

## **Background Paper / Fact Sheet on DoD's Cooperative Threat Reduction Program (Biological Threat Reduction Program) - Ukraine**

Background: The Biological Threat Reduction Program (BTRP), part of the Department of Defense's Cooperative Threat Reduction (CTR) program, is implemented by the Defense Threat Reduction Agency (DTRA). Since 2005, the program assisted the Ukrainian government in converting former Soviet biological weapons (BW) research facilities to support peaceful and safe biological detection and diagnostic capabilities and reduce the threats posed by dangerous pathogens, whether they are naturally-occurring, accidental, or intentional.

### Key Facts:

- BTRP's priorities in Ukraine are to help them consolidate and secure pathogens and to continue to ensure Ukraine can detect and report disease outbreaks before they pose security or stability threats. All of BTRP's efforts are peaceful in nature and subject to rigorous export-control measures and vetting processes. BTRP sponsors no gain of function research or "human experimentation."
- Ukraine is a State Party to Biological and Toxin Weapons Convention (BWC). In accordance with an August 2005 CTR agreement, the DoD has been funding security upgrades at Ukrainian biological laboratories where collections of pathogens are kept.
- BTRP has supported 46 laboratories, facilities and diagnostic sites for the Ministry of Health and Ministry of Agriculture. BTRP has also provided the Ministry of Defense with 3 mobile diagnostic laboratories, with the goal of enhancing the system of disease surveillance and emergency preparedness in the Armed Forces of Ukraine. All of this assistance improved Ukraine's COVID-19 response.
- All of these are Ukrainian facilities owned and operated by the government of Ukraine, which aims to improve human and animal health capacity for the people of Ukraine.
- On a daily basis, Russia propagates, either directly through state-run media outlets or through the use of surrogates, disinformation aimed at BTRP's laboratory and capacity building efforts in former Soviet Union countries. The Lugar Center in Georgia and the Central Reference Laboratory in Kazakhstan are the primary targets, but more recent disinformation efforts have targeted laboratories in Ukraine. Through these disinformation campaigns, Russia falsely claims the United States, and specifically DTRA, is developing biological weapons in laboratories in these countries, as well as killing local populations with purposeful releases of biological agents.
- Russia illegally took possession of two Ukrainian-owned labs that BTRP upgraded in 2014 and continues to deny Ukrainian access to these facilities. To date, we are unaware of any attempts to use these facilities for disinformation purposes.
- BTRP is just one of many organizations providing equipment and training to these facilities. Other supporters include, among others, the European Union, World Health Organization, international universities and research institutions, as well as other U.S. interagency partners.
- Even though BTRP has had an active biological engagement with the government of Ukraine since 2005, there are many Ministry of Health and Ministry of Defense facilities that have not asked for, or received equipment or training from the United States.

**DRAFT MEDIA QUESTIONS AND ANSWERS****1. Why are there DoD labs in Ukraine?**

*DoD does not own or operate labs in Ukraine. All the facilities receiving BTRP assistance are Ukrainian owned and operated, and these facilities receive training and equipment from a large array of partners to include the European Union and its individual members, the World Health Organization, Food and Agriculture Organization, the World Organization for Animal Health, the US Department of State, US Department of Agriculture, the US Centers for Disease Control and Prevention, USAID, and the US Department of Defense. During the Soviet era, certain select laboratories in Ukraine held the most dangerous pathogens in various collection sites. These materials were held under antiquated and inadequate safety and security conditions. The fall of the Soviet Union only exacerbated these vulnerabilities and exposed significant proliferation threats. DoD's Cooperative Threat Reduction (CTR) program was created to reduce the threat of WMD material, including biological threats. CTR worked cooperatively and peacefully with the government of Ukraine to increase biosecurity and biosafety at these sites to ensure these dangerous pathogens did not pose a risk to the people of Ukraine or the region. This relationship with Ukraine continues today and Ukraine uses the laboratory improvements provided by the United States to support broader public and veterinary health goals, such as monitoring the spread of COVID-19, preparing for and controlling African Swine Fever, which helped Ukrainian farmers protect their herds from infectious diseases, and protecting the food supply in Ukraine - just to mention a few of the many benefits that accrued from this partnership.*

**2. How can you prove that you weren't doing offensive biological weapons work?**

*The United States is a States Party and depository for the 1972 Biological Weapons Convention and maintains scrupulous compliance with its obligations under that treaty. The United States does not develop biological weapons, and any assistance we provide to foreign partners has strict protocols, to include a rigorous vetting process, that ensures all activities are peaceful in nature. As the U.S. has pointed out many times, injecting maximum transparency into ALL BWC member state initiatives within the convention is paramount.*

**3. What did you do with the material from the former Soviet BW program?**

*At the request of many former Soviet Union countries, to include Ukraine, Kazakhstan, Georgia, Armenia, Uzbekistan, and Azerbaijan, the United States (through the Congressionally-funded and mandated Cooperation Threat Reduction program) eliminated or secured stockpiles of dangerous pathogens from the legacy Soviet biological weapons research and development enterprise. For example, in Uzbekistan, the United States eliminated nearly 12 tons of weaponized Anthrax from an island in the Aral Sea. This work was a cooperative effort with the government of Uzbekistan and demonstrates a true partnership in reducing the threat of dangerous pathogens – either from an intentional act or accidental release.*

**4. If these efforts in Ukraine are peaceful, why do these labs still contain samples of anthrax, plague, and other dangerous agents?**

*All of these pathogens are common in agricultural and natural settings and readily found in the environment of Ukraine. These and other pathogens are studied in veterinary and public health research labs around the world to improve early detection and diagnostic capabilities to contain*

*and prevent outbreaks of diseases – such as COVID-19. Ukraine's capability to understand endemic pathogens is an essential step of disease surveillance, as required by the WHO and other international health organizations. Furthermore, BTRP encourages Ukraine and all partners not to store any biological materials beyond what is required to perform diagnostics. Moreover, BTRP has provided to Ukraine molecular diagnostic equipment, supplies, and know-how to avoid the typical, Soviet-era style of diagnostics, which involves growing viruses and bacteria—a clear proliferation risk. By employing PCR and sequencing technologies, BTRP enables Ukraine to detect viruses and bacteria without propagating infectious diseases.*

**5. Is it true you performed human experimentation?**

*DoD's Cooperative Threat Reduction Program (BTRP) does not conduct any human experimentation - period. All BTRP projects are focused on enhancing peaceful foreign partner biosecurity, biosafety, and detection activities – to detect disease outbreaks and stop a pandemic before it happens. As an example, BTRP does fund disease investigations where Ukrainian partners collect clinical samples from humans and/or animals to conduct diagnostic testing and epidemiological analysis. BTRP insists that foreign partners, like Ukraine, establish internal review board processes guided by national regulatory frameworks before any diagnostic or epidemiological study is conducted—whether with human or animal samples.*

**6. Other than DoD, who else provides funding to these labs?**

*DoD's CTR Program does not provide US taxpayer funding directly to the laboratories. Furthermore, the laboratories in Ukraine are owned and operated by the host country. DoD provides equipment and training that is in compliance with BWC protocols and International Health Regulations. However, the DoD CTR program does competitively award grants to foreign partners for biosurveillance studies aimed at detecting and diagnosing disease outbreaks. At their request, we partner with them because they value our expertise and experience – especially in terms of our biosafety and biosecurity protocols. While we know that some governments receive funding, capacity, and training from the European Union and other academic, governmental, and commercial sponsors, you will have to ask the countries that own the laboratories to confirm other funding sources.*

**7. How do you know that these labs are not performing illegal activities without your knowledge?**

*Ukraine is a responsible steward and owns and operates these facilities. The facilities are much more open and transparent than during the Soviet era. Scientists are encouraged to publish their research results, partner with international colleagues, and widely distribute their research findings. They operate in a capacity similar to university labs on campuses around the world. Furthermore, all DoD provided equipment and training with foreign partners is subject to US export control processes, DoD audits, and US acquisition laws and regulations to ensure transparency and compliance with both US and International Health Regulations.*

**8. If nothing illegal is going on, why all of the secrecy?**

*There is nothing secretive about DoD's capacity building efforts with foreign partners. In fact, we urge you to view BTRP promotional videos to see how the United States is transparent with all its biological engagement activities. In sum, DoD's peaceful efforts are designed to prevent*

UNCLASSIFIED

*the proliferation of disease-causing pathogens, and prevent outbreaks of diseases that impact everyone. DoD's efforts with foreign partners are designed to be as transparent as possible, while at the same time protecting intellectual property and intellectual rights. DoD's efforts with foreign partners also comply with US acquisition rules and regulations, ensuring maximum competition with US and foreign contractors who perform the work on behalf of the government. The US government must preserve a competitive playing field to ensure US taxpayer dollars are being spent wisely. While this may appear to be secretive, the actual work performed is not and information is publicly available.*

*Lugar Center: [https://www.youtube.com/watch?v=PkiUlv\\_WYnE](https://www.youtube.com/watch?v=PkiUlv_WYnE)*

**9. How much did the U.S. invest in these facilities in Ukraine?**

*The United States, through DoD's Cooperative Threat Reduction program, invested in approximately \$200 million in Ukraine since 2005. These activities have included building or renovating laboratories and providing laboratory equipment and training to help Ukraine's Ministry of Health and Ministry of Agriculture to conduct safer and more effective disease detection, to help Ukraine's Ministry of Defense to protect the health of the Ukrainian Armed forces, and help Ukraine conduct peer-reviewed biosurveillance studies to understand pathogens that are endemic in Ukraine and spot indicators of an outbreak.*

**DRAFT PRESS RELEASE – CTR ACTIVITIES AND BIOLOGICAL THREAT REDUCTION PARTNERSHIP WITH UKRAINE**

The Department of Defense's Cooperative Threat Reduction (CTR) Program is a Congressionally-founded and directed program created to rectify the WMD security gap left after the collapse of the Soviet Union. In Ukraine, CTR facilitated the removal of Ukraine's 1,800 nuclear warheads and helped return them to Russia. CTR also worked with the government of Ukraine to eliminate WMD delivery systems and infrastructure such as missiles and missile silos. CTR has worked with the government of Ukraine to identify legacy Soviet Biological Weapons (BW) sites and help eliminate and secure dangerous pathogens from that era. Over the years, this partnership expanded into helping Ukraine's government upgrade its public and animal health detection, diagnostic, safety, and security capacity. This investment in Ukrainian public health capability undoubtedly saved innumerable Ukrainian lives during the ongoing pandemic as a result of enhanced diagnostic and response to SARS COV-2. It also helped the Ukrainian government detect and respond to multiple outbreaks of African Swine Fever, a disease that is highly contagious and lethal to pigs and can cause severe economic disruption.

The United States has made a full and comprehensive declaration of our past biological weapons program, which ended in 1972. Our country is a State Party and depository of the 1972 Biological Weapons Convention and maintains scrupulous compliance with all of its provisions. The United States does not develop biological weapons, nor does the United States enable partner countries to do the same. The laboratory upgrades and training provided by the United States to Ukraine, and other partner countries, is a frequent target of Russian disinformation campaigns, making unscrupulous and baseless claims that the United States is developing biological weapons, and even worse, killing people in partner countries. These claims are outright lies, designed to drive a wedge between the successful biological threat reduction efforts of the United States and its partner countries.

The laboratories in Ukraine are owned and operated by the government of Ukraine. The Department of Defense, through the CTR program, continues to partner closely with Ukraine to improve public and veterinary health and safety.

COMPETE

1. Sweden and Finland Make Moves to Join Nato  
(Guardian, Jon Henley, 11 Apr 22)...

Sweden's ruling party has begun debating whether the country should join Nato, and neighbouring Finland expects to reach a decision within weeks, as Moscow warned that the Nordic nations' accession would "not bring stability" to Europe. Both countries are officially non-aligned militarily, but public support for Nato membership has almost doubled since Russia's invasion of Ukraine, to about 50% in Sweden and 60% in Finland, multiple opinion polls suggest. Sweden's centre-left Social Democrats, led by prime minister Magdalena Andersson, said their "security review" was about more than just joining the 30-nation alliance, adding that the party could decide to apply even without the backing of members. Having stressed at the outbreak of the war that non-alignment had "served Sweden's interests well", Andersson said she was "ready to discuss" the policy in light of Moscow's aggression, and in late March said she "did not rule out" joining Nato. "When Russia invaded Ukraine, Sweden's security position changed fundamentally," the party said in a statement on Monday. The Social Democrat general secretary, Tobias Baudin, said the security review would be complete "before the summer".

The question is expected to be a key issue in parliamentary elections due on 11 September, with centre-right opposition parties already saying they would back a Nato application and the far-right Sweden Democrats also open to the idea. Finland, which shares a 1,340km (830-mile) border with Russia and, like Sweden, is a Nato partner after abandoning its position of strict neutrality at the end of the cold war, is expected to outline its decision regarding the alliance before midsummer. Alexander Stubb, a former prime minister of Finland, told AFP it was "a foregone conclusion" that Helsinki would apply to join Nato, probably in time for a June Nato summit in Madrid.

A government-commissioned national security review is due to be delivered to parliament next week to help Finnish MPs decide on the question before they vote, with one recent poll suggesting only six of the country's 200 MPs were opposed. "We will have very careful discussions, but not taking any more time than we have to," the country's prime minister, Sanna Marin, said last week. "I think we will end the discussion before midsummer," she said.

Both countries have received public assurances from the Nato secretary general, Jens Stoltenberg, that their applications would be welcome, as well as expressions of support from several members including the US, UK, Germany, France and Turkey. But the move would almost certainly be seen as a provocation by the Kremlin, whose spokesperson, Dmitry Peskov, said on Monday that the alliance was "a tool geared towards confrontation" and that their possible accession "will not bring stability to the European continent".

[Top of the Document]

2. Ukraine War: Russia Warns Sweden and Finland Against Nato Membership (BBC, 11 Apr 22)...

Russia has warned Finland and Sweden against joining Nato, arguing the move would not bring stability to Europe. Kremlin spokesman Dmitry Peskov told reporters that "the alliance remains a tool geared towards confrontation". It comes as US defence officials said Moscow's invasion of Ukraine has been a "massive strategic blunder" which is likely to bring Nato enlargement. US officials expect the Nordic neighbours to bid for membership of the alliance, potentially as early as June. Washington is believed to support the move which would see the Western alliance grow to 32 members. US State Department officials said last week that discussions had taken place between Nato leaders and foreign ministers from Helsinki and Stockholm. Before it launched its invasion, Russia demanded that the alliance agree to halt any future enlargement, but the war has led to the deployment of more Nato troops on its eastern flank and a rise in public support for Swedish and Finnish membership.

Finnish MPs are expected to receive a security report from intelligence officials this week, and Prime Minister Sanna Marin said she expects her government "will end the discussion before midsummer" on whether to make a membership application. Finland shares a 1,340km (830 miles) long border with Russia and has been rattled by the invasion of Ukraine. And Sweden's ruling Social Democratic party, which has traditionally opposed Nato membership, said it is rethinking this position in light of Russia's attack on its western neighbour. Party secretary Tobias Baudin told local media that the Nato review should be complete within the next few months. "When Russia invaded Ukraine, Sweden's security position changed fundamentally," the party said in a statement on Monday. But Moscow has been clear that it opposes any potential enlargement of the alliance. Mr Peskov warned the bloc "is not that kind of alliance which ensures peace and stability, and its further expansion will not bring additional security to the European continent".

Last week Mr Peskov said that Russia would have to "rebalance the situation" with its own measures were Sweden and Finland to join Nato. And in February Maria Zakharova, Russia's foreign ministry spokeswoman, warned of "military and political consequences" if the countries joined the bloc. Nato was formed in 1949 to counter the threat of Soviet expansion, though since the fall of the Berlin wall a number of formerly communist eastern European countries have joined. Member states agree to come to one another's aid in the event of an armed attack against any individual member state. Despite the threats, both countries have pushed ahead with their bids and stepped up defence spending. On Monday, army leaders in Helsinki announced a new plan to allocate €14m (£10.88m) to purchase drones for Finland's military. And last month Swedish officials said they would boost defence spending by three billion kronas (\$317m; £243m) in 2022.

### 3. US Sanctions Western Balkan Figures, Citing 'Threat to Regional Security'

(Politico, Nektaria Stamouli, 11 Apr 22)...

The United States sanctioned seven people in the Western Balkans on Monday, including former leaders of North Macedonia and the short-lived State Union of Serbia and Montenegro, calling them a "serious threat to regional stability." Those targeted — from Albania, Bosnia and Herzegovina, Montenegro and North Macedonia — were added to the list of specially designated nationals, maintained by the U.S. Treasury Department's Office of Foreign Assets Control, or OFAC. This means their assets are blocked, U.S. citizens are generally prohibited from dealing with them, and they are also banned from entering the U.S. "The people designated today constitute a serious threat to regional stability, institutional trust, and the aspirations of those seeking democratic and judicious governance in the Western Balkans," said Brian Nelson, the Treasury's undersecretary for terrorism and financial intelligence, in a statement. Those listed include Svetozar Marović, the last president of the former State Union of Serbia and Montenegro, which dissolved in 2006. Marović also served as deputy president of the Democratic Party of Socialists of Montenegro until 2015, when he was arrested over his involvement in corruption scandals related to construction projects. He admitted to the charges and signed two plea deals, but before serving his sentence he fled to Serbia, where he now resides. Montenegro's government has been seeking his extradition from Belgrade since 2019.

North Macedonia's former Prime Minister Nikola Gruevski is also named. Gruevski was convicted by a court in his country on corruption-related charges, but fled and received asylum in Hungary, which the U.S. Treasury said "represents a serious setback for accountability for corruption and corruption-related activities in North Macedonia." OFAC also designated Gruevski's former chief of counterintelligence, Sašo Mijalkov, who the Treasury says was accused of being involved in a vote-rigging scheme and an illegal wiretapping operation targeting opposition politicians, judges and journalists "that provided political and economic gain, and which precipitated a two-year political crisis in the country." From Albania, the list includes former MP Aqif Rakipi and media mogul Ylli Ndroqi, accusing

him of using his outlets to “extort and blackmail Albanian citizens.” It also includes Asim Sarajlic, a member of the parliament of Bosnia and Herzegovina, and the country’s former chief prosecutor, Gordana Tadic.

#### 4. How Meta Fumbled Propaganda Moderation During Russia's Invasion of Ukraine (Reuters, Katie Paul and Munsif Vengattil, 11 Apr 22)...

Days after the March 9 bombing of a maternity and children's hospital in the Ukrainian city of Mariupol, comments claiming the attack never happened began flooding the queues of workers moderating Facebook and Instagram content on behalf of the apps' owner, Meta Platforms (FB.O). The bombardment killed at least three people, including a child, Ukraine's President Volodymyr Zelenskyy said publicly. Images of bloodied, heavily pregnant women fleeing through the rubble, their hands cradling their bellies, sparked immediate outrage worldwide. Among the most-recognized women was Mariana Vishegirska, a Ukrainian fashion and beauty influencer. Photos of her navigating down a hospital stairwell in polka-dot pajamas circulated widely after the attack, captured by an Associated Press photographer. Online expressions of support for the mother-to-be quickly turned to attacks on her Instagram account, according to two contractors directly moderating content from the conflict on Facebook and Instagram. They spoke to Reuters on condition of anonymity, citing non-disclosure agreements that barred them from discussing their work publicly. The case involving the beauty influencer is just one example of how Meta's content policies and enforcement mechanisms have enabled pro-Russian propaganda during the Ukraine invasion, the moderators told Reuters. Russian officialdom seized on the images, setting them side-by-side against her glossy Instagram photos in an effort to persuade viewers that the attack had been faked. On state television and social media, and in the chamber of the U.N. Security Council, Moscow alleged - falsely - that Vishegirska had donned make-up and multiple outfits in an elaborately staged hoax orchestrated by Ukrainian forces. Swarms of comments accusing the influencer of duplicity and being an actress appeared underneath old Instagram posts of her posed with tubes of makeup, the moderators said. At the height of the onslaught, comments containing false allegations about the woman accounted for most of the material in one moderator's content queue, which normally would have contained a mix of posts suspected of violating Meta's myriad policies, the person recalled. "The posts were vile," and appeared to be orchestrated, the moderator told Reuters. But many were within the company's rules, the person said, because they did not directly mention the attack. "I couldn't do anything about them," the moderator said. Reuters was unable to contact Vishegirska. Meta declined to comment on its handling of the activity involving Vishegirska, but said in a statement to Reuters that multiple teams are addressing the issue. "We have separate, expert teams and outside partners that review misinformation and inauthentic behavior and we have been applying our policies to counter that activity forcefully throughout the war," the statement said. Meta policy chief Nick Clegg separately told reporters on Wednesday that the company was considering new steps to address misinformation and hoaxes from Russian government pages, without elaborating. read more Russia's Ministry of Digital Development, Communications and Mass Media and the Kremlin did not respond to requests for comment. Representatives of Ukraine did not respond to a request for comment.

