation without the firebreak of direct contact between the most senior officials,” said James Stavridis, who served as the Supreme Allied Commander at NATO from 2009 to 2013. “Very young people are flying in jets, operating warships, and conducting combat operations in the Ukrainian war. They are not seasoned diplomats, and their actions in the heat of operations can be misunderstood.”

“We must avoid a scenario of NATO and Russia sleepwalking into war because senior leaders can’t pick up a phone and explain to each other what is happening,” he added.

Russia’s recent use of hypersonic missiles and other sophisticated weaponry against targets in western Ukraine have underscored the threat of spillover into a broader confrontation.

“The risks are obviously elevated currently,” said Rob Lee, a senior fellow at the Foreign Policy Research Institute. “Russia is striking targets in western Ukraine, which are not far from the border with NATO members, and the Ukrainian Air Force apparently continues to operate from that region, which means there is a risk that its aircraft could be mistaken for NATO aircraft across the border.”

U.S. defense officials have described the deconfliction phone line as a tactical mechanism to avoid miscalculations, especially when it comes to protecting NATO airspace or territory, but its functionality can be limited.

“It’s not set up to be a complaint line where you can just call in and just grouse about stuff,” said a U.S. defense official this week when asked about whether anything had been communicated through the channel. The official spoke on the condition of anonymity under ground rules set by the Pentagon.

Sam Charap, a senior political scientist at Rand Corporation, said calls by Austin and Milley serve a “fundamentally different purpose” than the deconfliction channel.

“One is about tactical accident avoidance. The other about strategic engagement,” he said. “It’s always important to maintain the strategic level to communicate our interests clearly and better understand theirs. When there’s no communication at that level, their worst-case assumptions, often based on poor information, are more likely to drive their behavior.”

As Russia's battlefield setbacks become more pronounced and the conflict nears its second month, U.S. officials are concerned that Russian President Vladimir Putin may escalate militarily in the hopes of changing the trajectory of the war. As more dangerous weaponry and tactics are deployed, the risks of a wider conflict grow.

"A nightmare scenario would be a Russian missile or attack aircraft that destroys a U.S. command post across the Polish-Ukrainian border," said Stavridis, a retired admiral. "A local commander might respond immediately, thinking the event was a precursor to a wider attack. This could lead to rapid and irreversible escalation, to include potential use of nuclear weapons."

Stavridis said when he was Supreme Allied Commander, he could dial his Russian counterpart anytime "and did on several occasions to clarify a situation and de-escalate."

The Pentagon holds the view that engagement between the U.S. and Russian defense leaders is "critically important at this time," Kirby said. Besides the deconfliction channel, the United States and Russia can also engage through the defense attache at the U.S. Embassy in Moscow or the relaying of messages to the Ministry of Defense.

Communications between the United States and Russia have been much more sparse since the war began last month. The U.S. ambassador to Russia, John J. Sullivan, has met with Russian officials most frequently with on and off visits and calls in Moscow. President Biden's national security adviser, Jake Sullivan, spoke to his counterpart, Nikolay Patrushev, last week for the first time since the start of the conflict. Some U.S. and Russian military officials met last week at the Russian Ministry of Defense, CNN first reported.

Secretary of State Antony Blinken has not attempted any conversations with his counterpart, Russian Foreign Minister Sergei Lavrov, since the start of the conflict, according to U.S. officials.

It remains unclear why Russia's top generals have refused to hold calls with their U.S. counterparts.

"I suspect that the problem lies with the Russian insistence that this is a 'special military operation' and unwillingness to admit the real nature of the war," said Angela Stent, a Russia scholar at Georgetown University who served as a senior intelligence officer in the Bush administration.

The generals may also be waiting on Putin's approval to make the calls, given the high stakes of the conflict, and he may not be signing off, Charap said.

Another theory is that Putin may now view the United States as a determined adversary bent on his downfall and not worth engaging. Russian officials bristled at Biden calling Putin a "war criminal," saying it could lead to a complete break in relations.

Biden has sought to avoid a conflict by keeping U.S. troops out of Ukraine and U.S. aircraft out of its airspace.

“You’re talking about avoiding incidents with aircraft or at sea,” said Ben Hodges, a retired Army officer who served as commanding general of the U.S. Army Europe. “I’m sure they would’ve wanted to convey to Gerasimov and Shoigu that Russian pilots should not be launching missiles too close to the Polish border, but they would also want to talk about other places, not just Ukraine, where you have Russian aircraft.”

“I would also imagine they would want to convey here’s what we’re doing, don’t interpret what we’re doing as a provocative act,” he added.

#### **24. Inside a rare US meeting with a Russian general in Moscow**

CNN, 23 Mar 22, Barbara Starr and Jeremy Herb

A rare face-to-face meeting between Russian and US military officials last week led to an "outburst" of emotion from a normally stoic Russian general, a "revealing moment" that the Americans present believe hinted at larger morale problems in Russia's military, according to a closely held US military readout of what transpired.

The readout, which was reviewed by CNN, describes the perspective of the two defense attachés who attended and their own impressions of what they saw and heard. It does not offer a definitive explanation of the Russian general's behavior. Readouts of sensitive meetings are never made public by the military or intelligence community because they are scrutinized for clues about an adversary's thinking and intentions.

The meeting, held at the Russian ministry of defense in Moscow, is a rare instance of Russian and American defense officials sitting down in person since Russia invaded Ukraine on February 24. The readout describes the meeting as tense, with visible signs of stress on the Russian side.

It makes particular note of the behavior of Russian Major General Yevgeny Ilyin, deputy chief of the main directorate of international cooperation who has a long track record of dealing with American officials. In a break from typical practice, Ilyin spoke with no notes or set talking points, according to the readout.

As the meeting was breaking up, one US defense attaché "casually inquired" about Ilyin's family roots in Ukraine, and the Russian general's "stoic demeanor suddenly became flushed and agitated," according to the readout. The Americans reported Ilyin responded "yes," and said that he was born in Dnipropetrovsk before moving with his family to Donetsk, where he went to school.

But the US officials reported Ilyin then added that the current situation in Ukraine is "tragic and I am very depressed over it" -- and then he walked out without shaking hands, according to the readout.

It's unclear why the meeting was held or the circumstances behind it. CNN does not know if there's additional documentation describing the meeting. The readout does not include the names of the American attachés in the meeting, and CNN has been unable to learn their identities. The

Pentagon and State Department declined to comment. CNN has reached out to the Russian Ministry of Defense for comment.

The US team had the sense, according to the readout, that Ilyin stopped just short of accusing US and Ukraine of atrocities against his family. It's not clear what specifically caused them to reach that conclusion, but one of the attachés said, "The fire in his eyes and flustered demeanor left a chill down the spine."

The readout said one of the attaché's jaw dropped, and both Americans reported they had never "witnessed such an outburst by Russian counterparts at an official meeting."

US meetings with Russian officials are typically scripted affairs. While it's not clear from the summary what precisely led to Ilyin's reaction, the two US defense attachés who attended the meeting assessed the general's reaction as a possible sign of morale problems.

"At the very least, it is clear that morale problems among Russian forces are not limited to front-line troops," the readout concludes.

### **A glimpse into US-Russia military relations**

The readout provides a peek behind the scenes of a Russian military that has failed in its apparent goal of quickly taking Kyiv after launching the invasion last month. Senior US military officials have said publicly and privately that the morale of Russian military forces is suffering as they enter the fourth week of their invasion of Ukraine -- an invasion that US officials think Russian President Vladimir Putin believed would go much more quickly and smoothly than it has.

In an interview Tuesday with CNN's Christiane Amanpour, Kremlin spokesman Dmitry Peskov disputed US assessments that Russian troops had morale problems. "You would probably have to doubt this information," Peskov said. "You have to doubt it, and you have to think twice whether it is true or not."

The Kremlin has continued since well before the invasion to refuse direct high-level contact between senior US generals and Russian counterparts making this meeting one of increased interest. The US has a deconfliction phone line of communication with the Russian military that has been tested daily but has not been used.

The US believes that the refusal for high-level meetings is due to Kremlin worries that the encounters would show them to be vulnerable if they allowed such meetings, because it risks a tacit admission that an abnormal situation exists, according to the readout.

Even before the remarkable end to the meeting, the US officials reported that Ilyin's stoicism began to wilt in the meeting when the Americans called the Ukraine situation a crisis, and the Russian general quickly "corrected and countermanded" them.

The Russian general did not deviate in the discussions from the win-at-all-costs Russian strategy of the invasion of Ukraine, according to the readout. In this instance, the two Americans believe

they witnessed a Russian general who was "clearly in distress over the situation but who had nowhere to project his anger except in line with Kremlin's state sponsored narrative," according to the readout.

The readout notes the Americans are not discounting the encounter may have underscored the hardening of the Russian position on the war and the Russian military officials' need to fulfill their orders because they have no other choice.

A senior defense official said last week that the US has "picked up anecdotal indications that morale is not high" in some of the Russian forces' military units.

"We certainly have indications that morale is a growing problem inside the Russian forces that are fighting in Ukraine," Pentagon press secretary John Kirby told reporters Tuesday. "As time goes on, and they continue to fail to achieve the progress on the ground that they want to achieve, we've seen increasing indications that morale and unit cohesion is a problem."

## **25. After Iraq and Afghanistan, Marine Corps reserve turns to deterrence**

Newsweek, 23 Mar 22, Alex J. Rouhandeh and Naveed Jamali

Four weeks into its invasion of Ukraine, Russia continues to struggle against its lesser-equipped adversary. As with the U.S. withdrawal from Afghanistan, even the most dominant military forces can falter when ill-equipped for the situation at hand.

Lieutenant General David Bellon, commander of the U.S. Marine Corps Reserve, told Newsweek that as the United States finds itself in an era of great power competition, bolstering the capabilities of the armed forces should be seen as a priority.

"We are in an era now, often referred to as the great power competition, where deterrence is a significant part of our mission," Bellon told Newsweek. "To do that, you have to be forward deployed, you have to be competing and pushing back where our adversaries are pushing forward."

Over the last 20 years, the United States has relied heavily on reserve forces in Iraq and Afghanistan. Marine Corps reservists played an especially active role in those two wars, with some having completed five combat tours abroad. These troops now stand poised to pass on their knowledge to younger members of the Corps.

The experience of Marine leadership fosters a greater level of trust between senior and junior members of the Corps, Bellon said. Not only has Russia's military leadership faced questions over their decision making, but questions of morale in the ranks have risen amid reports that troops were told they were heading into a training exercise rather than combat prior to the invasion of Ukraine.

As Russia's military is marred by morale and logistical challenges. Bellon said Marine Reserves are leveraging what makes them different from Putin's forces to come out ahead.

The maximum score for each test event is 100 points, and soldiers must get at least 60 points on each event to pass. If a soldier fails, they will be able to retake the test after several months but will be discharged from the Army if they fail twice.

With the changes, the Army will join the other military services, which also have tiered event requirements based on gender and age for their tests.

The new standards will only be applied to the regular fitness test given to all soldiers annually and will not change the tests troops need to take to qualifying for certain Army jobs such as combat positions or specialties.

The new plan will also be under a trial period, with active-duty soldiers to begin taking the test in April but not penalized if they fail. The test will then officially take effect in October, to be taken twice a year.

National Guard and Reserve soldiers, meanwhile, will have until April 2023 to take the test without penalties, and will take the test once a year.

## **27. Israel blocked Ukraine from buying Pegasus spyware, fearing Russia's anger**

The Guardian, 23 Mar 22, Stephanie Kirchgaessner

Israel blocked Ukraine from buying NSO Group's Pegasus spyware for fear that Russian officials would be angered by the sale of the sophisticated hacking tool to a regional foe, according to people familiar with the matter.

The revelation, following a joint investigation by the Guardian and Washington Post, offers new insight into the way Israel's relationship with Russia has at times undermined Ukraine's offensive capabilities and contradicted US priorities.

The Ukrainian president, Volodymyr Zelenskiy, has been critical of Israel's stance since Russia launched its full and bloody invasion of Ukraine on 24 February, saying in a recent address before members of Israel's Knesset that Israel would have to "give answers" on why it had not given weapons to Ukraine or applied sanctions on Russians.

People with direct knowledge of the matter say that, dating back to at least 2019, Ukrainian officials lobbied Israel to try to convince it to license the spyware tool for use by Ukraine.

But those efforts were rebuffed and NSO Group, which is regulated by the Israeli ministry of defense, was never permitted to market or sell the company's spyware to Ukraine.

When it is successfully deployed against a target, Pegasus can be used to hack into any mobile phone and intercept phone conversations, read text messages, or view a user's photographs. It can also be used as a remote listening device, because a government user of the spyware can use it to remotely turn a mobile phone recorder on and off.

Recent press reports, including by the Pegasus project, a media consortium that investigated NSO and included the Guardian and Washington Post, has focused on how the spyware has been used by NSO's government clients to target journalists and human rights defenders around the world. The consortium's reporting has also showed how, from Hungary to Saudi Arabia, sales of Pegasus were often aligned with Israeli foreign policy.

The spyware has also been used against senior government and diplomatic officials, from Spain to France to Uganda, in cases that were seen as attempts by some countries to use the tool to conduct domestic or international espionage.

NSO has said its spyware is meant to be used by government clients to target serious criminals and terrorists. It has also said it investigates serious allegations of abuse.

People with knowledge of the matter said that in most routine cases, Israel's ministry of defense first grants NSO permission to market Pegasus to a government client and then, following a review, either allows or blocks a sale of the technology.

One senior Ukrainian intelligence official said Israel's decision had left Ukrainian officials feeling "confused". The official said he did not have total visibility into why Ukraine was denied access to the powerful spying tool but added that he believed the US government supported Ukraine's efforts.

Sources close to the matter said Israel's decision reflected a reluctance to agitate Russia, which has a close intelligence relationship with Israel. The sources said Israel feared that granting Ukraine the ability to target Russia-based mobile phone numbers through Pegasus would be viewed as an act of aggression against Russian intelligence services.

It was not the only time one of Russia's key regional foes had been denied some access to Pegasus. People familiar with the matter say that Estonia, a Nato member, acquired access to Pegasus in 2019 but was informed by NSO in August that year that the company would not permit Estonian officials to use the spyware against Russian targets.

The Estonian ministry of defense spokeswoman Susan Lilleväli declined to comment.

In response to a detailed set of questions, NSO issued a one-line statement: "NSO continues to be subjected to inaccurate media reports regarding alleged clients, which are based on hearsay, political innuendo and untruths."

The Israeli defense ministry on Tuesday also responded to a list of questions by issuing a statement that did not directly address most of them.

"The state of Israel regulates marketing and export of cyber products in accordance with the 2007 Defense Export Control Act," the statement said.

It added: "Policy decisions regarding export controls take into account security and strategic considerations, which include adherence to international arrangements. As a matter of policy, the state of Israel approves the export of cyber products exclusively to governmental entities, for

lawful use, and only for the purpose of preventing and investigating crime and counter terrorism, under end-use/end-user declarations provided by the acquiring government.”

Nearly a month into the war, Ukraine’s armed forces – though massively outnumbered – have surprised outside observers by containing Russian military advances, even as Russia has bombarded civilian targets and is seeking to raze the port city of Mariupol.

Ukrainian officials declined to comment on Pegasus or their overall efforts to seek powerful surveillance technology.

But Mykhailo Fedorov, a vice-prime minister who oversees digital technology for Ukraine, said: “The government of Israel is at this time not participating in any discussion or facilitation regarding offensive tech, but we have ongoing conversations with a lot of the Israeli companies in the market and they’re at various stages. But again, let me say this: we have enough capability to continue winning and we’re adding new tools, including emerging tools, every day.”

Experts say Israel has political motives to stay close to Russia, from its hopes that Moscow will refrain from signing a revival of the Iran nuclear deal, which is close to completion in Vienna, to its reliance on Russia to mount attacks on Iranian positions inside Syria.

Ukraine’s request for Pegasus was previously reported by Israel’s Channel 12.

Zelenskiy’s address to the Knesset last weekend was delivered as the government of Israel’s prime minister, Naftali Bennett, who is brokering negotiations between Russia and Ukraine, has faced criticism for adopting what is in effect a neutral stance on the war. Bennett has spoken directly to Zelenskiy and Putin while his foreign minister has met with his US counterpart, Antony Blinken.

While Bennett was ultimately persuaded to support a UN general assembly resolution on 2 March to condemn Russia for its illegal invasion, Zelenskiy complained about Israel’s inaction in his Knesset address. Israel also refused to sell its Iron Dome missile defense system to Ukraine last year, the Israeli news organization Ynet recently reported.

“We ask why we’re not receiving weapons from you, why you haven’t applied sanctions on Russia, and on Russian businesses. You will need to give answers, and to be able to live with those answers,” he said in the address.

**28. US military members who survive Ukraine War may face 'consequences' at home**  
Newsweek, 23 Mar 22, Tom O’Connor and Naveed Jamali

Members of the U.S. military who travel to Ukraine to join the fight against Russian troops in a grueling war and live to tell the tale may return home only to face administrative or legal ramifications.

Days after Russian President Vladimir Putin announced the onset of what he called a "special military operation" against neighboring Ukraine nearly a month ago, Kyiv established a new foreign fighters' force, the International Legion of Territorial Defense of Ukraine. Since then, Ukrainian officials have said the volunteer militia has garnered tens of thousands of recruits from at least 52 countries, including the United States.

In fact, the U.S. has regularly been cited by Ukrainian officials as among the most (if not the most) prolific countries of origin, with more than 7,000 U.S. citizens having applied, according a figure provided to Newsweek by Ukraine's embassy in Washington, which noted that "not all of them are approved and not all of them are going to Ukraine."

And while no readily apparent legal barriers exist for U.S. civilians to sign up, the situation is far more complicated for active service members and reservists, who must notify their commanders of such travel and may face disciplinary action if they do not.

Reached for comment on what these protocols entail, the Office of the Director of National Intelligence referred Newsweek to Security Executive Agent Directive-3 (SEAD-3).

SEAD-3-covered individuals, which includes those who have access to classified information or hold a sensitive position, are required to notify their command or agency head of all unofficial foreign travel. Failure to do so may result in the "revocation of national security eligibility."

And even more serious actions may be pursued in the case of U.S. military personnel joining the ranks of a foreign country in active combat with a nuclear-armed rival.

Asked about what such recourse could be taken against U.S. reservists who go to Ukraine to fight, a Pentagon spokesperson told Newsweek that "due to the complex nature of reserve member statuses — regardless of whether they are members of the Selected Reserves, Retired Reserves, or Individual Ready Reserve — the answer isn't simple."

"For that reason, we are looking at the implications and consequences that would be associated with reserve members fighting in a foreign country on behalf of another government," the spokesperson said. "As each member is an American citizen, there are other considerations individuals must factor into a decision to fight in the Ukraine to include potential impacts to their citizenship, criminal or legal implications, etc."

While some mechanisms for the Pentagon to monitor the whereabouts of U.S. active-duty service members exist, the situation is more complex when it comes to reservists or members of the National Guard, who answer to states rather than the federal government. The lack of a clear-cut, daily-updated process has raised questions as to whether the U.S. military would even be immediately aware if members had already gone to Ukraine.

The United Kingdom, a NATO ally of the U.S. and another ardent supporter of Ukraine, faced a similar situation earlier this month when the U.K. Defense Ministry acknowledged that four of its soldiers had gone AWOL (absent without leave) and may have traveled to Ukraine. Doing so, the ministry warned, would be punishable by court martial.

From Ukraine's point of view, however, active duty or reserve status is not a barrier for membership.

Corporal Damien Magrou, spokesperson for Ukraine's International Legion, told Newsweek that the Legion was "aware of the legal constraints, both for active servicemen and other American citizens," but that this "is not a disqualifying factor" for aspiring recruits from the U.S. and other countries.

"Their enlisting in the Legion is perfectly legal under Ukrainian law, it's perfectly legal under international humanitarian law," Magrou said. "And from there on, it is not my role as a spokesperson for the International Legion of Ukraine, which is a part of the Ukrainian Army, to go and comment on possible consequences or whatever for our American recruits under American law."

He said that Ukraine's embassy in Washington and other consulates that accept applications to volunteer provide a "disclaimer" as to how such actions could be subject to U.S. laws, so "all of our recruits are aware of or should be aware of the legal situation in their home country."

"In this context, all of our recruits come in full knowledge of the situation and they make this decision themselves," Magrou said. "It's not for us to stop them if they want to come."

Despite the overwhelming U.S. support politically, economically and militarily to Ukraine's resistance against the Russian incursion, President Joe Biden's administration is not encouraging U.S. nationals outside of the military to join the fight either.

"Regarding volunteer fighters, Ukrainians have shown their courage and they are calling on every resource and lever they have to defend themselves," a State Department spokesperson told Newsweek. "We applaud their bravery. However, our Travel Advisory remains: U.S. citizens should not travel to Ukraine, and those in Ukraine should depart immediately if it is safe to do so using commercial or other privately available options for ground transportation."

The State Department issued a Level 4 "Do Not Travel" advisory last month in the leadup to the conflict, as U.S. officials repeatedly warned that Moscow was planning an attack amid an unprecedented Russian military buildup along Ukraine's borders in spite of Kremlin denials.

With war having erupted, the U.S. has only doubled down on such warnings to those may seek to travel to Ukraine.

"We urge all to carefully consider routes and the risks of travel, because Ukraine's roads may be crowded, exposed to combat operations, or have deteriorated infrastructure due to damage to bridges, roads, and facilities," the State Department spokesperson said.

"U.S. citizens who travel to Ukraine, especially in order to participate in fighting there, face significant risks to personal safety, including the very real risk of capture or death," the spokesperson added. "The United States is not able to provide assistance to evacuate U.S. citizens from Ukraine, including those U.S. citizens who travel to Ukraine to engage in the ongoing war."

The spokesperson also referenced another ominous development for those in the U.S. who seek to join the fight.

"In addition to other risks to personal safety, U.S. citizens should be aware that Russia has stated it intends to treat foreign fighters in Ukraine as 'mercenaries,' rather than as lawful combatants," the spokesperson said. "While the United States expects Russia to respect all of its obligations under the law of war, in light of this statement, U.S. citizens who are detained by Russian authorities in Ukraine may be subject to potential attempts at criminal prosecution and may be at heightened risk of mistreatment."

The Russian Defense Ministry has repeatedly warned foreigners not to join the fight, and has claimed to have conducted high-precision cruise missile attacks against positions hosting foreign fighters, including those in the provinces of Lviv, Zhytomyr and Rivne, counting hundreds of casualties among Ukrainian troops and international recruits.

Russian Security Council Secretary Nikolay Patrushev warned Biden's national security adviser, Jake Sullivan, directly on the matter during a phone call between the two last week, in which the senior Kremlin official told his White House counterpart "to stop Washington's support for neo-Nazis and terrorists in Ukraine and facilitating the transfer of foreign mercenaries to the conflict zone, as well as to refuse to continue supplying weapons to the Kiev regime."

Such steps, Patrushev warned, "will only lead to further escalation."

On Wednesday, Russia's ambassador to the U.S., Anatoly Antonov, also issued a warning on the topic.

"Pumping the Kiev regime with weapons and sending foreign mercenaries to the Ukrainian territory is irresponsible and extremely dangerous," Antonov said in a statement. "The militarization of Ukraine poses a direct threat to the European and global security."

The Biden administration has sought to walk a careful line in backing Ukraine's war effort, while holding back on certain offensive weapons systems such as fighter jets, and dismissing the possibility of declaring a no-fly-zone or sending U.S. troops to fight Russia, a scenario the president has said would lead to "World War III."

While the U.S. and Ukrainian officials as well as a number of experts have dismissed Putin's "denazification" justification for initiating hostilities against Ukraine, Newsweek has previously reported on far-right elements traveling from abroad, including the U.S., to join Ukraine's fight against pro-Moscow separatists that first rose up in the eastern Donbas region eight years ago amid political unrest that brought to power a pro-West government in Kyiv.

Forces associated within Ukraine's far-right such as the National Guard's Azov Regiment as well as nationalist political paramilitaries like Right Sector and even Russia-linked extremist groups like the neo-Nazi Wotanjugend have held a prominent place on the battlefield alongside a broad representation of Ukrainian society against the Kremlin's attack. So far, however, there is no evidence of a mass influx of far-right militants traveling to enter the fray.

Speaking on behalf of the International Legion, Magrou told Newsweek that "Ukraine is fighting on the side of different democratic freedoms, and one of these freedoms is freedom of conscience."

"Active military servicemen in Ukraine, including Legionnaires, have a duty of restraint when it comes to expressing their own views publicly and this includes both religious and political views," Magrou said. "So as long as the person is respecting their duty restraint and is not expressing any political points of view which may be controversial, then they can have whatever opinions or convictions they want, that is part of their freedom of conscience."

"If however, the recruit is taking a public stance or has in the past taken very public stances, with, let's say controversial, political, political convictions, that may reflect badly on the Legion," he added, "then that is one of the factors that we'll look at before they're accepted."

Magrou emphasized, however, that "there is no such thing as a blanket ban based off one more other political association, nor do I think it would be appropriate to operate in that way."

But he added that "when it comes to actual hate groups or extremist groups, if they do have public links to these groups, obviously that's one of the factors that we'll take into consideration" when reviewing applications.

The Biden administration, for its part, has encouraged U.S. citizens to help in other ways, including through U.S. AID's Center for International Disaster Information portal.

"The American people have demonstrated an incredible outpouring of support for Ukraine in the face of unprovoked Russian aggression," the State Department spokesperson told Newsweek. "It truly reflects the generosity and compassion of the American people."

## **29. From Afghanistan to Ukraine: How a team from Silicon Valley is helping evacuate people from war**

Vanity Fair, 23 Mar 22, Nick Bilton

The San Francisco peninsula is now home to a slew of private security companies filled with ex-military, former international counterterrorism experts, and government officials who were in charge of cyber-warfare with other nation states. The job of these security outfits is to protect the well-being and safety of not only the richest people on the planet, but also the biggest tech companies on earth. Roderick Jones, who founded one such company, Concentric, works at the center of this growing industry. Before moving to Silicon Valley to work with some of the most prominent CEOs on the planet, Jones used to work for Scotland Yard's Special Branch on international terrorism and also protected a high-profile British cabinet member.

While Jones could easily be a central character in a John le Carré novel (who knows, maybe he secretly is), he's been getting more attention in the tech world lately for a new nonprofit he started called the 188 Foundation, which is a first-of-its-kind nonprofit with one simple goal: getting people out of war zones using donations from the tech world. He works with a network of

volunteers as well as a team of employees who used to work for a variety of clandestine divisions of the government made up of three-letter acronyms (who could also be characters in the same le Carré novel). Currently, Jones has a team in Ukraine helping to get people to safety in Poland and elsewhere, almost exclusively using donations from people who work for tech companies. The team of volunteers in Ukraine—56 people in all, unarmed, and six dogs, across 19 separate and unique operations—have spent the past three weeks shepherding babies and families out of the country against the backdrop of falling bombs, gunfire, and power outages. While Jones can't go into the exact specifics of each operation for security reasons, he says the team has been evacuating some of the country's most vulnerable, including a blind woman they got out of the center of the war. The following is an edited conversation with Jones.

**Vanity Fair: You have a team in Ukraine right now getting people out of the country. How is it going so far?**

Roderick Jones: The team is led by a couple of experts from the U.S. national security community who are familiar with the country and in particular the Russian threat. They speak the local languages and have the capability to move around the non-occupied parts of the country. Their approach is similar to how we do a lot of private security jobs around the world by sending in domain experts from our company who then integrate local capabilities into the team. The evacuations of citizens all require constant intelligence analysis of Russian presence and occupation, logistical coordination, connecting people to vehicles with the necessary fuel, and permissions and specific paperwork to pass through countless checkpoints.

**You first started this new kind of work in Afghanistan. How successful was that operation, and how did it come to be?**

We evacuated over 188 people from Mazar-i-Sharif in the north of Afghanistan, approximately eight hours before the last American soldiers left the country. Our flight of passengers was Afghan citizens (and their families) who had aided the United States—they'd worked on empowering women, or had worked on the in-country polio eradication efforts. As the situation deteriorated in Kabul, I was initially contacted by a good friend who was trying to help evacuate some of the local Afghans and who had helped document human rights abuses in the country. As a security company, we maintain a large network of people globally, and we were able to connect resources, contacts, and capabilities together rapidly to conduct a rescue. As a result of the war and subsequent success of rescuing people, we founded our own 501(c)(3), the 188 Foundation—after the number of people we were able to save. After that, we knew there would be more opportunities in which we could provide security solutions to philanthropic initiatives, but we didn't think it would come as swiftly, nor on the mass scale, as the Ukraine humanitarian crisis did.

Afghanistan had so many more diplomatic hurdles to leap over than Ukraine. Getting an aircraft into a Taliban-controlled airport and paying for it was hard enough, but then finding a country to take Afghan refugees was an extra layer of effort, which took tremendous levers to work out. The Mexican government agreed to help us, and that is how our flight managed to take off and land in the UAE before flying on to Mexico City. Afghanistan was also unique because the citizens we were focused on rescuing were also being specifically targeted by the Taliban, thus

their movement within the country needed to be covert. Ukraine is very different in that it borders the E.U., who have agreed to take any Ukrainian over a land border. So our focus has been more on helping less-able-bodied people to leave areas under Russian attack. The movement of these citizens can be more overt due to a lack of specific targeting, but is still delicate from areas Russia is actively and indiscriminately bombing.

**You recently got a blind woman out of Ukraine? How did that happen?**

One of our more difficult evacuations, so far, was for an elderly blind woman abandoned in a large apartment complex in Irpin. Her U.S.-based daughter contacted us to rescue her. Unfortunately, Russian forces had her village surrounded. Our evacuation teams attempted access for six straight days but were unsuccessful. Worse, the bombing had taken out the power in the apartment building, so the woman couldn't charge her cell phone; meaning, she didn't know we were trying to get to her. Finally, on the sixth day, we found a very narrow window [and] had her daughter in the U.S. connect us with her daughter in Germany who could walk our operators through the apartment building to find her exact location and safely exfiltrate her to the Hungarian border.

**There are Ukrainians who work for Silicon Valley companies. Have you been able to get any of those employees out of the country?**

We actually had some former tech contractors of ours join the military when the war started, so [we] are well aware of the challenges facing the tech community there. We moved a group of tech workers to the western part of Ukraine as well as evacuating some tech workers' families. Martial law exists in Ukraine, so any fighting-age males—which are the majority of tech workers—are legally required to join the military and cannot leave the country. Our team has relayed stories of fighting-age males being caught attempting to leave the country and tied to trees overnight before being drafted into the military again the next day. Ukraine is facing an existential threat, so they are acting accordingly.

**Where's the money coming from to fund these operations?**

The funds tend to come from two main sources: tech entrepreneurs who are in our network and want to act during these crises, as well as veterans communities who were widely activated during the Afghanistan collapse and are still engaged philanthropically. For the Ukrainian efforts, we have benefited from having more time to engage potential donors, so [we] have received donations from private citizens eager to support the 188 Foundation and its cause.

**Would these kinds of philanthropic rescue operations be possible without the internet?**

The internet has enabled a variety of rapid networks to build quickly in order to safely move people. It might be an overused phrase already, but the open-source and direct nature of this kind of philanthropy is here to stay. Individuals around the world can connect to the problem and immediately donate their expertise or money to the cause. Of course there are some downsides to this in terms of the integrity of the approach, but it allows for rapid philanthropic networks to form organically, set objectives, and execute faster than traditional organizations. In both

Afghanistan and in Ukraine, the power of private citizens to work on a seemingly impossible problem was fundamentally made possible due to the connected nature of everyone involved. The organic nature of the networks is also appealing to donors, as the money donated goes directly to the cause, with little, if anything, spent on overhead.

**You work in security in Silicon Valley. Do you expect an increase in cyberattacks (from Russia) toward the West because of the help being offered to Ukraine?**

Like everyone, I'm surprised there hasn't been more of a cyber-backlash from Russia, but I expect it's coming and will probably be financial. The nature of the conflict in Ukraine, so far, has been straight from the 20th century, but the Western response led by the United States has been to weaponize finance, with a sanction regime designed to fundamentally weaken the Russian state. What we should therefore expect is an increase in financial crime as Russia seeks to fight back in that space. Ransomware was already a massive issue for most companies; it seems logical that more and increasingly sophisticated attempts will be made to blackmail Western companies in order to inflict economic damage on the West, or as an act of retribution for Ukrainian support during the conflict.

**30. US mulls larger permanent force in Europe, sends more missiles to Ukraine**

Defense One, 23 Mar 22, Tara Copp

The latest U.S. planeloads of anti-aircraft and anti-tank weapons for Ukraine are expected to arrive in Europe this week, then be rushed into the country via ground routes, a senior defense official told reporters Wednesday.

The Stinger and Javelin missiles aboard those planes are part of the \$800 million in additional security assistance President Joe Biden announced for Ukraine last week.

The weapons delivery is part of the ongoing international response to Russia's invasion of Ukraine, which could require more U.S. troops to head overseas now, but ultimately also produce a larger and permanent U.S. and NATO footprint.

Biden, Defense Secretary Lloyd Austin, and Secretary of State Anthony Blinken landed in Brussels on Wednesday for an emergency NATO summit and European Council meeting.

"The security environment in Europe is different now," the defense official said. "And it will be different no matter what the outcome is of this war. I think it's safe to say that the United States, as well as other NATO nations, will be taking a hard look at whether we have the footprint right and whether the posture is appropriate to the new security environment that results from all this. ... We're going to be open to discussing with our allies what the new security environment is going to require of every NATO ally, including us."

As part of its immediate response to Russia's actions, the U.S. has deployed more than 14,000 troops to NATO's eastern front. Sending in even more short-term forces is a possibility, the senior defense official said.

On Wednesday, NATO Secretary General Jens Stoltenberg announced the alliance would deploy four more battle groups to bolster defenses for Bulgaria, Hungary, Romania, and Slovakia.

"In terms of the immediate need to bolster the Eastern flank with temporary forces, the secretary is obviously looking at this every day and monitoring it," the U.S. defense official said. "We're not going to take off the table the possibility that he will flow more forces in from the United States or reposition them from elsewhere in Europe."

Now, as Russia's invasion of Ukraine has reached its 28th day, Ukrainian forces have repelled some attacks by ground troops around the country and some Russian forward elements have stopped their advances short of reaching Kyiv. But some of those stalled Russian units are also now establishing defensive positions.

Russia continues to fire long-range missiles at Ukrainian targets; the Pentagon's estimate has climbed past 1,200.

Also Wednesday, Stoltenberg said NATO will send protective gear to Ukraine to use in the event of chemical or biological weapons attacks. The U.S. defense official said its aid does not include that gear, because it was not seen as an immediate priority.

The U.S. shipments will include "small arms, ammunition, Stingers, Javelins, body armor, and helmets," for the vast number of Ukrainian civilian men and women who have remained in the country to fight.

### **31. As allies meet, splits emerge in NATO about how to deter Russia**

Washington Post, 23 Mar 22, Michael Birnbaum, Karoun Demirjian and John Hudson

As President Biden landed in Brussels on Wednesday for urgent talks about Russia's war on Ukraine, splits were emerging within NATO and in Washington about how to deter the Kremlin from further escalation. Allied leaders are discussing whether it is best to keep Russia guessing about what will trigger a bigger military response or to outline precisely what would draw NATO into a conflict.

Some NATO policymakers in Europe worry that there has been too much public messaging about what the alliance won't do — send its troops into Ukraine, nor, for the moment, send fighter jets for which Kyiv has been campaigning. With the threat of Russian nuclear and chemical weapons looming over the battlefields of Ukraine, a better approach, they say, would be not to rule out anything publicly.

The stakes could not be higher, with officials on both sides of the debate agreed that a mishandled response could draw NATO and Russia into a direct conflict, with potentially

calamitous consequences for the world. The discussion extends both to what to do for Ukraine and how best to bolster NATO's defenses within its own territory to deter Russia from attacking.

"We are determined to do all we can to support Ukraine, but we have a responsibility to ensure that the war does not escalate beyond Ukraine, and become a conflict between NATO and Russia," NATO Secretary General Jens Stoltenberg told reporters on Wednesday, summing up the dilemma.

When asked what NATO would do if Russia were to use chemical weapons in Ukraine, Stoltenberg kept his answer vague — a traditional approach that was used to for decades to maintain strategic ambiguity about how nuclear weapons would be used as well.

"Any use of chemical weapons would totally change the nature of the conflict and have far-reaching consequences," he said.

Critics of the U.S. handling of deterrence say that by being so clear about what the United States won't do for Ukraine, Washington is potentially emboldening Russian President Vladimir Putin to act more aggressively than he otherwise would.

"I don't think this is very productive when we say every so often, 'We don't want World War 3,' or 'We don't want conflict with Russia,' " said Marko Mihkelson, the head of the foreign affairs committee of the Estonian parliament, who was in Washington last week to lobby for additional troops and equipment for NATO's eastern flank. "That's a green light to the Russians that we're afraid of them."

Defenders of the Biden administration's approach say that the White House has helped deliver unprecedented sanctions against the Russian economy and is in the middle of a large-scale effort to deliver defensive weaponry to Ukraine. And NATO leaders, meeting at a summit in Brussels on Thursday, are expected to announce new deployments to the alliance countries that border Ukraine.

"The president has the responsibility to make clear our goal is to make sure to bring this war to an end," said a senior Biden administration official, speaking on the condition of anonymity to discuss the dispute. "To that end, we have made clear, we're not going to take steps that would expand this war, put more lives at risk and that could lead to a much larger conflict. That is a responsible approach and that is one centered on saving lives and bringing an end to this conflict as quickly as we can."

Fundamentally, there is little difference between Europe and Washington's appetite for war, said Sen. Chris Murphy (D-Conn.).

The United States is "pretty war weary and knows what it feels like to have thousands of soldiers dying in conflict, so it was important for the president to make clear what he's going to do and what he's not going to do," Murphy said. "But I don't think there's much separation at all in our bottom lines."

And elements of NATO deterrence appear to be working. There have been no Russian strikes against the logistics centers on NATO territory that are helping to organize the delivery of military aid to Ukraine, even though destroying the weaponry could advance the Kremlin's battlefield aims. Nor, at least for now, have there been significant cyberattacks against NATO nations that some policymakers had worried might follow the sanctions imposed on Russia. Alliance leaders say that cyberattacks could trigger NATO's collective defense treaties, but they haven't spelled out how.

But skeptics say that Biden has left some doors open for Putin from the outset, including in early December, just as Russian troops were starting to swell along Ukraine's border, when he said that "the idea that the United States is going to unilaterally use force to confront Russia invading Ukraine is not in the cards right now."

More recently, the administration declined a Polish offer of MiG fighter jets for the Ukrainian military, as Pentagon spokesman John Kirby declared that the U.S. assessment was that Russia would view it as an escalation. And some Eastern European officials say they are worried that there is foot-dragging about bolstering troops and equipment for vulnerable NATO nations.

The Biden administration "just cannot understand that there are times when you have to shut your mouth," said François Heisbourg, a senior adviser for Europe at the International Institute for Strategic Studies and a past adviser to the French defense ministry. "Overall, the crisis has been well-managed, the diplomacy has been superb, and they haven't really done any stupid stuff. It's shooting off their mouth about what they won't do."

By staying silent about issues such as troop deployments, "you are not signaling that you are going to deploy troops, you are leaving an uncertainty in the mind of your adversary that there is just this chance you are going to deploy troops, but it's for him to take the chance in escalating," Heisbourg said.

Republicans have echoed the criticism.

"It's better for [Russians] to wonder what we're going to do rather than telling them what we're going to do, exactly," said Sen. Mitt Romney of Utah. "Generally, strategic ambiguity is the best way."

At NATO, European diplomats have also raised concerns about the U.S. handling of the public messaging, two senior officials said, though they have done so in the measured tones typical of the consensus-driven alliance. Britain in particular has been vocal, along with Eastern European countries, but other Western European countries share some of the worries, the diplomats said. The diplomats spoke on the condition of anonymity to describe the closed deliberations.

"They're saying we should stop saying openly, in advance, what NATO will not be doing," one of the diplomats said.

Biden has not been the only NATO leader to try to be clear about limits.

“We will not give in to the demands for a no-fly zone,” German Chancellor Olaf Scholz told his country’s parliament on Wednesday. “NATO will not become a party to the war.”

And top Russian officials have admitted that no matter what Biden and other leaders might have outlined in the months leading up to the conflict, the Kremlin was still taken aback by the strength of the Western response.

“No one could have imagined that the West could impose these sanctions. It’s just theft,” Russian Foreign Minister Sergei Lavrov told students at the Moscow State Institute of International Relations on Wednesday.

The debate about how to maintain pressure on Russia — while trying to avoid escalating the situation — will continue among leaders in Brussels on Thursday. The Eastern European nations that border Russia — Poland, Lithuania, Latvia and Estonia — have been requesting additional troops and more advanced anti-aircraft capabilities, which they say would make clear to the Kremlin that NATO is capable of backing up its warnings with military might. Since 2016, the alliance has maintained about 1,000 rotating troops in each of the four countries, enough to serve as a tripwire, but not enough to defend against a Russian invasion, and the Baltic states could easily be severed from the rest of NATO territory if Russian troops cut off the 40-mile corridor that connects Poland to Lithuania.

After Putin made some miscalculations about Ukraine, to leave NATO’s eastern flank lightly reinforced could risk that he would make the same mistake about alliance territory, said Jonatan Vseviiov, the secretary general of the Estonian Foreign Ministry.

“These miscalculations make it at least plausible that he would miscalculate regarding the whole viable reinforcement part as well,” Vseviiov said. “That’s end-of-the-world dangerous.”

In the short run, alliance leaders are expected to focus elsewhere, by deploying new troops to Bulgaria, Hungary, Romania and Slovakia — NATO countries that ring Ukraine and the Black Sea and are close to the current fighting.

Biden backers in Washington say that this week’s discussions in Europe should help address whatever splits exist.

“This is exactly why a long, detailed in-person conversation with the heads of state and the chiefs of defense is critical, because we will succeed in deterring Putin only to the extent we are united,” said Sen. Christopher A. Coons (D-Del.).

Return to top

### **32. NATO: 7,000 to 15,000 Russian troops dead in Ukraine**

Associated Press, 23 Mar 22, Nebi Qena and Cara Anna

NATO estimated on Wednesday that 7,000 to 15,000 Russian soldiers have been killed in four weeks of war in Ukraine, where fierce resistance from the country's defenders has denied Moscow the lightning victory it sought.

By way of comparison, Russia lost about 15,000 troops over 10 years in Afghanistan.

A senior NATO military official said the alliance's estimate was based on information from Ukrainian authorities, what Russia has released intentionally or not and intelligence gathered from open sources. The official spoke on condition of anonymity under ground rules set by NATO.

Ukraine has released little information about its own military losses, and the West has not given an estimate, but President Volodymyr Zelenskyy said nearly two weeks ago that about 1,300 Ukrainian servicemen had been killed.

When Russia unleashed its invasion Feb. 24 in Europe's biggest offensive since World War II, a swift toppling of Ukraine's government seemed likely. But with Wednesday marking four full weeks of fighting, Moscow is bogged down in a grinding military campaign.

Zelenskyy — who has riveted the world's attention with ad hoc videos and speeches to legislatures seeking military aid for his country — seized on the anniversary to plead for people around the world to gather in public Thursday to show support for Ukraine, saying the war breaks the heart of “every free person on the planet.”

“Come to your squares, your streets. Make yourselves visible and heard,” Zelenskyy said in English during an emotional video address to the nation, recorded in the dark near the presidential offices in Kyiv. “Say that people matter. Freedom matters. Peace matters. Ukraine matters.”

Speaking in Russian, Zelenskyy appealed to Russians “to leave Russia so as not to give your tax money to the war.” Tens of thousands of Russians already have fled their country since the war began, fearing an intensifying crackdown on dissent that has included the arrest of thousands of antiwar protesters and suppression of the media.

Zelenskyy, who will speak to NATO members by video on Thursday, also said he is asking the alliance to provide “effective and unrestricted” support to Ukraine, including any weapons the country needs to fend off the Russian invasion.

With its ground forces slowed or stopped by hit-and-run Ukrainian units armed with Western-supplied weapons, Russian President Vladimir Putin's troops are bombarding targets from afar, falling back on the tactics they used in reducing cities to rubble in Syria and Chechnya.

A senior U.S. defense official said Wednesday that Russian ground forces appear to be digging in and setting up defensive positions 15 to 20 kilometers (9 to 12 miles) outside Kyiv, the capital, as they make little to no progress toward the city center.

The official, who spoke on condition of anonymity to discuss military assessments, said it appears the forces are no longer trying to advance into the city, and in some areas east of Kyiv, Ukrainian troops have pushed Russian soldiers farther away.

Instead, Russian troops appear to be prioritizing the fight in the Luhansk and Donetsk regions in the Donbas, in what could be an effort to cut off Ukrainian troops and prevent them from moving west to defend other cities, the official said. The U.S. also has seen activity from Russian ships in the Sea of Azov, including what appear to be efforts to send landing ships ashore with supplies, including vehicles, the official said.

In an ominous sign that Moscow might consider using nuclear weapons, a senior Russian official said the country's nuclear arsenal would help deter the West from intervening in Ukraine.

"The Russian Federation is capable of physically destroying any aggressor or any aggressor group within minutes at any distance," Dmitry Rogozin, the head of the state aerospace corporation, Roscosmos, said in televised remarks. He noted that Moscow's nuclear stockpiles include tactical nuclear weapons, designed for use on battlefields, along with far more powerful nuclear-tipped intercontinental ballistic missiles. Roscosmos oversees missile-building facilities.

U.S. officials long have warned that Russia's military doctrine envisages an "escalate to deescalate" option of using battlefield nuclear weapons to force the enemy to back down in a situation when Russian forces face imminent defeat. Moscow has denied having such plans.

Rogozin is known for his bluster, and he did not make clear what actions by the West would be seen as meddling, but his comments almost certainly reflect thinking inside the Kremlin. Putin has warned the West that an attempt to introduce a no-fly zone over Ukraine would draw it into a conflict with Russia. Western nations have said they would not create a no-fly zone to protect Ukraine.

As U.S. President Joe Biden left for Europe to meet with key allies about new sanctions against Moscow and more military aid to Ukraine, he warned there is a "real threat" Russia could use chemical weapons.

On the eve of a meeting with Biden, European Union nations signed off on another 500 million euros (\$550 million) in military aid for Ukraine.

Zelenskyy appealed to Western countries to stay united in the face of Russia's efforts to "lobby its interests" with "some partners" to bring them over to its side, and noted during his national address that Ukraine has not received the fighter jets or modern air-defense systems it requested. He said Ukraine also needs tanks and anti-ship systems.

"It has been a month of defending ourselves from attempts to destroy us, wipe us off the face of the earth," he said

The U.S. has determined that Russian troops have committed war crimes in Ukraine, and it will work to prosecute the offenders, Secretary of State Antony Blinken said. He cited evidence of indiscriminate or deliberate attacks against civilians and the destruction of apartment buildings, schools, hospitals, shopping centers and other sites.

Still, major Russian objectives remain unfulfilled, including in Kyiv, where near-constant shelling and gunfire shook the city Wednesday as the two sides battled for control of multiple

suburbs. Mayor Vitali Klitschko said at least 264 civilians have been killed in the capital since the war broke out.

The shelling also claimed the life of another journalist Wednesday. The independent Russian news outlet The Insider said Russian journalist Oksana Baulina had been killed in a Kyiv neighborhood.

In the south, the encircled port city of Mariupol has seen the worst devastation of the war, enduring weeks of bombardment and, now, street-by-street fighting. But Ukrainian forces have prevented its fall, thwarting an apparent bid by Moscow to fully secure a land bridge from Russia to Crimea, seized from Ukraine in 2014.

Zelenskyy said 100,000 civilians remain in the city, which had 430,000 people before the war. Efforts to get desperately needed food and other supplies to those trapped have often failed.

Zelenskyy accused Russian forces of seizing a humanitarian convoy. Deputy Prime Minister Iryna Vereshchuk said the Russians were holding captive 11 bus drivers and four rescue workers along with their vehicles.

In their last update, over a week ago, Mariupol officials said at least 2,300 people had died, but the true toll is probably much higher. Airstrikes in the past week destroyed a theater and an art school where civilians were sheltering.

In the besieged northern city of Chernihiv, Russian forces bombed and destroyed a bridge that was used for aid deliveries and civilian evacuations, regional governor Viacheslav Chaus said.

Kateryna Mytkevich, who arrived in Poland after fleeing Chernihiv, wiped away tears as she spoke about what she had seen. The city is without gas, electricity or running water, said Mytkevich, 39, and entire neighborhoods have been destroyed.

"I don't understand why we have such a curse," she said.

Despite plenty of evidence to the contrary, Kremlin spokesman Dmitry Peskov insisted the military operation is going "strictly in accordance" with plans.

The NATO official said 30,000 to 40,000 Russian soldiers are estimated to have been killed or wounded. In its last update, Russia said March 2 that nearly 500 soldiers had been killed and almost 1,600 wounded.

Ukraine also claims to have killed six Russian generals. Russia acknowledges just one dead general.

The figures from NATO represent the alliance's first public estimate of Russian casualties since the war began. The U.S. government has largely declined to provide estimates of Russian or Ukrainian casualties, saying available information is of questionable reliability.

### **33. Weapons for Ukraine's fight against Russia flow through small Polish border towns** Wall Street Journal, 23 Mar 22, Drew Hinshaw, Joe Parkinson and Nancy A. Youssef

RZESZOW, Poland Day and night, truck convoys rumble through once quiet Polish border towns and villages. Giant military transport planes land several times an hour on the single runway at a local airport. Their cargo: weapons for the Ukrainian forces fighting to beat back Russia's invading army.

The U.S. and its North Atlantic Treaty Organization allies have been racing for weeks to deliver antitank missiles, air-defense batteries and other armaments in one of the largest international arms transfers since World War II. Hundreds of millions of dollars of weaponry has already been shipped.

Now, pressure is growing to ramp up the pace further, as Ukraine says it is running out of weapons and ammunition as it fights to blunt Russian advances and counterattack. Antitank and anti-aircraft missiles are in especially short supply, Ukrainian defense officials say. During this week's NATO summit and meeting of the European Union, President Biden is expected to press allies to give Ukraine more, particularly air defense systems, U.S. officials said.

Ukraine's ambassador to Britain, Vadym Prystaiko, on Wednesday said stocks of some key weapons could soon run out and that Ukrainian forces urgently needed long-range weaponry. "We didn't have enough in the first place. Running out of weaponry will be seen in the week to come," Mr. Prystaiko said in a television interview. "Tomorrow, President Zelensky will talk to NATO to see how we can replenish our stocks," he said.

The U.S. and its NATO allies have been sending Javelins, Stingers and other weapons to Ukraine to help the country defend itself from Russian attacks. WSJ's Shelby Holliday explains how some of these weapons work, and why experts say they're useful to Ukrainian forces. Photo: Ukrainian Defense Ministry Press/AFP via Getty Images

Western security officials say their strategy initially envisaged equipping a nascent Ukrainian insurgency recalling the transfer of weapons to mujahedeen fighters who defeated the Soviet Union in Afghanistan that would employ guerrilla tactics against Russian occupiers.

Instead, because Ukraine's military has managed to keep Moscow's forces at bay in much of the country, the task has become equipping a regular army engaged in a large-scale conventional war.

"The Ukrainians are expending a lot of ordnance, and this is more than we anticipated," said a Western security official. "We are trying to step up the flow of weapons to meet that new requirement and there are constant shortages."

Ukraine says keeping the flow moving is central to its war effort. NATO allies have debated which systems would provoke an escalation from Russia, ruling out fighter jets, for example.

While U.S. and European officials said they are moving as quickly as possible, some also fear that some of the weapons systems could end up in Russian hands or circulate for years on the

black market. Some European nations are reluctant to provide more arms they fear could fuel a war on the continent. And U.S. officials, in the run-up to the Feb. 24 invasion, said they didn't plan to support Ukraine with arms for a protracted period.

Meanwhile, Moscow has warned that it considers arms shipments legitimate targets. "Any cargo moving into Ukrainian territory which we believe is carrying weapons would be fair game," Foreign Minister Sergei Lavrov said last week.

Russia hit a Ukrainian military base near the Polish border with cruise missiles on March 13, killing at least 35 people. Russia's air force, however, doesn't control the skies over Ukraine and so far doesn't appear to have hit any arms consignments en route.

The main artery for the weapons transfer is the sleepy southern Polish town of Rzeszow. The local airport normally caters to budget airlines ferrying travelers from elsewhere in Europe. Now, passenger jets there are dwarfed by giant C-130 military transports. Patriot missile batteries stand guard near the runway.

Ground handlers pull cargoes covered in camouflage tarps from the bellies of planes. On a recent day, soldiers from the U.S. 82nd Airborne Division stood by the runway as other personnel swiftly unloaded a Turkish Gulfstream G450, which didn't appear on ordinary flight-tracking websites. Turkey has supplied armed drones that Ukraine has used to attack Russian armored columns and other targets.

The arrivals terminal was surrounded by military vehicles, shipping containers and mounds of equipment that stretched the length of several football fields. At the airport's northern perimeter, behind a row of trees, a line of trucks with Ukrainian plates waited to be loaded. American soldiers based next to a Holiday Inn shuttled back and forth into town to do shopping and pick up takeout. Pentagon officials said they weren't discussing the deployment in detail to the media.

Closer to the border, daylight convoys still pass through main frontier crossings but are increasingly supplemented by nighttime deliveries through border villages. For such shipments, "you're only using low-key civilian vehicles and trucks," said a British contractor.

"I don't know if I'm supposed to tell you," said Marek, a 61-year-old Polish construction worker who declined to give his surname and lives about 500 yards from the Ukrainian border. "It's kind of a secret, but at night lots of aid goes across." He said he regularly sees small convoys passing an ordinarily fenced-off border crossing nearby.

Not long after, Polish border guards riding an ATV over gravel roads intercepted a pair of Wall Street Journal reporters and encouraged them to leave.

Local officials say the increased military deployment is reassuring, but say they worry it could make Rzeszow a target. Polish farmers are putting land up for sale, nervous their property is too close to the front line. Last week, the town's mayor, Konrad Fijolek, told constituents to check the living conditions in bomb shelters built during the Cold War.

“We have to be ready for different scenarios: The Russian military is just across the border,” Mr. Fijolek said. “You never know whether they will launch rockets and whether they will land here.”

On Wednesday, German officials said they would deliver another 1,700 Strela antiaircraft missiles, after delivering 500 last week. The Soviet-made weapons, inherited from former East Germany, have been languishing in military depots for decades.

Berlin originally said it would send 2,700 pieces of the hand-held weapons, but around 500 proved to be dysfunctional. On Wednesday, Sweden said it would send 5,000 antitank weapons.

In the days after Russia’s invasion of Ukraine, the U.S. allotted \$350 million to fund weapons such as Stingers and Javelins to Ukraine, and finished delivering that tranche within the past week, U.S. defense officials said. Earlier this month, Congress approved another \$200 million of military assistance, and the Biden administration has said it would spend another \$800 million after that. The U.S. is expected to deliver 1,400 Stingers and 4,600 Javelins through this year’s funding requests.

Before the invasion, weapons manufacturers weren’t geared up to make antitank and antiaircraft arms at a wartime pace. While the U.S. had 13,000 Stingers in its stockpile before the invasion, there were no plans to produce more en masse, U.S. officials said. Militaries in Europe that have given their Stingers and antitank missiles to Ukraine now want to refill depleted stocks, creating competition for new units rolling off the assembly line.

“Ready-made stocks are not inexhaustible,” said a defense contractor in Poland. “It isn’t the arsenal of democracy where refrigerator plants are also making airplanes. No. There is a very limited number of production facilities. You can maybe speed up some stuff, but it’s not like you can suddenly open up two or three new production lines.”

Now, as the warfare appears to emulate World War II, defense contractors are racing to ramp up the supplies of antiaircraft and antitank weaponry and ammunition. Central European defense ministers say they have set up a hotline into Ukraine, so that President Volodymyr Zelensky’s military chiefs can order former Soviet equipment from their stocks.

The Czech Republic has given Kyiv’s Defense Ministry a list of \$500 million of gear in Czech warehouses, and says the U.S. has signaled its willingness to buy much of it, for onward donation to Ukraine. The items on the list range from ordinary machine gun ammunition to antiaircraft missiles capable of intercepting war planes at high altitudes, all of it ready to be delivered within four days of an order.

“The Ukrainians are choosing from it on a daily basis,” said Czech Deputy Defense Minister Tomáš Kopečný. Several times, he added, Russian operatives posing as European or American companies have tried to buy the weaponry, before it can be dispatched eastward into Ukraine.

“We have instructed all the companies in the Czech Republic just to produce at their maximum capacity, because the moment they roll it from the factory, we take it, and we ship it there,” he said.

Last week, German Foreign Minister Annalena Baerbock said her country had already hit the limit on how many weapons it could ship to Ukraine. A senior official in the Defense Ministry said Germany had plenty of weapons in its stocks it could send, but the real shortage was of political will.

“For 20 years, most Western countries were not investing enough in their own supply lines, their own militaries, and now we pay the price,” said Latvian Defense Minister Artis Pabriks.

### **34. NATO likely to approve more troops for its eastern flank, says Stoltenberg**

Reuters, 23 Mar 22, Sabine Siebold and John Chalmers

NATO will likely decide on Thursday to ramp up military forces on its eastern flank, the head of the alliance said, while also warning Russia against using nuclear weapons after its Feb. 24 invasion of Ukraine.

NATO has sharply increased its presence at the eastern border of the alliance, with some 40,000 troops spread from the Baltic to the Black Sea, and is seeking to deploy four new combat units in Bulgaria, Hungary, Romania, Slovakia.

"I expect leaders will agree to strengthen NATO's posture in all domains, with major increases in the eastern part of the alliance. On land, in the air and at sea," NATO chief Jens Stoltenberg told a news conference ahead of a NATO summit in Brussels on Thursday.

Putin sent troops into Ukraine in what he calls a "special military operation" to demilitarize and "denazify" Ukraine. Ukraine and the West say Putin launched an unprovoked war of aggression.

The additional multinational battlegroups come on top of four existing combat units, with a total of some 5,000 troops, deployed by NATO to the three Baltic states and Poland after Russia's annexation of Crimea in 2014.

Stoltenberg said the Ukraine crisis had shown that NATO must reset its deterrence and defense posture for the longer term, an issue NATO leaders are expected to discuss at their next regular summit at the end of June in Madrid.

"There is a new sense of urgency because we cannot take peace for granted," he told reporters.

NATO leaders are also set to agree additional aid for Kyiv, according to Stoltenberg, including equipment to help Ukraine protect against chemical, biological, radiological and nuclear threats.

He warned Russia against using nuclear, biological or chemical weapons in Ukraine, while stressing NATO's readiness to "protect and defend allies against any threat any time".

"Russia should stop this dangerous irresponsible nuclear rhetoric... Russia must understand that it can never win a nuclear war," he said, adding that any use of biological or chemical weapons would have "far-reaching consequences".

Stoltenberg also called on China to condemn Russia's war in Ukraine and to not provide "material support" for Moscow.

China has not condemned Russia's invasion, though it has expressed concern about the war. Chinese Vice Foreign Minister Le Yucheng said on Saturday that Western sanctions against Russia were getting "more and more outrageous".

"For NATO, it is of particular concern that China now, for the first time, has questioned some of the key principles for security, including the right for every nation in Europe to choose his own path," Stoltenburg said.

In a show of Western unity against the war in Ukraine, Brussels will also host a G7 and an EU summit on Thursday.

### **35. Blinken says U.S. assesses Russian forces committed "war crimes" in Ukraine**

CBS News, 23 Mar 22, Caroline Linton

Secretary of State Antony Blinken said Wednesday that the U.S. assesses that Russian forces have committed war crimes in Ukraine and will work to hold them accountable.

"Today, I can announce that, based on information currently available, the U.S. government assesses that members of Russia's forces have committed war crimes in Ukraine," he said in a statement Wednesday.

"We've seen numerous credible reports of indiscriminate attacks and attacks deliberately targeting civilians, as well as other atrocities," Blinken said. "Russia's forces have destroyed apartment buildings, schools, hospitals, critical infrastructure, civilian vehicles, shopping centers, and ambulances, leaving thousands of innocent civilians killed or wounded. Many of the sites Russia's forces have hit have been clearly identifiable as in-use by civilians."

Blinken cited reports of several incidents in besieged Mariupol, such as the bombing of a maternity hospital and a strike that hit a Mariupol theater, which Blinken said "clearly marked with the word 'дети' Russian for 'children' in huge letters visible from the sky."

Blinken said Russian President Vladimir Putin's forces used the same tactics in Grozny, Chechnya, and in Aleppo, Syria, "where they intensified their bombardment of cities to break the will of the people."

According to Ukrainian President Volodymyr Zelenskyy, some 100,000 civilians remain in Mariupol, "in inhuman conditions, under a full blockade, without food, without water, without medicine and under constant shelling, under constant bombardment," he said in a video address Tuesday.

"We are trying to organize stable humanitarian corridors for Mariupol residents, but almost all of our attempts, unfortunately, are foiled by the Russian occupiers, by shelling, or deliberate terror," Zelenskyy said.

The secretary of state's statement comes one day after the Defense Department said it had "seen clear evidence that over the last week or so the Russians have deliberately and intentionally targeted civilian infrastructure."

Blinken and President Biden are headed Wednesday to Brussels for a NATO summit on Ukraine. NATO chief Jens Stoltenberg said Zelenskyy will address world leaders gathering in Brussels Thursday for an extraordinary meeting of the alliance.

On Friday, they will head to Warsaw, Poland, to meet with Polish President Andrzej Duda.

Mr. Biden last week called Putin a "war criminal" for launching the attack in Ukraine.

### **36. Britain sending thousands more missiles to Ukraine**

Associated Press, 23 Mar 22

Britain will send thousands more missiles to Ukraine's government as Prime Minister Boris Johnson urged Western allies to boost the supply of military aid to Ukraine.

Johnson is traveling to Brussels on Thursday for talks with NATO and leaders of the Group of Seven. He is expected to provide further details of the new British aid during the visit, including the donation of 6,000 more missiles comprising anti-tank and high-explosive weaponry.

"The United Kingdom will work with our allies to step up military and economic support to Ukraine, strengthening their defenses as they turn the tide in this fight," Johnson said.

Britain has already sent more than 4,000 anti-tank weapons to Ukraine.

The U.K. government also says it is providing some 4 million pounds (\$5.3 million) in emergency funding to the BBC World Service to counter disinformation in Russia and Ukraine.

### **37. Romania's Prime Minister on how NATO can navigate this 'stark new reality'**

TIME, 23 Mar 22, Charlie Campbell

There are plenty of national heroes that are tricky for outsiders to properly appreciate. Even so, Romania's Vlad Țepeș, or Vlad the Impaler, takes some beating. A Wallachian prince from the 15th century, Vlad had a reputation for boiling babies and drinking blood, though his trademark was impaling a foe on a stake in the ground from anus to armpit, thus missing any major organs and prolonging death for up to an agonizing 48 hours. Following a battle against Ottoman

soldiers in 1462, Vlad left a screaming forest of impaled thousands as a warning to pursuing troops set on conquering his lands.

Barbaric as these acts certainly were, ask people in Romania's stately capital Bucharest today about Vlad's deeds and they will shrug and offer a standard reply: that's what happens if you invade a person's home. It is, of course, a sentiment that has been galvanized by the war launched by Russian President Vladimir Putin in neighboring Ukraine, where millions have fled indiscriminate bombing, more than 500,000 of them across the 400 mi. shared border into Romania.

Romanian Prime Minister Nicolae Ciucă may not endorse Vlad's methods but tells TIME that he shares the widely held appreciation for how he "played a major role in defending Europe and its values." There was, Ciucă insists in an exclusive written interview, more to the man whose family name, Dracula, inspired Irish novelist Bram Stoker's vampiric creation. "Beyond the military strategies always used for defense, never for the conquest of other territories, Romanian rulers were also brilliant diplomats, visionaries, peace-seekers."

The world needs such skills today. How to stop the "illegal, unprovoked and brutal aggression against Ukraine," as Ciucă, a former army general, describes it, is "the biggest test since the end of the Cold War," promising to "open a new chapter of European history." Ciucă says that NATO needs to radically broaden and embolden its mandate to meet this next generation threat.

On Thursday, Romania's prime minister will join U.S. President Joe Biden and other world leaders for an extraordinary NATO meeting and E.U. summit in Brussels. Biden's goal, White House spokeswoman Jen Psaki told reporters, "is to meet in person face-to-face and talk about and assess where we are at this point in the conflict." Ciucă, however, is blunter about the stakes, which are no less than "the future of the democratic world and the rules-based international order."

Even if few Americans might be able to find Romania on a map, the nation of 19 million is set to have a notable geostrategic role to help navigate the aftermath of Putin's invasion — what Ciucă calls a "stark new reality." Even under the rule of communist dictator Nicolae Ceaușescu, Romania was arguably the most independent and Western-looking of the Soviet satellite states, and that deep mistrust of Russian encroachment has only swelled since its 1989 democratic revolution.

Although most famous for its forested Transylvania region and picture-postcard medieval towns, Romania is also the E.U.'s leading grains exporter, whose potential to boost capacity could help mitigate global shortages owing to disruptions to Ukrainian production. It also has significant underutilized oil and gas reserves, which could go a small way to help wean Europe off its Russian energy dependence that now funds the Kremlin's war machine.

More immediately, Romanians have opened their hearts and homes to the influx of refugees: Church groups, civil society, businesses, and regular people have flocked to border crossings to offer a ride or box of groceries. "We don't just say we are good neighbors here," Ciucă says proudly. "We show it!"

Ciucă's resumé makes him serendipitously well suited for a conflict role, despite assuming the job during peacetime 4 months ago. Born in the tiny village of Plenița by the southern border with Bulgaria, he served as chief of Romania's armed forces from 2015 to 2019, and then Defense Minister from 2019 to 2021. His elevation to head of government in November was a messy, uninspiring affair: he emerged as the least objectionable compromise candidate between bickering factions. Even then, Ciucă had to fend off allegations that he plagiarized almost a third of his doctoral thesis. (He has denied it).

Yet it is Ciucă's close connections with the U.S. military that have proven "invaluable" given the present tumult, says a senior Western diplomat in Bucharest, who asked to remain anonymous due to official protocol. Ciucă served alongside U.S. forces in the wars of Iraq and Afghanistan, earning recognition in the International Hall of Fame at the U.S. Army War College, where he studied in 2006. This year marks 25 since the signing of Romania's Strategic Partnership with the U.S. "Security is probably the strongest pillar of the [U.S.-Romania] relationship," says the diplomat. "Our military and Romania's military are very interoperable. A lot of their officers have gone to our schools."

Romania has been a NATO member since 2004, joining the E.U. three years later. The country is welcoming thousands of troops from alliance members, including the U.S., France, Belgium and Portugal. As well as having the longest land border with Ukraine of any NATO state, Romania has a de facto maritime boundary with Russia since the 2014 annexation of Crimea. As such, Romania's role has swelled in terms of the collective defense of the Black Sea region, NATO's Eastern Flank and the whole Euro-Atlantic space, says Ciucă. "We are at the fulcrum of both the security and defense aspects of this crisis, but also of its tragic humanitarian dimension."

Ciucă's praise of the NATO alliance is perhaps unsurprising. He says his missions in Iraq and Afghanistan were "essential stepping stones" for Romania's U.S. and NATO-aligned security and defense posture. But while "both were difficult and complex," he explains, "they were nothing like the challenge represented by the unprovoked invasion of Ukraine by Russia. Hundreds of thousands of forces and the vast capabilities represent a threat of a different magnitude."

Ciucă belies the stereotype of the combat-hungry general. He stresses that NATO is a defensive alliance and says it does not serve Ukraine or anyone else to risk an even larger conflict. Ukrainian President Volodymyr Zelensky has repeatedly pleaded with the U.S. and NATO to enforce a no-fly zone to prevent Russia's aerial assault on his cities. Ciucă is full of praise for his counterpart—"as somebody that stared down the barrel of a weapon, I respect his courage and conviction," he says—though warns that a no-fly zone would necessitate direct conflict between Russia and NATO and would be a price too high. "However dangerous and odious Russia's actions are, NATO needs to avoid playing into an escalatory logic," he says.

That does not mean there should be inaction, however. The Ukraine war has served as a wake-up call to many NATO members, including Romania, which on March 1 boosted defense spending from 2% to 2.5% of GDP. Two days later, Poland unveiled a hike to 3% in 2023. And on Feb. 27, Germany surprised many by announcing an extra \$111 billion on defense in 2022, tripling its

annual budget. Other defense dawdlers like Italy and Spain are following suit. “Let’s be clear, defense starts at home,” Ciucă says.

It’s a shift in tenor welcomed by Romanians who have long sounded the alarm about Russia’s intentions. In a late 2020 poll, 30% of Romanian respondents said that Russia posed a direct threat to their country—one of the highest rates in Eastern Europe. “There’s been dissatisfaction with specific E.U. member states, like Germany and Italy, that have opposed the full range of sanctions against Russia, or that have over time been in favor of doing business with Russia and so propped up the Putin regime,” says Oana Popescu-Zamfir, director of the Bucharest-based Global Focus think tank.

Still, it’s unclear whether the newfound urgency is enough: Since 2000, Russia’s defense spending has increased by 183% and China’s by 495%. Ciucă says that NATO must rethink its Strategic Concept—setting out the bloc’s fundamental security tasks, challenges and opportunities—given this shift: the structure and elements of its posture from the Baltic to the Black Sea to face the new reality of a massive Russian troop deployment in Ukraine and Belarus. NATO also needs to better prepare for combat “in cyberspace and in space,” he says, urging investment in fields like quantum computing, artificial intelligence, and autonomous weapons.

But NATO also needs to rethink not only how, but also what it defends. Hybrid actions like covert influence lobbying lawmakers and buying influential sporting franchises and massive disinformation campaigns, as well as repeated cyber-attacks against E.U. and NATO countries, should be considered as part of a wider campaign against its citizens’ democratic values and principles and warrant a robust response, Ciucă says. Strengthening strategic communications, while combating malign influence campaigns, should be “an essential part of NATO’s adaptation,” says Ciucă.

It’s clear that Ciucă has NATO in his bones. Still, he can’t hide the frustration palpable among Eastern Europeans that warnings regarding Russian aggression weren’t taken seriously enough. In praising Zelensky, he says the Ukrainian president “provides now for the Ukrainians and Europe a stark contrast to the hesitations, willingness to eschew responsibilities and avoiding hard and difficult decisions that often characterized the West’s dealings with Russia.” The burning question for the world whether or not Russia’s gambit in Ukraine is successful is whether it’s possible to deal with Russia with Putin as leader. The Russian President’s willingness to target civilians, increasingly unhinged speeches railing at West-leaning “scum and traitors,” and threats to unleash nuclear war renders fulsome reengagement meaningless. “Normalization of relations with the world requires rebuilding trust,” says Ciucă. “Seeing the sort of Orwellian propaganda and unwillingness to negotiate even to ensure the safety of civilians leaves doubts as to that possibility in the near future.”

But the alternative, barring a palace coup or other extraordinary change of leadership in the Kremlin, is shunning Russia long-term. That, however, is also highly undesirable. Ciucă emphasizes that Russia had for years been a valued partner of the E.U., with institutions like the now suspended NATO-Russia council established to deepen security cooperation. “Russia is an important country. Russia is also a European country,” says Ciucă, emphasizing “profound and extensive” economic interactions. “Nobody wants to ostracize Russia.”

Still, Putin's actions leave few other options, Ciucă says. "An imperialist regime that operates on the logic of spheres of influence and limited sovereignty, that brutally invades neighboring countries, foments separatism and annexes neighboring countries' territory, curtails domestic and regional democracy, deploys hybrid actions against other countries, cannot be a respected or even trusted partner."

It's a burning quandary though perhaps one that can be tabled for now. More immediately, the question for Biden, Ciucă and other leaders in Brussels will be how to stop the bloodshed. Sanctions and supplying weapons may have stalled the Russian advance for now but every new escalation will bring calls to deepen involvement. "President Zelensky and the whole of Ukraine are very much doing their part," he says. "We must continue to do ours."

### **38. Russia's invasion of Ukraine sparks fierce debate in China**

Financial Times (UK), 23 Mar 22, Kathrin Hille

Chinese internet users called it a "proxy war": three weeks ago, two pensioners in a Shanghai Park got into a fight over the Ukraine conflict that left Russia-backing Shen Jianguo, 70, bleeding from the ear and trending on social media.

China's government has leaned towards Russia by backing Moscow's complaints about Nato expansion and refusing to call its actions an invasion. But while Beijing's censors are working hard to suppress any criticism of that position, the conflict has ignited heated controversy both among Chinese policy experts and the public.

Analysts say the debate shows the strains caused by a clash between alignment with Russia and long-avowed Chinese diplomatic principles as Beijing struggles to assess how the war will affect its interests.

"The discussions are pretty intense. There are a lot of different points of view on this, the debate is extremely diverse," said Zhao Tong, senior fellow at Carnegie Tsinghua Center in Beijing.

The fiercest arguments are raging about basic beliefs. "It is about right and wrong," said Yun Sun, a China foreign policy expert at the Stimson Center in Washington. "I am struck by how intense the debate is, not just among policy folks, but also among ordinary people."

Zhang Guihong, an international relations professor at Fudan University, said China needed to better balance its values and its interests.

"We have been leaning towards Russia. But there is a bottom line which we need to insist upon," he said, citing respect for sovereignty and territorial integrity, two principles China says guides its foreign policy.

"In international relations, there are two legal options to use force: one is a mandate from the UN Security Council, the other is self-defense," Zhang added. "Although Russia felt threatened, for

example by Nato expansion, that is a future threat, not a direct one that would justify self-defense.”

Five Chinese history professors have called on President Vladimir Putin to stop the war and declared sympathy with the Ukrainian people.

Separately, Hu Wei, vice-chair of a public policy research center under China’s central government, urged an end to support for Russia. “Cutting off from Putin and giving up neutrality will help build China’s international image and ease its relations with the US and the west,” Hu wrote.

However, such voices are in the minority and are quickly silenced. After publishing Hu’s call, the website of the US-China Perception Monitor, a project promoting mutual understanding between the two countries, was fully blocked in China for the first time.

Mainstream scholars and opinion leaders see the war as a plot instigated by the US to weaken Russia, strengthen Nato and make Europe more dependent on Washington again.

“Some people in China continue to advocate for us to follow the west in condemning and sanctioning Russia,” wrote Hu Xijin, the firebrand nationalist former editor-in-chief of Global Times, the tabloid state newspaper. “Such propositions are very childish.”

Zuo Dapei, an economist at the Chinese Academy of Social Sciences, justified Russia’s actions as “righteous” because they were aimed against Nato. “We, the Chinese people, should voice the strongest call for justice on behalf of all the oppressed peoples in the world: Nato should be disbanded. Down with Nato!” he wrote last week.

Beyond the ideological divides, Chinese scholars are engaged in a sober discussion about how the Ukraine war affects their country. “For the Chinese it is simple: This is not Chinese territory, this is not a Chinese war,” Sun said. “Everything on top of that is a cool calculation of what benefits or hurts China — it is a power-centric world view.”

China Strategy think-tank, a website backed by Beijing scholars, argued that the conflict creates a strategic opportunity for China. “The longer the fighting drags on, the more it will exhaust Europe, America and Russia, and overall this benefits China,” said the piece, which has since been taken down without explanation. Its authors argued that China should stand by and watch the war and could emerge as a mediator or even rule maker in a new order.

Others focus on the economic impact. Some economists argue Russia’s increased dependence on China due to international sanctions will make it a good source of cheap supplies of commodities such as potash, coal or meat. But others express deep concern about the damage sanctions will do.

“There are a lot of worries about the economic fallout,” said Tuvia Gering, a researcher at the Jerusalem Institute for Strategy and Security who focuses on Chinese foreign and security policy. “China has a lot on its plate with a very ambitious growth target, Covid, climate and geopolitical competition.”

The most hotly debated question is the long-term strategic outcome of the war. Some Chinese analysts are convinced that Europe, forced to increase defense spending, will evolve into a new geopolitical force more independent from the US. “There is the belief that in this situation Europe will need China more,” Zhao said. “I think it is a misjudgment.”

Chinese observers are equally divided on whether the war will preoccupy the US enough to undermine its efforts to counter China, or whether European countries’ return to a more muscular security posture will free up resources for the US to pursue its pivot to the Indo-Pacific.

“China’s assessment of the war is continuously evolving,” Zhao said. “People are realizing that the impact will be profound and lasting.”

### **39. Shabaab attacks international hub in Mogadishu where U.S. Embassy is located**

Long War Journal, 23 Mar 22, Andrew Tobin

On Wednesday, Al Shabaab conducted an attack against Halane camp near Aden Adde International Airport in Mogadishu. The camp houses the U.S. embassy, the UN Assistance Mission in Somalia (UNSOM), the headquarters for the African Union Mission in Somalia (AMISOM) and most foreign diplomats based in Mogadishu.