Based at a moderation hub of several hundred people reviewing content from Eastern Europe, the two contractors are foot soldiers in Meta's battle to police content from the conflict. They are among tens of thousands of low-paid workers at outsourcing firms around the world that Meta contracts to enforce its rules. The tech giant has sought to position itself as a responsible steward of online speech during the invasion, which Russia calls a "special operation" to disarm and "denazify" its neighbor. Just a few days into the war, Meta imposed restrictions on Russian state media and took down a small network of coordinated fake accounts that it said were trying to undermine trust in the Ukrainian government. It later said it had pulled down another Russia-based network that was falsely reporting people for violations like hate speech or bullying, while beating back attempts by previously disabled networks to return to the platform. Meanwhile, the company attempted to carve out space for users in the region to express their anger over Russia's invasion and to issue calls to arms in ways Meta normally would not permit. In Ukraine and 11 other countries across Eastern Europe and the Caucasus, it created a series of temporary "spirit of the policy" exemptions to its rules barring hate speech, violent threats and more; the changes were intended to honor the general principles of those policies rather than their literal wording, according to Meta instructions to moderators seen by Reuters. For example, it permitted "dehumanizing speech against Russian soldiers" and calls for death to Russian President Vladimir Putin and his ally Belarusian President Alexander Lukashenko, unless those calls were considered credible or contained additional targets, according to the instructions viewed by Reuters.

The changes became a flashpoint for Meta as it navigated pressures both inside the company and from Moscow, which opened a criminal case into the firm after a March 10 Reuters report made the carve-outs public. Russia also banned Facebook and Instagram inside its borders, with a court accusing Meta of "extremist activity." read more Meta walked back elements of the exceptions after the Reuters report. It first limited them to Ukraine alone and then canceled one altogether, according to documents reviewed by Reuters, Meta's public statements, and interviews with two Meta staffers, the two moderators in Europe and a third moderator who handles English-language content in another region who had seen the advisories. The documents offer a rare lens into how Meta interprets its policies, called community standards. The company says its system is neutral and rule-based. Critics say it is often reactive, driven as much by business considerations and news cycles as by principle. It's a complaint that has dogged Meta in other global conflicts including Myanmar, Syria and Ethiopia. Social media researchers say the approach allows the company to escape accountability for how its policies affect the 3.6 billion users of its services. The shifting guidance over Ukraine has generated confusion and frustration for moderators, who say they have 90 seconds on average to decide whether a given post violates policy, as first reported by the New York Times. Reuters independently confirmed such frustrations with three moderators. After Reuters reported the exemptions on March 10, Meta policy chief Nick Clegg said in a statement the next day that Meta would allow such speech only in Ukraine. Two days later, Clegg told employees the company was reversing altogether the exemption that had allowed users to call for the deaths of

Putin and Lukashenko, according to a March 13 internal company post seen by Reuters. At the end of March, the company extended the remaining Ukraine-only exemptions through April 30, the documents show. Reuters is the first to report this extension, which allows Ukrainians to continue engaging in certain types of violent and dehumanizing speech that normally would be off-limits. Inside the company, writing on an internal social platform, some Meta employees expressed frustration that Facebook was allowing Ukrainians to make statements that would have been deemed out of bounds for users posting about previous conflicts in the Middle East and other parts of the world, according to copies of the messages viewed by Reuters. "Seems this policy is saying hate speech and violence is ok if it is targeting the 'right' people," one employee wrote, one of 900 comments on a post about the changes. Meanwhile, Meta gave moderators no guidance to enhance their ability to disable posts promoting false narratives about Russia's invasion, like denials that civilian deaths have occurred, the people told Reuters. The company declined to comment on its guidance to moderators.

In theory, Meta did have a rule that should have enabled moderators to address the mobs of commenters directing baseless vitriol at Vishegirskaia, the pregnant beauty influencer. She survived the Mariupol hospital bombing and delivered her baby, the Associated Press reported. Meta's harassment policy prohibits users from "posting content about a violent tragedy, or victims of violent tragedies that include claims that a violent tragedy did not occur," according to the Community Standards published on its website. It cited that rule when it removed posts by the Russian Embassy in London that had pushed false claims about the Mariupol bombing following the March 9 attack. But because the rule is narrowly defined, two of the moderators said, it could be used only sparingly to battle the online hate campaign against the beauty influencer that followed. Posts that explicitly alleged that the bombing was staged were eligible for removal, but comments such as "you're such a good actress" were considered too vague and had to stay up, even when the subtext was clear, they said. Guidance from Meta enabling commenters to consider context and enforce the spirit of that policy could have helped, they added. Meta declined to comment on whether the rule applied to the comments on Vishegirskaia's account. At the same time, even explicit posts proved elusive to Meta's enforcement systems. A week after the bombing, versions of the Russian Embassy posts were still circulating on at least eight official Russian accounts on Facebook, including its embassies in Denmark, Mexico and Japan, according to an Israeli watchdog organization, FakeReporter. [read more](#) One showed a red "fake" label laid over the Associated Press photos of Mariupol, with text claiming the attack on Vishegirskaia was a hoax, and pointing readers to "more than 500 comments from real users" on her Instagram account condemning her for participating in the alleged ruse. Meta removed those posts on March 16, hours after Reuters asked the company about them, a spokesperson confirmed. Meta declined to comment on why the posts had evaded its own detection systems. The following day, on March 17, Meta designated Vishegirskaia an "involuntary public person," which meant moderators could finally start deleting the comments under the company's bullying and harassment policy, they told Reuters. But the change, they said, came too late. The flow of posts related to the woman had already slowed to a trickle.

[Top of the Document]

## 5. Putin's Mysterious Facebook 'Superfans' on a Mission (BBC, Jack Goodman & Olga Robinson, 11 Apr 22)...

Russia's invasion of Ukraine has been widely condemned in many parts of the world, but a network of Facebook groups run by people with obscure motivations would like to change perceptions of the country's leader. Millions of people have viewed posts committed to portraying President Vladimir Putin as smiling, benevolent and peace-loving. These are Putin's superfans - and we've been tracking what they do and where they come from.

The BBC has been investigating these huge pro-Putin groups with the help of researchers from the Institute for Strategic Dialogue (ISD). ISD experts identified 10 pro-Putin public groups, boasting names such as Vladimir Putin - Leader of the Free World. The groups have more than 650,000 members between them. Content includes photos and messages praising the Russian leader, written in a number of languages, including English, Russian, Farsi, Arabic and Khmer. Not only are they popular, but they are very active. Over the past month, researchers counted 16,500 posts, receiving more than 3.6 million interactions. The overall aim of the groups seems to be to promote Mr Putin as a hero standing up to the West, with overwhelming international support. The images often show the Russian leader "walking confidently, holding puppies, staring longingly into the camera, saluting troops, and riding an array of wild animals, including bears and lions". These groups have gained more than 100,000 new members since the start of the invasion on 24 February. Digging into the details of the people driving most of the content, it emerged that many of the fans listed as administrators of the groups have duplicate accounts under the same name. The researchers found at least 100 such accounts in the network. These accounts generally follow each other and sometimes post heart-warming messages or send heart emojis to each other. And they administer these pro-Putin accounts alongside others pretending to be the Russian Federation or the Russian security services, which are clearly fake. Running duplicate accounts is a potential violation of Facebook's rules on inauthentic behaviour, the ISD says. Lead researcher Moustafa Ayad calls the practice an example of "astroturfing" - an online operation involving multiple accounts that falsely gives something the impression of wider grassroots support. The campaign "creates the appearance of widespread support for Putin and the Kremlin in the shadow of the invasion and relies on... inauthentic accounts to accomplish its goal", according to the ISD report.

A closer examination of some of the group admins shows some unusual activity. One, named Marine, who says her location is Syria, uses three separate accounts to generate support for the president. Her three accounts, in Arabic, post at the same time every day. Another moderator, Victoria, from Cambodia, has been pushing content in a Khmer language group. Since 4 February, her posts have generated more than 34,000 reactions and have been shared more than 4,000 times. And Marine and Victoria jointly run a Khmer-language Facebook page, part of a wider pattern of co-ordination between some of the accounts. Posts are widely shared across different groups. For instance, another account listed as located in Bulgaria posted the same Putin image 12 times in the space of a couple of minutes. We tried to contact the people behind all of these accounts for comment, but didn't

have much luck. But a man in Kenya, called Raj, who's in several of these groups and includes "Putin" at the end of his name on Facebook, did answer the phone when we rang. In a brief conversation, he called the president a "great leader" but said he didn't want to discuss the war. We emailed him further questions about his interest in Russia, but he didn't respond. Hasmik, from Armenia, says she's a journalist and now helps to run six pro-Putin groups. We asked who invited her to do it. She told us it was the people already running the groups and said that she wasn't paid for her efforts.

It's difficult to glean the motivations of the people behind the accounts. There is no obvious link to the Russian government and unlike other well-known Russian disinformation campaigns, the network isn't subtle; nor do the people involved hide their intentions. But we can't rule out the possibility that the network has some links to the Russian authorities or pro-Putin elements inside Russia. Many people around the world are drawn to Mr Putin and his anti-West view of the world. We contacted Facebook, which says it has policies against fake accounts and has suspended a number of accounts based on information from the report and their own investigations. "We're continuing to take strong action to prevent the spread of misinformation relating to the crisis in Ukraine," says a spokesman for parent company Meta.

In the course of our research, we came across another interesting phenomenon - Vladimir Putin impersonation accounts. Mr Putin is one of the few world leaders who doesn't use social media, and there's no official Facebook account in his name. He reputedly doesn't even have a smartphone. According to his spokesman, Mr Putin simply "does not need" social media as it "doesn't give him anything he doesn't have already". But some have filled the gap left by his online absence. The page on Facebook displayed above had more than three million followers until it was taken down for impersonation shortly after the invasion at the end of February. A significant number of its subscribers - more than 700,000 - joined during the pandemic, when the page was talking up Russian-made Covid vaccines. More recently, the page was posting messages amplifying the Kremlin's view of the war, and many commenting on it appeared to believe it contained the genuine words of the Russian president. Shortly after the invasion, a post on the page declared the goal of the "operation" was "peacekeeping... aimed only at the demilitarisation of a neighbouring country". This message was shared and liked more than 200,000 times. And the page also had a habit of tagging people in its messages about Mr Putin, including users identified by researchers as having duplicate accounts. In other words, it was interacting with the Putin superfans. We don't know who's behind this account. The people managing it are based in Russia and Latvia, according to the page's transparency section. Fan pages are fertile ground to drum up support for the Kremlin internationally, says Nika Aleksejeva, a researcher at the Digital Forensic Research Lab (DFRLab), part of the Atlantic Council think tank. "They may help to build public support in foreign countries for Russia's so-called 'military operation in Ukraine' unless taken down by mainstream social media platforms," she says. DFRLab documented how one Putin-impersonator account posting in Arabic had paid for adverts targeting users in several countries, including Algeria, Libya, Egypt, Yemen, Morocco,

Lebanon, and Tunisia. The page had more than one million followers, but has since been deleted. Another prominent Putin page, posted in Arabic, used to be managed by a man who is also a big fan of Syrian leader Bashar al-Assad. It attracted almost a million followers before recently disappearing.

#### 6. China's Echoes of Russia's Alternate Reality Intensify Around the World (New York Times, Paul Mozur, Steven Lee Myers, and John Liu, 11 Apr 22)...

When Twitter put up a warning message atop a Russian government post denying civilian killings in Bucha, Ukraine, last week, China's state media rushed to its defense. "On Twitter @mf\_a\_russia's statement on #Bucha got censored," wrote Frontline, a Twitter account associated with China's official English-language broadcaster, CGTN. In a Chinese Communist Party newspaper, an article declared that Russians had offered definitive evidence to prove that the lurid photos of bodies in the streets of Bucha, a suburb of Ukraine's capital, Kyiv, were a hoax. A party television station in Shanghai said Ukraine's government had created the grisly tableaux to win sympathy in the West. "Obviously, such evidence would not be admissible in court," the report said. Only a month ago, the White House warned China not to amplify Russia's campaign to sow disinformation about the war in Ukraine. The Chinese efforts have intensified anyway, contradicting and disputing the policies of NATO capitals, even as Russia faced renewed condemnation for the killings in Bucha and other atrocities in recent days. The result has been to create an alternate reality of the war — not just for the consumption of China's citizens but also for a global audience. The propaganda has challenged the Western efforts to isolate Russia diplomatically, particularly in the Middle East, Africa and Latin America, which have been fertile ground for conspiracy theories and distrust of the United States. "Russia and China have long shared distrust and animosity toward the West," said Bret Schafer, an analyst who tracks disinformation for the Alliance for Securing Democracy, a nonprofit group in Washington. "On Ukraine, it's a level above that — just the extent to which they have parroted some pretty specific and in some cases pretty far-fetched claims from Russia."

The campaign by China has further undercut the country's effort to present itself as a neutral actor in the war, eager to promote a peaceful resolution. In fact, its diplomats and official journalists have become combatants in the informational war to legitimize Russia's claims and discredit international concerns about what appear to be war crimes. Since the war began, they have parroted the Kremlin's justifications for it, including President Vladimir V. Putin's claim that he was fighting a neo-Nazi government in Kyiv. On Twitter alone, they have used the word "Nazi" — which Russia uses as a rallying cry — more times in the six weeks of the war so far than they did in the six months before, according to a database created by the Alliance for Securing Democracy. In an example on Wednesday, an official with China's Ministry of Foreign Affairs tweeted a doctored photo appearing to show Nazis holding a flag with a swastika next to flags of Ukraine and the United States. "Surprisingly, the US stands with the neo-Nazis!" the official, Li Yang, wrote of the image, which originally featured a neo-Nazi flag in place of the American flag. The timing and subjects of many of the themes prominent in the countries' coverage suggest coordination or at least a shared view of the world and the United States'

pre-eminent role in it. China's attacks on the United States and the NATO alliance, for example, now closely hew to those in Russian state media blaming the West for the war. At times, even the wording — in English for global audiences — is almost identical.

After YouTube banned RT and Sputnik, two Russian television channels, for content “minimizing or trivializing well-documented violent events,” both RT and Frontline accused the platform of hypocrisy. They did so using the same videos of former American officials, including President George W. Bush, President Barack Obama and Hillary Rodham Clinton, joking about weapons, drones and the killing of Col. Muammar el-Qaddafi, the former Libyan leader. In another instance, the same accounts used a video of Joseph R. Biden Jr. warning in 1997, when he was a senator, that NATO's eastward expansion could provoke a “vigorous and hostile” reaction from Russia to suggest that Mr. Putin's decision to go to war was justified. China's efforts have made it clear that the White House's warning did little to influence Beijing. China's propagandists have instead intensified their efforts, amplifying not only the Kremlin's broad views about the war but also some of the most blatant lies about its conduct. “If you're just looking at the outputs, then that message didn't get through,” Mr. Schafer said. “If anything, we've seen them sort of double down.” The White House did not respond to a request for comment about China's support of Russian disinformation.

While the extent of any direct collusion between Russian and Chinese on war propaganda remains uncertain, the roots of cooperation in international media outreach stretch back nearly a decade. China's leader, Xi Jinping, pledged to deepen ties between Russian and Chinese state media on his first foreign trip in 2013 to Moscow. Since then, the two countries' myriad state media organs have signed dozens of pledges to share content. Sputnik alone has reached 17 agreements with major Chinese media, which shared its articles over 2,500 times in 2021, according to Vasily V. Pushkov, the international cooperation director for Rossiya Segodnya, the state company that owns and operates Sputnik. The two have taken other cues from each other as well. In mid-March, after Russia Today began to use clips of the Fox News host Tucker Carlson to support the idea that the United States was developing bioweapons in Ukraine, Chinese state media also began to pick up Mr. Carlson's broadcasts. On March 26, Mr. Carlson was quoted on China's flagship nightly news broadcast, averring that “it turns out our government has for some time funded biolabs in Ukraine.” The next day, the English-language channel, CGTN, repeated a Russian claim tying the labs to the laptops of Hunter Biden, the American president's son. Russian and Chinese state media have also increasingly drawn on the opinions of the same group of internet celebrities, pundits and influencers, featuring them on their shows as well as in YouTube videos. One of them, Benjamin Norton, is a journalist who claimed that a coup sponsored by the United States government took place in Ukraine in 2014 and that U.S. officials had installed the leaders of the current Ukrainian government. He first explained the conspiracy theory on RT, although it was later picked up by Chinese state media and tweeted by accounts like Frontline. In a March interview, which China's state broadcaster, CCTV, trumpeted as an exclusive, Mr. Norton said the United States, not Russia, was to blame for Russia's invasion. “Regarding the current situation in Ukraine, Benjamin said that this is not

a war caused by Russia's invasion of Ukraine, but a war planned and provoked by the United States as early as 2014," an unnamed CCTV narrator said.

At times, China's information campaigns have seemed to contradict the country's official diplomatic statements, undercutting China's efforts to play down the links between its relationship with Russia and the brutal invasion. On Wednesday, Zhao Lijian, a spokesman for China's Ministry of Foreign Affairs, called the images from Bucha "disturbing" and asked for all parties to "exercise restraint and avoid groundless accusations." Only the day before, Chen Weihua, a vocal and prolific editor at China Daily, which is owned by the Chinese government, seemed to do just that. He retweeted a widely shared post that said there was not "one iota" of proof of massacre in Bucha and accused the West of "staging atrocities to jack up emotions, demonize adversaries and extend wars." Mr. Chen is one strand of a sprawling network of diplomats, government-controlled media, and state-backed pundits and influencers who have extended China's domestic narrative about the conflict to overseas platforms like Twitter and Facebook. Central to their message is that the United States and NATO, not Mr. Putin, are responsible for the war. One political cartoon, shared by state media and Chinese diplomats, portrayed the European Union as kidnapped by Uncle Sam and chained to a tank with a NATO flag. Another, from a Chinese diplomat in St. Petersburg, Russia, showed an arm with a stars-and-stripes sleeve stuffed up the back of a European Union puppet brandishing a spear. Other images portraying the European Union as a lackey of the United States came out of a number of official Chinese accounts in the run-up to a tense meeting between Mr. Xi and the European Union, in which Europe called on China not to subvert Western sanctions or support Russia's war. Maria Repnikova, a professor of global communication at Georgia State University who studies China and Russia information campaigns, said the two countries had "a shared vision of resenting the West" that drove nationalistic sentiment at home. At the same time, the shared messages have resonated globally, especially outside the United States and Europe. "It's not coordination but echoes of the similar sort of concerns or stance when it comes to this war," she said of views in Africa and other parts of the world. "China is also trying to showcase that it's not isolated."

7. US Army Chief of Staff on Hand as Ally Lithuania Announces Training for Ukrainians  
(Stars & Stripes, John Vandiver, 11 Apr 22)...

Lithuania will host a mission to train Ukrainian soldiers to use new weaponry that the Baltic country's fellow NATO allies are sending Kyiv to assist in its war against invading Russian forces. Lithuanian defense officials announced the plan Sunday, the same day U.S. Army chief of staff Gen. James McConville was in the country for security talks. Meanwhile, the Pentagon said Sunday that it had concluded a separate training effort with Ukrainian forces in the U.S. The troops were being trained on operating maritime patrol craft and use of weapons systems, such as the Switchblade drone, that the U.S. is now providing to Ukraine. "To achieve maximum effect, we will soon organize military training for Ukrainian troops here in

Lithuania,” Lt. Gen. Valdemaras Rupsys, the Lithuanian defense chief, told local reporters. The effort will center on training Ukrainian military instructors, who can in turn pass on their weapons knowledge to rank-and-file troops in Ukraine, Rupsys told the Delfi news agency. Rupsys also held talks with McConville, who told reporters that the Pentagon continues to assess what the future American force structure will look like in countries such as Lithuania, which have been eager for a larger American military presence. “We have rotational forces here, and our policymakers have said that they will defend every inch of NATO,” Delfi quoted McConville as saying. “And they are working through what that will look like as far as rotational or permanent troops as we speak.”