In the assault, two gunmen disguised as airport workers attempted to breach the base’s gates where they were confronted by security forces. These Shabaab gunmen, armed with small arms and hand grenades, reportedly killed six security forces, including five AMISOM peacekeepers and trainers, and injured an additional three police officers.

In a statement by spokesman Abdiasis Abu Musab, Shabaab claimed credit for the attack, asserting that their militants broke through checkpoints, shot multiple foreign AMISOM troops, and set fire to buildings within the base.

The group also claimed to have fired mortars into the base, targeting AMISOM buildings. The Al Qaeda affiliate claimed that the attack targeted international troops in an effort to drive them from Somalia. Shabaab has long opposed the presence of foreign troops in the country and sees their withdrawal as a precondition for taking control of the country, much like the Taliban’s stance in Afghanistan.

Somali security forces reported that the two militants were killed and that the attack was thwarted. However, Shabaab’s ability to inflict casualties on foreign troops within the well-defended Halane military base with only two gunmen is certainly cause for concern for the future of Somalia’s security. This attack in Mogadishu follows Shabaab’s major assaults last month across the city, demonstrating the group’s continued willingness and ability to strike secure points across the Somali capital.

[Return to top](#)

As the tragic war in Ukraine has now driven roughly 10 million from their homes and killed many thousands, with no end in sight and no real prospect of near-term victory for either side, it is increasingly necessary to focus on a possible peace plan.

Ukraine and Russia will have to agree on specifics, and at this point it is very difficult to know what either side would accept, but this war involves us all in one way or another, and springs in part from a disagreement about whether Ukraine should ever be allowed into NATO. As such, the U.S. has a big stake in this issue, and the Biden Administration should play a major role in helping the parties conceptualize a possible compromise.

The essence of any deal would presumably be that Ukraine forgo its aspirations to join NATO, that the Ukrainian governments as well as NATO formalize that commitment, and that Russia agree to a ceasefire as well as withdrawal of its forces from Ukrainian territory. All parties would also formally commit to uphold and promote the security of a neutral Ukraine. NATO and the European Union would convey the resolute message that if Russia again attacked, all of our economic sanctions against Russia and military assistance to Ukraine would snap back on.

Beyond these general principles, a number of additional ideas might be considered

**Territory.** It is tolerable, and probably inevitable, that Russia will insist on holding onto the Crimean Peninsula, given Crimea's role in Russian history and its importance for the Russian Navy. However, we in the West are not obliged to recognize this annexation dating back to 2014. Ukraine should be allowed to keep the issue alive in the future with Moscow, if it so chooses, perhaps proposing various types of dual citizenship and guaranteed access within this choice real estate. By contrast, the Donbas regions of eastern Ukraine should be returned to Ukraine, given the naked and violent Russian aggression that has since 2014 victimized this region though if Ukrainian President Volodymyr Zelensky were willing to modify borders in that region, we should not oppose the idea.

**U.N. peacekeepers.** To reduce the odds of renewed fighting, a U.N. monitoring mission (with troops from outside the Russia and NATO regions) could be deployed along whatever future borders are agreed upon. The Organization for Security and Cooperation in Europe should deploy monitors as well.

**U.N. presence.** Today, most U.N. agencies are home-based in New York, Italy, Switzerland, and Austria. The latter two countries are neutral, like Ukraine would itself remain in the future. Thus, it would be natural that some technical U.N. agencies (not security organizations per se) be moved to Ukraine in a demonstration of the confidence and commitment of the international community to Ukraine's sovereignty and as a symbolic recognition of its enduring neutrality.

**Rebuilding Ukraine.** The international community will need to help Ukraine rebuild after the war. Ideally, if improbably, Russia should make at least a token contribution to this effort itself, as one of the key members of the U.N. and the Organization for Security and Cooperation in Europe. Its financial contribution should not however be couched as reparations, since that would make the idea a non-starter in Moscow. Russia itself should not be eligible for any financial assistance.

**Ukraine's future military and political system.** Some Russians are insisting on a demilitarized Ukraine as part of any deal, as well as the end of the Zelensky government. The latter demand would be an unconscionable infringement on Ukraine's sovereignty. The former is also unacceptable; it would only give Putin the prospect of easily resuming the war at a future time. Ukraine cannot be a threat to Russia, given its size, and Putin knows it, so any Russian demand to demilitarize Ukraine demonstrates bad faith. That said, Ukraine's future military forces should resemble those of Finland or Switzerland or Sweden—with a modest active-duty force and a large reserve capability, primarily of infantry, that can resist any attack or attempt at occupation. This is not too different from Ukraine's current defense posture, so the goal should be to avoid new constraints, not change the basic situation dramatically.

**Military aid.** The U.S. can and should commit as part of any deal to limit our own military aid to Ukraine to the scale and character that preceded the war—several hundred million dollars a year on average—rather than to the much greater flow that we have been providing in recent weeks since the conflict began.

**Finland and Sweden.** These two countries have long been proud of their neutrality, but Putin's behavior has made them reconsider fundamentally whether they wish to join NATO, and a majority in each country now support the idea. Putin must accept that possibility; it is not his right to deny it, Finland and Sweden's choice even as they continue to mull whether such membership would in fact be a good idea.

**Sanctions.** Even though most sanctions imposed recently on Russia would be relaxed, then lifted, under this deal, Putin will have to accept that many western businesses will not choose to return to Russia for years to come, and western governments cannot force them to return. Such is the natural consequence of his military aggression, and he will have to live with it for some time to come. Still, such a prospect is far better for him than the kind of economic pain that will ensue if the war continues. With a deal, Russia will be able to resume most energy trade and most access to the international financial system.

Perhaps China and the U.S., often at each other's throats on the Ukraine issue and many others these days, can even collaborate on how to pursue and support this kind of peace process. President Xi Jinping may be best able to persuade Putin of the logic of this kind of approach—a framework that is ideal for no one, but the “least bad” of the realistic paths forward for most.

There is little further time to waste, before what is already a horribly tragic war becomes absolutely catastrophic.

**48. Ukraine's government is willing to make big concessions to end the war, but it doubts that Russia is negotiating in good faith**

The Economist, 23 Mar 22

At a secret location in a blacked-out high-rise in the suburbs of Kyiv, a senior Ukrainian intelligence officer shared what he claimed was Russia's invasion blueprint. The classified document, supposedly compiled before Russian troops crossed the border, envisages the complete takeover of Ukraine: seizing private property and taking over banks, transport, ports and elected institutions. There are provisions for a federation of puppet "peoples' republics" and perhaps their annexation into Russia if needed. There is a line about "denazifying" the Ukrainian education system, whatever that means.

Compared with this totalitarian wish list, peace negotiations with Russia appear to be headed to a more reasonable place. Russia is making four main demands: a declaration of Ukrainian neutrality; Ukraine's formal acceptance that Crimea, which Russia seized in 2014, is Russian territory and that the Donbas region in eastern Ukraine, which is controlled by separatists backed by Russia, is independent; the demilitarization of Ukraine; and relief for Russia from Western sanctions. Ukraine, for its part, appears ready to agree to several of these demands, including giving up on the prospect of NATO membership and accepting some sort of compromise on the occupied territories. Turkish and Israeli interlocutors are hailing what they describe as progress bringing the two sides together.

But there are two big sticking-points. The first is Russia's maximalist definition of demilitarization. It wants Ukraine to reduce its army to 50,000, a fifth of its current size. After a month of bloody sacrifice, few in Ukraine are anywhere near ready to agree to such a cut. The second is the Ukrainian belief that Vladimir Putin will not pull his forces from areas of eastern and southern Ukraine they have conquered, or are about to conquer. There is bitter experience here: Russian troops remained in Donbas despite being required to withdraw under the Minsk agreements of 2014-15.

Secondary discussions relate to the scope of new security guarantees for Ukraine. The talk has been of a formula involving the five permanent members of the UN Security Council plus Turkey; yet it is far from clear that the Western members (America, Britain and France) are ready to provide the unconditional guarantees that Ukraine is seeking. Both sides have agreed to keep the details of the talks secret. Ukraine's president, Volodymyr Zelensky, has already indicated that any proposed settlement would be subject to a referendum. The Kremlin's immediate response to this idea was to say that progress had become "slower and less substantive than needed". Russian approval for any deal would no doubt come more quickly, dependent as it is on the will of just one person. But it remains to be seen whether Mr Putin is really ready to compromise, or indeed whether his negotiators have a genuine mandate.

With a revealing pause and nervous laugh, the intelligence official said it was Russia's questionable sincerity that made him pessimistic about the prospects of the negotiations. They might offer the best opportunity to avoid the "nightmarish" scenario of a protracted conflict and "Syriaisation", or division of Ukraine into warring regions, he said. But Mr Putin did not appear to be taking the talks anywhere near as seriously as Ukraine is. That was clear in the "second tier" negotiation team he sent. "Moscow has always used peace talks to manipulate the agenda. Just like they have accused us of bombing our own people and homes." The official predicted

that Russia would continue an offensive to secure gains in the south and east of the country, completing its brutal siege of the port of Mariupol, before attempting to deny Ukraine access to the sea altogether with a renewed assault on Odessa.

Ukraine's negotiating position has been strengthened by Russia's surprisingly mediocre military performance. The level of professionalism has varied greatly: better in units facing Ukraine's elite forces in the south-east, much worse in the north and north-east and around Kyiv. There, Russian planners appear to have badly miscalculated, adopting a military posture that assumed minimal resistance. What is more, they failed to prepare adequately even for that rosy scenario. The intelligence officer said that Russia had gone ahead with its attack without even elementary co-ordination of its military units. It was a "miraculous" display of negligence, or sabotage, he said, which has had predictable consequences in the numbers of dead and injured.

Ukraine says Russia has lost more than 15,000 soldiers since the start of the conflict, a claim that many assume to be a wild exaggeration. But on March 21st a report in Komsomolskaya Pravda, a reliably pro-government Russian newspaper, suggested that as many as 9,861 Russian soldiers had died so far, with a further 16,153 wounded. That would put roughly 13% of the original invasion force out of action, and compares badly with the total losses endured by the Soviet Union during a decade of war in Afghanistan, when some 15,000 died. The Russian tabloid later claimed that it had been hacked and removed the numbers. But even if the report was not correct, the rate of attrition seems high enough to give the Kremlin an incentive to seek a negotiated peace.

Mr Zelensky has once again called for a face-to-face meeting with Mr Putin, who has so far turned down the chance to talk. Negotiations had to succeed, Mr Zelensky said, because the alternative was a "third world war". His intelligence officer was less optimistic, predicting that war would continue until Russian forces were "completely exhausted". Did Ukraine have the resources to bring that about? "We have to have them," he said. "Because we don't have an option. We want to stay alive."

#### **49. Ukraine can win with enough help**

Wall Street Journal, 23 Mar 22, Editorial Board

The public message out of Thursday's meeting of NATO leaders in Brussels is sure to be heavy on unity and resolve in support of Ukraine. But the unfortunate reality is that the democratic alliance confronting Vladimir Putin still isn't doing enough to ensure the Russian's defeat. And behind the scenes, some leaders would prefer if Volodymyr Zelensky agreed to a peace settlement sooner rather than later.

The stunning fact of this war is that the Ukrainians have rescued Europe and the U.S. as much as NATO is assisting Ukraine. Kyiv's stalwart resistance, at great human cost, has given the West a chance to stop the advance of Russian imperialism before it imperils NATO. The war has exposed the Russian military as weaker than our intelligence services and the Pentagon thought. Against all expectations, Ukraine may be winning.

Most surprising, the Ukrainian resistance has renewed a sense among the people of the West that their countries stand for something more than welfare-state ease and individual indulgence. Ukrainians are showing that freedom has a price, often a fearsome one.

Yet Western leaders still seem worried of what would happen if Ukraine won. That's especially true in the Biden Administration, which has taken many good steps—but typically under pressure from Congress or Europe, and typically late. President Biden is rightly outraged by Mr. Putin's brutality, and he calls him a war criminal, but he still seems afraid of doing what it takes to defeat him.

At the White House on Tuesday, national security adviser Jake Sullivan was asked twice if he and the President thought Ukraine could win. The best he could offer was the assurance that Russia is “never going to be able to subjugate the Ukrainian people” and a boilerplate commitment to Kyiv's sovereignty.

This cautious commitment extends to the slow pace of weapons delivery. Slovakia has offered its S-300 missile-defense system, which Ukraine says it needs, but it isn't clear when it will be delivered. News leaked on March 16 that the U.S. would finally deliver Switchblade loitering drones to counter an invasion that began on Feb. 24. But on Monday the Pentagon conceded the Switchblades still weren't on the ground in Ukraine. The U.S. should be emptying and restocking its weapons stockpiles on an emergency basis.

The same goes for assisting Western Europe as it copes with 3.5 million refugees and tries to wean itself from Russian oil and gas. The U.S. can accept many more Ukrainians for temporary protected status.

Europeans now understand the mistake they made on energy and are changing their policies. But Mr. Biden refuses to set aside his climate-change obsessions to address this world-changing crisis. His regulators are still targeting U.S. oil and gas production for slow extinction. He will have little credibility in persuading Germans and Italians to make sacrifices if he won't help them meet their energy needs now and next winter.

It's hard to resist the conclusion that Mr. Putin has succeeded in intimidating Mr. Biden and other leaders with his threats of nuclear escalation. This concern may justify the decision not to assist Ukraine with a NATO no-fly zone, which could require U.S. planes to attack Russian radars and missile defenses inside Russian territory.

But it shouldn't be an excuse for caution in doing everything short of that to help Ukrainians defeat Mr. Putin. If the nuclear threat works to stop NATO support now, the Russian will use it in the future against NATO proper. The essence of deterrence is credibility, which means persuading Mr. Putin that his resort to nuclear weapons in Ukraine will be met with a requisite response. The same goes for chemical or biological weapons.

Our fear is that Mr. Biden, and perhaps other NATO leaders, will lean on Mr. Zelensky to agree to let Ukraine become one more “frozen conflict” like Georgia. Russia would be able to keep the Ukrainian territory it occupies in return for no more bombing. Mr. Putin would be able to

consolidate control over those areas and rearm to threaten Ukraine again in the future. The NATO leaders could put that fear to rest if they said publicly that sanctions against Russia won't be lifted until its troops leave Ukraine.

We've said before that a country goes to war, hot or cold, with the President it has. We want Mr. Biden to lead and succeed in Ukraine. But he needs to lead more decisively—and with a goal not merely of military stalemate but of Ukrainian victory.

#### **50. Jordan King to visit Ramallah to ease tension ahead of Ramadan**

Asharq Al-Awsat, 23 Mar 22, Kifah Zboun

Jordan's King Abdullah II will visit Ramallah soon to meet Palestinian President Mahmoud Abbas in an attempt to contain a possible escalation during Ramadan month, according to the official Kan Channel.

Kan said that the monarch plans to come to Ramallah on the eve of Ramadan and meet Abbas, who will have returned from a visit to Germany.

The last time the Jordanian king visited Ramallah was five years ago.

The report stated that Amman fears new escalations and tensions during Ramadan, especially in Jerusalem.

The issue was a top priority on King Abdullah's agenda when he hosted Israeli Foreign Minister Yair Lapid last week in Amman.

"We agreed that we must work together to calm tensions and promote understanding, particularly in the lead-up to the month of Ramadan and Passover," Lapid said in a statement after the meeting.

A PA official asserted that the Authority has no interest in escalation, but Israel is pushing for it. He noted that Tel Aviv said it was trying to ensure calm, but nothing has been implemented on the ground.

The official stated that if Israel wanted to prevent any escalation, it must prevent Jews from entering the Temple Mount throughout Ramadan month, even though it will coincide with the Jewish Passover.

Israel tends to allow settlers to storm al-Aqsa Mosque during Ramadan month.

## **55. Different photos, same wounds: Images from Ukraine, Syria mirror war**

Anadolu Agency, 23 Mar 22, Ethem Emre Özcan and Seda Sevenscan

It has been 11 years since the civil war in Syria started, and images have now been reflecting same wounds and grief from the Russian war in Ukraine for a month. Besides military attacks, bombing and destruction, war is pain, tears and loss.

Anadolu Agency correspondents have compared similar photos from the two wars, revealing rescue of civilians from under rubble, destruction and migration, and the suffering of the elderly, children and women.

### **Destruction**

The images have drawn parallels between the destruction caused by Russian attacks targeting civilian settlements in Ukraine and devastation resulting from attacks by the Assad regime and its supporter Russia on the opposition-held cities in Syria.

Photos by Anadolu Agency photojournalist Andrea Carrubba capturing the destruction after the bombing of several settlements near the Ukrainian city of Kharkiv show similarity with the images shot by his colleague Salih Mahmud Leyla, who documented the ruin in Aleppo after an Assad regime attack.

### **Color of pain: Blood**

Covered by blood in her face after Russian airstrikes hit Kharkiv, the picture of Olena Kurilo has become the symbol of the Russia-Ukraine war. Her photo, shot by Anadolu Agency photojournalist Wolfgang Schwan, bears a great resemblance to the picture taken by Muhammed Said, another Anadolu Agency photojournalist, which shows a woman injured in an attack on civilians picking olives in a garden in Idlib.

After Russia declared a temporary cease-fire in five Ukrainian cities, civilians evacuated the city of Irpin, near the capital Kyiv.

An Anadolu Agency image of a Ukrainian soldier who holds a child in his lap to help him during the evacuation has attracted great attention. A similar photo was shot by Anadolu Agency in June 2015 during the Syrian civil war.

Fleeing the air bombardment of the Tel Abyad region by the US-led coalition forces in 2015 and the conflicts in the region, scores of Syrians migrated to Turkiye. An Anadolu Agency photo, which features an injured child during the escape who was taken to the Turkish side of the border immediately and given water by a Turkish soldier, made a splash.

Civilians, who wanted to leave the Ukrainian capital amid Russia's attacks, headed to the Kyiv Train Station. A photo by Anadolu Agency photojournalist Aytac Unal, which depicts a Ukrainian father's show of affection when he throws his baby in the air, brought to mind the story of a Syrian father and his baby whose life changed after Anadolu Agency covered their story.

The Syrian baby, Mohammad, born with congenital amputation, was brought to Turkiye as instructed by Interior Minister Suleyman Soylu, and returned to Idlib with prosthetic legs. The picture was taken by Muhammed Said.

### **Mothers flee war with babies**

While millions of civilians have left their countries and migrated to neighboring countries due to the war in Ukraine, millions of Syrians have taken refuge in neighboring countries, mainly in Turkiye, due to the civil war in Syria.

Anadolu Agency photo captured a photo of a helpless Ukrainian mother taking refuge in Poland with her baby in her arms. A similar picture was taken years ago when a mother with her baby in her arms reached the border crossing in Turkiye's southeastern Sanliurfa province as the war escalated in Syria.

### **Elders could not escape attacks**

After the war erupted in Ukraine, most of the civilians living in cities under the Russian attacks could not leave their homes. While some settlements were destroyed by Russia's attacks, many civilians escaped from being trapped under the rubble at the last moment.

When an apartment in Kharkiv was damaged in a Russian attack, an old man was taken from the damaged area with the help of two security guards, which Anadolu Agency documented.

A similar shot of this scene was taken years ago after Russia's attack on a neighborhood in Aleppo. An elderly citizen, who was injured in the attack of the Russian warplanes, was rescued from the rubble with the help of the locals.

### **56. Outcry raised as Afghan girls over grade 6 barred from school**

TOLOnews, 23 Mar 22

International organizations and diplomatic missions called to reopen all girls' schools across the country.

According to a previous announcement by the Ministry of Education and statements from a number of officials of the Islamic Emirate, all schools--for both boys and girls--were supposed to reopen on Wednesday, the first day of the school year in Afghanistan.

However, on Wednesday girls over grade 6 were not allowed to enter their classes. Only in Herat and Badghis provinces were all girls allowed to attend schools.

In some schools in Kabul, girls attended their classes for a few hours but later were told to return to their houses and wait until further notice.

### COVERAGE HIGHLIGHTS

---

1. The Associated Press led wire service reporting on Thursday's visit by China's foreign minister to Afghanistan. Wang Yi met with Taliban leaders "to discuss various issues including the extension of political relations, economic, and transit cooperation." The meeting was characterized by media as adding legitimacy to the Taliban government while western nations continue to press the group on its human rights record.
2. Foreign Policy magazine and Pakistan media focused on the beginning of a debate in Pakistan's Parliament today that will result in a no-confidence vote being taken concerning Prime Minister Khan. A protest against the debate is scheduled Sunday, and media expect violence between pro- and anti-Khan supporters.
3. ABC News quoted President Biden from a press briefing following NATO and EU meetings Thursday concerning Ukraine. The president said NATO would respond if he Russia uses chemical weapons, but the "nature of the response would depend on the nature of the use." Biden also discussed humanitarian and military aid to Ukraine and reaffirmed his support for NATO's Article 5 which states an attack on one member is an attack on all members.
4. The New York Times claimed a leaked document has revealed that China and the Solomon Islands are close to signing a security agreement that could lead to Chinese troops and warships stationed on the islands. If signed, the deal would give Prime Minister Sogavare of the Solomon Islands the ability to call on China for protection of his own government while granting China a base of operations between the United States and Australia that could be used to block shipping traffic across the South Pacific.

### **1. China's foreign minister makes surprise stop in Afghanistan**

Associated Press, 24 Mar 22, Kathy Gannon

China's foreign minister made a surprise stop in Kabul on Thursday to meet Afghanistan's Taliban rulers, even as the international community fumes over the hard-line movement's broken promise a day earlier to open schools to girls beyond the sixth grade.

### **2. Imran Khan faces his biggest political test yet**

Foreign Policy, 24 Mar 22, Michael Kugelman

Galvanized by rising public discontent over skyrocketing inflation and economic malaise, Pakistan's opposition is bringing a no-confidence vote to parliament to try to oust Khan. Although the special parliamentary session is scheduled to begin Friday, the vote will likely take place in the following days.

### **3. US, NATO 'would respond' if Putin used chemical weapons in Ukraine, Biden says**

ABC News, 24 Mar 22, Libby Cathey

President Joe Biden took questions at a news conference at NATO headquarters in Brussels, addressing warnings of a possible chemical weapons attack by Russia in Ukraine, after meeting with European leaders Thursday and following Ukraine's President Zelenskyy pleading with them to do more to help.

### **4. China and Solomon Islands draft secret security pact, raising alarm in the Pacific**

New York Times, 24 Mar 22, Damien Cave

A leaked document has revealed that China and the Solomon Islands are close to signing a security agreement that could open the door to Chinese troops and naval warships flowing into a Pacific Island nation that played a pivotal role in World War II.

### **20. Up to 60% failure rate for some Russian missiles used in Ukraine, U.S. officials say**

Reuters, 24 Mar 22, Phil Stewart

The United States assesses that Russia is suffering failure rates as high as 60% for some of the precision-guided missiles it is using to attack Ukraine, three U.S. officials with knowledge of the intelligence told Reuters.

### **21. Ukraine's plea for Soviet-era anti-aircraft systems goes unanswered**

Financial Times (UK), 24 Mar 22, Felicia Schwartz, Andy Bounds and Eleni Varvitsioti

US president Joe Biden's promise to supply Ukraine with Soviet-era long-range missile systems has become bogged down in difficulties with sourcing and moving the equipment, according to US and western officials.

### **22. U.K. says Russian mercenary group aims to assassinate Ukraine's president**

Wall Street Journal, 24 Mar 22, Max Colchester

The U.K. government said that Russian mercenary company Wagner Group is being used by Russia to try to assassinate Ukrainian President Volodymyr Zelensky.

**23. China threat to Taiwan highlighted by Ukraine war, warns US admiral**

Financial Times (UK), 25 Mar 22, Demetri Sevastopulo

Russia's invasion of Ukraine has underscored the serious threat that China poses to Taiwan as its military ratchets up pressure on the island, the top US military commander in the Indo-Pacific region has warned.

**24. China's push to isolate Taiwan demands U.S. action, report says**

New York Times, 24 Mar 22, Edward Wong and Amy Qin

The United States should organize a diplomatic campaign among partner nations to push back against China's increasingly forceful efforts to shut Taiwan out of United Nations agencies and other international organizations, according to a new report.

**25. Shabaab kills dozens in twin suicide bombings targeting Somalia's election process**

Long War Journal, 24 Mar 22, Caleb Weiss and Andrew Tobin

On March 24, just one day after Al Shabaab launched an assault against the Halane military base in Mogadishu, the terrorist organization conducted two suicide bombings in the central Somali town of Beledweyne, the capital of Somalia's Hiraaan region. The twin blasts left at least 48 people dead, including two parliamentary candidates, and dozens more wounded.

**26. Ethiopia declares 'Humanitarian Truce' in war-ravaged Tigray region**

New York Times, 24 Mar 22, Abdi Latif Dahir and Simon Marks

Ethiopia's government on Thursday announced what it called an immediate "humanitarian truce" with forces it has been fighting for 17 months in the northern Tigray region, where millions are hungry and food aid has not been delivered since December.

**27. China foreign minister arrives in India for visit**

Associated Press, 24 Mar 22, Ashok Sharma

Chinese Foreign Minister Wang Yi arrived in the Indian capital on Thursday for his visit in the past two years, after troops from the two countries engaged in a tense faceoff and occasional clashes along their disputed border, an Indian official said.

**28. Kim Jong Un oversees launch of new ICBM, urging defiance of U.S.**

Bloomberg, 24 Mar 22, Jessica Park

Kim Jong Un oversaw the launch of a new, larger intercontinental ballistic missile, state media confirmed, as the North Korean leader ordered the nation to prepare for further confrontation with the U.S.

---

ANALYSIS/COMMENTARY

---

**29. Russia's War has changed the Iran nuclear deal calculus**

Bloomberg, 24 Mar 22, Jonathan Tirone and Daniel Flatley

Russia's war on Ukraine is reshuffling Middle East diplomacy and forcing the U.S. to reassess the political costs of reviving the 2015 nuclear accord with Iran.

### **30. Why the U.S. was wrong about Ukraine and the Afghan War**

New York Times, 24 Mar 22, Julian E. Barnes

Ukrainian citizens learned to make Molotov cocktails from government public service announcements, then recorded themselves setting Russian armored vehicles on fire. Ukraine's soldiers waited in ambush and fired Western-provided missiles at Russian tanks. The country's president recorded messages from the streets of his capital, urging his country to fight back against the invaders.

### **31. Mohammed bin Salman has leverage on Biden—and is using it**

Foreign Policy, 24 Mar 22, Anchal Vohra

The sanctions imposed on Russia after its invasion of Ukraine caused havoc in global energy markets. Western capitals panicked over how to contain the price of oil as it climbed to nearly \$140 a barrel and how to wean themselves off Russian supplies. The United States and the United Kingdom, both of which announced bans on the purchase of Russian oil, rushed to convince their traditional allies to open their taps and reduce global oil prices.

### **32. Putin's Afghanistan: Ukraine and the lessons of the Soviets' Afghan War**

Foreign Affairs, 24 Mar 22, Milton Bearden

As Russian President Vladimir Putin's invasion of Ukraine has progressed, it is clear that almost nothing has gone according to plan. Far from being greeted as liberators, Russian forces have been treated as hated enemies; instead of quickly capitulating, the Ukrainians have shown they are determined to stop the Russian advance and fight at all costs.

### **33. How Russia is using tactics from the Syrian playbook in Ukraine**

The Guardian, 24 Mar 22, Emma Graham-Harrison and Joe Dyke

As Russian strikes reduce Ukrainian cities to ruin – killing, injuring and terrorizing thousands of civilians – comparisons have been made with the second world war, but there was a much more recent precedent. The tactics, and even some of Russia's soldiers, have come direct from the civil war in Syria – which Moscow joined in 2015 to support President Bashar al-Assad.

### **34. The West is rash to assume the world is on its side over Ukraine**

Financial Times, 24 Mar 22, Edward Luce

One of the most frequent lines heard in Washington is that Russia is now globally isolated with China being the key prevaricator. America risks being seduced by its own public relations. The world's reaction to Russia's invasion of Ukraine is far more complex than that. Since February 24, the west has been galvanized into showing more unity than it has in years. Yet most of the world is on the sidelines waiting to see which way it goes.

### **35. The Arab World isn't just silent on China's crackdown on Uighurs. It's complicit**

TIME, 24 Mar 22, Bradley Jardine

As China deepens relations with Saudi Arabia in the wake of Russia's invasion of Ukraine, the Uighur diaspora finds itself in the crosshairs. Riyadh is preparing to deport two Uighurs back to China's western province of Xinjiang, where they will almost certainly be detained for "re-education" in its vast network of concentration camps for the region's Turkic inhabitants. Uighurs in Xinjiang face human rights violations ranging from arbitrary detention and torture to sexual assault and forced sterilization.

### **36. What US intelligence got wrong on Ukraine**

The Hill, 24 Mar 22, Michael O'Hanlon

U.S. intelligence agencies are rightly receiving considerable praise for correctly forecasting the Russian invasion of Ukraine. Through a combination of satellite surveillance, monitoring of social media, and other sources, they read Russian President Vladimir Putin's mind several weeks before the conflict began on Feb. 24 — and prevented him from controlling the narrative about the true causes of the war.

### **37. How the Ukraine war could go nuclear**

Politico, 24 Mar 22, Bryan Bender

Not since the Cold War has the specter of nuclear war hung so heavily over a president's crisis diplomacy. As President Joe Biden meets with fellow NATO leaders, calls for a ceasefire in Ukraine are growing more urgent than ever — to alleviate the widespread human suffering but also to dial back what veterans of nuclear planning consider an alarming potential for it to spiral into a clash of atomic superpowers.

### **38. The naval response to the war in Ukraine**

Wall Street Journal, 24 Mar 22, Arthur Herman

Most proposals for military aid to Ukraine involve help from the air, such as establishing a Berlin-style airlift, flying in warplanes from Poland, and creating a no-fly zone over Ukrainian territory. But it would be a serious blunder to neglect the naval aspect of the conflict. Russia certainly hasn't. According to the Times of London, recent intelligence indicates that Russia has a fleet of warships ready to launch an amphibious assault on Odessa, the last major Ukrainian seaport not in Russian hands or under Russian siege.

### **39. Putin doesn't realize how much warfare has changed**

The Atlantic, 24 Mar 22, Antony Beevor

Otto von Bismarck once said that only a fool learns from his own mistakes. "I learn from other people's," the 19th-century German chancellor said. Astonishingly, the Russian army is repeating the past mistakes of its Soviet predecessor. In April 1945, Marshal Georgy Zhukov, under intense pressure from Stalin, sent his tank armies into Berlin without infantry support. Vladimir Putin's forces not only made the same error; they even copied the way their forebears had attached odd bits of iron—including bed frames—to their tanks' turrets in the hopes that the added metal would detonate anti-tank weapons prematurely. This did not save the Russian tanks. It simply increased their profile and attracted Ukrainian tank-hunting parties, just as the Soviet tanks in Berlin had drawn groups of Hitler Youth and SS, who attacked them with Panzerfausts.

#### **40. I'm the Prime Minister of Estonia. Putin Can't Think He's Won This War.**

New York Times, 24 Mar 22, Kaja Kallas

To anyone who lived under Soviet occupation, reports from Ukraine replay scenes we thought we would never see again. The bombing of civilians and the wanton destruction of buildings recall the carnage unleashed on the European continent by Hitler and Stalin. In Mariupol, a port city subjected to a brutal, horrifying siege, residents are reportedly being deported to faraway places in Russia where an uncertain fate awaits them.

#### **41. What is the thinking behind Israel's Ukraine balancing act?**

Daily Telegraph (UK), 24 Mar 22, Con Coughlin

The emergence of Israeli Prime Minister Naftali Bennett as a key interlocutor in trying to resolve the Ukraine crisis has much to do with Israel's enduring concerns about Iran's malign activities in the Middle East.

#### **42. Abbas is destroying democracy to ensure his successor supports Israel**

Foreign Policy, 24 Mar 22, Dalia Hatuqa

On Feb. 8, videos began to emerge on social media of an incident that had taken place earlier that day in Nablus, the second largest Palestinian city in the occupied West Bank. Shaky mobile phone footage showed a shared taxi and a gray van near a silver car, with bullet holes piercing the car's windshield. The driver of the silver car was slumped over, his bloodied passenger sitting lifelessly next to him as a third man lay across the back seat. All three Palestinian men were dead, their car riddled with more than 80 bullets.

---

#### **43. Blinken to visit Israel, West Bank, Morocco and Algeria**

Al Jazeera, 24 Mar 22

US Secretary of State Antony Blinken will visit Israel, the occupied West Bank, Morocco and Algeria in the coming days, the US Department of State has announced, to discuss regional issues as well as the Russian invasion of Ukraine.

#### **44. Saudi Arabia, US conclude series of joint Air Force exercises**

Al Arabiya, 24 Mar 22

The Royal Saudi Air Force and its United States counterpart have concluded a series of joint exercises, the official Saudi Press Agency (SPA) reported on Wednesday.

#### **45. Outrage as Iran's Revolutionary Guards display weapons at Doha show**

Arab News, 24 Mar 22

Iran's Islamic Revolutionary Guard Corps has caused outrage by displaying missile models and other weapons at a defense show in Qatar in which the US also took part.

**46. Blinken to meet Abu Dhabi Crown Prince during trip to Morocco: State Department**  
Al Arabiya, 24 Mar 22

US Secretary of State Antony Blinken will meet with Abu Dhabi Crown Prince Sheikh Mohammed bin Zayed next week as he makes stops in Israel, Palestine, Morocco and Algeria, the State Department said Thursday.

---

**47. Iran considers joining Russian financial messaging system to bypass Swift**  
The National, 24 Mar 22

Iran is considering joining Russia's financial messaging system to bypass the Swift interbank system, after a number of Russian banks were cut off from the international payment messaging platform as part of western sanctions imposed on Moscow following its invasion of Ukraine.

**48. BBC complains over Iran 'rape and death threats' to women journalists**  
The National, 24 Mar 22

The BBC has sent a new complaint about Iran to the United Nations after women journalists allegedly received death threats and were targeted with smears about their private lives.

---

IRAQ

---

**49. Iraq's Sadr forms 'save the nation' alliance to push for government formation**  
The National, 24 Mar 22

Iraqi cleric Moqtada Al Sadr announced a new parliamentary bloc on Thursday and nominated Rebar Ahmed Khalid for the presidency and Mohammed Jaafar Al Sadr for prime minister.

**50. All eyes on Saturday's parliamentary session as Iraqi presidential post deadline looms**  
Rudaw, 24 Mar 22, Julian Bechocha

Iraq's two biggest parliamentary alliances: Save the Homeland Alliance and the Coordination Framework are at loggerheads over the position of president of Iraq as Saturday is set as the date when parliament will convene to elect a new president. However, the Coordination Framework's threats of boycotting the session have cast a shadow of uncertainty over its success.

SYRIA

---

**51. Ukraine war allows UAE to bring Syria's Assad in from the cold**  
Al Jazeera, 24 Mar 22, Giorgio Cafiero

Since its military intervention in the Syrian civil war in September 2015, one of Russia's major foreign policy goals has been to convince Gulf Arab monarchies to come to terms with the survival of Syrian President Bashar al-Assad's regime, and the reacceptance of its "legitimacy".

### **52. Syrian opposition says UN must take firmer stance towards Syria to end stand-off**

The National, 24 Mar 22, Mina Aldroubi

The UN must take a "firmer stance" and become "less diplomatic" when dealing with the Syrian regime to end the crisis, an opposition spokesman told The National, as constitutional talks kicked off in Geneva this week.

### **53. Russia to "retreat" in Syria and the reason is Ukraine**

Syrian Observatory for Human Rights, 24 Mar 22

The Syrian Observatory for Human Rights revealed, on Wednesday, the "regression" of Russian strikes in Syria, due to the war in Ukraine.

## ANALYSIS/COMMENTARY

---

### **61. What caused the Taliban's cruel U-turn on girls' education?**

The National, 24 Mar 22, Editorial Board

In November 2020, at the height of the Covid-19 pandemic, UNICEF, the UN children's fund, warned that prolonged school closures and other disruptions to daily life put "the future of an entire generation at risk". The rest of the world's children are back at school, with the exception of schoolgirls in Afghanistan, whose futures are put at risk not by a global pandemic, but by the parochialism of their new leaders at home.

### **62. Why is Iran's foreign minister in Syria?**

Jerusalem Post, 24 Mar 22, Seth J. Frantzman

Iran's Foreign Minister Hossein Amirabdollahian left for Damascus, the capital of Syria, at the head of a delegation of Foreign Ministry officials this week. Iranian media reported on the trip. It was therefore not some kind of secret. It comes after the Syrian regime leader Bashar Assad visited the United Arab Emirates.

### **63. The Iraq crisis, an opportunity for change**

Asharq al-Awsat, 24 Mar 22, Rebar Ahmed

The presidential elections in Iraq come following a difficult reform path, which was undertaken by the political and social actors since the start of the largest protest movement in the country, the early parliamentary elections, and the convening of Parliament.

### COVERAGE HIGHLIGHTS

---

- 1) The Associated Press led wire service reporting on Thursday's visit by China's foreign minister to Afghanistan. Wang Yi met with Taliban leaders "to discuss various issues including the extension of political relations, economic, and transit cooperation." The meeting was characterized by media as adding legitimacy to the Taliban government while western nations continue to press the group on its human rights record.
- 2) Foreign Policy magazine and Pakistan media focused on the beginning of a debate in Pakistan's Parliament today that will result in a no-confidence vote being taken concerning Prime Minister Khan. A protest against the debate is scheduled Sunday, and media expect violence between pro- and anti-Khan supporters.
- 3) ABC News quoted President Biden from a press briefing following NATO and EU meetings Thursday concerning Ukraine. The president said NATO would respond if he Russia uses chemical weapons, but the "nature of the response would depend on the nature of the use." Biden also discussed humanitarian and military aid to Ukraine and reaffirmed his support for NATO's Article 5 which states an attack on one member is an attack on all members.
- 4) The New York Times claimed a leaked document has revealed that China and the Solomon Islands are close to signing a security agreement that could lead to Chinese troops and warships stationed on the islands. If signed, the deal would give Prime Minister Sogavare of the Solomon Islands the ability to call on China for protection of his own government while granting China a base of operations between the United States and Australia that could be used to block shipping traffic across the South Pacific.

#### TOP NEWS

---

##### **1. China's foreign minister makes surprise stop in Afghanistan**

Associated Press, 24 Mar 22, Kathy Gannon

China's foreign minister made a surprise stop in Kabul on Thursday to meet Afghanistan's Taliban rulers, even as the international community fumes over the hard-line movement's broken promise a day earlier to open schools to girls beyond the sixth grade.

## **2. Imran Khan faces his biggest political test yet**

Foreign Policy, 24 Mar 22, Michael Kugelman

Galvanized by rising public discontent over skyrocketing inflation and economic malaise, Pakistan's opposition is bringing a no-confidence vote to parliament to try to oust Khan. Although the special parliamentary session is scheduled to begin Friday, the vote will likely take place in the following days.

## **3. US, NATO 'would respond' if Putin used chemical weapons in Ukraine, Biden says**

ABC News, 24 Mar 22, Libby Cathey

President Joe Biden took questions at a news conference at NATO headquarters in Brussels, addressing warnings of a possible chemical weapons attack by Russia in Ukraine, after meeting with European leaders Thursday and following Ukraine's President Zelenskyy pleading with them to do more to help.

## **4. China and Solomon Islands draft secret security pact, raising alarm in the Pacific**

New York Times, 24 Mar 22, Damien Cave

A leaked document has revealed that China and the Solomon Islands are close to signing a security agreement that could open the door to Chinese troops and naval warships flowing into a Pacific Island nation that played a pivotal role in World War II.

## MIDDLE EAST

---

### **13. Qatar will stand 'in solidarity' with European countries during energy crisis**

CNN, 24 Mar 22, Becky Anderson, Mostafa Salem and Adam Pourahmadi.

Qatar will stand "in solidarity with Europe" and will keep natural gas flowing there, even if other customers are willing to pay more, Qatari Energy Minister Saad Al Kaabi told CNN's Becky Anderson in an exclusive interview on Thursday.

### **14. Blinken to Mideast as Ukraine war complicates US diplomacy**

Associated Press, 24 Mar 22, Matthew Lee

Secretary of State Antony Blinken will travel to the Mideast and North Africa next week as the Biden administration strives to keep allies and partners united in opposition to Russia's war in Ukraine, the State Department said Thursday.

### **15. Court charges Lebanon's Geagea over Beirut violence**

Reuters, 24 Mar 22

A Lebanese military court has charged Christian politician Samir Geagea over deadly clashes in Beirut last October, local media, as well as a judicial source, said, in a move that could stoke political tension two months before parliamentary elections.

### **16. Ukraine war could bring loss of aid, worsen food scarcity in Lebanon**

UPI, 24 Mar 22, Dalal Saoud

The Russian war in Ukraine has brought fears that food will become more scarce and life-saving humanitarian assistance could disappear from cash-strapped Lebanon, whose population is sinking deeper into poverty.

## NATIONAL SECURITY/DEFENSE NEWS

---

### **17. Biden sticks with longstanding U.S. policy on use of nuclear weapons amid pressure from allies**

Wall Street Journal, 24 Mar 22, Michael R. Gordon

President Biden, stepping back from a campaign vow, has embraced a longstanding U.S. approach of using the threat of a potential nuclear response to deter conventional and other nonnuclear dangers in addition to nuclear ones, U.S. officials said Thursday.

### **18. U.S. charges 4 Russian government workers with hacking energy sector**

Washington Post, 24 Mar 22, Devlin Barrett

The U.S. Justice Department fired another legal salvo against Russia on Thursday, announcing indictments against four Russian government employees for an alleged hacking campaign targeting the energy sector that lasted for years and targeted computers in 135 countries.

### **19. US, allies working to provide anti-ship missiles to Ukraine**

The Hill, 24 Mar 22, Jordan Williams

The U.S. and allies are working to send anti-ship missiles to Ukraine as it scrambles to bolster up Kyiv's ability to defend itself against Russia's invasion.

---

## ADJACENT AORs

---

### **20. Up to 60% failure rate for some Russian missiles used in Ukraine, U.S. officials say**

Reuters, 24 Mar 22, Phil Stewart

The United States assesses that Russia is suffering failure rates as high as 60% for some of the precision-guided missiles it is using to attack Ukraine, three U.S. officials with knowledge of the intelligence told Reuters.

### **21. Ukraine's plea for Soviet-era anti-aircraft systems goes unanswered**

Financial Times (UK), 24 Mar 22, Felicia Schwartz, Andy Bounds and Eleni Varvitsioti

US president Joe Biden's promise to supply Ukraine with Soviet-era long-range missile systems has become bogged down in difficulties with sourcing and moving the equipment, according to US and western officials.

### **22. U.K. says Russian mercenary group aims to assassinate Ukraine's president**

Wall Street Journal, 24 Mar 22, Max Colchester

The U.K. government said that Russian mercenary company Wagner Group is being used by Russia to try to assassinate Ukrainian President Volodymyr Zelensky.

**23. China threat to Taiwan highlighted by Ukraine war, warns US admiral**

Financial Times (UK), 25 Mar 22, Demetri Sevastopulo

Russia's invasion of Ukraine has underscored the serious threat that China poses to Taiwan as its military ratchets up pressure on the island, the top US military commander in the Indo-Pacific region has warned.

**24. China's push to isolate Taiwan demands U.S. action, report says**

New York Times, 24 Mar 22, Edward Wong and Amy Qin

The United States should organize a diplomatic campaign among partner nations to push back against China's increasingly forceful efforts to shut Taiwan out of United Nations agencies and other international organizations, according to a new report.

**25. Shabaab kills dozens in twin suicide bombings targeting Somalia's election process**

Long War Journal, 24 Mar 22, Caleb Weiss and Andrew Tobin

On March 24, just one day after Al Shabaab launched an assault against the Halane military base in Mogadishu, the terrorist organization conducted two suicide bombings in the central Somali town of Beledweyne, the capital of Somalia's Hiraa region. The twin blasts left at least 48 people dead, including two parliamentary candidates, and dozens more wounded.

**26. Ethiopia declares 'Humanitarian Truce' in war-ravaged Tigray region**

New York Times, 24 Mar 22, Abdi Latif Dahir and Simon Marks

Ethiopia's government on Thursday announced what it called an immediate "humanitarian truce" with forces it has been fighting for 17 months in the northern Tigray region, where millions are hungry and food aid has not been delivered since December.

**27. China foreign minister arrives in India for visit**

Associated Press, 24 Mar 22, Ashok Sharma

Chinese Foreign Minister Wang Yi arrived in the Indian capital on Thursday for his visit in the past two years, after troops from the two countries engaged in a tense faceoff and occasional clashes along their disputed border, an Indian official said.

**28. Kim Jong Un oversees launch of new ICBM, urging defiance of U.S.**

Bloomberg, 24 Mar 22, Jessica Park

Kim Jong Un oversaw the launch of a new, larger intercontinental ballistic missile, state media confirmed, as the North Korean leader ordered the nation to prepare for further confrontation with the U.S.

### **29. Russia's War has changed the Iran nuclear deal calculus**

Bloomberg, 24 Mar 22, Jonathan Tirone and Daniel Flatley

Russia's war on Ukraine is reshuffling Middle East diplomacy and forcing the U.S. to reassess the political costs of reviving the 2015 nuclear accord with Iran.

### **30. Why the U.S. was wrong about Ukraine and the Afghan War**

New York Times, 24 Mar 22, Julian E. Barnes

Ukrainian citizens learned to make Molotov cocktails from government public service announcements, then recorded themselves setting Russian armored vehicles on fire. Ukraine's soldiers waited in ambush and fired Western-provided missiles at Russian tanks. The country's president recorded messages from the streets of his capital, urging his country to fight back against the invaders.

### **31. Mohammed bin Salman has leverage on Biden—and is using it**

Foreign Policy, 24 Mar 22, Anchal Vohra

The sanctions imposed on Russia after its invasion of Ukraine caused havoc in global energy markets. Western capitals panicked over how to contain the price of oil as it climbed to nearly \$140 a barrel—and how to wean themselves off Russian supplies. The United States and the United Kingdom, both of which announced bans on the purchase of Russian oil, rushed to convince their traditional allies to open their taps and reduce global oil prices.

### **32. Putin's Afghanistan: Ukraine and the lessons of the Soviets' Afghan War**

Foreign Affairs, 24 Mar 22, Milton Bearden

As Russian President Vladimir Putin's invasion of Ukraine has progressed, it is clear that almost nothing has gone according to plan. Far from being greeted as liberators, Russian forces have been treated as hated enemies; instead of quickly capitulating, the Ukrainians have shown they are determined to stop the Russian advance and fight at all costs.

### **33. How Russia is using tactics from the Syrian playbook in Ukraine**

The Guardian, 24 Mar 22, Emma Graham-Harrison and Joe Dyke

As Russian strikes reduce Ukrainian cities to ruin—killing, injuring and terrorizing thousands of civilians—comparisons have been made with the second world war, but there was a much more recent precedent. The tactics, and even some of Russia's soldiers, have come direct from the civil war in Syria—which Moscow joined in 2015 to support President Bashar al-Assad.

### **34. The West is rash to assume the world is on its side over Ukraine**

Financial Times, 24 Mar 22, Edward Luce

One of the most frequent lines heard in Washington is that Russia is now globally isolated—with China being the key prevaricator. America risks being seduced by its own public relations. The world's reaction to Russia's invasion of Ukraine is far more complex than that. Since

February 24, the west has been galvanized into showing more unity than it has in years. Yet most of the world is on the sidelines waiting to see which way it goes.

### **35. The Arab World isn't just silent on China's crackdown on Uighurs. It's complicit**

TIME, 24 Mar 22, Bradley Jardine

As China deepens relations with Saudi Arabia in the wake of Russia's invasion of Ukraine, the Uighur diaspora finds itself in the crosshairs. Riyadh is preparing to deport two Uighurs back to China's western province of Xinjiang, where they will almost certainly be detained for "re-education" in its vast network of concentration camps for the region's Turkic inhabitants. Uighurs in Xinjiang face human rights violations ranging from arbitrary detention and torture to sexual assault and forced sterilization.

### **36. What US intelligence got wrong on Ukraine**

The Hill, 24 Mar 22, Michael O'Hanlon

U.S. intelligence agencies are rightly receiving considerable praise for correctly forecasting the Russian invasion of Ukraine. Through a combination of satellite surveillance, monitoring of social media, and other sources, they read Russian President Vladimir Putin's mind several weeks before the conflict began on Feb. 24 — and prevented him from controlling the narrative about the true causes of the war.

### **37. How the Ukraine war could go nuclear**

Politico, 24 Mar 22, Bryan Bender

Not since the Cold War has the specter of nuclear war hung so heavily over a president's crisis diplomacy. As President Joe Biden meets with fellow NATO leaders, calls for a ceasefire in Ukraine are growing more urgent than ever — to alleviate the widespread human suffering but also to dial back what veterans of nuclear planning consider an alarming potential for it to spiral into a clash of atomic superpowers.

### **38. The naval response to the war in Ukraine**

Wall Street Journal, 24 Mar 22, Arthur Herman

Most proposals for military aid to Ukraine involve help from the air, such as establishing a Berlin-style airlift, flying in warplanes from Poland, and creating a no-fly zone over Ukrainian territory. But it would be a serious blunder to neglect the naval aspect of the conflict. Russia certainly hasn't. According to the Times of London, recent intelligence indicates that Russia has a fleet of warships ready to launch an amphibious assault on Odessa, the last major Ukrainian seaport not in Russian hands or under Russian siege.

### **39. Putin doesn't realize how much warfare has changed**

The Atlantic, 24 Mar 22, Antony Beevor

Otto von Bismarck once said that only a fool learns from his own mistakes. "I learn from other people's," the 19th-century German chancellor said. Astonishingly, the Russian army is repeating the past mistakes of its Soviet predecessor. In April 1945, Marshal Georgy Zhukov,

under intense pressure from Stalin, sent his tank armies into Berlin without infantry support. Vladimir Putin's forces not only made the same error; they even copied the way their forebears had attached odd bits of iron – including bed frames – to their tanks' turrets in the hopes that the added metal would detonate anti-tank weapons prematurely. This did not save the Russian tanks. It simply increased their profile and attracted Ukrainian tank-hunting parties, just as the Soviet tanks in Berlin had drawn groups of Hitler Youth and SS, who attacked them with Panzerfausts.

**40. I'm the Prime Minister of Estonia. Putin can't think he's won this war.**

New York Times, 24 Mar 22, Kaja Kallas

To anyone who lived under Soviet occupation, reports from Ukraine replay scenes we thought we would never see again. The bombing of civilians and the wanton destruction of buildings recall the carnage unleashed on the European continent by Hitler and Stalin. In Mariupol, a port city subjected to a brutal, horrifying siege, residents are reportedly being deported to faraway places in Russia where an uncertain fate awaits them.

**41. What is the thinking behind Israel's Ukraine balancing act?**

Daily Telegraph (UK), 24 Mar 22, Con Coughlin

The emergence of Israeli Prime Minister Naftali Bennett as a key interlocutor in trying to resolve the Ukraine crisis has much to do with Israel's enduring concerns about Iran's malign activities in the Middle East.

**42. Abbas is destroying democracy to ensure his successor supports Israel**

Foreign Policy, 24 Mar 22, Dalia Hatuqa

On Feb. 8, videos began to emerge on social media of an incident that had taken place earlier that day in Nablus, the second largest Palestinian city in the occupied West Bank. Shaky mobile phone footage showed a shared taxi and a gray van near a silver car, with bullet holes piercing the car's windshield. The driver of the silver car was slumped over, his bloodied passenger sitting lifelessly next to him as a third man lay across the back seat. All three Palestinian men were dead, their car riddled with more than 80 bullets.

**43. Blinken to visit Israel, West Bank, Morocco and Algeria**

Al Jazeera, 24 Mar 22

US Secretary of State Antony Blinken will visit Israel, the occupied West Bank, Morocco and Algeria in the coming days, the US Department of State has announced, to discuss regional issues as well as the Russian invasion of Ukraine.

**44. Saudi Arabia, US conclude series of joint Air Force exercises**

Al Arabiya, 24 Mar 22

won't vote against the motion. PTI coalition partners have also signaled they are leaning toward the opposition's side. Khan will once again need to fight like a cornered tiger.

The prime minister also faces challenges from Pakistan's most powerful political actor: the military. Civil-military relations have been relatively smooth during Khan's nearly four years in office. However, Khan had a spat last year with Pakistan Army chief Qamar Javed Bajwa over the process to appoint the next intelligence chief, Nadeem Anjum. Khan had a warm relationship with Anjum's predecessor, Faiz Hameed, whom Khan would like to see become army chief when Bajwa's term expires in November.

This issue is likely one reason why the opposition acted when it did—to prevent Khan from sticking around and appointing his ally as the next army chief, strengthening his position ahead of national elections in 2023. Some political insiders see the military's silence during the current crisis as a tacit endorsement of the no-confidence vote.

Yet Khan could still survive this test. He may even receive help from Pakistan's Supreme Court. This week, a justice issued an opinion—not a final ruling—that Pakistani lawyers say would uphold a constitutional clause that could disqualify ruling party lawmakers who vote against their own prime minister in a no-confidence vote. The disqualification issue may remain unsettled up to the moment of the vote; PTI dissidents unwilling to risk an end to their political careers may reconsider their stance.

Khan will also engage in intense politicking to convince these dissident PTI members, other members of his coalition, and even the opposition to side with him. Furthermore, the ruling party plans to host a massive rally in Islamabad on March 27 to showcase Khan's support, hoping this will prompt some lawmakers to honor the public will and vote in his favor.

If Khan wins the no-confidence vote, he will emerge more emboldened than ever. If he loses, the opposition will try to cobble together a new coalition. If that fails, the PTI is unlikely to put together a new government without Khan, who has no logical successor; early elections would be likely. The opposition has a strong incentive to support early polls because it seeks to avoid becoming the new target of public ire over Pakistan's economic crisis.

The least likely outcome is a military takeover, despite Pakistan's history of coups. The military would prefer that the civilians take the fall for Pakistan's economic stress.

Regardless of the outcome of the no-confidence vote, violence is a very real possibility. Pakistan's political environment is especially charged; Khan recently warned that "my gun is now aimed at Asif Zardari," an opposition leader. There have been several violent clashes in recent weeks, and if Khan is ousted, passionate partisans could react with unrest. No one would benefit from such violence, not least Pakistanis who want politicians to focus on the economic crisis.

**3. US, NATO 'would respond' if Putin used chemical weapons in Ukraine, Biden says**  
ABC News, 24 Mar 22, Libby Cathey

President Joe Biden took questions at a news conference at NATO headquarters in Brussels, addressing warnings of a possible chemical weapons attack by Russia in Ukraine, after meeting with European leaders Thursday and following Ukraine's President Zelenskyy pleading with them to do more to help.

Noting Biden has warned there's a "real threat" in Russia using chemical weapons in Ukraine, the first question to him was on whether the U.S. has gathered specific intelligence that suggests that Russian President Vladimir Putin is considering deploying chemical weapons and whether the U.S. or NATO respond with military action if he did use them.

"I'm not going to give you intelligence data, number one," Biden said. "Number two, we would respond. We would respond if he uses it, and the nature of the response would depend on the nature of the use."

ABC News Chief White House Correspondent Cecilia Vega followed up, and asked, "If chemical weapons were used in Ukraine could that trigger a military response from NATO?"

"It would trigger a response in kind," Biden replied. "Whether or not -- you're asking whether NATO would cross -- we'd make that decision at the time."

But Biden did not lay out what that response might look like and whether it would involve sending U.S. troops to Ukraine, which Biden has vowed not to do.

As he began, Biden announced a range of new sanctions against Russia targeting the majority of the Duma and Russian elites, that the U.S. will welcome up to 100,000 refugees from Ukraine and provide \$1 billion in new humanitarian aid, as he faces pressure from Zelenskyy to provide more deliverables to Ukraine.

"Putin is getting exactly the opposite of what he intended to have as a consequence of going into Ukraine," Biden said, adding later on that he was "banking on NATO being split."

Biden also described his call last week with China's President Xi Jinping as "very straightforward" and said that, while "I made no threats," he did make clear Xi would be "putting himself in significant jeopardy" if China helped Russia with its invasion of Ukraine.

The president made the foreign trip to attend an extraordinary summit of all 30 NATO leaders to reaffirm the U.S. commitment to NATO allies, participate in a pre-scheduled meeting of the European Council -- the political body of the European Union -- and meet with leaders of the Group of Seven, or G-7, major industrial nations.

Biden also answered a definitive "yes," when asked he believes that Russia should be removed from the G20, but noted that it "would depend on the G20" to make that decision.

He said that point was raised today by G20 leaders and that he raised the possibility that if removing Russia can't be done because of "Indonesia and others" not in agreement, Ukraine should be able to attend future G20 meetings.

And when he was asked if Zelenskyy needs to cede any Ukrainian territory in order to gain a cease-fire with Russia, Biden said, "that is a total judgment based on Ukraine."

According to senior U.S. administration officials, the mood at NATO's emergency summit has been "sober" and "resolute" so far.

"There was a very strong sense that we are facing a significant historical moment, and very strong support from all the leaders who spoke about the need to defend our democracy," one of the officials told reporters during a telephone briefing Thursday.

The officials said Zelesnkyy, who addressed NATO leaders remotely, spoke "very eloquently" and "repeated his requests for continued and increased Western security assistance."

"But notably, there was not a request for a no-fly zone," an official added. "There was also not a request for NATO membership."

Zelesnkyy did ask for NATO to give 1% of all its tanks and said he hasn't been given an answer.

"I have been repeating the same thing for a month now: To save people and our cities, Ukraine needs military assistance without restrictions, as Russia uses without restrictions its entire arsenal against us," he continued. "Ukraine asked for your planes so that we do not lose so many people. And you have thousands of fighter jets, but we haven't been given any yet."

"We asked for tanks so that we can unblock our cities that are now dying," he added. "You have at least 20,000 tanks. Ukraine asked for a percent -- 1% -- of all your tanks to be given or sold to us. But we do not have a clear answer yet."

Speaking after Zelenskyy's speech, Biden that Thursday marks one month since Russia launched its invasion of Ukraine. He discussed the sanctions that have already been imposed and expressed strong support for Ukraine as well as humanitarian and military aid and reaffirmed his support for Article 5, which is the cornerstone of NATO and states that an attack on one member is an attack on all members.

Since Russian President Vladimir Putin launches his invasion one month ago, 3.5 million Ukrainians have fled the country and millions more have become internally displaced.

Biden is scheduled to travel to Poland on Friday.

As the fighting continues, Secretary of State Antony Blinken announced on Wednesday that the State Department has made a formal assessment that Russian forces have committed war crimes in Ukraine.

#### **4. China and Solomon Islands draft secret security pact, raising alarm in the Pacific**

New York Times, 24 Mar 22, Damien Cave

production and imports of biomethane and renewable hydrogen, and upgrading buildings to reduce consumption.

Earlier this week, German officials including economy minister Robert Habeck visited Qatar for talks on supplying gas to Europe in the midst of Russian energy uncertainty.

“We have not agreed a long term agreement with Germany yet, but we’re willing to discuss with the companies that we have been discussing to put a long term agreement in place potentially,” Al Kaabi said.

British Prime Minister Boris Johnson visited Saudi Arabia and the United Arab Emirates last week in an attempt to sway both nations into increasing oil supply. The two countries have spare production capacity but both have so far remained committed to the OPEC+ deal with Russia to only gradually increase output.

By 2028 Qatar hopes its gas volumes will be evenly split east and west of the Suez canal. Currently, about 80% of Qatar’s gas goes east and just 20% is shipped to west.

Qatar, which withdrew from OPEC in 2019 after a diplomatic rift with its neighboring countries, said they are not planning on returning to the organization. Al Kaabi, however, still supported supply moves by the group, calling their plan “very sensible”.

#### **14. Blinken to Mideast as Ukraine war complicates US diplomacy**

Associated Press, 24 Mar 22, Matthew Lee

Secretary of State Antony Blinken will travel to the Mideast and North Africa next week as the Biden administration strives to keep allies and partners united in opposition to Russia’s war in Ukraine, the State Department said Thursday.

With U.S. diplomacy facing serious tests on Ukraine and a range of Middle East regional issues, the department said that Blinken will visit Israel, the West Bank, Morocco and Algeria starting this weekend.

In Israel, Blinken plans to press Israeli officials on support for the Ukrainian government, seek their thoughts on potential mediation with Russia to end the conflict and update them on the status of the Iran nuclear talks in Vienna. The administration’s efforts to promote an Israeli-Palestinian peace dialogue will also be on the agenda.

In Morocco and Algeria, Blinken will discuss the importance of the role that smaller states can play in backing Ukraine’s sovereignty, as well as the U.S. interest in Arab nations continuing to normalize and expand their relations with Israel. While in Rabat, Blinken will also meet with the foreign minister of the United Arab Emirates, a longtime U.S. partner in the Gulf that recently attracted Washington’s ire by hosting a visit by Syrian President Bashar Assad.

“The secretary will emphasize to all of the foreign leaders he meets that the United States stands in solidarity with the government and people of Ukraine in the face of the Kremlin’s aggression,” the State Department said in a statement.

## **15. Court charges Lebanon’s Geagea over Beirut violence**

Reuters, 24 Mar 22

A Lebanese military court has charged Christian politician Samir Geagea over deadly clashes in Beirut last October, local media, as well as a judicial source, said, in a move that could stoke political tension two months before parliamentary elections.

An official in Geagea’s Lebanese Forces (LF) party said the charge against him, as well as the investigation into the violence, had political motives.

Judge Fadi Akiki told Al-Jadeed TV on Thursday that he had charged Geagea two days ago, based on “new information” relating to the Tayouneh events, a reference to Beirut’s deadliest street violence in a decade.

Seven people, all of them followers of the Iran-backed Shia Muslim group Hezbollah and its Shia ally the Amal Movement, were killed in the October 14 clashes near an old front line of the 1975-90 civil war.

Any attempt to arrest Geagea would likely be resisted by his party, creating the potential for trouble just two months before the parliamentary election, said Mohanad Hage Ali of the Carnegie Middle East Center.

Geagea was summoned to a hearing at military intelligence last October over the violence, but did not attend.

The October 14 violence began as people were gathering for a protest called by Hezbollah against the judge investigating the 2020 Beirut port blast.

Hezbollah, which is heavily armed and backed by Iran, accused the LF of mounting an ambush and perpetrating the killing to try to drag the country into a civil war.

Geagea, a strong critic of Hezbollah who has good ties with Saudi Arabia, has emphatically denied this, along with Hezbollah accusations that the LF – which had a powerful militia in the civil war – had established one again.

Geagea has said the trouble began when supporters of the Shia parties entered the Christian neighborhood of Ain al-Remmaneh where they vandalized cars, and that four residents were wounded before a shot was fired.

## **16. Ukraine war could bring loss of aid, worsen food scarcity in Lebanon**

UPI, 24 Mar 22, Dalal Saoud

The Russian war in Ukraine has brought fears that food will become more scarce and life-saving humanitarian assistance could disappear from cash-strapped Lebanon, whose population is sinking deeper into poverty.

Lebanon imports 66% of its wheat from Ukraine and 12% from Russia and relies on both countries to import cooking oil.

The disruption in the food supply comes as Lebanon deals with the worst financial crisis in its history, with the Lebanese pound losing more than 90% of its value since October 2019. Unemployment is soaring.

A growing number of Lebanese have been able to survive so far due to international aid and local charity initiatives that started to pour in, especially after an explosion at the Beirut port devastated much of the city and destroyed its grain silos, leaving the country without storage facilities.

Losing international humanitarian assistance as the world's attention shifts to Ukraine would be life-threatening to a large segment of the Lebanese population.

"As if the Lebanese didn't have enough problems, now [they are facing the impact of] the war in Ukraine," Bujar Hoxha, country director of CARE International in Lebanon, told UPI. "The situation is much worse and keeps on worsening."

Hoxha said that according to "scary" figures released in November, some 2.2 million Lebanese were facing food shortages, noting that their numbers have undoubtedly increased since then.

About 3.2 million to 3.7 million Syrian and Palestinian refugees living in Lebanon are also suffering food shortages, although "they are a bit better than the Lebanese" because they get assistance from the United Nations agencies, respectively the United Nations High Commissioner for Refugees and the United Nations Relief and Works Agency for Palestine Refugees.

What worries him most is a possible "shift in attention to other crises," with most grants to Lebanon -- whose population is moving from below poverty to extreme poverty -- coming to an end in the coming months.

Most of the grants his organization and other NGOs are implementing are short-term, ranging between "six months and one year in the best-case scenarios."

"If we stop now the current short-term assistance, the needs will double or triple as the situation will become much worse," Hoxha said. "So the fear is whether international assistance will continue, but if it is short-term, that won't solve the problem."

The need for the international community to keep supporting Lebanon is widely illustrated by heart-breaking stories about increasing food insecurity in the crisis-ridden country.

A mother with three children in Tripoli, Lebanon's poorest city in the north and the most impoverished along the entire Mediterranean coast, has to choose every day who to feed first.

"The one who is hungrier will have breakfast and the less hungry will have to wait for lunch or dinner with the little food the mother is able to put on the table," said Patricia Khodr, communication and media manager at Care International.

For another mother, feeding her infant baby is a painful mission. "Instead of the regular five spoons of baby milk, she only put one in her baby's bottle."

In another family, one of the children works the whole day just to be able to buy 1 kilo of bananas at 10,000 Lebanese pounds (40 cents) that would be wrapped in sandwiches for dinner.

"We haven't seen such poverty before. The people are going poorer by the day, with growing cases of malnutrition, especially among children and women. Many can't even afford one meal per day," Khodr told UPI.

Concerns about malnutrition and cases of anemia among children were also voiced by Etienne Careme, acting representative of the Food and Agriculture Organization in Lebanon.

"Access to healthy food is really a problem. When you have children who don't have access to healthy food, the next generation will have a problem," Careme told UPI, referring to a survey in December showing that 46% of the Lebanese population were found to be food insecure.

With uncertainty surrounding the Ukraine-Russia war, its duration and impact, shifting to local production, diversifying the Lebanese diet and importing substitutes could be a solution, Careme said.

With a real possibility that 6 million tons of wheat Ukraine was planning to export globally before the end of June 2022 will not materialize, Lebanon, which required between 35,000 and 40,000 tons of wheat per month for domestic milling before the port explosion, will have to rely on alternative suppliers to satisfy its domestic food needs.

"The most critical period to secure imports will likely be between now and the end of June, when trading of fresh supplies from the harvest in the northern hemisphere will start," Careme said.

With only one month's wheat reserves left, Lebanon is doubling efforts to find alternative import sources.

"For sure, we are in a crisis, but we haven't reached the catastrophe," Hani Bohsali, president of the Syndicate of Importers of Foodstuffs in Lebanon, told UPI.

Luckily, food importers have imported enough food supplies for two months ahead of the holy Muslim fasting month of Ramadan that starts April 2.

"But some of the imports from Ukraine were stopped because of the war," said Bohsali, who like other food importers, started to contact other suppliers in China, the United States, South America, Malaysia, Thailand, Poland and Hungary for the post-Ramadan period.

"We are searching for any source to secure food supplies, even at a higher cost. Let's not talk about the worst-case scenario. Let's see how today we can secure the basic commodities: wheat, oil and sugar," he said.

He noted that some of Lebanon's regular suppliers, like Turkey, Egypt and Algeria, have stopped exports for three months because of the Ukraine conflict but asked "would they be able to do that for a year? Their economies could collapse."

However, securing food supplies won't necessarily mean that it could be affordable to many, especially with the country's hyperinflation, skyrocketing food, fuel and fertilizer prices globally and in the absence of international aid and financial assistance.

"We are heading toward another humanitarian catastrophe for sure and the only solution to avoid this is to combine the humanitarian with the development funds," Hoxha said

Fighting over the available resources is another big concern.

"Tension between Syrians and Lebanese is increasing because of humanitarian assistance: who gets what and how much... This is really worrying," he said.

## NATIONAL SECURITY/DEFENSE NEWS

---

### **17. Biden sticks with longstanding U.S. policy on use of nuclear weapons amid pressure from allies**

Wall Street Journal, 24 Mar 22, Michael R. Gordon

President Biden, stepping back from a campaign vow, has embraced a longstanding U.S. approach of using the threat of a potential nuclear response to deter conventional and other nonnuclear dangers in addition to nuclear ones, U.S. officials said Thursday.

During the 2020 campaign Mr. Biden promised to work toward a policy in which the sole purpose of the U.S. nuclear arsenal would be to deter an enemy nuclear attack.

Mr. Biden's new decision, made earlier this week under pressure from allies, holds that the "fundamental role" of the U.S. nuclear arsenal will be to deter nuclear attacks.

That carefully worded formulation, however, leaves open the possibility that nuclear weapons could also be used in extreme circumstances to deter enemy conventional, biological, chemical and possibly cyber attacks, said the officials.

The decision comes as Mr. Biden is meeting with allies in Europe in an effort to maintain a unified Western stance against Russia President Vladimir Putin's invasion of Ukraine and allied concerns that the Kremlin might resort to nuclear or chemical weapons.

A spokeswoman for the president's National Security Council declined to comment.

Mr. Biden's nuclear policy follows an extensive Nuclear Posture Review, in which administration officials examined U.S. nuclear strategy and programs.

U.S. officials said the administration's review is also expected to lead to cuts in two nuclear systems that were embraced by the Trump administration. If Congress agrees, this would mean canceling the program to develop a nuclear sea-launched cruise missile and retiring the B83 thermonuclear bomb.

The review, however, supports the extensive modernization of the U.S. nuclear triad of land-based missiles, submarine-based missiles and bombers, which is projected to cost over \$1 trillion.

During the Cold War, the U.S. reserved the right to use nuclear weapons in response to a conventional attack to offset the Soviet bloc's numerical advantage in conventional forces. After giving up its chemical and biological weapons in accordance with arms-control treaties, the U.S. later said it was reserving the right to use nuclear weapons to deter attacks with poison gas and germ weapons in some circumstances.

North Atlantic Treaty Organization allies have been particularly nervous about shifting to a "sole purpose" doctrine, fearing it could weaken deterrence against a conventional Russian attack on the alliance.

Congressional Republicans had criticized Mr. Biden for considering a "sole purpose" doctrine.

In January, Sen. James Inhofe of Oklahoma and Rep. Mike Rogers of Alabama, the ranking Republican members on the Senate and House Armed Services Committees, urged Mr. Biden to stay with the U.S. nuclear doctrine that they said had deterred major wars and the use of nuclear weapons for more than 70 years.

In contrast, a number of Democratic arms-control supporters had urged Mr. Biden to minimize the role of nuclear weapons in the Pentagon's strategy and stipulate that the U.S. would never make the first use of nuclear weapons in a conflict.

"Allies were concerned that moving too far away from current posture would leave them vulnerable in theory or in practice to Russian threats," said Jon Wolfstahl, who served as the senior arms control and nonproliferation official on President Obama's National Security Council.

Mr. Wolfstahl, who served as an adviser to Mr. Biden when he was vice president, said it would be disappointing but not surprising if the president shelved his "sole purpose" initiative.

Some Biden administration officials say, however, that his decision doesn't diminish his long-term goal to reduce the U.S. dependence on nuclear weapons and reflects the need to consolidate allied support in the face of Russian threats and a rising China.

Mr. Biden, these officials also note, has supported other arms-control moves, including prolonging the New START treaty limiting U.S. and Russian long-range arms, which he extended for five years.

During the 2020 campaign, Mr. Biden wrote in *Foreign Affairs* magazine that he believed "the sole purpose of the U.S. nuclear arsenal should be deterring—and, if necessary, retaliating against—a nuclear attack."

Mr. Biden added that as president he would move "to put that belief into practice, in consultation with the U.S. military and U.S. allies." Mr. Biden had also staked out a similar position before leaving his post of vice president in 2017.

"Given our nonnuclear capabilities and the nature of today's threats, it's hard to envision a plausible scenario in which the first use of nuclear weapons by the United States would be necessary," Mr. Biden said at the time.

The reason for his "sole purpose" proposal was to narrow the circumstances in which the U.S. would consider using nuclear weapons by excluding the possibility that they could be employed in response to a conventional attack or other nonnuclear threats.

Mr. Biden's plan to overhaul U.S. doctrine and strategy, however, ran into firm opposition from allied nations, who were concerned that it might weaken the U.S. and allies' ability to deter a conventional Russian or Chinese military offensive, according to foreign diplomats and U.S. officials.

The Biden administration "fundamental role" phrase harks back to the Nuclear Posture Review conducted in 2010 during the Obama administration.

But it differs somewhat from the more specific language in the Trump administration's Nuclear Posture Review, which underscored the role of nuclear weapons to "hedge against an uncertain future."

That review spelled out that the threat of nuclear weapons could be used to deter what the Trump administration called "nonnuclear strategic attacks" against U.S. or allied populations or infrastructure. That suggested that a major cyberattack, germ weapon or chemical attack that killed thousands of people could trigger a nuclear response.

## **18. U.S. charges 4 Russian government workers with hacking energy sector**

Washington Post, 24 Mar 22, Devlin Barrett

The U.S. Justice Department fired another legal salvo against Russia on Thursday, announcing indictments against four Russian government employees for an alleged hacking campaign targeting the energy sector that lasted for years and targeted computers in 135 countries.

An indictment in U.S. District Court for the District of Columbia charges that Evgeny Viktorovich Gladkikh, who worked at a Russian Ministry of Defense research institute, conspired with others to damage critical infrastructure outside the United States, causing emergency shutdowns at one foreign facility. Those charged in the indictment, under seal since June 2021, also allegedly tried to hack the computers of a U.S. firm that managed similar facilities in the United States.

A separate indictment filed in Kansas alleges that a hacking campaign launched by Russian's federal security service, or FSB, targeted computers at hundreds of energy-related entities around the world. That indictment was also filed under seal last summer.

The hacking activity took place between 2012 and 2018, U.S. officials said. The decision to reveal the indictments underscores the concern U.S. and European officials have about Russia unleashing a wave of cyberattacks on the West in response to a new wave of sanctions over Russia's invasion of Ukraine.

Deputy Attorney General Lisa O. Monaco said there is an "urgent ongoing need for American businesses to harden their defenses and remain vigilant." She said Russian state-sponsored hackers "pose a serious and persistent threat to critical infrastructure both in the United States and around the world."

U.S. officials said one of their concerns regarding possible Russian hacking is that in the past, some Russian malware has been poorly controlled, spreading wildly around the world far beyond the intended targets. The 2017 case dubbed NotPetya, which targeted computers in Ukraine but also affected Denmark, India and the United States, is one example.

In a coordinated statement on Thursday, British officials also blamed the hacking on the Russian government.

"Russia's targeting of critical national infrastructure is calculated and dangerous, Foreign Secretary Liz Truss said. "We are sending a clear message to the Kremlin by sanctioning those who target people, businesses and infrastructure. We will not tolerate it."

The Russian Embassy in Washington did not immediately respond to a request for comment on the indictments Thursday.

Russia does not extradite its citizens to the United States, so there is little chance that the four individuals charged will ever be brought to trial. U.S. officials sometimes make such indictments public in the hopes of deterring future, similar attacks.

John Hultquist, vice president of intelligence analysis at the cybersecurity firm Mandiant, said the indictments are an important gambit amid ongoing tensions between Russia and the West, and a "warning shot" for Russian government hackers. "These actions are personal and are

meant to signal to anyone working for these programs that they won't be able to leave Russia anytime soon," he said.

Much of the hacking activity was previously reported, with U.S. security officials expressing alarm at the degree to which the hackers appeared to be deliberately trying to cause damage to sensitive chemical processes at energy plants that could result in serious harm or danger to people.

The indictment alleges that Gladkikh carried out the hacking as part of his job at the Central Scientific Research Institute of Chemistry and Mechanics in Moscow, launching an extremely dangerous form of malware called Triton, sometimes referred to as "Trisis" or "Hatman."

Gladkikh allegedly conspired to hack a Saudi Arabian oil refiner's sulfur recovery systems which, depending on the severity of the malfunction, could have caused explosions or released toxic gases, officials said. Hackers also compromised computer systems tied to U.S. energy sites, according to the charging papers.

The Kansas indictment names Pavel Akulov, Mikhail Gavrilov and Marat Tyukov as members of the FSB's Military Unit 71330, sometimes referred to as "Center 16," where they allegedly carried out the attacks.

In one instance, the hackers were able to breach the business network for the Wolf Creek nuclear power plant outside Burlington, Kan., according to that indictment. The business network is separate from the plant's operational system. Other U.S.-based victims included the Nuclear Regulatory Commission, Westar Energy and Kansas Electric Power Cooperative.