For now, there are no immediate plans for U.S. soldiers to join the Lithuanian initiative, which is expected to begin in the coming weeks. “We can’t speculate on whether or not that could change in the future,” U.S. Army Europe and Africa said in a statement Monday. The U.S. has long been involved in the training of the Ukrainian military. For years, the Army operated out of a site in western Ukraine that was focused on preparing troops to fight Russian-backed separatists in the eastern region known as the Donbas. However, because of security concerns, the American training was put on hold less than two weeks before Feb. 24, the date Russia launched its full-fledged invasion. The Russia-Ukraine war was preceded by a buildup of about 200,000 Russian service members and materiel near Ukraine’s borders on three sides. At the time of the halt in the U.S. training, about 160 National Guard soldiers were relocated from Ukraine to Germany, where they continue to take part in other Army instruction in Europe.

#### 8. Western Nations Adapt Their Ukraine Help as War Enters New Phase (DefenseNews, Joe Gould, 11 Apr 22)...

The U.S. and its allies are preparing to send heavier weapons to Ukraine in anticipation of Russia focusing its efforts on the eastern part of the country. British Prime Minister Boris Johnson paid a surprise visit to Ukrainian President Volodymyr Zelenskyy in Kyiv on Saturday, where he pledged 120 armored vehicles and new anti-ship missile systems. This came a day after he promised to send an additional £100 million (U.S. \$130 million) of high-grade military equipment to Ukraine, saying Britain wants to help Ukraine defend itself against Russian aggression. In the United States, Chairman of the Joint Chiefs of Staff Gen. Mark Milley forecast the war’s new phase will play out in flat, open terrain and will increasingly involve armor and artillery. On Monday, a senior defense official said the Pentagon will send arms to Ukraine for that fight, including more Javelin anti-tank weapons as well as counter-artillery radars. “I don’t think they’re in Ukraine yet, but they’re on the move,” the Pentagon official said of the Javelins. “That’s a very specific example of how we’re trying to help the Ukrainians in this particular new phase of the conflict.”

Thwarted in its early plan for a quick takeover of the capital Kyiv, Russia is resupplying and reinforcing its invasion force in eastern Ukraine with an 8-mile convoy of vehicles. The group, which includes command-and-control

support and possibly helicopters for air support, is apparently headed toward Iziurm in the Kharkiv region of eastern Ukraine - all while Russia is reinforcing its positions southwest of Donetsk with artillery units. The action comes as Ukrainian Foreign Minister Dmytro Kuleba called for more weapons for his country, and stronger sanctions against Moscow, during meetings with NATO foreign ministers in Brussels last week. Ahead of the talks, Kuleba said his agenda was "very simple - it has only three items on it: It's weapons, weapons and weapons." A \$100 million package of U.S. security assistance announced last week included Javelins, four counter-artillery and counter-UAV tracking radars, four counter-mortar radar systems, armored Humvees, and laser-guided rocket systems.

The Czech Republic became the first NATO member to send tanks to Ukraine, which included T-72 and BVP-1 infantry fighting vehicles. Reuters reported last week. The package of military aid Britain announced last week includes more Starstreak anti-aircraft missiles, another 800 anti-tank missiles and precision munitions capable of lingering in the sky until directed to their target. "Ukraine has defied the odds and pushed back Russian forces from the gates of Kyiv, achieving the greatest feat of arms of the 21st century," Johnson said in a statement. "It is because of President Zelenskyy's resolute leadership and the invincible heroism and courage of the Ukrainian people that [Russian President Vladimir] Putin's monstrous aims are being thwarted." It's a trickier political question in Germany, where Chancellor Olaf Scholz is reportedly delaying a final decision on whether to send German tanks to Ukraine. While the Defence Ministry argues it needs them for its own use, German Foreign Minister Annalena Baerbock said Monday that Ukraine needs "heavy weapons." "Now is not the time for excuses; now is the time for creativity and pragmatism," Baerbock said at a meeting of European Union foreign affairs ministers in Luxembourg. Russia warned Thursday that supplying weapons to Ukraine would thwart ongoing peace negotiations between the two countries. "Pumping weapons into Ukraine will not contribute to the success of Russian-Ukrainian talks," Kremlin spokesperson Dmitry Peskov said.

[Top of the Document]

#### 9. Germany's Baerbock Calls for 'Heavy Weapons' for Ukraine (Politico, Hans von der Burchard, 11 Apr 22)...

German Foreign Minister Annalena Baerbock on Monday urged Western countries to supply Ukraine with "heavy weapons," while issuing thinly veiled criticism of Chancellor Olaf Scholz, who has delayed deliveries of tanks to Kyiv. "What's clear: Ukraine needs more military material, especially heavy weapons," Baerbock said at a meeting of EU foreign affairs ministers in Luxembourg, adding that "the terrible horror that we see every day" in Russia's war against Ukraine made the need for such supplies "more than clear." Germany has already delivered defensive weapons such as anti-tank missiles to Ukraine, while "heavy weapons" implies sending tanks, artillery or advanced air defense systems. POLITICO reported last week that Scholz is delaying a final decision on whether to send German tanks to Ukraine, despite pressure from his coalition partners the Greens, led by Baerbock and Vice-Chancellor Robert Habeck. The foreign minister also issued indirect but harsh criticism of Scholz's position: "Now is not the time for excuses; now is the time for creativity and pragmatism," she said.

Scholz argued last week that Germany should reach a common position with allies on delivering tanks before sending them to Ukraine, while the German defense ministry, which is led by Scholz's Social Democratic Party colleague Christine Lambrecht, argued that Germany could not immediately deliver tanks to Ukraine from its own army stock because it needs them for its own defense as well as for NATO tasks. A defense ministry spokesperson argued on Monday that supplying Ukraine with offensive weapons was complicated and would require additional training as well as logistical support for maintenance and spare parts. Yet Baerbock pushed back against that argument, calling for "creativity and pragmatism" to solve "issues such as replacement materials and joint training" in order "to support Ukraine as soon as possible." Western officials have said that Russia is preparing for a major offensive in Eastern Ukraine in the coming weeks. The Ukrainian government has appealed to Germany and other EU governments to supply tanks and air defense systems to stop that offensive and also to be able to take back Ukrainian territories that are currently occupied by Russian forces.

10. Russia Could Triple Troop Numbers in Bid to Take Donbas, Say Western Officials  
(Independent, Patrick Daly, 11 Apr 22)...

Vladimir Putin is expected to double or even possibly triple the number of Russian troops in the Donbas as the Russian president resorts to a "diminished" invasion strategy, according to Western officials. The amassing of troops, however, will not necessarily give Moscow an advantage over Ukraine, with Kyiv's forces having had success in pushing back insurgents in the east of the country, they said. The Russian leader has been forced to "diminish considerably" the plan in Ukraine, one official said, amid suggestions Mr Putin wants to take the Donbas region before May 9 when Russia traditionally marks the Soviet Union's World War Two victory against Nazi Germany with military parades in Moscow in an attempt to claim victory for his so-called "special operation". Another official said: "I would imagine that, at outside estimates, what you're looking at is a force which is probably the Russians looking to double or even treble the amount of force that they bring into that Donbas area. "But I would note that that is going to take some considerable time to bring them up to that sort of number. "And even when they bring themselves to that number, there is a question over how effectively they can bring those forces into the battle. "The Russians have shown themselves to be not very effective in this invasion as to being able to use their numerical advantage effectively to actually bring about a decisive engagement."

It comes after Downing Street confirmed further details of the Prime Minister's trip to the Ukrainian capital to meet with President Volodymyr Zelensky. Boris Johnson held talks with his counterpart over a dinner of roast beef after touring Independence Square on Saturday. The British leader was in Kyiv for around five hours, and travelled by car, helicopter, military plane and train, according to a No 10 spokeswoman. Western officials said they hoped that, with Russia's military regrouping and moving

east, more European leaders could travel to Kyiv to show solidarity “on the ground” with Ukraine. While Russian troops are poorly-led and ill-disciplined, they are also becoming desensitised by the war, an official said, leading to “revolting” behaviour, such as the “targeting of civilians”. The Foreign Office said it was “shocked” by reports of mass graves being found in the village of Buzova outside Kyiv. Local officials said bodies showing “evidence of execution” had been discovered following the Russian withdrawal. Buzova is near Bucha, another town where atrocities were discovered although Russia has claimed the scenes from the aftermath of its occupation were staged.

The UK will work with allies to “investigate war crimes and ensure justice is done”, a Foreign Office spokesman said. The next phase of the conflict is expected to see focus shift to the south east of Ukraine, although it is not known when a fresh assault will commence. Western officials said that 37 to 38 Russian battalion tactical groups are “non-combat effective” – up by almost 10 on last week’s estimate. The total force available is about 90 battalion tactical groups, with between 700 and 1,000 troops said to be contained in each one. One official said: “It is clear there is an intent to reinforce the Russian presence in and around those forces, both in and surrounding the Donbas. “We’re already starting to see some Russian forces continue their attacks into the Donbas, and we are also seeing Ukrainian forces being effective in causing them problems. “I think the losses that we’ve seen and the scale of losses, regardless of the reinforcing of their forces into the Donbas, it is still unclear how they (Russia) are going to overcome some of the morale issues they will have with their troops. “And we’ve seen numbers of troops being unwilling to fight and refusing to engage in operations. “When they do start, with the scale of operations we anticipate in the Donbas, they will also have large logistic lines open up which will be vulnerable potentially to attack by Ukrainian forces.”

Britain is increasingly worried that Russia could use white phosphorus munitions in the bombardment of the besieged Ukrainian port Mariupol. White phosphorus is used for illumination at night or to create a smokescreen, but when it is deployed as a weapon it causes horrific burns. Western officials think that, for Russia, bringing about the fall of Mariupol is seen as crucial for both freeing up troops for the fight in the Donbas but also for creating a route north for the Kremlin’s forces as they look to form a pincer movement on Ukrainian defenders in the east. Meanwhile, the Russian military said it had destroyed a shipment of air defence missile systems provided to Ukraine by the West. The claim has not been verified. Russian defence ministry spokesman Maj Gen Igor Konashenkov said the military used sea-launched Kalibr cruise missiles to destroy four S-300 air defence missile launchers on the southern outskirts of the city of Dnipro, which lies in the east of Ukraine. He said about 25 Ukrainian troops were also hit by the strike on Sunday.

11. Russians Ready for New Offensive in Eastern Ukraine, U.S. Official Warns (Politico, Quint Forgy, 11 Apr 22)...

Russia has begun an effort to “resupply and reinforce” its forces in eastern Ukraine before mounting a new offensive in the Donbas region, a senior Defense Department official said on Monday. The official, who spoke on condition of anonymity, pointed to open-source images showing a line of Russian military vehicles heading toward the Ukrainian city of Izyum — just outside the Donbas, to its northwest. Although Russian forces still remain north of Izyum, the official said, the United States assesses that the line of vehicles includes a command and control element and a support group battalion, as well as perhaps rotary wing aviation support and other infantry support. “We do believe that this is an early effort by the Russians to bolster their presence and their capabilities in the Donbas,” the official said, adding that the developments are “clear evidence of what we’ve been saying for a while now: that the Russians are going to want to pour more of their assets into the Donbas.” Russia’s planned assault on the Donbas comes after its forces retreated from around the capital of Kyiv in recent days after encountering stiff Ukrainian resistance. Their hasty withdrawal exposed scenes of apparent war crimes and other atrocities in Bucha and other suburbs of Kyiv. Now, the official said on Monday, “the locus of everything we’re seeing is on the Donbas region,” from which Russia launched its latest invasion of Ukraine in February, 47 days ago.

Before proceeding with a full-scale invasion on the country, Russia first moved troops across its western border into the Donbas, which is home to two breakaway areas largely held by Moscow-backed separatists: the so-called Donetsk People’s Republic and Luhansk People’s Republic. The United States does not yet “assess that a new offensive has started” in the Donbas, the official said on Monday. But the official noted that a “hot war” has already been underway in the region since 2014 — when fighting began between Ukrainians and the pro-Russian separatists backed by Moscow. The official also said the United States assessed that Russia had indeed appointed Gen. Alexander Dvornikov to lead its war effort in Ukraine, as was reported over the weekend. Dvornikov previously oversaw Russian forces in Syria, and his brutal tactics there have prompted fears in the United States that the invasion of Ukraine could become even more violent as the fight shifts eastward. But the official said on Monday that “it remains to be seen what sort of an effect” Dvornikov will be able to have on Russian forces, who have faced significant logistical and morale problems amid the protracted conflict. “They have high challenges to surmount, and the choice of a general doesn’t mean that they’re poised for greater success here,” the official said. “We’ll just have to wait and see.”

[Top of the Document]

12. Russian Forces Ramp up Efforts to Gain Control of Mariupol (Irish Times, 11 Apr 22)...

Russian forces are pushing hard to establish control over the southern port city of Mariupol, the linchpin between Russian-held areas to the west and east and already devastated by weeks of siege and bombardment. Thousands of Russian troops were massing for a fresh offensive in the east, according to Ukrainian president Volodymyr Zelenskiy on Monday. He added that Moscow said it would not halt its military operation in Ukraine for any further peace talks. British intelligence indicated that Ukrainian forces had already

repulsed several Russian assaults in eastern regions. Britain's defence ministry said Russian shelling continued in the Donetsk and Luhansk regions. But Ukrainian forces had beaten back several assaults and destroyed tanks, vehicles and artillery equipment, it said. For now at least, the invading forces have abandoned their attempt to capture the capital Kyiv but they are redoubling efforts in the east. The invasion – which Russia calls a “special military operation” – has left a trail of death and destruction. Moreover, the attack has drawn condemnation from western countries and triggered concern about President Putin's broader ambitions.

Russia's defence ministry said sea-launched missiles had on Sunday destroyed S-300 anti-aircraft missile systems which had been supplied to Ukraine by a European country. The batteries were concealed in a hangar on the outskirts of Dnipro in central Ukraine, it said. The United States did not have evidence that any S-300 missile defence system had been destroyed by Russia, said a senior defence official. Washington believes Russia has started reinforcing and resupplying its troops in Donbas in eastern Ukraine, the official added, but that the US does not believe this is the start of a new offensive in the region. President Zelenskyy appealed to South Korea's parliament by videolink to provide his country with military aid to assist Ukraine's struggle against the Russian onslaught. About one-quarter of Ukraine's 44 million population have been forced from their homes, cities turned into rubble and thousands have been killed or injured, many of them civilians. Russian foreign minister Sergei Lavrov confirmed that the Kremlin would not halt its operation for any new round of peace talks. And he accused Kyiv of failing to reciprocate in previous sessions. Mr Lavrov told state television he saw no reason not to continue with talks. But although President Putin had ordered a suspension of military action during a first round in February, Moscow's position had changed, he said. “A decision was made that during the next rounds of talks, there would be no pause [in military action] so long as a final agreement is not reached,” said Mr Lavrov. Austrian leader Karl Nehammer met President Putin in Moscow on Monday and was expected to call for an end to the conflict. It was Mr Putin's first face-to-face meeting with a European Union leader since the invasion started. “This is not a friendly meeting,” Mr Nehammer was quoted as saying in a statement issued by his office, reiterating that he had hoped to help bring an end to the war or improve conditions for civilians. “The conversation with President Putin was very direct, open and tough.”

Mounting civilian casualties have triggered widespread international condemnation and new sanctions. Luhansk governor Serhiy Gaidai said shelling in the region was increasing day by day. “The most difficult situation is in [the cities of] Rubizhne and Popasna. They are being shelled constantly, round the clock,” said Mr Gaidai. He urged all civilians to evacuate. “Those that wanted to leave have already left, while now many are left in bomb shelters who are perhaps frightened to come out . . . or scared to lose their possessions.” Moscow has rejected accusations of war crimes by Ukraine and western countries. It has repeatedly denied targeting civilians and says its aim is to demilitarise and root out dangerous nationalists in its southern neighbour. Ukraine and western nations have dismissed this as a baseless pretext for war. German foreign minister Annalena Baerbock, speaking before a meeting of European ministers in Luxembourg, said Berlin

saw "massive indications" of war crimes in Ukraine. Meanwhile, French bank Société Générale became the latest company to retreat from Russia. It agreed to sell its stake in Rosbank and the Russian lender's insurance subsidiaries to Interros Capital, a firm linked to billionaire Vladimir Potanin. The invasion has triggered a wave of financial sanctions from the United States, Europe and Britain, prompting western companies to sell their Russian assets. Several European Union ministers said on Monday the bloc's executive was drafting proposals for an oil embargo on Russia, although there was still no agreement to ban Russian crude. The World Bank forecast the war would cause Ukraine's economic output to collapse by 45 per cent this year, with half of its businesses shuttered, grain exports mostly cut off by Russia's naval blockade and destruction rendering economic activity impossible in many areas. The bank forecast Russia's gross domestic product would contract by 11.2 per cent this year due to sanctions.

[Top of the Document]

13. Russia Says West Helping Ukraine Prepare Fake Allegations of War Crimes (Reuters, 11 Apr 22)...

Moscow said on Monday that the United States and Britain were helping Ukraine prepare fake claims about the alleged persecution of civilians in Ukraine to feed to international media in an attempt to smear Russia. Since Russian troops withdrew from towns and villages around the Ukrainian capital Kyiv, Ukrainian troops have been showing journalists corpses of what they say are civilians killed by Russian forces, destroyed houses and burnt-out cars. The West says the dead civilians are evidence of war crimes. Reuters reporters saw dead bodies in the town of Bucha but could not independently verify who was responsible for the killings. Russia's defence ministry said Ukraine's government was being directed by the United States to sow false evidence of Russian violence against civilians despite what it cast as Moscow's "unprecedented measures to save civilians." "The United States, which has many years of experience in organizing provocations with human victims, continues its campaign to create and promote false 'evidence'," the ministry said.

Ukraine says Russia is guilty of genocide and has called on the West and the NATO military alliance to give it more support. Russia said British intelligence was helping Ukraine to prepare new fake claims about alleged abuses in northeastern Ukraine. The defence ministry did not provide evidence for its claims of British and U.S. involvement. "New false staged provocations accusing the armed forces of the Russian Federation of allegedly cruel treatment of the population of Ukraine are being prepared by the Kiev regime under the leadership of British special services on the territory of the Sumy region," the ministry said. Russia said Western journalists had been invited to the Sumy region in northeastern Ukraine to "conduct the filming of staged plots". The ministry said Western media would publish such fake news shortly. It did not say which media.

It said that Russian troops had left the alleged scene of some of the abuses, the Ukrainian village of Nyzhnya Syrovatka, on March 20. "The goal is to further stoke Russophobia against the backdrop of the rapidly

developing economic crisis in Europe," the ministry said. Russia's Feb. 24 invasion of Ukraine has killed thousands of people, displaced millions and raised fears of a wider confrontation between Russia and the United States. Putin says the "special military operation" in Ukraine is necessary because the United States was using Ukraine to threaten Russia and Moscow had to act to defend Russian-speaking people in Ukraine against persecution. Ukraine says it is fighting against an imperial-style land grab and dismisses Putin's claims of genocide as nonsense.

[Top of the Document]

#### 14. Russia Claims It Destroyed Ukrainian Air Defense Systems (VOA, Ken Bredemeier and Jeff Seldin, 11 Apr 22)...

Russia said Monday that it destroyed several air defense systems in Ukraine over the weekend, ahead of what Ukrainian President Volodymyr Zelenskyy is warning could be the start of a renewed Russian offensive into the country's eastern region. The Russian claims could not be verified, but Russian Defense Ministry spokesman Major General Igor Konashenkov said the military launched cruise missiles to destroy four launchers Sunday on the southern outskirts of the central city of Dnipro and also hit systems in the Mykolaiv and Kharkiv regions. Zelenskyy pleaded Monday for more military aid from the U.S. and its allies, specifically requesting South Korean lawmakers in a video address to send more equipment that can shoot down Russian missiles. Meanwhile, the Pentagon said Monday it is seeing early signs of efforts by Russia to reinforce its troops in eastern Ukraine. The U.S. spotted a convoy north of Izyum with command-and-control elements, enablers, artillery, and rotary blade air support, according to a senior U.S. defense official. The official said there also are indications that Russian forces sent from northern Ukraine to Belarus and the Russian town of Valuyki are now moving toward eastern Ukraine. The official said, "We do not assess a new offensive has started" in eastern Ukraine but added, "What is clear is that the Russians continue to sink to new lows of depravity and brutality as we saw with the missile strike on a train station last week and their continued assault on Mariupol ... . "We're certainly bracing ourselves here for some potentially really, really horrible outcomes," the official said.

The U.S. official said Russia has launched 1,500 missile attacks on Ukraine during 47 days of war, destroying apartment buildings and hospitals throughout the country and killing thousands of Ukrainian civilians. Russia has acknowledged sustaining "significant" troop losses of its own. Russia said one of its latest missile attacks hit four S-300 launchers provided by a European country it didn't name. Slovakia gave Ukraine just such a system last week but denied it had been destroyed. Military analysts say that Russia's failure to capture the Ukrainian capital of Kyiv and the bulk of territory throughout the country has in part been the result of its failure to control the skies over Ukraine to provide cover for ground troops. Nonetheless, its missile bombardment has virtually flattened some cities and one missile attack on a train station killed more than 50 people last Friday. Russia has not been able to stop the flow of more military aid to Ukraine, with eight to 10 flights arriving daily. Zelenskyy told the CBS News show "60 Minutes" on Sunday that Ukraine's fate depends on further Western military assistance. "To be honest, whether we will be able to (survive) depends on this," Zelenskyy said. "Unfortunately, I don't have the

confidence that we will be receiving everything we need."

European Union foreign ministers are meeting Monday to discuss another round of sanctions against Russia. Meanwhile, Austrian Chancellor Karl Nehammer met with Russian President Vladimir Putin in Moscow, the first such visit by a European leader since Putin launched the invasion of Ukraine on February 24. In a statement after the meeting, Nehammer said the discussion with Putin was "very direct, open and tough." Nehammer said his most important message to the Russian leader was that the war in Ukraine must end because "in a war there are only losers on both sides." There was no immediate comment from the Kremlin.

15. Russia Will Not Pause Military Operation in Ukraine for Peace Talks (Reuters, 11 Apr 22)...

Russia will not pause its military operation in Ukraine for subsequent rounds of peace talks, Russian Foreign Minister Sergei Lavrov said on Monday. Russian officials say peace talks with Ukraine are not progressing as rapidly as they would like, and have accused the West of trying to derail negotiations by raising war crimes allegations against Russian troops in Ukraine, which Moscow denies. Speaking in an interview with Russian state television, Lavrov said he saw no reason not to continue talks with Ukraine but insisted Moscow would not halt its military operation when the sides convene again. Lavrov said that President Vladimir Putin had ordered to suspend military action during the first round of talks between Russian and Ukrainian negotiators in late February but that Moscow's position had changed since. "After we became convinced that the Ukrainians were not planning to reciprocate, a decision was made that during the next rounds of talks, there would be no pause (in military action) so long as a final agreement is not reached," Lavrov said.

Russia sent tens of thousands of troops into Ukraine on Feb. 24 in what it called a special operation to degrade its southern neighbour's military capabilities and root out people it called dangerous nationalists. Ukrainian forces have mounted stiff resistance and the West has imposed sweeping sanctions on Russia in an effort to force it to withdraw its forces. Lavrov last week accused Kyiv of presenting Moscow with an "unacceptable" draft peace deal that deviated from agreements the sides had previously reached. Kyiv dismissed Lavrov's comments at the time as a tactic to undermine Ukraine or divert attention from war crime accusations against Russian troops. In the interview aired on Monday, Lavrov also said that calls by Josep Borrell, the European Union's top diplomat, for the bloc to continue arming Kyiv marked a "very serious U-turn" in European policy.

PREPARE

16. Army Generals to Be Nominated to Lead European Command, Special Operations Command: Report

(MilitaryTimes, Meghann Meyers, 11 Apr 22)...

The current heads of U.S. Army Europe and Africa and Joint Special Operations Command have been chosen for new posts, according to a Wall Street Journal report. Gen. Christopher Cavoli will be nominated to lead U.S. European Command, U.S. officials told WSJ, and Lt. Gen. Bryan Fenton will be tapped for U.S. Special Operations Command. The White House and Pentagon declined to comment on the nominations Monday. Neither has been officially sent to the Senate to prepare for confirmation hearings. Fenton, a career Special Forces officer, took command of JSOC in July, after serving in the defense secretary's office as an adviser. Prior to that, he was the deputy commander of U.S. Indo-Pacific Command. Fenton would be the first Green Beret in nearly 20 years to lead SOCOM. The current head of the command, Gen. Richard Clarke, cut his teeth in the 75th Ranger Regiment, as did Gen. Tony Thomas before him.

Cavoli has led U.S. Army Europe since 2018. He became the head of the Army's combined Europe and Africa command when they consolidated in October 2020. An infantryman-turned-foreign area officer, Cavoli previously led the Hawaii-based 25th Infantry Division. If confirmed, he would take over for Air Force Gen. Tod Wolters, who has been at the center of the U.S. and NATO responses to Russia's invasion of Ukraine. EUCOM commanders automatically take on a second role as NATO's supreme allied commander. As the war in Ukraine has ramped up, the U.S. has mobilized more than 12,000 troops to Germany and eastern Europe. At the same time, there's ongoing discussion at the Pentagon and within NATO on what the U.S. force posture should look like on the continent going forward.

#### 17. Nato's 'Achilles Heel': Alliance Conducts War Games in Nervous Lithuania

(Guardian, Philip Oltermann, 11 Apr 22)...

About 30km west of the Belarusian border, the enemy's tanks were rolling through the pine forests of Lithuania at speed until a makeshift obstacle made of barbed wire blocked their path. Soldiers carrying bolt cutters jumped out of the armoured vehicle at the front to clear the road. Then, a deafening bang. In its rush to victory, the advancing party had neglected to check the sandy terrain underneath the roadblock for mines. Luckily, for them, this was merely a dress rehearsal for a showdown between Russia and the North Atlantic alliance. No live explosives were used in Nato's "Rising Griffin" manoeuvre at the Pabradė military base in eastern Lithuania. Instead, referees politely informed the tank commanders that their vehicles would have been ripped to shreds. The Russian enemy was being impersonated by American and Norwegian troops. The western defenders may have notched up a tactical victory against an eastern aggressor on this sunny April morning, yet Nato's security architecture has never looked more fragile than in the spring of 2022, especially when viewed from Lithuania, a country long considered the alliance's achilles heel.

An independent republic since 1990, the southernmost of the three Baltic

states borders both Russia-allied Belarus on its eastern side and the Russian exclave of Kaliningrad on its western flank. On Russian television, pundits have openly urged the Kremlin to escalate the war in Ukraine by enforcing a military corridor along the “Suwalki gap” – Lithuania’s short border with Poland – thus cutting off the Baltics from other Nato-allied lands. “Until last November, we had the Russian army quite far away from Nato’s borders,” said Gabrielius Landsbergis, Lithuania’s foreign minister. “Now the military activity is very close. To add to that, Lithuania lies between the territory of Belarus and the territory of Kaliningrad. Which puts us in a strategic situation that is, let’s say, interesting.” Since 2016, after Russia’s annexation of Crimea, “enhanced forward presence” battlegroups have been stationed in four member states on Nato’s eastern flank: Poland, Estonia, Latvia and Lithuania.

The war in Ukraine has led the alliance to further bolster its presence in the region, with multinational battalions to be dispatched to Romania, Bulgaria, Hungary and Slovakia. The military presence in Lithuania has been increased from approximately 1,200 to roughly 1,600 soldiers and equipped with new hardware, such as the German army’s light and mobile Ozelot anti-aircraft system, which can be used to protect airports from aerial assaults. But the function of these military units remains that of a “tripwire”: a reminder to hardliners in the Kremlin that invading what they may see as renegade breakaway nations of a former Russian empire would automatically trigger a military conflict with other western European states. But in their current state, there is little doubt the enhanced forward presence units would sooner or later be overrun. The scenario being rehearsed in the Rising Griffin exercise was a David v Goliath one, with the attacking force taking the role of the giant. The priority of Nato’s troops in the manoeuvre, said one officer, was to “delay the enemy”, not to hold the line.

As Nato members prepare to meet in Madrid in June, Lithuania, along with its Baltic neighbour Estonia, is calling on Nato to urgently adjust its posture in the region from deterrence to what it calls “forward defence”. “What we’re seeing in Russia and Belarus is now a dangerous country with the intention to attack other sovereign states,” Landsbergis told the Guardian. “It’s a double-edged sword: on the one hand Russia has proven in Ukraine that it is a declining regional power. On the other hand, it can still do a lot of damage on its way down, as it seems to have no regard for its own losses. We have to defend the Baltic states, especially those that are geographically interesting to Russia.” In keeping with the “founding act”, a political agreement signed by Nato and Russia in 1997, there are restrictions on how many western allied troops are allowed to be deployed to the Baltics, and how close they can be stationed to the border.

The enhanced forward presence in Lithuania, which is made up of seven European nations and led by Germany’s Bundeswehr, has to be rotated every six months at considerable cost and effort, with hundreds of vehicles having to be transported by road, rail or air before each changeover. While countries such as Germany and the UK remain committed to the founding act,

Lithuania and other states in the region say the document is no longer viable as a treaty. "We consider it null and void after what Russia has done," Landsbergis said. "The new reality we have to accept is that the treaties that built the old security environment with Russia are no more. We have to look at this with new eyes. There has to be a permanent military presence with everything needed to defend the skies, defend the seas and defend the land of the Baltic states." Estonia's prime minister last week called for the three Baltic states to be handed "war-fighting capabilities", with divisions of up to 25,000 soldiers per country. "The question we have to ask ourselves is: what will be the new global security architecture of the world after this war?" said Landsbergis. "At the moment, we are merely reacting to what is happening in Ukraine. But that has to change. We have to start thinking in strategic terms."

1. Putin's Bullying Backfires as Finland and Sweden Edge Closer to Joining NATO  
(CNN, Luke McGee, 12 Apr 22)...

When Vladimir Putin launched his invasion of Ukraine, his goals were clear. He wanted to bring his neighbor to heel, assert Russian authority in Eastern Europe and make the West think twice about expanding militarily and politically toward Russia's borders. But in one important respect, Putin's plan appears to have failed: The war has united the West against Moscow in ways that seemed unimaginable in January. Now, Finland and Sweden -- nations that are officially non-aligned -- are edging ever closer toward joining NATO, the US-led military alliance. Finland is expected to produce a report on the country's security policy this week, a key step on the road to the nation potentially applying for NATO. That report is expected to start discussions in Finland's parliament about whether to pursue membership in the alliance -- discussions which Finnish Prime Minister Sanna Marin said she hoped would wrap up "before mid-summer." Finland's foreign minister Pekka Haavisto said Monday that it was "important" that neighboring Sweden was following a "similar process" which he expects to take time. "But of course we exchange information all the time and, hopefully, if we make similar kinds of decisions, we could do them around the same time."

Sweden holds an election later this year, in which NATO is likely to be a key campaigning issue, with mainstream parties potentially not objecting to joining the alliance. Swedish Prime Minister Magdalena Andersson did not rule out the possibility of membership in an interview with SVT at the end of March. Sweden is undertaking an analysis of security policy that's due to be completed by the end of May, and the government is expected to announce

its position following that report, a Swedish official told CNN. They said their nation could make its position public sooner, depending on when neighboring Finland does. Public opinion in both countries has shifted significantly since the invasion, and NATO allies and officials are on the whole supportive of the two countries joining. The only serious objection could come from Hungary, whose leader is close with Putin, but NATO officials think it would be able to twist Prime Minister Viktor Orban's arm. Given that Putin started his war demanding that NATO roll its borders back to where they were in the 1990s, the fact this is even being considered represents a diplomatic disaster for Moscow. And if Finland in particular were to join, Putin would find Russia suddenly sharing an additional 830-mile border with NATO.

Kremlin spokesman Dmitry Peskov warned on Monday that expanding NATO wouldn't bring any more stability to Europe. "We have repeatedly said that the alliance itself is more of a tool for confrontation. This is not an alliance that provides peace and stability, and further expansion of the alliance, of course, will not lead to more stability on the European continent," he said. Rob Bauer, the head of NATO's military committee, told reporters on Tuesday that the alliance has not ruled out new members, but said it was ultimately up to Finland and Sweden to decide whether they want to join, Reuters reported. "It is a sovereign decision of any nation that wants to join NATO to apply for membership, which they so far have not done ... We are forcing no one into NATO," Bauer said. Nor has Putin's invasion motivated Ukraine to pull back from its desire for closer integration with the West. While the country is unlikely to join NATO, its efforts to join the European Union have accelerated since the start of the war. This would take a very long time and could also face stiff opposition from Hungary, which is already in a nasty battle with Brussels over its violations of the rule of law, causing the EU to propose suspending central funding to Budapest.

However, once again, the fact it's being talked about and the level of support among EU leaders and officials is another indication of just how united the West has become against Russia. It's worth noting that since the start of the war, the West has remained largely united in its response to Russia, be it through economic sanctions or military support for Ukraine. However, there are a few challenges coming up that will test how united this alliance against Russia really is. First, if it emerges that Russia has used chemical weapons in Ukraine, there will be enormous pressure for the West, particularly NATO, to take an even more active role in the war -- something the alliance has been reluctant to do so far. NATO members have already discussed red lines and what action should be taken in the event of chemical weapons, but those details are still private to prevent Russia from taking pre-emptive protective action. However, any NATO intervention would almost certainly lead to a less stable security situation in Europe, as the West would risk a military confrontation with Russia -- a nuclear power, which would likely respond by intensifying its attacks on Ukraine and possibly in other areas of traditional Russian influence. Second, the cost of living crisis in many European countries could soon test the unity of future Western sanctions on Russia and embargoes on Russian energy. If, ultimately, the economy of Western Europe is deemed more important than holding Russia

to account for waging war on its peaceful neighbor, then Putin could to some extent get away with invading an innocent country. But for now, as that unity largely holds, it is clear that Putin's desire to belittle the Western alliance has backfired -- and that the strongman has secured pariah status for his nation, possibly for years to come.

## 2. Finland Finishes White Paper Set to Kick off NATO Debates (Bloomberg, Leo Laikola, 12 Apr 22)...

Finland is set to kick off a process that is likely to culminate in an application by Russia's Nordic neighbor to join the defense alliance NATO. The government, together with President Sauli Niinisto, on Tuesday finalized a white paper on changes to the nation's security environment following its former imperial master's attack on Ukraine. The report will be sent to parliament and made public when officially signed off by the government in a session due to take place on Wednesday. While no proposal to join the North Atlantic Treaty Organization is set to be included, the government is prepared to later file an addendum on such a proposal should the required backing for it emerge in parliament, Foreign Minister Pekka Haavisto has said. More than half of voting lawmakers now support joining the alliance, according to an unofficial tally by Finland's biggest newspaper Helsingin Sanomat.

Finland has seen a tectonic shift in attitudes toward the membership in NATO following the invasion of Ukraine, with the latest polls showing a majority of Finns now backing it. With the white paper set to be used as a vehicle for the parliament to debate the issue, a potential entry application could be filed before the 30-member bloc is set to meet for a summit in Madrid June 29-30. The Nordic nation of 5.5-million people, which has the European Union's longest border with Russia, has been warned by its eastern neighbor against joining NATO, raising concerns about potential aggression from Moscow. On Friday, Finland reported an attack on government websites and a suspected airspace violation by Russian aircraft. The changing security landscape and public opinion is also seeing governing parties move toward supporting a membership in NATO. During the weekend, Finland's Center Party, that's part of a five-party cabinet run by Social Democrat Prime Minister Sanna Marin, opened the door to a potential membership bid. In yet another sign of the change in opinions on security issues, Finns have also given a somber assessment of their eastern neighbor with 84% now seeing Russia a significant military threat.

## 3. In Ukraine, Facebook Fact-Checkers Fight a War on Two Fronts (Washington Post, Naomi Nix, 11 Apr 22)...

First came a one-minute video taken on the streets of Bucha, a Kyiv suburb abandoned by retreating Russian forces. The footage showed numerous bodies, civilians in winter coats, scattered along the muddy roads like leaves on a fall day. Then came the deluge of misinformation: On social media, some argued the images were fake, that the bodies were actors pretending to be dead. Others falsely claimed the Ukrainian military had slain their own

countrymen. It fell to Valeriia Stepaniuk, 22, to set things straight. Stepaniuk fact-checks content for Facebook as part of her job at a think tank called VoxUkraine. After scouring credible news sources — such as a BBC article that said satellite imagery disproved Russian claims that the Bucha footage was staged — she and a handful of colleagues are compiling a report to debunk the misinformation flooding social media. “It was hard to write about this, to see everything the first several times,” Stepaniuk said from her home in the Western city of Lutsk. “But now I understand I can’t ignore this. Everyone should see the photos and understand the scale of tragedy.” Stepaniuk is part of a small group of independent fact-checkers in Ukraine who have long worked with Facebook to identify falsehoods on their social networks. When such outside groups determine a post is false, Facebook decreases its visibility in users’ news feeds and attaches a warning label pointing them to an explanation from the fact-checker. The role of these fact-checkers has become more critical since Russia invaded Ukraine on Feb. 24. VoxUkraine started as a blog by economists in 2014, when Ukraine’s president decided not to sign a trade agreement with the European Union, prompting a wave of protests. Now, the think tank is part of a nascent coalition determined to slow the spread of misinformation about the war. These groups bolster Facebook’s own algorithms and thousands of content moderators who police content that breaks its rules.

Before the war, there were no groups assigned to fact-check posts in Russia, according to a Washington Post review, and only two examining content in Ukraine: VoxUkraine and StopFake. Now, there are eight additional groups policing misinformation in the region. The stakes are high, as social media is increasingly becoming a tool of modern warfare. Ukrainians and Russians have both been turning to social media to win hearts and minds around the world as the bloody conflict destroys Ukrainian infrastructure, claims thousands of lives and sends refugees flooding into neighboring countries. Both VoxUkraine and StopFake have lost workers to the front lines. Those who stayed behind have had to fit fact-checking into days filled with planning for escape to Western cities or taking cover during particularly violent moments. “It was very frustrating moment because you need to come to terms with the reality of war,” said StopFake editor in chief Yevhen Fedchenko. “The challenge was how are we going to operate a business in the fog of war.” Meta spokesperson Ayobami Olugbemiga said in a statement that during the invasion the company has “been providing significant resources to fact-checkers covering Eastern Europe to increase their capacity to help slow the spread of misinformation about the war in Ukraine and help ensure their safety.” Facebook, which was recently renamed Meta, has long faced criticism of its role in spreading misinformation globally, particularly in the midst of elections and global conflicts.

Last month, the tech giant announced it had taken down a network of accounts that were operating from Russia and Ukraine to target people there with claims that Western nations were betraying their country. A pair of whistleblower complaints filed to the Justice and Treasury departments in December and February allege that the company has allowed sanctioned entities and individuals to spread Russian propaganda on Facebook and Instagram. The company has hired thousands of content moderators and has trained its algorithms to catch misinformation that breaks the site’s rules

on hate speech and other issues. But it also started adding organizations like VoxUkraine and StopFake following the 2016 election, paying independent news outlets and small media organizations to debunk misinformation. Those organizations are members of the International Fact-Checking Network, which sets editorial standards for fact-checking organizations and is run by the Poynter Institute, a nonprofit research organization. Facebook is also frequently their member organizations' largest source of revenue. VoxUkraine, StopFake and others get access to a special dashboard, where they see a list of potential posts and links in a specific region that could be debunked, according to representatives of several fact checking organizations. Then fact-checkers like Stepaniuk can pick what they want to focus on, relying on government records, press reports and software to help identify false statements, misleading news and doctored imagery. For example, Stepaniuk recently focused her attention on an article with anonymous sources posted on Facebook claiming the United States planned to send the Afghanistan military to fight in Ukraine. She and her colleagues began scouring the Internet for evidence that could support a written explanation about why it wasn't true. They found a news report about a news conference held before Russia's invasion of Ukraine, in which President Biden said he would not send troops to Ukraine. They also noticed that Linda Thomas-Greenfield, the U.S. Ambassador to the United Nations, reiterated that argument in March. And they pointed out that the Afghan National Army had collapsed when the Taliban took over the country last August. They posted an article publishing the results of their findings.