The Kansas indictment charges the FSB hackers placed malware on more than 17,000 different devices "to establish and maintain surreptitious, unauthorized access ... Such accesses enabled the Russian government to disrupt and damage such systems, if it wished."

## **19. US, allies working to provide anti-ship missiles to Ukraine**

The Hill, 24 Mar 22, Jordan Williams

The U.S. and allies are working to send anti-ship missiles to Ukraine as it scrambles to bolster up Kyiv's ability to defend itself against Russia's invasion.

"We have started consulting with Allies on providing anti-ship missiles to Ukraine," a senior administration official told reporters after President Biden attended a NATO summit.

"There may be some technical challenges with making that happen, but that is something that we are consulting with Allies and starting to work on," the official said.

News of the anti-ship missiles comes as the U.S. scrambles to send as much military equipment to Ukraine as it can as Russia's invasion of the country enters its second month.

Last week alone, Washington provided over \$1 billion in military assistance in Ukraine, the bulk of which comes from an \$800 million weapons package of anti-aircraft defenses, drones, and other weapons that Biden announced last Wednesday.

Biden attended a NATO summit on Thursday, and is also scheduled to meet with G7 leaders and a European Union summit

In a statement on the NATO meeting, Biden said that Ukrainian President Volodymyr Zelensky addressed the summit.

“We will continue to support him and his government with significant, and increasing, amounts of security assistance to fight Russian aggression and uphold their right to self-defense,” the president said.

“I welcome the steps by many other Allies to provide defensive support to Ukraine and together, we are committed to identifying additional equipment, including air defense systems, to help Ukraine,” he added.

A senior administration official told reporters that Zelensky repeated his request for security aid to Ukraine, but notably did not push the alliance to establish a no-fly zone over Ukraine. The Ukrainian president and other government officials repeatedly asked for such help, and that the alliance has rejected those pleas.

### **20. Up to 60% failure rate for some Russian missiles used in Ukraine, U.S. officials say** Reuters, 24 Mar 22, Phil Stewart

The United States assesses that Russia is suffering failure rates as high as 60% for some of the precision-guided missiles it is using to attack Ukraine, three U.S. officials with knowledge of the intelligence told Reuters.

The disclosure could help explain why Russia has failed to achieve what most could consider basic objectives since its invasion a month ago, such as neutralizing Ukraine's air force, despite the apparent strength of its military against Ukraine's much smaller armed forces.

The U.S. officials, who spoke on condition of anonymity due to the sensitivity of the information, did not provide evidence to support the assessment and did not disclose what precisely was driving high Russian missile failure rates.

Reuters was unable to independently verify the figures.

The Kremlin and Russia's defense ministry did not immediately respond to a request for comment.

Such a high failure rate can include anything from launch failures to a missile failing to explode on impact.

U.S. defense officials told reporters this week that the Pentagon assesses that Russia has launched more than 1,100 missiles of all kinds since the war began. The U.S. officials have so far not said how many of those hit their targets and how many failed to do so.

Citing U.S. intelligence, three U.S. officials said the United States estimated that Russia's failure rate varied day-to-day, depended on the type of missile being launched, and could sometimes exceed 50%. Two of them said it reached as high as 60%.

One of the officials said the intelligence showed that Russia's air-launched cruise missiles had a failure rate in the 20 to 60% range, depending on the day.

Russia has been seen fielding two types of air-launched cruise missiles in Ukraine, the Kh-555 and Kh-101, according to the Center for Strategic and International Studies think tank's Missile Defense Project.

Reuters could not determine what a standard failure rate would be for air-launched cruise missiles. Two experts interviewed by Reuters said any failure rate of 20% and above would be considered high.

The United States believes Russia fired air-launched cruise missiles from Russian airspace earlier this month when it attacked a Ukrainian military base near the Polish border, and one of the U.S. officials told Reuters there was a particularly high failure rate during this attack. The strike killed 35 people, according to Ukrainian authorities.

Missile attacks have been a feature of Russia's invasion, with Russia announcing strikes against military targets including weapons depots.

The invasion has killed thousands and driven a quarter of Ukraine's 44 million people from their homes. The bombardment has hit residential areas, schools and hospitals in Ukrainian cities including Kharkiv and the besieged port of Mariupol on the Sea of Azov.

Russia, which says its military is engaged in a "special operation" in Ukraine, denies targeting civilians.

## **21. Ukraine's plea for Soviet-era anti-aircraft systems goes unanswered**

Financial Times (UK), 24 Mar 22, Felicia Schwartz, Andy Bounds and Eleni Varvitsioti

US president Joe Biden's promise to supply Ukraine with Soviet-era long-range missile systems has become bogged down in difficulties with sourcing and moving the equipment, according to US and western officials.

Even as the US and its allies prepare to announce fresh sanctions on Moscow and additional lethal and humanitarian aid for Ukraine this week, the provision of the anti-aircraft ordnance seen by Kyiv as crucial to its ability to halt Russia's advance is set to take more time.

The effort is running into similar issues as the now-abandoned plan to transfer Polish fighter jets to Ukraine, a move that descended into a diplomatic fiasco. The countries that have the equipment — Slovakia, Greece and Bulgaria — have either balked at the plan or want new systems as a substitute. They also fear that Moscow will interpret any transfer as an aggressive act.

Defense experts say Ukraine needs the anti-aircraft systems to repel aerial strikes by Russian fighter jets.

“They’re using these systems to shoot down both Russian aircraft and Russian missiles,” said Frederick Kagan from the American Enterprise Institute, a conservative think-tank in Washington. “The Ukrainians are regularly intercepting Russian missiles. There are not that many systems in the world that can do that reliably.”

Tom Malinowski, a Democratic lawmaker on the House foreign affairs committee, said: “Russia seems to be increasing the number of air strikes as their ground forces are held back effectively by the Ukrainians. There is increasing urgency in getting these kinds of systems into the country.”

Of the 30 Nato countries, only Slovakia, Greece and Bulgaria have supplies of the S-300 missile system that was initially developed by the Soviet Union, and which the Ukrainian military is trained to use.

Last week, Slovakia said it would send the S-300 if it could source a suitable substitute but on Wednesday it announced that it was not ready to do so. Bulgaria and Greece have also ruled out transferring their systems for now.

Slovakia has started to receive components of the American-made Patriot missile defense system that Germany is temporarily deploying as part of NATO's response to the war in Ukraine. The Netherlands is also sending a Patriot system to Slovakia.

But Slovakia wants to see more permanent contributions. A Slovak official said on Wednesday that the German system would only be in Slovakia for six months. Slovakia cannot afford to buy its own Patriot system and it would cost several billion dollars to have enough batteries for reasonable defense cover, the official said.

Another Slovakian official pointed to remarks on Wednesday from Jaroslav Nad, the country's defense minister, indicating that its military would need a permanent alternative if it was to donate its own system.

Slovakia also fears Moscow would regard the transfer of the anti-aircraft munitions as an aggressive act and subsequently attack the country, according to someone briefed on the discussions.

The US and Greece have had informal discussions about Greece transferring its S-300 system but Athens has decided against because of the missiles' importance to its own security, a Greek diplomat said. Greece has already sent Kalashnikov rifles and rocket launchers but has ruled out sending air-defense systems, a second diplomat said.

After meeting with Lloyd Austin, US defense secretary, last week, Bulgarian prime minister Kiril Petkov would only offer humanitarian assistance to Ukraine.

"Being so close to the conflict, just right now I have to say that currently, we will not be able to send military assistance to Ukraine," he said on Saturday.

Despite the reluctance of the three countries with S-300s, the Biden administration is not giving up on the plan for now. "We feel good about the progress we are making with respect to air-defense systems," US national security adviser Jake Sullivan said on Wednesday ahead of Biden's meetings in Brussels on Thursday.

A US official said Washington has delivered nearly \$350mn of security assistance to Ukraine over the last three weeks and has committed \$1bn more, including deliveries that have already begun arriving.

The official said the US is helping Ukraine acquire longer range anti-aircraft systems and munitions its forces are trained to use, at the request of Volodymyr Zelensky, Ukraine's president.

Indeed, the Biden administration wants the transfers done urgently, according to US officials. "We're all mindful of the clock, and that Russia is intensifying their bombardment and long-range fires on cities and population centers throughout the country," Pentagon press secretary John Kirby said earlier this week.

The reluctance has echoes of the ill-fated fighter jet plan that was scrapped this month when the US rejected a Polish proposal for the US to take possession of Soviet-era fighter jets and transfer them to Ukraine. Washington feared that doing so might trigger a Russian response, while the Pentagon concluded that the jets would not significantly change the Ukrainian air force's effectiveness.

## **22. U.K. says Russian mercenary group aims to assassinate Ukraine's president**

Wall Street Journal, 24 Mar 22, Max Colchester

The U.K. government said that Russian mercenary company Wagner Group is being used by Russia to try to assassinate Ukrainian President Volodymyr Zelensky.

The group of hired soldiers was "reportedly tasked" with killing Mr. Zelensky, the U.K. government said, as it announced sanctions against Wagner Group. It didn't provide evidence or further details.

Wagner emerged from Russia's covert interventions in eastern Ukraine in 2014, where the Kremlin worked with armed groups funded by politically connected Russian businessmen. Wagner was financed in part by multimillion-dollar catering and construction contracts for the Russian armed forces awarded to companies linked with Yevgeny Prigozhin, a former restaurateur, according to European officials.

A representative of Mr. Prigozhin called into question the existence of Wagner Group and said questions about the U.K.'s claim represented "a severe psychosis of Western media," without commenting on the claim itself. The company couldn't be reached for comment.

The Wagner Group has already been sanctioned by the European Union, which accuses it of being a proxy force for Russia's Defense Ministry. The Kremlin has in the past denied any formal connections with the group.

U.K. officials have in recent weeks spoken of their worry about Mr. Zelensky's safety amid the war in Ukraine and numerous reports of attempts on his life.

The U.K., EU and the U.S. have already imposed sanctions on Mr. Prigozhin. The U.K. has also sanctioned his mother and daughter.

Wagner Group arrived in Syria shortly after Russia entered the conflict on behalf of the Assad regime and conducted support operations such as seizing oil and gas fields and securing other government infrastructure, such as airports.

### **23. China threat to Taiwan highlighted by Ukraine war, warns US admiral**

Financial Times (UK), 25 Mar 22, Demetri Sevastopulo

Russia's invasion of Ukraine has underscored the serious threat that China poses to Taiwan as its military ratchets up pressure on the island, the top US military commander in the Indo-Pacific region has warned.

Admiral John Aquilino, head of Indo-Pacific Command, said China had displayed a "boldness" over the past year that ranged from its increasingly assertive military activity near Taiwan and other parts of the South China Sea to its rapid nuclear expansion and a hypersonic weapon test in July.

"I don't think anyone five months ago would have predicted an invasion of the Ukraine. So I think the number one lesson is: 'Hey, this could really happen,'" Aquilino told the Financial Times during his first visit to Australia as head of US forces in the Indo-Pacific. "Number two, don't be complacent . . . We have to be prepared at all times."

China has flown increasing numbers of warplanes into Taiwan's air defense identification zone, raising tensions and sparking fear about future military action against the country over which Beijing claims sovereignty.

“Their operations have certainly changed specifically as it applies to their operations around Taiwan — increased maritime and air operations that are designed as a pressure campaign against the people of Taiwan,” Aquilino said in his first wide-ranging interview since assuming command at Indo-PACOM last April.

“I wouldn’t say I’m more concerned, but I do see increased pressure, and we have to make sure we are prepared should any actions get taken,” added Aquilino, who commanded the US Pacific Fleet before Indo-PACOM.

The former Navy “Top Gun” fighter pilot also expressed concern about China’s development of hypersonic weapons. The FT reported last year that China tested a hypersonic weapon that flew around the earth and fired a projectile over the South China Sea as it sped back towards China.

Asked whether the hypersonic weapon was designed to target the US or facilitate an attack on Taiwan, Aquilino said it was an “offensive capability” — not a defensive weapon — that had “many applications”.

“I don’t think it was built for a specific one, but it certainly destabilizes the region,” he said. “That capability that could be applied against any partner in the region.”

Aquilino said he was also paying close attention to a “very steep increase” in China’s nuclear arsenal, which the Pentagon projects will surpass 1,000 warheads this decade. He said Indo-PACOM was working with Strategic Command, which oversees US nuclear forces, to provide an “integrated deterrence” against the threat.

The admiral was speaking during a six-day visit to Australia aimed at further solidifying the US-Australia alliance to boost military interoperability and co-operation to deter threats from China to North Korea.

Before arriving in Canberra, Aquilino visited a base in Darwin hosting US Marines as part of the Pentagon’s effort to be more “forward deployed” in the Indo-Pacific region. He later flew to Amberly, an air force base near Brisbane, to greet the crew of a B-2 stealth bomber that had flown in from the US to demonstrate American long-range military power to potential adversaries.

“We’re synchronizing more and more with our allies and partners,” said Aquilino, pointing to a recent military exercise that involved seven countries and four aircraft carriers. “Bringing that credible combat deterrent force and operating forward with our allies and partners is one of the key focus areas.”

Asked what role Australia and Japan would play in any Taiwan conflict, he said they would have to decide for themselves but said the US wanted to be ready to operate with its allies.

“What we want to continue to do is to operate together, train together . . . so that whatever decisions those policymakers choose, we’re ready to be able to respond as tasked.”

Ahead of Australia, Aquilino flew to Indonesia for talks. In a rare move, he also flew in a P-8 surveillance aircraft over three contested reefs in the South China Sea that China has militarized in recent years.

His trip comes as the US is focused on helping Ukraine repel the Russian invasion, which has triggered concern among some experts that Washington will lose its focus on China at a critical time. But he stressed the US posture in Asia had not changed and that “everyone understands the security challenge” in the region.

“They understand that credible combat power forward, combined with our allies and partners, is an extremely strong deterrent factor . . . I have not had any of my forces taken and sent to the other part of the world,” said Aquilino. “That said, the adversary gets a vote, so there’s no telling what might happen.”

#### **24. China’s push to isolate Taiwan demands U.S. action, report says**

New York Times, 24 Mar 22, Edward Wong and Amy Qin

The United States should organize a diplomatic campaign among partner nations to push back against China’s increasingly forceful efforts to shut Taiwan out of United Nations agencies and other international organizations, according to a new report.

The report from the German Marshall Fund of the United States recommends that U.S. officials go on the offensive against China’s pervasive presence across top ranks of the United Nations and its “growing coercive and corrupting influence as well as its efforts to promote and legitimize its agenda across the U.N. system.”

Among other things, the United States should carry out “a sustained effort to lobby against the appointments and elections” of Chinese officials in high positions in U.N. agencies, the authors wrote. The New York Times saw a final draft of the report before its scheduled release on Thursday.

The assessment comes as concerns that the Chinese Communist Party might take measures against Taiwan and its 23 million people have grown in Washington and Taipei because of the invasion of Ukraine by President Vladimir V. Putin of Russia.

On Feb. 4, two weeks before the invasion, Mr. Putin met with President Xi Jinping of China in Beijing, and the two announced a “no limits” partnership. They released a 5,000-word statement covering broad geopolitical issues in which Russia reaffirmed its support for Beijing’s “One China” principle, which asserts the self-governing, democratic island of Taiwan is a part of China.

U.S. and Taiwanese officials have been trying to gauge whether Mr. Putin’s war in Ukraine will have any effect on the long-running goal of the Chinese Communist Party to bring Taiwan under its rule. Mr. Xi could see Mr. Putin’s invasion of Ukraine as a parallel to military actions he could take to seize Taiwan. At the same time, the harsh economic sanctions imposed on Russia

by the United States and its European and Asian allies and the fierce resistance of Ukrainians to the Russian military could serve as deterrents.

President Biden and Mr. Xi discussed Taiwan in a video call last Friday. Taiwan is the most sensitive and intractable issue between the United States and China. The United States provides defensive equipment to Taiwan and maintains “strategic ambiguity,” meaning it leaves open whether it would send armed forces to defend Taiwan if China tries to invade. And while the United States does not recognize Taiwan as an independent nation, it also does not state a position on the territory’s sovereign status relative to China.

China insists Taiwan is part of its territory and cannot exist as a sovereign nation. Taiwan’s full diplomatic status is recognized by 14 sovereign states — including 13 member states of the United Nations — a number that has fallen over the years as China has pressed nations to drop the recognition and normalize diplomatic ties with Beijing. Last December, Nicaragua switched recognition to China from Taiwan, following similar moves from 2017 to 2019 by Panama, the Dominican Republic, El Salvador and the Solomon Islands.

Last August, Lithuania allowed Taiwan to open a representative office in its capital, Vilnius, prompting China to recall its ambassador and sever trade ties.

The report from the German Marshall Fund, a research group that promotes democracy, laid out similar examples of coercive diplomacy by China in the constellation of United Nations agencies and associated groups. (The authors, Jessica Drun and Bonnie Glaser, both Taiwan experts, said they had received funding from the Taiwanese government for the research but that the views in the report were their own. Separately, Laura Rosenberger, senior director for China and Taiwan at the White House National Security Council, was a senior fellow at the German Marshall Fund.)

In some cases, Chinese diplomats worked to ensure that Taiwan could not participate in the groups. In other cases, Chinese officials pushed U.N. personnel to ensure that Taiwan was labeled a “province of China” in documents. The U.S. has a policy of promoting Taiwan’s participation in international organizations and venues.

A United Nations spokesperson did not reply to a request for comment.

A State Department official said that U.S. officials consistently highlighted the value of Taiwan’s “meaningful participation” in U.N. activities and associated groups, especially ones related to public health and safety. In a statement, the official said “this is in the best interest of all U.N. member states, given the transnational nature of the challenges we face.” U.S. officials regularly have private conversations with U.N. leaders on the issue.

China’s efforts in the United Nations context are part of a campaign to shift the understanding of that body’s Resolution 2758, passed in 1971. The resolution says the People’s Republic of China would be the only legitimate representative of China to the United Nations, meaning it would take the seat held by the government of Taiwan. The resolution does not say anything about the sovereign status of Taiwan, but China has been trying for years to change people’s understanding

of the language so they think the text says Taiwan is part of China, Ms. Drun and Ms. Glaser wrote.

China has “used U.N. Resolution 2758 and bilateral normalization agreements with other member states to falsely claim that its ‘One China’ principle is a universally accepted norm,” they wrote, adding that China gets support for its views partly “through economic pressure on governments.”

Those efforts allow China to more easily argue that Taiwan should be shut out of international organizations.

“They have lots of reasons to solidify the ‘One China’ principle, as they put it, in the minds of the leadership of the United Nations,” said Thomas Christensen, the interim dean at Columbia University’s School of International and Public Affairs and a former State Department official.

China pressures private companies and nongovernment groups too. Marriott, Delta Air Lines, Qantas, Zara and Medtronic all changed their website language in recent years after Chinese officials criticized the companies for listing Taiwan as a separate country. Last year, Chinese officials at the United Nations forced a Colorado high school to change language on its website before the school’s students were allowed to visit a U.N. organization. The school had to add “province of China” to text about Taiwan.

The German Marshall Fund report highlights an agreement between China and the World Health Organization as an egregious instance of a move to shut Taiwan out of an international group. The ban on Taiwan was especially harmful in the early months of the pandemic, when Taiwan had accumulated information on Covid-19 but could not share it with the W.H.O., the authors wrote. In May 2020, Secretary of State Mike Pompeo and other U.S. officials tried to lead a coalition of countries to get Taiwan observer status at an assembly convened by the W.H.O., but failed.

China also quashed a similar effort last year.

“Beijing is setting the table for a war to annex Taiwan, and its insistence on these linguistic changes are designed to absolve Beijing of its commitments under the U.N. Charter and to head off international sanctions and condemnation,” said Matthew Pottinger, a deputy national security adviser in the Trump administration and the chairman of the China program at Foundation for the Defense of Democracies. “It won’t work, because the world won’t abide Beijing slaughtering its peaceful neighbors irrespective of whether Taiwan is viewed as a sovereign country or part of ‘one China.’”

Liu Pengyu, a spokesman for the Chinese Embassy, said that participation by the “Taiwan region” in activities of international organizations, including the W.H.O., “must be handled in accordance with the ‘One China’ principle.”

China's efforts have fueled a growing sense of resentment toward the mainland among Taiwanese. More than ever, many of the island's residents identify as solely Taiwanese, and not Chinese.

The issue of Taiwan's representation on the international stage has been a source of rare bipartisan consensus between the island's two main political parties: the ruling Democratic Progressive Party, which tries to bolster Taiwanese identity, and the Kuomintang opposition party.

Taiwan has consistently pushed for meaningful participation in the United Nations. But China, which is a permanent member of the Security Council, has closed off almost any possibility of that happening.

"It is very high on China's agenda to stop Taiwan's visibility in the world," said Su Chi, a former official in the Kuomintang who served as the chairman of Taiwan's Mainland Affairs Council.

"Even the KMT resents that," he added. "We have the aspiration for dignity."

But China's influence in the United Nations and related agencies is growing.

"Due to China's powerful interests in the U.N., it's very difficult for these agencies to let Taiwan enter into these organizations," said Eugene Kuan, an associate professor of international politics at National Taiwan Normal University. "They don't want to cause any disputes or any conflict with China, so it's better for them not to take care of this issue."

## **25. Shabaab kills dozens in twin suicide bombings targeting Somalia's election process**

Long War Journal, 24 Mar 22, Caleb Weiss and Andrew Tobin

On March 24, just one day after Al Shabaab launched an assault against the Halane military base in Mogadishu, the terrorist organization conducted two suicide bombings in the central Somali town of Beledweyne, the capital of Somalia's Hiraaan region. The twin blasts left at least 48 people dead, including two parliamentary candidates, and dozens more wounded.

The initial blast occurred within the Lama-Galay military base in Beledweyne, which houses the Hirshabelle regional presidential residence (Hirshabelle refers to the federal member state that combines Somalia's Hiraaan and Middle Shabelle regions) and the site of ongoing parliamentary elections in the region.

Among the victims of the attack was Somali legislator Amina Mohamed Abdi, who was campaigning for re-election at the polling site at the time of the attack.

Mohamed was described as a fearless critic of incumbent president Mohamed Abdullahi Mohamed (popularly known as Farmaajo) and advocate for a female intelligence officer, Ikran Tahlil, whose disappearance in 2021 sparked disputes within the Somali federal government.

signs of an ICBM launch. The country also appears to be undertaking construction work at its main nuclear weapons test site for the first time in about four years.

## ANALYSIS/COMMENTARY

---

### **29. Russia's War has changed the Iran nuclear deal calculus**

Bloomberg, 24 Mar 22, Jonathan Tirone and Daniel Flatley

Russia's war on Ukraine is reshuffling Middle East diplomacy and forcing the U.S. to reassess the political costs of reviving the 2015 nuclear accord with Iran.

Clinching the deal after a year of negotiations now hangs on a sticking point that people familiar with the talks say has emerged as the most politically explosive for the Biden administration -- whether to remove Iran's Islamic Revolutionary Guard Corps from the U.S. list of terrorist organizations.

The designation isn't directly linked to the original pact, which curbed Tehran's atomic activity in return for sanctions relief, but Iran's insisted all along that it be scrapped.

The issue's galvanized U.S. lawmakers in an election year and united erstwhile Middle East foes in an unprecedented bid to nix a pact they fear will hand Iran an oil windfall. They include Gulf Arab nations that face regular attack from Iran-backed groups and have rebuffed requests to top up stricken oil markets unless their security needs are met.

The stakes are higher for President Joe Biden than they've been since he came to office in January 2021. Iran now has stockpiles of highly-enriched uranium, sanctions have failed to halt its progress and no deal means potentially living with the risk it could develop nuclear weapons and set off a regional arms race.

Lifting the IRGC's terror designation, however, would alienate Gulf Arab leaders just as Biden works to rally allies against Moscow and curb soaring gasoline prices. It also risks upending a decades-old alliance that extended U.S. influence in a strategic region that exports more energy than any other and straddles three shipping choke points.

#### **High stakes**

Two weeks after talks to revive the agreement were suspended, diplomats say it's not clear when negotiators might return to Vienna. Russia's decision to drop its 11th hour condition to a deal and the release last week of two British-Iranians detained for years by Tehran have yet to imbue new momentum.

Reflecting the souring mood as Ukraine redraws the political landscape, U.S. senators emerged discouraged from a classified briefing on the talks Tuesday.

“Russia was initially interested in getting the U.S. back into the deal,” said Democratic Senator Ben Cardin, who attended the briefing in Washington. “Now they have only concern about Ukraine. Their attention isn’t there anymore.”

After suggesting for weeks that a deal was close and remaining hurdles could be cleared within days, State Department spokesman Ned Price said Monday “that an agreement is neither imminent nor is it certain.”

### **Symbolic sanctions**

The deal’s proponents argue that the IRGC’s terrorism designation was a symbolic measure taken by then-President Donald Trump after he abandoned the agreement in 2018 and launched a “maximum pressure” campaign. Iran has said from the start it wants all the additional Trump-era penalties removed.

Even if the designation is scrapped, the military organization that’s armed and trained proxy groups around the region and launched attacks on the U.S. and its allies in Iraq and on tankers in the Persian Gulf would remain subject to a slew of other sanctions.

Plus, reinstating the pact would incentivize Iran to reduce tension, potentially breaking the tit-for-tat cycle of violence that’s shaken the Gulf since Trump exited the agreement.

Opponents of the deal, and even administration members who had been supportive, calculate that backing down would project weakness and carry political costs ahead of November elections in which Biden’s Democrats stand to lose control of Congress.

They’re also concerned about pushing Saudi Arabia and the UAE, which face regular attacks from Iranian-backed Yemeni fighters, further into Russia and China’s embrace, accelerating an erosion of American power already underway.

The senate briefing came hours after Israel, the UAE and Egypt held a rare summit -- unthinkable just a few years ago -- aimed at presenting a joint front against the Iran pact and shielding themselves from the more immediate economic turmoil triggered by the Kremlin’s month-old war.

And the debate’s prompted an unusual public objection from Israel. Prime Minister Naftali Bennett and Foreign Minister Yair Lapid issued a joint statement Friday urging the U.S. not to “abandon its closest allies in exchange for empty promises from terrorists.”

Another challenge to a deal could come from within Biden’s own party once he submits the text for Congressional oversight as required by a 2015 law. As well as broad Republican opposition it could meet resistance from some influential Democrats including Robert Menendez, who chairs the Senate Foreign Relations Committee, and has warned the administration not to accept a bad deal or interim agreement.

“I have no question in my mind that the Iranian Revolutionary Guard is a terrorist organization,” said Menendez. “We have acknowledged that their actions are such, so it would have to be explained.”

A nuclear deal that offers \$90-\$130B in sanctions relief, relieves sanctions against #Iran’s worst #humanrights offenders, & delists the #IRGC doesn’t support our nat’l security interests. Worse, this deal could enable #Putin to build his nuclear arsenal. Biden should walk away.

In the absence of an agreement, Iran’s enriched uranium stockpile looks likely to grow unabated while its government solidifies trading ties with China and Russia. Iranian Foreign Minister Hossein Amirabdollahian spoke with his Chinese counterpart following talks with Russian Foreign Minister Sergei Lavrov in Moscow only last week.

China disclosed this week that it continued importing Iranian crude in January. Security analysts have warned for months that China could provide Iran an economic escape route if nuclear talks collapse. Beijing has consistently criticized U.S. secondary sanctions that target its trading partners. The list of sanctioned companies has only grown in the wake of Russia’s war in Ukraine.

While Biden’s trying to discourage China from helping sanctioned entities, he’s been slow to address the depth of anger among Gulf Arab allies over the Iran deal, damaging efforts to isolate Moscow.

No Middle Eastern government, including Israel, has signed on to support the crushing sanctions the U.S. has imposed on Russia.

The State Department says it’s now in constant touch with Middle East allies to provide assurances. Having shunned Saudi Arabia’s de facto ruler and neglected for years to appoint ambassadors to the UAE and Saudi Arabia, U.S. officials say they’re trying to schedule high-level diplomatic meetings in the region in the days and weeks ahead.

And the differences over a symbolic designation aren’t insurmountable, say people familiar with the talks, if both sides decide the agreement’s worth it.

“Both the U.S. and Iran want a deal,” Eurasia wrote last week. “There may yet be some theatrics, with Iran trying to leverage high oil prices to win several additional concessions.”

### **30. Why the U.S. was wrong about Ukraine and the Afghan War**

New York Times, 24 Mar 22, Julian E. Barnes

Ukrainian citizens learned to make Molotov cocktails from government public service announcements, then recorded themselves setting Russian armored vehicles on fire. Ukraine’s soldiers waited in ambush and fired Western-provided missiles at Russian tanks. The country’s president recorded messages from the streets of his capital, urging his country to fight back against the invaders.

It was a stark contrast from a different set of images, just seven months ago, when the Taliban rolled into Afghanistan's capital, Kabul, unopposed. Most Afghan troops abandoned their uniforms and weapons. The president fled to the United Arab Emirates, leaving his country to the Taliban militants it had fought for some two decades.

The intelligence community and American military appear to have misjudged both countries' will to fight, according to lawmakers. In Afghanistan, intelligence agencies had predicted the government and its forces could hold on for at least six months after the U.S. withdrawal. In Ukraine, intelligence officials thought the Russian army would take Kyiv, Ukraine's capital, in two days. Both estimates proved wrong.

Assessing how well and how fiercely a military, and a nation, will defend itself is extraordinarily difficult. There are many factors to consider, including its leadership, the supplies at its disposal, the strength of the enemy and whether an opposing force is seen as an invader.

The miscalculations demonstrate that even in an age of electronic intercepts and analysis assisted by vast data collection, human relationships still matter in accurately assessing the morale of a country or military. Former intelligence officials say that is why it is critically important that the perspectives of people working directly with partner forces reach policymakers in Washington.

Had the U.S. view of Afghanistan been more realistic, efforts to evacuate Afghans who had assisted the American war effort could have begun earlier — or perhaps some of the billions of dollars put toward training Kabul's military could have been spent in other ways.

With Ukraine, according to lawmakers on both sides of the aisle, if the United States had had a better sense of how strong and effective the Ukrainian resistance would be against a Russian invasion, it might have sent more weapons to the country sooner.

“Assessing the will to fight in advance of a conflict like this is difficult. However the lesson of the last year is we have to figure out how to do that,” said Senator Angus King, a Maine independent and a member of the Senate Intelligence Committee. “If we had known in advance how strong the Ukrainians would be and how weak the Russians would be, we might have been able to preposition more equipment and had aid to the Ukrainians flow in faster, based on the assumption they had a real chance.”

How badly the intelligence agencies got it wrong is subject to debate. Ahead of the invasion, Ukraine experts “clearly and repeatedly” told policymakers in the White House and Congress that Ukraine's government and people “probably would resist a Russian invasion,” a U.S. official said.

But intelligence reports are usually hedged. And under questioning from Senator Tom Cotton, Republican of Arkansas, Lt. Gen. Scott D. Berrier, the director of the Defense Intelligence Agency, said this month that, before the invasion, he had thought the Ukrainians were not as ready for an attack as they needed to be.

“Therefore, I questioned their will to fight. That was a bad assessment on my part because they have fought bravely and honorably,” General Berrier said.

In an interview, Mr. Cotton said the intelligence agencies were at their best assessing Russia in the lead-up to the invasion. Once the invasion began, the assessments of Ukraine's capabilities and Russia's military were "less than stellar." Still, he said, judging how effective a country's defenses will be ahead of a potential attack is tricky.

"Will to fight is not a discrete area of intelligence you can go out and collect on it," Mr. Cotton said. "It's not like how many working fighters did an air force have? There's a lot of subjectivity."

Recent counteroffensives by the Ukrainian military suggest that the country's leaders are resolved to do more than simply defend Ukraine against the Russian invasion. Over the last week, Ukrainian forces have used tanks and fighter jets to attack Russian positions outside Kyiv and other cities in a way that demonstrates that their objective is not to take back territory, but to destroy Russian forces. It is a sign of not only savvy strategy but a clear intent by Ukraine to defeat the Russian military and win the war.

Representative Adam B. Schiff, Democrat of California and the chairman of the House Intelligence Committee, said it was easy to overstate what the intelligence community got wrong, both in Ukraine and Afghanistan. Last summer, intelligence agencies repeatedly warned that the Afghan government would collapse and that military leaders were surrendering to the Taliban, Mr. Schiff said.

Mr. Schiff said that he had asked during intelligence briefings if Ukraine would fight a Russian invasion and was told by officials that, yes, they would, but that it was difficult to know what that would mean in concrete terms.

"If there was a blind spot, I think it was less in believing Ukrainians wouldn't fight and more about believing the Russian military was more capable than they turned out to be," Mr. Schiff said.

Russia believed that it would face little effective resistance from the Ukrainian military, and that it could quickly march to Kyiv, rather than having to engage in a slow grinding war, according to U.S. intelligence agencies.

That misjudgment was amplified by the Russian military's struggle with complex maneuver warfare, supply problems, broken-down vehicles and lack of secure communications, former U.S. intelligence officials said.

"No one doubted the will of the Ukrainians, but given the small size of their army, analysts assessed there were limits to their capability to fight a war on a modern battlefield," said Douglas H. Wise, a retired senior C.I.A. officer and a former deputy director of the Defense Intelligence Agency. "With the scale of the Russian military dwarfing Ukraine's much smaller size, analysts ran the numbers and assessed they would not prevail."

Intelligence officials also had no way of predicting the leadership abilities of Ukraine's president, Volodymyr Zelensky, which have proven key in rallying the country to the fight. One

reason for the misjudgment was that the Ukrainian government, including Mr. Zelensky, was initially skeptical of American intelligence that Russia was going to invade.

Two weeks before the invasion, Mr. King asked intelligence officials how Mr. Zelensky would handle the attack. Mr. King had argued that had President Ashraf Ghani of Afghanistan not fled in the face of an advancing enemy force, Kabul might have lasted longer, and he wanted to know what Mr. Zelensky would do.

“Will he be Churchill or Ghani?” Mr. King asked.

The officials replied that Mr. Zelensky had publicly played down the likelihood of an invasion, but they simply did not know how he would respond.

“But boy, when the chips were down,” Mr. King said in an interview this week, “he channeled his inner Churchill.”

The United States has a bad track record of assessing its partner forces stretching back to Vietnam, when U.S. officials thought the South Vietnamese army would be able to hold off the north after the American withdrawal. Indeed, the more the United States has invested in training partner forces, the less clear-eyed officials have been on their prowess.

In Vietnam, Iraq and Afghanistan, American officials believed the units they had trained would fight longer and harder than they did. It is nearly impossible to make an objective analysis of the fighting spirit of a partner force in those situations, former intelligence officers said.

“To get the data you have to become close to your partner and the minute you do that, lack of bias goes out the window,” Mr. Wise said.

Other former intelligence officials argue it is often the officers who train and work with partner forces who can accurately assess the will to fight. But that information is sometimes overlooked as it is passed up to analysts in Washington, said Marc E. Polymeropoulos, a former senior C.I.A. official who oversaw operations in Europe and the Middle East and served several times in Afghanistan.

“If you ask operations officers about will to fight, they will tell you the truth based on their being on the ground with a partner,” he said. “I think any operations officer would have told you that the Afghan regular army did not have that will to fight on their own, if we left, and consistently would have said that over and over again.”

Whether the United States is prepared to handle such assessments better in the future is unclear. It is already confronted with a similar issue as it tries to help Taiwan deter a possible attack from China.

“The question is whether the Taiwanese would exhibit the same fighting spirit as the Ukrainians,” said Rep. Mike Gallagher, Republican of Wisconsin and a member of the House Intelligence Committee. “The answer matters. Because if we suspect not, then we need to be

moving more aggressively to help the Taiwan military reform and fix their reservists, the infrastructure and make them a more lethal and more difficult target before it's too late.”

Intelligence officials believe the Russian war in Ukraine is failing. But they think President Vladimir V. Putin will adjust his tactics, doubling down on the hard-line attacks he has employed in recent weeks or looking to escalate the situation in a bid to force the West to end its support for Ukraine.

The idea that Ukraine is certain to lose may no longer be universally accepted, but some lawmakers think the Biden administration is still underestimating the Ukrainian military.

“Zelensky’s endgame may be victory, it may be getting Russian troops off his soil,” Mr. Cotton said. “Even if you didn’t think that a month ago, you have to concede it is certainly a possibility now.”

### **31. Mohammed bin Salman has leverage on Biden—and is using it**

Foreign Policy, 24 Mar 22, Anchal Vohra

The sanctions imposed on Russia after its invasion of Ukraine caused havoc in global energy markets. Western capitals panicked over how to contain the price of oil as it climbed to nearly \$140 a barrel—and how to wean themselves off Russian supplies. The United States and the United Kingdom, both of which announced bans on the purchase of Russian oil, rushed to convince their traditional allies to open their taps and reduce global oil prices.

Saudi Arabia and the United Arab Emirates, two of the biggest producers of oil, however, did not oblige, instead seeing an opportunity for themselves in the crisis. The message to the United States and the West more generally was unmistakable: The Saudis have too much leverage to be taken for granted in geopolitics or to be treated as an object of continuous criticism for violating human rights.

Even more than the Emiratis, the Saudis hold the key to oil wells and expect big concessions from the United States before opening their taps and reversing their pro-Russia oil policy. Activists fear that human rights will be sacrificed at the altar of energy security once again. Neither the United States nor the U.K. publicly criticized Saudi Arabia’s mass executions of 81 people in mid-March. The West’s policy toward Saudi Arabia has consisted mostly of cajoling to ease the pressure on consumers’ wallets.

The Saudis and Emiratis have a spare capacity of more than 3 million barrels a day and could reduce oil prices even if they released a part of it. Moreover, since Russia exports about 5 million barrels a day and nearly 80 percent to Europe, an assurance of support from Riyadh and Abu Dhabi could go a long way in assuaging the concerns of European countries and encouraging them to reduce dependence on Russia.

But the two Gulf states have held back, citing commitment to the OPEC+1—the expanded version of the oil cartel that includes Russia. Their rationale is that the war in Ukraine has not so

far resulted in a massive disruption of oil supplies; hence, there is no need to max out production. But experts believe it to be a political decision that reflects a major shift in world politics. The choice to keep the prices up, which also benefits Russia's war machine, displays how dictatorships in the Gulf no longer feel the need to be on the right side of the United States and are embracing newer alliances with like-minded authoritarians. On several occasions in the past, Saudi rulers increased or reduced the output to please their U.S. allies.

This time, however, the de facto ruler of the kingdom, Saudi Crown Prince Mohammed bin Salman, sees a chance to get even with U.S. President Joe Biden for what he believes have been gratuitous insults and less than favorable treatment. While still a candidate in the U.S. presidential election, Biden described Saudi Arabia as a pariah and when in office made public an intelligence report that implicated the crown prince in the assassination of the Saudi dissident and Washington Post journalist Jamal Khashoggi. Moreover, both the Saudis and Emiratis felt their concerns over the possible resumption of the Iran nuclear deal were sidelined and that the United States failed in its duty as a military ally when it refused to take action against the Houthis in Yemen for attacking their ships and cities. Lately, even their pleas to keep the Houthi movement on the list of designated terrorists were ignored by Washington.

As fuel prices rose in the wake of Russian President Vladimir Putin's war, the White House scrambled to organize a phone call between Biden and the jilted crown prince but was rebuffed. However, the Saudi heir was not at all anxious about being seen as a closer ally of Putin, who stood by him through the allegations of ordering Khashoggi's killing and didn't so much as whisper condemnation when women's rights activists were arrested and prisoners executed en masse.

The Saudi tilt toward a fellow authoritarian began back in 2015, when relations soured with then-U.S. President Barack Obama. A year later, Russia was included in OPEC. Riyadh's relationship with Moscow has since strengthened, while ties with the United States have waxed and waned, improving during the tenure of U.S. President Donald Trump, who withdrew from the Obama-era nuclear deal with Iran, and plummeting again as Biden took charge and restarted talks to revive the agreement. During the Trump administration, Mohammed bin Salman was portrayed as a reformer, but under Biden he was once again criticized widely for Saudi strikes in Yemen that killed civilians and for human rights violations inside his own kingdom.

Trita Parsi, a co-founder and executive vice president of the Quincy Institute for Responsible Statecraft, said Saudi Arabia supports Russia because the crown prince is certain of the continuation of Putin as Russian president and a change of government in the United States.

"The Saudi crown prince is making a bet on Putin," he said. "Not only does he believe but he also hopes that the Republicans will win the midterm elections, turning Biden into a lame duck. By 2025, [Mohammed bin Salman] likely believes that Biden and the Democrats will be out of power, while Putin will remain president of Russia."

The crisis has forced the United States to assess its claims of energy independence. It must either come up with a more coherent long-term plan to better manage its domestic energy industry,

which has suffered extensive losses during the pandemic, or seal its lips and tolerate the authoritarians.

Energy experts believe in any case it would take months for U.S. fracking companies to dig new wells. Even if sanctions against Iran and Venezuela are lifted, it will still take time before they can supply their oil to the global market. Last weekend, Germany signed a long-term deal with Qatar to import liquefied natural gas (LNG); Qatar holds the third-largest gas reserves after Russia and Iran. Under the agreement, Germany will fast-track construction of two LNG terminals to be able to import Qatari gas, but even then, it would take years before that gas is supplied to German homes. Until now, Germany had banked on cheaper Russian gas transported through pipelines.

Saudi Aramco, currently the world's largest oil producer, reported record profits in 2021, earning \$110 billion, a net income increase of 124 percent from \$49 billion the year before. The company announced a general investment in increasing oil production but nothing to increase the supply in the short term. "We recognize energy security is paramount for billions of people around the world, which is why we continue to make progress on increasing our crude oil production capacity," said Amin Nasser, CEO of Saudi Aramco.

The International Energy Agency has said that by the end of this year, at least 1.5 million barrels of oil a day are likely to be lost from Russia. It will undoubtedly lead to a further price rise. OPEC+ is next meeting at the end of this month and is expected to take stock of the situation to decide on oil output. But a lot depends on how much the Saudis and Emiratis feel heard by the United States.

They are certain the United States will not change its position on the nuclear deal, but could it back the Gulf countries in their war against the Houthis in Yemen and cut down on criticism on human rights violations? The lowest hanging fruit in the world of hard national interests is individual liberties. Saudi activists may end up paying the price for global oil stability and a reduction in prices once again. Mohammed bin Salman, however, might want even more than that from Biden.

### **32. Putin's Afghanistan: Ukraine and the lessons of the Soviets' Afghan War** Foreign Affairs, 24 Mar 22, Milton Bearden

As Russian President Vladimir Putin's invasion of Ukraine has progressed, it is clear that almost nothing has gone according to plan. Far from being greeted as liberators, Russian forces have been treated as hated enemies; instead of quickly capitulating, the Ukrainians have shown they are determined to stop the Russian advance and fight at all costs. Even at this point, a month into what will undoubtedly become a much longer engagement than Putin estimated, reports abound that the Russian campaign has been plagued by supply issues and low morale. Already, the war

shows signs of becoming what the Institute for the Study of War has described as a “stalemate.” Perhaps most striking, U.S. intelligence officials estimate that the Russian military lost more than 7000 soldiers in the first 20 days of the war alone, as well as five Russian generals in the past month. By all indications, there is no clear path to victory for Russia absent a massive escalation, and the war has already proved perilously costly to the Kremlin—and especially to Putin himself.

For those who remember late Soviet history, there is a familiar analog to these events: the Soviet invasion of Afghanistan in 1979. As with the war in Ukraine, the invasion of Afghanistan was driven by the fear that Moscow was losing a crucial piece of its sphere of influence. With Afghanistan, the Soviet leadership believed, as Putin apparently did about Ukraine, that the war would be quick and easy, that its troops would have no problem handling whatever resistance they might encounter, and that the United States and its allies, distracted by other events, would not mount an effective response. And like Putin, the Soviets assumed that it would be easy to install a puppet government in the newly conquered territory.

None of this turned out to be true. Instead, Afghanistan quickly turned into the most disastrous Russian foreign military engagement of the postwar era. Afghan insurgents quickly organized into effective guerrilla forces and created safe havens in Pakistan, where they were armed and trained by Pakistani intelligence officers. Within weeks of the Soviet invasion, U.S. President Jimmy Carter formed an alliance with Pakistan—an effort that was soon joined by China, Egypt, the United Kingdom, and Saudi Arabia—to support the Afghan resistance. Deeply unprepared for what would be arrayed against them, Soviet forces dug their heels into what turned into a grinding decadelong war that undermined morale at home, drained Soviet coffers, and eventually precipitated the collapse of the Soviet Union.

Of course, Russia in 2022 is not the Soviet Union of 1979. But given the striking similarities that have already emerged between Putin’s Ukraine adventure and the Soviet war in Afghanistan, it is worth examining the defining features of that earlier conflict and its far-reaching consequences. If the Ukraine invasion continues to unfold as it has so far and becomes Russia’s bleeding wound of the twenty-first century, it could, as the Afghan war did for the Soviets, threaten the survival of Putin’s regime—and Putin himself.

### **Learning the wrong lessons**

Unlike Putin’s clumsy preparations for the invasion of Ukraine—botched in part because of U.S. intelligence revelations exposing Moscow’s intent to attack—the Soviet plans for Afghanistan unfolded in secret. In late 1979, KGB intelligence analyses had wrongly concluded that Afghanistan was sliding into the West’s orbit and that a U.S. military base in the country would allow the United States to completely encircle the USSR with nuclear missiles. Soviet leaders also feared that if Afghanistan were pulled into Washington’s sphere of influence, it could trigger a domino effect among the nations of the Warsaw Pact. According to the Brezhnev Doctrine, which proclaimed that a threat to socialist rule in any Soviet bloc country was a threat to all socialist states, these fears justified military intervention. Thus, on December 12, 1979, Soviet Defense Minister Dmitri Ustinov, KGB Chair Yuri Andropov, and Soviet Foreign Minister Andrei Gromyko drafted a proposal to dispatch a “limited contingent” of the Soviet

army to Afghanistan with a short and targeted intervention in mind. A dozen days later, the Soviet invasion began.

In its initial phase, the Soviet invasion was far more successful than Putin's in Ukraine. On a snowy Christmas Eve, Soviet airborne troops—along with special units of the OMON, the militia division of the Soviet Interior Ministry—quickly seized strategic targets in Kabul, assassinated Afghan leader Hafizullah Amin and key members of his ruling team, and replaced him with their handpicked man, the pro-Soviet Babrak Karmal, who rode into Kabul on the tanks of the Soviet invaders. They moved occupation forces into Afghanistan's major cities—Jalalabad in the east, Kandahar in the south, Herat in the west, and Mazar-e Sharif in the north. Bagram Air Base, north of Kabul, quickly became a Soviet Air Force base. Within a few weeks, the Soviet Union had brought Afghanistan under the semblance of control.

As with Putin in Ukraine, however, the Soviets badly underestimated the Western response. At the time the decision to attack Afghanistan was made, the KGB assessments had indicated that the United States would be unlikely to seriously challenge the invasion. The Americans had withdrawn from Vietnam just a few years earlier, and the presumably weak U.S. president, Jimmy Carter, was preoccupied with the American hostage crisis in Iran. But the West was on a much higher alert than the Russians anticipated. Fearing that failure to respond could embolden the USSR's international ambitions, President Carter swiftly moved to cancel new consular agreements and major wheat sales with the Soviet Union and issued a boycott of the upcoming 1980 Moscow Olympics. Behind the scenes, he also ordered the CIA to covertly begin supplying the Afghan resistance movement with equipment, including lethal materials. Within weeks, the CIA had delivered thousands of Enfield .303 rifles to Pakistan for distribution to the mujahideen, and was soon sending rockets, mortars, and rifles, as well. Total U.S. funding for the Afghan resistance grew from about \$100 million in the first year to \$500 million in the fourth year; in the last two years of the war, it would top \$1 billion.

The failure of the Soviet Union to anticipate both the strength of the resistance and the extent of Western support had devastating consequences. What Soviet leaders had assumed would be a quick and easy military intervention turned into a bloody decadelong struggle. The human devastation of the conflict reverberated throughout the region: around a million Afghans were killed, a million and a half were wounded, three million sought refuge in Iran and Pakistan, and an unknown number were internally displaced—all out of a population of fewer than 20 million people. The Soviet Union itself eventually admitted to having lost more than 15,000 soldiers in the conflict, although that number is probably much closer to 25,000. By the time Mikhail Gorbachev came to power in 1985, the Soviet leaders who had launched the Red Army into Afghanistan had passed from the scene, but the USSR was continuing to pour blood, treasure, and its international reputation into the war. Eventually, with the U.S.-armed Afghan resistance increasingly on the march, Gorbachev gave his commanders a year to turn around the situation, but they could not. On February 15, 1989, the Soviets finally withdrew.

Signaling the Soviets' defeat, the withdrawal from Afghanistan set in motion a stunning series of events that would change the world. Countries within the Soviet bloc and the Warsaw Pact saw an exhausted Soviet Union leave Afghanistan, and rightly concluded that the new Soviet premier, Mikhail Gorbachev, would have little stomach for new military adventures. Thus, in

May 1989, the Hungarian government, perhaps the most cerebral of the Soviet partners, cut the barbed wire fences on its border with Austria, allowing hundreds of East Germans to escape to West Germany. The following month, in the first free elections in over six decades, the people of Poland cast their ballots for the Polish dissident and Nobel Peace Prize laureate Lech Walesa, effectively voting out over four decades of communism. That summer, East Germany's antigovernment Monday demonstrations grew in numbers and sheer force until the night of November 9, 1989, when crowds of East German protesters breached the Berlin Wall. Less than a year later, Czechoslovakia and Romania had followed suit in breaking with Moscow, East and West Germany were reunified—as a member of NATO—and in 1991, Ukraine declared independence. On Boxing Day of 1991, a small group of Russian soldiers marched out on the Kremlin wall, lowered the red and gold hammer and sickle for the last time, and hoisted the Russian white, blue, and red tricolor.

It was these traumatic events—precipitated at least in part by the Afghan disaster—that Putin witnessed as a young KGB officer stationed in East Germany. The memory of the Soviet collapse has driven him to declare it “the greatest tragedy of the twentieth century,” but he appears to have taken the wrong lesson from those events. Paradoxically, in an effort to reconstruct his vision of the lost Russian empire and reclaim Ukraine from what he takes to be Washington's sphere of influence, he has launched his own Afghan-like invasion. In setting out to reverse history, he may instead be repeating it.

### **Replicating disaster**

If anything, Putin's invasion of Ukraine looks even shakier than the Soviet invasion of Afghanistan. The televised meetings of Russia's Security Council indicate that Putin's closest advisers, unlike Brezhnev's Politburo, were not entirely briefed on the invasion plans and may have had their own misgivings. And in contrast to the Soviets' initial success, Putin's invasion has been poorly executed from the start, with failure to seize or control major cities and casualty counts in the first few weeks that would take the Soviets years to amass in Afghanistan.

Moreover, Putin has met far more resistance in Ukraine than Soviet forces initially met in Afghanistan, which may lead him to resort to more violent tactics. Already, Russian attacks on hospitals, residential buildings, and a crowded theater have caused President Biden to brand Putin a “war criminal,” to which he has responded by petulantly declared that he might break off all diplomatic relations with the United States. If Putin follows the pattern that he has shown in his previous wars in Grozny and Syria, he will likely use tactics the Soviets employed in their failed Afghan enterprise that resulted in an estimated one-third of the Afghan population killed, wounded, or displaced internally or into Iran and Pakistan.

At this stage, unless there is a negotiated settlement—an unlikely event—it seems that Putin will seek to seize and occupy Kyiv after a bitter and violent fight with its heavily armed civilian population. This task alone may prove extremely difficult and could take weeks or months of costly fighting. It is far from certain that Putin could take Kyiv with conventional tactics. But even if he is successful in taking Kyiv—removing the Zelensky government and replacing it with handpicked pro-Russian quislings—Moscow's troubles could be just beginning. As in Afghanistan forty-odd years ago, Putin would likely face a relentless, heavily armed insurgency,

covertly backed by a Western coalition similar to the one that pushed the Soviets out of Afghanistan.

Ukraine's size alone will present formidable problems to any Russian occupation. As large as Texas, it has a population of over 40 million people—twice as many as Afghanistan's in 1979—and is not isolated, landlocked, mountainous, and forbidding like Afghanistan, where mules and all-terrain vehicles were required to deliver arms to the Afghan resistance. Ukraine is also a reasonably modern country with decent roads and transportation networks. It has 850 miles of land and maritime borders with Poland, Hungary, Slovakia, and Romania: all NATO countries. And although it lacks the rugged, mountainous terrain that helped the Afghan insurgents effectively counter a heavily armed Soviet Army, Ukraine's vast geography, strong communication networks, and proximity to Western powers give its insurgents a great advantage.

As with the Afghan resistance in the 1980s, with its safe havens in Pakistan, a Ukrainian insurgency could also benefit from staging areas in neighboring countries. Already, millions of Ukrainian refugees crossing into these bordering NATO countries are being met with sympathy and support. In the coming days and weeks, as the war moves toward engulfing the entire country, these refugees are likely to be joined by growing numbers of fighting-age Ukrainians. These fighters will be seeking not refuge but safe havens, where they will begin to organize, train, and arm themselves as a roughly coherent resistance force against the Russian occupation of their country. With the United States and its NATO allies already funding and arming the budding insurgency against Russia, it will not be long before Putin finds himself pitted against a well-armed resistance movement that could make the occupation simply too politically, socially, and economically costly to sustain. As in Afghanistan, supply problems and morale issues among the occupying forces could reach a level that cannot be sustained.

The record of recent insurgencies suggests that the odds will be sharply against Putin in any prolonged occupation. In the decades since the end of World War II, nationalist-based insurgencies against foreign invading forces have almost always prevailed, as Afghan resistance fighters did against the Soviet Union. This puts Putin in a vulnerable position: either he wins and quickly pacifies Ukraine—a most unlikely outcome—or he orders a withdrawal of his troops from the country after he declares his “special military operation” successfully completed. The personal humiliation of such a move would likely be too much for Putin. He is approaching his 23rd year as Russia's leader, about seven years short of his personal goal of exceeding Joseph Stalin's 30 years at the helm. The options open to him are narrowing by the day, and further complicating any assessment of his likely actions is the growing suggestion that he is unhinged and capable of taking the unthinkable step of using nuclear weapons, as he has repeatedly threatened to do. The nagging suspicions regarding Putin's state of mind can only serve to force the United States and its NATO allies to place themselves, quietly and without public pronouncement, on their own highest levels of alert, including regarding the nuclear option.

If Putin is to be taken out of the game before he escalates to the unthinkable, it will most certainly take his own military or intelligence people to accomplish the task. As the war in Ukraine drags on day by day and the international media reports on Russian atrocities and civilian casualties, the world continues to turn on Moscow. Although Putin may have started this

war to remedy what he sees as the tragedy of the Soviet dissolution, he may well be replicating the disastrous war that precipitated that collapse in the first place and jeopardizing his own future in the process.

*Milton Bearden served as CIA Chief in Pakistan from 1986 to 1989, where he was responsible for the agency's Covert Action program in support of the Afghan resistance to the Soviet occupation.*

### **33. How Russia is using tactics from the Syrian playbook in Ukraine**

The Guardian, 24 Mar 22, Emma Graham-Harrison and Joe Dyke

The woman in labor stared out from the stretcher, as medics rushed her over a wasteland left by a Russian attack on a maternity hospital. In a different hospital and feeling her baby slipping away, she begged doctors: “Kill me now.” Hours later, both she and her child were dead.

The horror of the attack on a maternity hospital in the besieged Ukrainian port city of Mariupol stunned the world. But it was not the first time Russian bombs had fallen on women as they gave birth.

As Russian strikes reduce Ukrainian cities to ruin – killing, injuring and terrorizing thousands of civilians – comparisons have been made with the second world war, but there was a much more recent precedent. The tactics, and even some of Russia’s soldiers, have come direct from the civil war in Syria which Moscow joined in 2015 to support President Bashar al-Assad.

Since then it has carried out a brutal but ultimately successful campaign – helping Assad seize back nearly all of the country from rebel hands. In the process, entire cities have been devastated and up to 24,743 civilians allegedly killed by Russian strikes, according to the civilian harm monitor Airwars.

From the Damascus suburb of Ghouta, to the great cultural and economic powerhouse of Aleppo, Russian bombs hit hospitals, schools, markets and queues of people waiting for bread. Its planes helped enforce Syrian sieges on the ground, reducing people to desperate skeletal bodies. And when Russia and the Syrian army promised exit routes, they sometimes bombed and shot the civilians trying to flee.

Some observers predicted Putin would not import the tactics of Syria to Ukraine because close ties of family and friendship straddle the border. While Syrians were distant, anonymous victims to most in Russia, the people of Mariupol include relatives, classmates and former colleagues.

But over the past month, the targets have been the same: hospitals, schools, markets, bread queues, a theatre. Russian troops have promised escapes and then attacked civilians on the roads.

Below is an examination of five key elements of the “Syria playbook”, looking at how the tactics from one war have been imported to devastating effect into another.

## **Cutting off rebellious areas**

Syrian and Russian forces besieged multiple cities in Syria to starve them into submission, effectively holding civilians hostage as forces moved in on rebel fighters.

Perhaps the most notorious was the siege of Aleppo in 2016. Syrian rebels were first cut off from their supply lines and then squeezed, street by street, over more than six months, while indiscriminate bombing took place.

By 2017, 4.9 million Syrians in need of humanitarian assistance were living in besieged or hard-to-reach areas.

Now the same is happening in Mariupol, where Russian forces are closing in on Ukrainian forces trapped between their frontlines and the sea. As the fighting rages civilians are barred from leaving, civilian infrastructure is being targeted, and life has become a daily gamble.

Russian forces appeared to be attempting a similar blockade of the capital, Kyiv, and the key eastern city of Kharkiv, but so far Ukrainian forces have been able to keep supply lines open.

## **Civilian infrastructure**

In both Syria and Ukraine, Russia and its allies have made military targets out of the civilian heart of communities – places ordinary people go for medical care, education, and food and other necessities.

Deliberately targeting civilians is illegal under international law, but it can also be effective. It spreads terror, saps the will of fighters, and destroys the community they rely on for practical and moral support.

During the eight-month battle of Aleppo, civilians were reportedly harmed in at least 16 attacks on hospitals, accounting for up to 143 alleged deaths, according to Airwars. Across the rest of Syria, dozens of strikes on healthcare facilities have been documented, including multiple attacks that have been tied directly to Russian forces.

“We documented numerous attacks on hospitals by precision Russian weapons demonstrating a clear desire to target hospitals – which are protected under international humanitarian law,” said Marc Garlasco, a war crimes investigator who analyzed Russian activity in Syria for the United Nations. “It was shocking.”

The World Health Organization has documented at least 43 attacks on healthcare in Ukraine since the war began, with at least 12 people killed. Countless other patients have had their healthcare disrupted by siege, including children on a cancer ward who are trapped in Chernihiv and running out of painkillers.

Simply feeding your family becomes unsafe under Russian assault. Since 2015, civilians in Syria have been killed or injured in 204 reported attacks on market places by Russian or government

forces, according to Airwars data. This was five times the number of such allegations about the US-led coalition against Islamic State during the same period.

Schools too have been attacked; in Syria children were killed while studying. In Ukraine, because education has been halted, no students were at their desks when bombs hit, but there have been casualties. In Mariupol a missile hit an art school sheltering at least 400 people.

And even when there are no deaths, damaging or destroying schools rips out the heart of a community and its future; in eastern Kharkiv alone, the mayor said, 48 schools had been destroyed. Nationwide, hundreds have been hit.

Water, gas and power supplies were hit in Syria. In Ukraine, a power station in the east was attacked even before Russia launched its full invasion, and utility supplies have been disrupted around the country. This is particularly devastating in the bitter Ukrainian winter.

### **Widespread use of indiscriminate weapons**

In Ukraine, Russian forces have deployed indiscriminate weapons when targeting residential areas of towns and villages, reducing entire settlements to rubble.

The largest-scale devastation has taken place in districts of Mariupol, where fires extended the work of bombing. But other towns have been attacked in this way, including eastern Volnovakha and Schastia which were targeted early in the war. Residents say 90% of Volnavakha has been razed or damaged.

The civilian toll of this kind of attack is high. Many people are killed, bodies cannot be buried and surviving residents are spending days sheltering in freezing basements without water, their food supplies dwindling, and hopes of an evacuation repeatedly dashed.

Again the echoes of Syria are clear – with videos of the ruins reminiscent of footage from Aleppo. In Syria, Russian forces allegedly used “vacuum missiles” – a particularly deadly explosive that can suck the oxygen from the air – hundreds of times in heavily populated neighborhoods.

Russia has also used other inherently indiscriminate weapons in both countries, including cluster bombs, which scatter from a delivery case, and grad rockets – indiscriminate and unguided weapons designed for open battlefields.

Civilian harm allegations have resulted from cluster munitions reported 567 times in Syria, with at least 2,000 civilians killed. They have also been widely used in Ukraine, from Kharkiv in the north-east to Mykolaiv in the south. There, one man told the Guardian a neighbor had been killed and another badly injured by cluster bombs that landed in his village.

“What Russia did in Syria was almost indescribable – intensive attacks destroying whole areas,” said Fadel Abdul Ghany, the head of the Syrian Network for Human Rights. He pointed to the 2018 siege of the rebel-held suburb of eastern Ghouta. “They had at least 12 airplanes shelling a civilian area and when they finished another 12 would return in their place.”

Russia also used its wars to develop tactics and test new weaponry. The country's defense minister boasted of testing more than 300 new weapon types in Syria, and in Ukraine they claim to have used new hypersonic missiles for the first time.

### **Humanitarian corridors**

A fourth part of the “playbook” is the announcing of humanitarian corridors. In both Syria and Ukraine, Russia has appeared to offer escape routes from areas under siege or intense shelling and then at the last minute snatched away the chance of safe passage for civilians to areas beyond the conflict.

The sight of buses lined up for a rescue mission, then forced to wait as bombardment continued became familiar in Syria and has been repeated in Ukraine.

Perhaps the most notorious in Ukraine is Mariupol. After weeks of attack and false hopes, tens of thousands fled in ad-hoc convoys of private cars once word got out in the city that Russian checkpoints were letting civilians through. Those without cars had a brutal choice of walking for several miles, or staying in the ruined city.

In Syria, Russia sometimes announced the corridors unilaterally without coordinating with international organizations such as the United Nations – meaning they were unable to monitor them, said Emma Beals, a non-resident scholar at the Middle East Institute in Washington. The corridors were sometimes open too briefly to be useful, were unworkable or even took civilians to areas under the control of military forces they were hiding from.

“The important lesson from Syria is when military and political victory is their explicit ambition there is pretty much nothing that will cause them to stop except achieving that. And the humanitarian corridors were used as part of those goals,” Beals said.

At least seven times in Syria, Russia and its allies were accused of killing or injuring civilians while targeting humanitarian convoys, including those carrying food, resulting in the deaths of at least 44 people, according to Airwars data.

The opening of corridors, even if they are not functional, can also presage an intensified attack. “Russia then usually argues that having given this chance for departure, anyone left is a “terrorist” and as such a legitimate military target. This was the pattern most infamously in Aleppo,” said Kyle Orton, a Syria analyst.

### **Disinformation**

Another trademark of the “Syria playbook” is consistent denial of, and disinformation about, civilian casualties and war crimes. To date, Russia has not accepted killing a single civilian in Syria and has no known mechanism to measure the civilian impact of its actions.

Since invading Ukraine its domestic propaganda machine has gone into overdrive, banning even the simple truth of calling the invasion a war. Instead it is a special operation. Putin claims that his soldiers are fighting to “denazify” a country whose president is Jewish.

Internationally, Russia has attempted to deny some of its worst atrocities in Ukraine. Even the pregnant woman killed in Mariupol was not left to die in dignity – the Russian embassy in London claimed images of her final agonizing moments were “fake”.

That echoed attacks on the White Helmet civilian rescue group, the Syrian victims of Russia’s most aggressive and successful disinformation campaigns. They gained worldwide fame for filming their rescues following bombings, but were regularly accused of faking the carnage they captured.

The chief spokesperson for the Russian defense ministry, Maj Gen Igor Konashenkov, even alleged, without evidence, that Ukrainian forces were planning to make “staged videos” of fake civilian deaths, in campaigns “based on patterns used by the White Helmets”.

Sara Kayyali, a Syria researcher at Human Rights Watch, said over several years the campaign in Syria succeeded in casting doubt among many over any allegation of civilian harm.

“What we came up against was the sophisticated disinformation campaign that the Russian media, in particular, launched against people like the White Helmets. Unfortunately, in many circles, this was quite successful.”

### **Fears over the next step?**

One potential further step that Russia could take to echo the war in Syria would be using chemical weapons. Russia did not use chemical weapons in Syria, but Putin’s ally Assad illegally deployed them against civilians multiple times. Syria has either denied these attacks or claimed they were “false flag” operations by rebels, but the UN-aligned body that oversees chemical weapons has confirmed the Syrian regime deployed chemical agents, including the nerve gas sarin.

Western leaders have warned that Russia may be planning a similar attack in Ukraine. The Russian state has already used a nerve agent and a radioactive poison in attacks on British soil.

Moscow’s false accusation that Ukraine has biological and chemical weapons is a “clear sign” that a desperate Vladimir Putin is considering using them himself, the US president, Joe Biden, has said. Putin has also made a veiled nuclear threat by ordering nuclear deterrence forces on to high alert.

That threat, if carried out, would take Putin beyond even his own brutal Syrian playbook. The western world, which has stepped back from intervention in either war even as civilians were trapped, starved and bombed, has not yet decided how it would respond.

### **34. The West is rash to assume the world is on its side over Ukraine**

Financial Times (UK), 24 Mar 22, Edward Luce

One of the most frequent lines heard in Washington is that Russia is now globally isolated — with China being the key prevaricator. America risks being seduced by its own public relations. The world's reaction to Russia's invasion of Ukraine is far more complex than that. Since February 24, the west has been galvanized into showing more unity than it has in years. Yet most of the world is on the sidelines waiting to see which way it goes.

Not for the first time, the west is mistaking its own unity for a global consensus. One misleading measure is at the UN. In the organization's last tally earlier this month, 141 of 193 member states condemned Vladimir Putin's blatant violation of international law. But the 35 that abstained account for almost half the world's population. That includes China, India, Vietnam, Iraq and South Africa. If you add those that voted with Russia, it comes to more than half.

Moreover, many of those nominally against Russia are hedging their bets. Saudi Arabia is considering China's request to be paid in yuan for its oil. That would help undercut the power of the dollar. Both Saudi Arabia and the United Arab Emirates refused to take Joe Biden's calls this month when he wanted them to step-up oil production — a rare snub to a US president.

Last week the UAE hosted an official visit from Bashar al-Assad, Syria's dictator, and Putin's close ally, who the US rightly sees as a pariah. One of the UAE's motives for rehabilitating Assad is that Biden is pushing to revive the nuclear deal with the regionally dreaded Iran that would release more oil on to the global market. Even Israel, arguably America's closest friend, is keeping an open mind. Its prime minister, Naftali Bennett, who is auditioning as a Russia-Ukraine mediator, has been conspicuously even-handed.

All this may look academic in a few months if Ukraine continues to humiliate Russia and the west can sustain its unity. Everybody loves a winner and the hedging countries would probably tilt back towards the west. The bigger abstainers, such as India, which has quadrupled its oil imports from Russia at a discount compared to this time last year, would adjust their stance, which is causing anguish in Washington. But the world's ambivalence should give Biden and Europe food for thought.

One red flag is the west's habitual tendency to claim moral leadership. This creates three problems. First, it is hypocritical. US public opinion paid little attention to the horrific carnage in Syria, for which Assad is primarily culpable. Though Germany took in 1mn refugees in 2015, most of the rest of the west did not follow suit. Britain and the US admitted fewer than 50,000 Syrians between them. What Russia is doing to Ukraine is barbaric. But there is plenty to go round. Many in the Muslim world, in particular, think America practices double standards. Thousands of civilians died in Iraq and Afghanistan from US munitions, though they were not deliberately targeted (unlike in Ukraine).

A second point is that the west is rash to assume its values are universal. The US this week designated what Myanmar did to its Rohingya minority as genocide. Though Myanmar, unlike Ukraine, is in India's neighborhood, Narendra Modi, India's Hindu nationalist prime minister, made only token protests. The fact that the Rohingya are Muslim undoubtedly influenced him. India took only a tiny fraction of the refugees. This is in spite of the fact that India, unlike China, is a democracy.

A third is that much of the world resents western sanctions. With the exception of fuel exports to Europe, the west has largely decoupled from Russia in a month. The execution has been astonishing. But it has also reminded others of the west's capacity to punish those with whom it disagrees. In this instance, it is very hard to argue the west is wrong. Putin not only poses a mortal threat to democratic values; he is also extolling the law of the jungle. No wonder so many small countries condemned Russia at the UN.

The western public's response to Putin's barbarism has been admirable. But it is inevitably selective. The more western governments grasp how large parts of the world see them, the better able they will be to practice effective diplomacy.

### **35. The Arab World isn't just silent on China's crackdown on Uighurs. It's complicit** TIME, 24 Mar 22, Bradley Jardine

As China deepens relations with Saudi Arabia in the wake of Russia's invasion of Ukraine, the Uighur diaspora finds itself in the crosshairs. Riyadh is preparing to deport two Uighurs back to China's western province of Xinjiang, where they will almost certainly be detained for "re-education" in its vast network of concentration camps for the region's Turkic inhabitants. Uighurs in Xinjiang face human rights violations ranging from arbitrary detention and torture to sexual assault and forced sterilization.

Saudi Arabia, a key ally of China in the Arab world, has shown support for Beijing's crackdown on Uighur culture in the past. During a 2019 visit to China, Saudi Crown Prince Mohammed bin Salman, the country's de facto ruler, told his hosts: "We respect and support China's rights to take counter-terrorism and de-extremism measures to safeguard national security." Saudi Arabia further endorsed China's Xinjiang policies in two joint letters to the United Nations in 2019 and 2020.

But Arab states are not only lending rhetorical support to China, they are also actively assisting Beijing in its global campaign of abuse and reprisals against Uighurs. At least six governments in the Arab world—Egypt, Morocco, Qatar, Saudi Arabia, Syria, and the UAE—have detained or extradited Uighurs at China's behest. According to our dataset at the Oxus Society for Central Asian Affairs, around 292 Uighurs have been detained or deported from Arab states at China's behest since 2002.

The majority of these occurred in recent years. China's repressive practices against the Uighur diaspora have expanded dramatically since Chinese President Xi Jinping unleashed his "people's war on terror" in 2014. At least 1,327 individuals have been detained or rendered from 20 countries worldwide since then, according to our findings. The majority of these are from Muslim-majority countries. Today, links to the Arab world can result in immediate imprisonment for Uighurs, with algorithmic systems of surveillance flagging any individuals with ties to Egypt, Saudi Arabia, or any of the other 26 countries blacklisted by Chinese police, for arrest.

To pursue Uighurs, China has abused international organizations such as Interpol, the world police agency, as well as bilateral extradition treaties. The recent case of Idris Hasan (also known as Aishan Yideresi), who was detained in Morocco in July 2021, is revealing. Hasan, a computer engineer, worked for a number of Uighur human rights organizations in Turkey before he fled to Morocco after Turkish authorities detained him. He was arrested on July 19 at Casablanca Airport and sent to a prison near Tiflet after China issued an Interpol Red Notice on false charges of terrorism against the Uighur activist. Interpol suspended the Red Notice on August 2021, but Moroccan courts proceeded to try Hasan according to an extradition treaty signed with China in 2016—part of a strategic partnership agreement between the two countries that included economic and financial investments. On December 16, 2021, the Court of Cassation in Morocco ordered his extradition but he remained in detention at the time of publication.

Hasan’s case is not the first or even most blatant example of China’s powerful reach in the Arab world. In July 2017, Egyptian police rounded up over 200 Uighur residents from their homes, restaurants, mosques, and even airports as they tried to flee the country. Most were students at al-Azhar University, an Islamic university that has stood in Cairo for over a thousand years. A large number were taken to Tora, the notorious “Scorpion Prison,” where Egyptian political prisoners are usually sent. Our interviews with detainees reveal that Chinese intelligence officers interrogated Uighurs within these facilities alongside their Egyptian counterparts.

According to our findings in the report “Beyond Silence: Collaboration Between Arab States and China in the Transnational Repression of Uyghurs,” published with the Oxus Society and Uighur Human Rights Project, at least 76 of these detained Uighurs were deported to China. In interviews with the authors, Uighurs who fled the crackdown in Egypt thought al-Azhar University would protect them, but were left “astonished” when police came for them. At least two Uighur students have been reported dead in police custody on their return to China.

Even the hajj, the pilgrimage required of all practicing Muslims, is no longer safe. The journey to the Saudi cities of Mecca and Medina for the Muslim faithful has become a snare to catch Uighurs from all over the world. Osman Ahmad Tohti, a Uighur with legal residency in Turkey and Saudi Arabia, was detained in 2018 while conducting the hajj and forcibly repatriated to China. He has not been heard from since. China’s intelligence services have also used the pilgrimage to bait Uighurs in safe European jurisdictions. Norway-based Uighur Omer Rozi said his mother was forcibly taken on the hajj by Chinese police and was forced to call Omer three times per day, urging him to join her.

Transnational technological linkages between Beijing and the Arab world have potentially dire consequences for Uighurs back in China. In 2019, a Uighur was reportedly stopped at mainland China’s border with Hong Kong and interrogated for three days because someone on his WeChat contact list had “checked in” at Mecca. In the past, Uighurs conducting the hajj have been given state-issued tracking devices in the form of “smartcards” attached to lanyards around their necks.

The United Arab Emirates, which enjoys one of the strongest relationships with China in the Arab world, has emerged as a regional intelligence hub for China’s security services. In August 2021, Jasur Abibula, a Netherlands-based Uighur and former husband of Asiye Abdulahed—who rose to prominence for leaking the “China Cables” about the mass incarceration program in

Xinjiang—said he was lured to Dubai where he met with two Chinese intelligence officers. The agents reportedly handed him a USB and instructed him to insert it into his ex-wife’s computer to infect it with spyware. Beijing has been using its leverage over the UAE to collect biometric data and other forms of ID from its Uighur residents. When Ahmad Talip was detained in the UAE in 2018, he told his wife Amannisa Abdullah that the Dubai police collected a blood sample at the request of the Chinese government. Shortly after Amannisa received the message, Talip disappeared. She was told he was deported to China and imprisoned. The collection of biometric data matches conversations I have conducted with Uighurs in the UAE who say they have received WeChat messages from Chinese officials requesting photographs and other identifying documents. Pressure is often applied to their families in Xinjiang to ensure their compliance.

If the Biden administration wants to take China to task on Xinjiang, it must use its leverage to unite its partners in the Arab world behind this mission. The U.S. has considerable authority to punish security officials engaged in illicit refoulement through its Magnitsky Act for targeted sanctions. As the long arm of China’s surveillance state reaches Uighurs residing in like-minded autocracies, it is more crucial than ever before that the U.S. offer safe haven to this oppressed group by granting Uighur refugees protected status and raising refugee quotas.

China’s campaign of repression against the Uighurs is not confined to Xinjiang. The efforts of the U.S. to prevent a rapidly deteriorating humanitarian crisis should not stop there either.

### **36. What US intelligence got wrong on Ukraine**

The Hill, 24 Mar 22, Michael O’Hanlon

U.S. intelligence agencies are rightly receiving considerable praise for correctly forecasting the Russian invasion of Ukraine. Through a combination of satellite surveillance, monitoring of social media, and other sources, they read Russian President Vladimir Putin’s mind several weeks before the conflict began on Feb. 24 — and prevented him from controlling the narrative about the true causes of the war.

Putin was widely recognized as the clear, and duplicitous, aggressor. Their prescience probably helped President Biden, working with other Western leaders, to put together the coalition that since has solidified NATO’s eastern flank militarily, strengthened Ukraine’s own ability to resist the invasion, and punished Putin’s Russia economically. All that is to the good.

However, it appears that U.S. intelligence agencies — like Putin himself — expected a far quicker, easier fight than has ensued over the past month. If so, that constitutes a significant intelligence failure that may have compromised our response options. It also would reflect poor tradecraft in military analysis that the CIA, Defense Intelligence Agency (DIA), and other parts of the American intelligence community must fix before they do worse harm in a future crisis.

Consider what the commandant of the U.S. Marine Corps, Gen. David Berger, said at a public conference in mid-March, according to Breaking Defense: “The computer models would have said Russia wins in 72 to 96 hours. [They] cannot explain why Ukraine is still hanging on.”

If U.S. military or intelligence organizations confidently predicted a rapid Russian win, they committed a cardinal mistake in military analysis.

As Pentagon “whiz kids” Alain Enthoven and K. Wayne Smith argued a half-century ago in their classic book, “How Much Is Enough?” it is crucial to lay out plausible optimistic and pessimistic cases for any possible war when forecasting its duration, outcome and casualties. Anything else is to assume a degree of clairvoyance that we cannot have about most military encounters — past, present or future.