Months before Russia invaded, the Ukrainian-based StopFake was already developing contingency plans in case war broke out. They acted on warnings from foreign intelligence officials about Russia's increasing aggressiveness, Fedchenko said. He took those reports seriously in part because they kept seeing Russian propaganda that offered new twists on old claims such as Ukraine is a failed, fascist state and the Ukrainian military plans to take back control of Crimea with force. "We have been looking at disinformation for eight years and for us it was obvious that it's not the end, it's just the beginning," Fedchenko said. "That gives you a very kind of special attitude because we have a very small team of people who are fighting against a huge machinery of lies." StopFake started working on an editorial plan to cover the war. The group also mulled potential measures to shore up the security of their technological systems. And they thought about how to ensure their employees could get to safety in the event that Kyiv, where the group is based, was surrounded quickly by Russian forces, Fedchenko said. Just a couple of days before Russia's invasion, traffic was unusually high at Russian state-backed propaganda channels on Facebook and YouTube, which were promoting false claims about the war such as that Ukrainians had attacked Russians, according to a Post data analysis. The day Russia invaded, VoxUkraine staffers spent their morning Zoom call developing new products to fight misinformation about the war on the Internet, said Svitlana Slipchenko, the head of VoxUkraine's fact-checking arm. The group decided to further expand their fact checking program beyond Facebook to emerging platforms such as Telegram, where it seemed Russia propaganda was migrating. It also decided to launch a podcast to tell Ukrainians positive news about the war.

After their meeting, VoxUkraine managers began calling on their staff members to check in. Many of them talked about their plans to flee to cities in Western Ukraine such as Sumy and Kryvyi Rih. Some privately told their bosses they wanted to take a mental health break for a few days before returning to work. For others, debunking viral falsehoods was a welcome respite from the chaos of the invasion, said Slipchenko. “In some days, I just wanted to sit at the floor and cry about all that’s happening in Ukraine now,” Slipchenko said about the early days of the invasion from her Kyiv apartment, where she has heard explosions and seen smoke billowing from the city streets. “The work was the main factor that helped me deal with this situation. I know that I’m on the informational front of this war.”

That day Maksym Skubenko sat in his apartment mulling his next move to fight the Russian invaders. As chief executive of VoxUkraine, Skubenko had already mapped out contingency plans to swap intelligence with the government, and knew his 25-person team could function without him. So Skubenko, 30, chugged a couple small glasses of whiskey and took a taxi to enlist. Instead of using a computer to patrol the digital front lines of Russia’s war in Ukraine, he chose to fight with a gun. “We need to fight,” Skubenko said in a Zoom interview. “We need to become stronger and stronger — even stronger than we are right now — and to fight them because they will never stop.”

Three employees of StopFake’s 15-member team also temporarily left their posts to go fight in the war but Fedchenko replaced them by recruiting among alumni of the journalism school where he works.

After the conflict began, Facebook barred Russian state-controlled media outlets from advertising and said it demoted its content on its social networks. The company also started reaching out to a handful of organizations in nearby countries to ask them if they could also fact-check content appearing in Ukraine and Russia. And it added additional groups. Georgia-based Myth Detector is one organization that expanded its capacity to catch viral propaganda about the war. After the invasion, Meta expanded its agreement with the fact-checking site so the group could also debunk falsehoods appearing in Russia, Ukraine and Belarus, according to Tamar Kintsurashvili, executive director of the Media Development Foundation, which started the site. To cope with the influx of Russian disinformation, the organization hired one additional Russian speaker and reallocated two others who speak the language to focus on fact checking, Kintsurashvili said. Latvia-based fact-checking group Re:Check was asked by Facebook to start checking content in Russia and Ukraine. Re:Check editor Evita Purina said their three-person team is still primarily focused on checking posts targeted at Latvian audiences, not the posts appearing in the other countries. Purina added that the group’s resources are “quite limited” but they decided to add another fact-checker. “We realized soon enough we don’t have resources enough to cover the war,” said Purina. “Comparing to January, for example, I would say we have tripled our amount of work.” Lead Stories, a global debunking website, has also started fact-checking Russian and Ukrainian language content. The group, which also has a partnership with TikTok, said last month it was onboarding at least half a dozen native speakers to handle posts about the war. “We’re building the runway as the airplane is taking off,” said co-founder Alan Duke.

More than a hundred fact-checking groups around the world have also joined

in to help debunk viral rumors about the conflict in their respective countries. The groups are coordinating so they don't duplicate efforts trying to fact-check the same myths — a strategy they developed while policing misinformation about the covid-19 pandemic. Now, the groups are pooling their debunked posts into a database and posting them on the website, #UkraineFacts. So far, there are more than 1,000 debunked posts on the site. "The key lesson was like immediate collaboration," said Enoch Nyariki, community and impact manager for the International Fact-Checking Network. "During covid, it was quite slow but I think this collaboration has benefited greatly from our initial working together." Facebook's fact-checking model — one of its primary methods of policing potential falsehoods on its sites — has some critics. Some have alleged that the outside groups can be too ideologically aligned to fairly determine what's true. Others question whether fact checking is a function Facebook should be taking on in-house. The issue has caught the attention of at least one member of Facebook's Oversight Board, an independent group of journalists, human rights experts and academics funded by the company and tasked with overseeing the company's content moderation decisions. "These organizations do not have any oversight," Oversight Board member Michael McConnell said about Facebook's fact-checking model.

On the front lines of the war, many are doing their best. Kyrilo Perevoshchykov, 23, spends his nights on a mattress on the floor in the underground shelter at Taras Shevchenko National University of Kyiv, where he is getting a degree in international relations. During the days, he goes back up to his dorm room where he reads the news, catches up with friends and fact-checks posts on Facebook. Sometimes, a loud siren warns him that it may be dangerous to be above ground so he heads back down to the shelter or to his windowless bathroom to take cover. Then it's back up to his dorm to fact-check. Last month, Perevoshchykov began looking into an online report that alleged Ukrainian President Volodymyr Zelensky fled Ukraine after Russia's invasion in February. Perevoshchykov debunked it by checking news reports showing interviews and news conferences held by Zelensky in his office during the first four weeks of the war. He also saw videos published by Zelensky's administration in which he mentions the popular viral piece of misinformation himself, Perevoshchykov said. Perevoshchykov, who may have to join the armed services when he graduates this spring, said informational warfare is just as important as combat on the front lines, he said. "It will be success for us that we prevent someone from falling into Russian lies and manipulation," he said. "But there is also a feeling that you are not doing enough — that you could not only write fact checking, but you could also volunteer or maybe help your soldiers."

#### 4. Romania Hasn't Always Seen Itself as a Safe Haven. War in Ukraine Has Changed That

(NPR, Michel Martin, Liz Baker, Emma Bowman, Eliza Dennis, 12 Apr 22)...

Sasha and Eugenia had just crossed into Romania from Ukraine, carrying their 2-year old son and heavy duffle bags as they walked through a ferry checkpoint. Sasha, the father, says they decided to leave their home country a week earlier. It had been more than a month since the start of the Russian invasion, and the family had reached a breaking point. "Our child, he needs

special care," he says through an interpreter. "And then, all of a sudden, we realized we don't have the medicine; it is not available anymore. And that is the moment we got triggered. We decided we had to leave." More than 4.5 million refugees have fled Ukraine since the war erupted in late February. The vast majority, some 2.6 million, have traveled to Poland. Romania has seen the second-largest influx. For many of the more than 690,000 Ukrainians who have passed through Romania, the port city of Isaccea is the final stop on a difficult journey. For others, like Sasha, Eugenia and their young son, it's a way station, one stop among many on a long, unpredictable search for safety. The couple, who declined to give their last names, came from a village near the ferry departure point in the southern Ukrainian village of Orlivka. Eventually, they hope to reach California, where they have family. They arrived in Romania alongside hundreds of others after a 20-minute ferry ride across the Danube River. The throng of new arrivals entered the country wheeling large suitcases, pushing strollers and carrying pets across a bumpy metal ramp. They were greeted by aid workers, who helped them navigate a maze of relief tents and trucks filled with supplies. Daniel Petrov, a local first responder, is in charge of the extensive operation in Isaccea — one that includes border officials, volunteers and medics from three different agencies that all teamed up to respond to the flood of arriving Ukrainians. In the first weeks of the war, the boat ferried some 800 people on a single trip some days, Petrov says. During those early days, he says, "It was, I must say, traumatizing for both Ukrainians and us — the authorities — on this side." The reason, he explained, "I would use only one word: empathy."

Radu Umbres, a professor of anthropology at the National School for Political Studies and Public Administration in Bucharest, says he was taken aback by his country's warm response to the refugees from Ukraine. "The image that we have of ourselves is that in general, we're not especially generous towards foreigners in particular," he says. "We have this idea that developed, rich countries are the ones that help. But in this case, even a rather small and not so affluent country as Romania has offered quite a lot of support for this, for these neighboring people." Romania's embrace of refugees from Ukraine, Umbres concedes, stands in stark contrast to how the nation responded during Europe's last major humanitarian crisis, when millions of migrants and refugees from across the Middle East and Africa sought safety on the continent, including in Romania. "We had refugees from Iraq, from Afghanistan, from Syria, and the general experience was that they were not welcomed," he says. "To be honest about the matter, it's clear that the empathy that Romanians felt for Ukrainian refugees comes from a certain amount of shared cultural heritage," he says. "Ukrainians are very similar to Romanians in many ways. Of course, we have also some shared post-communist history, [which] makes them in a way very familiar." Umbres says the crisis has also brought back echoes of Romania's own troubled history with Russia — memories that remain deeply personal and deeply painful for many. "So many people have personal histories in which their ancestors have been, in one way or another, hurt by the Russian power, by this kind of authoritarian state. So this, again, helps empathizing with them." Of more than 600,000 refugees who have traveled to Romania, roughly 80,000 have chosen to stay. What's unclear is how large that number may ultimately grow the longer the war drags on. "It's quite possible that many Ukrainians might end up staying in Romania for a long time, given the fact that the Romanian economy is doing rather well in the past few years,"

Umbres says. "I think that if I look towards the future, I think there's a good chance that we'll have a Ukrainian diaspora living in Romania for some time to come."

About 200 miles southwest of Isaccea, Romania's biggest train station, located in the capital of Bucharest, has transformed into another central hub for Ukrainians fleeing the war. Almost every corner of the Gara de Nord station is being used to assist refugees. There are separate waiting areas for women and children, men and families, where refugees can rest, eat and breastfeed. Yellow-vested volunteers stand ready to field questions. An abandoned storefront now houses refrigerators of food prepared by World Central Kitchen — one of the American-based NGO's 42 distribution sites in Romania providing hot meals to refugees. At a medical tent set up by the local fire department, an EMT named Faisal Hawat has been treating somewhere between 60 and 70 patients a day. Many of these people, he says, are struggling with insomnia and anxiety. In the area sheltering women and children, 5-year-old Dana, who's traveling with her parents, happened to be in Sri Lanka when Russia invaded Ukraine. But her teenage sister is stuck in Kharkiv, one of Ukraine's hardest-hit cities. Dmytro Ishchuk, Dana's father, says they can't find a way to get her out of the city. "They're just hiding in undergrounds, just waiting for a proper moment," he says, speaking through an interpreter. But he doesn't see such a moment in the near future. Sofia Kotlyarova, an 11-year-old singer and actor from Kyiv, is at the station with her mother and grandmother after her family spent more than a month volunteering in the Ukrainian capital. But after their neighborhood was bombed, says Sofia's mother, Ira, they decided it was time to evacuate. That meant separating from Ira's father, brother and husband, who are still in Ukraine. Under Ukraine's martial law, men between the ages of 18 and 60 aren't allowed to leave the country in case they are needed to fight. Kotlyarova's family has friends in Israel who are willing to take them in if they can get there. They aren't Jewish and don't have family in Israel, so they're hoping Sofia's fame can help their chances of getting in. But they've been disappointed before. The 11-year-old reflected on how quickly her family's lives have changed. Since the invasion, she says, her once-close friends in Russia are now ignoring her calls. "We always thought that Russia was our friend," Sofia says. "We will never forgive them."

DETER

5. 480th Fighter Squadron Rapidly Deploys to Deter Russia on the Black Sea (Air Force Magazine, Abraham Mahshie, 11 Apr 22)...

As Russian President Vladimir Putin threatened Ukraine in early February, amassing some 150,000 troops along its border, worrying NATO allies, the U.S. Air Force needed to reassure eastern flank Allies, and fast. The 480th Expeditionary Fighter Squadron at Spangdahlem Air Base, Germany, answered the call. They had one week to deploy to Romania with eight F-16Cs, 150 service members, and a million pounds of equipment. Seven days later, they were flying. "Usually these things takes months to plan," said 1st Lt. Jayce Webster, project manager for the mission support group "We had to plan airlift, plan ground movements, we had to plan the layout of everything within a week," he said. "So, when you talk about that agile combat, we were

able to do that before the jets landed, and we started running.” The 86th Air Base, as Fetesti is also known, also received a rotation of two F-35s as part of the air policing mission in mid-February. Romania is rapidly building up this base with new construction, but it’s not yet ready for new tenants. There are only hangers to accommodate the Romanian F-16s, so scheduling maintenance is hard.

Still, the Black Sea ally was eager to welcome the added air power. Romania cleared out a building, initially provided all the aircraft fuel, and shared the few spare parts that coincided with their own earlier model F-16 Block 15s. The 30-year-old U.S. aircraft require regular maintenance on wiring and computer systems to stay fully operational. To limit downtime during the five-day wait for spare parts, an aircraft is designated to be “cannibalized” for parts. “It’s just the avionics side, it breaks more often,” said Master Sgt. Christopher Paden, maintenance production superintendent. “The targeting systems, the digital flight control computer is a common part we change.” Now, close to 200 U.S. service members are helping to fly four daily NATO enhanced Air Policing sorties with Allies, protecting NATO’s skies alongside Romanian F-16s and MiG-21s, and British and Italian Eurofighters at nearby Mihail Kogalniceanu Air Base. “It’s a daily integration with a partner nation,” said U.S. Air Force Lt. Col. William Parks, 480th Fighter Squadron detachment commander, who uses a building where Romanian Airmen live and work.

The Romanian Air Force is looking to build its fleet of approximately two dozen MiG-21 Lancers with 49 second-hand F-16s in coming years. It’s already taken possession of 17 F-16s. NATO began enhanced Air Policing over the skies and Black Sea coast of Romania and Bulgaria in 2014 when Russia invaded Ukraine. The mission differs from Baltic Air Policing, which began in 2004, and protects the Baltic nations of Lithuania, Latvia, and Estonia, which do not have their own combat jets. “We’re here just on the enhanced part of that air patrol, an extra visible and forward symbol to show U.S., Romanian, and NATO unity,” Parks said. The mission includes training and exercising with Romanian pilots, what’s known as “enhanced vigilance.” “Because of the info exchange, the experience exchange,” with USAF pilots, “... our troops get kind of like a second wind going towards progress,” said Romanian Lt. Alex Nasturel.

Fetesti Air Base is just over 50 miles from the coast of the Black Sea, which is now threatened by a heavy Russian air- and sea-presence. Non-Black Sea NATO ships are forbidden from entering during wartime due to the Montreux Convention, and U.S. intelligence, surveillance, and reconnaissance flights over international air space on the Black Sea are believed to have ceased. Russian fighter jets in recent weeks have tested NATO air space, causing NATO aircraft to scramble in response. With Putin repositioning his troops in the east and south of Ukraine, Romania has also begun to move armored vehicles and land forces to its border with Ukraine. Small villages dot the expansive green fields near the Romanian 86th Air Base. Its symbol, the prickly-leafed pink thistle flower, protrudes through the grass in and around the base in the chilly spring. Despite living at a hotel an hour away

in Constanta, along a strip of beach crowded with bars and clubs, the Spangdahlem Airmen avoid the nightlife. Their focus is on mission. Early the morning of April 9, before the 480th even began making its trademark jalapeno popcorn, Maj. Jared "Roam" Aschenbrenner and Capt. Sean "Sega" Sheldon were in a dark room watching slides and getting their "step brief" from Parks, who identified the Combat Air Patrol (CAP) zone in eastern Romania butting up against the border of Ukraine for the pilots to patrol. They would keep an undisclosed buffer distance from the border in accordance with NATO standards. Just across the Ukrainian border is the region of Odesa, thought to be a prime target in Putin's quest to cut Ukraine off from the sea and grab a prized port.

The total time for the CAP was four hours, meaning the pilots would make a 10-minute commute to the center of the country to hit a tanker over the Carpathian Mountains before finishing their sortie and high fiving their replacement enhanced Air Policing pair before returning to Fetesti. On their F-16C Block 50s were AIM-120 Advanced Medium-Range Air-to-Air Missiles, should they be needed. While air encounters have occurred between Russians and other NATO partners, Parks assured the Americans are trained to de-escalate. So far, the Russians have diverted after each intercept without incident. "We're here, we're present, we're showing that NATO's borders are secure," said Parks, who also flies patrols. "If an intercept has to occur, our primary job is to be de-escalatory. Let's go out, let's identify this person. Let's make sure he gets turned around and back to whatever nation or host country that aircraft is out of." With the sun just over the horizon as the hour neared the 0815 departure, 17 maintainers stood back from the two aircraft. Their job was done. The aircraft's GE engine had been roaring for some 40 minutes as all the checks were run. The chocks were pulled, and the two jets began to taxi, one behind the other. In minutes, they were airborne, launching in quick succession, then banking slightly left and rising almost vertically into the orange-hued clouds.

#### 6. Biden Appears to Label Russian Atrocities in Ukraine 'Genocide' (Politico, Myah Ward, 12 Apr 22)...

President Joe Biden on Tuesday appeared for the first time to label Russia's atrocities in Ukraine genocide. Speaking in Menlo, Iowa, about his Build a Better America agenda and efforts to lower energy prices, the president said a family's financial situation in the U.S. should not be dependent on another leader's attacks "half a world away," in remarks likely aimed at Russian President Vladimir Putin. "Your family budget, your ability to fill up your tank, none of it should hinge on whether a dictator declares war and commits genocide a half a world away," Biden said. Biden's notable shift in rhetoric comes as other administration officials have so far avoided using the genocide designation. From national security adviser Jake Sullivan to Secretary of State Antony Blinken, officials have said they're monitoring the situation and have yet to reach consensus on whether the atrocities in Ukraine "rise to the level of genocide." "Based on what we have seen so far, we have seen atrocities," Sullivan said last week. "We have seen war crimes. We have not seen a level of systematic deprivation of life of the Ukrainian people to rise to the level of genocide."

The U.S. has long been reluctant to designate genocides. Just three weeks ago, the Biden administration formally labeled the Myanmar military's actions against the country's minority Rohingya population in 2016 and 2017 genocide and crimes against humanity. A flood of horrid imagery poured out of Ukraine last week, with the scenes out of Bucha prompting Biden to say Putin should be put on trial for war crimes. The Justice Department also announced last week that it was contributing to international investigations into alleged war crimes, further escalating U.S. involvement in holding Moscow legally accountable. Tuesday's rhetoric from Biden, whether a slip up or intentional, isn't the first time he's led the administration in a shift toward stronger language. Biden was one of the first U.S. officials to call Putin a war criminal, language other administration officials began to use freely in the following days and weeks.

## 7. Ukraine War: US 'Deeply Concerned' at Report of Mariupol Chemical Attack

(BBC, 12 Apr 22)...

The US and Britain say they are looking into reports that chemical weapons have been used by Russian forces attacking the Ukrainian port of Mariupol. Ukraine's Azov regiment said three soldiers were injured by "a poisonous substance" in an attack on Monday. However, no evidence has been presented to confirm the use of chemical weapons. UK Foreign Secretary Liz Truss said officials were working to "urgently" investigate what she called "a callous escalation" of the war. The Pentagon called the potential use of the weapons "deeply concerning". Western nations have warned that the use of chemical weapons would mark a dangerous escalation of the conflict and have pledged to take firm action if Russia carries out such attacks. Ukraine's Deputy Defence Minister Hanna Maliar said the government was investigating the allegations, adding that early assumptions suggested phosphorous ammunition had been used. Phosphorus is not classed as a chemical weapon under the Chemical Weapons Convention, but using it as an incendiary weapon near civilians would be illegal. On Tuesday, pro-Russian separatist forces in Donetsk denied carrying out the attack.

The Azov battalion, which has been heavily involved in fighting in Mariupol and has strong ties to the far-right, wrote in a Telegram post that Russian forces had dropped "a poisonous substance of unknown origin" during a drone attack at the city's large Azovstal metals plant. It said that its fighters had suffered minor injuries, including shortness of breath. One injured man described a "sweet-tasting" white smoke covering an area of the plant after an explosion. Another said he felt immediately unable to breathe and had collapsed with "cotton legs". The reported incident - which the BBC cannot independently verify - came hours after a spokesperson for the Moscow-backed Donetsk People's Republic urged Russia to bring in "chemical forces" to the besieged south-eastern city. Eduard Basurin told Russian state TV the remaining Ukrainian forces in Mariupol were entrenched at the Azovstal plant and that Russia should encircle it and "smoke out the moles". Speaking on Monday night, President Volodymyr Zelensky said any use of chemical weapons would mark a "new stage of terror against Ukraine" and called on Western

nations to arm his forces with the weapons needed to defend his country. "Unfortunately, we are not getting as much as we need to end this war sooner," Mr. Zelensky said. "I am sure that we will get almost everything we need, but not only time is being lost. The lives of Ukrainians are being lost — lives that can no longer be returned." UK Defence Minister James Heappey ruled nothing out in terms of a Western response if a chemical attack was confirmed. "There are some things that are beyond the pale, and the use of chemical weapons will get a response and all options are on the table for what that response could be," he said. Last month US President Joe Biden said Nato "would respond" if Russia used chemical weapons in Ukraine. "The nature of the response would depend on the nature of the use," he said.

8. Pentagon Working With Congress on Additional Ukraine Funding (DefenseNews, Bryant Harris and Joe Gould, 12 Apr 22)...

The Defense Department's No. 2 civilian official said Tuesday the Biden administration plans to ask Congress for money to pay for U.S. troop deployments in Eastern Europe — on the same day Senate Minority Leader Mitch McConnell, R-Ky., floated the possibility of additional Ukraine funding. Asked about the potential for additional funding to respond to the crisis, Deputy Defense Secretary Kathleen Hicks said the Pentagon is working with Congress to backfill the cost of U.S. forces surged to Eastern Europe. Those forces were not included in the FY23 budget request, she said. "Congress on a bipartisan basis has been very forward leaning in terms of its interest in making sure they can help us be whole against those requirements," she said at a roundtable with reporters. "As we are able to kind of abrogate those costs, a lot of that is Army cost, in terms of Army movement. We make sure to capture those costs, and we're working with Congress." McConnell on Tuesday noted Congress may need to pass an additional funding bill to respond to Russia's invasion of Ukraine. "We may need to do another supplemental," McConnell said during remarks in his home state of Kentucky. "This is critically important that we win, that the Russians be defeated, that we do everything we can to punish them both on the economic side and military side." Congress finalized a \$1.5 trillion spending bill last month that provides \$13.6 billion in new aid for the Ukraine crisis. The money was in large part to restore military stocks of equipment already transferred to Ukrainian military units through the president's drawdown authority, while \$3.1 billion was to cover "deployment, operational, and intelligence costs" for U.S. forces deployed to Europe in response to the Russian actions.

Legislation supporting Ukraine and punishing Russia has become easy fodder in recent weeks for an otherwise bitterly partisan Congress to pass into law. President Joe Biden signed into law last week two separate bills penalizing Russia, which both the Senate and the House quickly passed before adjourning for a two-week recess. The Senate passed both pieces of legislation — one bill banning Russian energy imports and another suspending normal trade relations with Moscow — by a 100-0 vote. Separately, the Senate unanimously passed another bill last week intended to expedite military aid to Ukraine by easing statutory requirements under the president's authority to lease or loan defense articles to Kyiv. However, the House did not take action on the Ukraine bill before recessing. Hicks said the Biden

administration is in a “continuing dialogue” with Ukrainian officials over the types of weapons it plans to send, and that presidential decisions on the matter are pending. “Yes, we will continue to look at the type of capabilities that the Ukrainians are asking for in terms of how to give them more range and distance,” Hicks said. Washington is debating an increase to U.S. military deployments in Eastern Europe, which grew after Russia’s annexation of Crimea in 2014. That would represent another added expense. But any major changes in force posture will probably have to wait for the early July NATO summit in Madrid, Hicks said. “Given that we’re in the midst of operations now, those operations may continue for some time as they are,” she said. “I wouldn’t anticipate drastic changes in U.S. posture, and certainly not before there’s a summit where there’s a general understanding of what allied posture is going to be.”

9. Pentagon Does 'Not Object' to Potential Transfer of Jets From Slovakia to Ukraine  
(Washington Examiner, Mike Brest, 12 Apr 22)...

The Pentagon would not stand in the way of a possible transfer of Slovakian fighter jets to Ukraine, a senior U.S. defense official told reporters Tuesday. Slovakia, which has already provided military technology to the Ukrainian military that the United States has back-filled, could provide MiG-29 fighter aircraft, Prime Minister Eduard Heger said Monday, according to Politico, though it's unclear how many the country would provide. “We certainly would not object to it. We have no right to object to it,” the defense official said, noting that the U.S., to its knowledge, was not involved in any of the discussion in facilitating the deal. Earlier during the war in Ukraine, the U.S. nixed a proposed Polish deal that would provide Ukraine with MiG-29 aircraft because the Polish wanted to transfer the planes to U.S. custody first. The Pentagon called the possible deal “high-risk” and not “tenable.”

The defense official specified that the objection to the previous possible agreement was the role in getting the planes to Ukraine, not Poland’s idea to provide the aircraft. “I want to stress again, from the very beginning, we said that these are sovereign decisions that nations can make, and we respect them, and if a nation wants to provide fixed-wing fighter aircraft to Ukraine, then that’s up to them to decide and for them to speak to. And what our goal again, our objections to the previous proposal was that the country in question expressed the desire to transfer them into our custody for us to deliver to Ukraine,” the official said. “That is what we objected to. We did not object to the idea of the provision of fixed-wing aircraft to Ukraine, and that will be a decision in this case for Slovakia to make,” the official continued.

The Slovakian government is looking to move away from relying on MiGs because the upkeep on such aircraft requires a “relationship” with Russia, Heger said, noting that they’re waiting two more years to receive U.S.-made F-16s. Ukrainian leaders continued to press Western governments for additional military resources as Russia has changed its operating tactics to

focus on the Donbas region, the eastern and southeastern part of the country. The U.S. alone has provided \$1.7 billion in military aid since Russia invaded. Last week, Slovakia provided the Ukrainians with an S-300 air defense system, and U.S. European Command repositioned one Patriot missile system to Slovakia in return.

[Top of the Document]

10. Putin Says Peace Talks With Ukraine Are at Dead End, Goads the West (Reuters, Guy Faulconbridge, 12 Apr 22)...

President Vladimir Putin said on Tuesday peace talks with Ukraine had hit a dead end, using his first public comments on the conflict in more than a week to vow his troops would win and to goad the West for failing to bring Moscow to heel. Addressing the war in public for the first time since Russian forces retreated from northern Ukraine after they were halted at the gates of Kyiv, Putin promised that Russia would achieve all of its "noble" aims in Ukraine. In the strongest signal to date that the war will grind on for longer, Putin said Kyiv had derailed peace talks by staging what he said were fake claims of Russian war crimes and by demanding security guarantees to cover the whole of Ukraine. "We have again returned to a dead-end situation for us," Putin, Russia's paramount leader since 1999, told a news briefing during a visit to the Vostochny Cosmodrome 3,450 miles (5,550 km) east of Moscow. Asked by Russian space agency workers if the operation in Ukraine would achieve its goals, Putin said: "Absolutely. I don't have any doubt at all." Russia will "rhythmically and calmly" continue its operation but the most important strategic conclusion was that the unipolar international order which the United States had built after the Cold War was breaking up, Putin said. Putin said Russia had no choice but to fight because it had to defend the Russian speakers of eastern Ukraine and prevent its former Soviet neighbour from becoming an anti-Russian springboard for Moscow's enemies. The West has condemned the war as a brutal imperial-style land grab targeting a sovereign country. Ukraine says it is fighting for its survival after Putin annexed Crimea in 2014 and on Feb. 21 recognised two of its rebel regions as sovereign. Putin dismissed the West's sanctions, which have tipped Russia towards its worst recession since the years following the 1991 fall of the Soviet Union, as a failure. "That Blitzkrieg on which our foes were counting did not work," Putin said. "The United States is ready to fight with Russia until the last Ukrainian - that is the way it is." Putin, who had been ubiquitous on Russian television in the early days of the war, had largely retreated from public view since Russia's withdrawal from northern Ukraine two weeks ago. His only public appearance in the past week was at the funeral of a nationalist lawmaker, where he did not directly address the war. On Monday he met the visiting chancellor of Austria at a country residence outside Moscow but no images of that meeting were released.

Putin dismissed Ukrainian and Western claims that Russia had committed war crimes as fakes. Since Russian troops withdrew from towns and villages around the Ukrainian capital Kyiv, Ukrainian troops have been showing journalists corpses of what they say are civilians killed by Russian forces, destroyed houses and burnt-out cars. Reuters saw dead bodies in the town of Bucha but could not independently verify who was responsible for the killings. Ukraine says Russia is guilty of genocide and U.S. President Joe

Biden has accused Putin of war crimes and called for a trial. Putin said he had told Western leaders to think a little about destruction by the United States of the Syrian city of Raqqa, the former de facto capital of the Islamic State caliphate, and in Afghanistan. "Have you seen how this Syrian city was turned to rubble by American aircraft? Corpses lay in the ruins for months decomposing," Putin said. "Nobody cared. No one even noticed." "There was no such silence when provocations were staged in Syria, when they portrayed the use of chemical weapons by the Assad government. Then it turned out that it was fake. It's the same kind of fake in Bucha." The Organisation for the Prohibition of Chemical Weapons has found that poison gas was used repeatedly in Syria, including in Ghouta, an opposition-held suburb of Damascus. Russia has objected to those findings that implicated its ally Syrian president Bashar al-Assad. Washington and its allies have denied targeting civilians in the 2017 air strikes on Raqqa, a Syrian city that had become the headquarters of the Islamic State militant movement the U.S.-led coalition was fighting. Putin, who says Ukraine and Russia are essentially one people, casts the war as an inevitable confrontation with the United States, which he accuses of threatening Russia by meddling in its backyard. Sixty one years to the day since the Soviet Union's Yuri Gagarin blasted off into the history books by becoming the first man in space, Putin drew an analogy between Soviet space successes and Russia's defiance today. "The sanctions were total, the isolation was complete but the Soviet Union was still first in space," he said. "We don't intend to be isolated," Putin added. "It is impossible to severely isolate anyone in the modern world - especially such a vast country as Russia."

[Top of the Document]

11. Putin and Lukashenko Describe Bucha Killings as 'Fake' and 'Staged by Englishmen'  
(Politico, Victor Jack, 12 Apr 22)...

Russian President Vladimir Putin called the mass killing of civilians in Bucha "fake" and praised Russia's "noble" war against Ukraine during a visit to eastern Russia with Belarusian President Alexander Lukashenko on Tuesday. "When it comes to Bucha ... it's the exact same fake as in Syria," Putin said, in reference to Russian claims from 2018 that the use of chemical weapons in the Syrian war was staged by foreign agents. Bucha was "a psychological operation staged by Englishmen," Lukashenko added. After Russian troops partially withdrew from Bucha, a town outside of Kyiv, earlier this month, authorities discovered roads lined with civilians apparently tied up and shot at close range, as well as mass graves of local residents. Russia has repeatedly denied it was responsible, but numerous media outlets have independently shown that it was unlikely the scenes were staged by Ukraine.

The Russian president was on a joint visit with the Belarusian premier to the Vostochny Cosmodrome in Russia's far east to celebrate "Space Day" and discuss the two countries' space industries. "What is happening in Ukraine is a tragedy ... but they left us no choice," Putin said, adding that Russia's military "goals are absolutely clear and noble." He also slammed the U.S., alleging Washington was using Ukraine as a proxy conflict and was "ready to fight against Russia until the last Ukrainian" — while repeating claims it was "impossible" to isolate Russia with sanctions because of its size. Russia's economy — which has been hammered by sanctions, inflation and

capital flight since its invasion of Ukraine — is set to contract by over 10 percent this year, the biggest drop in GDP in more than two decades. Putin also told reporters that negotiations with Ukraine had reached a “deadlock” due to an “inconsistency on fundamental issues” and suggested talks may take place in Belarus in the future.

[Top of the Document]

12. A Fifth of Russia’s War Dead Are ‘Officers Sent to Command Putin’s Troops in Ukraine’  
(Independent, Rory Sullivan, 12 Apr 22)...

More high-ranking Russian soldiers have been killed in the conflict, Ukraine’s military has said, following reports that about 20 per cent of the Kremlin’s war dead are officers. The Ukrainian army said that Colonel Alexander Beshpalov, who led the 59th Guards Tank Regiment, and Lieutenant Colonel Vyacheslav Savinov, who worked in artillery reconnaissance, had died. Colonel Beshpalov’s funeral took place in the central Russian city of Ozersk on Friday, with his death first announced via a local messaging board post, which was later deleted. Their deaths come as the BBC Russian Service concluded that officers account for one in five Russian losses on the battlefields of Ukraine. In a sample of 1,083 dead Russian soldiers, there were 31 majors and 155 troops ranked between second lieutenant and captain, the broadcaster reported.

Experts believe the proportion of officer deaths could be slightly inflated due to the faster return of their bodies to Russia than those of rank-and-file soldiers. Speaking on Friday, Oleksiy Arestovych, a Ukrainian presidential adviser, said the Kremlin had refused to accept the corpses of 3,000 of its regular soldiers early in the war. “They said, ‘We don’t believe in such quantities. We don’t have this number. We’re not ready to accept them,’” he told The Washington Post. Moscow has been largely quiet about the number of casualties it has suffered since it invaded Ukraine on 24 February. In only its second update, Vladimir Putin’s regime said 1,351 Russian troops had died as of 25 March. However, Kyiv believes almost 20,000 Russian troops have been killed so far in less than seven weeks of fighting, more than the 15,000 Soviet soldiers who lost their lives in the Soviet-Afghan war, fought between 1979 and 1989.

Although Russia has not released a new death toll for some time, Dmitry Peskov, Mr Putin’s spokesperson, said last week that his country had seen “significant losses of troops”, describing it as “a huge tragedy for us”. On Monday, Western officials confirmed that Russian forces had sustained “extremely high casualties”, adding that they are becoming “increasingly difficult to lead”. The remarks were made as the Kremlin plans to heighten its attack against the Donbas region of eastern Ukraine.

PREPARE

13. Army’s Cavoli to Be Next EUCOM Chief and NATO Commander in Europe,

Report Says  
(Stars & Stripes, John Vandiver, 12 Apr 22)...

Gen. Christopher Cavoli, a Russian speaker who has led the Army in Europe for the past four years, has been tapped to serve as the next head of U.S. European Command, according to a Wall Street Journal report. Cavoli would replace Gen. Tod Wolters, who is slated to retire, the Journal reported Monday, citing unnamed U.S. officials. The shakeup comes at a crucial time in Europe, where Russia's war on Ukraine has prompted the U.S. and its allies to send thousands more troops to NATO's eastern flank. If confirmed, Cavoli also would serve simultaneously as NATO's supreme allied commander. During his tenure at U.S. Army Europe and Africa, Cavoli has overseen a mission that was growing even before Russia's Feb. 24 full-fledged invasion of Ukraine. Additional units, such as the Army's 56th Artillery Command, have taken up new positions in Germany, marking a reversal from the decadeslong post-Cold War drawdown of U.S. troops in Europe.

In October 2020, Cavoli was promoted in connection with U.S. Army Europe and Africa's elevation to a four-star headquarters. Going forward as EUCOM chief, Cavoli is expected to play a key role in designing what the future U.S. mission in Europe will look like. Joint Chiefs of Staff Chairman Army Gen. Mark Miley and other military leaders have said they anticipate more U.S. troops being based on NATO's eastern flank in the future in connection with concerns about further Russian aggression. That increase could involve rotational forces or a mix of revolving and permanently based troops. Cavoli, who was born to an Army family in Wuerzburg, Germany, during the Cold War, grew up at various military bases around Europe. A graduate of Princeton University, he served multiple tours in Afghanistan. He also is a foreign area officer and held a previous staff job as director for Russia on the Joint Staff. A replacement for Cavoli at Army headquarters in Wiesbaden, Germany has not yet been announced.

14. U.S. Amphibious Combat Group Deploys to the High North Amid High Tensions  
(Independent Barents Observer, Thomas Nilsen, 12 Apr 22)...

The North Atlantic with Iceland and northern Norway are critical communication links between North America and Europe in times of war. This winter, one NATO exercise has followed the other. The Norwegian-led Cold Response was followed by the Iceland-hosted, U.S. Sixth Fleet-led Northern Viking. Now, the largest warship that participated outside Keflavik last week sails into the waters of northern Norway with the U.S. 22nd Marine Expeditionary Unit, forces consisting of amphibious vessels, aircraft, helicopters, multi-role attack ships, logistics and a command unit. Training is set to kick off next week. "This is a very important allied unit from the U.S. Marine Corps," says Lt. Gen. Yngve Odlo, head of the Norwegian Operations Headquarters.

In case of war, Norway depend on reinforcement from allied forces.  
"Receiving and joint training with allied forces is very important and

contributes to high operational readiness. Norway, and especially parts of Nordland and Troms regions, are favorable training areas for several of our allied forces," Odlo notes. The amphibious assault ship "USS Kearsage" made port call to Tromsø on Monday. The dock landing ship "USS Gunston Hall" and the destroyer "USS Gravelly" are also taking part. With soldiers from the Marine Corps Base Camp Lejeune, North Carolina, the 22nd Marine Expeditionary Unit ready for fast reaction winter operations includes a tiltrotor squadron, the ground combat element, a landing team, aviation combat forces, and a logistic element. The training will last until early summer, the Armed Forces informs.

#### 15. Albania's Former 'Stalin City' Looks West With NATO Airbase (AFP, 12 Apr 22)...

In an Albanian city once named for Soviet dictator Joseph Stalin, dozens of Soviet- and Chinese-made planes rust in the open air on a former communist airbase, some with flat tyres, others covered with dust. The site in the central city now called Kucova is being transformed into a modern NATO airbase, a symbol of Albania's westward shift -- and a key military buffer in Europe as Russia wages war in Ukraine. The renovation project was agreed in 2018 by the Balkan state and NATO, which has already committed \$55 million (50.4 million euros) to the project, according to Albanian sources. Construction began at the beginning of the year, ahead of Russia's February 24 invasion of Ukraine that has sparked fears of a spillover into NATO and EU member states. Though the timing of the Kucova base redevelopment was a coincidence, for some it is a welcome one. "The changed global security environment has now created considerable impetus for the completion of the (base) renovation plan," a NATO official in Brussels told AFP, speaking on condition of anonymity. The base, due to be completed in 2023, will give the "alliance an important strategic facility in the Western Balkans, within short reach of the Mediterranean, Middle East and the Black Sea region", the NATO official said.