In this case, the models were not wrong to include a pessimistic scenario (pessimistic as Ukraine, and the United States would define it). Just as with the U.S. invasion of Iraq in 2003, there was indeed a credible path to quick victory. Russian airborne forces could have quickly grabbed Kyiv, or its government — and particularly President Volodymyr Zelensky — could have been successfully targeted in the war’s early hours by a missile attack or hit squad.

Indeed, it appears that Russia tried these tactics. Had any of them worked, the rest of the Ukrainian government and perhaps its armed forces might have collapsed as fast as the Afghan government did last summer. Actually, an estimate of 72 to 96 hours is very fast; it took us three weeks to overthrow Saddam Hussein in 2003, and it took the Taliban at least 10 days (after a campaign that had lasted months) to generate the rapid snowballing series of victories last August. But the spirit of this scenario is still credible.

Yet we know that in war, as Carl von Clausewitz wrote compellingly in the early 19th century, even the simple things are hard. A lot goes wrong, and “the enemy gets a vote.” There was always a chance that Ukraine could do well in this conflict — especially since the late winter start of the invasion meant that Russia would need to use a modest number of roads to mount its invasion, in the face of Ukrainian regular and irregular forces armed with plenty of anti-tank weapons. This outcome should not surprise us, even as we admire the tenacity and courage of the Ukrainian resistance. We should have known it was possible in advance.

Russia has an active-duty military that is 900,000 strong, more than quadruple Ukraine’s standing armed forces that number about 200,000. But Russia has brought only around 200,000 of its total forces to the fight so far; even rounding up to account for support from nearby Russian forces on home territory, its total strength probably does not exceed 300,000. Ukraine itself may have roughly that same aggregate total of fighters, counting various citizen resistance units on top of its uniformed military.

Simple military modeling tells you that, in a war of attrition between two forces of roughly comparable size, even if one side enjoys technological superiority and various other qualitative advantages, any resulting victory could take months. Across a large theater of combat, it is unusual to see daily loss rates approaching or exceeding 1 percent of total forces. Moreover, while by some measures Russian troops might be expected to be two to three times as good as

Ukrainians, the latter enjoy advantages in terrain and fighting position, as well as morale, that could largely or even wholly counter the better equipment and (somewhat) better training of the Russians.

Did this mistake matter? Perhaps not gravely — except that, if we had avoided it and recognized how tough the war could be, perhaps we all might have tried just a wee bit harder to avert it, rather than, in some quarters, to accept it largely as an inevitability.

But let's not make this mistake again. It would be tragic if, in some future crisis, overconfidence in our ability to predict the outcome of a possible war skewed the way in which we sought to prepare for it — and ideally, to deter it.

### **37. How the Ukraine war could go nuclear**

Politico, 24 Mar 22, Bryan Bender

Not since the Cold War has the specter of nuclear war hung so heavily over a president's crisis diplomacy.

As President Joe Biden meets with fellow NATO leaders, calls for a ceasefire in Ukraine are growing more urgent than ever — to alleviate the widespread human suffering but also to dial back what veterans of nuclear planning consider an alarming potential for it to spiral into a clash of atomic superpowers.

The nuclear brinkmanship from Russian President Vladimir Putin in recent weeks is unprecedented: He ordered a snap nuclear war game before the invasion and days later put his nuclear forces on high alert. And the Kremlin has repeatedly signaled it could resort to nuclear weapons — an option explicitly reserved in Russian military doctrine — if it determines the West's intervention in the conflict goes too far.

Again on Tuesday, in an interview with CNN, Putin's chief spokesperson refused to rule out the use of nuclear arms in the conflict.

So far, Biden has sought to dial down the tensions. The Pentagon has not changed the alert status of U.S. nuclear forces and military leaders have publicly said they have not detected Russian actions suggesting they are preparing to use nuclear weapons. The Pentagon also took the unusual step early in the conflict of putting off a regularly scheduled test of an intercontinental ballistic missile to avoid fueling nuclear tensions.

Yet as the conflict drags on, and Russia's conventional forces suffer surprisingly heavy losses while its economy reels, the prospect that Putin might resort to using weapons of mass destruction is increasing. Moscow has already demonstrated that it's willing to use hypersonic missiles for the first time in a war.

With limited contact between the Kremlin and Western capitals, the risk that Moscow's intentions could be misread with catastrophic consequences will only grow more acute, according to numerous specialists.

"There has always been a chance of mistakes, but I think the chances are much higher," said former Sen. Sam Nunn, the longtime chair of the Armed Services Committee and now co-chair of the nonprofit Nuclear Threat Initiative. "I think we are in a different era in terms of blunders."

It is a high-wire act confronting Biden as he tries to stiffen the spines of NATO countries for what is expected to be a long struggle. Allies are helping Ukraine fend off its bigger aggressor — including sending more arms and U.S. troops to defend NATO's eastern borders — while not pushing Putin over the edge.

Russia invaded Ukraine as cooperation between Washington and Moscow on nuclear arms control has been unraveling in recent years. The two countries have walked away from several treaties to control the deadliest weapons, including one that outlawed intermediate-range nuclear missiles that could threaten Europe.

The only remaining nuclear pact between the two sides is the New Strategic Arms Reduction Treaty, which limits deployed strategic weapons to 1,550 each. Biden and Putin agreed last year to extend it until 2026.

But the treaty does not cover any of the thousands of smaller, or "battlefield," nuclear weapons in their respective arsenals, including at least 2,000 in Russian stockpiles, according to public estimates.

Two Defense Department officials, who spoke on condition of anonymity, say they are vigilantly gathering intelligence on Russian military moves for any sign that it might be taking such weapons out of storage or preparing for deployment units trained in nuclear or chemical warfare.

### **Raising the ante**

Longtime observers of Russian nuclear policy have been startled at how reckless the Putin regime has been with its nuclear threats compared to leaders in Moscow during the Cold War.

"The communist party of the Soviet Union was incredibly disciplined about this," said Rose Gottemoeller, a former undersecretary of state for arms control who has negotiated treaties with Russians and served as NATO deputy secretary general from 2016 to 2019. "There were only a few Soviet leaders who were allowed to speak about nuclear doctrine and strategy, and they did so in a very carefully scripted way.

"We are in a more difficult crisis than anyone could have predicted with this constant nuclear saber-rattling that has been going on," she added. "We have to take what [Putin's] people say seriously, because he was serious about invading Ukraine when many of us hoped he would turn away at the last minute."

The dearth of diplomacy and growing distrust only fuels the risk of “mushroom clouds appearing on the battlefield,” Izumi Nakamitsu, United Nations high representative for disarmament affairs, warned on Tuesday.

She hearkened back to the numerous instances during the decades-long standoff between the United States and then-Soviet Union when the two sides nearly came to nuclear blows. But diplomacy and a good bit of luck prevailed.

“We are all aware of the close calls and near-misses,” she said at an event hosted by The Stimson Center. “Unfortunately, I fear we have forgotten many of those difficult lessons. A simple glance at a headline today can point to how acute nuclear risks have become.”

Those concerns are shared across the spectrum by advocates for nuclear disarmament and those who believe a more robust U.S. nuclear arsenal is needed to deter adversaries.

“I really am worried here that the war is going so badly for Putin ... it raises the possibility of Putin feeling like he needs to escalate to win his way out of this conflict,” said Tim Morrison, a former Trump White House nuclear policy adviser who is now a researcher at the Hudson Institute, a hawkish think tank.

That, he continued, “is right in the wheelhouse of Russian [military] doctrine for a low-yield nuclear or even chemical [weapons] use.”

Morrison added that he fears the situation could unravel to the point where Putin is “raising the ante, climbing the rungs of the escalation ladder to make the point to NATO ‘hey, you guys really need to knock it off with arming the Ukrainians, I will no longer tolerate this.’”

Russia has already ratcheted up the war with its hypersonic missile launch in Ukraine last week, and it has also been accused of dropping phosphorus bombs, which are banned under the Geneva Convention (though using the chemical to obscure troop movements or illuminate targets is not).

NATO Secretary General Jens Stoltenberg said on Wednesday the alliance will be assisting Ukraine with specialized equipment in the event of a Russian attack with chemical, biological or nuclear weapons.

Gottemoeller said she fears that Moscow’s use of a tactical nuclear weapon is a serious possibility. “Putin is capable of anything,” she said. “He could declare there is an existential threat from a NATO ally resupplying the Ukrainians.”

### **You’re not going to necessarily know**

Others worry less about Putin ordering a nuclear attack and more about a miscalculation leading to the use of nuclear weapons.

Nunn has been sounding the alarm about the threat of an accidental nuclear exchange as a result of a cyber attack on nuclear command-and-control systems including by malign actors not directly involved in the conflict who could be confused for a nuclear adversary.

“Third parties, third countries, might interfere in terms of command-and-control or warning systems,” he said of potential hackers. “Interference in command-and-control could be taken in this kind of atmosphere as probably a deliberate act.”

Nunn successfully lobbied Congress last year to require the Pentagon to conduct a “failsafe review” of the U.S. nuclear arsenal “to prevent cyber-related and other risks that could lead to the unauthorized or inadvertent use of nuclear weapons as the result of an accident, misinterpretation, miscalculation, terrorism, unexpected technological breakthrough, or deliberate act.”

Further complicating the task of U.S. and allied commanders to decipher Russian intentions, said Morrison, is the fact that so many Russian battlefield systems are also designed to unleash both conventional and nuclear or chemical warheads.

In other words, it could be exceedingly difficult to know when the Russian military has decided to pursue a nuclear option.

“One of the problems with Russian nuclear forces is how many of their systems are dual-capable,” Morrison said. “So you’re not going to necessarily know if the S-300 or that long-range [missile or artillery] battery is packing a conventional warhead or a nuclear one.”

If U.S. military leaders detected Russian nuclear maneuvers, Nunn said, Biden may have no choice but to act more aggressively to deter Moscow, including putting American nuclear forces on alert.

“If you’d seen bombers in the air, all sorts of activities in the nuclear forces, it would have been a different proposition,” Nunn said. “The risk of nuclear use is in my view higher through a mistake or blunder than through intent. But nevertheless blunders get more likely when nuclear weapons are put on alert.”

The Nuclear Threat Initiative last week outlined a hypothetical but horrific scenario to underscore how the war in Ukraine could go wrong. In a simulation based on historical examples, the current conflict escalated with the detonation of a nuclear weapon in Ukraine and quickly spiraled into a nuclear holocaust.

The scenario lays out a chain of events — the downing of an American spy plane by accident, the misreading of counter actions, cyber attacks that further sow confusion, and leaders with very little time to react — that result in the unthinkable: an all-out nuclear war between the United States and Russia.

“Over the course of the next hour,” it chillingly details, “82 million Americans are killed with allied countries faring similarly. Most die instantly, while more will die of radiation poisoning over the coming days and weeks.”

### **The most imperative arms control**

There is also nearly uniform agreement that any glimmers of hope that the Biden administration might reach further agreements with Putin to rein in nuclear armaments have been dashed.

“Prospects of renewed arms control are very low,” said Nikolai Sokov, a senior fellow at the Vienna Center for Disarmament and Non-Proliferation who worked on arms control agreements in the Soviet and Russian foreign ministries.

He said one reason is now very personal. He believes a renewal of nuclear talks would likely require a summit between Biden and Putin, or at least their top diplomats, Secretary of State Antony Blinken and Foreign Minister Sergei Lavrov.

“By calling Putin a war criminal,” Sokov said, “Biden closed off the prospect of a summit, whether in person or a call. Same for Blinken-Lavrov. These things will stand in the way and, at best, delay arms control.”

But some who support nuclear disarmament say the Ukraine crisis only strengthens their argument for why these weapons are destabilizing and steps must be pursued to eliminate them around the world.

“Advocates for nuclear weapons have long argued that they keep the peace, acting as a stabilizing force,” said Stephen Young, the senior Washington representative for the Union of Concerned Scientists. “Putin is turning that belief on its head, using the threat of nuclear war to deter others from intervening against his forces in Ukraine”

“In other words,” Young added, “Russia’s nuclear weapons are enabling this war.”

He lauded Biden’s efforts at nuclear deescalation in the face of Putin’s threats. “But it isn’t enough,” Young said. “The president should take nuclear weapons off the table, and make clear that the sole purpose of U.S. nuclear forces is to deter or respond to a nuclear attack on the United States or its allies.”

Such dramatic changes to undo decades of American nuclear policy, which the Biden administration was not expected to make even before the Russian invasion of Ukraine, are widely viewed as more remote than ever given the current crisis.

### **A serious confrontation**

For now, Nunn believes the most urgent task is to find a way to stop the shooting in Ukraine.

“The ceasefire is in my view the most imperative arms control right now,” he said in an interview. “If we do not have a ceasefire, escalation becomes more likely.”

He recently organized a joint declaration by former U.S. and European leaders, including one of Putin’s ex-foreign ministers, Igor Ivanov, calling for an immediate ceasefire in Ukraine.

They highlighted the recent firefight at the Zaporizhzhia nuclear power plant as a reminder of “how nuclear catastrophe can quickly rise to the surface in the ‘fog of war.’”

“The first and most essential step toward reducing the risks of a consequential accident, mistake, or miscalculation is a ceasefire to end the unacceptable and unjustifiable loss of human lives, including innocent civilians,” they wrote.

But Sokov said he worries that even with an end to the current hostilities, the nuclear stakes will remain historically high, especially if Putin believes his regime is at stake.

“I expect the post-war settlement to be a more dangerous period than the war itself,” Sokov said in an email. “It is pretty clear that the U.S. will not remove sanctions. In that situation, Moscow may conclude that reliance on nuclear weapons is the only means of avoiding the fate of Iraq, post-Saddam.”

That is “all the more so,” he added, “since its conventional forces will have been depleted and not judged efficient after the war. I expect a serious confrontation with a strong nuclear component.”

### **38. The naval response to the war in Ukraine**

Wall Street Journal, 24 Mar 22, Arthur Herman

Most proposals for military aid to Ukraine involve help from the air, such as establishing a Berlin-style airlift, flying in warplanes from Poland, and creating a no-fly zone over Ukrainian territory. But it would be a serious blunder to neglect the naval aspect of the conflict. Russia certainly hasn't. According to the Times of London, recent intelligence indicates that Russia has a fleet of warships ready to launch an amphibious assault on Odessa, the last major Ukrainian seaport not in Russian hands or under Russian siege.

It is vital to Europe's peace and security that Ukraine not lose what remains of its Black Sea coastline, and that Russia not consider that international body of water its private naval and maritime preserve. The U.S. and the North Atlantic Treaty Organization can protect this strategic flank of Europe and NATO while also relieving Russian pressure on Ukraine short of risking war.

The Black Sea's importance to Russia's economy and sovereignty dates from the 19th century. But then the Black Sea and the Turkish Straits, which allowed access to the Mediterranean and beyond, took on growing importance for Russia.

That was thanks to Russia's export trade in grain and industrial goods and its imperial designs in Southern Europe, including on the Turkish capital. The issue became so important that nations negotiated international agreements aiming to restrict the Russian navy's presence in the Black Sea and access to the Turkish Straits, the most recent being the Montreux Convention, which was signed in 1936 by the Soviet Union and nine other countries and is still in effect.

The Black Sea remains vital to Russia's national interest. One reason Vladimir Putin invaded Crimea in 2014 was to secure the former Soviet naval base at Sevastopol. It is crucial to confront

Russia in this region as part of a broader strategy to help Ukraine—and also as the centerpiece of a new NATO maritime strategy. Here are five steps the U.S. and NATO can take:

First, keep Ukrainian forces supplied with antiship missiles that can deter Russian naval forces and amphibious landings. The Norwegian-made Naval Strike Missile can be launched from either ship or shore. Poland and Romania have bought them from Norway's Kongsberg Defence and Aerospace. All three countries are NATO members; all three should be working together to build Ukraine's antiship-missile arsenal, especially after Ukraine's claim that it was able to destroy a Russian naval vessel near Mariupol using similar weaponry.

Second, make sure Turkey bans passage of Russian warships under Article 19 of the Montreux Convention, which governs access to the Black Sea through the straits, while allowing free passage of U.S. and NATO vessels. Under Article 19, Turkey can deny access to warships of war belligerents as long as Turkey isn't a party to the conflict. On Feb. 27, three days after Mr. Putin invaded, Ukraine asked Ankara to close the straits to Russian warships. Turkish Foreign Minister Mevlut Cavusoglu acknowledged Mr. Putin's invasion as an act of war—a major step toward invoking Article 19. A day later, however, Turkey seemed to back away, with words suggesting it would close the straits to all warships, not only those from Russia and Ukraine. Under Article 19, however, Turkey isn't authorized to close the straits to neutral warships. Adherence to the article requires blocking passage only to Russian and Ukrainian vessels. Turkey's NATO partners should insist that Ankara carry out Article 19 to the letter.

This will come too late to interfere with the 30 or more Russian warships already blockading the Ukraine coastline. But closing the straits would hamper attempts to reinforce future large naval operations, and signal that the Russian navy can no longer act as if the Black Sea is its private lake.

Third, send a U.S.-led NATO flotilla to show the flag at ports of friendly countries on the Black Sea. Last July NATO conducted an important Black Sea exercise with some 30 vessels from 32 NATO members and other countries, including Ukraine. The NATO presence has since nearly vanished. It's time to revive a robust Western naval presence.

Fourth, organize a humanitarian sealift with a convoy of ships under NATO escort bringing food and medical supplies to Russian-occupied Kherson. This convoy can show Moscow that although Kherson is currently occupied by Russian troops, it is still Ukrainian sovereign territory.

Fifth, devise a naval strategy for the Black Sea region. A single French frigate visited the region in December 2021 and left the day after the New Year. No major NATO warship has made an appearance since, even as Russia ravages Ukraine. The war is "like a boa constrictor around Ukraine's neck," retired Adm. James Foggo, who commanded U.S. and NATO fleets in Europe for almost a decade until 2020, told Reuters. "NATO needs a maritime strategy."

The fate of NATO's southern flank may depend on how quickly its leaders, including President Biden, respond to this challenge—at sea as well as on land and in the air.

### **39. Putin doesn't realize how much warfare has changed**

The Atlantic, 24 Mar 22, Antony Beevor

Otto von Bismarck once said that only a fool learns from his own mistakes. "I learn from other people's," the 19th-century German chancellor said. Astonishingly, the Russian army is repeating the past mistakes of its Soviet predecessor. In April 1945, Marshal Georgy Zhukov, under intense pressure from Stalin, sent his tank armies into Berlin without infantry support. Vladimir Putin's forces not only made the same error; they even copied the way their forebears had attached odd bits of iron—including bed frames—to their tanks' turrets in the hopes that the added metal would detonate anti-tank weapons prematurely. This did not save the Russian tanks. It simply increased their profile and attracted Ukrainian tank-hunting parties, just as the Soviet tanks in Berlin had drawn groups of Hitler Youth and SS, who attacked them with Panzerfausts.

The Russian president's distorted obsession with history, especially with the "Great Patriotic War" against Germany, has skewed his political rhetoric with bizarre self-contradictions. It has clearly affected his military approach. Tanks were a great symbol of strength during the Second World War. That Putin can still see them that way defies belief. The vehicles have proved to be profoundly vulnerable to drones and anti-tank weapons in recent conflicts in Libya and elsewhere; Azerbaijan's ability to destroy Armenian tanks easily was essential to its 2020 victory in the Nagorno-Karabakh region.

Yet Putin seems to have learned as little as he has forgotten. In August 1968, the Warsaw Pact forces entering Czechoslovakia were told by their political officers that they would be welcomed as liberators. They found themselves cursed, out of fuel, and hungry. Morale was shattered. Putin's control of domestic media can hide the truth from most of the Russian population, but his conscripts, forced now to sign new contracts to turn them into volunteers, are all too aware of the reality.

His treatment of his own people is as pitiless as his treatment of his enemies. The army even brought a mobile crematorium to Ukraine to dispose of Russian casualties in order to reduce the body-bag count going home. Putin's Soviet predecessors had a similar disregard for their troops' feelings. In 1945, the Red Army faced a number of mutinies. Frequently treated with contempt by officers and political departments, soldiers were ordered out at night into no-man's-land not to retrieve the bodies of fallen comrades, but to strip them of their uniforms for reuse by replacement troops.

Another old pattern repeating itself in Ukraine is the Russian army's reliance on heavy guns. In World War II, the Red Army bragged about the power of its artillery, which it called "the god of war." In the Berlin operation, Zhukov's artillery fired more than 3 million shells, destroying more of the city than the Allies' strategic air offensive had. The Soviets used Katyusha rocket launchers, which German troops nicknamed "Stalin's organ" for their howling sound, to kill any remaining defenders. While Putin's conventional artillery smashes Ukrainian buildings open in

the same old way to eliminate potential sniper positions, thermobaric ordnance—the devastating “vacuum bombs” that create a fireball that sucks the oxygen away from their targets—takes the place of the old Katyushas.

The Russians’ destruction of Grozny and Aleppo had already revealed how little their urban-conflict doctrine, unlike that of Western armed forces, has evolved since World War II. The international coalition that reclaimed the cities of Raqqa and Mosul from the Islamic State demonstrated a far more targeted approach, sealing off each city and then clearing it sector by sector.

Putin’s army is clearly not the Red Army, just as Putin’s Russia is not the Soviet Union. Institutional corruption across the government has affected everything, even with officers profiting off of the sale of spare parts and ignoring logistic support in favor of prestige projects. While Ukrainian defenders are destroying Cold War–era Russian T-72 tanks like ducks in a row, the Russian priority has been to reserve enough money to pay for the next generation of high-tech Armata tanks. Yet the Armata can still do little more than trundle across Red Square in Victory Day parades every May 9 to impress the crowds and foreign media. On the battlefield, it would suffer exactly the same fate as the T-72s.

Elite units, paratroopers, and Spetsnaz special forces still exist within the Russian military, but they can achieve little on their own in the chaos of bad command and control. The lack of foresight involved in the introduction of the Russian army’s new Era encrypted-communications system would have been much harder to believe in the more rigorous Soviet days, when such mistakes were severely punished. Supposedly secure, it relies on 3G towers—which Russia destroyed when it invaded Ukraine. Because the system is simply not working, Russian officers have to communicate in open speech by cellphone, as gleeful Ukrainian volunteers listen in.

The 2008 invasion of Georgia, which dealt a setback to the small former Soviet republic but revealed incompetence and weakness on Russia’s part, led to plans to reequip and reform Putin’s armed forces. Those efforts have manifestly failed. This says a good deal about the lack of idealism, probity, and sense of duty within his regime. How this can change at such a late and crucial stage in the Ukraine invasion is very hard to see.

At Stalingrad in late 1942, the Red Army surprised itself and the world with a sudden turnaround, and there are indications that Putin’s forces are adjusting their tactics and preparing two major strategic envelopments, around Kyiv and in eastern Ukraine. An almost Stalinist determination to right the Russian military—backed by the execution of deserters and failing officers—could well extend the conflict in a bloodbath of relentless, grinding destruction.

Against all prewar expectations, though, a Russian military collapse also looks possible. A complete disintegration of morale could lead to a humiliating withdrawal, a potentially devastating result of Putin’s inability to part with the Soviet past.

#### **40. I'm the Prime Minister of Estonia. Putin can't think he's won this war.**

New York Times, 24 Mar 22, Kaja Kallas

To anyone who lived under Soviet occupation, reports from Ukraine replay scenes we thought we would never see again. The bombing of civilians and the wanton destruction of buildings recall the carnage unleashed on the European continent by Hitler and Stalin. In Mariupol, a port city subjected to a brutal, horrifying siege, residents are reportedly being deported to faraway places in Russia where an uncertain fate awaits them.

My family knows what that's like. My mother was only a 6-month-old baby when, in 1949, the Soviets deported her, together with her mother and grandmother, to Siberia. My grandfather was sent to a Siberian prison camp. They were lucky to survive and return to Estonia, but many didn't. Today the Kremlin is reviving techniques of sheer barbarity. Those who have escaped Mariupol describe it as hell on earth.

To put an end to these horrors, the most optimistic observers have put their hope in a peace deal. But peace is not going to break out tomorrow. We must face up to the fact that the Kremlin's idea of European and global security is completely at odds with that of the free world. And Vladimir Putin is willing to kill and repress en masse for the sake of it.

At NATO, our focus should be simple: Mr. Putin cannot win this war. He cannot even think he has won, or his appetite will grow. We need to demonstrate the will and commit resources to defend NATO territory. To check Russia's aggression, we need to put in place a long-term policy of smart containment.

First, we must help Ukraine in every possible way. The people of Ukraine have not tired, and neither can we. True, Russia's full-scale invasion of Ukraine has galvanized us into action. Allies and partners have made decisions with remarkable determination and unity. But now is the time to go the extra mile.

Ukrainian soldiers are able fighters, but they need weapons and matériel, including longer-range air defense assets and anti-tank missiles to better protect their skies. Defensive military aid must be our top priority, and we must commit ourselves to it for the long haul.

In Estonia, a country of 1.3 million people, we have provided Ukraine with close to \$250 million worth of assistance so far. Much of that is military, but it extends to ambulances, blankets and baby food. The free world should redouble its efforts to support the people of Ukraine however possible through the delivery of arms, food and daily essentials.

Second, we must show the aggressor that we are ready to defend ourselves and, if need be, to fight. Sometimes the best way to achieve peace is to be willing to use military strength.

To do so, we need to strengthen our collective defense, especially on the alliance's eastern flank that borders Russia. That's why in Estonia we are increasing the amount we spend on defense. This year, we'll spend 2.3 percent of G.D.P.; in the coming years, that will rise to 2.5 percent. All NATO countries, irrespective of their location, should do the same: Two percent of G.D.P.

must become an absolute minimum requirement. By increasing our spending individually, we can ensure we are all collectively safer.

We at NATO have a solid basis to work from. Members are committed to the defense of the whole of NATO territory, and in recent years the alliance has taken some bold, necessary steps. Among them was the establishment in 2016 of an enhanced forward presence of allied troops — multinational, combat-ready battle groups — in Poland, Lithuania, Latvia and Estonia. On Wednesday the alliance announced that it will likely double the number of battle groups on its eastern flank.

But we need to go further. The forward presence needs to become forward defense, of land, air and sea. That would mean more combat-ready allied troops stationed permanently in the Baltic States, supported by long-range artillery, air defense and other enabling capabilities. It would mean more NATO fighters in our skies ready to switch from peacetime air policing to wartime air defense. And it would mean more NATO ships patrolling the Baltic Sea.

Third, we must paralyze the Kremlin's war machine. We must do so not only to end the bloodshed and occupation in Ukraine but also to disarm Russia economically, to prevent Mr. Putin from further expanding the war.

At the heart of the machine is oil and gas. Last year exports from hydrocarbons amounted to roughly 40 percent of the Russian state budget, and this year they're likely to turn into the biggest source. Our focus must be on drying up these revenues. The European Union has already announced plans to cut Russian gas imports by two-thirds by the end of this year. But it can and should go further. We should also put some of the payments for Moscow's oil and gas in a special third-party account so that the revenue does not go toward financing the war. And we should direct a significant share of these funds to a future reconstruction plan for Ukraine.

None of this will be easy or cost-free. And the time will surely come when we hear calls for the easing of sanctions. But we — NATO, the European Union and individual countries — must be patient and remain firm. There will be no business as usual with Mr. Putin's Russia. In fact, there can be no business at all.

Fourth, we must help Ukrainians fleeing the war.

Moscow may think that forcing millions of Ukrainians to leave and seek shelter across Europe will destabilize our societies. This is also part of Mr. Putin's war aims, and one of the tools of his hybrid warfare. We must show him he's wrong.

Neighboring countries have already been extraordinarily welcoming in such a short period of time, and the European Union immediately gave Ukrainians the right to live and work in the bloc. In Estonia, we have welcomed many Ukrainian refugees, who now make up around 1.6 percent of our population. All countries should do as much as they can to provide a safe haven for Ukrainian refugees until they can return home.

Taken together, it's a tall order. Stopping the Kremlin's aggression will require time and a lot of effort. But as NATO members, Europeans and human beings, we cannot flinch from that task.

Kaja Kallas (@kajakallas) is the prime minister of Estonia.

#### **41. What is the thinking behind Israel's Ukraine balancing act?**

Daily Telegraph (UK), 24 Mar 22, Con Coughlin

The emergence of Israeli Prime Minister Naftali Bennett as a key interlocutor in trying to resolve the Ukraine crisis has much to do with Israel's enduring concerns about Iran's malign activities in the Middle East.

Israel and Russia may not be natural allies, but relations have improved in recent years as Israel has sought closer relations with the Kremlin. The main driving force this effort, which dates back to the premiership of former Israeli Prime Minister Benjamin Netanyahu, has been to persuade Russia not to obstruct Israel's attempts to rein in the activities of Iran's Islamic Revolutionary Guard Corps.

Apart from Israel's long-standing concerns about Iran's nuclear activities, it is also opposed to Tehran's attempts to establish military bases in southern Syria which can be used to launch attacks against Israelis.

Consequently, when Mr Bennett flew to Moscow two weeks ago for face-to-face talks with Russian President Vladimir Putin at the Kremlin, the conversation focused as much on Israeli concerns over Iran's malign activities in the Middle East as they did on the Ukraine crisis.

"For Israel, the Ukraine crisis is an unwelcome distraction from issues that really concern Israelis, such as the nuclear deal and Iran's expansionist activities in Syria," a senior Israeli official with knowledge of the Putin-Bennett summit told me. "These were the issues that really dominated their conversation."

So far as Ukraine is concerned, Israel is attempting to adopt a nuanced position. While the Israelis voted alongside the US and other western countries at the UN General Assembly earlier this month to condemn the Russian invasion, Israel has so far declined Ukrainian requests to send military equipment, including defensive weapons such as anti-tank and anti-aircraft missiles.

Instead, the Israelis are concentrating their efforts on humanitarian relief, with around 100 tons of aid already having been flown to the region, including six generators sent to Lviv hospital. A field hospital, staffed by more than 80 Israeli medical personnel, has also been set up inside Ukraine near the Polish border.

Israel's lukewarm response to Ukraine has not been well-received by Ukrainian President Volodymyr Zelenskyy, who is himself Jewish and has criticized Israel for not doing enough to support the Ukrainian people. In Tel Aviv, the Ukrainian ambassador to Israel, Yevgen Korniychuk, even donned a combat helmet at a press conference, and asked why Israel was proving reluctant to provide lifesaving supplies.

But Israeli officials insist their delicate balancing act is working, as it has enabled Mr Bennett to maintain a dialogue with Mr Putin, with the two leaders continuing to speak on a regular basis. In their latest call earlier this week, Mr Putin gave the Israeli premier his assessments on the current state of negotiations to end the conflict, as well as giving an update on what the Kremlin calls Russia's "special military operation" in Ukraine.

But while Israel, in common with most other countries, is keen to see an end to the violence in Ukraine, the Israelis are also focused on safeguarding their own national interests, especially their ability to strike at Iranian targets inside Syria.

Of particular concern is the need to maintain the so-called "deconfliction mechanism" it has set up with Russia in Syria.

The arrangement, which has been in place since September 2015 when Russian forces first intervened in support of Syrian President Bashar Al Assad, allows Israeli military officers in Tel Aviv to alert their Russian counterparts in Syria's Hmeimim air base when they are planning to launch attacks against Iranian targets in Syria. This has enabled the Israelis to launch hundreds of air strikes against Iranian assets, allied militias and weapons shipments.

Israeli officials believe the attacks are vital for preventing Iran from consolidating its presence in Syria and strengthening its ability to attack it.

Mr Bennett has also taken advantage of his cordial ties with Mr Putin to raise the status of the Vienna nuclear talks between Iran and world powers aimed at reviving the 2015 nuclear deal.

Russia has been supporting Iran's position in the nuclear talks, where Tehran wants to see punitive economic sanctions lifted in return for agreeing to limits on its nuclear activities. Hopes have been raised in recent weeks that a deal may be announced soon, but the Israelis have made the Kremlin well aware of their opposition to any such deal.

The prominent role Israel has been playing in diplomatic efforts to resolve the Ukraine crisis reflects a deepening sense within the region that responsibility for resolving key regional issues, such as the threat posed by Iran's nuclear ambitions, lies with the region's leaders, not the West, as has traditionally been the case.

One of the big complaints of Arab leaders, especially in the Gulf, about the 2015 nuclear deal is that their concerns and security needs were excluded from the negotiating process, which was largely driven by former US President Barack Obama.

But as the UAE's Minister of State Khalifa Shaheen Al Marar said in an address to the UN Security Council earlier this week, there was a growing need for "Arab solutions to Arab issues", and that it is important that the global community listens to Arab leaders to "consider their views" when dealing with complex regional issues.

The desire of regional leaders, moreover, to forge closer co-operation was evident at this week's summit at the Egyptian resort of Sharm el-Sheikh, when Mr Bennett joined Sheikh Mohamed bin

Zayed, Crown Prince of Abu Dhabi and Deputy Supreme Commander of the Armed Forces, to attend an historic regional summit hosted by Egyptian President Abdel Fattah Al Sisi.

The main topic of discussion at the summit was regional security.

At the very least, the summit demonstrated that, while the world's attention remains fixed on the Ukraine crisis, there are also other major issues that need to be tackled. And when they relate to the Middle East, the ability of regional leaders to find solutions will be crucial to maintaining peace and stability.

#### **42. Abbas is destroying democracy to ensure his successor supports Israel**

Foreign Policy, 24 Mar 22, Dalia Hatuqa

On Feb. 8, videos began to emerge on social media of an incident that had taken place earlier that day in Nablus, the second largest Palestinian city in the occupied West Bank. Shaky mobile phone footage showed a shared taxi and a gray van near a silver car, with bullet holes piercing the car's windshield. The driver of the silver car was slumped over, his bloodied passenger sitting lifelessly next to him as a third man lay across the back seat. All three Palestinian men were dead, their car riddled with more than 80 bullets.

According to witnesses, their murder happened quickly and in broad daylight: Israeli special forces driving Palestinian-plated vehicles entered Nablus, cut off the silver car, and opened fire, killing the men inside immediately.

The assassinated men were later identified as members of the al-Aqsa Martyrs Brigade, the armed offshoot of Fatah, the ruling party of the Palestinian Authority (PA), which administers small parts of the West Bank. The PA's Ministry of Foreign Affairs and Expatriates called for an international probe into the killings, which the cabinet of Palestinian President Mahmoud Abbas described as a "heinous crime."

For its part, Israel said the three people were militants who had previously been involved in recent attacks across the West Bank against Israeli settlers and soldiers and were on the way to carry out another when they were intercepted. Shortly after the men were killed, local Fatah officials in Nablus called for a "response in the field" to what Palestinians viewed as an extrajudicial assassination—including a day of mourning with commercial closures and marches. At the men's funeral later that day, Fatah and the al-Aqsa Martyrs Brigade's yellow flags flapped in the wind, masked gunmen carrying rifles sprayed extended volleys into the air, relatives wailed, and calls for revenge echoed among the marchers.

The killings come at a time when the PA is under intense criticism from Palestinians for maintaining security coordination with Israel. This relationship has repeatedly facilitated the capture and killing of Palestinian fighters, wanted for attacks on Israeli soldiers and settlers. This might explain why Abbas made a rare recording that was played by a senior Fatah official at the mourners' gathering, in which he condemned the killings and vowed to not let the incident "go idly by." "We will not allow them to reoccur, nor will we remain quiet," Abbas said. However,

Plans of a united Kurdish front in Baghdad failed to come to fruition after the KDP made agreements with the Sadrists and the Sunni Taqadum coalition, a move that the Patriotic Union of Kurdistan (PUK) considers to be a disadvantage for Kurds.

Iraq held snap elections on October 10. The vote was called in response to mass protest in the country beginning in October 2019, caused by widespread dissatisfaction with Iraq's politicians and endemic corruption in the country.

### **51. Ukraine war allows UAE to bring Syria's Assad in from the cold**

Al Jazeera, 24 Mar 22, Giorgio Cafiero

Since its military intervention in the Syrian civil war in September 2015, one of Russia's major foreign policy goals has been to convince Gulf Arab monarchies to come to terms with the survival of Syrian President Bashar al-Assad's regime, and the reacceptance of its "legitimacy".

A host of developments in Gulf-Syrian relations during the past few years, most recently al-Assad's visit to the United Arab Emirates, indicate that this Russian strategy has been quite successful.

The UAE, which reopened its embassy in Syria in December 2018, and sent its foreign minister to Damascus in November last year, is the main Gulf Cooperation Council (GCC) actor working to accelerate the Syrian regime's reintegration into the Arab world's diplomatic fold, following years of relative isolation in the region.

The UAE's efforts to return Syria to the Arab League point to a growing alignment between Abu Dhabi and the Kremlin that is particularly unsettling to Washington, especially within the context of the ongoing Russia-Ukraine war, in which the West has failed to bring the UAE on board with international efforts to squeeze Russia.

The key to understanding this burgeoning relationship, and the UAE's openness to warmer relations with al-Assad, is a shared antipathy to political Islam and pro-democracy movements in the region.

"The UAE vision for the region, in opposing both Muslim populism and democracy, looks an awful lot more like Putin's vision than it does Washington's, so it is natural that the UAE is hedging its US entanglements by keeping on the good side of Russia and its clients," said Juan Cole, professor of history at the University of Michigan, in an interview with Al Jazeera.

For the UAE's de facto leader, Abu Dhabi Crown Prince Mohammed bin Zayed Al Nahyan, the Arab Spring revolutions were a threat, and one that needed to be rolled back.

"Assad, as a strongman opposed to the Muslim Brotherhood, looks in this context very much like Egypt's President Abdel Fattah el-Sisi, whom the UAE also supports ... Al-Assad's Baath Party

has taken the neoliberal road and does not pose an ideological threat to the Gulf any longer,” added Cole.

### **Emirati autonomy**

The UAE is now much further away from Washington and London’s orbits of geopolitical influence compared with previous points in modern history. The growth of relations between the UAE and Russia, as well as China and India, has been central to Abu Dhabi’s success in diversifying its global partnerships while gaining greater autonomy from its Western partners in an increasingly multipolar world.

The UAE has not been afraid to support Russia’s positions on issues it sees eye to eye with Moscow and disagrees with Washington. The UAE’s response to the war in Ukraine underscores how far Abu Dhabi has come in terms of gaining greater autonomy from the West.

Yet, for all the tensions that have been brewing between the UAE and the Biden administration, it would be incorrect to conclude that Abu Dhabi intends to walk away from its extremely close partnership with the US. Ultimately, Washington, not Moscow, is the UAE’s security guarantor, underscored by the US’s role in defending the Gulf Arab country from Houthi missile and drone attacks earlier this year.

“Abu Dhabi views Washington as a strategic priority, it’s an irreplaceable relationship,” explained Monica Marks, an assistant professor of Middle East politics at New York University, Abu Dhabi. “I don’t think [the Emiratis] are trying to replace it, but they are trying to diversify their portfolio as self-beneficially as possible to put forward what they see as their own interests.”

Thanks to the normalization of relations with Israel, among other factors, the UAE has a tremendous amount of leverage in Washington. That clout will likely enable it to continue closely aligning with Russia in relation to Syria, Libya, and other sensitive files in the Arab world, while also remaining a country where Russian oligarchs can park their wealth as Western sanctions bite, without worrying about major harm being done to US-Emirati relations.

US-UAE ties are deep enough that the Biden administration will most likely not attempt to seriously downgrade the two countries’ partnership, despite Abu Dhabi’s growing ties to al-Assad and Putin.

“If you listen closely to some past American government officials, they view the UAE as a model government that they’d like to see the rest of the Arab world reproduce,” Nader Hashemi, director of the Center for Middle East Studies at the University of Denver, told Al Jazeera.

“[The Emiratis] buy American arms and they have a peace treaty with Israel. They have this liberal veneer which keeps public opinion somewhat satisfied so that the relationship [with the US] can go forward. They have this Ministry of Tolerance [and Coexistence], which is a public relations exercise,” said Hashemi.

“When you put it all together there are so many overlapping interests, and so many influential voices within the United States that want this relationship to continue, so the possibility of any sanctions directed at the UAE over [al-Assad’s visit] is just inconceivable.”

## **52. Syrian opposition says UN must take firmer stance towards Syria to end stand-off**

The National, 24 Mar 22, Mina Aldroubi

The UN must take a “firmer stance” and become “less diplomatic” when dealing with the Syrian regime to end the crisis, an opposition spokesman told The National, as constitutional talks kicked off in Geneva this week.

Syria's crisis, which has left half a million people dead, devastated cities and drawn in other countries and extremist groups, entered its twelfth year this month.

The regime's key supporters have been Russia and Iran while Turkey and other Arab states have backed the opposition to a certain degree during the conflict.

Previous rounds of UN-led talks have failed to make much progress, with President Bashar Al Assad refusing to step down and negotiate with the opposition.

Syrians stand on top of their gas canisters as they wait for a refill in front of a gas lorry provider in Kafranbel, Idlib province. Violence across Syria has resulted in shortages in gas, water and electricity.

Syrians stand on top of their gas canisters as they wait for a refill in front of a gas lorry provider in Kafranbel, Idlib province. Violence across Syria has resulted in shortages in gas, water and electricity.

Over the years, the fragmented opposition has insisted that Mr Al Assad leave his position as part of any political settlement.

However, last May, Mr Al Assad held presidential elections, which he won by a landslide, official figures showed.

The opposition believes that the UN Special Envoy to Syria Geir Pederson must be less diplomatic when addressing the UN Security Council and must put pressure the regime to make compromises to enable progression of the peace process.

“The UN is supposed to do more, be more active, call a spade a spade and at the same time come together in the General Assembly and not the Security Council because it’s been taken as a hostage by Russia and its use of the veto to protect the regime,” Yahya Al Aridi said during a phone call.

Previous UN Security Council sessions have failed to adopt resolutions condemning the use of chemical weapons and the regime’s brutality against civilians following vetoes by Russia.

The ball is in the UN's court to save Syria, Mr Al Aridi said, adding the international community rose against Russia's invasion of Ukraine so it must do the same for Syria.

"When [Mr Pederson] makes his briefs to the UN Security Council he doesn't dot the Is and cross the Ts, he doesn't specify who is hindering the process, who is trying to obstruct it and who is weaseling out and this is the regime," he added.

The Syrian opposition figure is insisting that Mr Pederson is not expressing his annoyance with the regime's lack of compliance to UN resolutions.

"However, the UN envoy does this out of being diplomatic because it seems that the main concern is to get the three teams together in Geneva and that's it," said the Syrian opposition spokesman.

He urged Mr Pederson to take the Syrian issue to the UN General Assembly to adopt a resolution that would end the "brutality of the Syrian regime".

"They took Ukraine to UNGA and they got the vote where Russia and the Syrian regime said no to the resolution that condemned Russia's invasion of Ukraine," he said.

"So for us it's harder and it's been going on for over a decade," he said.

The UN special envoy's office told The National they will not comment on Mr Al Aridi's remarks.

Talks on the constitution will be the seventh round between 15 members of each of Syria's three factions. The latest round in October ended with no agreement on how to move forward.

Those who are represented in the talks are members of the opposition, government and civil society.

Before the start of the negotiations, Mr Pedersen said the parties had agreed on a deal and decided to meet again with his help this week in Geneva.

"We do not have any expectations at all because the experience of the last six rounds was disappointing, as the special envoy has said in his own words," Mr Al Aridi said.

"We have two parties, with one side choosing the path to a military solution with no respect to the other part and no regard to what Syrians have been going through and their main concern is to focus on remaining in power and for the Syrian people to suffer," he said.

Mr Al Aridi has refused to go to Geneva and participate in the talks and has frozen his membership in the constitutional committee. He believes the regime is "playing games" and there needs to be a time plan put in place.

"The regime has never committed itself and has wasted time so the world would know that it's participating in the political process," he said.

Syria's opposition believes the only way out is to ensure that all sides “get together politically in a different way.”

The opposition must “stand tall and strong” to commit itself to what Syrians really want and to implement UN resolutions, he said.

### **53. Russia to “retreat” in Syria and the reason is Ukraine**

Syrian Observatory for Human Rights, 24 Mar 22

The Syrian Observatory for Human Rights revealed, on Wednesday, the “regression” of Russian strikes in Syria, due to the war in Ukraine.

The observatory said that “Syrian territories have witnessed a remarkable and noticeable decline in the activity of the Russian forces in various areas of their presence, since the start of the Russian war on Ukraine” on February 24.

And the observatory recorded, “a decrease in the Russian aerial bombardment on the desert, at a rate 4 times less than it was before the war in Ukraine.”

Documentation and statistics indicate that “298 air raids were carried out by Russian fighters on the areas of ISIS spread in the Syrian Badia, from February 24 to March 22,” that is, within about a month of the start of the war in Ukraine.

More than 1,250 Russian raids were monitored in separate areas in the Syrian desert, during about 30 days before the Russian war on Ukraine, i.e. from January 24 to February 23.

### **54. ‘US only now coming to terms with Afghan situation’**

Dawn, 24 Mar 22, Anwar Iqbal

There was ‘surprise and frustration’ in Washington when Kabul fell to the Taliban but gradually, they understood the situation, says Pakistan’s US Ambassador Asad Majeed Khan.

“Obviously, it came as a surprise for everybody, contrary to the intelligence estimates here and earlier than anybody had expected,” said the outgoing ambassador, explaining why Washington reacted so strongly to the fall.

Ambassador Khan, the longest serving Pakistani diplomat in the US, leaves for Islamabad on Thursday from where he will head to Brussels as his country’s new envoy for the European Union, Belgium and Luxembourg.

He served as Pakistan's ambassador in Washington from Jan 7, 2019, to March 24, 2022. He has also served in Washington as the deputy chief of mission for four years and spent six years in New York, including as a diplomat at Pakistan's UN Mission.

Asked to define the most difficult issue he handled in Washington, Mr Khan acknowledged that the Afghan issue was difficult but pointed out that "both sides have never shied away from addressing problems". And this (US-Pakistan) "has never been an easy relationship," he added. The United States and Pakistan, he said, have had a "clear convergence" in Afghanistan because "the US is as much interested in peace and stability in Afghanistan as we are".

Mr. Khan represented Pakistan in Washington during much of the Doha talks between the United States and the Taliban that were facilitated by Pakistan. The talks ended on a peace deal that led to the US withdrawal from Afghanistan and consequently to Kabul's fall to the Taliban.

"Our job was to articulate and convey our national position to Washington and to listen to the concerns expressed here and explain how Islamabad looked at developments in Afghanistan," he said.

The embassy, however, was not involved in arranging the visits of Taliban officials to Doha as that was handled by Islamabad, he added.

Ambassador Khan said that Pakistan's key role in facilitating the evacuation of those wishing to leave Afghanistan also helped improve bilateral ties after the fall of Kabul.

"We saw appreciation for Pakistan's positive contribution during the peace process and dealing with the aftermath of the Taliban takeover," he said. "People understood that the international community must come together to stabilize Afghanistan as Pakistan alone cannot do this."

Ambassador Khan hoped that the Ukrainian crisis would not drive the world's attention away from the humanitarian challenges in Afghanistan.

Asked if the embassy was ever asked to arrange a telephone call between President Joe Biden and Prime Minister Imran Khan, Ambassador Khan said: "You don't make formal phone call requests. Leaders do get in touch on issues and such possibilities are explored. But it is dependent on the convenience of the leaders."

Mr Khan also said that telephone "calls should not be a yardstick for any relationship, and certainly not for US-Pakistan ties". The relationship, he noted, has been moving at its pace and there have been regular contact between the national security advisers, cabinet ministers and the military leaderships of the two countries.

### COVERAGE HIGHLIGHTS

---

- 1) The Washington Examiner was one of several media reporting on CENTCOM's Change of Command ceremony Friday in which GEN Kurilla assumed command from Gen McKenzie. Overall reporting was neutral, noting GEN Kurilla's previous assignment as CENTCOM's chief of staff and returning to Tampa after being the commander of the 18th Airborne Corps in Fort Bragg, N.C.
- 2) The Wall Street Journal led global media reports announcing that Saudi Arabia and Yemen's Houthis agreed to a two-month cease-fire. UN Special Envoy Grundberg issued details on the truce, which includes the Houthis halting missile and drone attacks against Saudi Arabia and the UAE. In return, the Saudi-led coalition agreed to stop its current air campaign, allow fuel ships to enter the Yemeni port of Hodeidah, and allow a small number of commercial flights in-and-out of Sanaa.
- 3) The Washington Post reported U.S.-Iran indirect JCPOA negotiations are at a standstill due to Tehran's demand that Washington lift its designation of the IRGC as a foreign terrorist organization, and U.S. refusal to do so. At a Foreign Policy forum last weekend, U.S. negotiator Robert Malley said an agreement "is not just around the corner, and not inevitable."
- 4) The New York Times reported President Biden has agreed to work with allies to transfer Soviet-made tanks to the Ukraine military for its defense of the country's eastern Donbas region. A U.S. official told the Times that transfers of the tanks would begin "soon" but declined to say how many tanks would be sent, or from which countries. The decision comes as the U.S. has also agreed to send Ukraine \$300 million in additional military aid.

##### **1. Kurilla assumes CENTCOM top spot as McKenzie retires**

Washington Examiner, 1 Apr 22, Mike Brest

Army Lt. Gen. Michael "Erik" Kurilla is now the head of U.S. Central Command, and Gen. Frank McKenzie has retired. Kurilla, who had been the commander of the 18th Airborne Corps

in Fort Bragg, North Carolina, assumed the position during a ceremony on Friday at the Tampa Convention Center, where McKenzie's 42 years of military service were also honored.

## **2. Yemen parties agree to two-month truce**

Wall Street Journal, 1 Apr 22, Dion Nissenbaum

Saudi Arabia and Iran-backed Houthi fighters agreed on Friday to a two-month truce, bringing a temporary halt to a seven-year-old war in Yemen that could create new momentum for a diplomatic end to the conflict.

## **3. Iran nuclear talks at stalemate over terrorism issue**

Washington Post, 1 Apr 22, Karen DeYoung

Tehran's demand that the United States lift its designation of the Iranian Revolutionary Guard Corps as a foreign terrorist organization, and U.S. refusal so far to do that, have brought the year-long negotiations over reviving the Iran nuclear deal to a halt, with no new meetings scheduled and little obvious room for compromise.

## **4. U.S. will help transfer Soviet-made tanks to Ukraine**

New York Times, 1 Apr 22, Helene Cooper

The Biden administration will work with allies to transfer Soviet-made tanks to bolster Ukrainian defenses in the country's eastern Donbas region, a U.S. official said on Friday. The decision to act as an intermediary to help transfer the Soviet-made tanks, which Ukrainian troops know how to use, comes in response to a request from President Volodymyr Zelensky of Ukraine, the official said. It marks the first time in the war that the United States has helped transfer tanks.

## **5. Tampa hosts military leaders for CENTCOM change of command**

WFLA-TV (News Channel 8, Tampa), 1 Apr 22, Jeff Patterson

Ranking officers from every branch of the U.S. Military and a number of foreign nations traveled to Tampa on Friday for the change of command ceremony for U.S. Central Command based at MacDill Air Force Base.

## **6. McKenzie retires, hands over command of CENTCOM**

The Hill, 1 Apr 22, Ellen Mitchell

The top general in charge of U.S. military operations in the Middle East and Central Asia on Friday relinquished his command in a ceremony in Florida. Marine Gen. Frank McKenzie, who had led U.S. Central Command (Centcom) since March 2019, handed over his position to Army Gen. Michael "Erik" Kurilla during a change of command ceremony in Tampa, Fla.

## **7. General Kurilla takes over at US Central Command**

Military.com, 1 Apr 22, Jonathan Lehrfeld

Army Gen. Michael "Erik" Kurilla, who has earned two Purple Hearts and a Bronze Star during his military career, took over leadership of U.S. Central Command (CENTCOM) on Friday during an event at the Tampa Convention Center, according to a press release from the command.

## **8. Change of leadership at United States Central Command**

WTSP-10 Tampa Bay News, 1 Apr 22, Courtney Robinson

On Friday, U.S. Central Command assumed a new commander. General Michael "Erik" Kurilla will now lead CENTCOM, headquartered on MacDill Air Force Base in Tampa.

## NOTABLE TWEETS

---

**President Biden; @POTUS (1 Apr):** Jill and I extend our best wishes to Muslim communities here in the United States and around the world on the beginning of Ramadan. From the People's House to your own homes, we wish you and your loved ones a blessed and prosperous month. Ramadan Kareem!

**Secretary Antony Blinken; @SecBlinken (1 Apr):** Spoke today with Jordan's Foreign Minister @AymanHsafadi about steps to preserve calm in Jerusalem during the upcoming holidays. Many thanks to Jordan for its leadership in the region and support for Ukraine.

**Secretary Antony Blinken; @SecBlinken (1 Apr):** We welcome the @UN's announcement of a 2-month truce in the Yemen conflict and the parties' acceptance of its terms. This truce halts fighting and attacks for at least 60 days and facilitates the flow of goods and people, bringing relief to millions of Yemenis.

**Secretary General of the UN, António Guterres; @antonioguterres (1 Apr 22):** I commend the Government of Yemen, the Saudi-led Coalition and the Houthis for agreeing on a two-month truce in Yemen, including cross-border attacks. This truce must be a first step to ending Yemen's devastating war. The parties accepted to halt all offensive military air, ground and maritime operations inside Yemen and across its borders. This truce, which has the possibility of renewal, coincides with the start of the holy month of Ramadan. I thank my Special Envoy Hans Grundberg and his team for their tireless efforts in the pursuit of this agreement.

**Head of the Houthi Revolutionary Committee, Mohammad al-Houthi@Moh\_Alhouthi (1 Apr 22):** Implementation of the truce declared by the envoy is credible by implementation. Our Yemeni people should be careful.

**Inherent Resolve; @CJTFOIR (1 Apr):** Thank you @StateDeptCT, @INTERPOL\_HQ, & @Interpol\_USA for helping @IraqiGovt enhance border security capabilities that help pave the way for sustainable security. These collaborative efforts help in the broad fight to defeat terrorism. #StrongerTogether

## **27. China calls on EU to act independently of US foreign policy**

Financial Times, 1 Apr 22, Andy Bounds, Sam Fleming, Tom Mitchell and Eleanor Olcott

Xi Jinping has called on the EU to act more independently of the US as China and Brussels clashed over Russia's invasion of Ukraine and the bloc's leaders warned Beijing not to aid Moscow's war effort.

## **28. China's embrace of Putin is looking more and more costly**

TIME, 1 Apr 22, Charlie Campbell

When Wang Jixian moved to the southern Ukrainian port city of Odessa, he didn't expect to find himself in the middle of a war. But as the 37-year-old software engineer picked up his cellphone and began posting online the reality of life under Russian bombardment—wailing sirens, booming artillery, buskers on fretful streets—he soon found himself under attack from a more surprising quarter: the Chinese government and nationalist trolls, who objected to Wang's stark portrayal of Russian aggression that chafed with Beijing's official narrative.

## **29. Western diplomats court India over Ukraine but fail to find love**

The Economist, 1 Apr 22

Delhi is a crowded place these days, but not from its crush of cars, auto-rickshaws and stray cows. Instead, India's capital is flooded with visiting diplomats and statesmen, all vying for India's love, or at least its attention. Recent top-level envoys have included, among others, the prime minister of Japan, the foreign ministers of China, Britain, Russia, Mexico, Greece, Oman and Austria, an American undersecretary of state and deputy national security adviser, and a senior adviser to the German chancellor.

## **30. War in Ukraine compounds hunger in East Africa**

New York Times, 1 Apr 22, Abdi Latif Dahir

First came the drought, drying up rivers, and claiming the lives of two of Ruqiya Hussein Ahmed's children as her family fled the barren countryside in southwest Somalia. Then came the war in Ukraine, pushing food prices so high that even after making it to the outskirts of the capital, Mogadishu, she is struggling to keep her two other children alive.

**31. America and Saudi Arabia are stuck with each other: How Biden can recalibrate the relationship without breaking it**

Foreign Affairs, 1 Apr 22, Yasmine Farouk and Andrew Leber

In recent weeks, as Western sanctions on Russia over its war in Ukraine have roiled global energy markets, Saudi Arabia has continued to decline requests from U.S. President Joe Biden's administration that it increase oil production. Although the kingdom's pointed refusal to mitigate the pain of skyrocketing fuel prices clearly startled many American observers, inspiring a raft of commentary asking whether the 77-year U.S.-Saudi alliance was still worth maintaining, it should not have come as a surprise.

**32. A new video shows a missing American hostage pleading for help in Taliban custody**

The New Yorker, 1 Apr 22, Michael Ames

When the Biden Administration pulled all U.S. forces out of Afghanistan last August, Mark Frerichs was believed to be the only American hostage remaining in Taliban custody. Frerichs, a fifty-nine-year-old civil engineer and Navy veteran, had been abducted on the streets of Kabul in 2020. Members of his family have repeatedly pleaded with the Taliban and the Biden Administration to negotiate his release, but, for more than two years, no evidence had publicly emerged that Frerichs was alive. The New Yorker has obtained a new video, from an unidentified individual in Afghanistan, that shows Frerichs in captivity and pleading for his freedom. "I've been patiently waiting for my release," Frerichs says, apparently reading from a script held in front of him. "I'd like to ask the leadership of the Islamic Emirate of Afghanistan, please, release me."

**33. Government change in Islamabad will not derail China-Pakistan relations**

The Diplomat, 1 Apr 22, Krzysztof Iwanek

At present, the future of Imran Khan's government in Pakistan appears uncertain. As things stand now, the ruling coalition, led by Pakistan Tehreek-e-Insaf (PTI), has lost its majority and it is about to face a no-confidence vote. Should there be a change of government, however, there is unlikely to be a change in China-Pakistan ties. Pakistan's relationship with China may have already become more stable than Pakistan's democracy.

**34. Analysis: Oil prices, Ukraine war create Saudi pivot point**

Associated Press, 1 Apr 22, Jon Gambrell

The world is looking to Saudi Arabia to boost oil production as global energy prices spike because of Russia's invasion of Ukraine. But that could mean rethinking how to deal with the kingdom's controversial crown prince.

**35. Afghanistan's hungry will pay the price for Putin's war**

Foreign Policy, 1 Apr 22, Lynne O'Donnell

Russia's ban on food and fertilizer exports to stabilize supply and prices at home while it wages war on Ukraine is reverberating in its own backyard, pushing Central Asian states into economic crisis and threatening to tip Afghanistan from starvation into famine.

### **36. Israel and the triangular crisis of Ukraine, Iran, and Palestine**

New Yorker, 1 Apr 22, Bernard Avishai

On Monday, the U.S. Secretary of State, Antony Blinken, joined the foreign ministers of Israel, the United Arab Emirates, Bahrain, Egypt, and Morocco for a meeting at Sde Boker, the retirement kibbutz and burial place of David Ben-Gurion, the nation's first Prime Minister. The meeting had been initiated by the Israeli Foreign Minister, Yair Lapid, with encouragement from Blinken, whose main aim was to reassure the group that the United States is fixed in its commitment to deny Iran a nuclear weapon, and that the not-yet-consummated Iran nuclear deal is the best of available options to do that. "The summit was to showcase a strategic alliance growing out of the Abraham Accords," the Israeli journalist Henrique Cymerman told me. "To seed the formation of a kind of Middle Eastern NATO to contain Iran—deal or no deal."

### **37. Painful choices lie in the path to peace in Ukraine**

Washington Post, 1 Apr 22, David Ignatius

In the agonizing final years of the Vietnam War, a strategist named Fred Iklé wrote a treatise titled "Every War Must End." His basic theme was that "wars are easier to start than to stop" a message that applies powerfully now to the conflict in Ukraine.

### **38. Peace in Ukraine will be elusive until one side makes a military breakthrough**

Financial Times (UK), 1 Apr 22, Lawrence Freedman

From almost the moment the war in Ukraine began, diplomats have been at work trying to end it. The UN Security Council has deliberated. Vladimir Putin has had regular telephone discussions with western leaders in which they urge him to stop his aggression or at least facilitate humanitarian relief for those suffering under the weight of Russian bombardments. He then in turn explains how they fail to understand Ukraine's responsibility for these tragic events.

### IRAN

---

terrorism would be diminished ... whose ballistic missile program would be checked, all of those things turned out not only to be not true, but in almost every case the exact opposite has come to fruition.”

At the same time, while continuing to deny it seeks a nuclear bomb, Iran has vastly expanded the quality and quantity of uranium enrichment and is believed now only weeks away from assembling enough to fuel a weapon. It expanded other aggressive activities even as Trump reimposed sanctions that had been lifted by the Iran deal and imposed more than 1,500 more. Between 2019 and 2020, Price said, the number of attacks against U.S. personnel and facilities in Iraq by Iran-backed groups “went up 400 percent.”

Much of the Vienna negotiations over the past year were devoted to disagreements between Iran insisting that all U.S. sanctions be lifted, and administration insistence that a return to the deal involved only those that were “nuclear related.” Those issues, along with questions of sequencing and the unfreezing of certain Iranian assets, have now been largely resolved.

But as word spread that the biggest remaining issue on the table was the terrorism designation of the Revolutionary Guard Corps, opponents of the deal, including virtually all Republicans vowed to redouble their efforts to stop the agreement, and a number of Democrats expressed worries.

“We are highly concerned about reports indicating the potential lifting” of the foreign terrorist organization designation of the Revolutionary Guard Corps, a bipartisan group of 21 House members wrote Biden last month, saying that the combination of not “adequately addressing Iran’s role as the world’s leading state sponsor of terror,” and providing billions of dollars in sanctions relief would provide “a clear path for Iranian proxies to continue fueling terrorism.”

Any administration action is further complicated by reported U.S. intelligence indicating ongoing Iranian plots to target Pompeo and other former U.S. officials whom Tehran holds responsible for the drone strike in 2020 that killed Qasem Soleimani, commander of the Quds Force, the Revolutionary Guard Corps branch specializing in unconventional warfare. But others have warned that Iranian and U.S. leaders have “painted themselves into a corner” by allowing the issue to become what may ultimately kill any prospect of a deal.

“Failure to secure the nuclear deal will very likely lead to unpredictable and possible uncontrollable escalation, and almost certainly skyrocketing oil and gas prices,” Trita Parsi, an Iran expert and executive vice president of the Quincy Institute for Responsible Statecraft wrote Thursday. “The political costs to both the United States and Iran of either delisting” the Revolutionary Guard Corps or “dropping the demand to delist, respectively, pale in comparison.”

#### **4. U.S. will help transfer Soviet-made tanks to Ukraine**

New York Times, 1 Apr 22, Helene Cooper

The Biden administration will work with allies to transfer Soviet-made tanks to bolster Ukrainian defenses in the country’s eastern Donbas region, a U.S. official said on Friday.

The decision to act as an intermediary to help transfer the Soviet-made tanks, which Ukrainian troops know how to use, comes in response to a request from President Volodymyr Zelensky of Ukraine, the official said. It marks the first time in the war that the United States has helped transfer tanks.

The official said the transfers would begin soon but declined to say how many tanks would be sent, or from which countries they would come. They will allow Ukraine to conduct long-range artillery strikes on Russian targets in Donbas, said the official, who spoke on the condition of anonymity because he was not authorized to speak publicly.

The tanks' arrival could be another signal of a new phase in the war, which is five weeks old and has been dominated by Russian attacks on Ukrainian cities and installations from the air, and a stalled Russian advance on the ground. Earlier this week, Russian officials indicated that they were refocusing their efforts on eastern Ukraine, where Russian-backed separatists have been fighting Ukrainian soldiers since 2014.

Mr. Zelensky called on Sunday for NATO allies to provide tanks and planes, in addition to the antitank and anti-aircraft weaponry that have become a staple of the arms transfers to Ukraine from the West. Frustrated at what he views as a slow pace of weapons transfers, Mr. Zelensky asked specifically for tanks, in remarks a day after President Biden met with senior Ukrainian officials in Poland.

An angry Mr. Zelensky criticized the West for what he called its "Ping-Pong" about weapons transfers. "I've talked to the defenders of Mariupol today," he said, in a reference to the besieged city that has been under an onslaught from Russia for four weeks. "If only those who have been thinking for 31 days on how to hand over dozens of jets and tanks had 1 percent of their courage."

In the past, the Biden administration has taken pains to call the weapons it is providing to Ukraine defensive, and has focused on smaller, easily portable arms. But as the war has progressed, the definition of defensive has become more elastic.

Ukraine had already found one source of tanks, capturing at least 161 from Russia on the battlefield, according to the military analysis site Oryx, though Russia has also destroyed a number of Ukrainian tanks. For its part, Russia has captured 43 Ukrainian tanks, according to analysts who study photos and videos on social media.

The decision to help transfer the tanks comes as the Ukrainian military has continued to turn back Russia's ground advance. Pentagon officials have been quick to point out that Russia's pivot to Donbas and away from capturing Kyiv, the capital, might be a necessity for Moscow after Russian forces stalled out in the central part of the country.

On Wednesday, Biden administration officials, citing declassified U.S. intelligence, said that President Vladimir V. Putin of Russia had been misinformed by his advisers about the Russian military's problems in Ukraine. The intelligence, American officials said, also showed what

appeared to be growing tension between Mr. Putin and his defense minister, Sergei K. Shoigu, who was once among the most trusted members of the Kremlin's inner circle.

Russian officials have disputed the allegations, with the Kremlin on Thursday calling it a "complete misunderstanding" of the situation that could have "bad consequences."

## CENTCOM CHANGE OF COMMAND

---

### **5. Tampa hosts military leaders for CENTCOM change of command**

WFLA-TV (News Channel 8, Tampa), 1 Apr 22, Jeff Patterson

Ranking officers from every branch of the U.S. Military and a number of foreign nations traveled to Tampa on Friday for the change of command ceremony for U.S. Central Command based at MacDill Air Force Base.

The ceremony was attended by U.S. Secretary of Defense Lloyd Austin who previously served as the Commanding officer for CENTCOM. Austin says CENTCOM plays a vital role in the defense of the middle east.

"This region is where we protect waterways so that global commerce can flow, it is where we fight terrorists who threaten our citizens," said Austin who praised outgoing Marine General Kenneth McKenzie as he turned over the command to Army General Michael "Erik" Kurilla.

Kurilla once served as McKenzie's Chief of Staff at CENTCOM and so his return is homecoming of sorts to Tampa.

General Mark Milley, the Chairman of the Joint Chiefs of Staff spoke at the ceremony, pointing out that combat operations are over in Iraq and Afghanistan, but that CENTCOM still has a vital role to play.

"The fight isn't over here. Every day there is new threats this country faces and there are always new challenges and in this complex theater, everything from terrorism to regional conflict can rear its ugly head on very short notice," said Milley.

General Kurilla is a West Point Graduate and a wounded combat veteran. He's previously commanded the 82nd Airborne and the 2nd Ranger Battalion of the 75th Ranger Regiment and is well aware of the history and importance of CENTCOM.

"CENTCOM was critical in its formation, it is critical now and it will be into the future," said Kurilla as he accepted his new position.

### **6. McKenzie retires, hands over command of CENTCOM**

The Hill, 1 Apr 22, Ellen Mitchell

#### **24. Pentagon to send Ukraine another \$300 million in defense aid**

Washington Post, 1 Apr 22, Alex Horton

The Pentagon said Friday that it will provide a new \$300 million package of military aid to Ukraine that includes drones, armored vehicles and machine guns.

The assistance is part of the Ukraine Security Assistance Initiative, a program that lets the United States procure supplies from manufacturers instead delivering them from its own military stockpiles, Pentagon press secretary John Kirby said. Under this initiative, Washington has delivered hundreds of millions of dollars in aid to Ukraine each year since 2015.

The Biden administration has dispatched more than \$2.3 billion in defense support to Ukraine since it took office. Among the highlights of the new package are Puma unmanned aerial systems, or hand-launched lightweight drones, “non-standard” machine guns, counter-drone systems and access to commercial satellite imagery services.

#### **25. U.S. to ease nuclear tensions with Russia, cancel 'Minuteman' Missile tests**

Newsweek, 1 Apr 22, Jake Thomas

The Pentagon is again delaying a test of a nuclear-capable missile to avoid a “misinterpretation or miscommunication” with Russia amid heightened tensions.

The U.S. military on Friday canceled a previously scheduled test flight of the Minuteman III intercontinental ballistic missile, capable of delivering a nuclear warhead to Russia. The postponement is the second time the Pentagon has put off the planned test, signaling the U.S. is continuing to avoid nuclear escalation with Russia.

The Pentagon told Newsweek in an email that the Air Force recently canceled the test flight of the LGM-30G Minuteman III missile.

“The launch had been previously delayed due to an overabundance of caution to avoid misinterpretation or miscommunication during the ongoing Russian invasion of Ukraine and was canceled for the same reason,” the Pentagon said in the statement. “Our next planned test flight is later this year. The Department is confident in the readiness of the strategic forces of the United States.”

Pentagon officials announced on March 2 that it would delay the launch of the Minuteman III missile after Russian President Vladimir Putin said he would place his country's nuclear forces on high alert during its invasion of Ukraine.

At the time, Pentagon spokesman John Kirby contrasted what he described as the U.S.'s restraint to Putin's “dangerous and irresponsible...unnecessary step.”

“We did not take this decision lightly, but instead to demonstrate that we are a responsible nuclear power,” Kirby said in March.

The Minuteman III has been "the backbone of the U.S. land-based nuclear strategic force since 1962," according to Missile Threat, a product of the Center for Strategic and International Studies (CSIS). The missile is the only land-based component of the U.S. nuclear triad and has near 100 percent testing reliability.

There are currently an estimated 440 of the missiles in the U.S.'s arsenal, and two or more tests are conducted each year, according to Missile Threat.

Air Force crews test four Minuteman III missiles each year from the Vandenberg Space Force Base in California to ensure its arsenal is functioning. Each of the tests are publicized in advance to avoid the appearance of being in response to a world event. The dummy warheads splash down near Kwajalein Atoll in the Pacific Ocean.

The Air Force previously successfully tested a Minuteman III in August 2021. The missile flew about 4,200 miles and detonated explosives before landing in the ocean.

Previously, the Pentagon has said the launch's postponement will "not affect America's nuclear deterrence in any way."

## **26. How two dozen retired generals are trying to stop an overhaul of the Marines** Politico, 1 Apr 22, Paul McLeary and Lee Hudson

An influential group of over two dozen retired generals has launched a counteroffensive against plans to transform the Marine Corps and is using their clout in a high-power pressure campaign to get Congress to slam on the brakes.

The roster of personalities includes every living former commandant, along with a slew of other retired four-star generals revered within the Corps. And all of them are bristling at different aspects of foundational changes introduced by Commandant Gen. David Berger, who aims to make the Corps lighter, faster and more capable of doing everything from electronic warfare to sinking ships at sea.

The group of retired generals includes former Defense Secretary Jim Mattis, former Joint Chiefs Chair Joe Dunford and John Kelly, a former Homeland Security chief and White House chief of staff.

"This is not a fragmented effort, this is a collective of 30 some generals ... including six or seven of the most senior, most credible Marines that I've ever worked with," said Frank Hoffman, distinguished research fellow at the National Defense University and a retired Marine officer. Yet he also noted that Berger's efforts have already been blessed by Congress and the Pentagon brass, so putting a stop to them now is unlikely.

The Marine Corps' two-year-old plan represents a fundamental shift in how the Corps equips its troops and goes to war. The Corps' 400-odd tanks have already been shifted to the Army,

The Marines are working through some of their new concepts during the Cold Response war games taking place in Norway, Wolters said, adding, “the Marines are doing a fantastic job of leading from the front and showing the rest of us how to do it right.”

Backers of the changes note that they didn’t originate with Berger. In June 2017, his predecessor, Gen. Robert Neller, told Congress that the Marine Corps is “not currently organized, trained and equipped to face a peer adversary in the year 2025.”

Neller pointed to the use of electronic warfare, precision weapons, and cyberattacks that would confront Marines on future battlefields against China and Russia, adding, “I’m worried that we’re going too slow and that we’re afraid of change.”

### **27. China calls on EU to act independently of US foreign policy**

Financial Times (UK), 1 Apr 22, Andy Bounds, Sam Fleming, Tom Mitchell and Eleanor Olcott

Xi Jinping has called on the EU to act more independently of the US as China and Brussels clashed over Russia’s invasion of Ukraine and the bloc’s leaders warned Beijing not to aid Moscow’s war effort.

China’s president called on the EU “to pursue an independent policy towards China” — a thinly veiled criticism of European solidarity with the US in blaming Russia for the crisis and in hitting Vladimir Putin’s regime with sanctions.

Speaking after video meetings that exposed widening divisions between the two powers, Charles Michel, the European Council president, said China could not “turn a blind eye” to Russian aggression against Ukraine. Ursula von der Leyen, European Commission president, admitted the two sides had exchanged “clearly opposing views”.

Anything China did that supported Russia’s ability to wage war would do “major reputational damage” to the country in Europe, von der Leyen warned. “China has an influence on Russia and therefore we expect China to take its responsibility” to help bring a peaceful resolution of the conflict, she said.

Xi, however, refused to budge from his position that the US and EU had adopted what Chinese diplomats call a “cold war mentality” over the crisis in Ukraine.

While Xi’s diplomats insist China is a neutral party on Ukraine, they and Chinese state media have repeatedly endorsed Russia’s justifications for the invasion and blamed the US and Nato expansion for stoking conflict.

According to the official Xinhua news agency, Xi said “regional security conflicts” in Europe were the “root cause” of the Ukraine crisis.

Xi “did not condemn, but also did not defend” Putin’s invasion, according to a person present during the video call, adding that the Chinese president ignored a direct question from Michel as to whether he supported the invasion.

Instead, Xi referred to the importance of understanding Russia’s “security concerns in Europe”, the person said.

In a separate video call with the EU duo, Chinese premier Li Keqiang insisted Beijing was working towards a peaceful resolution of the crisis in “its own way”.

In the run-up to Friday’s summit, Wang Yi, China’s foreign minister, told his Russian counterpart “the Ukrainian issue” was the result of “the long-term accumulation of security conflicts in Europe” as well as a “cold war mentality and group confrontation”.

Wang hosted Sergei Lavrov on the sidelines of a regional security meeting about Afghanistan on Wednesday, their first in-person discussion since the war in Ukraine began in late February.

In early February, Xi and Putin said there were “no limits” to their friendship. But analysts say the threat of secondary western sanctions has stopped China from offering significant support to the struggling Russian economy.

“So far, China has not helped Russia offset the cost of sanctions because it doesn’t want to trigger secondary sanctions or become more entangled in the unstable Russian economy,” said Francesca Ghiretti, an EU-China analyst at the Mercator Institute for China Studies, a German think-tank.

“Beijing wants to avoid any more economic pain on top of the pandemic lockdowns and global inflationary pressures,” she added.

China’s trade with the EU was worth €1.9bn a day, compared with €330mn daily with Russia, von der Leyen said, suggesting Beijing’s attitude to the war could threaten that flow. Ukraine was a “defining moment for our relationship with the rest of the world”, she said.

## **28. China's embrace of Putin is looking more and more costly**

TIME, 1 Apr 22, Charlie Campbell

When Wang Jixian moved to the southern Ukrainian port city of Odessa, he didn’t expect to find himself in the middle of a war. But as the 37-year-old software engineer picked up his cellphone and began posting online the reality of life under Russian bombardment – wailing sirens, booming artillery, buskers on fretful streets – he soon found himself under attack from a more surprising quarter: the Chinese government and nationalist trolls, who objected to Wang’s stark portrayal of Russian aggression that chafed with Beijing’s official narrative.

Wang’s Weibo social media account was blocked for “spreading rumors” and strangers started issuing expletive-riddled threats on his Wechat account. “I’m dealing with a war on two fronts,”

Wang told Voice of America. “The battlefield I’m faced with here is terrifying, but at least I can see the tanks. But the other battlefield lurking behind me is even scarier ... I don’t know who’s in it, but they’re all telling me that they want me dead.”

China’s censorship of Wang and other independent voices on Ukraine underscores the contradictory position that the Beijing government has adopted since Russian President Vladimir Putin’s Feb. 24 assault on Ukraine: on one hand upholding sovereignty, territorial integrity, and the rules-based international order; on the other refusing to condemn Putin’s invasion nor even call it one.

“For a major power like China, which is poised to become the world’s largest economy in less than 10 years, the most important thing is to strike a balance,” says Zhou Bo, a retired PLA senior colonel and senior fellow at the Center for International Security and Strategy at Tsinghua University Zhou.

Over days and weeks of probing questions, China’s spokespeople settled on a line: The war is caused by NATO’s expansionism, which Russia is defending itself against. In an emailed statement March 18, China’s embassy in London said that Chinese President Xi Jinping spoke with Putin on the second day of the conflict and “expressed China’s hope to see Russia and Ukraine hold peace talks as early as possible.” Putin’s escalation since then—including the near total destruction of the eastern city of Mariupol—hardly indicates that he took Xi’s words to heart.

On April 1, Xi met E.U. leaders for a virtual summit with efforts to resurrect the stalled Comprehensive Agreement of Investment trade pact already facing pushback over allegations of forced labor and human-rights abuses in Xinjiang province. Refusal to help end the bloodshed in Ukraine just compounds the ill-feeling.

How much sway China has over Putin’s Ukraine invasion is a contentious matter. A Western intelligence report claimed that senior Chinese officials asked their Russian counterparts in early February to delay the invasion of Ukraine until after the Winter Olympics in Beijing. However, Qin Gang, the Chinese ambassador to the U.S., refuted that claim writing in the Washington Post March 16, saying “had China known about the imminent crisis, we would have tried our best to prevent it.”

Of course, figuring out China is like watching a magic show: sure, you can listen to the patter, but never take your eyes off the hands. And China’s actions reveal a cynical and risky gambit to back Vladimir Putin. Xi has often spoken of a world buffeted by “changes unseen in 100 years.” If Western sanctions targeting Russia’s economy, oligarchs and industry fail, it would confirm America’s decline as a superpower—and perhaps Xi would have less to fear from blowback were he to pursue his own strategic targets, such as reuniting self-ruling Taiwan.

But it’s looking increasingly likely that Beijing has its strategic calculus wrong. Putin’s offensive is foundering (for now, at least), and NATO has rarely been more united, as members announce a raft of defense spending hikes. A defeat for Putin just after he and Xi declared a “no limits” partnership in a high-profile meeting ahead of the Beijing Olympics would be an embarrassment

for the Chinese Communist Party leader just as he is seeking a protocol-shredding third term. And in Putin, China has a “partner” with neither scruples nor, it’s becoming increasingly apparent, a sense of reality.

“It’s quite exposing for China,” says Kerry Brown, director of the Lau China Institute at King’s College, London. “It’s pushed a lot of decisions on them far quicker than they were expecting, making them declare their hand in ways where they don’t want to.”

### **The high cost of siding with Russia**

Beijing’s initial approach was to deal with the crisis through inaction, on the assumption that you can’t punish inactivity. But things are happening on a scale in a speed that is compelling China into taking more proactive positions. On the one hand, China doesn’t want to align with Russia, which is antagonizing and angering Western countries who remain their biggest trade partners. But on the other, Beijing doesn’t want a continuation of American-led Western dominance, which it felt was already waning.

China was quick to refute reports that Russia had asked for military assistance. While it makes perfect sense for Putin to want to embroil China in his conflict, Beijing has more to lose than gain from actively assisting the invasion of Ukraine. And any help would mostly be symbolic—though China retains close military ties with Russia, with the two countries staging frequent joint-exercises including naval maneuvers in the Mediterranean and the Baltic seas—there’s little interoperability between their forces. Exercises in north-west China last year involving some 10,000 Russian and Chinese troops were the first to feature Russians using Chinese weapons and joint command-and-control. Coming down more heavily on the Russian side will entail huge costs, including risking tough sanctions and international boycotts. It doesn’t make much sense for Beijing to pay that for Russia, which they consider a regional power with a limited sphere of influence, whereas China today is a global player with interests on every continent—the only true rival to the United States.

“If China and Russia engage in a military alliance, the whole world would change,” says Zhou. “Western countries, no matter how strong their economic relationship with China, will definitely follow America and stand on their side. Then we inevitably will have two camps and a repetition of the Cold War. So it is extremely important for China to have this nonaligned relationship with Russia in spite of our friendship. And this is totally possible.”

### **Why Beijing won’t try to stop Putin**

At the same time, if the West believes it can shame China into isolating Russia, it’s kidding itself. Beijing has for decades propped up an ossified, rogue nuclear state on its border because dealing with Kim Jong Un is calculated as preferable to a united, U.S.-allied Korean peninsula. If the threat of nuclear catastrophe combined with the plight of 25 million North Koreans subject to U.N.-designated “crimes against humanity” doesn’t sway China’s leaders, 4 million Ukrainian refugees won’t warrant a shrug. Beijing has proved it will only act in the purest traditions of self-interest. And so, it’s doubtful that Beijing will suddenly oppose Putin as he attempts to carve up the world into spheres of influence, with NATO, and America’s role severely diminished.

In this sense, joining Western sanctions are contrary to China's self-interest, given that handing NATO an easy victory would reenergize a newly confident, united, America-led Western alliance. China wants a less-confident, less-zealous West to deal with, and more unity and purposefulness spells trouble. "Russia is causing that to happen," says Brown. "But it's still not a solution for China to align with the West as that actually brings about the very thing that it doesn't want. It just shows this rather torturous position they're in."

It's also likely that the West is inflating the clout Beijing has over the Kremlin to distract from its own culpability. China has little demand for Russian products other than oil and gas. True, bilateral trade rose 33.6% year-on-year to some \$140 billion in 2021, when Russia was China's second largest crude oil supplier, accounting for some 15.5% of China's total imports. But the 10 billion cubic meters of gas China purchased in 2021 is dwarfed by the 175 billion cubic meters Russia sold to Europe over the same period. For leverage over Russia's economy, European leaders should look closer to home.

Ultimately, it's a war that looks unwinnable, while perpetually muddying China's international reputation, stirring up antagonism in Washington and Europe. None of that speaks to China's interest, being the self-appointed global superpower in waiting. And while China may be winning the domestic propaganda war for now, voices like Wang's in Odessa—who has more than 100,000 subscribers on Youtube—will get louder as the war drags on and more people ask questions. "[Ukrainians] are fighting for their homes ... Why should they be bombed?" he posted March 4. "It's just that simple; it's got nothing to do with NATO. People just want to be able to live their lives."

## **29. Western diplomats court India over Ukraine but fail to find love**

The Economist, 1 Apr 22

Delhi is a crowded place these days, but not from its crush of cars, auto-rickshaws and stray cows. Instead, India's capital is flooded with visiting diplomats and statesmen, all vying for India's love, or at least its attention. Recent top-level envoys have included, among others, the prime minister of Japan, the foreign ministers of China, Britain, Russia, Mexico, Greece, Oman and Austria, an American undersecretary of state and deputy national security adviser, and a senior adviser to the German chancellor.

During one of a seemingly endless series of press appearances Subrahmanyam Jaishankar, India's busy foreign minister, moaned that there appears to be "almost a campaign" to influence India. If so, this is largely his fault. The official Indian response to the great drama that currently preoccupies much of the world, Russia's invasion of Ukraine, has been so cold and tight-lipped that it has left everyone wondering where the world's largest democracy stands. The guessing game has at the same time raised Russian hopes of Indian support, Chinese hopes of wooing India from the clutches of America, Western hopes that India may dump its crotchety old friend Russia—and Western worries that a country they see as a natural ally couldn't, in fact, give a fig about their high-falutin' self-declared values, and is solely focused on a narrow notion of its own interests.

On every vote at the UN since Russia's tanks rolled into Ukraine on February 24th, India has abstained. It has not condemned Russia by name. But nor has it shied from calling this a war rather than a "special operation", as Sergei Lavrov, Russia's deadpan foreign minister, gamely corrected an Indian journalist in Delhi on April 1st. Russia's state-throttled media tries to paint India as a staunch cheerleader of Vladimir Putin, but struggles to find pukka Indians to parrot such tosh. And although India has annoyed those hoping to squash Russia with sanctions, by eagerly bargaining for discounted Russian oil and other goods, Mr Jaishankar points out that Western countries still buy heaps more Russian stuff than India ever has or will.

This prickly damn-them-all attitude is popular in India. In the polarized politics generated by the ruling Bharatiya Janata Party's (BJP) strident Hindu nationalism, giving the West a poke in the eye unites in delight both old leftists and young Hindutva hotheads. Mr Jaishankar was also not wrong when he told a perplexed-looking Liz Truss, Britain's foreign secretary, that Indians care less about Ukraine than they do, say, about Afghanistan simply because of proximity. The subtle message was, first, that Ukraine is Europe's problem and, second, that the West let India down by scuttling Afghanistan to the Taliban, so why should India be concerned now? India's press and social media tom-tommed umbrage when Daleep Singh, America's deputy national security adviser for economic affairs, suggested there might be "consequences" for undermining efforts to squeeze Russia. India will never bow to pressure, was the responding chorus.

While much of India's establishment does cherish musty memories of cold-war "non-alignment", when the Soviet Union backed the country against an American-supported Pakistan and a looming Chinese dragon, many also cite pragmatic contemporary reasons for staying off the West's anti-Putin bandwagon. Most obviously, India depends on Russia for most of its arms. Perhaps 80% of its legacy systems are of Russian origin and, despite intensifying efforts to diversify, Russia remains a key supplier of new weapons and a vital source for maintenance and spares. Perhaps more crucially in the eyes of Indian generals, many of the country's prestige military toys, such as nuclear-powered submarines and hypersonic cruise missiles, rely on Russian inputs.

It is not just nostalgia, either, that attaches Indian strategists to a clumsy fading power whose economy is now little more than half of India's in size. Tanvi Madan of the Brookings Institution, an American think-tank, notes that India still sees Russia through the lens of its biggest long-term foreign-policy challenge, China. Delhi warmed to Moscow in the 1960s after the Soviet Union broke with Beijing. Indian security wonks still see Mr Putin's Russia as a potential balance to what is not only an Asian superpower, but one with which India regularly spars over a long and dangerously undefined border. India fears that an isolated Russia will fall deeper into China's embrace. At the same time, by declining to condemn Russia over Ukraine, India also wants to send a signal to China of its independence. The message is that for all its military footsie with the West, such as joining a "Quad" of China-wary powers along with America, Japan and Australia, carrying out joint naval exercises and mouthing mantras about a "rules-based order" and "free and open Indo-Pacific", India is not a Western stooge.

All this posturing is fine, say Western diplomats, swallowing yet another snub on April 1st when Narendra Modi, India's prime minister, granted an audience to Mr Lavrov that he had pointedly denied to any of the other envoys (including China's foreign minister, Wang Yi, who visited

Delhi on March 25th). Even the Americans accept that in a global energy crunch India may take some advantage of steep Russian discounts on its oil. They have already given Delhi a free pass for its recent purchase of an advanced Russian air-defense system – the sort of order that could trigger American laws requiring sanctions.

But although India may be right in thinking that it is too big and important a player for Western powers to forsake, Delhi's narrow focus on "realpolitik" is not without costs. China's "historic" claims on bits of Indian territory are not so different from Russia's in Ukraine. Cocking a snook at your partners in the Quad serves only to prove Mr Wang, the Chinese foreign minister, acute in his argument that the grouping is no more substantial than "sea foam". Clever as it may seem to use its closeness to Russia to its advantage in its contest with China, the erratic, bumbling and nasty Russia of Mr Putin, provider of costly weapons that don't work too well, does not a reliable partner make. And at some point, particularly if Ukraine gets even messier, India's own people might begin to take unwonted interest in foreign affairs. They might then ask, what kind of democracy are we anyway, if we can't help fellow democracies in need?

### **30. War in Ukraine compounds hunger in East Africa**

New York Times, 1 Apr 22, Abdi Latif Dahir

First came the drought, drying up rivers, and claiming the lives of two of Ruqiya Hussein Ahmed's children as her family fled the barren countryside in southwest Somalia.

Then came the war in Ukraine, pushing food prices so high that even after making it to the outskirts of the capital, Mogadishu, she is struggling to keep her two other children alive.

"Even here, we have nothing," she said.

Across East Africa, below-average rainfall has created some of the driest conditions in four decades, according to the United Nations, leaving more than 13 million people facing severe hunger. Seasonal harvests have hit their lowest in decades, malnourished children are filling hospitals and many families are walking long distances to find help.

The devastating drought has blanketed most of Somalia, leaving nearly a third of the population hungry. In neighboring Kenya, the drought has left more than three million people short of food and killed more than 1.5 million livestock.

And in Ethiopia, where a civil war has impeded aid delivery into the northern Tigray region, food insecurity is more widespread than at any time in the last six years. The first food aid to Tigray in three months arrived on Friday.

Now, the war in Ukraine is making the crisis even worse by raising the price of grains, fuel and fertilizer.

Russia and Ukraine are some of the region's top suppliers of agricultural commodities such as wheat, soybeans and barley. At least 14 African countries import half of their wheat from Russia

and Ukraine, according to the Food and Agriculture Organization. Eritrea depends on them entirely for its wheat imports.

“The conflict in Ukraine is compounding an already complicated situation in East Africa,” Gabriela Bucher, the executive director for the charity organization Oxfam International, said in a phone interview. “East Africa is not on the global agenda now, but the region needs the solidarity of the international community and it needs it now.”

The devastating drought and the war in Ukraine are amplified by a series of crises over the past two years.

The coronavirus pandemic has disrupted food supply chains and forced many families to pay higher prices for food staples. The locust infestation in Kenya, the civil war in Ethiopia, extreme flooding in South Sudan, the political crises and growing terrorist attacks in Somalia, and the intensifying ethnic conflict in Sudan have all contributed to the destruction of farms, the depletion of harvests and a worsening food crisis, aid groups say.

The war in Ukraine, which is in its second month, is expected to cause further spikes in food costs across the region. The conflict, depending on how long it lasts, could reduce “the quantity and quality” of staples like wheat, said Sean Granville-Ross, the regional director for Africa at Mercy Corps, a nongovernmental organization.

“Meeting the basic needs of vulnerable drought-affected populations will become more expensive and challenging,” he said.

That ominous outcome is already evident in many parts of the region.

In Somalia, the price of a 20-liter container of cooking oil has increased to \$55 from \$32, while 25 kilograms of beans now go for \$28 instead of \$18, according to data gathered by Mercy Corps.

In Sudan, the price of bread has nearly doubled, and some bakeries have closed because wheat imports have dropped by 60 percent since the beginning of the war, according to Elsadig Elnour, the Sudan country director for the charity organization Islamic Relief.

Kenya, citing the war in Ukraine, also raised the price of fuel, leading to protests in parts of the country.

When famine hits, children are particularly vulnerable. An estimated 5.5 million children in the region are facing high levels of malnutrition from the drought, according to World Vision, a Christian aid organization.

“My children died of hunger. They suffered,” said Ms. Ahmed, whose children, aged 3 and 4, died during her days-long trek from her home in Adde Ali village in the Lower Shabelle region to the outskirts of Mogadishu. “They died under a tree.”

In Mogadishu, families are already feeling the ripple effects of the war in Ukraine, with rising food prices squeezing household budgets as the holy month of Ramadan approaches. With no job, proper shelter or access to the beans, maize and tomatoes she once farmed, Ms. Ahmed now relies on food donations from well-wishers to feed her two surviving children, ages 7 and 9.

And aid programs are stretched thin. The war has affected the operations of the World Food Program, which this month said it had reduced rations for refugees and others in East Africa and the Middle East because of rising costs and depleting funds.

Some fear that the continued drought in East Africa could come to resemble the one in 2011, which killed about 260,000 people in Somalia alone. While the situation hasn't reached that level yet, the funding and resources needed to avert such a crisis have not yet begun to flow, Ms. Bucher of Oxfam said.

Just 3 percent of the \$6 billion the U.N. needs this year for Ethiopia, Somalia and South Sudan has been allocated, she said, while Kenya has only secured 11 percent of the \$139 million needed for assistance.

Last week, the African Development Bank said it would raise up to \$1 billion to improve agricultural production and help Africans become self-sufficient in food in the long run. But while these initiatives are welcome, Ms. Bucher said it was imperative that donors also give unsparingly and immediately to avert a much wider crisis.

"The world needs to come to the rescue of East Africa to avert a catastrophe," she said.

## ANALYSIS/COMMENTARY

---

### **31. America and Saudi Arabia are stuck with each other: How Biden can recalibrate the relationship without breaking it**

Foreign Affairs, 1 Apr 22, Yasmine Farouk and Andrew Leber

In recent weeks, as Western sanctions on Russia over its war in Ukraine have roiled global energy markets, Saudi Arabia has continued to decline requests from U.S. President Joe Biden's administration that it increase oil production. Although the kingdom's pointed refusal to mitigate the pain of skyrocketing fuel prices clearly startled many American observers, inspiring a raft of commentary asking whether the 77-year U.S.-Saudi alliance was still worth maintaining, it should not have come as a surprise.

The United States' relationship with Saudi Arabia has been in a downward spiral since immediately after 9/11. After years of tensions over the U.S.-led "war on terror," the American intervention in Iraq, Washington's on-and-off pursuit of a nuclear deal with Iran, the Saudi-led war in Yemen, and Riyadh's human rights record, even former President Donald Trump's open courtship of Saudi Crown Prince Mohammed bin Salman (MBS) did little to improve trust and communication. Though some in the U.S. foreign policy establishment privately question

soon, a similar process may occur – the focus of some of the projects may be shifted to create benefits for different groups – but this will only mean the Chinese presence on Pakistani soil will shift, not depart entirely.

### **34. Analysis: Oil prices, Ukraine war create Saudi pivot point**

Associated Press. 1 Apr 22, Jon Gambrell

The world is looking to Saudi Arabia to boost oil production as global energy prices spike because of Russia’s invasion of Ukraine. But that could mean rethinking how to deal with the kingdom’s controversial crown prince.

Crown Prince Mohammed bin Salman’s ties with longtime allies have been troubled by a string of issues. At the top of the list is the killing and dismemberment of Washington Post columnist Jamal Khashoggi at the Saudi Consulate in Istanbul in 2018, as well as Saudi Arabia’s intervention in neighboring Yemen’s war.

U.S. President Joe Biden has kept the 36-year-old prince at a distance. But with economic worries high, others may be putting the controversies behind them.

Turkey on Thursday moved to end an ongoing court case of Khashoggi’s death, a step that could ease tensions with Saudi Arabia.

With higher oil prices flooding the kingdom’s coffers, the crown prince and his father King Salman face a potential pivot point of their own.

Can the ruling Al Saud family reset its relationship with the United States, long the security guarantor for the wider Persian Gulf? Or does the kingdom tip toward further toward China, now its biggest buyer of crude, or Moscow?

An American rapprochement seems unlikely. Asked in a recent interview about what he’d want Biden to know about, Prince Mohammed bluntly said: “I don’t care.”

“It’s up to him to think about the interests of America,” the prince added.

Perhaps no other country in the world stands to rapidly benefit financially from the Ukraine war as Saudi Arabia.

Its vast oil resources, located close to the surface of its desert expanse, make it one of the world’s cheapest places to produce crude. For every \$10 rise in the price of a barrel of oil, Saudi Arabia stands to make an additional \$40 billion a year, according to the Institute of International Finance.

It's a wild turn of events considering oil prices in April 2020 turned negative at the height of lockdowns in the coronavirus pandemic. Now, benchmark Brent crude stands at \$105 a barrel highs unseen since 2014.

The additional cash comes in handy for Prince Mohammed, who also has to deal with questions at home, particularly how to find jobs for a growing number of unemployed youth.

The crown prince has been known for his brash moves. His vision for Saudi Arabia includes developing a futuristic city called Neom in the desert reaches along the Red Sea. Its latest iteration involves a ski slope project called Trojena, advertised in a computer-generated commercial now in heavy rotation across Mideast satellite channels.

But while expansive palaces now exist there, satellite photos from Planet Labs PBC show the wider Neom project remains at an early stage. It likely will be years before it produces the jobs the prince counts on to slingshot the kingdom's economy away from oil.

Meanwhile, unemployment among youth stood at 32.7% for men and 25.2% for women late last year, according to the Saudi General Authority for Statistics. Reopening cinemas and allowing concerts in a kingdom where ultraconservatives view music as a sin comes as a part of that push for jobs.

"If I'm going to get the employment rate down, and tourism could create 1 million jobs in Saudi Arabia, ... that means I have to do it," the prince told *The Atlantic* magazine in a recent interview. "Choose a lesser sin rather than a bigger sin."

The sheen, however, has come off for human rights activists and some Western nations.

Saudi Arabia just put to death 81 prisoners in a single day, the biggest known mass execution in the kingdom's history, after a pandemic lull. Despite a unilateral Ramadan cease-fire, the Saudi-led war in Yemen against the Houthi rebels rages years after the prince promised a quick victory — and the Arab world's poorest country has been left in wreckage.

Internationally, perhaps nothing received more attention than Khashoggi's killing.

U.S. intelligence services believe Prince Mohammed approved the operation that killed Khashoggi, a permanent resident of the United States. Finding a resolution over the split with a close ally remains a difficult knot to untangle.

Biden, who called the crown prince "a pariah" while campaigning, pointedly has only spoken to King Salman since entering the White House. Biden's first foreign trip was to a G-7 summit in England, rather than the sword-dancing embrace then-President Donald Trump gave to Saudi Arabia.

Saudi Arabia and the United Arab Emirates appear to be leveraging record gasoline prices at the pump to extract American concessions on Yemen.

Saudi Arabia has repeatedly said it can't be held responsible for energy price jumps caused by Houthi attacks on its oil facilities. That steps up pressure on Biden, whose administration withdrew American air defenses from Saudi Arabia last year.

Meanwhile, Saudi Arabia is maintaining its own ties to Russia. The kingdom also is again reportedly thinking of selling some crude oil in Chinese yuan to Beijing, rather than the U.S. dollar.

Ukrainian President Volodymyr Zelenskyy weighed in on the situation in recent days, urging Qatar and other regional energy powers to increase their output to make up for the loss of Russian supply. "The future of Europe depends on your efforts," he told them.

Faisal J. Abbas, the editor-in-chief of Saudi Arabia's English-language daily newspaper Arab News, wrote that the kingdom needs "all the support it can get" against the Houthis.

"The kingdom cannot — and must not — be left alone to safeguard global energy supplies at a time when the entire world is unanimously hurting from price hikes," he wrote.

Where the support comes from in the future remains the question.

### **35. Afghanistan's hungry will pay the price for Putin's war**

Foreign Policy, 1 Apr 22, Lynne O'Donnell

Russia's ban on food and fertilizer exports to stabilize supply and prices at home while it wages war on Ukraine is reverberating in its own backyard, pushing Central Asian states into economic crisis and threatening to tip Afghanistan from starvation into famine.

The war in Ukraine has already sent shudders through commodities markets, pushing up prices of cereals, fuel, and fertilizer. Together, Ukraine and Russia account for 30 percent of wheat supply; Russia exports most of the world's fertilizer. The longer the war lasts, the greater the instability of supply and the higher prices will go in anticipation of shortages.

The impact on vulnerable countries such as Afghanistan, where millions of people are short of food and babies are dying of malnutrition, will be devastating, economists said. Other vulnerable countries, including Yemen, Lebanon, Ethiopia, and Nigeria, can expect serious ramifications at least for the coming year, possibly longer. The war is expected to hit harvests and yields, not only in Ukraine, where grain planting this year could be cut by half, but in countries that have relied on Russian fertilizer to boost their own output, according to Friederike Greb, an economist with the World Food Program (WFP).

WFP is spending \$71 million a month on grain purchases, she said, 44 percent more than the average monthly outlay in 2019, to meet existing needs. As the war fallout worsens, need will rise, and not only will WFP have to stretch stocks to feed more mouths, but hunger will intensify in countries already suffering from a lack of food as there just won't be enough to go around. Already, WFP has had to reduce food rations to 8 million people.

One of the worst-hit will likely be Afghanistan, reeling after emerging from four decades of war with little in the way of a sustainable economy. Since the Taliban's takeover last August, what economic activity there has come to a halt, and U.S. economic sanctions mean that many people do not have cash to buy anything, including food. Desperate people have reportedly sold their organs and their children.

"The situation in Afghanistan can only get worse," said Qais Mohammadi, an Afghan economist and former assistant professor at a private university in Kabul. "It's not just one but multiple variables, and the Ukraine war is an additional significant variable on top of unstable currency, unstable banking system, unstable political environment, instability of decision-making, having no rules and regulations, freezing of billions of dollars in financial assets."

WFP has repeatedly warned that half of Afghanistan's population is "food insecure," with nearly 9 million people facing famine-like conditions. Worldwide, that figure is 44 million, Gerb said. The Taliban's Ministry of Public Health has said more than 13,000 babies have died of malnutrition this year already, though the number is impossible to verify.

"Afghanistan is one huge humanitarian crisis," Greb said, adding that along with Yemen and Lebanon it was already in a "very dire place" before Russia's war in Ukraine. WFP operations in Afghanistan, Yemen, and Lebanon "are highly dependent on wheat," she said. "Our resources don't take us as far as they used to because we have to pay higher prices in global markets."

In Afghanistan, where the main staple is bread, wheat imports are essential. Kazakhstan is a major supplier but won't have so much to sell as Russian curtailments on exports to its own neighbors start to bite. Afghan economists expect that farmers in the eastern provinces will take advantage of higher prices in Pakistan, itself a recipient of WFP aid, to sell their grain over the border, rather than at home.

Nazar Bobitski, a strategic advisor with the Ukrainian Business and Trade Association, said Russia's blockade of the Black Sea coast has isolated Ukraine from global maritime trade, cutting supplies of cereals and vegetable oils, as well as grain for animal feed production. Almost all of Ukraine's grain exports are shipped through deep-water ports on the Black Sea, but no bulk shipments have left since the invasion.

"Sea lane trade was critical to ensure that there is stability of supply and price stability for these commodities," he said. Combined with the export bans, "this leaves significant curtailing of supply, and obviously price rises will follow. It's mostly less developed countries that will be affected."

It's not just Afghanistan. Central Asian countries such as Turkmenistan, Uzbekistan, Tajikistan, Kyrgyzstan, and Kazakhstan will suffer from the ban on Russian fertilizer and grain exports, as well as the wilting of the Russian economy under Western sanctions, which will shrink their own remittance incomes from migrant workers.

Egypt, Ethiopia, Lebanon, Syria, and Yemen all depend on grain shipments from Black Sea ports, which cannot be easily replaced, as sourcing from elsewhere, such as Canada, Australia, or

India, adds to shipping costs and time. Nor do good harvests necessarily mean producing countries can pick up the slack, as port capacities are already tight.

“There’s only so much you can do, especially if transport costs are so high. So in the end it means cutting rations. And now WFP would need almost \$20 billion for this year to feed almost 140 million beneficiaries,” Greb said. “That’s a lot of money.”

### **36. Israel and the triangular crisis of Ukraine, Iran, and Palestine**

New Yorker, 1 Apr 22, Bernard Avishai

On Monday, the U.S. Secretary of State, Antony Blinken, joined the foreign ministers of Israel, the United Arab Emirates, Bahrain, Egypt, and Morocco for a meeting at Sde Boker, the retirement kibbutz and burial place of David Ben-Gurion, the nation’s first Prime Minister. The meeting had been initiated by the Israeli Foreign Minister, Yair Lapid, with encouragement from Blinken, whose main aim was to reassure the group that the United States is fixed in its commitment to deny Iran a nuclear weapon, and that the not-yet-consummated Iran nuclear deal is the best of available options to do that. “The summit was to showcase a strategic alliance growing out of the Abraham Accords,” the Israeli journalist Henrique Cymerman told me. “To seed the formation of a kind of Middle Eastern NATO to contain Iran—deal or no deal.”

Israel and its Arab guests registered a certain discontent. No deal currently being negotiated contemplates constraints on the Iranian missile and drone programs. The leaders of the Gulf states have been increasingly chagrined by the lack of a U.S. response to the various attacks that Iran’s Houthi proxies in Yemen have made on the U.A.E. and Saudi Arabia during the past few months—including, most recently, a strike on a Saudi Aramco facility, on March 25th. Indeed, Saudi Arabia and Jordan were not represented in person at the summit, although their interests were. (“The Saudis were the real enablers of the meeting,” Cymerman said.) According to Axios, Blinken asked Prime Minister Naftali Bennett, at a pre-summit meeting on Sunday, what alternative Israel proposed to a new deal—other than a U.S.-led, preemptive strike, which Israel continues to prepare for but, particularly given the situation in Ukraine, the Biden Administration would not want to entertain. Bennett reportedly said that he believed Iran might be deterred from enriching uranium to weapons grade if it knew that the U.S. and European countries would intensify sanctions to the extreme levels they have placed on Russia. Since Israel has not joined in those sanctions, one can only wonder how Blinken received the suggestion.

In any event, Bennett had already stated that Israel did not see itself as a party to the Iran deal. Earlier in March, moreover, as if to prove some independence from Washington, the U.A.E. hosted a state visit by Syria’s Bashar al-Assad—who remains in power thanks to brutality abetted by Iran and Russia. The chief U.S. negotiator on the Iran deal, Robert Malley, perhaps signaled acknowledgement of Israel’s developing partnership with the Gulf states when he announced in Doha, on Sunday, that Washington would not yet remove Iran’s Revolutionary Guards from the terrorism-sanctions list, and noted that the signing of the deal was “not just around the corner.”

Two other matters cast shadows on Blinken's trip: Israel's occupation of Palestine, especially the continuing expansion of the settlements, and its quasi-neutrality on Ukraine, both of which are a source of tension between Jerusalem and Washington. They may seem unrelated, but each has rendered Israel a sort of outsider among democratic states at a decisive moment. And Blinken chose to finesse both. Bennett has made much of his attempts to mediate between Moscow and Kyiv, but, in addition to remaining aloof from sanctions against Russia, Israel refuses to supply Ukraine with war matériel in order to preserve, Lapid had said, Russian tolerance for its interdictions of Iranian-backed forces in Syria. Blinken, at a press conference with Bennett, tactfully praised Israel for the solidarity that it has shown with regards to Ukraine: joining the United Nations' vote to condemn Vladimir Putin's invasion; implementing new rules to prevent oligarchs from parking yachts and planes and fortunes in Israel (though Jewish oligarchs who are Israeli citizens, and have Israeli registered property, may well be able to elide them); setting up a field hospital in western Ukraine; and, last and apparently least, Bennett's mediation efforts.

The question of Palestine was largely sidelined at the Sde Boker summit, though few doubt that the Saudis and Jordanians made a show of boycotting it largely to avoid providing scenes of senior Arab and Israeli diplomats hobnobbing for the world's press, while Israeli occupation forces defended the at times violent settler zealots—which might have incited further violence in the West Bank and Amman, as Ramadan begins. Alas, that show seems to have been of little value. Eleven Israelis have been killed in three separate terror attacks during the past week. On Friday, a Palestinian man was shot and killed by soldiers in Hebron.

Blinken, apparently sensitive to this gap in the agenda, spent the afternoon before the summit with Mahmoud Abbas, the President of the Palestinian Authority, who called the gathering a "harsh attack" on the Palestinian people, and decried a U.S. "double standard": acting against Russia's claims on the Ukraine, while tolerating Israel's occupation of Palestinian territories. Jordan's King Abdullah II visited Abbas in Ramallah, on Monday, as the summit was taking place. Benny Gantz, the moderate Israeli Defense Minister, wanted to join that meeting, but Bennett, the annexationist Prime Minister, nixed the idea. Blinken, for his part, simply restated his endorsement of a "two-state" solution, while acknowledging that is not imminent. In the triangular crisis of Ukraine, Iran, and Palestine, the last issue seems the most deferrable at present.

Or is it? The occupation exacerbates Israel's hostility with Iran, and the desire to operate against Iran in Syria shapes its diplomacy with Russia. Leaders make strategic, not just transactional, decisions. Deliberately or by default, they define what a country stands for and set its course for a generation. And the leader who made this responsibility most vivid for the Israelis in recent days was not Blinken, or Bennett, but Ukraine's President, Volodymyr Zelensky, who addressed the members of the Knesset, Israel's parliament, in an impassioned speech delivered remotely on March 20th. "Indifference kills. Calculation is often erroneous. And mediation can be between states, not between good and evil," he said. "I am sure that every word of my address echoes with pain in your hearts." But he wanted to know why Israeli military help had not been forthcoming. "What is it? Indifference? Political calculation? Mediation without choosing sides?" Putin's aggression, Zelensky said, had made the choice this stark. There is an urgency for democratic solidarity, he suggested, to valorizing a global order in which military power does not determine a neighbor's fate.

He might have added that Ben-Gurion himself, in his Biltmore Declaration of 1942, envisioned a “Jewish Commonwealth integrated in the structure of the new democratic world.” But Zelensky, a Jew, couched his appeal in a way that he clearly thought would resonate with the leaders of a Jewish state. “The Nazi Party raided Europe and wanted to destroy everything. Destroy everyone,” he told them. “Wanted to conquer the nations. And leave nothing from us, nothing from you.” Then he said, “They called it ‘the final solution to the Jewish issue.’ You remember that. And I’m sure you will never forget! But listen to what is sounding now in Moscow. Hear how these words are said again: ‘final solution.’ But already in relation, so to speak, to us, to the Ukrainian issue.”

Members of Bennett’s inner circle responded furiously to the comparison. The Communications Minister, Yoaz Hendel, tweeted that the Nazis’ genocide of Jews “was also carried out on Ukrainian land,” implying Ukrainian sympathy for it, and said that “the comparison to the horrors of the Holocaust and the Final Solution is outrageous.” The Interior Minister, Ayelet Shaked, went further, telling a conference sponsored by the newspaper Yedioth Ahronoth that, while some Ukrainians had behaved decently during the Second World War, “Ukraine, as a whole, colluded with the Nazis—may their name be cursed—in the slaughter of the Jewish people.” Bennett echoed Hendel and Shaked, albeit in a more compassionate tone. “I can’t imagine being in his shoes,” Bennett said, of Zelensky, but added that the Holocaust should not be compared with anything, and that Zelensky’s rhetoric was “misplaced.”

The discomfort that Bennett’s allies felt was from the messenger as much as from the message. Zelensky hardly needs a lesson on the unique cruelties of the Final Solution: his grandfather fought in the Red Army and lost many family members to Nazi occupiers. Indeed, Zelensky’s fierce liberalism and his ironist’s sense of history seem his tribute to them. But for national-Orthodox Zionists such as Bennett, Hendel, and Shaked, Zelensky’s grasp of nationhood would seem a kind of naïveté. Their lesson, as their erstwhile mentor Benjamin Netanyahu had put it, is that “only the strong survive.” Hendel, who grew up in a West Bank settlement, refused, during the spring of 2020, to allow a center-left government to be formed if it rested on the votes of Arab Israelis. More recently, Shaked scandalized moderates in the government by setting criteria—which have since been overturned—that would allow Israel to absorb only Ukrainian Jewish refugees. As long as Bennett is in power, the Israeli government’s hesitation to align unambiguously with the democratic world has an ideological, not just a pragmatic, aspect.

Zelensky, I hasten to add, thanked the Israelis for the support they have given, and he did not dismiss Bennett’s mediation efforts. But, as the negotiations that resumed this week in Istanbul have revealed, the question is not whether mediation should persist but whether Bennett’s value as a mediator outweighs Israel’s potential contribution to the resilience of Zelensky’s forces, America’s sanctions, and Western solidarity—whether that counterforce against Putin, not mediation, would cause him to inch toward agreement, if inch he will. A source close to Bennett claimed that the Prime Minister’s efforts were appreciated: Putin is no longer insisting on the “de-Nazification” of Ukraine’s regime, code for his being reconciled to Zelensky staying in power. Nor, the source told me, does the Kremlin’s demand for “demilitarization” mean a Russian takeover, though Putin expects Zelensky to recognize Russian annexation of the Donbas and Crimea. The remaining Ukrainian state, for its part, would adopt something like the neutral stance of Austria during the Cold War. Zelensky would need some sort of security guarantors,

though, the source said, he “didn’t get many volunteers.” But these shifting conditions have been shaped, obviously enough, by the desperate military courage of the Ukrainian forces. (Last week, the Times reported that Israel, fearing a Russian reaction, refused even to supply those forces with hacking software.)

All of which returns us to the Sde Boker meeting. Given Israel’s appeal to the “democratic world” — certainly to the United States — to anchor a new alliance against Iran, it is hard to see how Bennett justifies his maneuvering on Ukraine. If Iran, for example, were to attack Israel from Lebanon, and Tel Aviv became a site of carnage, no Israeli Prime Minister would be grateful for, say, the French President offering mediation instead of aid. The retired Lieutenant General H. R. McMaster, who briefly served as Donald Trump’s national-security adviser and has worked closely with the Israeli military, told Haaretz that “Israelis ought to be embarrassed” by their government’s proto-neutrality. (“This idea that you hedge with Vladimir Putin to compensate for concerns that the American Administration might attenuate or lessen support for Israel — that’s part of a long pattern and it’s always been wrong,” he said.)

The risks are real: Palestine, Iran, and Ukraine have presented Israeli leaders a strategic challenge. Does Israel prioritize a peace process with Palestinians, defer to American leadership on Iran, take a stronger stance on Russia—define its interests within “the structure of the new democratic world”? The complexity — as Zelensky implied — doesn’t mean that the answer isn’t simple.

Putin has punished his shrinking inner circle for misjudging the war.

### **37. Painful choices lie in the path to peace in Ukraine**

Washington Post, 1 Apr 22, David Ignatius

In the agonizing final years of the Vietnam War, a strategist named Fred Iklé wrote a treatise titled “Every War Must End.” His basic theme was that “wars are easier to start than to stop” — a message that applies powerfully now to the conflict in Ukraine.

Russia and Ukraine have been meeting for preliminary peace talks in Turkey this week, which has raised hopes for a settlement. Both sides have described the same basic terms for resolving the conflict: In exchange for a halt in the fighting, Ukraine would agree to a neutral military status that wouldn’t threaten Russia.

But this formula masks painful choices: Such a pact would grant Russian President Vladimir Putin at least partial victory. For many in Ukraine and the West, that is unacceptable. Putin launched an unprovoked, illegal invasion. His army committed atrocities against civilians. He shouldn’t be rewarded for such behavior.

The Biden administration's view is that it's up to Ukrainian President Volodymyr Zelensky to decide whether to settle for neutrality or keep fighting for a better deal. "The Ukrainians will have to decide when the situation on the ground is ripe for a settlement," argues Stephen Hadley, a former national security adviser to President George W. Bush who keeps close contact with the Biden team.

After fighting so valiantly, Ukrainians won't want a settlement that leaves the country disarmed and vulnerable to a future attack. "This is viable to me in only one way — the kind of neutrality that Switzerland has — fully armed, with a citizen army," Konstantin Gryshchenko, an influential former foreign minister of Ukraine, told me in an interview.

The Russian military has performed poorly so far, and some Ukrainians think more fighting will bring victory. But U.S. officials specializing in Russia are skeptical. Russia is a large country with the ability to resupply and reposition its forces; Ukraine is a relatively small one that's short on the essentials for survival. The war is 40 days old; who can say what the battlefield situation might be in six months or a year?

Iklé offered a useful caution: "It often happens in wars that the weaker party makes no attempt to seek peace while its military strength can still influence the enemy but fights until it has lost all its power to bargain." He called this "self-destructive perseverance."

Iklé was similarly skeptical of punitive tactics such as Russia's seeming determination to bomb its way to a desirable settlement. "Inflicting 'punishment' on the enemy nation is not only an ineffective strategy for ending a war, it may well have side effects that actually hasten the defeat of the side that relies on that strategy," he wrote.

Often, wars don't end with a peace treaty but a cease-fire that leaves forces in place along a "line of control." Some analysts think Russia may be moving toward such an outcome by consolidating its forces in a swath of southeastern Ukraine that could eventually stretch from Odessa to the Donbas region.

Such partition lines are messy but can be surprisingly durable. North and South Korea are still separated without a formal peace treaty. A disputed line of control separates India and Pakistan, and also India and China. Vietnam was similarly partitioned for decades.

Harvard's Graham Allison argues that such a division could allow the Western-allied part of Ukraine to prosper. Before the Russian invasion, he contends, Ukraine was a failing state — one of the rare post-Soviet republics whose real gross domestic product per capita actually declined after 1991. A future Western Ukraine might become a version of South Korea, Allison says.

As Russia and Ukraine exchange peace proposals, the United States and its allies are subtly pressuring Russia through what has been their best tool — the release of declassified intelligence. The latest installment was a series of statements this week by U.S. and British officials arguing that Putin's bloody invasion was marked by the Russian leader's delusion and the incompetence of his advisers. "Putin's advisers are afraid to tell him the truth," but "the

extent of these misjudgments must be crystal clear to the regime,” argued Jeremy Fleming, director of Britain’s code-breaking agency GCHQ, in a speech on Thursday.

That zinger was aimed directly at the Kremlin, and it could have several interesting consequences: Putin may further blame his military and intelligence chiefs for failing to warn him of the disaster ahead; the generals and spies may further resent their remote president who has waged what Fleming described as his “personal war”; and the Russian people may mistrust both Putin and his security chiefs.

The most hopeful development I saw in this week’s peace feelers was a statement by Russian negotiator Vladimir Medinsky that, although Moscow rejects Ukrainian membership of NATO, it “has no objection to Ukraine’s aspirations to join the European Union.”

Maybe that is a building block for a real settlement. For a European Ukraine would represent a profound defeat for Putin’s dream of hegemony over Kyiv. That’s an essential requirement for a peace deal, along with stopping the killing.

### **38. Peace in Ukraine will be elusive until one side makes a military breakthrough**

Financial Times (UK), 1 Apr 22, Lawrence Freedman

From almost the moment the war in Ukraine began, diplomats have been at work trying to end it. The UN Security Council has deliberated. Vladimir Putin has had regular telephone discussions with western leaders in which they urge him to stop his aggression or at least facilitate humanitarian relief for those suffering under the weight of Russian bombardments. He then in turn explains how they fail to understand Ukraine’s responsibility for these tragic events.

Israel’s prime minister Naftali Bennett visited Moscow to explore a peace initiative some weeks ago, but that now seems to be in abeyance. The only talks that hold any real promise are those that take place regularly between Ukrainian and Russian teams. The most recent of these was in Istanbul. But here too there has been little tangible progress.

For now neither side has an incentive to commit to a long-term settlement. They are waiting for military breakthroughs and a clearer view on the likely course of the war. Should the prospect be one of a long stalemate, then both might feel obliged to compromise. As they wait for news from the front, all they can do is to urge each other to be more “realistic” in their expectations.

Russia has had most reason to scale down its ambitions. It launched this war presuming an early victory, an assessment that was shared in a number of western capitals. The resulting mindset, which assumed that it would be Ukraine who was compelled to make the big concessions, has still not gone away, even though Russia has had to relinquish some of its earlier territorial gains. Its forces are suffering heavy losses and struggle with logistical and morale issues. And on Friday, authorities in the city of Belgorod claimed that Ukrainian helicopters had made the first strike on Russian soil since the war began.

Russia's original demands, however, are still on the table. So far it has only acknowledged implicitly that it will be unable to achieve regime change in Kyiv or impose demilitarization.

What will happen if Ukraine sustains this military pressure, and Russian efforts to reinforce its forces and mount new offensives continue to falter? Moscow's best option in those circumstances will be to call for an imminent ceasefire. This would enable Russia to consolidate its gains.

Ukrainian president Volodymyr Zelensky will see the trap and be obliged to refuse the offer. He can note a record of Russia failing to honor many of the localized ceasefires, intended to allow civilians from besieged towns and cities to escape and for relief supplies to enter. He could also point to the problems with the implementation of the February 2015 Minsk agreement. Russian-sponsored separatists stayed in control of the territory they had occupied the previous year.

While Putin might be happy to start with a ceasefire without an accompanying peace deal, giving him an opportunity to confirm his gains while using a period of quiet to encourage his armed forces to sort themselves out, Zelensky will want a peace deal that only leads to a ceasefire as it is being implemented. His core demand is that Russian forces must leave Ukrainian territory. The war cannot truly end while any remain.

To sweeten the pill for Russia, the Ukrainian leader has come up with ideas to deal with the most contentious issues. The proposal that captured the most attention was one to abandon efforts to join Nato and turn Ukraine into a neutral state.

At first glance this looks like an important step. But Zelensky is after an armed neutrality backed by security guarantees. As he wants these guarantees to be stronger than those Ukraine had before, notably the ones in the 1994 Budapest Memorandum, which were provided in return for giving up its Soviet-era nuclear arsenal. Weeks before the war began foreign minister Sergei Lavrov explained that Russia was no longer bound by any promises because of the "state coup in Ukraine".

This experience explains why Ukraine was so keen to join Nato and why it now will want guarantees from the US, UK and others that are more or less the same as those as it would get as a member of Nato. However, as always with guarantees, there is small print. Whatever formula is found, Ukraine will carry on being dependent upon its own defenses, fortified by more equipment coming in from the west. It might hope that Moscow's experience of military failure will encourage caution in the future, though it will hardly feel secure if Russia ends this war still holding a chunk of Ukrainian territory.

Kyiv has all but accepted that while it will never agree in principle to Russia's annexation of the Crimea, in practice this is a fait accompli. But it will not agree to Russian control over the Donbas, the area for which Putin went to war.

It seems doubtful that this shattered territory, with its hostile population and vast reconstruction costs, requiring defense for the indefinite future, will appear now as such an attractive prize. But without it Putin has absolutely nothing to show for all this effort. This war should end with

Russian forces out of the Donbas. That would also be the most stable outcome. Without an agreement on this core issue, whatever else has been settled in negotiations, the conflict will not be concluded. That is why the search for a durable peace cannot be separated from the search for military success.

## REGIONAL MEDIA COVERAGE

---

### MIDDLE EAST

---

#### **39. Wexler to Asharq Al-Awsat: Regional peace not possible without Saudi Arabia**

Asharq Al-Awsat, 1 Apr 22, Fatehelrahman Yousif

US Senator and President of the S. Daniel Abraham Center for Middle East Peace in Washington DC, Robert Wexler stressed that real peace in the Middle East is not possible without Saudi Arabia.

In remarks to Asharq Al-Awsat, he said the Saudi-American relationship is the cornerstone for not just tangible security, but in handling terrorism related to extremist ideologies and deterring emerging groups.

The relationship between Riyadh and Washington is very important, not just in traditional politics, but goes beyond it to the fields of innovation, economy and regional peace efforts, he continued.

Moreover, he said there was deep understanding of the fundamental nature of the American-Saudi relationship and the massive long-term value of the partnership and joint interests and goals.

Saudi Arabia is the cornerstone for American interests and its allies.

When it comes to Israeli-Palestinian peace, it would be impossible to imagine any deal or any real tangible peace progress taking place without Saudi Arabia, said Wexler from Riyadh.

He cited late King Abdullah bin Abdulaziz's declaration of the 2002 Arab peace initiative, saying it was a great vision of peace.

The collective challenge at hand, continued Wexler, is building sustainable peace.

Furthermore, he acknowledged that Israel is partly to blame for the collapse of the peace process in the region.

He refused to blame Tel Aviv entirely for the failure to achieve peace in the conflict with Palestinians.

Adding to his woes are recent judicial rulings by Iraq's highest courts on the constitutional interpretation of how presidents should be elected. Effectively, Iraq's highest legal authorities have stepped in to ensure that Sadr has to share power with his Shia rivals.

This is not to say that Sadr is particularly "anti-Iran", but rather that Tehran has long encouraged a form of "sibling rivalry" between its Shia proxies and associates so that no single party becomes too powerful and may one day think about striking out on its own without Iranian patronage.

By keeping its clients at each other's throats, Iran is better positioned to leverage its influence and continue to use Iraq as an instrument of its own power projection, allowing it to reach deep into Syria and even threaten Saudi Arabia, Turkey, and the United States.

What the Iraqi parliamentary chaos shows is that the political system established by the 2003 US occupation designed it to be controlled by external forces, and democracy does not remotely factor into how the state should be run.

Unless there is root-and-branch reform of the Iraqi political system, anyone who engages in Iraqi politics and the democratic process will have to face an entrenched deep state that ensures that the nation remains at the mercy of powerful foreign players, most notably the US and Iran.

## SYRIA

---

### **42. In Syria, Russia leads effort to recruit fighters for Ukraine**

Al Jazeera, 1 Apr 22, Kareem Chehayeb

Even after a decade of civil war, Syrians have been trying to find a way out of the country to fight in another. Moscow through the mercenary company the Wagner Group and supported Syrian fighter groups have been recruiting men to fight alongside Russian troops in Ukraine. Thousands across the war-torn country have reportedly expressed an interest in signing up.

One group, dubbed the ISIS Hunters, have made calls for recruitment at least twice over the past month. Those interested have to be between 23 and 43 years old, and must submit personal identification and documents that show they have military experience.

The ISIS Hunters will then let them know whether or not they have been recruited, and will summon them for deployment "at a later time when needed".

They are closely linked to the Wagner Group, and even share an almost identical insignia.

"Moscow is taking the lead with recruitment," Omar Abu Layla, a Syrian activist based in Europe who runs Syrian media and monitoring group Deir EzZor 24, told Al Jazeera.

“If you see it as a hierarchal structure, you have Russia at the top, then the Wagner Group, then the National Defense Forces,” he explained, the latter being a network of private pro-government fighter groups.

Russian President Vladimir Putin announced in March that he will approve up to 16,000 fighters from the Middle East to deploy in Ukraine’s Donbas region to support Russian-backed rebel groups.

The US Pentagon said it has seen indicators that the Wagner Group has been recruiting fighters from Syria, Libya, and other countries with a goal to deploy “a thousand or so” in the eastern province.

Russian defense-ministry-owned Zvezda TV broadcast a video of Syrian men in military garb, waving Syrian and Russian flags, pledging to fight alongside Russian forces in Ukraine.

### **Recruitment centers**

A fighter in Homs with the recently disbanded Russia-backed group Desert Hawks Brigade said its leader, Mohamad Jaber, has been contacting former fighters to regroup and support Russia’s war in Ukraine. He accepted Jaber’s request.

The Desert Hawks was considered one of Syria’s two most significant and ruthless fighter branches in the military. It has taken part in key offensives in Aleppo, Palmyra, Lattakia, and Deraa to keep President Bashar al-Assad in power.

“Otherwise you sign up at the [ISIS] Hunters center in Homs,” said the fighter, speaking on condition of anonymity.

Gregory Waters, an analyst at the Counter Extremism Project and nonresident fellow at the Middle East Institute, said there are more than a dozen recruitment centers in Syria run by Moscow-backed private pro-government armed groups.

Meanwhile, in the eastern Deir Az Zor province, the Wagner Group and allied Syrian forces have directly started recruiting Syrians to volunteer in Ukraine, Abu Layla said.

Salaries start as low as \$200-\$300 per month for volunteers to work as security guards to protect installations, but those with greater military experience are paid higher rates, exceeding \$1,000 per month, he said.

It is an attractive pay in a country where 90 percent of the population lives in poverty, and where access to adequate food and heating is becoming more out of reach.

Abu Layla said many Syrians volunteering are not just in it for the money.

“Some of these Syrian militias are hoping to get higher positions, and believe that they could do this if they show loyalty to Russia,” he explained. “But with many others in Syria hoping to emigrate to Europe, they see this as their golden ticket.”

Meanwhile, brokers claiming to help speed up recruitment for Syrians have swarmed Facebook groups and other social media platforms, including one called Job Opportunities with Our Russian Friends.

Dozens of Syrians, many dressed in camouflage in their photos, appear desperate for opportunities abroad, even if it puts their lives at risk.

Many on the page, including the Desert Hawk Brigades fighter, waiting for deployments have called them “scammers”.

“There are so many corrupted people who say you will be instantly recruited and sent to Ukraine if you pay them an advance,” he said.

One recruiter claimed in a post that volunteers deployed to Syria will be paid a monthly salary of 1,500 euros (US\$1,657), have all their personal expenses covered, and will receive a 50,000 euro (\$55,235) lump sum at their end of service. “I want to sign up, please somebody help me,” one middle-aged man said in the comment section.

However, a young man on the page, dressed in military garb in his photo, said this recruiter was a fraud.

He posted WhatsApp screenshots where the recruiter asked for broker fees, but would reduce the fee if he would find more people to recruit. “This crook says he will sign us off to go to Russia, notify the authorities!” he said in an angry post.

### **‘Stay away’**

Some analysts are skeptical about the recruitment process and whether Russia will deploy armed Syrians in Ukraine anytime soon.

“I’ve yet to see evidence of contracts,” Waters said, describing pledges as “political grandstanding”.

No Syrian fighters have reached Ukraine yet. However, some have reportedly arrived in Russia. Accountability organization Syrians for Truth and Justice, said the Wagner Group and a Syrian partner security company have transported Syrian volunteers in Benghazi, Libya to Damascus, Syria, and eventually to Russia. A Syrian government official denied this.

The Desert Hawks Brigade fighter is still waiting in Syria, and does not know when he will be called for deployment. “I don’t know what’s going on right now,” he admitted. “Once our leader tells us we’re traveling, we’ll travel.”

That said, not all Syrians are interested in fighting a new war, after more than a decade of conflict in their own country that has killed hundreds of thousands of people and displaced millions. Some say despite Russia’s crucial military support to the Syrian government, Ukraine is not a war for them to fight.

Yemen's president dismissed his controversial deputy on Thursday and delegated his own powers to a presidential council in a move backed by Saudi Arabia, removing some obstacles to U.N.-led efforts to revive negotiations to end the seven-year war.

### **3. In a break with the past, U.S. is using intel to fight an info war with Russia, even when the intel isn't rock solid**

NBC News, 6 Apr 22, Ken Dilanian, Courtney Kube, Carol E. Lee and Dan De Luce

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine. President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions.

### **NOTABLE TWEETS**

---

**Iraq Ministry of Defense Security Media Cell; @SecMedCell (6 Apr):** (1) At a time when the Iraqi lands enjoy security and faith during the days of the holy month of Ramadan, outlaw groups are trying to disturb these blessed days. This evening, terrorist elements bombed Khabat district in Erbil governorate in the Kurdistan region of Iraq with three Katyusha rockets. (2) It fell in separate areas eliminated in empty and agricultural spaces near the Kurusk complex, the Great Zab River and the Kurokosk refinery, without recording human or material losses. It was found that these missiles were launched from the Hamdaniya crossing. (3) For their part, the competent security services have launched a search and search process for the terrorist elements that carried out this terrorist act. The security forces will work to bring those who tampered with security to justice, so that they may receive their just punishment.

**Yemen PM, Dr. Maeen Abdulmalek Saeed, @Yemen\_PM (6 Apr):** A meeting with the Vice President of the World Bank dealt with aspects of joint coordination to mobilize support and funds necessary for government programs to maintain food security, provide services, and help it carry out its duties and obligations in alleviating the humanitarian crisis.

**U.S. State Dept - Near Eastern Affairs; @StateDept\_NEA (6 Apr):** The U.S. supports @UN peace efforts for #Yemen, including the negotiated truce. But ultimately, deep-rooted divisions need to be resolved by Yemenis through dialogue & compromise," said #USEnvoyYemen in a mtg w/Secretary-General People's Congress Advisor Alalimi. @USEmbassyYemen

**Inherent Resolve; @CJTFOIR (6 Apr):** Hope for a better future. Daesh attempts to destroy people's spirit in NE Syria during its brutal rule has failed. The @Coalition remains partnered with the #SDF to ensure the lasting defeat of Daesh & help keep NE Syria safe & secure. #StrongerTogether

**President Biden; @POTUS (6 Apr):** I made clear that Russia would pay a severe and immediate price for its atrocities in Bucha. Today, along with our Allies and partners, we're announcing a new round of devastating sanctions.

Two weeks after Russian tanks rolled into Ukraine, South African president Cyril Ramaphosa held a phone call with Russia's Vladimir Putin. On the same day, European leaders meeting in Versailles warned democracy itself was at stake. Yet Ramaphosa struck a very different tone.

**20. US disrupts global 'botnet' controlled by Russian military intelligence, DOJ says**

The Guardian, 6 Apr 22, David Smith

The US has disrupted a global "botnet" controlled by Russia's military intelligence agency, Attorney General Merrick Garland announced on Wednesday.

**21. U.S. government and energy firms close ranks, fearing Russian cyberattacks**

Washington Post, 6 Apr 22, Ellen Nakashima

In February, as Russian troops massed on Ukraine's border, executives with a major energy firm here worked with U.S. energy and homeland security officials to draw up a playbook and help prepare the electricity sector to deal with potential cyberattacks by Russia.

**22. Hypersonic-Missile delay puts U.S. further Behind Russia, China**

Bloomberg, 6 Apr 22, Tony Capaccio

The first U.S. hypersonic weapon will be delayed for as long as a year under a new schedule, even as lawmakers protest that the Pentagon is lagging behind in a new technology that Russia has already used in Ukraine and China has demonstrated in a space launch.

**23. USS Gerald R. Ford's captain on why the carrier's new island design works**

The War Zone, 6 Apr 22, Howard Altman

For Navy Capt. Paul "Paulie" Lanzilotta, 140 feet makes a world of difference. That's how far the island superstructure of the \$13 billion USS Gerald R. Ford has been moved to the aft on the 1,106-foot long vessel, which leads a new class of aircraft carriers, compared to what's found on the previous Nimitz class.

**24. NATO nations see differing paths as Ukraine War enters uncertain stage**

New York Times, Apr 6, 22, Steven Erlanger and Michael Crowley

Faced with the prospect that the war in Ukraine will be long and grinding, NATO countries are divided on how best to manage the next stage of the conflict and the uncertain period that promises to follow.

**25. US imposes 'severe' sanctions on Russian banks after Bucha atrocities**

Financial Times (UK), 6 Apr 22, Courtney Weaver, James Politi, Colby Smith and Jasmine Cameron-Chileshe

The US has imposed its most severe level of sanctions on Sberbank, Russia's largest financial institution, and Alfa-Bank, the country's biggest private bank, escalating its economic punishment of Moscow in response to atrocities committed by Russian forces in Ukraine.

**26. Eastern Ukraine braces for renewed assault as Russia regroup**

Washington Post, 6 Apr 22, David L. Stern, Joby Warrick, Louisa Loveluck and Max Bearak

MUKACHEVO, Ukraine Ukrainian officials called Wednesday for evacuations in three provinces near the Russian border amid new signs that President Vladimir Putin's troops are escalating their assault on eastern and southern cities following a failed attempt to take the country's capital.

**27. Ukraine's surprise strike on Russian fleet hobbles Putin's Donbas strategy**

Wall Street Journal, 6 Apr 22, Brett Forrest and Nancy A. Youssef

A surprise Ukrainian strike on a Russian ship at a southern port city last month could curb Moscow's plan to expand its hold on the Donbas region, eliminating a key military advantage in the Russian attack plan, Ukrainian military analysts and U.S. officials said.

**28. Russia is recruiting mercenaries and Syrians to Ukraine, Western officials say**

New York Times, 6 Apr 22, Eric Schmitt, Julian E. Barnes and Helene Cooper

As Russian troops retreat from northern Ukraine and focus operations on the country's east and south, the Kremlin is struggling to scrape together enough combat-ready reinforcements to conduct a new phase of the war, according to American and other Western military and intelligence officials.

**29. Pentagon: Russia has fully withdrawn from Kyiv, Chernihiv**

Washington Post, 6 Apr 22, Karoun Demirjian and Dan Lamothe

Russian forces have fully withdrawn from the Ukrainian capital, Kyiv, and the city of Chernihiv to its north, the Pentagon said Wednesday, as Moscow prepares to concentrate its invading forces in the eastern part of the country.

**30. China's security deal with Solomons raises alarm in Pacific**

Associated Press, 6 Apr 22, Nick Perry and David Rising

A security alliance between China and the Solomon Islands has sent shudders throughout the South Pacific, with many worried it could set off a large-scale military buildup or that Western animosity to the deal could play into China's hands. What remains most unclear is the extent of China's ambitions.

**31. Finland may finally want in on NATO; Sweden is not far behind.**

Foreign Policy, 6 Apr 22, Robbie Gramer and Amy Mackinnon

Just over two months ago, the prospect of Finland joining NATO was virtually unthinkable to most in the northern European country. It had grown closer to the military alliance over the last three decades but resisted the idea of becoming a full-fledged member. That all changed when tens of thousands of Russian troops rolled across Ukraine's border in late February.

### **32. Don't let Putin win in Ukraine**

Wall Street Journal, 6 Apr 22, Daniel Henninger

In no sense now can Vladimir Putin be allowed to win in Ukraine. People shouldn't have to be shot in the back of the head with their hands tied behind them to make that clear, but such is history's record of humanity slow-walking counterattacks against mass slaughter.

### **33. Across South Asia, U.S. and India push back against China**

Foreign Policy, 6 Apr 22, C. Raja Mohan

When Indian Foreign Minister S. Jaishankar and Indian Defense Minister Rajnath Singh hold a so-called two-plus-two dialogue with U.S. Secretary of State Antony Blinken and U.S. Defense Secretary Lloyd Austin in Washington on Monday, managing the discord between their countries over Russia's war in Ukraine will be a priority. India, a major customer of Russian weapons, has so far refused to condemn the brutal invasion at the United Nations or join the West in sanctioning Russia. The Biden administration and the government of Indian Prime Minister Narendra Modi, however, are determined not to let their differences over Russia come in the way of strengthening the Indian-U.S. partnership in the Indo-Pacific.

### **34. Outgoing air force chief: Israel no longer has full freedom of action over Lebanon**

Times of Israel, 6 Apr 22

Outgoing air force chief Amikam Norkin said Israel no longer has unfettered air superiority and freedom of action in Lebanon's skies in an interview broadcast on Tuesday. After a drone was nearly shot down by an anti-aircraft missile over Lebanon about a year ago, Israel realized that Lebanon's Hezbollah terror group had some capabilities it was not previously aware of, Norkin said.

### **35. Israel concerned over Iranian takeover of Syrian Golan**

Arutz Sheva, 6 Apr 22

Terror groups seeking to enlist supporters among Shiite population in Syria have already enlisted a few hundred, report says. With the end of Syria's civil war, the IDF has identified a new threat brought about by the demographic change and significant growth of the Alawite and Shiite population in Syria.

### **36. Gantz speaks with Palestinian president for Ramadan**

Riyadh, which last deposited funds into the Aden-based central bank in 2018, has struggled to exit the costly and unpopular conflict, which is widely seen in the region as a proxy war between Saudi Arabia and Iran.

Hadi took the helm of a crumbling Yemeni state in 2012 in a political transition plan backed by Gulf states after Arab Spring protests in 2011 that brought down President Ali Abdullah Saleh.

The United Nations is pushing for inclusive political negotiations to end the conflict in which several Yemeni factions are vying for power.

### **3. In a break with the past, U.S. is using intel to fight an info war with Russia, even when the intel isn't rock solid**

NBC News, 6 Apr 22, Ken Dilanian, Courtney Kube, Carol E. Lee and Dan De Luce

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine.

President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions.

It's one of a string of examples of the Biden administration's breaking with recent precedent by deploying declassified intelligence as part of an information war against Russia. The administration has done so even when the intelligence wasn't rock solid, officials said, to keep Russian President Vladimir Putin off balance. Coordinated by the White House National Security Council, the unprecedented intelligence releases have been so frequent and voluminous, officials said, that intelligence agencies had to devote more staff members to work on the declassification process, scrubbing the information so it wouldn't betray sources and methods.

Observers of all stripes have called it a bold and so far successful strategy — although not one without risks.

“It's the most amazing display of intelligence as an instrument of state power that I have seen or that I've heard of since the Cuban Missile Crisis,” said Tim Weiner, the author of a 2006 history of the CIA and 2020's “The Folly and the Glory,” a look at the U.S.-Russia rivalry over decades. “It has certainly blunted and defused the disinformation weaponry of the Kremlin.”

Four days before the end of the Cuban Missile Crisis in 1962, the U.S. publicized spy plane photos to show the Soviet Union had deployed nuclear missiles not far from Florida's coast. The Biden administration began releasing reams of intelligence about what it said were Putin's plans and intentions even before the invasion of Ukraine began.

Just this week, national security adviser Jake Sullivan stood at the White House podium and read out what officials said was more declassified intelligence, asserting that Russia's pullout from areas around Kyiv wasn't a retreat but a strategic redeployment that signals a significant assault

on eastern and southern Ukraine, one that U.S. officials believe could be a protracted and bloody fight.

The idea is to pre-empt and disrupt the Kremlin's tactics, complicate its military campaign, "undermine Moscow's propaganda and prevent Russia from defining how the war is perceived in the world," said a Western government official familiar with the strategy.

Multiple U.S. officials acknowledged that the U.S. has used information as a weapon even when confidence in the accuracy of the information wasn't high. Sometimes it has used low-confidence intelligence for deterrent effect, as with chemical agents, and other times, as an official put it, the U.S. is just "trying to get inside Putin's head."

Some officials believe, however, that trying to get into Putin's head is a meaningless exercise, because he will do what he wants regardless.

After this story was published, a U.S. official told NBC News that "the U.S. government's effort to strategically downgrade intelligence to share with allies and the public is underpinned by a rigorous review process by the National Security Council and the Intelligence Community to validate the quality of the information and protect sources and methods." The official added that "we only approve the release of intelligence if we are confident those two requirements are met."

### **'Spot on'**

The biggest success of the U.S. information offensive may have been delaying the invasion itself by weeks or months, which officials believe they did with accurate predictions that Russia intended to attack, based on definitive intelligence. By the time Russia moved its troops in, the West presented a unified front.

Before the invasion, the U.S. asserted that Russia intended to stage a false flag attack against members of Ukraine's Russian-speaking population as a justification for war and that the plans included a video featuring fake corpses. The video never materialized; Russia has consistently claimed it was invading to protect ethnic Russians from "Nazis" in Ukraine.

The U.S. accurately predicted that Putin intended to go through with the attack, even as other Western countries, notably France, argued otherwise. The head of France's military intelligence agency stepped down last week over the wrong call.

A former U.S. official said administration officials believe the strategy delayed Putin's invasion from the first week of January to after the Olympics and that the delay bought the U.S. valuable time to get allies on the same page in terms of the level of the Russian threat and how to respond.

CIA Director William Burns, a former ambassador to Russia, told lawmakers at a congressional threats hearing last month that "in all the years I spent as a career diplomat, I saw too many instances in which we lost information wars with the Russians."

Now, he said, "by being careful about this we have stripped away the pretext that Putin, in particular, often uses."

“That has been a real benefit, I think, to Ukrainians,” he said.

The policy has drawn lavish praise even from some Republicans.

“You were spot on in your intelligence,” Rep. Brian Fitzpatrick, R-Pa., said at the House’s annual worldwide threats hearing last month, addressing Burns and other intelligence agency leaders. “Your decision to declassify, both the form and the fashion in which you did so, saved lives. Sleep well, and thank you for doing that.”

But the strategy has its dangers. One of them, the Western official said, is that getting something clearly wrong would be extremely damaging to U.S. credibility and play into Moscow’s hands.

### **Disclosure as a deterrent**

As the war has proceeded, the administration has used intelligence to warn of possible Russian actions and draw attention to Russian military failings.

At times, the Biden administration has released information in which it has less confidence or about things that are possible rather than truly likely.

Last week, U.S. officials told reporters they had intelligence suggesting Putin is being misled by his own advisers, who are afraid to tell him the truth.

But when Biden was asked about the disclosure later in the day — after it made headlines around the globe — he was less than definitive.

“That’s an open question. There’s a lot of speculation,” Biden told reporters. “But he seems to be I’m not saying this with a certainty he seems to be self-isolating.

The degree to which Putin is isolated or relying on flawed information can’t be verified, said Paul Pillar, a retired career U.S. intelligence officer. “There’s no way you can prove or disprove that stuff,” he said.

Two U.S. officials said the intelligence about whether Putin’s inner circle was lying to him wasn’t conclusive — based more on analysis than hard evidence. Other officials disputed that, saying the intelligence was very reliable and had been vetted at the highest levels.

In another disclosure, U.S. officials said one reason not to provide Ukraine with MiG fighter jets is that intelligence showed Russia would view the move as escalatory.

That was true, but it was also true of Stinger missiles, which the Biden administration did provide, two U.S. officials said, adding that the administration declassified the MiG information to bolster the argument not to provide them to Ukraine.

Likewise, a charge that Russia had turned to China for potential military help lacked hard evidence, a European official and two U.S. officials said.

The U.S. officials said there are no indications China is considering providing weapons to Russia. The Biden administration put that out as a warning to China not to do so, they said.

The European official described the disclosure as “a public game to prevent any military support from China.”

Game or not, U.S. intelligence officials say it has been successful. Intelligence is rarely definitive, and Biden officials have calculated in some cases that it’s better to pre-empt something that might not happen, rather than stay silent and watch it unfold.

“It doesn’t have to be solid intelligence when we talk about it,” a U.S. official said. “It’s more important to get out ahead of them — Putin specifically — before they do something. It’s preventative. We don’t always want to wait until the intelligence is 100 percent certainty that they are going to do something. We want to get out ahead to stop them.”

The official said there was an extensive discussion about whether to reveal that the Russians had a blacklist of Ukrainian enemies whom they intended to arrest and possibly kill once they seized control. Officials weighed the potential harm of divulging the intelligence. “That was a big decision,” the official said.

But the intelligence appears to have been borne out by witness accounts from towns Russian once occupied and has now left, where political assassinations have been documented.

### **Leaning forward**

Some U.S. officials have advocated a strategy of leaning further forward in declassifying and releasing intelligence for years, as U.S. adversaries became adept at using modern communications platforms to spread propaganda.

In 2020, nine of 11 U.S. military combatant commanders signed a memo urging the U.S. intelligence community to declassify more information to counter disinformation and propaganda from Moscow and Beijing.

The U.S. can bolster support from allies only by “waging the truth in the public domain against America’s 21st century challengers,” the officers wrote. But efforts to compete in the battle of ideas, they added, are hamstrung by overly stringent secrecy practices.

“We request this help to better enable the US, and by extension its allies and partners, to win without fighting, to fight now in so-called gray zones, and to supply ammunition in the ongoing war of narratives,” the four-star generals wrote to the acting director of national intelligence at the time, Joseph Maguire.

“Unfortunately, we continue to miss opportunities to clarify truth, counter distortions, puncture false narratives, and influence events in time to make a difference,” the generals said.

In the past, the U.S. had sat on its hands as Russia waged information war.

In 2014, days before Russia invaded Ukraine's Crimean peninsula, Russia released a recording of an apparent phone conversation between senior U.S. diplomat Victoria Nuland and the ambassador to Ukraine at the time, in which Nuland disparaged the European Union.

The move was part of a wave of disinformation and propaganda from Moscow surrounding the seizure of Crimea. But the Obama administration didn't react.

That's because the U.S. had opted out of the great power propaganda wars after the 9/11 attacks, Weiner said.

"So what was the United States' response to all of this?" Weiner asked. "Crickets, nothing, zip. They had no response."

The Biden strategy has been different.

Pillar said the Biden administration took a significant risk in predicting Russia would invade Ukraine, a bold move that was vindicated by Putin's actions.

"That suggests that there are some pretty strong bases for this information," Pillar said. "Not only did it turn out to be correct ... but evidently it had been presented to the president with enough confidence that he felt confident going out on the limb as far as he did."

Said Pillar, "Boy, if there wasn't an invasion, this would have a huge 'cry wolf' effect and make our president look pretty bad."

#### **4. Germany arrests Syrian accused of torturing captives with Daesh**

Associated Press, 6 Apr 22

German investigators on Wednesday arrested a Syrian man accused of war crimes for allegedly torturing captives while he was with Daesh group in Syria in 2014.

Federal prosecutors said the man, identified only as Raed E. in line with German privacy rules, was arrested in Berlin. He is suspected of membership in a foreign terrorist organization, crimes against humanity, war crimes and bodily harm.

The suspect joined Daesh in summer 2014 and participated in an attack that August on the Shueitat tribe in the Deir Ezzor region of eastern Syria, prosecutors said.

Activists reported death tolls ranging up to 700.

Raed E. is accused of abusing and torturing three captives after that attack. Prosecutors say that he had a man who was looking for a 13-year old brother kidnapped by Daesh arrested and then tortured him at various prisons run by the terrorist group.

U.S. surveillance of Russia's Ukraine invasion has been buttressed by two newer satellite systems built with commercial parts and on-board imagery processes, the head of the intelligence agency that manages the programs said in a rare public statement.

Alongside orbiting spy satellites, the new systems built using commercial technology have "enabled NATO and the entire world to see in real time the Russian military buildup prior to its invasion," National Reconnaissance Office Director Christopher Scolese said in prepared testimony Wednesday for a mostly closed-door House Armed Services subcommittee hearing.

The new systems, which Scolese said "went from concept to orbit in less than three years," have since helped Biden administration officials provide a stream of detailed intelligence statements about Russian battlefield developments, missile launches, likely strategic goals and -- this week -- potential war crimes, without disclosing classified sources.

"They illustrate our efforts to deliver capabilities more quickly, using a combination of commercial components and processes and government-sponsored capabilities," Scolese said. "And they almost immediately started serving the needs of both warfighters and national policy makers."

That includes foreign allies of the U.S. Working with the National Geospatial-Intelligence Agency, which produces precise, geo-located maps from the NRO imagery, "these products are being widely disseminated at the NATO Intelligence Fusion Center and shared with the U.S. European Command," he said.

The Ukraine war isn't the first time the technology has been employed for humanitarian or U.S. national security purposes.

Before the invasion, the systems built on commercial technology "supported earthquake relief in Haiti, imaged areas over Afghanistan to support the evacuation of U.S. troops," Before the invasion, the systems built on commercial technology "supported earthquake relief in Haiti, imaged areas over Afghanistan to support the evacuation of U.S. troops." Scolese said.

### **19. Financial warfare: will there be a backlash against the dollar?**

Financial Times (UK), 7 Apr 22, Robin Wigglesworth, Polina Ivanova and Colby Smith

*This is the second part of a series on the weaponization of finance*

Two weeks after Russian tanks rolled into Ukraine, South African president Cyril Ramaphosa held a phone call with Russia's Vladimir Putin. On the same day, European leaders meeting in Versailles warned democracy itself was at stake. Yet Ramaphosa struck a very different tone.

"Thanking His Excellency President Vladimir Putin for taking my call today, so I could gain an understanding of the situation that was unfolding between Russia and Ukraine," he wrote on Twitter. Ramaphosa, who has blamed Nato expansion for the war, said Putin "appreciated our balanced approach".

The South African president is not alone in pursuing a “balanced” position to the war. “We will not take sides. We will continue being neutral and help with whatever is possible,” Brazil’s Jair Bolsonaro said after Russia invaded Ukraine. Mexican president Andrés Manuel López Obrador also declined to join the sanctions being imposed on Russia. “We are not going to take any sort of economic reprisal because we want to have good relations with all the governments in the world,” he said.

And, then, there is China: an increasingly close ally of Russia. The world’s second-largest economy has scrupulously declined to criticize the invasion of Ukraine.

It might seem that most of the world is united in condemnation of the war in Ukraine, but while there is a western-led coalition against Russia, there is no global coalition. This could have important implications for the future of international finance as countries around the world respond to the dramatic move by the US and its allies to freeze Russia’s foreign currency reserves.

“The sanctions have been earth-shattering,” admits John Smith, who used to be the leading sanctions official at the US Treasury department and now co-heads the national security practice at Morrison & Foerster, a law firm. “They’ve broken the mold.”

The power of the sanctions on Russia is based on the dominance of the US dollar, which is the most widely-used currency in trade, financial transactions and central bank reserves. Yet by explicitly weaponizing the dollar in this way, the US and its allies risk provoking a backlash that could undermine the US currency and sunder the global financial system into rival blocks that could leave everyone worse off.

“Wars also upend the dominance of currencies and serve as a doula to the birth of new monetary systems,” says Zoltan Pozsar, an analyst at Credit Suisse.

China, in particular, has long-term plans for its currency to play a much bigger role in the international financial system. Beijing views the dollar’s dominant position as one of the bulwarks of American power that it wants to chip away at, the flipside of the US Navy’s control of the oceans. The Ukrainian conflict will solidify this view.

Zhang Yanling, former executive vice-president of Bank of China, said in a speech last week the sanctions would “cause the US to lose its credibility and undermine the dollar’s hegemony in the long run”. She suggested China should help the world “get rid of the dollar hegemony sooner rather than later”.

The death of the dollar has been predicted on countless occasions before, only for the US currency to maintain its position. Inertia is a powerful force in cross-border finance: once a currency is widely used, that becomes a self-perpetuating position.

But if there is a steady shift away from the dollar in the coming years, the sanctions on Russia’s central bank might come to be seen not as a bold, new way of exerting pressure on an opponent but the moment when the dollar’s dominance began to decline — a financial Suez Canal.

Analysts point out that previous examples of financial warfare have mostly related to blocking money for terrorism or deployed in specific cases such as Iran's nuclear programme. Targeting a country of Russia's size and power is unprecedented, and for better or worse it could become a blueprint for the future, argues Mitu Gulati, a financial law professor at the university of Virginia.

"If you change the rules for Russia, you're changing the rules for the whole world," he says. "Once these rules change, they change international finance forever."

### **'It was simply theft'**

As Russia accelerated its build up of forces on the border of Ukraine earlier this year and the threat of war hung in the air, the country's leading financial officials conducted a stress-test of the impact of potential sanctions.

But when one senior Russian banker suggested modelling what would happen if the ruble went over the symbolic mark of 100 to the dollar — a huge jump at the time — the suggestion was dismissed as unrealistic.