After decades of global isolation, Albania became a NATO member in 2009. It was shunned by much of the world under paranoid Communist dictator Enver Hoxha, who forged close ties with the Soviet Union and China before falling out with them over their apparent deviation from true Marxism. The country embraced the West after the fall of the communist regime in 1990, and today is eager to become an EU member. The defunct aircraft at the Kucova base are reminders of a chapter of Albania's history many are happy to leave behind -- and a signal to Russia which has sought to extend its influence in the region. "The construction of this base is a clear message to other players with bad intentions in the Western Balkans region," Albania's Defence Minister Niko Peleshi told AFP. The construction is certain to irk Moscow, which strongly opposes any NATO expansion into eastern and central Europe -- especially in the Balkans which has traditionally been torn between East and West. Today, Albania's neighbours Croatia, Montenegro and Northern Macedonia are all part of NATO too. For Scit Putro, who has worked in the finance department at the base for more than 30 years, it's a welcome confirmation of Albania's political allegiances. "Once in the East, we are now in our place, next to the West, which is a good step forward for all," he told AFP.

The 350-hectare (865-acre) site in the former 'Stalin City' was built in the 1950s under Hoxha with help from the Soviets, and completed later with a network of the same kind of underground tunnels that were dug across the country in case of nuclear attack. Once the NATO renovation is finished, it will function as a tactical operational base, kitted out with a refurbished runway more than two kilometres (1.2 miles) long, an updated control tower and new storage units. It will have the capacity to host state-of-the-art military aircraft and can also be used for refuelling and ammunition storage. Officials are also hoping the base, which once employed 700 people, will create new jobs in the poor region, 85 kilometres south of the capital Tirana. It will have a "very positive economic and social impact", said deputy commander of the base, Major Leandro Syka.

The aircraft now languishing on the airbase mainly consist of Chinese and Soviet MiGs, Soviet-made Antonovs and Yak-18s. At the end of the Cold War, the base had about 200 planes and 40 helicopters, which were put out of commission as they were obsolete. About 75 remain today, and their fate remains uncertain. The authorities have to yet to decide whether they will be auctioned, put in a museum or turned into scrap metal. For some, they hold painful memories from past conflicts. Former pilot Niazi Nelaj remembers clearly his first flight aboard a Mig-15, which bore bullet marks from combat in distant Asian countries. But the 85-year-old is happy to see the airbase aligned with NATO, and he believes Albania's previous pivot toward the East was only an "accident of history". "Albania's natural alliance has always been and will be with the West," he said.

# DEFENSE MORNING CLIPS

As of 0430 Hours, March 21

## OVERVIEW

Amid growing concern that Russia could use chemical or biological weapons, Secretary of Defense Lloyd Austin told *CBS News* the U.S. expected to see Russia continue attacks against Ukraine's civilian population in an attempt to re-establish momentum for their "essentially stalled" campaign. Separately, current and former Pentagon officials rejected Russian and Chinese accusations that the U.S. was funding biological weapons labs in Ukraine, and one senior official noted "Russia knows well we eliminate weapons of mass destruction," the *Wall Street Journal* wrote. Also of note, INDOPACOM Commander Adm. John C. Aquilino said that China has installed missile arsenals, aircraft hangars, radar systems and other military facilities on at least three artificial islands in the South China Sea to expand offensive capability beyond their continental shores, the *Associated Press* reported.

## TOP STORIES

### 1. Austin vows 'significant reaction' if Russia uses chemical or biological weapons in Ukraine

*CBSNews.com (Face the Nation), Mar. 20 (1222) | Melissa Quinn*

Defense Secretary Lloyd Austin warned Sunday a chemical or biological weapons attack by Russia in Ukraine would prompt a "significant reaction" from the United States, as well as global allies and partners. "If a chemical or biological weapon was used, you'd see a significant reaction from not only the United States, but also the global community," Austin said in an interview on "Face the Nation." "I don't want to speculate about what exactly would change our calculation. I think engaging in hypotheticals is probably not helpful here either, but this is a very serious step and as you heard our president say, we won't take that lightly."

### 2. Pentagon Program Becomes Flashpoint

*Wall Street Journal, Mar. 21 (0200), Pg. A6 | Sharon Weinberger*

A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union -- and to build trust between Washington and Moscow after the Cold War -- has instead become a new flashpoint in an information war between the two countries in the wake of Russia's invasion of Ukraine.

### 3. U.S. Admiral Says China Fully Militarized Isles

*Associated Press (Exclusive), Mar. 21 (0126) | Jim Gomez and Aaron Favila*

China has fully militarized at least three of several islands it built in the disputed South China Sea, arming them with anti-ship and anti-aircraft missile systems, laser and jamming equipment, and fighter jets in an increasingly aggressive move that threatens all nations operating nearby, a top U.S. military commander said Sunday. U.S. Indo-Pacific commander Adm. John C. Aquilino said the hostile actions were in stark contrast to Chinese

President Xi Jinping's past assurances that Beijing would not transform the artificial islands in contested waters into military bases. The efforts were part of China's flexing its military muscle, he said.

## **DEFENSE DEPARTMENT**

### **4. Ukraine war is backdrop in U.S. push for hypersonic weapons**

*Associated Press, Mar. 20 (1105) | David Sharp*

Lagging behind Russia in developing hypersonic weapons, the U.S. Navy is rushing to field its first, with installation on a warship starting as soon as late next year. The United States is in a race with Russia and China to develop these weapons, which travel at speeds akin to ballistic missiles but are difficult to shoot down because of their maneuverability.

## **COVID-19**

### **5. Inside U.S. troops' fight against the Pentagon's 'unjust' COVID vaccine mandate**

*Washington Times Online, Mar. 20 (2106) | Ben Wolfgang*

They didn't make the decision lightly, as they were fully aware it would likely cost them their military careers. But for U.S. troops who refused the federally mandated COVID-19 vaccine, it was a sacrifice worth making. Washington Times interviews with several service members and the lawyers who represent them revealed a host of reasons for opting against coronavirus immunization. They include deeply held religious beliefs, fears of long-term health side effects and broader concerns about what objectors say is the increasingly heavy hand of government in their personal lives.

## **EXECUTIVE/LEGISLATIVE**

### **6. White House: Biden to Visit Poland on Europe Trip This Week**

*Associated Press, Mar. 21 (0018) | Colleen Long and Ellen Knickmeyer*

President Joe Biden has added a stop in Poland to his trip this week to Europe for urgent talks with NATO and European allies, as Russian forces concentrate their fire upon cities and trapped civilians in a nearly month-old invasion of Ukraine. Biden will first travel to Brussels and then to Poland to meet with leaders there, press secretary Jen Psaki said in a statement Sunday night.

### **7. 'Do the Right Thing': How U.S., Allies United to Punish Putin**

*Associated Press, Mar. 20 (1256) | Josh Boak*

Just days before Russia invaded Ukraine on Feb. 24, President Joe Biden quietly dispatched a team to European Union headquarters in Belgium. These were not spy chiefs or generals, but experts in reading fine print and tracking the flow of money, computer chips and other goods around the world. Their mandate: inflict maximum

pain on Russian President Vladimir Putin, making it harder, if not impossible, for him to fund a prolonged war in Ukraine and denying him access to technologies at the core of modern warfare.

**8. Prosecutors May Seek To Resolve Sept. 11 Case Without a Capital Trial**

*New York Times, Mar. 21 (0300), Pg. A13 | Carol Rosenberg*

Pentagon prosecutors have struggled for more than a dozen years to hold the death-penalty trial of Khalid Shaikh Mohammed, the accused mastermind of the Sept. 11, 2001, attacks, and his four co-defendants at Guantánamo Bay. Now a trial prosecutor who has been on the case since the George W. Bush administration, Clayton G. Trivett Jr., is in talks with defense lawyers about trading guilty pleas for at most life in prison without parole.

**EUROPE**

**9. Ukraine Rejects Russian Offer of Passage Out of Mariupol**

*Associated Press, Mar. 21 (0137) | Cara Anna*

Ukrainian officials defiantly rejected a Russian demand that their forces in Mariupol lay down arms and raise white flags Monday in exchange for safe passage out of the besieged strategic port. Fighting for Mariupol has continued to be intense, even as the Russian offensive in other areas has floundered to the point where Western governments and analysts see the broader conflict grinding into a war of attrition. Ukrainian officials rejected the Russian proposal for safe passage out of Mariupol even before Moscow's 5 a.m. deadline for a response came and went.

**10. Ukraine Assault Uproots 10 Million**

*Wall Street Journal, Mar. 21 (0200), Pg. A1 | Alan Cullison, Isabel Coles and Matthew Luxmoore*

Russia's assault on Ukraine has forced more than 10 million people to abandon their homes, the United Nations said, with the scale of the humanitarian disaster showing little sign of easing as Moscow presses its attack with missile strikes and artillery fire.

**11. As Russian advances slow, a stalemate may be on the horizon**

*Washington Post, Mar. 21 (0115), Pg. A1 | Liz Sly and Dan Lamothe*

Russia's attempt to conquer Ukraine could be headed toward a stalemate as heavy casualties and equipment losses take a toll on unprepared Russian forces that have failed so far to achieve any of their initial objectives, Western officials and military experts say.

**12. US and NATO officials struggle to decipher status of negotiations between Russia and Ukraine**

*CNN.com, Mar. 20 (2200) | Zachary Cohen, Natasha Bertrand and Alex Marquardt*

US and NATO officials believe Russian President Vladimir Putin has not backed off his original demands in talks with Ukraine, and there is a heavy dose of skepticism in Western capitals about how credible Moscow's

engagement truly is -- even as the status of those negotiations remains difficult to decipher, according to multiple sources briefed on the situation.

**13. Ukraine finally rotates workers at Chernobyl – IAEA**

*Agence France-Presse, Mar. 21 (0337) | Not Attributed*

Ukraine has managed to rotate staff working at the Chernobyl nuclear power plant for the first time since Russia seized it last month as it invaded its neighbour, the UN's nuclear agency said.

**14. Ukraine's military is winning with agile defenses, measured weapons use and fierce will**

*Washington Times Online, Mar. 20 (1940) | Bill Gertz and Mike Glenn*

Outgunned Ukrainian forces are winning the war so far against the invading Russians with unique tactics, effective use of weapons and fighters who have exhibited a fierce commitment to defending their nation, military analysts say. In particular, the anti-tank missiles supplied to Ukraine in advance of the month-old war played a major role in thwarting the advances of Russian tanks and armored vehicles, and the anti-aircraft systems denied Moscow control of the skies.

**15. US delivers air defence system to Slovakia**

*Agence France-Presse, Mar. 20 (1158) | Not Attributed*

The US-made Patriot air defence system is on its way to Slovakia, Defence Minister Jaroslav Nad said Sunday, paving the way for Bratislava to possibly deliver similar hardware to Ukraine.

**16. Signed up to fight, some foreigners wait in frustration**

*Washington Post, Mar. 21 (0115), Pg. A1 | Sudarsan Raghavan*

Since Russia invaded Ukraine, thousands of Americans and other foreign nationals have signed up to fight for Ukraine, answering a call to action by Ukrainian President Volodymyr Zelensky. Now, with the conflict in its fourth week, a growing number of foreign volunteers are flowing into the capital, signing contracts and receiving weapons and combat training before being deployed to one of the numerous front lines of the war.

**17. On NATO's eastern edge, high stakes for exposed Baltics**

*Washington Post, Mar. 21 (0115), Pg. A13 | Missy Ryan, Michael Birnbaum, Paul Sonne and Steve Hendrix*

As Russia presses its invasion deeper into Ukraine, Baltic leaders say the world has finally woken up to the admonitions they have been making for years: that Putin is prepared to use force, like he did in Georgia, Crimea and eastern Ukraine, to advance his political goals. As the global implications of Putin's assault set in, Baltic nations' appeals for greater deterrence are translating into additional troop and aircraft deployments. Already in recent months, new NATO and U.S. forces have been dispatched to the region. In Estonia, a British-led force of some 2,500 NATO troops conducts training and exercises with local forces. Additional NATO forces are there

for the Baltic air policing mission, which now includes American F-35s and British and U.S. F-16s. There are also American F-35s in Lithuania.

**18. Is an EU Army Coming?**

*ForeignPolicy.com (Interview), Mar. 20 (1338) | Elisabeth Braw*

The war in Ukraine, politicians and pundits agree, is the European Union's sudden birth as a serious military player. Germany has announced that it will dramatically increase its defense spending and is sending weapons to Ukraine—a previously unthinkable development. The European Union, heretofore mostly known as an outfit that voices concerns about military aggression but does nothing, has already sent Ukraine military aid worth more than half a billion dollars. But what exactly the EU's military role should be remains painfully unclear: Member states have widely different opinions on the matter, and European security is of course already being looked after by NATO. What, exactly, can the EU do to grow its military muscle without causing affront to its Brussels neighbor? Severe crises below NATO's Article 5 threshold, in a way, pose an opportunity for the EU to make a real military contribution. Its Military Committee—composed of member states' defense chiefs—has the daunting task of mapping a course. At the center sits its chair, Gen. Claudio Graziano.

**RUSSIA**

**19. Putin Is Seen as Shifting to Plan B**

*Wall Street Journal, Mar. 21 (0200), Pg. A1 | Michael R. Gordon and Alex Leary*

After Russian forces failed to secure a quick victory over Ukraine, senior U.S. officials see signs the Kremlin is shifting to a new strategy to secure key territorial objectives while seeking leverage to compel the Ukrainian government to accept neutrality between Russia and the West. The new assessment of Mr. Putin's intentions, which is shared by senior officials within the Biden administration, is to compel Kyiv to accept Russian claims to Ukraine's southern and eastern territories. Having seized both Crimea and regions of Donbas in 2014, Russia seeks to secure a "land bridge" between western Russia and the Crimean Peninsula, and to expand Russian control of the Donbas region.

**20. Blame Game Begins For Russia Agencies**

*Wall Street Journal, Mar. 21 (0200), Pg. A6 | Warren P. Strobel and Michael R. Gordon*

Recriminations and finger-pointing have begun within Russia's spy and defense agencies, as the campaign that Moscow expected to culminate in a lightning seizure of Ukraine's capital has instead turned into a costly and embarrassing morass, U.S. officials said. The blame game, which includes the detention of at least one senior Russian intelligence official, doesn't appear to pose any immediate threat to Russian President Vladimir Putin's iron grip on power, but the U.S. officials are watching the machinations closely.

**21. For Putin, 'Truth' Is Just Another Front Line**

*New York Times, Mar. 21 (0300), Pg. A1 | Steven Lee Myers and Stuart A. Thompson*

Disinformation in wartime is as old as war itself, but today war unfolds in the age of social media and digital diplomacy. That has given Russia -- and its allies in China and elsewhere -- powerful means to prop up the claim that the invasion is justified, exploiting disinformation to rally its citizens at home and to discredit its enemies abroad. Truth has simply become another front in Russia's war. Russia's message has proved successful domestically, where the Kremlin's claims go unchallenged. Surveys suggest a majority of Russians support the war effort. Internationally, the campaign has seeped into an information ecosystem that allows them to spread virulently, reaching audiences that were once harder to reach.

**22. U.S. envoy to U.N. decries 'disturbing' accounts of Ukrainians deported to Russia**

*Reuters, Mar. 20 (1350) | Ted Hesson and Richard Cowan*

Accounts that thousands of residents of Ukraine's besieged port city of Mariupol have been forcibly deported to Russia are "disturbing" and "unconscionable" if true, U.S. ambassador to the United Nations Linda Thomas-Greenfield said on Sunday.

**23. Why Russia's tank war stalled in Ukraine**

*CBSNews.com (Sunday Morning), Mar. 20 (0914) | Not Attributed*

The stalled and sputtering spectacle the Russian military is making of itself in Ukraine came as a revelation to General Frank McKenzie -- and almost certainly to Vladimir Putin as well. "I am surprised at the problems they were having," McKenzie said. "It should be very concerning to Russian leadership."

## **CHINA**

**24. China Will Work to De-Escalate War in Ukraine, Diplomat Says**

*Bloomberg News, Mar. 20 (2256) | Tony Czuczka*

China's top envoy to Washington pledged his country "will do everything" to de-escalate the war in Ukraine, but refused to condemn Russia's attack and branded such requests "naive." "There's disinformation about China providing military assistance to Russia," Ambassador Qin Gang said on CBS's "Face the Nation" on Sunday. China isn't sending "weapons and ammunitions to any party," he said, calling Beijing's "common interests" with Russia an "asset" that could help peace talks.

## **INDO-PACIFIC**

**25. India's Dependence on Russian Weapons Tethers Modi to Putin**

*Bloomberg News, Mar. 20 (1900) | Sudhi Ranjan Sen*

For all the success of the U.S.-led campaign to isolate Russia on the world stage, India has stood out as one major democracy that has been reluctant to criticize Vladimir Putin -- and billions of dollars in weapons purchases mean that's unlikely to change anytime soon.

**26. Eying China, Japan breaks with past for strong Ukraine response**

*Agence France-Presse, Mar. 20 (2153) | Not Attributed*

Japan has broken with years of precedent in its tough response to the Ukraine invasion, and the conflict could reshape Tokyo's defence strategy as it confronts China's regional ambitions, analysts say.

**27. Biden administration rules Myanmar army committed genocide against Rohingya**

*Reuters (Exclusive), Mar. 20 (1508) | Humeysra Pamuk and Simon Lewis*

The Biden administration has formally determined that violence committed against the Rohingya minority by Myanmar's military amounts to genocide and crimes against humanity, U.S. officials told Reuters, a move that advocates say should bolster efforts to hold the junta that now runs Myanmar accountable.

## **MIDDLE EAST**

**28. U.S. Delivers Patriot Missiles to Saudis**

*Wall Street Journal, Mar. 21 (0200), Pg. A12 | David S. Cloud*

The Biden administration has transferred a significant number of Patriot antimissile interceptors to Saudi Arabia within the past month, fulfilling Riyadh's urgent request for a resupply amid sharp tensions in the relationship, senior U.S. officials said.

## **AFGHANISTAN-PAKISTAN**

**29. How Afghanistan's Militant Groups Are Evolving Under Taliban Rule**

*Voice of America News, Mar. 20 (1305) | Jeff Seldin*

Intelligence agencies worldwide are warning that Taliban rule in Afghanistan is radically reshaping terrorist and militant groups in South Asia and around the world. Specifically, intelligence and counterterrorism officials say that despite Taliban promises to sever ties with al-Qaida and oppose terror groups such as the Islamic State's Afghan affiliate, as codified in the 2020 Doha agreement with the United States, there has been scant evidence of progress.

## **MARINE CORPS**

**30. Marines Corps identifies Marines killed in Norway Osprey crash**

*Stars and Stripes Online, Mar. 20 (2045) | Phillip Walter Wellman*

The Marine Corps on Monday identified four Marines killed during a training accident in northern Norway last week.

## **MODERNIZATION & TECHNOLOGY**

### **31. Q&A with Dr. Martin Lindsey, Science & Technology Advisor to U.S. Indo-Pacific Command**

*National Defense Magazine Online, Mar. 20 (1918) | Stew Magnuson*

Dr. Martin Lindsey is the principal science and technology Advisor to U.S. Indo-Pacific Command. He advises command staff and advocates for S&T activities that better enable warfighters serving in the region to accomplish their assigned missions. He also engages with service and agency laboratories and pursues cooperative efforts with international partners and allies within the Indo-Asia-Pacific region. He spoke by phone with National Defense Editor in Chief Stew Magnuson after the conclusion of the Pacific Operational Science and Technology (POST) conference in Honolulu, Hawaii, organized by the National Defense Industrial Association. The interview has been lightly edited for brevity and clarity.

### **NOTABLE COMMENTARY**

#### **32. Don't Go Wobbly on Ukraine Now**

*Wall Street Journal, Mar. 21 (0200), Pg. A20 | Editorial*

The Ukrainian people are making great sacrifices fighting against Russia's war machine, and their resistance is helping the free world. As NATO's leaders meet this week in Brussels, now is the time for the alliance to repay this fortitude by escalating support for Kyiv.

#### **33. The Next NATO Expansion**

*Wall Street Journal Online, Mar. 20 (1655) | Editorial*

One lesson of Russia's assault on Ukraine is that NATO continues to be vital to European security. Would Ukraine be under siege today if it were a member of the alliance? This is something to keep in mind as discussions about Sweden and Finland pursuing membership advance.