By the end of February, Russia had launched an invasion of Ukraine, sanctions had been introduced and a large part of the Russian central bank's foreign reserves had been frozen. Western governments surprised themselves and Moscow with the strength of their economic response to the war. As a result, the ruble fell to 135 against the dollar, a depreciation of about 50 per cent since the start of the year.

"No one who was forecasting what sanctions the west might impose could have predicted that, when the central bank reserves [were frozen]," Russia's foreign minister Sergei Lavrov said in March. "It was simply theft."

Five weeks into the war, the situation looks different — at least superficially. The ruble has regained most of the ground it lost in the days after the sanctions were first announced — prompting some Russian officials to claim that the measures had failed.

"This is the beginning of the end of the dollar's monopoly in the world," Vyacheslav Volodin, speaker of the Russian Duma lower house of parliament, said on Wednesday. "Anyone who keeps money in dollars today can no longer be sure that the US will not steal their money."

Volodin added: "The 'hellish' sanctions didn't work. They hoped to collapse the economy and paralyse Russia's banking system. It didn't work."

But analysts say the rebound largely reflects the draconian capital controls and interest rate increases Russia has unveiled in response. They add that the economic impact is undoubtedly going to be severe, regardless of the ruble's movements.

"It's very grim," says Carmen Reinhart, the World Bank's chief economist. "Modelling at a time like this is an art, so I don't want to be too precise, but we're talking about significant, double-digit declines in economic activity and skyrocketing inflation."

Nonetheless, there are a few tentative signs that Russia could find ways around the sanctions that bypass the dollar-based US financial system. One area is trade. India, a country which is eager to maintain the independence of its foreign policy, has been flirting with the idea of providing a payments backdoor to Russia.

Indian officials say the government and central bank have looked into the viability of a rupee-rouble arrangement — a mechanism the two countries used during the Soviet Union era, which also involved barter trades involving oil and other goods. But officials stress that the issue is not yet settled. Such arrangements are “not easy to undo once the crisis goes,” one official cautions.

Some fear the war is the beginning of a profound shift in the global economy. Larry Fink, the chief executive of BlackRock, the world’s largest investment group with \$10tn of assets under management, argued in his annual letter to shareholders that “the Russian invasion of Ukraine has put an end to the globalization we have experienced over the last three decades”. One result, he said, could be a greater use of digital currencies — an area where the Chinese authorities have made significant preparations.

Even the IMF believes the dollar’s dominance could be diluted due to the “fragmentation” of the system, although it will likely remain the primary global currency. “We are already seeing that with some countries renegotiating the currency in which they get paid for trade,” says Gita Gopinath, the IMF’s first deputy managing director.

The sanctions could also accelerate changes in the infrastructure of international finance. As part of its push to reduce dependence on US-controlled systems, China has spent years developing its own renminbi-denominated cross-border interbank payments system (Cips), which now has 1,200 member institutions across 100 countries.

Cips is still small compared with Swift, the European-based payments system, which is an important part of the sanctions regime against Russia. But the fact that the biggest Russian banks have been kicked off Swift has given a potential growth opportunity to the Chinese rival.

“Cips has the potential to be a game changer,” says Eswar Prasad, a former senior IMF official now at the Brookings Institution. “China is setting up an infrastructure for payments and payment messaging that could one day provide an alternative to the western-dominated international financial system and in particular Swift.”

Even before the war, there were also tentative signs of a big shift already under way in the composition of central bank reserves — one of the main building blocks of the international financial system.

US government debt has for much of the past century been central banks’ preferred place to stash away rainy-day money, given the size and strength of the US, the safety and tradability of its debt and the dominant role of the dollar in international trade and finance. In the 1960s, former French president Valéry Giscard d’Estaing called this America’s “exorbitant privilege”. But that privilege has been eroded in recent decades.

Of the \$12tn worth of foreign currency reserves held by central banks around the world at the end of 2021, the dollar accounts for about 59 per cent, according to the latest IMF data. That is down from 71 per cent in 1999, when the euro was launched.

The European common currency is the principal dollar alternative — it accounts for 20 per cent of central bank reserves — but there has also been a marked shift into smaller currencies such as the Australian dollar, the Korean won and above all the Chinese renminbi, according to Barry Eichengreen, Berkeley economics professor who is the dean of studies of the international monetary system.

In a recent report co-authored with the IMF, he called this “the stealth erosion of dollar dominance”, and argued it “hints of how the international system may evolve going forward”. The use of central bank sanctions would probably accelerate the process, he told the Financial Times.

“It’s a huge deal. Freezing the assets of the Russian central bank certainly came as a surprise to me, and it would appear to Putin as well,” he says. “These issues have always come up in the past whenever the words ‘weaponize’ and ‘dollar’ are spoken. The worry is always that this will work to the disfavor of US banks, and you go some way towards eroding the dollar’s exorbitant privilege.”

Yu Yongding, a leading economist at the Chinese Academy of Social Sciences, said in a speech last week that sanctions had “fundamentally undermined national credibility in the international monetary system”. Yu, who used to be an adviser to the Chinese central bank, added: “What contracts and agreements can’t be dishonored in international financial activities if foreign central banks’ assets can be frozen.”

### **Is it too early for the death knell of the US dollar?**

Yet for all the speculation about the impact of the sanctions, there are also strong reasons to believe they will not promote a shift in the tectonic plates that underpin global finance — at least for the foreseeable future.

Despite the recent rebound in the ruble, there is no easy way for Russia to escape from the impact of the sanctions. Natalya Zubarevich, director of the regional programme of the Independent Institute for Social Policy, says people are expecting results “too quickly” from the sanctions. “Sanctions do not work quickly,” she says. “The other sanctions will have an effect over months, not days.”

Moreover, the threat of US and European sanctions on entities that actively try to help Russia evade the financial blockade will be a major deterrent — even for banks in countries that are amenable to helping Moscow.

Nor is it easy for challengers to displace the dollar. The uncomfortable realization for countries that might now be nervously eyeing their vulnerability to similar sanctions is that there is simply a lack of viable alternatives. Even Eichengreen says he is nowadays less worried about the dollar’s standing than he used to be, after it survived the “erratic” presidency of Donald Trump.

That dilemma is particularly acute for China. With foreign currency reserves of \$3.2tn that need to be invested, it has no choice but to have extensive dollar holdings. Outside of Europe and potentially Japan, which have stood shoulder-to-shoulder with America in this case, there simply are not enough liquid financial assets in other currencies to meet that demand.

“We have very accommodative monetary policy, we are very open with our markets, things are easily convertible and we are safe as an economy. Until those things change, the rest of it ain’t changing,” says Brian O’Toole, a sanctions expert at the Atlantic Council and former senior official at the US Treasury. “If we’re acting with all of our partners and allies in this, where else are you going to go? There’s no place else that has anything approaching the level of liquidity and access that the US market has. It doesn’t exist anywhere.”

China also faces an intractable problem if it wants other countries to hold its currency in their reserves. Its capital controls are not as strict as they used to be, but the renminbi is still not a fully convertible currency. In the decade since it first started trying to internationalize the renminbi, the Chinese Communist party has come to realize it can have a global currency that might one day rival the dollar or it can retain tight control over its domestic financial system, but it cannot have both.

Prasad points out that despite the message that countries can no longer rely completely on “their carefully built up war chests at times of war” in light of the “quite dramatic moves by the western economies”, there is simply a paucity of viable alternatives. “The harsh reality though is that the renminbi at this stage is not a big enough player in international finance to be a viable alternative to the dollar,” he says.

Given the profound changes that have taken place in the global economy over the last four decades, it might seem an anachronism that the traditional western allies still dominate the financial world. But for the time being, there is little escape from the hold that their currencies enjoy.

Smith, the former Treasury official, points out that “the death knell of the US dollar in the international economy has been sounded every year” since roughly 2008, when Washington first blocked Iran from using the US dollar for its international energy transactions. But nothing tangible has ever come from it.

“There’s been a lot of hoopla ever since about the US dollar losing its status as the reserve currency and the currency of choice in the energy markets and in the international economy, [but] we have not seen that occur,” he says. “The US dollar has continued to remain strong as a source of stability in international financial transactions, and that is likely to continue even after the dust settles on the Ukraine war that Russia has unleashed.”

**20. US disrupts global ‘botnet’ controlled by Russian military intelligence, DOJ says**  
The Guardian, 6 Apr 22, David Smith

The US has disrupted a global “botnet” controlled by Russia’s military intelligence agency, Attorney General Merrick Garland announced on Wednesday.

A botnet is a network of hijacked computers used to carry out cyberattacks. “The Russian government has recently used similar infrastructure to attack Ukrainian targets,” Garland told reporters at the justice department.

“Fortunately, we were able to disrupt this botnet before it could be used. Thanks to our close work with international partners, we were able to detect the infection of thousands of network hardware devices.

“We were then able to disable the GRU’s [the military intelligence agency] control over those devices before the botnet could be weaponized.”

The attorney general also announced charges against Russian oligarch Konstantin Malofeyev for sanctions violations. He said the billionaire had been previously identified as a source of financing for Russians promoting separatism in Crimea and providing support for the so-called Donetsk People’s Republic in eastern Ukraine.

“After being sanctioned by the United States, Malofeyev attempted to evade the sanctions by using co-conspirators to surreptitiously acquire and run media outlets across Europe,” Garland said.

The indictment is the first of a Russian oligarch in the US since the Russian invasion of Ukraine.

In a related move, a federal court in the southern district of New York unsealed a criminal indictment against TV producer John Hanick, 71, a US citizen charged with violations of sanctions and false statements because of his work for Malofeyev over several years.

Matthew Olsen, assistant attorney general of the justice department’s national security division, said: “The defendant Hanick knowingly chose to help Malofeyev spread his destabilizing messages by establishing, or attempting to establish, TV networks in Russia, Bulgaria and Greece, in violation of those sanctions.”

Last month Garland, who is America’s top law enforcement official, announced the launch of Task Force KleptoCapture, an interagency law enforcement task force dedicated to enforcing the sweeping sanctions against Russia over its invasion of Ukraine.

He vowed on Wednesday: “Our message to those who continue to enable the Russian regime through their criminal conduct is this: it does not matter how far you sail your yacht, it does not matter how well you conceal your assets, it does not matter how cleverly you write your malware or hide your online activity.

“The justice department will use every available tool to find you, disrupt your plots and hold you accountable.”

Garland, whose grandparents fled antisemitism at the border of western Russia and eastern Europe more than a century ago, acknowledged horrific images that emerged from Bucha in Ukraine his week. “We have seen the dead bodies of civilians, some with bound hands, scattered in the streets. We have seen the mass graves. We have seen the bombed hospital, theatre and residential apartment buildings.

“The world sees what is happening in Ukraine. The justice department sees what is happening in Ukraine. This department has a long history of helping to hold accountable those who perpetrate war crimes.”

He noted that one of his predecessors, Attorney General Robert Jackson, later served as a chief American prosecutor at the Nuremberg trials after the second world war. “Today, we are assisting international efforts to identify and hold accountable those responsible for atrocities in Ukraine and we will continue to do so.”

## **21. U.S. government and energy firms close ranks, fearing Russian cyberattacks**

Washington Post, 6 Apr 22, Ellen Nakashima

In February, as Russian troops massed on Ukraine’s border, executives with a major energy firm here worked with U.S. energy and homeland security officials to draw up a playbook and help prepare the electricity sector to deal with potential cyberattacks by Russia.

Berkshire Hathaway Energy officers were among the small group that wrote the guidelines, which stressed the importance of quickly sharing cyberattack information between industry and government.

With President Biden warning last month of evolving intelligence that Russia is exploring possible cyberattacks against American critical industries, companies such as Berkshire Hathaway Energy and the U.S. government are on high alert. After years of what critics saw as lip service, cybersecurity collaboration between the federal government and some critical industries has taken root, officials and industry leaders say, and it could be put to the test as Russian government hackers probe the defenses of American power plants, banks and telecommunications networks.

“The collaboration between government and the private sector has seen exponential improvement over the last couple of years,” said Bill Fehrman, president and chief executive of Berkshire Hathaway Energy (BHE), which provides electricity generated by wind, solar, natural gas and coal to 12 million customers in the United States, Canada and Britain. “The main benefit,” he said, “is the more efficient transfer of information from the front line — the companies — to the government, and getting usable information back from the government in a timely manner.”

In particular, he said, the declassification of information from the government “has gone from months to in some cases hours.”

BHE is so large — one of the biggest electricity companies in North America by number of customers — that if its systems were disrupted by a Russian cyberattack, officials say, the impact on Americans' lives would be substantial. At the same time, they say, practices such as those adopted by BHE, whose CEO chairs the electricity sector group that coordinates with the federal government, can serve as a model for the industry.

As a chill wind whipped off the farm fields an hour northwest of Des Moines, the warmth from a 10,000-horsepower engine and the smell of oil filled a compressor room. The engine, chugging so loudly workers wear earplugs, powers pistons that compress natural gas. The compressor station in Ogden is one stop along the 13,000-mile-long Northern Natural Gas pipeline, which is part of BHE and studded with similar stations every 60 miles or so. The compressed gas is fed from one station to another in relay fashion, serving homes, hospitals and power plants from Bakersfield, Tex., to Michigan's Upper Peninsula.

There has never been a cyberattack on any industrial control system within BHE and its 11 subsidiaries. That is because of strict security measures imposed over the past eight years, said Chief Security Officer Michael Ball. No operational network is connected to the Internet, and third-party vendors coming in to do maintenance follow stringent rules, including a ban on plugging any outside hardware into the system.

But although its industrial control or operational technology (OT) systems are not connected to the Internet, the company still has to ensure that traffic flowing within its systems is not contaminated by malware.

In a campaign launched by the White House a year ago to boost the cyberdefenses of critical sectors, BHE deployed sensor software in its OT networks to look for malicious activity and vulnerabilities. The software it chose, developed by a company called Dragos, detects suspicious traffic from nation-state actors. It also anonymizes the data and makes it available to analysts at the National Security Agency, the Energy Department and the Department of Homeland Security's Cybersecurity and Infrastructure Security Agency (CISA).

"We have confirmed foreign states are active in their targeting of U.S. energy industrial control systems," said Robert M. Lee, CEO of Dragos, whose software allows the government to send queries to the companies to see whether they have detected the presence of certain adversaries.

By the end of the first 100-day campaign, which focused on electricity companies, almost 60 percent of electricity customers in the United States were covered by companies that had or pledged to have commercial cyberthreat sensors on their OT networks, said Fehrman, who coordinated the effort across the sector.

Work with the natural gas sector followed, and in January an effort for the water sector began.

"If power is disrupted, or if oil and gas is disrupted, or if clean water is disrupted, that really affects Americans' lives," said Anne Neuberger, deputy U.S. national security adviser for cyber and emerging technology. "The collaboration between companies and with the government, the

deployment of commercial sensors, the deepened information-sharing has been an important contribution to the sectors' resilience," she said.

Though Biden's warning last month was based on intelligence gathered by the U.S. government, the sensors were helpful for additional insight, U.S. officials said.

Five years ago, Russian government hackers penetrated the OT systems of some American electricity companies, but the intrusions were not detected immediately. It took some companies months to realize they had been infiltrated. The sensors should cut that time drastically, U.S. and company officials said.

Last year, Russian criminals carried off a ransomware attack on Colonial Pipeline, snarling up the company's administrative computer network. Out of fear that the malware might spread to the OT system, the company shut down its fuel pipeline for five days, prompting panic-buying at gas stations on the East Coast and raising concerns that Russia might target other critical companies.

The abundance of targets in American industry prompted CISA to issue a call in February to companies to harden their cyberdefenses in a campaign the agency dubbed "Shields Up."

On a recent day, a senior threat intelligence analyst at BHE's global security operations center pulled up a dashboard on a large screen on a wall, displaying some 3,000 Russian "indicators of compromise," or IP addresses and other digital clues that had been tied to cyberattacks on Ukraine government systems since January. The IOCs, as they are called, came from the DHS; the Canadian Center for Cyber Security, a government agency; and the Energy Department; as well as an industry information-sharing collective and private threat intelligence companies.

In years past, companies might get this sort of data, but by the time it got to them, "chances are really good I already knew about it," BHE's Ball said. "Now it's flipped, and we're seeing stuff faster, more of the stuff we haven't already heard about."

And, more importantly, company executives say, the quality of some of that information has improved.

"We have been getting 'actionable intelligence' — extremely helpful feedback that we can implement," Fehrman said. That is intelligence obtained through U.S. government penetration of adversaries' systems overseas and enhanced with more information that, for instance, tells companies what threat is really significant, what techniques the hackers are using, what machines they are targeting — sometimes down to make and model — and what defensive actions should be taken as a result.

A major milestone in facilitating some of the cooperation driven by the Ukraine crisis was a congressional mandate that CISA set up a 24/7 center for the real-time sharing of threat information that includes personnel from key industrial sectors as well as from the FBI, the DHS, the NSA and the Energy and Treasury departments. The result was the launch last summer of what CISA Director Jen Easterly named the Joint Cyber Defense Collaborative.

The JCDC has “created a beachhead,” said Tom Fanning, CEO of the energy giant Southern and a member of the Cyberspace Solarium Commission, which recommended the formation of the collaborative. “As we mature the process, it will get better and better and better.”

Michael Ball, vice president and chief security officer for Berkshire Hathaway Energy, at the company's global security operations center in Urbandale, Iowa. (KC McGinnis for The Washington Post)

A major spoke off the JCDC information-sharing hub is the Energy Department’s Energy Threat Analysis Center, created in January to enable companies and the government to jointly analyze threats and develop measures to deal with them.

It will also feed that information back to the JCDC. “If we’re seeing a threat to an energy industrial control system, we certainly want to make sure that information gets out to other sectors like water and chemical, [which] have similar systems,” said Puesh Kumar, director of the department’s Office of Cybersecurity, Energy Security and Emergency Response.

In February, the White House put CISA Executive Director Brandon Wales in charge of an effort to ensure the government can handle a cyberattack from the Russians, including any resulting physical consequences in the public or private sectors.

“On the whole we are more prepared now than ever before,” Wales said.

“Russian malicious cyber actors have posed a high threat to the U.S. government and the critical infrastructure since before the invasion of Ukraine,” he said, “and they will present a threat after this current crisis is resolved.”

## **22. Hypersonic-Missile delay puts U.S. further behind Russia, China**

Bloomberg, 6 Apr 22, Tony Capaccio

The first U.S. hypersonic weapon will be delayed for as long as a year under a new schedule, even as lawmakers protest that the Pentagon is lagging behind in a new technology that Russia has already used in Ukraine and China has demonstrated in a space launch.

The goal to declare an “early operational capability” for the Lockheed Martin Corp. missile by Sept. 30 has been moved back to sometime in the next fiscal year, according to an Air Force statement. The Pentagon has said the Air-Launched Rapid Response Weapon, or ARRW, is expected to be the “nation’s first operational hypersonic weapon.”

Hypersonic weapons are hard to track and destroy because they fly five times the speed of sound and can be maneuvered. Last month, Russia debuted a hypersonic air-to-ground missile in its attack on Ukraine, and in July China hit a demonstration target on Earth with a weapon in orbit. Adversaries don’t have to meet the rigorous standards set under the U.S. defense acquisition system or face public scrutiny over delays and failure.

That comes in handy, he added, when boaters try something stupid.

“Sometimes there are mariners out there that aren’t very smart, and they think it's smart to cross the bow of an aircraft carrier in tight quarters,” he said. “And I don't know how great his engineering plant is, you know, if you're on a small sport fisherman or something like that, if you lose your diesels right in front of me, I need to be able to stop and I know I can.”

For the world's largest warship, CVN-78 is surprisingly nimble, thanks largely in part to the massive amount of power at her crew's disposal thanks to her twin nuclear reactors.

Sometime later this year, Lanzilotta will finally get a better idea of just how well the new island design will work on the carrier’s first operational cruise, and what, if any, challenges it will create.

“I think so,” he said when asked about whether the new island design will prove more efficient. “But when we deploy later in the year we’re going to learn more and improve more. And that's an important mindset.”

When asked what lessons he anticipates learning during that deployment, Lanzilotta waxed philosophical.

“The sailors are smarter than most of us old guys,” he said. “You know, I've been doing this for 28 years. So I have my own predisposed notions of how things are going. I've got sailors that are younger, super-intelligent, and always thinking like ‘hey, why don't we do it like this?’ Or ‘let's try something like that.’ So that I'm gonna stay open-minded on it. So I don't drive the solution too much.”

Still, that doesn’t mean he doesn’t have questions about how things will go.

“I think maybe just you know, how fast can I go?” he pondered., “Not speed to the water, but how quickly can I generate sorties? What is our limiting factor? Can we work on that?”

### **24. NATO nations see differing paths as Ukraine War enters uncertain stage**

New York Times, Apr 6, 22, Steven Erlanger and Michael Crowley

Faced with the prospect that the war in Ukraine will be long and grinding, NATO countries are divided on how best to manage the next stage of the conflict and the uncertain period that promises to follow.

Central European members like Poland and the Baltic states want a total break with Moscow and an effort to bring Russia to its knees, two senior Western officials said. They worry that anything that Russia can present as a victory will do serious damage to European security.

But other nations believe that Russia cannot be easily subdued and that the war's outcome is likely to be messy — more exhausting cease-fire than resounding victory. Countries like France, Germany and Turkey want to keep contacts with Russia's president, Vladimir V. Putin, regardless of the allegations of war crimes committed by his troops, the officials said.

NATO foreign ministers, meeting this week to discuss how to help Ukraine prosecute the war, do agree on one major point: The war is far from over and — as badly as Russia's forces have performed and despite their retreat from areas around Kyiv, the capital — they are making slow and brutal progress in Ukraine's east.

“Moscow is not giving up its ambitions in Ukraine,” Jens Stoltenberg, NATO's secretary general, said this week. “We now see a significant movement of troops away from Kyiv, to regroup, rearm and resupply. And they shift their focus to the east.”

That will take several weeks, officials believe, as Russian troops move back into Belarus to be resupplied and reorganized, and then must make their way with their equipment through Russia toward eastern Ukraine.

“In the coming weeks, we expect a further Russian push in the eastern and southern Ukraine to try to take the entire Donbas and to create a land bridge to occupied Crimea,” Mr. Stoltenberg said. “This is a crucial phase of the war.”

In response to the scenes of corpses in Bucha, the United States and the European Union are preparing more sanctions against Russia, but without much expectation that they will hasten the end of the war.

But at the NATO meetings, the talk will be of weapons and matériel, not sanctions.

There is a general agreement that Russia is no longer a strategic partner of the alliance, that the North Atlantic Treaty Organization is no longer bound by the troop limits of the 1997 NATO-Russia Founding Act, and that its military posture must be sharply enhanced to deter a confrontational Russia, so long as Mr. Putin and his allies retain power there.

There is also a commitment to continue aiding Ukraine — some two-thirds of NATO members have already provided lethal weaponry, including the Czechs' contribution of Soviet-era tanks and armored personnel carriers.

But some stocks are running low in the West — U.S.-made Javelin antitank missiles, for example. And Ukraine is also going to need different weapons for the next phase of the war in the east, officials suggest, including longer-range artillery and more sophisticated armed drones, if they hope to push the Russians back, let alone drive them out of Ukraine.

The amount of matériel arriving in Ukraine remains a secret, but officials say that the overall flow is very large and has made an enormous difference to the war. But what sort of weapons are most useful, and how to think through the possible conclusion to the war, is preoccupying alliance leaders.

“On a number of fronts, we obviously have some changing battlefield dynamics,” U.S. Secretary of State Antony J. Blinken, who is in Brussels for the NATO meetings, told reporters this week.

Mr. Blinken said the NATO meetings would focus on new ways to support Ukraine and to “put pressure on Russia,” and on Mr. Putin. More evidence of atrocities is likely to emerge, he said on Wednesday, as Russia pulls out of territories it controlled, “like a receding tide.”

On Tuesday, Mr. Blinken announced a further \$100 million worth of weapons and equipment from American stockpiles. Total U.S. military aid to Ukraine is worth some \$2.4 billion since President Biden took office and more than \$1.7 billion since the war began on Feb. 24, he said.

How the war might finally end is an important issue not just for Ukraine but for the entire alliance.

U.S. officials are skeptical that Russia is prepared to make real concessions in ongoing peace talks with Ukraine, although they do not rule out the possibility and want to ensure Kyiv’s leverage in the negotiations.

That is a key discussion. While Ukraine will decide for itself how and when to try to end the war and what it will negotiate with Moscow, President Volodymyr Zelensky and his government are in regular discussion with NATO country leaders, including the Americans.

“We believe that our job is to support the Ukrainians,” Jake Sullivan, the U.S. national security adviser, said this week. “We are not going to define the outcome of this for the Ukrainians.”

Some countries, especially in Central Europe and including Britain, are anxious that any sort of Russian expansion into Ukrainian territory, let alone a Russian victory, would embolden Mr. Putin, undermining overall European security and values such as the adherence to international law, respect for national sovereignty and territorial integrity. They want Russia to be seen as the loser.

Even if the war ends with a new line of contact between Russian and Ukrainian forces, NATO aims to work with Kyiv to make Ukraine indigestible to Russia, as another senior Western official said. The point is to arm and train the Ukrainians so well that Mr. Putin would not wish to try again.

The foreign ministers will also begin a deeper discussion of NATO’s new strategic concept, the first since 2010, now in early draft. It is much tougher on Russia, and foresees a longer period of confrontation and expensive deterrence.

## **25. US imposes ‘severe’ sanctions on Russian banks after Bucha atrocities**

Financial Times (UK), 6 Apr 22, Courtney Weaver, James Politi, Colby Smith and Jasmine Cameron-Chileshe

The US has imposed its most severe level of sanctions on Sberbank, Russia's largest financial institution, and Alfa-Bank, the country's biggest private bank, escalating its economic punishment of Moscow in response to atrocities committed by Russian forces in Ukraine.

The announcement on Wednesday of "full blocking sanctions", which prevent the lenders from transacting with any US institutions or individuals, came after top officials including President Joe Biden warned this week that they were planning to impose harsher restrictions on Russia.

"There's nothing less happening than major war crimes," Biden said at an event in Washington on Wednesday, during which he listed some of the atrocities committed in Ukraine.

"Responsible nations have to come together to hold these perpetrators accountable. And together with our allies and our partners, we're going to keep raising economic costs and ratchet up the pain for [Vladimir] Putin," Biden added.

A senior US official said the latest measures were in response to "the sickening brutality in Bucha", a city near the Ukrainian capital of Kyiv where gruesome images of the bodies of civilians have emerged in recent days, indicating a possible massacre by Russian soldiers.

"Treasury is committed to holding Russia accountable for its actions so it cannot benefit from the international financial system," Janet Yellen, the US Treasury secretary, told Congress during a hearing on Wednesday.

The US also imposed sanctions on Putin's two adult daughters, Ekaterina Tikhonova and Maria Vorontsova; the wife and daughter of Sergei Lavrov, foreign minister; and members of Russia's Security Council, including Dmitry Medvedev, former president; and Mikhail Mishustin, prime minister.

In addition, the US said it would prohibit any new American investments in Russia, and announce new sanctions on large Russian state-owned enterprises on Thursday.

Immediately after the invasion, the US prohibited debt or equity transactions with Alfa and Sberbank, but its "full blocking sanctions" amount to much stricter curbs.

"This is the most severe action we can take in terms of financial measures," the US official said. "And in practice, the history of sanctions is when we impose full blocking sanctions . . . the rest of the world, even in other jurisdictions that have not yet imposed a full block, they respect the regime. So there tends to be a multiplier effect."

The official added that the US and EU had chosen to target Putin's daughters because they believed they were helping shield the Russian president's wealth.

The UK government on Wednesday also announced additional sanctions against Putin's regime, including full asset freezes against Sberbank.

The measures, which Liz Truss, UK foreign secretary, said marked “the toughest sanctions yet”, included a ban on imports of Russian iron and steel products alongside an outright ban on new investment in the country.

The UK also imposed sanctions on a further eight individuals linked to key Russian industries, including Andrey Akimov, chief executive of Gazprombank, and Leonid Mikhelson, founder and chief executive of Novatek.

The US and European allies had hoped that the initial burst of sanctions imposed after Russia’s invasion in late February, including cutting off Moscow’s access to its foreign reserves by banning transactions with its central bank, would isolate the country financially without causing excessive spillovers into the rest of the global economy.

But as the conflict has continued, they have been forced to consider additional targets, widening the net to include companies and individuals in third countries continuing to do business with Russian entities and sharpening enforcement of existing sanctions.

Edward Fishman, a former Russia and Europe sanctions lead at the state department, called Wednesday’s measures “the most significant sanctions taken since the [Russian] central bank sanctions” imposed in late February.

“We’re headed towards Iran-style sanctions,” he added, referring to the decades-long measures against Tehran beginning in 1979. “This is a conveyor belt and it only leads in one direction.”

Despite the new sanctions, some US legislators on Wednesday criticized the Biden administration for not doing enough, noting that the package stopped short of levying the harshest penalties on certain oligarchs and still included exemptions for Russian energy.

David Scott, a Democrat on the House financial services committee, told Yellen that the Treasury department’s decision to issue a special license for Alisher Usmanov — an oligarch he described as Putin’s “favorite” — which allowed him to continue doing business was becoming a “black mark” on the nation.

“Our reputation as the world leader is at stake when these types of things happen, and there’s no explanation for it,” Scott said.

Yellen said the US was prepared to wield further sanctions, including against China if it attacked Taiwan.

“We are concerned about Taiwan and will act as appropriate,” she said. “In the case of Russia, we’ve threatened significant consequences, we’ve imposed significant consequences, and I think that you should not doubt our ability and resolve to do the same in other situations.”

## **26. Eastern Ukraine braces for renewed assault as Russia regroups**

Washington Post, 6 Apr 22, David L. Stern, Joby Warrick, Louisa Loveluck and Max Bearak

**MUKACHEVO, Ukraine** Ukrainian officials called Wednesday for evacuations in three provinces near the Russian border amid new signs that President Vladimir Putin's troops are escalating their assault on eastern and southern cities following a failed attempt to take the country's capital.

Local officials reported renewed Russian shelling in the eastern Donetsk region, killing at least five people, and as many as 10 high-rise apartment buildings on fire in Severodonetsk, in the neighboring Luhansk district. U.S. analysts said Moscow has begun gradually shifting the focus of its military operations to the eastern border provinces after withdrawing thousands of troops that previously encircled the capital, Kyiv.

The continued violence came amid fresh reports of human-rights atrocities in Ukrainian cities and towns that had been under Russian control. Accounts of rape and summary executions of civilians by Russian occupiers prompted the United States and several allies to announce new economic sanctions, including measures targeting two of Russia's largest banks and Putin's adult children.

"We're going to further increase Russia's economic isolation," President Biden said in a speech announcing the sanctions at a meeting of North America's Building Trades Unions. "The United States will continue to stand with the Ukrainian people in their fight for freedom."

Biden again accused Russia of committing "major war crimes" and said the additional measures would further strain its economy. "Civilians executed in cold blood, bodies dumped into mass graves," he said, ticking off a list of alleged war crimes. "A sense of brutality and inhumanity left for all the world to see unapologetically."

The speech came as NATO and European Union leaders gathered to consider additional measures to punish Moscow and support Ukraine. A possible European ban on Russian coal is expected to be approved on Thursday, along with additional military aid for Kyiv from the NATO alliance.

Pentagon officials confirmed Wednesday that Russia had, in the past 24 hours, completed an evacuation of all forces from around Kyiv and Chernihiv, two cities it had tried unsuccessfully to capture in the opening days of the invasion, now in its sixth week.

While U.S. analysts have not observed a tangible increase in troops and tanks in the Donbas — the energy-rich region near the Russian border that includes Donetsk and Luhansk — the Pentagon believes that retreating units are regrouping for a concentrated assault on the eastern provinces. Some of the recently withdrawn troops are now in neighboring Belarus, where the pro-Moscow government is allowing Russia to resupply its exhausted battalions. Few, if any, have reentered Ukraine so far, a senior Defense Department official told reporters.

"Our assessment is that they won't want to spend too much refitting and resupplying because they have made a very public show of saying that they're going to prioritize their efforts on the Donbas region," said the official, who spoke on the condition of anonymity according to rules set by the Pentagon.

For their part, Ukrainian forces are “absolutely adapting and adjusting in real time to Russian efforts now to increase their activities” in eastern Ukraine, the official said. “As they have beaten back the Russians or as the Russians have left, they are reoccupying that ground and making their own assessments about what their force posture ought to be going forward.”

Increased shelling in the eastern provinces claimed additional casualties on Wednesday, including the five people reportedly killed in Donetsk. Provincial Gov. Pavlo Kyrylenko said four people were killed by Russian artillery fire in the city of Vuhledar as they waited to receive humanitarian aid. The fifth victim, also a civilian, was killed during an attack on the town of Ocheretyn, he said, and six houses and a kindergarten facility were destroyed.

A regional military official in Luhansk reported “mass shelling” in Severodonetsk. The number of casualties was unclear. Video posted on Facebook and verified by The Washington Post shows townspeople scrambling for cover as shells explode in a residential street.

Ukrainian Deputy Prime Minister Iryna Vereshchuk, in broadcast remarks, urged residents of the Luhansk, Donetsk and Kharkiv regions to start preparing for the expected Russian onslaught. While the Kremlin has described the troop withdrawal from Kyiv as a “goodwill” gesture to facilitate peace talks, she said it was clear that more attacks were coming. Moscow has greater support in the east, where Ukrainian forces and Russian-backed separatists have been locked in a grinding conflict for many years.

“We need to evacuate,” she said. “We must do it because then people will be on fire, they will be shot ... and we will not be able to help them.”

Elsewhere in Ukraine, rescue workers looked for survivors in rubble-strewn neighborhoods newly freed of Russian troops. Washington Post reporters witnessed scenes of devastation in Borodyanka, a community northwest of Kyiv that had been pummeled by airstrikes that gouged huge chunks out of residential buildings.

In a schoolyard that was converted into a garrison while Borodyanka was occupied, the Russians had cut a trench through a playground and built a sandbag wall along the perimeter fence, with openings for gun emplacements.

In a ruined apartment a few blocks away, Katia Palivshenko, 34, said she feared that some of her neighbors were still trapped, and likely dead, in the basements of bombed-out buildings nearby. Cellphone service had faltered when the town came under attack, and she had not heard from some of her friends since then.

“They were below ground but then messages stopped coming,” she said. “We don’t know what happened to them.”

In Bucha, a town associated with some of the war’s most disturbing assaults on Ukrainian civilians, soldiers and police continued the gut-wrenching work of removing and burying bodies, dozens of which still lay in the streets and in open fields. Some bodies were booby-trapped by the departing Russians, officials said.

The city remained almost entirely deserted, as mine-clearing teams searched methodically for hidden bombs. On Vokzalna Street near the train station, the blackened hulks of Russian tanks, all destroyed in a fierce counterattack by Ukrainian forces, sat in an eerie silence that was punctuated only by the barking of stray dogs.

The images from Bucha have evoked shock and condemnation around the world, including at the United Nations, where dozens of countries have backed an effort to boot Moscow from the body's Human Rights Council — a move reserved for countries that have repeatedly violated human rights. A vote of the 193-nation body could come as early as Thursday morning at the U.N. headquarters in New York.

The U.S. sanctions announced on Wednesday targeted Sberbank and Alfa Bank — two of Russia's biggest financial institutions — and two daughters of the Russian president, Katerina Tikhonova and Mariya Putina. U.S. officials say much of the Putin family's enormous wealth is stashed away in accounts held by family members. The White House also is seeking new economic sanctions against state-owned Russian enterprises involved in shipbuilding and aircraft manufacturing, as well as relatives of Russian Foreign Minister Sergei Lavrov.

Members of the 27-nation European Union were preparing to decide Thursday on a measure banning all imports of Russian coal, a key revenue source for Moscow, even as NATO leaders discuss ways to further isolate Russia while bolstering Ukraine's ability to defend itself.

"Today, tomorrow, we'll continue to talk about not only how we can sustain these efforts but how we can build upon them," U.S. Secretary of State Antony Blinken told reporters. He was flanked by NATO Secretary General Jens Stoltenberg, who earlier in the day warned that the conflict could become protracted despite the surge of Western military support to Ukrainian forces.

"We have to be realistic and realize that this may last for a long time, for many months, for even years," Stoltenberg said. "And that's the reason why we need also to be prepared for the long haul."

Britain launched additional sanctions against eight Russian oligarchs and two Russian banks and vowed to end all dependency on Russian coal and oil by the end of 2022. "We are showing the Russian elite that they cannot wash their hands of the atrocities committed on Putin's orders," Foreign Secretary Liz Truss said.

In Washington, the Justice Department announced indictments against Russian oligarch Konstantin Malofeyev, who U.S. officials accused of illegally supporting pro-Russian separatists in Ukraine. Speaking at a news conference, Attorney General Merrick Garland also announced the successful disruption of a global "botnet" — or network of hacked computers — that he said was controlled by the Russian military intelligence agency known as the GRU. Moscow has used similar networks to attack Ukrainian targets, Garland said.

"It does not matter how far you sail your yacht. It does not matter how well you conceal your assets. It does not matter how cleverly you write your malware or hide your online activity,"

Garland said. “The Justice Department will use every available tool to find you, disrupt your plots and hold you accountable.”

## **27. Ukraine’s surprise strike on Russian fleet hobbles Putin’s Donbas strategy**

Wall Street Journal, 6 Apr 22, Brett Forrest and Nancy A. Youssef

A surprise Ukrainian strike on a Russian ship at a southern port city last month could curb Moscow’s plan to expand its hold on the Donbas region, eliminating a key military advantage in the Russian attack plan, Ukrainian military analysts and U.S. officials said.

The March 24 offensive against Russian navy ships docked at a captured port in Berdyansk on the Azov Sea was the first major strike on the Russian fleet, Ukrainian and U.S. officials said. The attack destroyed a ship laden with supplies, drove others back into the sea, and damaged the port facilities.

The strike ended the presumption that Russian ships could attack without the threat of a Ukrainian reply. And it has limited Russia’s ability to fire missiles and artillery as it pivots its assault toward Donbas in Ukraine’s east, said retired Adm. James Foggo, who commanded U.S. Naval Forces Europe-Africa.

Hours after the strike, Russia moved its ships in port out to sea, making it harder for them to attack Ukraine’s cities and preventing them from supporting ground forces.

“It’s a major logistical blow,” Adm. Foggo said. “It’s an ‘aha!’ moment for the Russians. Despite the damage they have done inside Ukraine, Ukrainian forces are still capable of conducting offensive strikes with precision.”

Residents in the Ukraine town of Borodyanka surveyed damage. Officials urged civilians to leave eastern regions as they braced for a major new Russian offensive. The West announced new sanctions on Russian banks and citizens, including on two daughters of Vladimir Putin. Photo: I-Images/Zuma Press

In the nearly two weeks since the strike, Russia’s navy hasn’t launched any major attacks on Ukrainian cities, although it has struck targets around a few of them. On Sunday, missiles from Russian ships struck the Ukrainian port city of Odessa, hitting infrastructure.

Russia’s military made port cities a priority during its assault into Ukraine. It seized the city of Berdyansk, a key foothold for its future attacks in strategically important cities such as Mariupol, just days into its invasion of Ukraine, soon boasting of the advantage the port would afford its war effort.

Quickly putting the port to use, Russia landed huge ships carrying as much as 2,000 tons of supplies each for its ground forces in the Ukrainian south. The Russians ejected Ukrainian cargo ships, dredgers and a tug, then berthed their own ships carrying multiple-launch rocket systems to provide cover for troops moving into the region.

The ships at Berdyansk were only lightly defended, as the nearest Ukrainian forces were about 60 miles away.

“The Russians thought Ukraine didn’t have any capability to reach them,” said Andrii Ryzhenko, a former Ukrainian navy captain now with the Center for Defense Strategies, a Kyiv think tank with close ties to the military. “But Ukraine had the capability.”

By the early weeks of the war, Russia had as many as 22 ships in the Black Sea and another dozen in the Azov Sea, U.S. officials said. At least half of those in the Azov Sea were docked at Berdyansk—“sitting ducks,” said Bryan Clark, a senior fellow at the Hudson Institute, a conservative think tank in Washington.

“It’s just an example of how cavalier Russia’s operations have been about keeping ships at shore,” Mr. Clark said.

Russia had major advantages over the Ukrainian navy for nearly a decade. It captured and destroyed much of the Ukrainian navy at the port of Sevastopol during Moscow’s 2014 seizure of Crimea, expanding its influence over the Black Sea. And in the run-up to the Feb. 24 invasion, Russia moved much of its navy from as far as the Baltic Sea toward Ukraine’s shores.

The Azov Sea, a small, shallow body of water bounded by Russia, Ukraine and the Crimean Peninsula, has been strategically important for centuries. Ships operating off the Azov Sea coast took part in the Russian assault on the southern city of Mariupol, military analysts said, firing artillery into Mariupol with little risk from Ukraine’s defenses. The ships also held supplies for nearby ground forces and provided another line of defense to troops and tanks entering Mariupol.

The Azov Sea is also the fastest supply route between Russia and Crimea, because Ukrainian forces destroyed the rail lines between the two in 2014. From the Russian port of Temryuk, it is faster for Moscow to deliver troops and supplies by sea to Berdyansk than to drive them over the bridge that spans the Kerch Strait, then north through Crimea and eastward over a strip of captured Ukrainian coastline.

On March 24, Ukraine fired a Tochka-U ballistic missile at the port, Mr. Ryzhenko said. The missile struck the Saratov, a Cold War-era landing vessel designed to ferry troops and equipment ashore through a ramp at the bow. As the Saratov foundered, other ships fled the Berdyansk port under a plume of smoke. The attack also damaged the port, according to satellite images.

U.S. defense officials warned that Russia could be making adjustments in the sea, much as it is doing around the Ukrainian capital. Russia said it was repositioning its forces around Kyiv, which U.S. officials described as a regrouping based on battlefield losses and logistical challenges.

Since the strike, Russia had withdrawn all but three ships from the Azov Sea as of last week, a U.S. senior defense official said, hindering Moscow’s ability to supply troops in the Ukrainian south.

Meanwhile, the Kremlin late last month said it was shifting its mission to Ukraine's east, aiming to consolidate control over Donbas, its initial plan to quickly take Kyiv fading under relentless Ukrainian resistance.

The Berdyansk strike could also have a wide-reaching impact on the ability of Russia's navy to support its army.

With the damaged Berdyansk port off limits to ships for weeks, Russia's capacity to land troops there and in the vicinity of Odessa has diminished, especially as nearby Mykolaiv remains in Ukrainian control, analysts said.

"After the attack on landing ships in Berdyansk, the Russian Federation will be forced to take several, possibly two or three, landing ships from the Black Sea to the Azov Sea," said Andrii Klymenko, a defense and maritime analyst with the Black Sea Institute of Strategic Studies, a Ukrainian think tank. "This will weaken landing capabilities."

## **28. Russia is recruiting mercenaries and Syrians to Ukraine, Western officials say**

New York Times, 6 Apr 22, Eric Schmitt, Julian E. Barnes and Helene Cooper

As Russian troops retreat from northern Ukraine and focus operations on the country's east and south, the Kremlin is struggling to scrape together enough combat-ready reinforcements to conduct a new phase of the war, according to American and other Western military and intelligence officials.

Moscow initially sent 75 percent of its main ground combat forces into the war in February, Pentagon officials said. But much of that army of more than 150,000 troops is now a spent force, after suffering logistics problems, flagging morale and devastating casualties inflicted by stiffer-than-expected Ukrainian resistance, military and intelligence officials say.

There are relatively few fresh Russian troops to fill the breach. Russia has withdrawn the forces — as many as 40,000 soldiers — it had arrayed around Kyiv and Chernihiv, two cities in the north, to rearm and resupply in Russia and neighboring Belarus before most likely repositioning them in eastern Ukraine in the next few weeks, U.S. officials say.

The Kremlin is also rushing to the east a mix of Russian mercenaries, Syrian fighters, new conscripts and regular Russian army troops from Georgia and easternmost Russia.

Whether this weakened but still very lethal Russian force can overcome its blunders of the first six weeks of combat and accomplish a narrower set of war aims in a smaller swath of the country remains an open question, senior U.S. officials and analysts said.

"Russia still has forces available to outnumber Ukraine's, and Russia is now concentrating its military power on fewer lines of attack, but this does not mean that Russia will succeed in the east," Jake Sullivan, President Biden's national security adviser, said on Monday.

“The next stage of this conflict may very well be protracted,” Mr. Sullivan said. He added that Russia would probably send “tens of thousands of soldiers to the front line in Ukraine’s east,” and continue to rain rockets, missiles and mortars on Kyiv, Odesa, Kharkiv, Lviv and other cities.

U.S. officials have based their assessments on satellite imagery, electronic intercepts, Ukrainian battlefield reports and other information, and those intelligence estimates have been backed up by independent analysts examining commercially available information.

Earlier U.S. intelligence assessments of the Russian government’s intent to attack Ukraine proved accurate, although some lawmakers said spy agencies overestimated the Russian military’s ability to advance quickly.

As the invasion faltered, U.S. and European officials have highlighted the Russian military’s errors and logistical problems, though they have cautioned that Moscow’s ability to regroup should not be underestimated.

The Ukrainian military has managed to reclaim territory around Kyiv and Chernihiv, attacking the Russians as they retreat; thwarted a ground attack against Odesa in the south and held on in Mariupol, the battered and besieged city on the Black Sea. Ukraine is now receiving T-72 battle tanks, infantry fighting vehicles and other heavy weapons — in addition to Javelin antitank and Stinger anti-aircraft missiles — from the West.

Anticipating this next major phase of the war in the east, the Pentagon announced late Tuesday that it was sending \$100 million worth of Javelin anti-tank missiles — roughly several hundred missiles from Pentagon stocks — to Ukraine, where the weapon has been very effective in destroying Russian tanks and other armored vehicles.

American and European officials believe that the Russian military’s shift in focus is aimed at correcting some of the mistakes that have led to its failure to overcome a Ukrainian army that is far stronger and savvier than Moscow initially assessed.

But the officials said it remained to be seen how effective Russia would be in building up its forces to renew its attack. And there are early signs that pulling Russian troops and mercenaries from Georgia, Syria and Libya could complicate the Kremlin’s priorities in those countries.

Some officials say Russia will try to go in with more heavy artillery. By focusing its forces in smaller geographic areas, and moving them closer to supply routes into Russia, Western intelligence officials said, Russia hopes to avoid the logistics problems its troops suffered in their failed attack on Kyiv.

Other European intelligence officials predicted it would take Russian forces one to two weeks to regroup and refocus before they could press a major offensive in eastern Ukraine, where Russian-backed separatists have been fighting for eight years. Western officials said that President Vladimir V. Putin of Russia was desperate for some kind of win by May 9, when Russia traditionally celebrates the end of World War II with a big Victory Day parade in Red Square.

“What we are seeing now is that the Kremlin is trying to achieve some kind of success on the ground to pretend there is a victory for its domestic audience by the 9th of May,” said Mikk Marran, the director general of the Estonian Foreign Intelligence Service.

Mr. Putin would like to consolidate control of the Donetsk and Luhansk regions of eastern Ukraine, and establish a land bridge to the Crimean Peninsula by early May, a senior Western intelligence official said.

Russia has already moved air assets to the east in preparation for the renewed attack on the heart of the Ukrainian military, and has increased aerial bombardment in that area in recent days, a European diplomat and other officials said.

“It’s a particularly dangerous scenario for the Ukrainians now, at least on paper,” said Alexander S. Vindman, an expert on Ukraine who became the chief witness in President Donald J. Trump’s first impeachment trial. “In reality, the Russians haven’t performed superbly well. Whether they could actually bring to bear their armor, their infantry, their artillery and air power in a concerted way to destroy larger Ukrainian formations is yet to be seen.”

Russian troops have been fighting in groups of a few hundred soldiers, rather than in the bigger and more effective formations of thousands of soldiers used in the past.

“We haven’t seen any indication that they have the ability to adapt,” said Mick Mulroy, a former senior Pentagon official and retired C.I.A. officer.

The number of Russian losses in the war so far remains unknown, though Western intelligence agencies estimate 7,000 to 10,000 killed and 20,000 to 30,000 wounded. Thousands more have been captured or are missing in action.

The Russian military, the Western and European officials said, has learned at least one major lesson from its failures: the need to concentrate forces, rather than spread them out.

But Moscow is trying to find additional forces, according to intelligence officials.

Russia’s best forces, its two airborne divisions and the First Guards Tank army, have suffered significant casualties and an erosion of combat power, and the military has scoured its army looking for reinforcements.

The British Defense Ministry and the Institute for the Study of War, a Washington think tank that analyzes the Ukraine war, both reported on Tuesday that the Russian troops withdrawing from Kyiv and Chernihiv would not be fit for redeployment soon.

“The Russians have no ability to rebuild their destroyed vehicles and weapon systems because of foreign components, which they can no longer get,” said Maj. Gen. Michael S. Repass, a former commander of U.S. Special Operations forces in Europe who has been involved with Ukrainian defense matters since 2016.

Russian forces arriving from Abkhazia and South Ossetia, two secessionist statelets that broke away from Georgia during the 1990s and then expanded in 2008, have been conducting peacekeeping duties and are not combat ready, General Repass said.

Russia's problems finding additional troops are in large measure why it has invited Syrian fighters, Chechens and Russian mercenaries to serve as reinforcements. But these additional forces number in the hundreds, not thousands, European intelligence officials said.

The Chechen force, one of the European intelligence officials said, is "clearly used to sow fear." The Chechen units are not better fighters and have suffered high losses. But they have been used in urban combat situations and for "the dirtiest kind of work," the official said.

Russian mercenaries with combat experience in Syria and Libya are gearing up to assume an increasingly active role in a phase of the war that Moscow now says is its top priority: fighting in the country's east.

The number of mercenaries deployed to Ukraine from the Wagner Group, a private military force with ties to Mr. Putin, is expected to more than triple to at least 1,000 from the early days of the invasion, a senior American official said.

Wagner is also relocating artillery, air defenses and radar that it had used in Libya to Ukraine, the official said.

Moving mercenaries will "backfire because these are units that can't be incorporated into the regular army, and we know that they are brutal violators of human rights which will only turn Ukrainian and world opinion further against Russia," said Evelyn N. Farkas, the top Pentagon official for Russia and Ukraine during the Obama administration.

Hundreds of Syrian fighters could also be heading to Ukraine, in what would effectively return a favor to Moscow for its helping President Bashar al-Assad crush rebels in an 11-year civil war.

A contingent of at least 300 Syrian soldiers has already arrived in Russia for regular training, but it was unclear if or when they would be sent to Ukraine, officials said.

"They are bringing in fighters known for brutality in the hopes of breaking the Ukrainian will to fight," said Kori Schake, the director of foreign and defense policy studies at the American Enterprise Institute. But, she added, any military gains there for Russia will depend on the willingness of the foreign fighters to fight.

"One of the difficult things about putting together a coalition of disparate interests is that it can be hard to make them an effective fighting force," she said.

Finally, Mr. Putin recently signed a decree calling up 134,000 conscripts. It will take months to train the recruits, though Moscow could opt to rush them straight to the front lines with little or no instruction, officials said.

“Russia is short on troops and is looking to get manpower where they can,” said Michael Kofman, the director of Russian studies at C.N.A., a research institute in Arlington, Va. “They are not well placed for a prolonged war against Ukraine.”

## **29. Pentagon: Russia has fully withdrawn from Kyiv, Chernihiv**

Washington Post, 6 Apr 22, Karoun Demirjian and Dan Lamothe

Russian forces have fully withdrawn from the Ukrainian capital, Kyiv, and the city of Chernihiv to its north, the Pentagon said Wednesday, as Moscow prepares to concentrate its invading forces in the eastern part of the country.

“We are assessing that all of the Russians have left,” said a senior U.S. defense official, speaking on the condition of anonymity under terms set by the Pentagon. Their full departure was confirmed only in the last 24 hours, this person said, cautioning that Russian forces may have left mines in their wake that would still need to be cleared.

U.S. and European intelligence officials have been tracking for days that Russia is in the midst of reorienting after encountering fierce resistance and suffering thousands of casualties in northern Ukraine. Moscow enjoys greater support in the east, where Ukrainian forces and Russian-backed separatists have been locked in a grinding conflict for many years.

But while Russia’s withdrawal from Ukraine’s capital region appears to be complete, with many units retreating through Belarus, the Pentagon has yet to see those personnel reenter eastern Ukraine, the senior defense official said Wednesday.

The United States announced Tuesday night the approval of an additional \$100 million in military assistance for Ukraine, a move made in part to ensure Ukrainian forces will have the weapons they need to fight for the Donbas region, the official said. There is a particularly “urgent” need for Javelin anti-armor systems, Pentagon spokesman John Kirby noted Wednesday.

Kirby said that earlier this week the United States also sent Ukraine 100 Switchblade drones, which can be loaded with explosives and flown into enemy targets, and that a “very small number” of Ukrainian soldiers receiving military education in the United States since the fall had been taught how to use them. The Switchblade — what some analysts have termed a “kamikaze” drone — is not a complex system, Kirby said, noting that personnel could be trained how to use them in about two days.

On average, it is taking the United States about four days to ship weapons to pass-off points outside Ukraine, and another day or two for those shipments to enter the country, Kirby said, adding that such transfers have “never been done that fast before.”

Kirby expressed some confidence Wednesday that Ukraine “can win this,” arguing that Russian President Vladimir Putin has achieved “exactly zero” of his strategic objectives thus far. But the

Pentagon continues to caution that even though the war's epicenter appears to be shifting, serious threats remain.

There are more than 30 Russian battalion tactical groups operating in the Donbas region, according to Pentagon estimates.

Earlier this week, national security adviser Jake Sullivan predicted that if Russia could successfully regroup in the Donbas region, it may seek to push out from there into other parts of Ukraine.

"It's not like Kyiv is somehow immune from further attack," the senior U.S. defense official said Wednesday.

More than 80 of the approximately 130 battalion tactical groups that Russia deployed into Ukraine continue to operate in the country, this official added, estimating that such groups each contain 800 to 1,000 troops.

### **30. China's security deal with Solomons raises alarm in Pacific**

Associated Press, 6 Apr 22, Nick Perry and David Rising

A security alliance between China and the Solomon Islands has sent shudders throughout the South Pacific, with many worried it could set off a large-scale military buildup or that Western animosity to the deal could play into China's hands.

What remains most unclear is the extent of China's ambitions.

A Chinese military presence in the Solomons would put it not only on the doorstep of Australia and New Zealand but also in close proximity to Guam, with its massive U.S. military bases.

China so far operates just one acknowledged foreign military base, in the impoverished but strategically important Horn of Africa nation of Djibouti. Many believe that China's People's Liberation Army is busy establishing an overseas military network, even if they don't use the term "base."

The Solomon Islands government says a draft of its agreement with China was initialed last week and will be "cleaned up" and signed soon.

The draft, which was leaked online, says that Chinese warships could stop in the Solomons for "logistical replenishment" and that China could send police, military personnel and other armed forces to the Solomons "to assist in maintaining social order."

The draft agreement specifies China must approve what information is disclosed about joint security arrangements, including at media briefings.

The Solomon Islands, home to about 700,000 people, switched diplomatic recognition from Taiwan to Beijing in 2019 — a move rejected by the most populous province and a contributing factor to riots last November.

U.S. Secretary of State Antony Blinken responded in February by saying that Washington would reopen its embassy in the capital, Honiara, which has been closed since 1993, to increase its influence in the Solomons before China becomes “strongly embedded.”

Both China and the Solomons have strongly denied the new pact will lead to the establishment of a Chinese military base. The Solomon Islands government said the pact is necessary because of its limited ability to deal with violent uprisings like the one in November.

“The country has been ruined by recurring internal violence for years,” the government said this week.

But Australia, New Zealand and the U.S. have all expressed alarm about the deal, with New Zealand Prime Minister Jacinda Ardern describing it as “gravely concerning.”

David Panuelo, the president of nearby Micronesia, which has close ties to the U.S., wrote an impassioned letter to Solomon Islands Prime Minister Manasseh Sogavare asking him to rethink the agreement.

He noted that both Micronesia and the Solomon Islands were battlegrounds during World War II, caught up in the clash of great powers.

“I am confident that neither of us wishes to see a conflict of that scope or scale ever again, and most particularly in our own backyards,” Panuelo wrote.

But the Solomon Islands police minister mocked Panuelo's concerns on social media, saying he should be more worried about his own atoll being swallowed by the ocean due to climate change.

Sogavare has likewise dismissed foreign criticism of the security agreement as insulting, while labeling those who leaked the draft as “lunatics.”

China's Foreign Ministry spokesperson said the agreement aims to maintain the safety of people's lives and property, and “does not have any military overtones,” saying media speculation on the potential development of a base was groundless.

Euan Graham, a senior fellow at the International Institute for Strategic Studies based in Singapore, said China has been pursuing such a port facility for some five years as it aims to expand its naval presence in the South Pacific as part of Beijing's long-game of seeking to become the dominant regional power.

“If they want to break out into the Pacific, at some point they will need the logistics capability to support that presence,” Graham said. “We're not talking about war plans here; this is really about extending their presence and influence.”

Unlike the base built in Djibouti, where China has commercial interests in the region to protect, Graham said any operation in the Solomon Islands would likely be less substantial.

“It’s quite a subtle and interesting geopolitical game that’s emerged in the South Pacific,” he added. “And I think the Chinese have been very successful, if you like, in outflanking the United States and Australia in an influence competition, not a military competition.”

China's base in Djibouti was opened in 2017. China doesn't call it a base, but rather a support facility for its naval operations fending off piracy in the Gulf of Aden and for its African peacekeeping operations. It boasts a 400-meter (1,300-foot) runway and a pier big enough to dock either of China’s two operating aircraft carriers.

The base, with 2,000 personnel, allows China to position supplies, troops and equipment in a strategically crucial region, while also keeping an eye on U.S. forces that are stationed nearby.

Chief among other potential base candidates is Cambodia, whose authoritarian leader Hun Sen has long been a trusted Chinese ally and which reportedly signed a secret 2019 agreement permitting the establishment of a Chinese base.

China is dredging the harbor at Ream Naval Base to allow ships larger than any Cambodia possesses to dock, and is building new infrastructure to replace a U.S.-built naval tactical headquarters. A Chinese base in Cambodia would establish a chokepoint in the Gulf of Thailand close to the crucial Malacca Strait.

China has also funded projects at Gwadar in Pakistan, another close ally, and in Sri Lanka, where Chinese infrastructure lending has forced the government to hand over control of the southern port of Hambantota.

Especially intriguing has been an alleged Chinese push to establish a base in the West African nation of Equatorial Guinea. That would give China a presence on the Atlantic opposite the east coast of the continental United States as well as in an important African oil-producing region.

“China has seized opportunities to expand its influence at a time when the U.S. and other countries have not been as engaged economically in the Pacific islands,” said Elizabeth Wishnick, an expert on Chinese foreign policy at Montclair State University in New Jersey.

About 80 years ago in the Solomon Islands, the U.S. military began its famous “island hopping” campaign of World War II to take back Pacific islands from Imperial Japanese forces one-by-one. It successfully won back the main island of Guadalcanal in February 1943 after some six months of fierce fighting.

Today, the Solomon Islands would give China the potential ability to interfere with U.S. naval operations in the region that could be crucial in the event of a conflict over Taiwan or in the South and East China seas.

Lt. Gen. Greg Bilton, Australia’s chief of joint operations, said that if Chinese naval ships were able to operate from the Solomon Islands it would “change the calculus.”

“They’re in much closer proximity to the Australian mainland, obviously, and that would change the way that we would undertake day-to-day operations, particularly in the air and at sea,” he told reporters.

But Jonathan Pryke, the director of the Pacific Islands Program at the Lowy Institute, an Australian think tank, said he thinks that leaders have overreacted to the agreement, perhaps in Australia's case because there is an election looming.

“It's clearly getting everyone very animated in the West and very alarmed,” Pryke said. “But I don't think it markedly changes things on the ground.”

He said the pact could be seen as the first step toward China establishing a base, but there would need to be many more steps taken before that could happen.

“I think the alarmism has strengthened China's hand by pushing the Solomon Islands into a corner,” Pryke said. “And they've reacted the way I imagine many countries would react from getting this outside pressure — by pushing back, and digging their heels in.”

## ANALYSIS/COMMENTARY

---

### **31. Finland may finally want in on NATO; Sweden is not far behind.**

Foreign Policy, 6 Apr 22, Robbie Gramer and Amy Mackinnon

Just over two months ago, the prospect of Finland joining NATO was virtually unthinkable to most in the northern European country. It had grown closer to the military alliance over the last three decades but resisted the idea of becoming a full-fledged member.

That all changed when tens of thousands of Russian troops rolled across Ukraine's border in late February.

Now, top Finnish leaders are edging closer to joining NATO, buoyed by a drastic turnaround in Finnish public opinion that went from opposing the move to supporting it virtually overnight.

“It has been a major change,” said Pete Piirainen, a visiting senior fellow at the Finnish Institute of International Affairs. “We feel Russia broke the rules, broke the international system and security architecture.”

Finland's sudden shift on NATO membership is a sea change in Europe's security environment in the wake of Russia's invasion of Ukraine, one that could drastically alter the map of the showdown between Russia and the West.

If Finland were to join the alliance, the total land border between NATO territory and Russia would more than double, from around 754 miles currently to nearly 1,600 miles. It would also extend NATO's northern flank across the full length of the border with Russia's strategically

important Murmansk region and Kola Peninsula, where a sizable chunk of Russia's navy is based.

A similar debate over NATO membership is playing out in neighboring Sweden, another longtime partner of the alliance that had spurned full membership for decades—until Russia's brazen invasion of Ukraine. Of the two countries, it is the Swedish public that has historically been more open to membership of the military alliance than their Finnish neighbors. That is no longer the case. "The biggest momentum is in Finland, and that has been a bit surprising actually," said Anna Wieslander, director of the Institute for Security and Development Policy, a Swedish think tank.

In the days after Russia's invasion of Ukraine in February, support for NATO membership in Finland surged into the majority for the first time, reaching 62 percent in a second survey conducted in mid-March by the Finnish public broadcaster. In Sweden, 51 percent now support NATO membership, according to a poll from early March, up from 42 percent in January.

Although Finland is edging closer to NATO membership than Sweden, most analysts and diplomats agree that the countries are a package deal. If one joins, the other is likely to follow suit. Given their shared geography on the Scandinavian Peninsula—along with NATO member Norway—the alliance would prefer if the two countries joined at the same time. "[With] that, you will have one new solution for the security arrangements," Wieslander said.

"Finland is on a path toward membership. I think now it's a question of when, not if," said Erik Brattberg, an expert on trans-Atlantic security with the Albright Stonebridge Group, a consulting firm. "I think Sweden is still adjusting to the new geopolitical reality. It has been slower in that adjustment, but they are also moving in the same direction."

NATO members seem universally ready to welcome Sweden and Finland with open arms. Diplomats from Germany, Britain, France, Canada, Lithuania, and Estonia all told Foreign Policy their governments would likely support Finland and Sweden's membership bid.

Julianne Smith, the U.S. ambassador to NATO, said Washington would "welcome" the two new members but stressed it was up to the governments in Helsinki and Stockholm to make the first move. "They bring very capable militaries. They are some of our closest allies in Europe, and so I can't imagine a situation where there would be tremendous resistance to this idea," she told reporters in a briefing on Tuesday. "Quite the contrary, I think NATO allies would be generally enthusiastic."

The Finnish government is working on a white paper on security due to be released this month, which will fuel conversation about NATO membership ahead of the security alliance's summit in Madrid in June. The white paper will "clearly influence the debate here in Sweden as well," Wieslander said.

Brattberg said the ruling party in Sweden, the center-left Swedish Social Democratic Party, appears to be starting to shift its foreign-policy platform in the wake of Russia's war, prodded in part by the center-right parties in opposition to renewing a push for NATO membership. "The

Social Democratic Party has traditionally, historically stood for Swedish neutrality ... and military nonalignment,” Brattberg said. “But even amongst leading Social Democrats in Sweden, that stance is increasingly being seen as less and less relevant in a new era marked by the Russian invasion of Ukraine.”

The question of NATO membership is likely to factor higher than ever before in debate ahead of the Swedish general election scheduled for September. The country’s Moderate Party has already announced that it would back membership of the military alliance.

The prospect of Finland and Sweden joining NATO is likely to further inflame tensions between Russia and the NATO alliance. The Kremlin has characterized the alliance, borne out of the Cold War rivalry between the Soviet Union and the West, as its top geopolitical foe and signaled that Ukraine’s prospective NATO membership played a major role in its decision to fully invade the country. A senior Russian diplomat warned last month that there would be “serious military and political consequences” if the two countries joined the alliance.

Finland’s ambassador to Washington, Mikko Hautala, told Foreign Policy in an interview that he expected a reaction from Moscow if Finland or Sweden were to move ahead with applying to NATO. “[At] a minimum, we will see information influencing ... those kind of activities,” he said. “But it’s hard to say what the reaction would be.”

During the Cold War, as Europe was carved up into spheres of influence, Finland opted for neutrality, serving as an important buffer between the East and the West. The collapse of the Soviet Union gave Finland more room to maneuver in its foreign policy, joining the European Union in 1995 and deepening its cooperation with NATO. “We are basically as close to NATO as you can get without being a member,” Hautala said.

Smith, the U.S. NATO ambassador, said the Kremlin’s fierce opposition to NATO enlargement wouldn’t deter allies from welcoming new members, even in the face of a full-scale Russian war in Ukraine. “Russia tried its very best in recent months to try and get NATO allies to revisit that policy,” she said. “It sent a treaty requesting that NATO basically turn off the process of NATO enlargement, and the answer that came back in stereo surround sound from all 30 allies was: absolutely not. NATO’s door will remain open—full stop.”

NATO diplomats say Finland brings more advantages to the alliance than just military hardware. Few countries know how Russia works better than Finland—at least as well as foreign countries can in the shadowy and opaque power structure that Russian President Vladimir Putin has built. They say adding Finland’s expertise and experience in balancing relations with its larger eastern neighbor would add significant value to the alliance.

Other experts on trans-Atlantic security said while Russia would likely condemn Finland and Sweden’s membership, it doesn’t view those countries in the same light as other prospective members that used to be in the Soviet Union and, at least in the eyes of Putin, should fall under Moscow’s orbit.

“Russia would be furious, but I don’t think it would react the same way if, say, Georgia or Ukraine were on a clear track to NATO membership now,” said Rachel Rizzo, a nonresident senior fellow at the Atlantic Council think tank.

### **32. Don’t let Putin win in Ukraine**

Wall Street Journal, 6 Apr 22, Daniel Henninger

In no sense now can Vladimir Putin be allowed to win in Ukraine. People shouldn’t have to be shot in the back of the head with their hands tied behind them to make that clear, but such is history’s record of humanity slow-walking counterattacks against mass slaughter.

Mr. Putin was going to defeat Ukraine quickly. Now he isn’t. But he can still win if the West’s commitments to Ukraine, however impressive, produce a frozen conflict, as Joint Chiefs of Staff Gen. Mark Milley predicted to Congress Tuesday when he said the conflict could last “years for sure.” Time like that is Mr. Putin’s friend because he has Stalin’s stomach for death, and eventually we won’t.

It is good in the wake of the Bucha atrocities that President Biden and Europe’s leaders are talking about holding Mr. Putin and his associates accountable for war crimes—once it is possible to collect evidence. Still, one doesn’t have to be Volodymyr Zelensky to notice that these good intentions have little to do with the reality that the current level of help from the North Atlantic Treaty Organization still leaves Ukraine in purgatory, with one foot in Mr. Putin’s hell and the other stretching toward deliverance by the West.

A stirring of moral sensibilities is always welcome, but Bucha, Mariupol and these events have surfaced new realities that the West’s political leadership can’t pretend away into some future when, as they hope, this is over.

A few weeks ago, it was possible at least to describe as an endgame talking point the possibility that Ukraine would be divided into western and eastern parts, ceding control to Russia of the Donetsk and Luhansk regions in eastern Donbas and possibly Crimea if the Putin army establishes a land bridge through Mariupol.

That result, however, assumed the war would default into a traditional military standoff between competing armies. That’s not what is happening in Ukraine. It is increasingly clear that after failing to secure a quick win, Mr. Putin’s Plan B is scorched earth.

Using crudely targeted long-range missiles, land mines and his army’s historic instinct to barbarity, he is simply destroying Ukraine—its people, its economy, whole cities and infrastructure. After the current “pause,” he’ll go back for more.

The consequences of this obviously unexpected scale of destruction are significant for the West’s calculations. At this point all the arguments, such as they are, for affirming a negotiated settlement that turns so much of Ukraine over to Mr. Putin have become impossible to credit.

It will take a decade and unimaginable amounts of capital to rebuild what Mr. Putin has destroyed. Who exactly is going to do that? Dividing Ukraine in two would effectively turn the eastern part into a Cold War East Germany, which would create the destabilizing post-Yalta imbalances that existed for decades between the wealthy West and those living in the Third World East.

To rebuild the Ukraine under his control, Mr. Putin would have to send vast amounts of his oil and gas revenue into the region. Fat chance of that on the scale needed.

Any serious rebuilding of Mariupol, Mykolaiv and other cities ceded to Russia will never happen without capital investments from Western banks and governments, making us the morally humiliated paymasters for Mr. Putin's demolition. Why is this man smiling?

Until the invasion, Ukraine's economy was growing, including a vital new technology sector, and leaning toward the West. Absent the Putin lunacy, Ukraine could have become an economic "land bridge" between the European Union nations to the west and the modern economy younger Russians were building to the east. Now much of Ukraine is rubble, and the Russian market will be a ruin for years.

Any notion Russians themselves may have entertained that somewhere at the bottom of all this was a rationale for uniting with the medieval political state known as the Kievan Rus is now exposed as a gross lie by their leader. Mr. Putin was willing to settle for nothing more than the dirt.

In the absence of anything but passing press contact with the U.S. president, a question often put to those who interpret for Mr. Biden at the White House, Pentagon and State Department is whether we want Ukraine to win. After this week, I think the better question is: Are we willing to make Mr. Putin lose?

Saying that he's experiencing a "strategic defeat" is a dodge. Every day—or year—that he is killing and wrecking, he's winning. Vladimir Putin has to lose in Ukraine, not only in the eyes of the aghast outside world. NATO's current military and political status quo—the arms flows and ratcheting sanctions—just isn't enough.

It's a terrible thing to say, but one suspects that for some in Washington, Berlin and Paris, the world's roaring moral outrage at these atrocities lets them kick the harder decisions about raising the military costs for Mr. Putin into another week. If the media is writing about Bucha, genocide and war crimes, the argument fades for sending Ukraine high-altitude missile defenses, counter-artillery radar and other "escalatory" military equipment.

Eventually, Putin wins. Don't let him.

#### **44. Russia-Ukraine war casts new shadow over Syria**

Middle East Eye, 7 Mar 22

The Ukraine and Syria conflicts have long been intertwined. One of Russian President Vladimir Putin's motivations for intervening in Syria in the first place was to break out of the diplomatic isolation he faced after annexing Crimea in 2014.

#### **45. Blue-eyed refugees first**

Daily Sabah, 7 Mar 22, Ibrahim Karataş

People of the Middle East have been suffering from either civil wars or foreign intervention for decades. It is possible that more than 1 million people have been killed by dictators or invaders during that time. In addition, millions have been displaced and immigrated to neighboring countries or Europe. Surprisingly (or not), the two big invaders, namely the U.S. and Russia, host almost no refugees though they are perpetrators.

#### **46. Ukrainian-Russian crisis exposes racism in Western media coverage — journalists**

Jordan Times, 7 Mar 22, Batool Ghaith

The Ukrainian-Russian crisis has revealed deep-rooted racism in Western media's coverage of the conflict, according to experts. Over the past week, multiple Western politicians and journalists have used discriminatory language, based on race and religion while discussing the recent invasion of Ukraine by Russia, sparking anger globally, especially in the Middle East.

#### **47. As Kyiv burns, a new world order emerges**

Arab News, 7 Mar 22

If only all humanitarian crises inspired such global unity and resolve! In a few short days we have been living through the traumatic birth pains of an entirely new geopolitical order, with profound and unpredictable reverberations for decades to come.

#### **48. Russia-Ukraine: Another Cold War?**

The Nation (Pakistan), 8 Mar 22, Dr Atique Ur Rehman

Torture. “His transfer is a welcome incremental step, but the Biden administration needs to act much faster and more comprehensively to close Guantánamo than it has so far.”

The transfer leaves 38 detainees at Guantánamo, half of them approved for release if the State Department can reach security agreements with receiving countries. Of the rest, 12 have been charged with war crimes, including two men who have been convicted.

The other seven are held as “law of war” prisoners, essentially detained indefinitely because the United States considers them too dangerous to release. Their cases are reviewed periodically by a U.S. government panel, which can recommend a transfer with certain security measures, including restrictions on travel or to detention in overseas prisons.

## **16. Russia-Ukraine central to Blinken talks with Israel minister**

Associated Press, 7 Mar 22, Matthew Lee

U.S. Secretary of State Antony Blinken on Monday thanked Israel for its efforts to end Russia’s war with Ukraine as he and his Israeli counterpart met to discuss the conflict and ongoing nuclear talks with Iran in Vienna.

Blinken said that any initiative to try to halt the conflict would be welcome as long as the move is consistent with U.S., NATO and European principles that Ukraine’s independence, sovereignty and territorial integrity are respected.

He made the comments as he and Israeli Foreign Minister Yair Lapid sat down for hastily arranged talks in the Latvian capital of Riga just two days after Israeli Prime Minister Naftali Bennett met with Russian President Vladimir Putin in Moscow.

“We very much appreciate the efforts that any of our close partners and friends and allies can make to see if there’s any opening to end the war consistent, of course, with the principles that we’ve all established,” Blinken told Lapid.

“I look forward to hearing your ideas, hearing about some of the engagements that Israel has had, but we appreciate all efforts by friends and allies to look for a diplomatic resolution,” he said.

Lapid, who flew to Latvia especially to brief Blinken on Bennett’s meeting with Putin and express Israel’s grave concern at the prospect of a new nuclear deal with Iran, said the meeting was taking place “at the moment the world order is changing.”

“The war that is going on in Ukraine and the nuclear talks in Vienna are events that are changing the world as we know it,” he said. He said Israel is “totally committed” to doing everything in its power to bring an end to the war in Ukraine.

On Iran, Lapid noted Israel’s concerns about the nuclear negotiations potentially at the point of a breakthrough, saying Israel has well-known differences with the U.S. on a deal even if they share the end goal of preventing Iran from developing a nuclear weapon.

“It’s no secret we have our differences on this, but it’s it’s a conversation between allies that have a common goal, which is preventing Iran from becoming a nuclear threshold country and to stop Iran’s ability to spread terror and instability all around the world,” Lapid said.

Blinken responded that both Israel and the United States are “united and committed to the proposition that Iran must never obtain a nuclear weapon.”

### **17. The real cost of an Iran nuclear deal**

OilPrice.com, 7 Mar 22, Cyril Widdershoven

While Russia’s invasion of Ukraine may be front and center of today’s media coverage, the ongoing JCPOA discussions with Iran in Vienna need to be watched carefully. Under pressure from a growing military conflict in the heart of Europe and steep energy and commodity prices, it now seems that Tehran’s rulers are going to get what they have wanted for so long. While the specifics have not yet been divulged to the public, insiders appear very optimistic that a deal will be reached soon. Some insiders have indicated that an agreement would see Iran quickly return to international markets. The underlying reasons for the recent rapid progress in negotiations, however, hint at the potential of diplomatic and geopolitical miscalculations. Some analysts are warning that the US Midterms and European elections are partly influencing the decisions being made at the negotiating table. High energy and commodity prices are threatening the electoral success of Biden and other European leaders. Perceived domestic pressure to do something about higher gasoline prices or power bills could have forced Western politicians to be much more flexible to Iran’s extremist regime than would have otherwise been the case. Strategic decisions appear to be being pushed through based on misconceptions about the impact that Iran’s vast oil and gas reserves could have on energy prices. At the same time, the ongoing military build-up and regional aggression of the Raisi regime are being largely ignored.

The main underlying political failure here appears to be a failure to recognize that the removal of US sanctions, which were put in place by US President Donald Trump, will not stabilize the Middle East at all. To open up the global financial sector and commodity markets to Iran will be a major mistake, as it gives the extremist regime a new lease on life, while hydrocarbon revenues will be pushed not only into the Iranian economy but also to military procurement, development of ballistic missile systems, drones, and the financing of Iranian proxies in Iraq, Syria, Lebanon, Gaza, and Yemen. The financial gains of the Iranian government will not lead to a push for democratization or strengthen the public interests of Iranians.

At the same time, Iran’s connection to and support of Russia is apparently being ignored. Russia has been using Tehran’s forces in the battle for control of Syria. Moscow clearly understands that the use of Iran in the Middle East has not only pushed Western powers out of the region but can be used as a bargaining chip with major Arab powers, such as Saudi Arabia, the UAE, and even Egypt. Washington and Brussels will understand that any action they take with Iran will need to be justified to Israel and its Arab allies. Russia is clearly using Iran to maintain its foothold in the Middle East and to make sure Israel is wary of getting involved in Ukraine. Israeli tech would significantly strengthen Ukraine’s position if the country was to get more involved.

Pyongyang has been ratcheting up tensions with a series of missile launches since the start of this year.

### **23. How Ukraine crisis undermines Turkey's economic program**

Al-Monitor, 7 Mar 22, Sebnem Turhan

The viability of the Turkish government's "new economic model" — a controversial policy to battle inflation without the central bank hiking rates — was already in doubt before Russia's incursion into Ukraine. But it has clearly hit a deadlock now that the fallout of the war is undermining Ankara's plans to bridge its current account deficit by promoting export-focused growth and steady its battered currency by safeguarding lira deposits.

With its annual consumer inflation already over 54%, Turkey stands to take some of the heaviest blows from the conflict as both Russia and Ukraine are among its major economic partners, with crucial links in tourism, agricultural trade, energy and even the defense industry.

The impact is already tangible on various fronts. Chief among them is Turkey's tourism industry, a vital source of hard-currency revenues, which was hoping to bounce back to pre-pandemic levels this year. Bookings from Russia and Ukraine have ground to a halt, and those from European countries have markedly dropped.

Russians were the largest group of foreign visitors to Turkey in 2021, numbering some 4.7 million or 19% of all tourists. Ukrainians ranked third after Germans, numbering about 2 million or 8%. Turkey was hoping for \$35 billion in tourism revenues this year, up from \$24.5 billion in 2021 and on par with its revenues in 2019 before the COVID-19 pandemic hit.

Some representatives of the tourism industry cling to the hope that the Ukraine crisis might be resolved soon and some of the canceled early bookings might be renewed before the high season starts. Though Turkey is not part of the avalanche of Western sanctions targeting Russia, the disruptions in international air traffic and payment systems loom large for tour operators.

A tourism investment consultant in Antalya, Turkey's main tourist hub on the Mediterranean coast, speaking on the condition of anonymity said the sector's planning for this year, based on the target of \$35 billion in revenues, "had gone upside down" with the war. "The number of Ukrainian tourists was reaching nearly 2 million in Antalya alone. Antalya and the Aegean region will be hit hard," he told Al-Monitor. "Nevertheless, we should not panic, and [we should] keep calm until May."

The executive of a tourism association speaking on the condition of anonymity said, "The tourism sector is waiting in apprehension. It was expecting to outstrip its 2019 performance and break a new record in 2022. Provided that the Russia-Ukraine crisis is settled soon, we stand a chance to weather it without big damage."

The problem of money transfers could be resolved by rerouting payments to Russian banks that are not subject to the SWIFT ban, according to experts. And energy payments are expected to proceed smoothly, given Gazprombank's exclusion from the sanctions.

Haluk Burumcekci, a prominent economist, warned of "significant losses" should the war drag on. "Russians and Ukrainians account for some 30% of tourists in terms of numbers, but their share in the tourism revenues is 15%. There could be risks, yet the current account balance is the real issue here," he told Al-Monitor.

Indeed, Ankara's ambitious goal of a current account surplus, which officials have described as key to price stability, appears increasingly beyond reach amid the rise in global energy prices, stoked by the Ukraine crisis. Turkey's economy is heavily reliant on imported energy and inputs, the cost of which had already soared due to the lira's severe depreciation last year.

The country's foreign trade deficit — the most important leg of the balance of payments — increased 186.3% year-on-year to some \$18.4 billion in the first two months of the year, owing mainly to the surging energy cost.

Russia is Turkey's main energy supplier, meeting more than 33% of the country's natural gas needs. In February, imports from Russia topped Turkey's importation bills by countries.

Energy imports cost \$8 billion in February out of total imports of \$28.1 billion, and the foreign trade deficit stood at \$8.1 billion, a 142% increase from the same period last year.

Oil prices surged by more than 20% to over \$115 a barrel last week, a level unseen for many years. And every \$10 rise in the price of oil adds \$5 billion to Turkey's current account deficit, economists calculate.

"The bill of our monthly energy imports has jumped abruptly to some \$8 billion and is likely to climb to \$10 billion in March," Burumcekci said, recalling that monthly bills stood at \$2 to 3 billion last year. "This is a harbinger of how big the current account deficit will be. Year-end current account deficit forecasts have already been raised to over \$30 billion," he added.

JP Morgan has recently doubled its current account deficit forecast for Turkey for 2022 to 2.2% of gross domestic product (GDP), while Goldman Sachs has revised its forecast to 2.5% from 1.5% of GDP.

Disruptions in supply chains and Russia's overseas payments as well as adversities affecting Turkish exports stand out as further economic challenges for Turkey. The war has stalled goods transportation to Ukraine and disabled land routes to Russia via Ukraine. Scrambling for alternative routes, Turkish trucks reportedly formed queues of up to 20 kilometers (12 miles) at the Georgian-Russian border last week, with freight prices jumping by about 50%.

Taking blows from the war are also textile and leather hubs in Istanbul, which rely heavily on Russian and Ukrainian buyers. According to business representatives in the district of Laleli, the heart of the garment industry and the suitcase trade, orders of more than \$200 million have been canceled in a matter of days. Russian and Ukrainian markets account for 40% of Laleli's \$3

billion annual sales. A protracted war threatens billions of dollars of losses for manufacturers in the sector.

With Russia and Ukraine both major wheat exporters, the war has sent global wheat prices to record levels, threatening to aggravate food inflation globally.

A scare of shortage of sunflower oil has already startled Turkey. The country is the world's largest importer of sunflower seed, and Russia and Ukraine supply 70% of its sunflower oil imports. At least 15 ships carrying crude sunflower oil to Turkey are reportedly stranded in the Sea of Azov, denied exit by the Russians. In a letter to government authorities earlier this month, the head of Turkey's Vegetable Oil Industrialists Association called for action to secure the passage of the ships, warning that existing stocks would meet the country's needs by mid-April at best and that crude sunflower oil prices had jumped to over \$2,000 per ton from \$1,400 before the war.

Food prices were already skyrocketing in Turkey and have spiked further since the invasion, as have fuel prices, boding further price hikes across the board. Even before the war, Turkey's annual consumer inflation soared to 54.4% and producer inflation hit 105%, with energy and food prices leading the uptick. Every \$10 rise in the price of oil pushes Turkey's consumer inflation up by 1.5 percentage points, economists calculate.

## ANALYSIS/COMMENTARY

---

### **24. Rebuilding U.S. defenses after Ukraine**

Wall Street Journal, 7 Mar 22, Editorial Board

Vladimir Putin's assault on Ukraine has caused Germany to revolutionize its defense policy in less than a week. Will the Biden Administration have a similar awakening about defending Americans with dictators on the march?

Progressives complain the Pentagon budget is larger than any other nation's, but the truth is that defense spending is at historic lows. It's heading to under 3% of the economy. Defense spending reached a postwar high of 9.1% in 1968 but never fell below 4.5% even in the 1970s, reaching a high of 6% in 1986 at the height of the Reagan buildup that helped win the Cold War. (See nearby chart.)

American military power in the last two decades has been burned up in counterterrorism operations, and the current force may be too small and geriatric to crush a peer military, let alone aggression on two fronts.

No matter, some say: Europe can deal with Russia, and Taiwan is in China's sphere of influence. But authoritarians have little incentive to stop gobbling territory if they pay no price, and the U.S. is bound to defend treaty allies in NATO or Japan if they're next on the menu, not to mention the U.S. territory of Guam.

One reason the U.S. is struggling to deter bad behavior is that adversaries know American military power is in retreat. Controlling the skies is indispensable to American warfighting in any theater, but the U.S. Air Force fighter inventory has fallen to about 2,000 from 4,000 aircraft in 1991 and the average age is 29 years old, up from 11.5 then.

The Air Force has cannibalized readiness to buy more capable equipment, which it also needs to stay competitive. President Trump's Air Force Secretary, Heather Wilson, was right that to deal with "the world as it is" the U.S. needs 386 squadrons by 2030, up from 312—especially more bomber and tanker squadrons to cope with distance in the Pacific.

The Navy is working at the same clip as the Cold War with half as many ships, and the fleet is smaller and older than China's navy. The sea service needs and wants many more attack submarines—a potent defense against China—but the Navy lacks the maintenance yards to keep up with even current inventory. Carriers need attack aircraft with longer range.

The Marines are the only branch adapting fast for the future. But the price is a shrinking force, including three fewer infantry battalions and tanks the country may miss if land battles make a comeback. The Army's brief should be Europe, though the land force's budget is down nearly 11% since 2018 in real terms, as analyst Thomas Spoehr calculates, including cuts to exercises and procuring less of everything from helicopters to ammunition.

Any conflict would require enormous amounts of munitions, and on current plans U.S. forces could run out of some of the most lethal and important stuff in weeks. The Pentagon needs to ramp up planned purchases of long-range antiship and joint air-to-surface standoff missiles—now. But it can't afford to stop working on hypersonics or offensive cyber, which means spending will have to increase.

The Biden team has been pushing a "divest to invest" strategy that skimps on weapons to develop technology for the 2030s, a plan that now belongs in a Pentagon paper shredder. A memo at the Foundation for Defense of Democracies called "Battle Force 2025" is full of ideas for making the most of existing assets: Modifying Navy submarine-hunting aircraft to fight with anti-surface ordnance, for instance.

A boost in defense spending doesn't preclude cutting bloat, even heretical ideas like controlling personnel spending and healthcare costs. Contract public affairs and lawyers instead of using so many expensive uniformed officers. Tell retirees they'll have to muddle through without subsidized groceries and close the commissaries. Cut general officers. If an Air Force colonel or Navy captain can reasonably fill a billet, it shouldn't be a flag position.

The brass bear some blame for the country's lack of preparation, especially acquisition catastrophes like the F-35 or the Ford-class aircraft carrier. But what better time for Congress to renovate how the Pentagon buys equipment, concentrating political accountability in one office?

The precedent here is Jimmy Carter, who began his Administration bemoaning the "inordinate fear of Communism" but did a 180-degree turn three years later and began a defense buildup as

the Soviets gained ground around the world. Mr. Biden has wanted to focus on domestic affairs but Presidents have to deal with the world as it is.

Mr. Putin's invasion means the end of post-Cold War illusions, and it heralds an age of new threats to our allies and the homeland. Americans don't want to learn through defeat that, as retired Lt. Gen David Deptula has warned, "the only thing more expensive than a first-rate military is a second-rate one."

## **25. Bahrain's paranoia about Iran is self-defeating**

Foreign Policy, 7 Mar 22, Anchal Vohra

Naftali Bennett made history in mid-February by becoming the first Israeli prime minister to ever make an official visit to Bahrain. Bennett is struggling at home as the leader of an ideologically divided ruling coalition, but on his visit to Bahrain he fulfilled the role of statesman, embracing the unprecedented regional alliance that has formed between Israel and Arab countries, including Saudi Arabia and the United Arab Emirates, against Iran. Bennett offered Israel's assistance to Bahrain against Iran whenever called upon.

Bahrain plays a central role in this alliance, not least because it hosts the 5th Fleet of the U.S. Navy. (During Bennett's visit, he discussed security cooperation in a meeting that included both Bahraini officials and Vice Adm. Brad Cooper of the 5th Fleet.) But taking on Iran has proved to be a particularly challenging task for Bahrain. In part that's because of the simple fact of its small size in relation to its powerful competitor.

But Bahrain's government is also suffering the effects of its own paranoia. Warding off Iran's influence in its domestic affairs has turned the Al Khalifa monarchy into ruthless rulers and the kingdom into a brutal place to live for the majority of its population.

Bahrain's Sunni monarchy believes Iran wants to annex its majority-Shiite country or at the very least install a puppet regime. The past comments of Iran's Shiite leaders asserting that Bahrain is the 14th province of Iran, together with Iran's support to Bahrain's Shiite opposition, have magnified Bahrain's fears. It accuses Tehran of not only fomenting the uprising in 2011 but also plotting attacks against state security in successive years and providing militants with financial support and arms training through its militias in Iraq.

Partly in response to these fears, Bahrain has imposed repression at home. In the last decade, death sentences have risen by 600 percent, and the political opposition has been disbanded or thrown behind bars. Some 1,400 political prisoners are incarcerated in a single prison. The right of prisoners to weekly video calls with family members has been suspended in an arbitrary manner, and torture allegations are routine.

Last year Bahrain was accused of detaining 13 children related to protests and threatening some with rape and torture, according to the Bahrain Institute for Rights and Democracy (BIRD), a nonprofit human rights organization based in London. And the alliance with Israel is further

present time, Gamea elaborated, adding that there are distinguished investment opportunities for the Emirati business community to invest in the Egyptian market, especially in the fields of spinning, weaving, leather, furniture, handicrafts, and other crafts.

For her part, Al-Kaabi expressed her country's keenness to develop economic relations for the benefit of the economies and peoples of the two countries.

She also praised Egypt's unique participation in Expo 2020 Dubai with a distinguished pavilion that has been the focus of the world's attention since the start of the expo's activities until now. The Egyptian pavilion is one of the most important pavilions participating in the event, attracting the attention of all attendees and receiving a large number of official visits.

"It is possible for Egypt to make use of the UAE's market as a hub for Egyptian-Emirati joint projects' exports to the markets of the Arabian Gulf and Southeast Asian countries in addition to the UAE benefiting from the Egyptian market as a gateway for Emirati exports to the markets of the African continent and profiting from facilities and preferential transactions offered by the African Continental Free Trade Agreement (AfCFTA). There is also the possibility of establishing Egyptian-Emirati investments in other countries," Al-Kaabi said.

## ANALYSIS/COMMENTARY

---

### **44. Russia-Ukraine war casts new shadow over Syria**

Middle East Eye, 7 Mar 22

The Ukraine and Syria conflicts have long been intertwined. One of Russian President Vladimir Putin's motivations for intervening in Syria in the first place was to break out of the diplomatic isolation he faced after annexing Crimea in 2014.

The success of this action, and the lack of western pushback for subsequent atrocities, have led some commentators to argue that the February invasion was emboldened by western passivity over Syria. Today, as Ukraine suffers, the overlap is evident once more as Russian military tactics from Syria are now at the forefront of the Ukraine operation.

Clearly, the Syria war has impacted Ukraine, but how might the current crisis impact the situation in Syria? It is a fair assumption that the crisis will not be resolved soon, meaning it will continue to dominate global media and diplomatic attention. Syria has already been falling down the global priority list and its obscurity will likely continue, despite its civil war being far from over.

Syrian President Bashar al-Assad's continued domestic repression, ongoing economic suffering, and the sporadic fighting between different extremist factions will get less and less global interest as, like Iraq and Afghanistan before it, Syria becomes yesterday's war. The ongoing suffering in Yemen and Libya could similarly slip further from focus.

This is arguably most significant for the 5.7 million registered Syrian refugees. Already, they were suffering cuts in funding from international donors such as the UK, but the emergence of a new refugee crisis from Ukraine will draw more money and support away from the Middle East and towards Eastern Europe. There are sadly countless examples in history of refugees being forgotten once the conflict they were fleeing drops from public interest, often having miserable consequences for the refugees and the countries hosting them.

#### Drained military resources

Beyond a loss of attention, the geopolitics of Syria's war could be significantly impacted by the fallout from the Russia-Ukraine war. At the most extreme, if this leads to Putin's fall in Moscow, it could radically alter Russia's presence in Syria. Yet, even less dramatic consequences could have an impact. A long, gruelling war that drains Russia's military resources, while western sanctions cripple its economy, might force Putin to pull money and military forces from Syria. An alternative scenario might be for an embattled Putin to double down on Syria, drawing Assad's regime even closer into his network of client states.

Neither of these outcomes is good for Assad. Any Russian military or economic pullback would weaken him, possibly fatally if it emboldens his dormant opponents. Assad also won't want to be sucked into a "Putin-sphere" that's isolated from the rest of the world.

Damascus has been desperately trying to reintegrate into its region. It is already badly sanctioned by western governments, and the last thing it needs is further punishment for its proximity to Putin. A besieged Putin might come to view Assad as he does Belarusian President Alexander Lukashenko: indebted to him and obligated to help in his hour of need, whether through statements of support or by sending military aid.

Putin and Assad's other ally, Iran, will also watch closely how events in Ukraine will impact Syria. Less beholden to Moscow than Damascus, it is unlikely Tehran will feel obligated to stand by Putin, although its leadership instinctively blamed the US for the Ukraine crisis rather than Russia. Despite a few wrangles with Russia over the (very few) spoils of Syria's civil war, and Moscow permitting Israel to launch frequent attacks on Iranian positions, Tehran broadly benefits from the status quo in Syria. Any change to Russia's position there - which Iran played a major role in engineering - will not be welcomed.

#### Israel's balancing act

Israel has also become comfortable with the status quo. Though it is alarmed by the numerous Iranian and Hezbollah forces in Syria as a result of the war, Russia's presence alleviates this. Its close ties to Moscow have given the Israeli army a free hand to strike deep into Syria.

The Israeli government has thus walked a fine line since the Ukraine crisis began. It is close to the US, Ukraine, and Russia, and has been sure to condemn Putin's aggression in a relatively muted way, conscious that an angry Moscow could prevent its Syria raids. At the same time, Israel probably doesn't want the conflict to prompt Putin's departure from Syria, as this would leave Iran and Hezbollah unchecked and increase the chances of direct clashes.

Like Israel, Turkey has approached the Ukraine crisis cautiously, having close military, diplomatic, and economic ties with both sides. Both Moscow and Kyiv, as well as its western allies, are courting Ankara, given its control of the Dardanelles.

Turkey could use this favourable position to squeeze greater concessions from either Russia or the US in Syria, where it has clashed with both. Ankara has long wanted to expand the areas of northern Syria that its proxies control, and could conceivably tie its position on the Ukraine crisis with either Moscow or Washington depending on whether it captures Manbij or Kobane.

But Erdogan may choose to hold his cards close. His immediate concern is Turkey's struggling economy and a related decline in his popularity. He is probably more worried about how the war will impact oil and gas prices and the fate of vital gas and wheat supplies from Russia, than about taking advantage of the crisis to boost his position in Syria - for now.

Of course, it remains early days in the Russia-Ukraine war, and it is hard to forecast how great a shadow it will cast over Syria or elsewhere. But given the conflict's global nature and the number of key players in Syria impacted by this new war, it seems unlikely it will avoid the fallout.

#### **45. Blue-eyed refugees first**

Daily Sabah, 7 Mar 22, Ibrahim Karataş

People of the Middle East have been suffering from either civil wars or foreign intervention for decades. It is possible that more than 1 million people have been killed by dictators or invaders during that time. In addition, millions have been displaced and immigrated to neighboring countries or Europe. Surprisingly (or not), the two big invaders, namely the U.S. and Russia, host almost no refugees though they are perpetrators.

While European countries accepted a certain number of migrants, the Russian attack on Ukraine shows that they are prejudiced against certain refugees. When Africans try to cross the Mediterranean or Syrians, Afghans and other migrants attempt to reach Europe via the Balkans, they are not allowed in by European Union members. Plus, many people drown at sea or are left to die by border guards. Greece is so infamous for its treatment of refugees that its mistreatment has led to the deaths of hundreds of people seeking a safe haven.

However, when Ukrainians took refuge in Europe, the mercy of Europeans suddenly overflowed. Welcoming Ukrainians is something that we all appreciate. Yet, helping them just because they are blue-eyed, blonde-haired, European and Christian is unacceptable discrimination. It shows that the European mindset has an Orientalist subconscious that excludes non-Europeans. In their

view, a non-Christian, black or brunette man is not civilized and does not deserve to be accepted as a refugee, except for a select few.

Actually, lovers of the white race have missed some points that contradict their views. First, whether they are aware of it or not, blue-eyed and blonde Ukrainians are displaced by blue-eyed and blonde Russians who are Christians and of Slavic descent just like Ukrainians. In other words, a country is attacked by a relative country, both are European, share the same skin and eye color and have the same faith. Therefore, the oppressor and the victim have the same characteristics. How can we attribute physical factors to civilization then?

Russians are also responsible for the displacement and deaths of Syrians, to which Europe closed its doors. One may think that Russia is an exception among the allegedly civilized world, but it is not. Afghanistan, Iraq and many other countries were invaded by the European/American race. Colonizers were also blonde and had very attractive eyes. Besides, the two world wars were mainly between blonde people.

The disadvantages we learned

Another complicated aspect is that if a person does not belong to Judeo-Christian culture and religion, they are again disadvantaged, as we learned from the Bosnian War when Europe did next to nothing when Bosnians were slaughtered by Serbian nationalists. Thus, a refugee should not be brunette, black or Muslim, which are vivid factors keeping migrants on European borders. We should note that there are millions of people immigrating to Europe from the Middle East and Africa. Yet, it seems that they are not the first choice nor a preference for Europeans, at least when compared to Ukrainians.

Meanwhile, being a local of a country does not mean that you will not be discriminated against in your country. Everyone will accept that minorities and sometimes people constituting the majority might face exclusionary and discriminatory behaviors and regulations. For instance, a black person or a Latino may not be as advantageous as a white man in the U.S. Some secular people in Turkey think of themselves as “white Turks” to differentiate themselves from the conservative community in particular. Needless to say, some Indians are more privileged due to the social classes they belong to. In Syria, the Arab Alawite minority ruled the Sunni majority for decades.

In light of the above argument, it can be concluded that, for some, being white in terms of race is preferable. Yet, claiming that the white race is more civilized is wrong since most crimes against humanity were committed by white people. Even if a person is white and has nothing to do with violence, being a Christian is preferable to Europeans. This is why Europeans welcome a Ukrainian refugee rather than a Bosnian one. Regarding people with darker skin colors, they should either pretend to be white as some Turks, Indians and Arabs do, or acquiesce their hapless destiny.

#### **46. Ukrainian-Russian crisis exposes racism in Western media coverage — journalists**

Jordan Times, 7 Mar 22, Batool Ghaith

The Ukrainian-Russian crisis has revealed deep-rooted racism in Western media's coverage of the conflict, according to experts.

Over the past week, multiple Western politicians and journalists have used discriminatory language, based on race and religion while discussing the recent invasion of Ukraine by Russia, sparking anger globally, especially in the Middle East.

Jordan Press Association member and trainer in human rights Khaled Qudah told The Jordan Times that the war in Ukraine has "proved the opposite of what the West has been presenting to the international community about integrity, impartiality, freedom of expression and human rights".

"These arguments are only used when it serves in their interests, and this was evident in the Western media's coverage of refugees from Syria, Iraq or Afghanistan, and how different it is to the coverage of refugees from Ukraine," Qudah said.

Qudah emphasised that the principles advocated by the West are "decorative" to serve political goals. "Unfortunately, Western media has abandoned the principles of professionalism, humanity and impartiality," he continued.

He also highlighted social media's spread of misinformation, as a photo of Palestinian girl Ahed Tamimi in confrontation with Israeli soldiers was published, claiming her as a Ukrainian girl resisting Russian soldiers.

"A Ukrainian child resisting the Russians is described as a hero, while a Palestinian child resisting the Israeli occupation is described as a terrorist, even though they are fighting the same fight, living the same issue, but in a different place, with different origins, religion etc," he added.

Heba Obeidat, a journalist from Jordan, noted how "dangerous it is for journalists or public figures to engage in hate speech".

"The influence of these words is much greater coming from officials and journalists than when it is just an opinion of some citizens, as they are addressing millions of people worldwide," Obeidat told The Jordan Times.

She added that the right to asylum is a right guaranteed by international laws to anyone who fled their country due to war or political reasons, without any bias towards white-skinned people.

Obeidat said that the Western media's recent remarks "confirmed the idea that neutral media doesn't exist".

Ahmed Smadi, a humanitarian worker in Jordan, highlighted the role of media during such crises. "Journalism is vital for getting people's voice heard and shedding light on what is

happening. Such reporting, however, should not be at the expense of others, or to undermine other people's suffering," he told The Jordan Times over the phone.

"There are many alleged reports of people of colour being refused entry at border crossings in favour of white Ukrainians, therefore they are stuck at borders for days in terrible conditions. The European Union and European countries' human treatment of refugees should include refugees of different races, religions, and nationalities," Smadi added.

Mohammad Shamma, a human rights journalist, said that some Western media outlets have "double-standard-sympathy", which is a violation of basic journalistic standards.

"Everyone has the right to sympathise, but the content they present must represent the life of all people without double standards or discrimination," Shamma told The Jordan Times over the phone.

Shamma emphasised that some Western media coverage is "a colonialist discourse" which does not necessarily represent Europe, but the journalists should be held accountable.

#### **47. As Kyiv burns, a new world order emerges**

Arab News, 7 Mar 22

If only all humanitarian crises inspired such global unity and resolve! In a few short days we have been living through the traumatic birth pains of an entirely new geopolitical order, with profound and unpredictable reverberations for decades to come.

As cities burn and populations are uprooted, the deep ideological divisions and strategic impotence that have wracked the Western world for years have superficially vanished, as if by magic. This was manifested at the UN General Assembly, where 141 member nations from Europe to the GCC to the Pacific took a unified position on Ukraine, leaving a handful of rogue states — Syria, North Korea and Belarus — on the opposite side. Even close Kremlin allies such as Iran and China could only bring themselves to abstain.

The transformation was most profound in states that have long flirted with Moscow. Germany's abandonment of its long-standing military neutrality and economic alignment with Russia has far-reaching implications, while near neighbors Finland and Sweden are clamoring for NATO membership. After irritating the West with his purchases of Russian defense systems, President Recep Tayyip Erdogan suddenly remembered Turkey was also a NATO member, upping sales of drones and other weaponry to Kyiv and restricting Russian shipping's access to the Black Sea.

Meanwhile, Europe's foremost demagogue, Viktor Orban, is being ridiculed by the opposition as "Putin's lapdog" immediately before Hungarian elections. Eastern European states that beat, tortured and blockaded Syrian refugees have opened their doors to over a million Ukrainians.

Beijing anxiously watches developments, knowing the outcomes will affect its own abilities to menace its neighbors and crush citizens' freedoms.

The ramifications of these events will affect the Middle East equally profoundly. One short-term risk is that America and others appear to be rushing toward a quick-fix nuclear deal with Iran, allowing them to focus on Russia. Tehran is exploiting that to seek further concessions, while a panicky Moscow appears to be trying to thwart such an outcome with its own new demands. Flooding the market with Iranian oil to compensate for blocked Russian output is not a viable solution, because Tehran is an equally grave threat to global security.

These negative potential outcomes offer Arab oil producers the opportunity to call the shots to ensure that their security interests are protected. With Russia bombing nuclear power stations, Arab states and Israel may discover that they have an increasingly sympathetic global audience when they highlight the apocalyptic risks of tolerating Iranian nuclearization, its immense ballistic missile program, and the proliferation of Iran-backed militias from Baghdad to the Mediterranean Sea.

Libya and Syria suffered wars of extermination by mercenaries from Moscow, Ankara, Tehran and elsewhere, long after Western interest in these conflicts had dissipated. The sovereignty of Lebanon, Yemen and Iraq has been shredded by years of naked Iranian aggression. Gulf states have been under constant assault from barrages of Iranian missiles and drones. This will worsen if Iran emerges from a deal with billions of dollars of unfrozen funds to invest in regionwide terrorism.

Although in recent days Russian air raids in Syria have decreased, there are concerns that if the Kremlin gets a bloody nose in Kyiv, it may exploit its mercenaries in the Middle East, Africa and elsewhere to up the pressure on states perceived as acting against it, particularly as the Middle East has been the arena for proxy conflicts since time immemorial. Indeed, there is evidence that the Kremlin views Syria's current fragmented reality as a model for a future divided and submissive Ukrainian puppet entity.

So catastrophic is the situation that some are hailing Naftali Bennett as the world's best hope for a sane outcome, given Israel's uniquely close ties with both sides. However, Putin appears hellbent on not listening to any voices of reason.

Infinitely worse is yet to come for Ukraine: After humiliating setbacks, Moscow is inflicting indiscriminate levels of destruction last seen in Syria, hoping to starve and crush courageous citizens into submission. International tensions are hence set to further soar, while tensions within Russia will escalate as citizens see living standards plunge for a war they are scarcely allowed to mention. As the Russian economy bleeds to death, irreversible defeat is etched on the grim faces of Putin's generals. The Kremlin can pound cities to dust, but the Ukrainian nation is forever outside its grasp.

On International Women's Day we watch girls and mothers fleeing into exile, while grandmothers grimly manufacture Molotov cocktails in freezing bomb shelters. Ashen-faced youths are given a rifle and taught how to bandage themselves after a limb is blown off. Like

millions of others, my heart bleeds after having lived through such horrors when Israel invaded Lebanon in 1982 – losing everything, embracing loved-ones we may never see again, knowing our lives are transformed for ever.

Ukrainian dignity and courage in the face of unimaginable evil humble us all, while reawakening the world's long-slumbering conscience and sense of justice.

The Middle East has long been mired in this evil, amid genocide, sectarian cleansing and wars of annexation. Assad, Israel, Iran, Erdogan, Hezbollah, the Houthis and Al-Hashd al-Shaabi must discover that the civilized world will stand with human rights and justice, irrespective of ethnicity or faith. Raw might is never right. Evil is self-destructive and unsustainable. Injustice must never be allowed to prevail.

It has taken a few short days for Europe to reawaken and shake off three decades of strategic complacency. The Western world is no more immune from the implacable, brutal march of history than anywhere else.

The world is relearning that sovereignty, freedom, territorial integrity and international law aren't natural attributes that spontaneously prevail, but are fundamental principles that must be fought for, and that millions of peace-loving citizens are willing to die to protect.

Irrespective of how this crisis ends, history will remember the brave struggle of the Ukrainian people against colossal odds. It will also recall whether the rest of the civilized world reasserts the primacy of international law and national sovereignty, to ensure that aggressor states cannot menace peace-loving nations, throughout Eurasia, the Arab world and everywhere else.

#### **48. Russia-Ukraine: Another Cold War?**

The Nation (Pakistan), 8 Mar 22, Dr Atique Ur Rehman

As the Russian-Ukraine war enters its 12th day, there is still no indication of when the conflict will end in the near future. Ukraine forces are unable to face the wrath of the Russian invasion. It is pertinent to analyse the present situation and the effects of this war.

An overview of the situation reflects the division of the world in support of Russia and against it. The US has not been able to influence countries to unanimously vote against Russia for invading Ukraine. In the final tally, 141 countries supported the resolution in UNGA, with just five voting against and another 35 abstaining. Asia Pacific seems to be largely under the influence of the US.

Within this region just two countries voted against the resolution: Russia itself and North Korea. 14 Asia-Pacific countries not only voted in favour but co-sponsored the resolution: Australia, Cambodia, Fiji, Japan, Kiribati, the Marshall Islands, Micronesia, New Zealand, Palau, Papua New Guinea, South Korea, Samoa, Singapore, and Timor-Leste.

Central Asian countries evidently are under Russian influence, which is a big indication for resistance to US desires in the region. None of the five Central Asian republics voted in favour of the motion; all either abstained or did not participate in the vote at all. In South Asia, countries were evenly divided, with four supporting the resolution—Afghanistan, Bhutan, the Maldives, and Nepal—and four abstaining—Bangladesh, India, Pakistan, and Sri Lanka.

An Islamabad-based think tank, the Islamabad Policy Research Institute (IPRI) has carried out a discourse analysis of the conflict. They carried out a twitter analysis on March 3-4 of 50 thousand tweets, comparing two opposing hashtags; #IStandWithPutin and #IStandWithUkraine. The findings reveal a bifurcation among social media users. English was the dominant language used across both hashtags.

Tweets in Urdu and Hindi were in support of #IStandWithPutin and tweets originating in German and French were supporting #IStandwithUkraine. The findings clearly reflect a divided world on the Russia-Ukraine war. These distinctions were most marked when comparing user location data, which shows a clearer difference between what is widely understood as the ‘West’ on one side and the ‘Global South’ or the Shanghai Cooperation Organisation (SCO) countries on the other.

Every state’s stance and position on the Russia-Ukraine conflict has been carefully calibrated based on a broad range of interests and issues; the digital landscape shows a divided world, or a re-emergence of a new Cold War. The UNGA voting pattern and discourse analysis clearly reflects that the world is divided on the issue.

The Russian invasion of Ukraine has manifold ramifications. It has brought global and regional confrontations to the edge and pushed the world once again towards a cold war. The US has already partially sanctioned Russia, but China has refused to abide by the US sanctions. Germany and the rest of the EU is dependent on Russian gas.

OPEC countries are exploiting the conflict and have raised oil prices to over \$100 per barrel, but this looks to be a temporary raise as most Asian countries export oil from OPEC and the consistent rise in prices may jeopardise the market, thus indirectly affecting the national politics of buyer countries. Moreover, if oil consumption is reduced or managed by oil-purchasing countries, it will reverse the effects towards OPEC. The US provocation of Russia in Ukraine has given them some advantages. It has put pressure on Germany and Russia for Nord stream-2 it has brought Russia under pressure for its gas supply to the EU. It might have distracted Russia from China for a while.

The conflict will leave millions of refugees at the mercy of other nations. So far, 1.5 million Ukraine citizens have already fled the country while more are lined up. Mariupol city is besieged and efforts are being made to evacuate the trapped civilians. The situation in Mariupol is extremely dangerous. Meanwhile, Mastercard and Visa operations have been suspended in Russia. The Foreign Minister of Ukraine has asked for fighter jets and air defence systems from the US. NATO’s refusal to implement a no-fly zone over Ukraine is another blow for Kyiv. The IMF has also expressed their concerns on the effects of the war on the global economy.

According to John Meirshiemer, it is the US who is to be blamed for this post-cold war disorder. In pursuit of a liberal hegemony, the frequency of US military deployments has been six times greater in the period between 1990 and 2017 than in the 200 years spanning 1789 and 1989. The seven wars initiated by the administrations of Bill Clinton, George W Bush, and Barack Obama have failed to achieve any meaningful success and it has cost roughly \$5.6 trillion, in addition to an estimated 370,000 civilians and combatants killed.

War has revived the theoretical concept of realism, which might be a big blow to liberalism. The nation states in an anarchic world are responsible for self-defence and nobody else will come to their rescue. The nation states surviving in a vulnerable geo-strategic environment will increase their military spending. Countries will rush for military hardware which will strengthen the military-industrial complex.

India and Japan are already the biggest buyers of military hardware. More EU nations will now come forward to purchase arms and ammunition. Germany has already announced an increase in their defence spending. Supremacy in airpower will remain the priority of nation states to solidify their respective defences. It will definitely hamper the efforts for nuclear non-proliferation.

Pakistan seems to be getting strategic autonomy, at least in this conflict. On Sunday, Prime Minister Imran Khan categorically snubbed the EU demand to oppose the Russian move. He said that Pakistan was not there to serve EU interests. As a sovereign country, we would take a decision which is best for our country.

Pakistan has been a reluctant partner to the US due to the former's keen interest in the South Asian region. But it is China's strategic partner now. The China-Pakistan Economic Corridor (CPEC) is the flagship programme of China's Belt and Road Initiative (BRI). Pakistan is crafting new relations with Russia. Though US forces have withdrawn from Afghanistan, it still maintains its influence in Afghanistan. Pakistan has never lowered its guard and the nation is proud to have ever-vigilant and the most professional armed forces in the world.

### COVERAGE HIGHLIGHTS

---

- 1) The Financial Times reported that Qatar is mediating directly between the United States and Iran in an attempt to convince both parties to sign a new JCPOA deal. The article notes Qatar is also working to have both countries engage in direct talks about JCPOA and other issues.
- 2) The Wall Street Journal said White House officials unsuccessfully tried to arrange phone calls between President Biden and the leaders of Saudi Arabia and UAE in February immediately after Russia's invasion of Ukraine. Before agreeing to take part in an international alliance against Russia, the Saudis said they want more support for their intervention in Yemen, help with their civilian nuclear program, and legal immunity for Prince Mohammed in the U.S. The Emiratis question the restrained U.S. response to recent missile strikes by Iran-backed Houthi militants in Yemen against the UAE and Saudi Arabia, in addition to concerns about Iran's nuclear program.
- 3) The Associated Press reported Middle East nations are divided concerning events in Ukraine as a result of Russia's increased engagement in the Levant and throughout the region. The article notes Russia has filled some of the void of America's withdrawal from the region, making regional leaders wary of alienating Russia -- or the U.S. and Europe. But Shiite militia factions in Iraq, Lebanon's Hezbollah group and Houthis in Yemen support Russia against Ukraine.
- 4) Wire services reported this morning that Kyiv residents awoke Wednesday to an air raid alert urging them to get to bomb shelters as quickly as possible over fears of incoming Russian missiles, while the strategic port city of Mariupol remained encircled as a humanitarian crisis grew. Other major news concerning Ukraine overnight was the U.S. turning down Poland's offer of MiG-29 fighters to be based at Ramstein AB, Germany for use by Ukraine pilots; the UN stating 2 million people have now fled Ukraine; and the widening economic isolation of Russia's economy.

### U.S./WESTERN MEDIA COVERAGE

---

#### TOP NEWS

---

#### 1. Qatar mediates between Iran and US in nuclear talks

Financial Times, 8 Mar 22, Andrew England and Najmeh Bozorgmehr

Qatar has stepped up its role in mediating between the US and Iran as western powers have been striving to convince wary Iranian leaders to ink a deal to revive the 2015 nuclear accord, according to people briefed on the talks.

### **2. Saudi, Emirati leaders decline calls with Biden during Ukraine crisis**

Wall Street Journal, 8 Mar 22, Dion Nissenbaum, Stephen Kalin and David S. Cloud

The White House unsuccessfully tried to arrange calls between President Biden and the de facto leaders of Saudi Arabia and the United Arab Emirates as the U.S. was working to build international support for countering Russia's invasion of Ukraine and contain a surge in oil prices, said Middle East and U.S. officials.

### **3. Ukraine war highlights internal divides in Mideast nations**

Associated Press, 8 Mar 22, Qassim Abdul-Zahra and Zeina Karam

In a neighborhood of Iraq's capital, a gigantic poster of Vladimir Putin with the words, "We support Russia," was up for few hours before a security force arrived and hurriedly took it down. Then came the security directive: All public displays of Putin's pictures shall be banned.

### **4. Russians pressure Ukrainian cities as fighting continues**

Associated Press, 9 Mar 22, Mstyslav Chernov and Yuras Karmanau

Kyiv residents awoke Wednesday to an air raid alert urging them to get to bomb shelters as quickly as possible over fears of incoming Russian missiles, while the strategic port city of Mariupol remained encircled as a humanitarian crisis grew.

## NOTABLE TWEETS

---

**President Joe Biden; @POTUS (8 Mar):** Today, I'm announcing that the United States is targeting a main artery of Russia's economy. We are banning all imports of Russian oil and gas.

**Secretary of State Antony Blinken; @SecBlinken (8 Mar):** Productive conversation today with UAE Minister of Foreign Affairs @ABZayed. We value the close coordination on Ukraine and a strong international response to support Ukrainian sovereignty. The U.S. will continue to bolster strong UAE defenses to deter regional threats.

**Pentagon Spokesman John Kirby; @PentagonPresSec (8 Mar):** We are now in contact with the Polish government following the statement issued today. As we have said, the decision about whether to transfer Polish-owned planes to Ukraine is ultimately one for the Polish government. We will continue consulting with our Allies and partners about our ongoing security assistance to Ukraine, because, in fact, Poland's proposal shows just some of the complexities this issue presents. The prospect of fighter jets "at the disposal of the Government of the United States of America" departing from a U.S./NATO base in Germany to fly into airspace that is contested with Russia over Ukraine raises serious concerns for the entire NATO alliance. It is simply not

clear to us that there is a substantive rationale for it. We will continue to consult with Poland and our other NATO allies about this issue and the difficult logistical challenges it presents, but we do not believe Poland's proposal is a tenable one.

**[Taliban spokesman] Suhail Shaheen; suhailshaheen1 (8 Mar):** On the occasion of International Women's Day, I would like to say, women have all their fundamental rights as per the Islamic rules. They can avail that. The IEA is committed to providing a secure environment to deliver their legitimate needs and demands. We have made commitment to the world that we will not be threat to them and made commitment to our people that their life and property are secure. HE Sirajuddin Haqani. Minister of Interior

### **5. U.S. intelligence shows Iran threats on U.S. soil, but Blinken and Schiff say this shouldn't derail new nuclear deal**

CBS News, 8 Mar 22, Margaret Brennan

The U.S. intelligence community has assessed that Iran will threaten Americans — both directly and via proxy attacks — and that Tehran remains committed to developing networks inside the U.S., according to the intelligence community's 2022 Annual Threat Assessment, published Tuesday by the Office of the Director of National Intelligence (ODNI).

### **6. Iran nuclear deal nears completion, but Russia poses complication**

New York Times, 8 Mar 22, Steven Erlanger

With negotiators all but finished with their work to restore the 2015 nuclear deal with Iran, the Russian invasion of Ukraine has made an agreement both more urgent and more difficult to get.

### **7. Iran's Revolutionary Guard says it launches 2nd satellite**

Associated Press, 8 Mar 22, Amir Vahdat and Jon Gambrell

Iran's paramilitary Revolutionary Guard said Tuesday it launched a second reconnaissance satellite into space as world powers await Tehran's decision in negotiations over its tattered nuclear deal.

### **8. Blinken says Russia continues to be engaged in efforts to salvage Iran nuclear deal**

CNN, 8 Mar 22, Jennifer Hansler

Secretary of State Antony Blinken on Tuesday said that Moscow remains engaged in the effort to salvage the Iran nuclear deal, despite a recent demand by the Russian foreign minister for written guarantees that sanctions imposed for its invasion of Ukraine will not impact future dealings with Tehran.

## AFGHANISTAN

---

### **9. From Taliban bullets to Russian bombs: War chases Afghan refugee across Europe**

The Guardian (UK), 8 Mar 22, Lorenzo Tondo

A week ago, Masouma Tajik found herself running for her life for the second time in six months. Evacuated from Kabul after the Taliban takeover of Afghanistan, she was now fleeing another country in another continent, this time to escape Russian bombs and bullets. A software engineer and data analyst, 23-year-old Tajik says the shock and trauma of finding herself in another war zone has shaken her sense of reality.

#### **10. Taliban vow to defend women's rights under Islamic law**

Voice of America, 8 Mar 22, Ayaz Gul

The Taliban pledged Tuesday to protect the rights of women in Afghanistan under Islamic law to mark International Women's Day, even as critics decried the erosion of human rights since the Islamist group retook control of the country nearly seven months ago.

#### **11. The smugglers' paradise of Afghanistan**

New York Times, 8 Mar 22, Christina Goldbaum, Yaqoob Akbary and Kiana Hayeri

It was just after 1 a.m. in this corner of southwest Afghanistan and a full moon drenched the desert dunes a dim, white glow. Hours earlier, the smuggler struck a deal with an Iranian security guard to send 40 Afghans across the nearby border that night. Now a few miles down the road, the migrants hid in a ravine waiting for his signal to run.

#### **12. Blood drive to mark Women's Day halted, Afghan activists say**

Associated Press, 8 Mar 22, Rahim Faiez and Samya Kullab

The Taliban halted a blood donation drive by women activists to mark International Women's Day on Tuesday, activists said.

### **15. Jordan says prince apologizes over last year’s palace feud**

Associated Press, 8 Mar 22

The royal court in Jordan said Tuesday that the half-brother of King Abdullah II has apologized for his role in a rare palace feud last year and is seeking the king’s forgiveness. Prince Hamzah was accused of involvement in a plot to destabilize the Western-allied kingdom and was placed under house arrest last April. In a video statement at the time he denied the allegations, saying he was being punished for speaking out against official corruption.

### **16. Turkish, Israeli presidents to meet for first time after fractious decade**

Reuters, 8 Mar 22

Turkey and Israel will seek to overcome years of animosity and insults when their presidents meet for the first time in more than a decade this week, expanding a recent Turkish charm offensive with regional rivals.

### **17. U.S. urges Saudis to review cases of ‘prisoners of conscience’**

Reuters, 8 Mar 22, Stephanie Nebehay

The United States urged ally Saudi Arabia on Tuesday to review cases of "prisoners of conscience" and lift travel bans and other restrictions imposed on women's rights activists previously released from jail.

### **19. Pentagon says Poland's jet offer for Ukraine 'not tenable'**

Associated Press, 8 Mar 22, Vanessa Gera, Lolita C. Baldor and Amer Madhani

The Pentagon on Tuesday rejected a surprise announcement from Poland that it would give the United States its MiG-29 fighter jets for use by Ukraine, a rare display of disharmony as NATO

allies seek to boost Ukrainian fighters while avoiding getting caught up in a wider war with Russia.

#### **20. US and UK ban Russian oil and gas imports in drive to punish Putin**

Financial Times (UK), 8 Mar 22, James Politi, Myles McCormick, Jim Pickard and Andy Bounds

President Joe Biden has banned imports of Russian oil and gas into the US as Washington steps up economic sanctions on Moscow over the invasion of Ukraine in an attempt to deprive it of revenue. The move was matched by a UK phase-out of Russian oil imports, but the EU did not follow suit and instead unveiled a plan to cut Russian gas imports by two-thirds within a year.

#### **21. Biden calls for legislation to help sick veterans who served near burn pits**

Washington Post, 8 Mar 22, Seung Min Kim and Matt Viser

President Biden repeatedly declared on Tuesday that the United States needs to take better care of veterans who became ill after being exposed to toxic chemicals during their military service, and he called on Congress to pass legislation granting benefits and comprehensive health care to those sickened.

#### **22. Spy agencies cite Russia's setbacks but say Putin is 'unlikely to be deterred'**

New York Times, 8 Mar 22, Julian E. Barnes

Top U.S. intelligence officials said on Tuesday that President Vladimir V. Putin of Russia had been surprised and unsettled by the problems that have hampered his military in Ukraine, issues that will make it more difficult for Russian forces to control the country. But Mr. Putin is determined to succeed in Ukraine, and will try to double down and use ever more brutal tactics, the officials said during an appearance before the House Intelligence Committee.

#### **23. Biden Administration altered rules for sharing intelligence with Ukraine**

Wall Street Journal, 8 Mar 22, Warren P. Strobel and Michael R. Gordon

The White House last week modified existing guidance for the Pentagon and U.S. spy agencies on sending intelligence data to the Ukrainian government to clear the way of any bureaucratic roadblocks to information sharing, a senior Biden administration official said.

#### **24. Russia's military losses in Ukraine are a gold mine for US intelligence**

Newsweek, 8 Mar 22, Naveed Jamali and Tom O'Connor

Russian military equipment seized by Ukrainian forces throughout an explosive conflict poised to enter its third week may prove a gold mine for U.S. intelligence looking to get a rare look at Moscow's weapons and the encrypted command and control data they contain, current and former U.S. military personnel told Newsweek.

#### **25. Russian oil embargo pushes OPEC to take sides**

Wall Street Journal, 8 Mar 22, Rochelle Toplensky

A Russian oil embargo ramps up pressure on the Organization of the Petroleum Exporting Countries to increase production or side with Russia. As the war in Ukraine becomes a proxy conflict in a new Cold War, the cartel can't hope to maintain its current studied neutrality.

### **26. US spy chiefs warn Putin may escalate war**

TIME Magazine, 8 Mar 22, Vera Bergengruen

Twelve days into his invasion of Ukraine, Russian President Vladimir Putin has “no sustainable political endgame,” the heads of U.S. intelligence agencies told Congress in a somber assessment Tuesday. That military reality means even greater humanitarian costs lie ahead, they said. “Putin is angry and frustrated right now,” Central Intelligence Agency Director William Burns told lawmakers at the House Intelligence Committee’s annual hearing on worldwide threats. “He’s likely to double down and try to grind down the Ukrainian military with no regard for civilian casualties.”

### **27. NATO members mount huge operation to resupply Ukrainian fighters**

Wall Street Journal, 8 Mar 22, Matthew Luxmoore, Drew Hinshaw and Nancy A. Youssef

In the space of two weeks, Russia’s invasion of Ukraine has set off one of the largest and fastest arms transfers in history. By road and rail, the Czech Republic sent 10,000 rocket-propelled grenades to Ukraine’s defenders last week alone. In Poland, the provincial airport of Rzeszow located about 60 miles from the Ukrainian border has been so crowded with military cargo jets that on Saturday some flights were briefly diverted until airfield space became available.

### **28. Arctic winds in Ukraine ‘will turn Russian vehicles into 40-tonne freezers’**

The Times (UK), 9 mar 22, Larisa Brown

A severe cold snap could stall Russian advances further, analysts believe, with troops forced either to abandon their vehicles or sit in “40-tonne iron freezers”. Arctic air moving through Russia and Ukraine will combine with an easterly wind to make temperatures drop to as low as minus 10C (14 degrees Fahrenheit) overnight around Kyiv and the northern city of Kharkiv in the coming days. When wind chill is taken into account it could feel as cold as minus 20C (-4 degrees Fahrenheit), according to forecasts.

### **29. Hints of a Ukraine-Russia deal?**

Foreign Policy, 8 Mar 22, Michael Hirsh

With Russia’s bloody aggression in Ukraine apparently bogged down, there are hints this week that Russian President Vladimir Putin and Ukrainian President Volodymyr Zelensky may be tentatively opening themselves to compromises that might halt the 12-day-old war.

### **30. Europe's unified welcome of Ukrainian refugees exposes 'double standard' for nonwhite asylum seekers: Experts**

ABC News, 8 Mar 22, Deena Zaru

Before Russian attacks on Ukraine led to mass displacement, Europe was already grappling with the Syrian refugee crisis — an issue that had bitterly divided European Union nations in recent years over what to do with the 1.1 million Syrians who sought refuge in Europe.

### **31. Satellite images show activity at North Korean nuclear site**

Associated Press, 8 Mar 22, Kim Tong-hyung and Jon Gambrell

Commercial satellite images suggest a resumption of construction activity at North Korea’s nuclear testing ground nearly four years after leader Kim Jong Un declared the site’s closure and invited foreign journalists to observe the destruction of tunnels ahead of his first summit with then-U.S. President Donald Trump.

### **32. Travels with Milley: The general brings his ‘big green map’ to NATO’s flank**

Washington Post, 8 Mar 22, David Ignatius

CONSTANTA, Romania — Gen. Mark A. Milley carries what his staff calls the “big green map” of Ukraine with him everywhere he goes — inside the Pentagon, at White House meetings with President Biden and on foreign trips such as the five-day tour of NATO front-line nations that he just completed. Milley’s map is a compendium of U.S intelligence about Russia’s pitiless assault on Ukraine.

### **33. The Syrian White Helmets are ready to help Ukraine**

Washington Post, 8 Mar 22, Josh Rogin

As Russian President Vladimir Putin expands his murderous attacks on civilians across Ukraine, regular citizens are becoming front-line troops. Syrians, who have been facing Russian military attacks for seven years, are ready to help Ukrainians organize their first responders. Ukrainians will need all the help they can get to save as many innocent lives as possible in what could be a long struggle.

### **34. Putin has no good way out, and that really scares me**

New York Times, 8 Mar 22, Thomas L. Friedman

If you’re hoping that the instability that Vladimir Putin’s war on Ukraine has wreaked on global markets and geopolitics has peaked, your hope is in vain. We haven’t seen anything yet. Wait until Putin fully grasps that his only choices left in Ukraine are how to lose — early and small and a little humiliated or late and big and deeply humiliated.

### **35. The curious case of Russia’s missing air force**

The Economist, 8 Mar 22

Billions of dollars have been poured into Russia’s warplanes over the past decade. Between 2009 and 2020 the air force gained around 440 new fixed-wing aircraft, as well as thousands of drones. At the outset of war, it was widely assumed by defense analysts and officials that Russia

would quickly destroy its enemy's air force and roam freely over the country, using its air superiority to pick off Ukrainian forces at will. Yet in the first two weeks of combat, Russia's air force has played a minimal role.

### **36. New rules for a new world**

New York Times, 8 Mar 22, Bret Stephens

Russia's invasion of Ukraine is being described as the end of the post-Cold War era. This isn't quite accurate. Since the Soviet Union collapsed in 1991, we've seen three different eras. Each of them lasted about a decade.

### **37. The Information War isn't over yet**

The Atlantic, 8 Mar 22, Charlie Warzel

Russia's invasion of Ukraine is not yet two weeks old and yet a dozen headlines from major media outlets now suggest that Ukraine is "winning the information war" across much of the world (Russia and China may be notable exceptions). A primary reason for Ukraine's success, they argue, is Ukrainian President Volodymyr Zelensky, a former actor whose leadership style, media savvy, and earnest, emotional appeals have helped channel sympathy and aid for his country. He is, as one headline put it, "a respected war hero and a cultural icon."

### **38. The suffering of Afghan women is the suffering of Afghanistan itself**

The Globe and Mail (Canada), 8 Mar 22, Khorshied Nusratty and Lauryn Oates

On March 8, as the world recognizes International Women's Day, we would do well to recall the catastrophe that has all too recently occurred in Afghanistan. It has only been six months since the Taliban took back Kabul, a tragic day marked by chaos and terror after a days-long campaign in which province after province in the country fell like dominoes.

### **39. Pakistan broaches 'Hijab Day' for International Women's Day**

Foreign Policy, 8 Mar 22, Lynne O'Donnell

Pakistan's minister of religious affairs has called for events marking this year's International Women's Day to be canceled and for March 8 to be rebranded as "Hijab Day" to celebrate a garment that faces no threat to its existence in this overwhelmingly Muslim country.

### **40. Keeping the Pressure on ISIS**

Voice of America, 8 Mar 22, Editorial Board

"ISIS, and those inspired by it, continue to engage in heinous attacks wherever and however they can," declared U.S. Ambassador Jeffrey DeLaurentis, Senior Advisor for Special Political Affairs at the United Nations. "The group attempts to exploit humanitarian crises, and recruit and radicalize to violence members of vulnerable populations and attack civilians."

## **REGIONAL MEDIA COVERAGE**

comfortable with". He added that Rob Malley, the US's top negotiator, has for a long time had a "very good relationship" with Sheikh Mohammed, Qatar's foreign minister.

"Qatar's relationship with Iran changed post the regional embargo and so all the stars aligned for the Qataris to step in," Vaez said. "There was no one else who had the personal ties to both sides and was better placed geo-strategically at this point in time to play the role."

Iranian officials have said outstanding issues include Tehran's demands for guarantees from the US, as well as disagreements over which sanctions would be lifted if Iran reverses its nuclear activity to agreed limits. Tehran wants all Trump-era sanctions lifted, including those related to alleged human rights abuses and terrorism allegations, not just those related to economic activity.

The diplomat briefed on the Qatari talks said Tehran initially wanted its differences with the US lumped together within an agreement to revive the nuclear accord. But the message from Europeans, Qataris and other mediators was "that is going to be very difficult, agree on the JCPOA, which both sides need urgently, and either keep other topics in separate talks or continue talks on other issues, like other sanctions, after the deal is signed," the diplomat said.

Experts said it is almost impossible for Biden to guarantee that no future administration would withdraw from the accord. "The worry with no guarantee is the Iranians will go into it with one eye open and be prepared that in two years the US could leave again," the diplomat said. "The Iranians could use these two years to develop trust and relations with the EU and Asia, and build further institutional trust and other negotiations with the US."

## **2. Saudi, Emirati leaders decline calls with Biden during Ukraine crisis**

Wall Street Journal, 8 Mar 22, Dion Nissenbaum, Stephen Kalin and David S. Cloud

The White House unsuccessfully tried to arrange calls between President Biden and the de facto leaders of Saudi Arabia and the United Arab Emirates as the U.S. was working to build international support for countering Russia's invasion of Ukraine and contain a surge in oil prices, said Middle East and U.S. officials.

Saudi Crown Prince Mohammed bin Salman and the U.A.E.'s Sheikh Mohammed bin Zayed al Nahyan both declined U.S. requests to speak to Mr. Biden in recent weeks, the officials said, as Saudi and Emirati officials have become more vocal in recent weeks in their criticisms of American policy in the Gulf.

"There was some expectation of a phone call, but it didn't happen," said a U.S. official of the planned discussion between the Saudi Prince Mohammed and Mr. Biden. "It was part of turning on the spigot [of Saudi oil]."

Mr. Biden did speak with Prince Mohammed's 86-year-old father, King Salman, on Feb. 9, when the two men reiterated their countries' longstanding partnership. The U.A.E.'s Ministry of Foreign Affairs said the call between Mr. Biden and Sheikh Mohammed would be rescheduled.

The Saudis have signaled that their relationship with Washington has deteriorated under the Biden administration, and they want more support for their intervention in Yemen's civil war, help with their own civilian nuclear program as Iran's moves ahead, and legal immunity for Prince Mohammed in the U.S., Saudi officials said. The crown prince faces multiple lawsuits in the U.S. including over the killing of journalist Jamal Khashoggi in 2018.

The Emiratis share Saudi concerns about the restrained U.S. response to recent missile strikes by Iran-backed Houthi militants in Yemen against the U.A.E. and Saudi Arabia, officials said. Both governments are also concerned about the revival of the Iran nuclear deal, which doesn't address other security concerns of theirs and has entered the final stages of negotiations in recent weeks.

The White House has worked to repair relations with two key Middle Eastern countries it needs on its side as oil prices push over \$130 a barrel for the first time in almost 14 years. Saudi Arabia and the U.A.E. are the only two major oil producers that can pump millions of barrels of more oil—a capacity that, if used, could help calm the crude market at a time when American gasoline prices are at high levels.

Brett McGurk, the National Security Council's Middle East coordinator, and Amos Hochstein, the State Department's energy envoy, both traveled to Riyadh late last month to mend fences with Saudi officials. Mr. McGurk also met with Sheikh Mohammed in Abu Dhabi in a bid to address Emirati frustrations over the U.S. response to the Houthi attacks.

One U.S. official said the Biden administration has worked diligently to beef up Saudi and Emirati missile defenses, and that America would be doing more in the coming months to help the two Gulf nations protect themselves. It may not be all the two countries want, the official said, but the U.S. is trying to address their security concerns.

But Saudis and Emiratis have declined to pump more oil, saying they are sticking to a production plan approved between their group, the Organization of the Petroleum Exporting Countries, and a group of other producers led by Russia. The energy alliance with Russia, one of the world's top oil producers, has enhanced the power of OPEC while also bringing the Saudis and Emiratis closer to Moscow.

Both Prince Mohammed and Sheikh Mohammed took phone calls from Russian President Vladimir Putin last week, after declining to speak with Mr. Biden. They both later spoke with Ukraine's president, and a Saudi official said the U.S. had requested that Prince Mohammed mediate in the conflict, which he said the kingdom is embarking on.

White House spokeswoman Jen Psaki said earlier this week that there were no plans to talk to Prince Mohammed anytime soon about oil, and that there were no plans for Mr. Biden to travel to Saudi Arabia.

Saudi Arabia and the U.A.E. forged deep ties with former President Donald Trump, who sided with them in a regional dispute with Qatar, pulled the U.S. out of the Iran nuclear deal that they had opposed, made his first trip abroad to Riyadh in 2017 and stood by Prince Mohammed after the killing of Mr. Khashoggi. But Mr. Trump's decision not to respond to an Iranian drone and

missile attack on major Saudi oil sites in 2019 rattled Gulf partners who have relied for decades on the promise of U.S. security protection. Iran denied involvement in the oil facility attacks.

The rift between Mr. Biden and Saudi Arabia's crown prince stretches back to the 2020 presidential election, when the Democratic candidate vowed to treat the kingdom as a "pariah" state after a Saudi hit team killed Mr. Khashoggi in 2018 in Istanbul.

There is "very little social redeeming value in the present government in Saudi Arabia," Mr. Biden said during a presidential debate in 2019.

After taking office, Mr. Biden released a U.S. intelligence report that concluded that Prince Mohammed had approved the plan to capture or kill Mr. Khashoggi, who had been an outspoken critic of the young Saudi ruler.

Prince Mohammed has denied knowing anything about the plot, even though people close to the crown prince were convicted by a Saudi court of taking part in murdering the journalist.

Mr. Biden also publicly castigated Saudi Arabia over its protracted war in Yemen and cut off the flow of some weapons Riyadh could use to target Houthis. The president also reversed a move by his predecessor that put the Houthis on America's official list of global terrorist groups, a move that Saudi leaders said had emboldened the Yemeni force and thwarted efforts to broker a cease-fire.

On Monday, Ms. Psaki said the president stood by his view that Saudi Arabia should be treated like a "pariah" state and that the leadership had little redeeming social value.

When asked in an interview with the Atlantic magazine released last week if Mr. Biden misunderstood the Saudi leader, Prince Mohammed responded: "Simply, I do not care."

Prince Mohamed said alienating the Saudi leaders would hurt the U.S. president. "It's up to him to think about the interests of America," he said. "Go for it."

One U.S. official acknowledged that Prince Mohammed is the key Saudi decision maker, and that the Biden administration will have to find ways to work with the crown prince on everything from energy policy to normalizing relations with Israel.

Along with Saudi Arabia, the U.A.E. has urged the U.S. to put the Houthis on its list of terrorist groups and to send more military aid to help defend the country from more attacks. But the U.S. hasn't moved to address those Emirati concerns, according to Gulf officials.

Last month, Gen. Frank McKenzie, the head of U.S. Central Command, flew to Abu Dhabi for a series of meetings with Emirati leaders to discuss ways to beef up security in the wake of the Houthi missile strikes. Gen. McKenzie wanted to meet with Sheikh Mohammed, but was unable to get time with the Emirati leader, according to a Middle East official.

Last week, Yousef Al Otaiba, the U.A.E. ambassador to the U.S., said that relations between the two countries were strained.

“It is like any relationship,” he said in Abu Dhabi. “It has strong days where the relationship is very healthy and days where the relationship is under question. Today, we’re going through a stress test, but I am confident that we will get out of it and get to a better place.”

[Return to top](#)

### **3. Ukraine war highlights internal divides in Mideast nations**

Associated Press, 8 Mar 22, Qassim Abdul-Zahra and Zeina Karam

In a neighborhood of Iraq’s capital, a gigantic poster of Vladimir Putin with the words, “We support Russia,” was up for few hours before a security force arrived and hurriedly took it down. Then came the security directive: All public displays of Putin’s pictures shall be banned.

In Lebanon, the powerful Hezbollah militia railed against the government’s condemnation of Russia’s attack on Ukraine, calling for neutrality.

Such wrangling shows the deep divisions over the Ukraine war in the Middle East, where Moscow has embedded itself as a key player in recent years, making powerful friends among state and non-state actors while America’s influence waned.

Political elites closely allied with the West are wary of alienating Russia or the U.S. and Europe. But other forces — from Shiite militia factions in Iraq, to Lebanon’s Hezbollah group and Houthi rebels in Yemen — vocally support Russia against Ukraine.

These groups are considered to be Iran’s boots on the ground in the so-called anti-U.S. “axis of resistance.” Putin won their backing largely because of his close ties with Tehran and his military intervention in Syria’s civil war in support of President Bashar Assad.

They see Putin as a steady, reliable partner who, unlike the Americans, does not drop his allies. In their circles, they even have an affectionate nickname for Putin — “Abu Ali” — which is a common name among Shiite Muslims and meant to portray a certain camaraderie.

Meanwhile, governments are walking a tightrope.

“Iraq is against the war but has not condemned it nor taken a side,” said political analyst Ihsan Alshamary, who heads the Political Thought Think Tank in Baghdad. Iraq needs to remain neutral because it has shared interests with both Russia and the West, he said.

He said Iran’s allies in the region are outspokenly with Russia “because they are anti-American and anti-West and believe that Russia is their ally.”

Russia has invested up to \$14 billion in Iraq and the northern Kurdish-run region, mainly focusing on the energy sector, Moscow’s ambassador Elbrus Kutrashev told the Iraqi Kurdish news agency Rudaw in a recent interview.

Among the major oil companies operating in the country are Russia’s Lukoil, Gazprom Neft and Rosneft.

Iraq also maintains close ties with the U.S., but Western companies have steadily been plotting to exit from Iraq's oil sector.

Iraq's strongest move so far came after its central bank advised the prime minister against signing new contracts with Russian companies or payments in light of U.S. sanctions. The decision will impact new Russian investment in the country, but little else, Russian industry officials said.

Last week, Iraq was among the 35 countries that abstained from a U.N. General Assembly vote to demand that Russia stop its offensive and withdraw troops from Ukraine. Lebanon voted in favor, while Syria, where Russian ties run deep, voted against. Iran also abstained.

In Lebanon, an unusually blunt Foreign Ministry statement denouncing Russia's invasion of Ukraine caused an uproar and upset the Russians, forcing the minister to clarify that Lebanon did not intend to take sides and would remain neutral.

"They distance themselves and claim neutrality where they want, and they interfere and condemn where they want," Hezbollah lawmaker Ibrahim Moussawi wrote on Twitter, taking aim at the Foreign Ministry. "What foreign policy does Lebanon follow, and what is Lebanon's interest in that? Please clarify for us, foreign minister."

Hezbollah, which also sent thousands of fighters to neighboring Syria to shore up Assad's forces, has seized on Russia's invasion of Ukraine to portray it as an inevitable result of U.S. provocations and yet another betrayal by the United States of its allies — in this case, Ukraine.

In Syria, where Russia maintains thousands of troops, billboards proclaiming, "Victory for Russia" popped up in areas of Damascus this week. In opposition-held areas, which still get hit by Russian airstrikes, residents hope pressure will ease on them if Russia gets bogged down in fighting in Ukraine.

In Iraq, the Ukraine war is highlighting divisions in an already fractured landscape during stalled efforts to form a new government, five months after parliament elections were held.

The huge billboard in support of Putin was briefly put up in a Baghdad neighborhood considered a stronghold of powerful Iranian-backed militias. After it was removed, the Russian Embassy in Baghdad tweeted an image of it.

"The poster was provocative, I am against it," said Athir Ghorayeb, who works at a nearby coffee shop. Iraq is only just emerging from decades of war and conflict, he said. "Why do they insist on involving us in new problems?"

Many Iraqis see in Russia's invasion of Ukraine echoes of Saddam Hussein's invasion of neighboring Kuwait and subsequent years-long economic sanctions placed on Iraq. It was only a few days ago that Iraq finished paying reparations to Kuwait which totaled more than \$52 billion.

On social media, Iraqi pages on Facebook with millions of followers have posted news of what is happening in Ukraine, sharing their views. “Our hearts are with the civilians, as those who have tasted war know its catastrophes,” posted one user, Zahra Obaidi.

“We have tents for refugees and internally displaced people, so you’re welcome to come use them,” Hafidh Salih posted.

Toby Dodge, a professor of International Relations at the London School of Economics, said Iraq’s moves — abstaining from the U.N. vote while limiting economic activity — were prudent, managing the short-term risks without taking an ideological stance.

But the longer the war drags on, the harder it will be to maintain this strategy.

“Iraq is deeply divided politically amongst players between pro-Iran and those that are anti-Iran trying to assert autonomy. The Ukraine becomes another performance, another example of where either side can burnish their credentials,” he said.

#### **4. Russians pressure Ukrainian cities as fighting continues**

Associated Press, 9 Mar 22, Mstyslav Chernov and Yuras Karmanau

Kyiv residents awoke Wednesday to an air raid alert urging them to get to bomb shelters as quickly as possible over fears of incoming Russian missiles, while the strategic port city of Mariupol remained encircled as a humanitarian crisis grew.

Kyiv regional administration head Oleksiy Kuleba issued the air raid alert saying there was a “threat of a missile attack” on the Ukrainian capital. “Everyone immediately to shelters,” he said, later lifting the alert as the all-clear was given.

For days, as Moscow’s forces have laid siege to Ukrainian cities, the fighting has thwarted attempts to create corridors to safely evacuate civilians.

Air raid alerts are common, though irregular, keeping people on edge. Kyiv has been relatively quiet in recent days, though Russian artillery has pounded the outskirts.

Kuleba said the crisis for civilians was growing in the capital, with the situation particularly critical in the city’s suburbs.

“Russia is artificially creating a humanitarian crisis in the Kyiv region, frustrating the evacuation of people and continuing shelling and bombing small communities,” he said.

Across the country, thousands of people are thought to have been killed, both civilians and soldiers, in nearly two weeks of fighting. Russian forces have seen their advances stopped in certain areas — including around Kyiv — by fiercer resistance than expected from the Ukrainians.

But Russian troops have advanced deep along Ukraine's coastline in what could establish a land bridge to Crimea, which Moscow seized from Ukraine in 2014.

The city of Mariupol has been surrounded by Russian soldiers for days and a humanitarian crisis is unfolding in the encircled city of 430,000.

Corpses lie in the streets of the city, which sits on the Asov Sea. Hungry people break into stores in search of food and melt snow for water. Thousands huddle in basements, trembling at the sound of Russian shells pounding this strategic port city.

"Why shouldn't I cry?" Goma Janna demanded as she wept by the light of an oil lamp below ground, surrounded by women and children. "I want my home, I want my job. I'm so sad about people and about the city, the children."

Tuesday brought no relief: An attempt to evacuate civilians and deliver badly needed food, water and medicine through a designated safe corridor failed, with Ukrainian officials saying Russian forces had fired on the convoy before it reached the city.

Mariupol, said Ukrainian Deputy Prime Minister Iryna Vereshchuk, is in a "catastrophic situation."

In other developments in the Russian invasion:

— Poland offered to give all of its MiG-29 fighter jets to the U.S., apparently agreeing to an arrangement that would allow them to be used by Ukraine's military. But Pentagon press secretary John Kirby later said the plan is not "tenable" and raises serious concerns for the NATO alliance. He said the U.S. would discuss it further with Poland.

— U.N. officials said that 2 million people have now fled Ukraine.

Russia's economic isolation deepened as U.S. President Joe Biden announced a ban on Russian oil imports and Shell said it will no longer buy oil and natural gas from the country. Also, Adidas and McDonald's said they are suspending their operations in Russia.

For days, as Moscow's forces have laid siege to Ukrainian cities, attempts to create corridors to safely evacuate civilians have stumbled amid continuing fighting and objections to the proposed routes. Ukraine has rejected Moscow's offers of corridors that lead civilians to Russia or its ally Belarus.

The Russian military has denied firing on convoys and charged that the Ukrainian side is blocking evacuation efforts.

One evacuation did appear successful Tuesday, with Vereshchuk saying that 5,000 civilians, including 1,700 foreign students, had been brought out via a safe corridor from Sumy, an embattled northeastern city of a quarter-million people where overnight strikes killed 21, including two children.

Natalia Mudrenko, the highest-ranking woman at Ukraine’s U.N. Mission, told the Security Council that the people of Mariupol have “been effectively taken hostage,” by the siege. Her voice shook with emotion as she described how a 6-year-old died shortly after her mother was killed by Russian shelling. “She was alone in the last moments of her life,” she said.

Authorities in Mariupol planned to start digging mass graves for all the dead. The shelling has shattered buildings, and the city has no water, heat, working sewage systems or phone service.

Theft has become widespread for food, clothes, even furniture, with locals referring to the practice as “getting a discount.” Some residents are reduced to scooping water from streams.

With the electricity out, many people are relying on their car radios for information, picking up news from stations broadcast from areas controlled by Russian forces or Russian-backed separatists.

Ludmila Amelkina, who was walking along an alley strewn with rubble and walls pocked by gunfire, said the destruction had been devastating.

“We don’t have electricity, we don’t have anything to eat, we don’t have medicine. We’ve got nothing,” she said, looking skyward.

## NOTABLE TWEETS

---

**President Joe Biden; @POTUS (8 Mar):** Today, I’m announcing that the United States is targeting a main artery of Russia’s economy. We are banning all imports of Russian oil and gas.

**Secretary of State Antony Blinken; @SecBlinken (8 Mar):** Productive conversation today with UAE Minister of Foreign Affairs @ABZayed. We value the close coordination on Ukraine and a strong international response to support Ukrainian sovereignty. The U.S. will continue to bolster strong UAE defenses to deter regional threats.

**Pentagon Spokesman John Kirby; @PentagonPresSec (8 Mar):** We are now in contact with the Polish government following the statement issued today. As we have said, the decision about whether to transfer Polish-owned planes to Ukraine is ultimately one for the Polish government. We will continue consulting with our Allies and partners about our ongoing security assistance to Ukraine, because, in fact, Poland’s proposal shows just some of the complexities this issue presents. The prospect of fighter jets “at the disposal of the Government of the United States of America” departing from a U.S./NATO base in Germany to fly into airspace that is contested with Russia over Ukraine raises serious concerns for the entire NATO alliance. It is simply not clear to us that there is a substantive rationale for it. We will continue to consult with Poland and our other NATO allies about this issue and the difficult logistical challenges it presents, but we do not believe Poland’s proposal is a tenable one.

The Islamic State group claimed responsibility for an attack on a security convoy in southwestern Pakistan early Tuesday that killed at least five soldiers, according to a monitoring group.

Pakistani police said the explosion in Baluchistan province was caused by a roadside bomb but the claim of responsibility cites an IS suicide bomber as carrying out the attack, according to the U.S.-based SITE Intelligence Group, which monitors militant messaging.

The conflicting reports could not be immediately explained.

It was the second attack in less than a week claimed by the IS regional affiliate known as Islamic State in Khorasan Province. The militant group is headquartered in neighboring Afghanistan.

Last week, an IS suicide bomber targeted a Shiite mosque during Friday prayers in the northwestern city of Peshawar, killing 63 worshippers and wounding nearly 200.

In Tuesday's attack in the district of Sibi, police also said that 28 people, mostly police officers, were wounded. Wazir Murree, a local police official, said rescuers transported the dead and wounded to hospitals, where an emergency was declared. He said some of wounded were in critical condition.

Local media said the bombing happened near an open area where an annual cultural show was being held. Earlier in the day, Pakistan's President Arif Alvi attended the festival. The targeted convoy was part of the security deployment surrounding Alvi's visit. The bombing took place hours after he had left the area.

Baluchistan has been the scene of a long-running insurgency by various Baluch secessionist groups that for decades have staged attacks on security forces and police to press their demands for independence.

Although authorities say they have quelled the insurgency, violence has continued in the province. Local militants and IS also have a presence there.

According to the claim of responsibility, the attacker was a Pakistani national who "detonated his explosive vest amid a gathering of soldiers and policemen," SITE said.

#### **14. Ukraine calls on Egypt to support it, abandon neutrality**

Al-Monitor, 8 Mar 22, Rasha Mahmoud

Ukraine is calling on its trade partners to support it with weapons, fuel and financial and humanitarian assistance, and to abandon their neutral position toward the Russian invasion. Ukrainian Charge d'Affaires in Egypt Ruslan Nechai noted in a press conference Feb. 28 that his country had sent a memorandum to the Arab League asking it to take its side against Russia.

In an exclusive interview with Al-Monitor, Nechai said, "Egypt's commercial and economic interests with Ukraine and Russia will be threatened and disrupted if the war waged by the Kremlin is not ended. Egypt and Ukraine have long-standing relations in terms of food security. Egypt imports wheat, corn and sunflower seed oil from Ukraine. As we speak, cargoes can no longer be transported via the Black Sea, which catapulted prices of imported materials to unprecedented levels. The price of a ton of wheat almost doubled from \$230 to \$450."

He noted, "Vessel insurance companies also raised their prices. Moreover, cooperation in the field of tourism will take a bad hit. In 2021, around 1.3 million Ukrainian tourists visited Egypt. Now, the Ukraine airspace is closed for civil aviation and there will be no Ukrainian tourism to Egypt. Meanwhile, the Russians will be under great economic pressure in light of the imposed economic sanctions, which would block the flow of Russian tourists to Egypt."

Nechai explained, "Ukraine submitted an official request to Egypt that includes a list of demands. It urged Egypt to affirm its solidarity with it by supplying it with weapons, defense equipment, ammunition, fuel and all supplies necessary to confront the largest army in the [European] continent. Ukraine also called on Egypt to provide it with financial support in addition to humanitarian aid, and to record all cases of violations of the provisions of international humanitarian law."

He added, "It is in Egypt's best interest that the war ends. We need Egypt to offer us humanitarian and medical aid, and help us with weapons, at its own discretion. Egypt's food security depends on Ukraine to a large extent."

Egypt is the largest importer of wheat in the world, and Russia and Ukraine are the main source of Egyptian imports, which exceed 50% of its annual consumption. In light of the chronic gap, wheat is among the strategic commodities that were directly affected by the war.

On Feb. 26, Egypt relaunched an international wheat tender to import wheat from April 13 to April 26, just 48 hours after canceling a tender that received a single offer as a result of the war.

Egypt had confirmed in a statement issued by the Ministry of Foreign Affairs following the invasion launched by the Russian forces, "The Arab Republic of Egypt is following with deep concern the successive developments regarding the situation in Ukraine, and affirms the importance of upholding dialogue and diplomatic solutions, as well as endeavors that would hasten the political settlement of the crisis in a manner that preserves international security and stability, and ensures that the situation does not escalate or deteriorate, and thus to avoid aggravating humanitarian and economic conditions, with their impacts on the region and worldwide."

On March 2, the United Nations General Assembly (UNGA) overwhelmingly adopted a resolution condemning the Russian attack on Ukraine and calling on Russia to withdraw all its forces immediately. The majority of Arab countries voted for the resolution, while one Arab country opposed it and three countries abstained. Two Arab countries were absent.

The Arab countries favoring the resolution were Egypt, Saudi Arabia, the United Arab Emirates, Jordan, Kuwait, Qatar, Bahrain, Yemen, Libya, Tunisia, Comoros, Mauritania, Somalia and Oman.

During a March 3 press conference in Cairo, Nechai praised the Egyptian-Ukrainian relations at all levels, expressing appreciation to Egypt's efforts since the crisis erupted and its condemnation of the Russian invasion during the UNGA meeting.

Karim Mostafa, Egyptian researcher specializing in international relations, told Al-Monitor that the Egyptian position was balanced. "Egypt is weighing all possible scenarios. It is vouching for ending the war in Ukraine as soon as possible, because this is in its best interest. A prolonged war will have severe adverse effects on its economy and on the global economy. On this point, Egypt agrees with the stance of the European community and the G-7," he said.

He noted that Egypt has intertwined economic, tourism and political interests with the two parties to the conflict. "These include the issue of the Grand Ethiopian Renaissance Dam that is nearing settlement with the approaching third filling operation. The EU had issued statements assuring it will tend to this issue after the end of the Russian-Ukrainian war," he said.

Mostafa added, "Egypt has fixed stances based on the need to respect international law and to settle disputes by peaceful means. It also asserts the need not to employ economic sanctions outside the framework of the international system."

Political researcher in international affairs Muhammad al-Omari ruled out the possibility of putting pressure on Egypt and the Arab countries to modify their stance on the crisis and abandon their neutrality by using the food security trump card. He told Al-Monitor, "The rise in gas prices in Europe could provide an opportunity for Egypt and gas exporting countries. This could relatively compensate for the damage they will sustain from the rise of the price of grains."

Nader Saad, spokesman for the Egyptian Council of Ministers, told Al-Monitor that his country has 14 approved countries for the supply of wheat, some of which are outside the European continent. "We are safe to a large extent. Last year, the supply of wheat to the government by farmers was 3.4 million tons and we expect production to hit 4 million this year," he said.

He pointed out that the wheat cultivated area in Egypt is estimated at about 1 million feddans (1.03 million acres), each producing more than 3 million tons, and that the country has a silo storage capacity of 3.8 million tons.

"Egypt's current strategic reserve of wheat amounts to 4.3 million tons. The country is diversifying its sources of supply and trying to increase the productivity of the feddan in the supply season in April. The strategic stock is sufficient for nine months, i.e., until the end of this year," Saad noted.

The tension caused by the Russian war on Ukraine lifted the wheat ton prices in Egypt by about 1,000 Egyptian pounds (\$63.65) while the supply of mills for flour production in the local market was not affected.

shoulder or pulling the strings from backstage. We don't know enough about the Berdimuhamedov family dynamics to quite know whether and how father and son might work together. The possible bifurcation of power between the elder and the younger Berdimuhamedovs may invariably introduce the kind of instability the early election is designed to pre-empt in the first place.

## NATIONAL SECURITY/DEFENSE NEWS

---

### **19. Pentagon says Poland's jet offer for Ukraine 'not tenable'**

Associated Press, 8 Mar 22, Vanessa Gera, Lolita C. Baldor and Aamer Madhani

The Pentagon on Tuesday rejected a surprise announcement from Poland that it would give the United States its MiG-29 fighter jets for use by Ukraine, a rare display of disharmony as NATO allies seek to boost Ukrainian fighters while avoiding getting caught up in a wider war with Russia.

Pentagon spokesman John Kirby said Poland's declaration that it intended to deliver the 28 jets to the U.S. Ramstein Air Base in Germany raised the concerning prospect of warplanes departing from a U.S. and NATO base to fly into airspace contested with Russia in the Ukraine conflict.

"We will continue to consult with Poland and our other NATO allies about this issue and the difficult logistical challenges it presents, but we do not believe Poland's proposal is a tenable one," Kirby said in a statement.

The proposed gift of more warplanes would be a morale booster for Ukrainians now under Russian assault for nearly two weeks. But it also raises the risk of the war expanding beyond Ukraine.

Russia has declared that supporting Ukraine's air force in this way would be tantamount to participating in the war, and would possibly spur retaliation.

White House officials were blindsided by the Polish government announcement on the MiGs. The proposal did not come up during talks with Secretary of State Antony Blinken when he was recently in Poland, according to a U.S. official familiar with the talks.

The U.S. official, who spoke on the condition of anonymity, said White House officials did not think the proposal would easily solve the logistical challenges of providing aircraft to Ukraine.

U.S. Undersecretary of State Victoria Nuland told lawmakers at a Senate Foreign Relations Committee hearing on the Ukraine crisis Tuesday she learned of Poland's plans only while driving to the hearing.

"To my knowledge, it wasn't pre-consulted with us," Nuland told senators.

Ukraine has been pleading for more warplanes as it puts up a tough resistance against stronger Russian forces. Washington has been looking at a proposal under which Poland would supply Ukraine with the Mig29s and in turn receive American F-16s to make up for their loss. Ukrainian pilots are trained to fly the Soviet-era fighter jets.

The Polish Foreign Ministry announced the plan in a statement, which said the jets would be delivered to Ramstein free of charge.

“At the same time, Poland requests the United States to provide us with used aircraft with corresponding operational capabilities,” it said.

The Polish government also appealed to other owners of MIG-29 jets to follow suit.

Former Soviet-bloc NATO members Bulgaria and Slovakia also still have Soviet-made fighter jets in their air forces.

Poland’s decision to publicly float its plan came the day before Vice President Kamala Harris was scheduled to depart for Warsaw for talks with Polish officials. The disconnect is likely to add an awkward layer to the talks, which were expected to focus largely on U.S. efforts to help Poland and other eastern European nations that have taken in some 2 million refugees since the war started.

The handover of Poland's 28 Soviet-made MiG-29s would signal Western resolve to do more to deter Russia. Militarily, it would be unlikely to be a game-changer. The number of aircraft is relatively small. The MiG-29s are inferior to more sophisticated Russian aircraft and could be easy prey for Russian pilots and Russian missiles.

A senior U.S. defense official has said Ukrainians are flying relatively few of their existing aircraft, for relatively little time, as it is. The defense official, who spoke on condition of anonymity to discuss the U.S. assessment, said it's possible that Ukraine does not need more planes and would benefit most from addition types of the weapons it uses effectively every day, including anti-aircraft Stinger and anti-tank Javelin missiles.

The official also said that Russia currently has the capacity to reach almost the entire country of Ukraine with its surface-to-air missiles, including from within Russia and from ships in the Black Sea.

Any MiG transfer is fraught with complications as neither NATO nor the European Union want to be seen as directly involved in such a transaction, which would sharply raise already extreme tensions with Russia.

In order to maintain the pretense that NATO and the EU are not direct participants in the Ukraine conflict, U.S. and Polish officials have been considering a variety of options. One begins with the “donation” of Poland’s MiGs to the United States, as Poland announced on Tuesday.

Under one scenario that has been floated, Poland would deliver the fighter jets to the U.S. base in Germany, where they would be repainted and flown to a non-NATO, non-EU country. Ukrainian pilots would then come to fly them to Ukraine.

No country has been publicly identified as a transit point, but Kosovo, a non-aligned country that is very friendly with the United States, has been mentioned as one of several nations that might be willing to serve as a middle point.

Poland's proposed gift would also weaken Poland's own air force at a time of heightened danger in eastern Europe.

Poland had been asking for the U.S. to provide it with F-16 fighter jets to replace the MiGs.

F-16 production is backlogged, however, and the next recipient in line for new deliveries is Taiwan, which is facing renewed threats from China and has strong support from both parties in Congress.

In its statement, the Polish government specifically asked for "used" planes, a distinction that would allow the Biden administration to bypass congressional opposition to making Taiwan wait to receive its F-16s.

Polish Prime Minister Mateusz Morawiecki said any decision about delivering offensive weapons must be made unanimously by NATO members.

"This is why we are able to give all of our fleet of jet fighters to Ramstein, but we are not ready to make any moves on our own because ... we are not a party to this war," he said.

Some U.S. lawmakers support answering Ukraine's appeals for more warplanes. Senate Minority Leader Mitch McConnell said Tuesday that he believed the aid that Congress hopes to approve later this week for Ukraine will include loan guarantees to help NATO allies replenish their air forces after giving MiGs to Ukraine.

## **20. US and UK ban Russian oil and gas imports in drive to punish Putin**

Financial Times, 8 Mar 22, James Politi, Myles McCormick, Jim Pickard and Andy Bounds

President Joe Biden has banned imports of Russian oil and gas into the US as Washington steps up economic sanctions on Moscow over the invasion of Ukraine in an attempt to deprive it of revenue.

The move was matched by a UK phase-out of Russian oil imports, but the EU did not follow suit and instead unveiled a plan to cut Russian gas imports by two-thirds within a year.

The US decision opens a new front in efforts to isolate Moscow from the global economy, following moves to impose sanctions on key Russian banks, top government officials and oligarchs, as well as its central bank.

“Russian oil will no longer be acceptable at US ports and the American people will deal another powerful blow to [Vladimir] Putin’s war machine,” Biden said, speaking from the White House.

But a ban on US and UK imports will be far less disruptive to global markets than a full international embargo as only a small proportion of Russian shipments goes to those two markets.

The Kremlin responded by issuing an edict on Tuesday saying it would restrict the export of some commodities following the western oil bans, but did not specify details.

The ban came after days of debate within the Biden administration and between the US and western allies about the merits of banning Russian energy to punish President Vladimir Putin for the attack on Ukraine, as well as the risk that it could trigger a new shock to global energy markets.

UK prime minister Boris Johnson’s government said it would phase out the import of Russian oil by the end of the year.

Kwasi Kwarteng, UK business secretary, said the British government would organize an “orderly transition” away from Russian oil imports. But Rishi Sunak, UK chancellor, told a cabinet meeting that consumers would pay a price for the ban, with lower-income households particularly hard hit.

The UK is less dependent on Russia than much of mainland Europe, with Russian supplies making up 8 per cent of overall oil imports into the UK. Johnson is expected to make a statement later this week on reducing British imports of Russian gas.

Germany has resisted any EU prohibition on buying Russian crude. Olaf Scholz, Germany’s chancellor, said on Monday that he preferred to apply “sustainable” pressure on Moscow that would not impose too big a cost on German consumers. Developing alternatives to Russian energy, he said, “cannot be done overnight”.

Biden said: “We’re moving forward this ban understanding that many of our European allies and partners may not be in a position to join us. But we’re working closely with Europe and our partners to develop a long-term strategy to reduce their dependence on Russian energy as well.”

Volodymyr Zelensky, Ukraine’s president, tweeted on Tuesday evening: “Thankful for US and @POTUS personal leadership in striking in the heart of Putin’s war machine and banning oil, gas and coal from US market. Encourage other countries and leaders to follow”.

Russia, the world’s largest exporter of crude and petroleum products, shipped almost 8mn barrels a day to global markets at the end of last year, according to the International Energy Agency.

About 60 per cent of Russia’s oil exports go to Europe, including around 2 per cent to the UK, while 8 per cent go to the US. China accounts for about 20 per cent.

Biden had been facing heavy pressure from members of Congress, both Republicans and Democrats, to plough ahead with an import ban on Russian oil, but had been resisting in an attempt to keep energy flowing around the world and prevent petrol prices from rising sharply at home.

Biden warned that “defending freedom” would bring costs to America as well in the form of higher prices, but he told US energy companies to not take advantage of the increases. “Russia’s aggression is costing us all and is no time for profiteering or price gouging,” said Biden.

The White House said Americans would also be prohibited from “financing or enabling foreign companies” that are investing in Russian energy production. A senior Biden administration official said the US was banning new crude purchases immediately and allowing 45 days to wind down existing contracts.

Alexander Novak, Russia’s deputy prime minister, warned on Monday night that a potential ban could cause oil prices to more than double to \$300 a barrel. He also said that Russia had the option of switching off gas supplies to Europe via the original Nord Stream pipeline, but had chosen not to so far because “no one will benefit from it”.

The move earned plaudits for Biden from Capitol Hill. Jeanne Shaheen, a Democratic senator from New Hampshire, said it was the “right decision”. “The US vowed to hold Putin accountable for any violation of Ukraine’s sovereignty, and this is a result of Putin’s actions,” she said. Republicans said the move should be accompanied by moves to boost US domestic energy production.

Brent crude oil rose 6.5 per cent on Tuesday to about \$131 a barrel as traders reacted to news of the US ban. West Texas Intermediate, the US benchmark, rose by a similar margin to \$127. US petrol prices have climbed rapidly in recent months. On Tuesday, the national average hit a record high of \$4.17 a gallon, according to the AAA, an automobile association.

Mohammed Barkindo, secretary-general of the OPEC producer group, warned that there would be no way of filling the gap left by Russian oil in case of an all-out embargo.

“There is no capacity in the world at the moment that can replace 7mn barrels of exports,” he said at the CERAWEEK energy conference in Houston on Monday.

Oil prices have surged in recent days as many big oil consumers have boycotted Russian oil even before the announcement of any official crude import prohibitions. Brent and West Texas Intermediate both ended 2021 at less than \$80 a barrel.

The EU unveiled a plan on Tuesday to cut Russian gas imports by two-thirds within a year. Moscow supplies 40 per cent of the bloc’s gas and a quarter of its crude oil.

Brussels aims to import more liquefied natural gas, increase the amount of wind and solar energy, produce biogas and reduce demand by insulating homes and asking people to turn down their central heating.

the president have suggested he does not want to appear to be setting policy based on his personal emotions or grief over his son.

It was 2016 when Biden first publicly connected the brain cancer that killed his son to the toxic burn pits that Beau had been exposed to, citing a book that had been written about it and had included a chapter on Beau.

In a January 2018 interview with PBS's Judy Woodruff, Biden said he thought burn pits played a "significant role" in his son's death but added that the science was unsettled.

"There's a lot higher incidence of cancer coming from Iraq now and Afghanistan than in other wars," Biden said. "There's been no direct scientific evidence that I'm aware of yet, but a lot of work is being done."

During the campaign, Biden advocated for a law that would allow veterans to get treatment, and he also called on more federal research funding to study the impact of brain injuries and toxic exposures. His budget proposal this year included \$87 million toward such research, with additional funding expected in future years.

Biden had been more cautious on calling for federal legislation until recently. But on Tuesday, he was unequivocal in pushing for the House bill, as well as a similar Senate measure that cleared with unanimous backing this year.

"Both of these bills have bipartisan support," he said. "These are the bills that unite the American people. These are the bills that will deliver necessary care for veterans and their families. And let's get those bills to my desk, so I can sign them immediately."

## **22. Spy agencies cite Russia's setbacks but say Putin is 'unlikely to be deterred'**

New York Times, 8 Mar 22, Julian E. Barnes

Top U.S. intelligence officials said on Tuesday that President Vladimir V. Putin of Russia had been surprised and unsettled by the problems that have hampered his military in Ukraine, issues that will make it more difficult for Russian forces to control the country.

But Mr. Putin is determined to succeed in Ukraine, and will try to double down and use ever more brutal tactics, the officials said during an appearance before the House Intelligence Committee.

America's intelligence agencies, which before the attack released information on Russia's troop buildup and war plans, will work to highlight Russian atrocities and crimes, a continuation of the information war that helped rally the West to impose tough sanctions on Ukraine, the officials said.

Before the invasion, Mr. Putin thought the war would be relatively quick, allowing him to rapidly seize Kyiv and overwhelm Ukrainian forces, Avril D. Haines, the director of national intelligence, told lawmakers.

“Moscow underestimated the strength of Ukraine’s resistance and the degree of internal military challenges we are observing, which include an ill-constructed plan, morale issues and considerable logistical issues,” Ms. Haines said.

Controlling all of Ukraine will necessitate even more forces than Russia has committed to the fight, she said.

Some allied intelligence services believe that Mr. Putin’s early military problems could cause him to readjust his plans to take control of the whole country, and stop his advance after he captures Kyiv, particularly if military officers highlight how many additional forces it will require to secure Ukraine.

But diplomats are also quick to add that they are not sure how rationally Mr. Putin is viewing the situation. At the hearing, Ms. Haines said Mr. Putin appeared intent on intensifying his campaign, despite his military’s logistical problems.

“Our analysts assess that Putin is unlikely to be deterred by such setbacks,” Ms. Haines said, “and instead may escalate, essentially doubling down to achieve Ukrainian disarmament, neutrality, to prevent it from further integrating with the U.S. and NATO.”

Given the problems the Russian military has faced, and the rising will of Ukraine to fight, intelligence officials predicted the war would intensify. William J. Burns, the C.I.A. director, is anticipating an “ugly next few weeks.”

“I think Putin is angry and frustrated right now,” Mr. Burns said. He is likely to “try to grind down the Ukrainian military with no regard for civilian casualties,” he added.

Lt. Gen. Scott D. Berrier, the director of the Defense Intelligence Agency, said there was a limit to how long Kyiv could hold on as Russian forces encircled Ukraine and tightened the vise. “With supplies being cut off, it will become somewhat desperate in, I would say, 10 days to two weeks,” General Berrier said.

Other estimates are similar. Some allied governments believe Russia will finish encircling Kyiv in a week and, given the strength of Ukraine’s resistance, the city may be able to hold out for another month, a European diplomat said on Tuesday.

While the intelligence chiefs said Mr. Putin felt aggrieved, Mr. Burns said it would be incorrect to view his actions as crazy.

The Russian leader’s increasing isolation and insulation from conflicting views make him “extremely difficult to deal with,” Mr. Burns said. Without aides willing to push back, Mr. Putin entered the war misunderstanding the will of Ukraine to fight back and the West to take action.

Germany, for example, suspended the Nord Stream 2 pipeline project, which would have allowed imported Russian natural gas to bypass Ukraine; sent weapons directly to Ukraine; and expanded its defense budget.

“He’s been unsettled by Western reaction and allied resolve, particularly some of the decisions that the German government has taken,” Mr. Burns said. “I think he’s been unsettled by the performance of his own military.”

General Berrier said he had low confidence in reports of Russian casualties, but put Moscow’s losses at 2,000 to 4,000.

Mr. Burns said the American government was keeping a close eye on Mr. Putin’s domestic support. With state-controlled media dominating what the Russian public hears and independent reporting on the invasion essentially being made illegal, it will take time for Russians to “absorb the consequences” of Mr. Putin’s actions.

But, over time, funerals of Russian soldiers killed in Ukraine will have an impact, Mr. Burns said.

“You also see, in relatively small numbers, a lot of very courageous Russians out on the street protesting,” Mr. Burns said. “Something like 13 or 14,000 have been arrested since then, which is not a small thing in a deeply repressive society like Russia.”

Other governments said another crucial factor is whether Mr. Putin’s support within the military erodes. Before the invasion, Russian officers complained about the plan, according to intercepts obtained by Western intelligence. The discontent with the Kremlin’s planning now continues, the European diplomat said.

The intelligence community will expand its information war with Russia, working to expose Moscow’s war crimes and atrocities in Ukraine, Ms. Haines said. American spy agencies were working with other agencies to document Russian actions in Ukraine, including war crimes, and to hold the perpetrators accountable.

“Russian forces are at the very least operating with reckless disregard for the safety of noncombatants, as Russian units launch artillery and airstrikes into urban areas as they have done in cities across Ukraine,” Ms. Haines said.

Such an information campaign to expose Russia’s attacks on civilians and other missteps would build on the intelligence released before the invasion, which sought to expose Russia’s war plans, rally allied support for tough financial sanctions and deny Moscow the chance to create a false pretext for an attack.

Gen. Paul M. Nakasone, the director of the National Security Agency, said that the United States had closely tracked three or four Russian cyberattacks on Ukraine, and that reinforced Ukrainian defenses had helped blunt wider Russian cyberattacks.

“In terms of why they haven’t done more, I think that’s obviously some of the work that the Ukrainians have done, some of the challenges that the Russians have encountered and some of the work that others have been able to do to prevent their actions,” General Nakasone said.

### **23. Biden Administration altered rules for sharing intelligence with Ukraine**

Wall Street Journal, 8 Mar 22, Warren P. Strobel and Michael R. Gordon

The White House last week modified existing guidance for the Pentagon and U.S. spy agencies on sending intelligence data to the Ukrainian government to clear the way of any bureaucratic roadblocks to information sharing, a senior Biden administration official said.

That change followed complaints from both Democratic and Republican lawmakers that President Biden’s administration wasn’t sharing real-time targeting data that would enable Ukraine’s military to strike back at Russian armored formations bombarding and attempting to envelop its major cities.

“We’re adjusting as circumstances warrant, and we’ll continue to ensure that operators have flexibility to share intelligence as the conflict evolves,” a U.S. intelligence official said of the change, declining to provide additional details.

The U.S. has been sharing battlefield intelligence with Ukraine to help the Kyiv-based government defend itself against Russia’s invasion, while being careful to avoid becoming directly embroiled in the conflict itself, other U.S. officials said.

The intelligence sharing with Ukraine, which isn’t a member of the North Atlantic Treaty Organization, is part of broader Biden policy of support for Kyiv that includes billions in military assistance, diplomatic support and joining U.S. allies in harsh sanctions on Russia.

It extends a preinvasion initiative of releasing more intelligence than Washington has previously provided to allies in Europe and to the public to spotlight the Kremlin’s military movements.

In the days leading up to the invasion, the Biden administration warned repeatedly that an attack was imminent, though it didn’t provide details on why it believed Russia was preparing military action. According to an American official, one of the reasons the U.S. grew so certain of Moscow’s plan for an invasion was intelligence showing the Russian military had begun to fuel its missiles, a sign they were about to be deployed.

It couldn’t be determined, however, if that specific detail was provided to the Ukrainians.

U.S. officials said the classified information now streaming across secure communications portals includes detailed, tactical data on Russian troop movements that is designed to help Ukraine formulate a military response. They declined to be more specific, citing the classified nature of the exchange.

One U.S. official said the intelligence data first must be scrubbed to remove clues about how it was collected, leading to delays in sharing it with the Ukrainians.

Rep. Adam Smith (D., Wash.), chairman of the House Armed Services Committee, said last week that the Pentagon wasn't sharing "real-time targeting" information with the Ukrainians because doing so would make the U.S. a participant in the war. "So the Pentagon is really struggling and walking that very fine line," he said on MSNBC's "Morning Joe" program.

"We are sending them intelligence. But we have lawyers delaying the process at way, way too many steps. And we shouldn't be letting technicalities get in the way of helping the Ukrainians fight back," Sen. Ben Sasse (R., Neb.), a member of the Senate Intelligence Committee, told National Public Radio.

U.S. officials with knowledge of the matter disputed those characterizations. They said one of the major impediments to sharing classified material with Ukrainian President Volodymyr Zelensky's government is concerns about Russian moles in Ukraine's security services.

"We are sharing intelligence with Ukrainians as quickly as possible," Sen. Mark Warner (D., Va.), chairman of the Senate Intelligence Committee, said in a recent TV interview. "We also have to realize, unfortunately, many of the Ukrainian services have been penetrated by the Russians over many years, so we have to protect our sources and methods."

Those counterintelligence concerns, officials said, can mean delays in transmitting newly acquired intelligence to Ukraine, while it is sanitized to ensure Russian operatives don't learn the details of American intelligence-gathering methods.

Lack of intelligence-gathering assets over Ukraine is another limiting factor. The U.S. isn't—as far as is known—flying surveillance drones and aircraft over Ukraine's airspace. Additionally, Ukraine, at least until recently, hasn't been a traditional "hot spot" where spy satellites and other collection platforms were consistently trained, another U.S. official noted.

Rep. Tom Malinowski (D., N.J.), a member of the House Foreign Affairs Committee, said he looked into the intelligence-sharing issue and "my belief is that there are no meaningful restrictions on the sharing of intelligence."

"For example, I personally believe it would be very useful to provide intelligence on the locations of Russian artillery," he said, without stating whether or not that was occurring.

Speaking Tuesday at a House hearing on world-wide threats, the intelligence agency chiefs provided a general picture of how they saw the war in Ukraine going.

Director of National Intelligence Avril Haines said Russia is facing serious military shortcomings in its invasion of Ukraine, including morale and logistical problems. Moscow will be hard-pressed to control territory and install a pro-Kremlin regime in the face of a persistent and significant Ukrainian insurgency, she added.

Ms. Haines and other intelligence agency chiefs told the House Intelligence Committee that Russian President Vladimir Putin had hoped to seize the Ukrainian capital of Kyiv within two days in a lightning strike that would have short-circuited attempts by the West to aid the country.

That didn't happen. "His own military performance has been largely ineffective," CIA Director William Burns told House Intelligence Committee chair Rep. Adam Schiff (D., Calif.).

Ms. Haines and Mr. Burns told the committee that Mr. Putin is likely to double down on his efforts to subdue Ukraine and grind down its military, with increasing disregard for civilian casualties.

It will be "an ugly next few weeks," Mr. Burns said.

#### **24. Russia's military losses in Ukraine are a gold mine for US intelligence**

Newsweek, 8 Mar 22, Naveed Jamali and Tom O'Connor

Russian military equipment seized by Ukrainian forces throughout an explosive conflict poised to enter its third week may prove a gold mine for U.S. intelligence looking to get a rare look at Moscow's weapons and the encrypted command and control data they contain, current and former U.S. military personnel told Newsweek.

"The gear is huge," Mike Jason, a retired U.S. Army colonel who served in Afghanistan, Iraq and Kosovo, told Newsweek. "It's like capturing an enigma machine."

The term refers to the cipher device employed by Nazi Germany during World War II to mask the Third Reich's secret communications, a code ultimately unraveled by the Allies, constituting a major intelligence advantage.

Now as Russian President Vladimir Putin continues to argue today for the "denazification" of Ukraine through what he has deemed a "special military operation" decried by much of the international community as an unjustified invasion of the neighboring country, an opportunity may exist to listen in on Moscow's war effort.

Should Ukraine get its hands on such assets, Jason said there are "immediate implications" and "long-term implications," including those that involve the country's foreign backers.

Among the potential "immediate" impacts would be that Kyiv "can perhaps listen in right now to what is happening, then exploit in real-time," Jason said. One of the possible "long-term" effects he identified was that "the equipment can be reverse-engineered, say, sent to a major foreign intelligence exploitation lab, etc."

Here, Jason said, even seemingly innocuous devices such as radios, if still intact, could contain important so-called "crypto" information, giving an insight into Russia's encoded communications.

"And then," he added, "technology can be developed to jam and/or listen in, etc."

Given the active war effort, U.S. military officials have been reticent in speaking publicly about the extent to which intelligence was being shared between Washington and Kyiv. Reached for comment, a Pentagon spokesperson told Newsweek that "we have nothing to offer, as we do not speak to intelligence assessments."

But one U.S. cyberwarfare officer, who asked to remain anonymous, told Newsweek that "we have covert folks attempting to acquire hardware all the time."

And, though no reliable figures as to the extent of Russia's military losses thus far have been made public, reports indicate they have been relatively substantial. Unverified footage promoted by official Ukrainian outlets has documented Ukrainian captures of the likes of Russian command and control vehicles, a T-72-tank-mounted TOS-1A thermobaric multiple-launch rocket system and a number of Russian aircraft, including the Su-34.

Ukrainian state-owned defense conglomerate Ukroboronprom even claimed Tuesday it would offer sizable rewards for anyone willing to retrieve "stolen combat aviation equipment of the occupiers," including up to \$500,000 for a captured military helicopter and \$1 million for a warplane in working condition.

One particularly important alleged find for Kyiv was the Pantsir surface-to-air missile system, several of which have been said to have been taken intact by Ukrainian units. Jason said this would potentially be "a huge get," as it's assumed such a weapon "talks to friendly aircraft to deconflict friend-or-foe" and "would be tied to command and control systems at a high level."

Asked by Newsweek what the fate of such Russian equipment was once coming under Ukrainian control, a senior Ukrainian defense official who requested to not be named had a simple answer.

"It is recovered and used against the aggressor," he said.

A U.S. military aviator who also asked to remain unnamed gave some examples of the benefits of capturing enemy hardware.

"Getting actual equipment and manuals also helps with the human dynamic: how easy it is to operate, etc," the U.S. military aviator told Newsweek. "Can any 'Joe Shmoe' use this, or does it require a Ph.D. to operate it at the same level as the glossy brochure?"

But this aviator also noted that there were limits to the amount of useful information that could be extracted from these systems alone in the modern era, when a nation like Russia would likely be quick to take action to avoid critical channels being intruded on.

"As systems move from analog to digital, the exploitation game changes a bit," the U.S. military aviator said. "The software and source code are the critical items, because you can find zero-day vulnerabilities and build a tool to attack it if/when the time comes."

As such, the U.S. military aviator said that "crypto gear is less important these days because the value is in the keys, and they change all the time."

But fears of U.S. equipment falling into Russia's hands likely also played into hesitance to send more advanced, expensive weapons systems to Ukraine, beyond the simpler platforms such as Stinger shoulder-fired surface-to-air missile systems, a number of which the Russian Defense Ministry claims to have already confiscated. Ukraine's military also said its navy sunk its own flagship last week, the frigate Hetman Sahaidachny, to avoid capture by Russia.

Attempts by Washington and Moscow to obtain one another's equipment were a central theme of the Cold War, and continue to influence U.S. opposition to allies like Turkey and partners like India acquiring Russia's S-400 surface-to-air missile system while also seeking advanced U.S. platforms.

Last month, the Pentagon dismissed Russian news reports that Moscow had recovered a sonar countermeasure device from a U.S. Navy Virginia-class submarine after an encounter with Russian warships in the northern Pacific Ocean, with spokesperson Eric Pahon telling Newsweek at the time that the claims were "nonsense and disinformation."

On Thursday, the Pentagon managed to complete an extensive operation to recover an F-35 fighter jet that had crashed earlier this year into the South China Sea, where the U.S.' stated top competitor on the world stage, China, operates extensively, and which it largely claims as its own territory.

As the war in Ukraine drags on, both Kyiv and Moscow claim successes on a daily basis. But rampant misinformation and the fog of war have obscured efforts to discern the validity of either side's claims.

And despite their ongoing hostilities, representatives of Russia and Ukraine have also engaged in three rounds of talks hosted by Russian ally Belarus. Among the more immediate topics of discussion is the implementation of a ceasefire and humanitarian corridors to allow citizens to flee the conflict, which threatens to soon take on an even deadlier character as Russian troops push to encircle major cities, including the capital.

On Monday, Kremlin spokesperson Dmitry Peskov told Reuters that Moscow would end the war "this moment" should Kyiv agree to four core demands: an end to Ukrainian military action, recognition of the independence of the pro-Russia separatist-held Donetsk and Luhansk People's Republics in the eastern Donbas region, Russia's control of the southern Crimean Peninsula annexed in 2014 and an amendment to Ukraine's constitution to declare neutrality from military blocs, ending its bid to join the U.S.-led NATO alliance.

In an interview with ABC News, Ukrainian President Volodymyr Zelensky later rejected what he called an "ultimatum" from Russia, but said his government had a "possible solution" to satisfy the conditions. To do so, however, he sought a direct line with Putin, who has not expressed any public plans to engage one-on-one with his Ukrainian counterpart.

## **25. Russian oil embargo pushes OPEC to take sides**

Wall Street Journal, 8 Mar 22, Rochelle Toplensky

A Russian oil embargo ramps up pressure on the Organization of the Petroleum Exporting Countries to increase production or side with Russia. As the war in Ukraine becomes a proxy conflict in a new Cold War, the cartel can't hope to maintain its current studied neutrality.

President Biden banned imports of Russian oil on Tuesday, sending the price of Brent crude to an intraday high of \$133 a barrel. The U.K. may soon follow, but the key export market for Russian oil is Europe. Many buyers already were avoiding Russian crude due to fears of breaching financial sanctions or hurting their reputations. European energy giant Shell on Tuesday even announced its own private boycott of Russian oil and gas and apologized for buying a cargo of Russian oil last Friday, after coming under public pressure.

Russia is the world's third-largest oil supplier, producing around 10 million barrels per day of crude, about half for export. The West imported about 4.3 million bpd in January. The lion's share of that went to Continental Europe, with the U.S. importing just 200,000 bpd and the U.K. even less, according to Bjørnar Tonhaugen, head of oil markets at Rystad Energy. But the U.S. embargo may cause others to avoid Russian crude and in the absence of buyers the global market could face a big shortfall. Rystad Energy estimates that cutting four million bpd from global supply would send crude prices to \$200 a barrel.

Alternative suppliers could ease the crunch. OPEC+ has about 4 million bpd of spare capacity, according to Rystad, concentrated in Saudi Arabia, Iraq, Iran and the United Arab Emirates. But opening their taps would be to take sides against Russia, which co-chairs OPEC+, the wider version of the cartel. At its most recent meeting, in the week after President Vladimir Putin's invasion of Ukraine, OPEC+ took just 13 minutes to decide they would stick to their production plans. They didn't even discuss the war in what was reportedly their shortest meeting ever.

U.S. shale production also could be profitably ramped up at prices far below current levels, but that isn't a short-term answer; OPEC could produce much more quickly. Also, differences in oil composition can make it difficult for customers to directly substitute one crude for another. For example, U.S. Gulf Coast refineries use heavier Russian oil, which can't be readily replaced with the lighter shale blend.

Europe, Russia's biggest energy customer in coal, oil and gas didn't announce an oil embargo on Tuesday. Instead, the European Union unveiled a plan to cut its "overreliance" on Russian energy. The bloc seems to have finally accepted that its pipeline diplomacy has failed as Mr. Putin weaponizes energy. "We simply cannot rely on a supplier who explicitly threatens us," said EU Commission President Ursula von der Leyen.

Even if some European companies continue to buy Russian oil, the region faces a potential crisis in gas. Moscow has threatened to stop sending gas through the Nord Stream 1 pipeline to Germany in retaliation for a Western ban on its oil. The EU has enough gas to make it through to the summer, but will need to rebuild its inventories before next winter. The bloc has proposed a

legal requirement that gas storage in the EU be at least 90% full by Oct. 1 every year. That would lower the risk of a winter crunch, assuming the gas can be found.

It also promised to reduce its demand for Russian gas by nearly two-thirds before the end of the year by increasing liquefied-natural-gas imports and pipeline gas from the likes of Norway and Algeria as well as pushing energy-efficiency measures and clean-energy installations.

The Saudis demonstrated that energy was a powerful weapon against Moscow in their OPEC+ standoff in 2020, which sent crude prices briefly below zero. It might be that OPEC isn't willing to sacrifice the recent detente to balance the market. Mr. Putin needs energy income more than ever with his war in Ukraine taking longer than expected and Russia's foreign-exchange reserves tangled in sanctions.

Second-guessing OPEC's moves is a mug's game, but the U.S. ban on Russian purchases shrinks its space for trying to play it both ways. OPEC members have an uncomfortable choice to make.

## ADJACENT AORs

---

### **26. US spy chiefs warn Putin may escalate war**

TIME Magazine, 8 Mar 22, Vera Bergengruen

Twelve days into his invasion of Ukraine, Russian President Vladimir Putin has “no sustainable political endgame,” the heads of U.S. intelligence agencies told Congress in a somber assessment Tuesday. That military reality means even greater humanitarian costs lie ahead, they said. “Putin is angry and frustrated right now,” Central Intelligence Agency Director William Burns told lawmakers at the House Intelligence Committee’s annual hearing on worldwide threats. “He’s likely to double down and try to grind down the Ukrainian military with no regard for civilian casualties.”

The U.S. intelligence leaders laid out their most blunt assessment yet of the war that has killed hundreds of civilians and forced more than two million people to flee the country, with testimony from Director of National Intelligence Avril Haines, Defense Intelligence Agency Director Lt. Gen. Scott Berrier, National Security Agency Director Paul Nakasone and FBI Director Christopher Wray. Despite the significant losses incurred by the Russian military, which has faced unexpectedly fierce resistance from Ukrainian armed forces, U.S. intelligence analysts “assess that Putin is unlikely to be deterred by such setbacks and instead may escalate,” warned Haines. “Putin feels aggrieved the West does not give him proper deference and perceives this as a war he cannot afford to lose,” she told lawmakers, adding that the Russian military “has begun to loosen its rules of engagement to achieve their military objective.”

But even if the Kremlin pursues a “maximalist plan,” U.S. intelligence analysts judge that it will be difficult for Russians to hold and control Ukrainian territory. Given the current situation, it would prove extremely challenging to “install a sustainable pro-Russian regime in Kyiv in the face of what we assess is likely to be a persistent and significant insurgency,” Haines said. U.S.

and European leaders have made similar warnings in recent days. Tony Radakin, the head of the United Kingdom's armed forces, declared on Sunday that Russian forces were being "decimated" by the Ukrainians. "Ukraine will never be a victory for Putin," President Joe Biden said in a White House address on Tuesday. "Putin may be able to take a city, but he'll never be able to hold the country."

Moscow underestimated the strength of a highly motivated Ukrainian resistance as well as the severity of the Russian military's internal challenges "which include an ill-constructed plan, morale issues, and considerable logistical issues," Haines said. What was meant to be a rapid offensive was almost immediately hampered by supply problems. Hundreds of videos have shown destroyed Russian vehicles and captured Russian soldiers. Between 2,000 to 4,000 Russian soldiers have been killed so far in less than two weeks of fighting, according to Berrier, the DIA Director. The U.S. suffered 2,400 military deaths in 20 years in Afghanistan.

But U.S. intelligence chiefs also offered a frank assessment of Putin's mindset, calling the war on Ukraine a "matter of deep personal conviction" for the Russian leader. "He has been stewing in a combustible combination of grievance and ambition for many years," Burns told lawmakers. He noted that Putin is operating with a very small circle of advisers, and that the COVID-19 pandemic "made it even narrower."

The threat of accidental or intentional nuclear escalation loomed over the hearing. "As Putin's generals are being killed and he's increasingly cornered, I would anticipate he would do increasingly desperate things," said Rep. Jim Cooper, a Tennessee Democrat, echoing concerns expressed by other lawmakers. Putin sparked new fears when he took the unusual step of publicly declaring that he was putting his nuclear forces into "special combat readiness" on Feb. 27. At the same time, Ukraine's nuclear plants have been caught in the crossfire between Russian and Ukrainian forces, and international officials have issued dire warnings about the risks. "We've never had armed conflict, in this way, with boots on the ground in a country with this configuration of nuclear infrastructure," Rafael Mariano Grossi, the head of the International Atomic Energy Agency (IAEA), told TIME March 4, calling it "unprecedented."

The U.S. intelligence officials cautioned against panic. While Putin's announcement was "very unusual" and something U.S. officials said they had not seen since the 1960s, Haines said that they had "not observed force-wide nuclear posture changes that go beyond what we've seen in prior moments of heightened tensions."

The officials also noted the potential fallout for countries that have aligned themselves with Putin. Chinese leader Xi Jinping and other leaders are "unsettled" by what they're seeing in Ukraine, Burns said. "They did not anticipate the significant difficulties the Russians were going to run into," he told lawmakers. "I think they are unsettled by the reputational damage that can come by their close association with President Putin; second by the economic consequences at a moment when they are facing lower annual growth rates than they've experienced for more than three decades."

Xi has adopted a more cautious tone in his recent dealings. In a video conference with French President Emmanuel Macron and German Chancellor Olaf Scholz on Tuesday, he warned about

the situation “spinning out of control” and said he was “pained to see the flames of war reignited on the European continent,” according to a readout from the Chinese foreign ministry.

The U.S. intelligence agencies are now focused on how Putin will respond to his initial miscalculations about Ukraine, about the West’s response, and about his own military. “He’s been proven wrong on every count,” Burns said, noting Putin’s underlying belief that Ukraine is not a real country. “He’s dead wrong. Real countries fight back. And that’s what the Ukrainians have done quite heroically over the last 12 days.”

## **27. NATO members mount huge operation to resupply Ukrainian fighters**

Wall Street Journal, 8 Mar 22, Matthew Luxmoore, Drew Hinshaw and Nancy A. Youssef

In the space of two weeks, Russia’s invasion of Ukraine has set off one of the largest and fastest arms transfers in history.

By road and rail, the Czech Republic sent 10,000 rocket-propelled grenades to Ukraine’s defenders last week alone. In Poland, the provincial airport of Rzeszow located about 60 miles from the Ukrainian border has been so crowded with military cargo jets that on Saturday some flights were briefly diverted until airfield space became available.

On the country’s highways, police vehicles are escorting military transport trucks to the border, with other convoys slipping into Ukraine via snow-covered back roads through the mountains.

The race to deliver arms to Ukraine is emerging as a supply operation with few historical parallels. Western allies, having ruled out putting troops on the ground in Ukraine, have been attempting to equip the country’s thinly spread and outmatched military, some of its soldiers fighting without boots.

With Russian warships holding the Black Sea coast, and Ukraine’s airspace contested, the U.S. is rushing to truck weapons overland before Russia chokes off the roads as well. Pentagon officials said most of what will total \$350 million in arms and assistance the Biden administration pledged late last month has been delivered. Congress is considering authorizing billions more. The Defense Department has described its efforts as unprecedented.

Governments once reluctant to transfer arms and antagonize Russia are joining the fray. Sweden, though historically nonaligned, has pledged 5,000 antitank weapons. Berlin—which only three weeks ago was blocking Estonia from transferring German-made howitzers to Ukraine—is now sending more than 2,000 antitank and anti-aircraft weapons. Italy, long a passive player in the North Atlantic Treaty Organization, has also promised weapons, and Spain has offered grenade launchers.

The allied effort is buttressed by ordinary citizens in Europe and the U.S., who say they are buying hunting-grade gear online to circumvent rules against shipping military equipment and funneling it to friends headed into Ukraine. In Warsaw, a 67-year-old woman is in charge of smuggling night-vision goggles to the country’s defenders. Packed hotels near the Polish-

Ukrainian border cater to men asking each other how they can ship body armor to major cities, before Russian troops seize the roads.

Still, Ukrainians say it isn't enough. In videos posted to social media from his office in Kyiv, with the Ukrainian capital almost encircled by Russian forces, President Volodymyr Zelensky has urged the West to send more weapons and enforce a no-fly zone to stop Russia from carrying out more air attacks on civilians. He pleaded last weekend to members of Congress for combat jets and missiles.

Such appeals are coming not just from the top. Frontline fighters in Ukraine's Territorial Defense units have used social media to put out a shopping list of their needs, including helmets, binoculars, range finders along with more basic needs such as instant noodles or Q-Tips.

"We need more," said Andriy Malets, a 53-year-old entrepreneur who signed up to help defend the town of Kryvyi Rih but said he was forced to wait because his local unit has five volunteers for every available gun. Instead, he said, people in Kryvyi Rih now spend their time making Molotov cocktails.

The infusion of hundreds of millions of dollars in weaponry has little precedent in modern times, said Filip Bryjka, a security analyst at the Polish Institute of International Affairs. There hasn't been a Western arms push of such speed and scale in Europe since President Harry S. Truman asked Congress to send \$400 million in military and economic assistance into Greece and Turkey in the first months of the Cold War, said Mr. Bryjka, who wrote a recent analysis of Poland's role in arms transfers to Ukraine.

The dollar value, U.S. and allied officials say, is almost certain to grow if the war continues. On Capitol Hill, legislators are considering a bill for when the \$350 million designated for Ukraine runs out. That legislation provides \$12 billion for Ukraine and its Eastern European allies, roughly half of which would be dedicated to supporting Ukraine militarily.

Ukrainian officials, in negotiations with Poland and the U.S., have pushed for NATO allies to provide Soviet-era jet fighters that Ukrainian pilots could fly, alongside more antitank missiles, Turkish drones, and heat-seeking missiles capable of shooting down combat helicopters or planes.

"We are happy but we are not satisfied," said one senior Ukrainian official. "What we have is not enough because Russian troops are still in Ukraine."

U.S. officials warn that the pace of resupply would likely slow if Russian forces grab control of the highways and cities of western Ukraine, where the weapons are received from convoys rolling in from Poland, Slovakia and Romania. But judging the pace of Russia's advance and when the supply lines may be cut is hard to assess, defense officials have said.

A large amount of the gear going to Ukraine comes from NATO members in Central Europe that were once part of the former Soviet Union or allied with it. The U.S. says that Washington and its NATO allies have sent 17,000 antitank weapons into Ukraine, mostly provided by the Czech military.

Some of the efforts have been financed by a crowdfunding campaign, which raised \$20 million from individual donors in the Czech Republic. The country's government put up another \$30 million to buy arms that have virtually all been dispatched.

"Everything that Ukraine's allies ask us to do, we do it ASAP," said Czech Deputy Defense Minister Tomas Kopecky. "When it's used in Ukraine it means it's not used in our country."

Although the transport planes and trucks are highly visible, the operation to supply Ukraine in many countries has been shrouded in secrecy. Some Central and Eastern European countries worry overt shipments could provoke Russia. "Most countries prefer not to share details because they are afraid of how Russia could react," said Mr. Bryjka. "And they don't want to make Russia's intelligence work easier."

The shipments are also operating through an area that Washington doesn't expect to stay open much longer. Kyiv, which U.S. officials thought would fall early in the war, has held off Russian advances, allowing western militaries to ship in gear more easily than they expected.

Ukrainians living outside the country are using the same opening to drive in military gear bought with their own money to soldiers fighting in the war. While President Biden was delivering his State of the Union address last week, promising aid for Ukraine, Oksana Prysyazhnyuk, a Ukrainian energy executive in New York state, was watching, while texting friends on the front. "Maybe you can find someone who can provide helmets and bulletproof vests because the demand for them is absolutely huge," a Ukrainian stationed near the front line texted her.

"They are going to war with bare hands," Ms. Prysyazhnyuk said. "They don't even have winter boots."

One senior Ukrainian military official, who spoke Tuesday from his base outside Kyiv, disagreed. He said there were now no major equipment shortages among his troops. Asked what kind of support he would like to see from the West, he backed Mr. Zelensky's call for a no-fly zone over Ukraine and added: "I'd like to see more Russians in graves."

## **28. Arctic winds in Ukraine 'will turn Russian vehicles into 40-tonne freezers'**

The Times (UK), 9 mar 22, Larisa Brown

A severe cold snap could stall Russian advances further, analysts believe, with troops forced either to abandon their vehicles or sit in "40-tonne iron freezers".

Arctic air moving through Russia and Ukraine will combine with an easterly wind to make temperatures drop to as low as minus 10C (14 degrees Fahrenheit) overnight around Kyiv and the northern city of Kharkiv in the coming days. When wind chill is taken into account it could feel as cold as minus 20C (-4 degrees Fahrenheit), according to forecasts.

Analysts said that this could make the invasion harder for the Russians, especially those stuck in a 40-mile column of stalled vehicles north of the Ukrainian capital. A Ukrainian military source

said: “It will affect those in the long-staying convoys; it means that Russian troops staying alongside the roads will be suffering.”

Major Kevin Price, who served in the British Army for 20 years, said: “Minus 20C will degrade the Russian force, there is no question. It will improve cross-country mobility because there will be less mud but the Russians are not ready for Arctic conditions.” An urban assault without suitable clothing would be “unbelievably tough”, he said.

Any fuel shortages would also mean that soldiers would be unable to run their engines to keep warm. “Imagine being sat in a 40-tonne iron freezer all night,” he said, adding that very low temperatures would also probably affect the vehicle performance if there were no suitable oils and lubricants.

Price said he believed that bad weather would further damage Russian morale and inflict cold-weather casualties. “It’s not a decisive factor but it is a very unwelcome development for Russian commanders,” he said, noting that the temperature was below average for this time of year and so Russian forces would probably be unprepared.

Brigadier Ben Barry, who is now a senior fellow for land warfare at the International Institute for Strategic Studies in London, said the weather would affect Ukrainians too. “It will slow things down but it will slow things down for both sides,” he said. “The proportion of troops that start suffering cold injuries like frostbite will go up.”

A Nato military official told CNN that despite using all the forces it had concentrated in and around Ukraine, Russia was making very little progress. The official said: “We see very little change. For the first time, we don’t expect them to make any gains in the next few days.”

British military chiefs believe that Russian commanders are heading farther forward than normal to restore momentum. On Monday last week Major General Andrei Sukhovetsky, 47, deputy commander of the 41st Combined Arms Army of the Central Military District, was killed near Mariupol, in the southeast. Two days ago a second Russian general was reported to have been killed. Major General Vitaly Gerasimov, 45, chief of staff of the 41st Army, served in Syria and Chechnya and took part in the annexation of Crimea in 2014.

The Ukrainian defense ministry said that he had died near Kharkiv and broadcast what it said was a conversation between two Russian security service officers discussing his death and saying that their secure communications did not work in Ukraine. Christo Grozev, executive director of the investigative journalism group Bellingcat, said the 41st Army had lost communications and used a local sim card, enabling the interception.

After almost two weeks Russian forces have captured large areas of northeastern and coastal Ukraine and laid siege to cities and cut off food, water, heat and medicine. However, advances have ceased in many areas. For days efforts to create corridors to evacuate civilians have faltered because of continued shelling and objections to the proposed routes. One evacuation attempt did appear to have been at least partially successful yesterday, when a bus convoy left Sumy in the northeast.

Last night the Tass news agency in Russia reported an announcement of new ceasefire this morning and that Russian forces were ready to provide human corridors so people could leave Kyiv and four other cities.

## **29. Hints of a Ukraine-Russia deal?**

Foreign Policy, 8 Mar 22, Michael Hirsh

With Russia's bloody aggression in Ukraine apparently bogged down, there are hints this week that Russian President Vladimir Putin and Ukrainian President Volodymyr Zelensky may be tentatively opening themselves to compromises that might halt the 12-day-old war.

Even so, in testimony to the House intelligence committee on Tuesday, Director of National Intelligence Avril Haines told lawmakers that although Putin has been surprised by Ukrainian resistance and the global reaction to his invasion, he "is unlikely to be deterred by such setbacks and instead may escalate, essentially doubling down."

In a TV interview released Tuesday, Zelensky was asked by David Muir of ABC News how he reacted to proposals from the Kremlin on Monday. "What is your message to Vladimir Putin right now?" Muir asked. Muir noted that to cease hostilities, Moscow was demanding that Ukraine change its constitution to reject any intention to enter NATO as well as recognize Crimea as part of Russia and the two breakaway regions of Donetsk and Luhansk as independent states.

Zelensky avoided answering the question directly but indicated he was willing to compromise on most of those points, saying he was "ready for a dialogue." Regarding NATO, Zelensky said, "I have cooled down regarding this question a long time ago, after we understood that ... NATO is not prepared to accept Ukraine. The alliance is afraid of controversial things and confrontation with Russia."

On the question of separatist territories, the Ukrainian president also appeared somewhat conciliatory, at least on the issue of Donetsk and Luhansk. "I think that items regarding temporarily occupied territories and pseudo-republics not recognized by anyone but Russia, we can discuss and find a compromise on how these territories will live on," Zelensky said. "What's important to me is how the people in those territories who want to be part of Ukraine are going to live."

In the Ukrainian government's official release of the full interview, Zelensky also called for a "collective security agreement" that would include Russia, though he added, "We cannot recognize that Crimea is the territory of Russia" and "I think it will be difficult for Russia to recognize that this is the territory of Ukraine."

On Monday, two weeks after Putin declared in a grandiose speech that Ukraine was "an inalienable part" of Russia's "history, culture, and spiritual space," Russian foreign ministry spokesperson Dmitry Peskov told reporters that Moscow was ready to stop its military campaign "in a moment." The Kremlin's demands, Peskov said, were that Ukraine also halt hostilities,

acknowledge Crimea as Russian territory, accept Donetsk and Luhansk as independent states, and change its constitution to refuse entry into NATO or the European Union. Western-leaning Ukrainians have long sought to join the EU, and Putin's move to annex Crimea in 2014 was triggered by huge protests that led to the ousting of Ukraine's then-Russia-leaning president, Viktor Yanukovich, after he avoided signing an association pact with the EU. Only last week, Zelensky asked for fast-track EU membership to help thwart Russia's invasion.

Putin has falsely suggested he is willing to compromise before, and Russia's demands are not much different from the past. Even so, after a visit to Moscow on Saturday, Israeli Prime Minister Naftali Bennett—the only Western leader to have met Putin since the invasion—also indicated that a deal might be possible, according to Israeli news reports. Quoting unnamed sources “privy to details about the meeting,” the Jerusalem Post reported that although Bennett did not go to Russia with specific proposals in hand, the negotiations were “much more serious than what the West has been saying.” It added that Kyiv has not shared the details so as to maintain pressure on Putin. Bennett called Zelensky after his talk with Putin, which Zelensky had requested. “Talked to [Naftali Bennett],” the Ukrainian president tweeted. “Thanked [him] for Israel's mediation efforts. Discussed ways to end the war and violence.”

If Moscow is more open to negotiations, it would signal a change in tone from Putin's Feb. 21 speech, which occurred three days before the invasion. Since then, the Kremlin has appeared stunned that its attacks on major regions—especially Ukraine's capital, Kyiv—have been stymied by Ukrainian resistance; Russia has also been flummoxed by the ferocity and unity of the response by the United States and European Union. Both have imposed unprecedented sanctions, effectively cutting Russia off from the international financial system. On Tuesday, U.S. President Joe Biden also announced he was banning imports of Russian oil, gas, and coal to the United States to further deprive Putin “of the economic resources he uses to continue his needless war of choice,” a senior administration official said.

“Putin's country is already on ropes,” said Richard Andres, a national security expert at the U.S. National War College. “Russia is disconnected almost completely from the world banking system. There are already going to be millions of Russians who won't be able to get enough to eat or enough electricity.”

Marlene Laruelle, director of the Institute for European, Russian, and Eurasian Studies at George Washington University and an expert on Putin, said that although it is possible Putin is just playing for time so as to regain the military advantage, she believes the Russian leader might be ready to talk.

“I think they are realizing that there is no political solution to the war, and they cannot win in the long run,” she said, adding that Putin probably realizes he can no longer dismiss the charismatic Zelensky as a Western puppet since Zelensky has become an international hero while Putin has been villainized around the globe. “He probably realizes he will have to have direct talks with Zelensky. He has been arrogant, and very often, you lose the war because of your arrogance.”

On Tuesday, both Haines and CIA director Williams Burns said Putin has too much at stake personally to be seen as backing down now. But with Russian discontent in the streets and even

within his government rising, the Russian leader might also have to worry about his staying power for the first time. "We assess Putin feels aggrieved the West does not give him proper deference and perceives this as a war he cannot afford to lose, but what he might be willing to accept as a victory may change over time given the significant costs he is incurring," Haines said.

[Return to top](#)

### **30. Europe's unified welcome of Ukrainian refugees exposes 'double standard' for nonwhite asylum seekers: Experts**

ABC News, 8 Mar 22, Deena Zaru

Before Russian attacks on Ukraine led to mass displacement, Europe was already grappling with the Syrian refugee crisis – an issue that had bitterly divided European Union nations in recent years over what to do with the 1.1 million Syrians who sought refuge in Europe.

Meanwhile, neighboring European nations have swiftly met the influx of more than 2 million Ukrainian refugees since Russia's invasion on Feb. 24 with a united show of solidarity.

Although it is unclear if disagreements over burden-sharing will follow, according to those who study migration in Europe, experts say Ukrainian refugees face a more welcoming environment because they are white.

Andrew Geddes, Director of the Migration Policy Centre, told ABC News that there's a stark contrast between Europe's "very warm welcome" of Ukrainian refugees, compared to the largely "hostile" response to Syrians and other asylum seekers from Africa and the Middle East.

"It's night and day," Geddes said.

"I think the strongest contrast is with a bunch of central European countries that were very hostile to Syrian refugees, and are now quite much more favorable to Ukrainian refugees," Geddes added, referencing Poland, Hungary, Slovakia, and the Czech Republic – European Union members that were "the most resistant" to welcoming Syrian refugees.

Meanwhile, many nonwhite refugees fleeing Ukraine, including students from Asia and Africa, have reported instances of discrimination on the borders of Ukraine, with some telling ABC News that differential treatment based on race led to difficulties in crossing into countries like Poland. But others from Africans and the Middle East have said they crossed into Poland without any issues.

United Nations High Commissioner on Refugees Filippo Grandi confirmed during a press conference last Tuesday that "there are instances" of differentiation of treatment at the borders based on race, but said he was assured that "these are not state policies."

Grandi said he met with Polish Foreign Minister Zbigniew Rau last Wednesday, who "affirmed Poland's commitment to continue receiving all those fleeing, without distinction." Meanwhile, Ukraine's Minister of Foreign Affairs Dmytro Kuleba responded to reports of discrimination last

Tuesday, tweeting that "Ukraine's government spares no effort to solve the problem." He also added that Ukraine set up an emergency hotline to assist African, Asian and other students seeking to leave Ukraine.

### **'Exclusionary' asylum policies**

European countries host over 1 million of the 6.6 million Syrian asylum-seekers and refugees, but the vast majority are hosted by only two countries – 59% in Germany and 11% in Sweden, according to United Nations High Commission on Refugees data.

But according to Kelly Petillo, coordinator of the Middle East and North Africa programme and the European Council on Foreign Relations, this "didn't come immediately."

"It came after quite a bit of internal back and forth and lack of disagreement," Petillo said, adding that the majority of Syrian refugees were allowed to enter Europe in 2016 -- four years after the war in Syria began -- only after the European Union struck a deal with Turkey, which was facing immense pressure at the time from the surge of migrants and asylum seekers.

The Europe Union provided financial support to Turkey to slow the flow of migrants and asylum seekers crossing into Europe by returning "irregular migrants" attempting to enter Europe through Greece to Turkey, as Turkey works "to prevent new migratory routes from opening," according to the Migration Policy Centre.

As part of the deal, which was intended to slow migration to Europe, "the European Union agreed to resettle Syrian refugees from Turkey on a one-to-one basis," per MPC, and the European Union also paid 6 billion euros to aid Turkey's Syrian migrant communities.

"Since the Syria crisis erupted more than 10 years ago, we've seen that there was a high level of reluctance from Europeans to share the burden amongst themselves," Petillo said.

Austria, Greece, the Netherlands and France host between 2 to 5% of Syrian refugees in Europe, and other countries host below 2%, according to UNHCR.

Some of the Eastern European countries that largely rejected Syrian refugees have been at the forefront of welcoming Ukrainians, Geddes said, pointing to Poland, Hungary, Slovakia and the Czech Republic.

"For migrants from outside of Europe ... it's a very, very powerful, exclusionary approach," Geddes said.

"The EU is much more willing to internalize a refugee situation where the people who are being forced to flee are white Europeans, and has been much more reluctant to offer protection for people who are from Africa and the Middle East," he added.

And that "double standard," Petillo said, is not only shaped by race, religion and culture, but also by politics.

Poland received 1.2 million of those fleeing Ukraine, according to UNHCR data, and on Friday Polish President Andrzej Duda toured a border crossing facility in Korczowa, where he met with Ukrainian refugees and told reporters that Poland would welcome them with open hearts.

Geddes said that Poland's handling of the Syrian refugee crisis was the "opposite."

As Poland continued to push back against pressure from the European Union to take in asylum seekers from Syria, Jarosław Kaczyński, leader of Poland's rightwing party and current Deputy Prime Minister, argued in 2017 that doing so would be "dangerous" and would "completely change our culture and radically lower the level of safety in our country."

The European Union's top court ruled in April 2020 that Poland, Hungary and the Czech Republic broke EU law by refusing to host refugees to relieve some of the burden from countries like Turkey and Greece.

And in November 2021, Poland was "involved in a military standoff" with Belarus to prevent asylum seekers from Africa and the Middle East from crossing the Polish border, Geddes said.

More than 2,000 people were trapped in a makeshift camp on the Belarusian side as Poland blocked aid. At least 15 died in the cold last year.

And in January, Poland began building a metal wall on the border of Belarus to block migrants.

"When it comes down to it, Ukrainians are seen as European," Geddes said, saying that there are "very strong" historical and cultural links between Poland and Ukraine -- Many refugees from Ukraine have family and friends in Poland who have taken them in.

Meanwhile, asylum seekers from Africa and the Middle East "are fundamentally seen as being different, racially, socially, culturally," he added.

### **Islamophobia and politics**

Those sentiments, which Petillo described as "othering," were evident over the past week in the rhetoric of several prominent political leaders and various Western media figures, who made controversial statements that went viral on social media.

One journalist described Ukrainians as "civilized" in an attempt to differentiate them from other refugees and others suggested that it's more difficult to witness the plight of Ukrainians because they "look like us."

"These people are intelligent, they are educated people," Bulgarian Prime Minister Kiril Petkov said of Ukrainians earlier this week, according to The Associated Press. "... This is not the refugee wave we have been used to, people we were not sure about their identity, people with unclear pasts, who could have been even terrorists."

And Hungarian Prime Minister Viktor Orban, who declared, "we're letting everyone in," regarding Ukrainian refugees, has made an anti-immigration platform a central part of his reelection campaign, arguing that an influx of non-Christian migrants is a threat to the culture.

"We do not want to be an immigrant country," Orban said in January, according to The Associated Press.

In the wake of the global War on Terror following the 9/11 terror attacks, Petillo said that Islamophobic language that "linked terrorism to Islam" became common in a "dangerous" political discourse regarding refugees from the Middle East.

Geddes said those anti-immigrant sentiments have been weaponized by various leaders of "the radical right" in Europe and "played a part in this exclusionary approach to migration."

At the height of the refugee crisis in 2015, Czech President Milos Zeman referred to the influx of Syrian and Iraqi refugees seeking asylum in Europe as "an organized invasion."

Meanwhile, the Czech Republic has so far welcomed tens of thousands of Ukrainian refugees, per UNHCR.

Slovakia, which has so far taken in more than 140,000 Ukrainian refugees, per UNHCR data, said in 2015 that it would only accept Christians from Syria, according to The Associated Press.

According to Geddes, while other European countries were not as "explicit" as Slovakia in favoring Christians, they did so "implicitly" with their policies.

In a historic vote, the European Union agreed on Thursday to give Ukrainians immediate temporary protective status that allows them to work and live in EU countries and provides them with access to health care and other social services. This marks the first time that the EU has invoked this protection since it became a part of EU law two decades ago, Geddes said.

Although Germany and Sweden have made some efforts to provide protections for Syrian refugees, many remain "stuck in limbo" without access to employment, education or other social services, Petillo said.

"[They're] not coming out officially with policies saying we want Syrians to return, but they're doing anything they can to disincentivize Syrian refugees from staying," Petillo said, adding that ongoing humanitarian crises have led to an ongoing flow of refugees to Europe.

Since 2014, more than 20,000 asylum seekers from the Middle East, Asia and Africa arriving to the Mediterranean by land or by sea in hopes of crossing into Europe have died — some drowning or gone missing, per UNHCR data, including 154 so far in 2022.

### **31. Satellite images show activity at North Korean nuclear site**

Associated Press, 8 Mar 22, Kim Tong-hyung and Jon Gambrell

South Korea has patrolled waters around the Northern Limit Line for decades after it was drawn up by the U.N. command at the end of the 1950-53 Korean War. North Korea does not recognize the line and insists upon a boundary that encroaches deeply into waters currently controlled by the South.

The incident came a day before South Koreans vote in a highly contested presidential election. The bitter campaign has been marked by clashes between major candidates over whether South Korea should continue pursuing engagement with North Korea or take a harder line to check its nuclear threat.

## ANALYSIS/COMMENTARY

---

### **32. Travels with Milley: The general brings his ‘big green map’ to NATO’s flank**

Washington Post, 8 Mar 22, David Ignatius

CONSTANTA, Romania — Gen. Mark A. Milley carries what his staff calls the “big green map” of Ukraine with him everywhere he goes — inside the Pentagon, at White House meetings with President Biden and on foreign trips such as the five-day tour of NATO front-line nations that he just completed.

Milley’s map is a compendium of U.S intelligence about Russia’s pitiless assault on Ukraine. The paper version isn’t actually big or particularly fancy, just a foot-square chart showing the locations, numbers and likely assault paths of the vast Russian force battering Ukraine. But the map documents what Milley, the chairman of the Joint Chiefs of Staff, and his top aides believe might be the most comprehensive operational intelligence in the history of warfare.

“The president and the [National Security Council] found it very useful,” concurs a White House official.

The green map was updated daily this week as Milley traveled along NATO’s flank, from the Baltic to the Black Sea. During stops in Belgium, Germany, Poland, Latvia, Estonia, Lithuania and Romania, he drew on its intelligence to brief NATO allies and consult U.S. commanders about Russia’s advance on Ukraine. In this awful conflict, the intelligence data compiled in the map has been America’s most potent weapon.

Milley talked with U.S. troops and NATO allies about the dilemmas presented by Russian President Vladimir Putin’s invasion. The U.S.-led alliance wants to help beleaguered Ukraine with a flood of arms, whose delivery Milley inspected near the Ukraine border. But America wants to avoid any direct shooting between Russia and NATO nations that could escalate to nuclear war.

This razor’s edge cut in every NATO capital we visited, their streets decorated with Ukrainian flags. In Warsaw, a grim “wanted” poster branded Putin a war criminal. In Vilnius, Lithuania, a skyscraper was festooned with a banner summoning Putin for a trial in The Hague. With Russian

shells pounding Ukrainian cities a few hundred miles away, Milley, at stop after stop, preached readiness combined with caution.

The United States and NATO must “prevent any further aggression by the Russians,” he told troops from the 2nd Armored Cavalry Regiment at our last stop here in Constanta, about 250 miles from Russian-occupied Crimea. But, he warned, “we’re not going to go into Ukraine. We’re not going to fly over Ukraine. We’re not putting ground troops into Ukraine.” The message: Be vigilant, but don’t pull the trigger unless you are forced.

Milley is an archetypal American commander — barrel-chested, gruff, profane, boisterous and sentimental. At every stop, Milley, an Irish American from Boston, took time to banter with soldiers, quiz them about their personal lives or conduct surprise inspections of their prefab “hooches.” Any soldier who shared Milley’s Boston heritage got a shout of “Red Sox Nation” or a jesting offer of instant promotion. But make no mistake: Underlying this bluster is a remarkable war record. Colleagues say Milley has probably seen more combat under fire than any Joint Chiefs chairman in modern times.

Milley doesn’t advertise it, but he’s also a cerebral Princeton University graduate with an encyclopedic knowledge of military history. Talking about the Ukraine war, he will recall campaigns from Valley Forge to Stalingrad. Weighing the dangers of a confrontation with Russia, he quotes war theorists from Carl von Clausewitz to Thomas Schelling.

It’s this intellectual focus that led Milley to demand from his staff a way to visualize the assault that Russia was planning.

Maps are the most basic tools of military strategy. They allow commanders to chart a course through the fog of war; they organize the chaos of the battlefield. Milley huddling with his staff around his battle plan of the Ukraine theater conjures similar scenes through history, as generals from George Washington to Dwight D. Eisenhower leaned over maps to study the enemy’s formation and plot strategy.

Milley ordered aides to begin assembling the map in late October, when startling intelligence reports signaled that Russia was gathering an invasion army on Ukraine’s border. The Russian forces were no exercise; intercepted messages showed that Russia was actually planning an attack.

Milley began quizzing aides about the coming invasion: “How many? Where are they? What can we see? What’s hidden? What’s the intent?” Though Milley doesn’t like using sports analogies for war, he believes the battlefield is not a football game with neat, linear advances. It’s more like the hockey he once played, fluid and dynamic with sudden spasms of action.

Milley took the first versions of his map to the White House in late October, “to paint the picture for the NSC and the president,” one defense official said. The chairman would bring five or six copies of the map, Ukraine in green, and leave them with top officials.

Biden quickly concluded that Russia’s assault planning was for real — and that America needed to lead an effort to stop it. Biden then did something unprecedented. He decided to share much of

the top-secret intelligence with NATO allies — and then, increasingly, with the public through leaks to the press.

On the eve of Russia's Feb. 24 invasion, Biden ordered Milley and Director of National Intelligence Avril Haines to brief Congress on what the map showed — and then to give the same briefing, on “deep background,” to the Pentagon press corps. This was a declassified version of code-word intelligence, drawn from communications intercepts, surveillance satellites and spies on the ground. America's best weapon against Putin, Biden decided, was the truth. The administration had found a way to weaponize intelligence.

Milley's trek across Europe sometimes had the feel of a NATO pep rally. He met for strategy talks with NATO Secretary General Jens Stoltenberg and the defense chiefs of Poland, Latvia, Estonia, Lithuania and Romania. And he visited U.S. troops across Europe, whose numbers have jumped since the Ukraine threat surfaced in October from a normal 65,000 to about 100,000.

Though it's largely invisible to the public, the United States has moved an astonishing military presence forward in Europe, from a mere 200 in Hungary and 350 in Bulgaria to 2,500 in the Baltic states, 10,000 in Poland and 38,500 in Germany — forces in 17 countries, bolstered by 11,000 in ships at sea. It's a forbidding display of force.

At one stop near the Ukrainian border, we watched one of the 14 widebody cargo planes that arrive at the local airfield each day with Western weapons; near the runway stood a rack of Javelin antitank missiles, awaiting shipment into Ukraine. If you want to see where they end up, just watch the videos on social media of Russian tanks and trucks exploding into fire.

Milley can't resist jousting with American troops. It's like the trash talk on a sports team; he'll ask soldiers what's wrong with their officers; he'll take instant polls on whether an officer is a good leader. He introduces by name the senior generals traveling with him, the local commanders and even the local squad leaders. “I'm running for public affairs officer,” he muttered during a stop at the Nowa Deba training camp in Poland.

Milley hands out dozens of “commander's coins” at every stop and presses them into the palms of wide-eyed soldiers. He advises them to study the coin's representation of the U.S. Constitution. To an Indian American soldier in Poznan, Poland, and a Panamanian American soldier in Constanta, he repeats the same message: They're all American citizens, equal under law, and will be judged by “the content of their character.” It's corny, but it's also moving, every time.

Nations appear eager for this sort of American leadership, and passionate about the Ukraine fight — from the northernmost tip of NATO to the southern edge. Artis Pabriks, the defense minister of Latvia, told us proudly that his country was the first to send Stinger antiaircraft missiles to Ukraine. “They are fighting our fight for us,” he said. As for the Russians, he predicted, “many of them will end up as sunflowers, I am sorry to say,” meaning they will die. “We will make a second Afghanistan for Russia.”

NATO troops have been fighting together in Afghanistan since 2001, and this shared combat experience resonates. In Romania, U.S. Command Sgt. Maj. Robert Earl Pickett told us how a Romanian rescue team saved his life after a firefight east of Kandahar, Afghanistan, in 2006 that wounded him in the head, chest and knee.

Milley's army is preparing for a war he hopes it will never have to fight. It's eerie, traveling this NATO arc, to see U.S. and NATO forces arrayed like a picket line. NATO, once a seeming anachronism, is reenergized. Putin is cornered with his reckless adventure in Ukraine.

As Milley tells the story conveyed by his map, the Russian leader began a war that he will have great difficulty completing — and any attempt to expand it will summon a devastating response.

### **33. The Syrian White Helmets are ready to help Ukraine**

Washington Post, 8 Mar 22, Josh Rogin

As Russian President Vladimir Putin expands his murderous attacks on civilians across Ukraine, regular citizens are becoming front-line troops. Syrians, who have been facing Russian military attacks for seven years, are ready to help Ukrainians organize their first responders. Ukrainians will need all the help they can get to save as many innocent lives as possible in what could be a long struggle.

Since 2015, when Putin dispatched his troops to Syria to help President Bashar al-Assad maintain his hold on power, the Russian military has been attacking civilians in opposition-held areas, reportedly committing war crimes on a regular basis by targeting hospitals, schools and critical infrastructure. Those tactics are now being used in several Ukrainian cities, complete with attacks on fleeing families and credible reports of illegal weapons such as cluster bombs. Last week, the International Criminal Court said it would “immediately proceed” with an investigation into alleged Russian war crimes in Ukraine.

The Syrian Civil Defense force, known as the White Helmets, has been working to rescue, evacuate and give emergency care to civilians under attack since 2014. The all-volunteer force says it has saved more than 100,000 civilian lives and that at least 252 of its members have been killed in the process. Now, the White Helmets are turning their attention to Putin's latest victims.

“We are here to help our Ukrainian brothers and sisters in any way we can,” Raed Al Saleh, the leader of the White Helmets, told me in an interview. Putin's goal is to break the will of the civilian population, he said, and there are no limits to the savagery of his troops. “The Russian military has no principles. They respect no human rights. They have no standards or ethics,” Saleh said. “The Ukrainians are facing the most ferocious, unethical, criminal killing machine that exists in the world today, which we have been facing for the last seven years.”

The White Helmets are preparing a series of videos to help Ukrainian civilians learn civil defense tasks, such as how to handle unexploded rockets or how best to evacuate a building under attack. They are also preparing lists of supplies and equipment Ukrainian rescue and evacuation teams will need. They're even ready to send in staff.

Meanwhile, Ukrainians can learn from the White Helmets' experience. Saleh recommends, for example, that the Ukrainians organize their civil defense forces inside each city by separating them into small teams of four or five people, dispersed geographically with small, quick vehicles that can easily speed to an attack site. Don't establish any large or permanent headquarters, he warned, because they, too, will become targets for Russian bombs.

Short-range walkie-talkies are best for communications, he said, rather than cellular or Internet communications, which can be tracked by the Russians and might not work in an attack zone anyway. Also, some team members should be deployed to monitor the skies for planes, because that's often a better early warning system than radars or sirens.

Understanding the Russian military's cruel tactics can also save lives, Saleh said. For example, the Russian air force is notorious for what are called "double tap" strikes. Russian planes attack civilians, wait for first responders to arrive and then attack the first responders.

"One thing that we learned is, after the initial attack, you've got about seven to nine minutes, tops, to be able to do anything in that area, before they can hit it again," Saleh said. "So, those seven to nine minutes are really important."

The Ukrainians should establish small medical outposts around the city that can handle minor injuries and take the pressure off larger hospitals, Saleh said. But keep those secret and move them often, he warned, or they will be targeted by the Russian military as well.

Despite being widely recognized in the West for their heroism and bravery, the White Helmets have been the constant target of a massive disinformation campaign by the Russian government and the Assad regime, falsely accusing them of being terrorists. Saleh said Putin hates them not just because they save lives, but because they document Russian war crimes in the process.

"The GoPro camera is the best way to fight Russian disinformation," he said. "Remain truthful. Report the reality on the ground. Because at the end of the day, the facts are the facts."

There are some things the Syrians have learned not to do. Do not give GPS locations of medical facilities to the United Nations, which may claim it needs the information to keep them safe. The Russians will use that information to target them. Never let Moscow have any say or control over how humanitarian aid is distributed, even when it's a U.N. program. The Kremlin will use that power to starve out civilian populations, as it is doing in Syria now.

So how do you persuade thousands of people to put their own lives on the line to help others? "There is no greater honor than doing this work," Saleh told me, adding that it's the duty and privilege of the rescue workers to save people who represent the future of their country.

Even though some Syrians are reportedly being recruited to fight for Russia in Ukraine, the vast majority of Syrians are ready to help Ukrainians fight the Russian invaders, he said. Ukrainians are showing impressive strength and bravery. But there's still a long way to go.

"For the last seven years, the Syrian people have stood up to Russia and have yet to be defeated. So we believe the Ukrainians can also resist for a very long time," Saleh said. "At the end of the

day, it is the will of the citizens that is the strongest weapon, even against the mightiest militaries in the world.”

### **34. Putin has no good way out, and that really scares me**

New York Times, 8 Mar 22, Thomas L. Friedman

If you’re hoping that the instability that Vladimir Putin’s war on Ukraine has wreaked on global markets and geopolitics has peaked, your hope is in vain. We haven’t seen anything yet. Wait until Putin fully grasps that his only choices left in Ukraine are how to lose — early and small and a little humiliated or late and big and deeply humiliated.

I can’t even wrap my mind around what kind of financial and political shocks will radiate from Russia — this country that is the world’s third-largest oil producer and possesses some 6,000 nuclear warheads — when it loses a war of choice that was spearheaded by one man, who can never afford to admit defeat.

Why not? Because Putin surely knows that “the Russian national tradition is unforgiving of military setbacks,” observed Leon Aron, a Russia expert at the American Enterprise Institute, who is writing a book about Putin’s road to Ukraine.

“Virtually every major defeat has resulted in radical change,” added Aron, writing in *The Washington Post*. “The Crimean War (1853-1856) precipitated Emperor Alexander II’s liberal revolution from above. The Russo-Japanese War (1904-1905) brought about the First Russian Revolution. The catastrophe of World War I resulted in Emperor Nicholas II’s abdication and the Bolshevik Revolution. And the war in Afghanistan became a key factor in Soviet leader Mikhail Gorbachev’s reforms.” Also, retreating from Cuba contributed significantly to Nikita Khrushchev’s removal two years later.