### **TOP STORIES**

#### **1. Austin vows 'significant reaction' if Russia uses chemical or biological weapons in Ukraine**

*CBSNews.com (Face the Nation), Mar. 20 (1222) | Melissa Quinn*

Washington -- Defense Secretary Lloyd Austin warned Sunday a chemical or biological weapons attack by Russia in Ukraine would prompt a "significant reaction" from the United States, as well as global allies and partners.

"If a chemical or biological weapon was used, you'd see a significant reaction from not only the United States, but also the global community," Austin said in an interview on "Face the Nation." "I don't want to speculate about what exactly would change our calculation. I think engaging in hypotheticals is probably not helpful here either, but this is a very serious step and as you heard our president say, we won't take that lightly."

Twenty-five days after Russia launched its invasion of Ukraine, Russian forces are struggling in their effort to take over the capital city of Kyiv but have continued their brutal bombardment of civilians.

In the port city of Mariupol, Ukrainian officials have accused Russia of bombing an art school where 400 people were sheltering, marking the second attack of a public building where civilians were taking shelter in less than a week. Russian forces struck a theater in Mariupol where more than 1,300 people were believed to be inside last week.

Outside of other major cities, Russia's advance has largely stalled, though there has been growing concern among Ukrainian and U.S. officials that Moscow could use chemical or biological weapons in the ongoing war.

The White House last week said Russia could escalate its attack by using such weapons or claiming Ukraine used chemical or biological weapons in a "false flag" attack as a pretext for more violence.

Russian officials, meanwhile, have accused the U.S. of working on secret biological and chemical programs inside Ukraine, a claim the White House has rebuked as absurd and part of a ploy by Russia to try to justify its attack on Ukraine.

Austin said that the U.S. has in the past seen Russia "raising issues and creating a pretext so that if they did something in the battle space, they could blame it on somebody else, either Ukrainians, us, NATO."

"This could possibly be what we're seeing today," he said.

Austin said the U.S. expects to see Russia's attacks on civilians in Ukraine continue as a result of its stalled campaign and in an attempt by Russian President Vladimir Putin to re-establish momentum.

"They're not being effective today in terms of their maneuver forces on the ground. They're essentially stalled," he said. "It's had the effect of [Putin] moving his forces into a wood chipper."

Austin commended the Ukrainian people for their defense of the country against Russia, saying they have shown "significant resolve" and been effective at using the weapons and equipment provided by the U.S.

"What we've seen in the past is that the Ukrainians have counterattacked, that they've used their initiative to move things around on the battlefield and they've presented some significant problems for the Russians," he said.

The Biden administration has provided Ukraine with \$2 billion in security assistance since 2021, and Congress earlier this month approved \$13.6 billion in humanitarian and military aid to Ukraine and Eastern European allies.

Still, Ukrainian President Volodymyr Zelenskyy has urged the U.S. to help create a no-fly zone over his country's skies, a move President Biden has opposed due to concerns it would further escalate tensions with Russia.

Austin, though, said the U.S. will work with allies and partners to help create conditions for Ukraine to get equipment like Russian-made S-300 surface-to-air missile systems and “ensure they have the ability to protect their skies going forward.”

[RETURN TO TOP](#)

## **2. Pentagon Program Becomes Flashpoint**

*U.S. worked to secure dangerous materials; Moscow accuses it of funding biowarfare*

Wall Street Journal, Mar. 21 (0200), Pg. A6 | Sharon Weinberger

On his first official visit abroad, the new senator from Illinois, Barack Obama, was taken to a facility in Ukraine where the U.S. helped scientists working with dangerous biological materials. But rather than produce biological weapons, U.S. officials in that ramshackle building were trying to prevent lethal pathogens from falling into the hands of terrorists.

“I removed a tray of glass vials containing *Bacillus anthracis*, which is the bacterium that causes the anthrax,” recalls Andrew Weber, the Pentagon official who was in charge of the U.S.-funded program that worked with the Ukrainian government. Mr. Weber said he showed the tray “to a very concerned-looking young senator.”

Mr. Obama himself recalled seeing in his 2005 trip to Ukraine “test tubes filled with anthrax and the plague lying virtually unlocked and unguarded.”

A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union -- and to build trust between Washington and Moscow after the Cold War -- has instead become a new flashpoint in an information war between the two countries in the wake of Russia’s invasion of Ukraine.

Moscow has accused the Pentagon of funding weapons work in Ukraine’s biological laboratories. “These were not peaceful experiments,” Russian Foreign Minister Sergei Lavrov said earlier this month.

China, whose leader Xi Jinping has cultivated a close relationship with Russian President Vladimir Putin, has echoed those allegations. “Russia has found during its military operations that the U.S. uses these facilities to conduct bio-military plans,” the Chinese Foreign Ministry spokesman told reporters.

U.S. officials have flatly denied those claims and warned that Moscow could use its allegations to justify its own use of weapons of mass destruction in Ukraine.

“We believe that Moscow may be setting the stage to use a chemical weapon and then falsely blame Ukraine to justify escalating its attacks on the Ukrainian people,” Secretary of State Antony Blinken said last week. “Manufacturing events and creating false narratives of genocide to justify greater use of military force is a tactic that Russia has used before.”

The allegations have shocked those who are most familiar with the Pentagon's post-Cold War initiative, called the Cooperative Threat Reduction program. That is because not only has Russia been aware of the Pentagon's work securing chemical, biological and nuclear facilities across the former Soviet Union, but it had also been its beneficiary for many years.

"They're outrageous claims," said Robert Pope, the head of the Defense Threat Reduction Agency, or DTRA, the arm of the Pentagon in charge of running the program. "We were created 30 years ago to eliminate weapons of mass destruction, and Russia knows well we eliminate weapons of mass destruction."

The program, which dates back to 1991 and continues today, stretches across the former Soviet Union. Since the program started, the Pentagon has spent approximately \$12 billion on securing material used in weapons of mass destruction in post-Soviet republics, according to a DTRA spokeswoman. Of those funds, about \$200 million has been spent on the biological work in Ukraine since 2005. The funds have supported dozens of labs, health facilities and diagnostic sites around the country, the DTRA spokeswoman said.

Mr. Weber, who was in charge of negotiating the initial agreement with Kyiv to work on securing the country's biological materials and facilities, said that work expanded to Ukraine after the 9/11 attacks, when al Qaeda terrorists hijacked aircraft and crashed them into the World Trade Center towers and the Pentagon. U.S. policy makers grew worried about the potential for terrorists to steal biological materials -- fears that were heightened after letters containing anthrax were sent through the U.S. mail to congressional offices and media outlets. The Federal Bureau of Investigation eventually concluded that an American scientist employed at a military lab sent the letters.

The president of Ukraine at the time, Leonid Kuchma, concerned about the threat of terrorism in his own country, asked the U.S. for help. Since the collapse of the Soviet Union a decade earlier, Ukraine had been starved of the funds needed to secure its biological facilities.

Mr. Weber put together a team that visited Ukraine's biological and chemical facilities, which ranged from large laboratories to small veterinary research centers.

"We found that a number of them had dangerous pathogen collections left over from Soviet days," he said. "They were in pretty bad shape."

Ukraine's laboratories -- unlike some in other former Soviet republics -- weren't directly involved in the Cold War biological-weapons program, but they did have pathogens that fed into offensive work, according to Mr. Weber.

Those pathogens, like anthrax, could pose a threat if released, whether accidentally or on purpose. The focus of U.S. work in Ukraine was to consolidate that biological material, much of it related to agriculture, into secure facilities, which the U.S. would pay to build or upgrade.

Paul McNelly, who from 1995 to 2003 directed the Defense Department's chemical and biological elimination programs in Russia, Kazakhstan and Uzbekistan, said he was stunned with what he saw inside the former Soviet facilities.

"You would walk into these places and the refrigerators that stored these dangerous pathogens, they had no locks on them at all," Mr. McNelly said. "There would be vials that were labeled tularemia, plague, different things like that. And these people, most of them, weren't masked. Their gowns were antiquated." He added: "It was horrible."

### **3. U.S. Admiral Says China Fully Militarized Isles**

Associated Press (Exclusive), Mar. 21 (0126) | Jim Gomez and Aaron Favila

OVER THE SOUTH CHINA SEA -- China has fully militarized at least three of several islands it built in the disputed South China Sea, arming them with anti-ship and anti-aircraft missile systems, laser and jamming equipment, and fighter jets in an increasingly aggressive move that threatens all nations operating nearby, a top U.S. military commander said Sunday.

U.S. Indo-Pacific commander Adm. John C. Aquilino said the hostile actions were in stark contrast to Chinese President Xi Jinping's past assurances that Beijing would not transform the artificial islands in contested waters into military bases. The efforts were part of China's flexing its military muscle, he said.

"I think over the past 20 years we've witnessed the largest military buildup since World War II by the PRC," Aquilino told The Associated Press in an interview, using the initials of China's formal name. "They have advanced all their capabilities and that buildup of weaponization is destabilizing to the region."

There were no immediate comments from Chinese officials. Beijing maintains its military profile is purely defensive, arranged to protect what it says are its sovereign rights. But after years of increased military spending, China now boasts the world's second-largest defense budget after the U.S. and is rapidly modernizing its force with weapons systems including the J-20 stealth fighter, hypersonic missiles and two aircraft carriers, with a third under construction.

Aquilino spoke with the AP onboard a U.S. Navy reconnaissance aircraft that flew near Chinese-held outposts in the South China Sea's Spratly archipelago, one of the most hotly contested regions in the world. During the patrol, the P-8A Poseidon plane was repeatedly warned by Chinese callers that it illegally entered what they said was China's territory and ordered the plane to move away.

“China has sovereignty over the Spratly islands, as well as surrounding maritime areas. Stay away immediately to avoid misjudgment,” one of the stern radio messages said in a veiled threat.

But the U.S. Navy plane dismissed the multiple warnings and pressed on defiantly with its reconnaissance in brief but tense moments witnessed by two AP journalists invited onboard. “I am a sovereign immune United States naval aircraft conducting lawful military activities beyond the national airspace of any coastal state,” a U.S. pilot radioed back to the Chinese.

“Exercising these rights is guaranteed by international law and I am operating with due regard to the rights and duties of all states,” he said.

Navy commanding officer Joel Martinez, who led the P-8A Poseidon’s crew, said there has been an incident when a Chinese jet flew close to a U.S. aircraft in a dangerous maneuver in the disputed region. The U.S. flight crew calmly reminded the Chinese to comply with aviation safety regulations, he said.

As the P-8A Poseidon flew as low as 15,000 feet (4,500 meters) near the Chinese-occupied reefs, some appeared to be like small cities on screen monitors, with multi-story buildings, warehouses, hangars, seaports, runways and white round structures Aquilino said were radars. Near Fiery Cross, more than 40 unspecified vessels could be seen apparently anchored.

Aquilino said the construction of missile arsenals, aircraft hangars, radar systems and other military facilities on Mischief Reef, Subi Reef and Fiery Cross appeared to have been completed but it remains to be seen if China will pursue the construction of military infrastructure in other areas.

“The function of those islands is to expand the offensive capability of the PRC beyond their continental shores,” he said. “They can fly fighters, bombers plus all those offensive capabilities of missile systems.”

He said any military and civilian plane flying over the disputed waterway could easily get within range of the Chinese islands’ missile system.

“So that’s the threat that exists, that’s why it’s so concerning for the militarization of these islands,” he said. “They threaten all nations who operate in the vicinity and all the international sea and airspace.”

China sought to shore up its vast territorial claims over virtually the entire South China Sea by building island bases on coral atolls nearly a decade ago. The U.S. responded by sending its warships through the region in what it calls freedom of operation missions. The United States has no claims itself but has deployed Navy ships and aircraft for decades to patrol and promote free navigation in international waterway and airspace.

China routinely objects to any action by the U.S. military in the region. The other parties — the Philippines, Vietnam, Malaysia, Taiwan and Brunei — claim all or part of the sea, through which approximately \$5 trillion in goods are shipped every year.

Despite China's aggression, the long-simmering territorial conflicts should only be resolved peacefully, Aquilino said, and cited the Philippine government's successful move to bring its disputes with China to international arbitration in 2013 as a good template.

A U.N.-backed arbitration tribunal that handled the case invalidated China's sweeping historical claims in the South China Sea under the U.N. Convention on the Law of the Sea. Beijing dismissed the ruling as sham and continues to defy it.

Washington's main objective in the disputed region is "to prevent war" through deterrence and promote peace and stability, including by engaging American allies and partners in projects with that objective, Aquilino said.

"Should deterrence fail, my second mission is to be prepared to fight and win," said Aquilino, who leads the largest U.S. combatant command with 380,000 military and civilian personnel covering 36 nations and territories.

## **DEFENSE DEPARTMENT**

### **4. Ukraine war is backdrop in U.S. push for hypersonic weapons**

Associated Press, Mar. 20 (1105) | David Sharp

PORTLAND, Maine -- Lagging behind Russia in developing hypersonic weapons, the U.S. Navy is rushing to field its first, with installation on a warship starting as soon as late next year.

The United States is in a race with Russia and China to develop these weapons, which travel at speeds akin to ballistic missiles but are difficult to shoot down because of their maneuverability.

The Russian military says it already deployed hypersonic missiles, claiming on both Saturday and Sunday to have deployed them against targets in Ukraine marking the weapon's first use in combat. The Pentagon couldn't confirm a hypersonic weapon was used in the attacks.

The American military is accelerating development to catch up.

The U.S. weapon would launch like a ballistic missile and would release a hypersonic glide vehicle that would reach speeds seven to eight times faster than the speed of sound before hitting the target.

In Maine, General Dynamics subsidiary Bath Iron Works has begun engineering and design work on changes necessary to install the weapon system on three Zumwalt-class destroyers.

The work would begin at a yet-to-be-named shipyard sometime in fiscal year that begins in October 2023, the Navy said.

Hypersonic weapons are defined as anything traveling beyond Mach 5, or five times faster than the speed of sound. That's about 3,800 mph (6,100 kph). Intercontinental ballistic missiles far exceed that threshold but travel in a predictable path, making it possible to intercept them.

The new weapons are maneuverable.

Existing missile defense systems, including the Navy's Aegis system, would have trouble intercepting such objects because maneuverability makes their movement unpredictable and speed leaves little time to react.

Russia says it has ballistic missiles that can deploy hypersonic glide vehicles as well as a hypersonic cruise missile.

The U.S. is "straining just to catch up" because it failed to invest in the new technology, with only a fraction of the 10,000 people who were working on the program in the 1980s, said U.S. Rep. Jim Cooper, a Tennessee Democrat who's chair of a subcommittee that monitors the program.

"If we want to pursue parity, we will need to back this effort with more money, time, and talent than we are now," he said.

The Russian invasion of Ukraine serves as a backdrop as the Pentagon releases its budget proposal that lays out its goals for hypersonics and other weapon systems later this month.

The three stealthy Zumwalt-class destroyers to be equipped with the new weapons have plenty of space to accommodate them thanks to a design failure that works to the Navy's advantage in this instance.

The ships were built around a gun system that was supposed to use GPS-guided, rocket-boosted projectiles to pound targets 90 miles (145 kilometers) away. But those projectiles proved to be too expensive, and the Navy canceled the system, leaving each of the ships with a useless loading system and a pair of 155-mm guns hidden in angular turrets.

The retrofit of all three ships will likely cost more than \$1 billion but will give a new capability to the tech-laden, electric-drive ships that already cost the Navy \$23.5 billion to design and build, said Bryan Clark, a defense analyst at the Hudson Institute.

“The engineering is not that hard. It’ll just take time and money to make it happen,” Clark said.

The Navy intends to field the weapons on the destroyers in the 2025 fiscal year and on Virginia-class nuclear-powered attack submarines in the 2028 fiscal year, the Navy said.

The destroyers would be based in the Pacific Ocean, where they would be a deterrent to China, should it become emboldened by Russia’s attack on Ukraine and consider attacking Taiwan, Clark said.

The U.S. focus on hypersonic weapons represents a pivot after hesitating in the past because of technological hurdles. Adversaries, meanwhile, continued research and development.

Russia fired off a salvo of Zircon hypersonic cruise missiles in late December, heralding the completion of weapon testing.

But Russia may be exaggerating the capability of such super weapons to compensate for weakness in other areas, said Loren Thompson, a defense analyst at the Lexington Institute.

For the time being, Russia doesn’t have many of the weapons, and it’s unclear how effective they are, he said.

## **COVID-19**

### **5. Inside U.S. troops’ fight against the Pentagon’s ‘unjust’ COVID vaccine mandate**

*Navy SEALs, Air Force reservists describe chaos, coercion in religious waiver process as their military careers hang in the balance*

Washington Times Online, Mar. 20 (2106) | Ben Wolfgang

They didn’t make the decision lightly, as they were fully aware it would likely cost them their military careers. But for U.S. troops who refused the federally mandated COVID-19 vaccine, it was a sacrifice worth making.

Washington Times interviews with several service members and the lawyers who represent them revealed a host of reasons for opting against coronavirus immunization. They include deeply held religious beliefs, fears of long-term health side effects and broader concerns about what objectors say is the increasingly heavy hand of government in their personal lives.

In each case, the troops explained how they consulted with their family, friends, colleagues, legal counsel and other stakeholders as they weighed their options. Each said they understood early on, from the moment Defense Secretary Lloyd Austin last year ordered all military personnel to get vaccinated, that their choice would come

with serious repercussions, likely including removal from their units and subsequent losses of health and retirement benefits.

Pentagon officials insist the vaccine mandate is needed to maintain the safety and readiness of the American fighting force. They stress that the vaccines are medically safe.

With relatively few exceptions, the Pentagon has routinely ruled that spiritual belief isn't a valid reason to be excused from vaccination.

Thousands of troops believe otherwise. Whether one agrees with their decision or not, there is little doubt it comes from a place of deep conviction.

“What’s going on right now is unjust,” one active-duty Navy SEAL told The Times in a recent interview. The Times is not identifying the resisters by name because they have filed formal religious waiver requests with the Navy and haven’t received final decisions.

“As service members in the military, we understand we swore an oath to the Constitution,” they said. “Your allegiance ... is to the law of the land, which is the Constitution.”

“Ultimately, we would be ... hypocritical, or we would be frauds, to go against the oath we swore in defending the law of the land if we were to comply with tyranny or to comply with something that is built off of lies,” the SEAL said.

Behind the scenes, SEALs described an atmosphere of pressure and coercion from the early days of the Pentagon’s vaccine mandate. When they raised questions about the vaccines, they said they were essentially told they needed to get them “because it’s an order.” Lawyers representing service members said they had clients who ultimately decided to get the shot, despite their doubts, simply because of the pressure from peers and commanding officers.

The Defense Department strongly denies such charges. Defense officials say military personnel are given every opportunity to have their questions answered and concerns addressed when it comes to vaccinations and other health-related matters.

### *An unprecedented fight*

Navy SEALs across the country have found themselves at the center of the vaccine fight. Last week, attorneys for 35 Navy SEALs and other special warfare personnel who object to the mandate on religious grounds asked the Supreme Court to intervene on their behalf and block any punishment for refusing the shot.

A week earlier, the Biden administration asked the high court to lift an earlier injunction keeping the Navy from considering vaccination status when deploying service members. None of the SEALs interviewed by The Times for this article is involved with that case, which is making its way through federal court in Texas.

That case centers on religious objections, but other factors are at play.

Another SEAL, who also asked to not be identified, discussed how they continue to face punishment even as many vaccine mandates, mask requirements and other COVID-19 policies are quickly rolled back across American society. Some of those policies are still being contested in court, but the outcome could result in a world in which unvaccinated civilians are working alongside troops who have been forced to get the vaccine, raising questions about the effectiveness and fundamental fairness of the policy.

“When we approach a topic of fairness, we understand that life is not fair,” the SEAL said. “Period. We approach it from right and wrong, and that leads us back to what the word of God says. If it is wrong, then we are going to stand in opposition to that. It may not be fair, but we’re looking to stand in truth.”

R. Davis Younts, a Pennsylvania lawyer representing about 60 military members, including the SEALs interviewed by The Times, said many of his clients have religious objections to vaccines because of research connected to the origins of the vaccines that was conducted using fetal stem cells. Numerous service members also cited that as a key reason for their objection.

Mr. Younts acknowledged that his clients, and all other service members, need to receive more than a dozen other vaccinations before they are allowed into the military. That has given fuel to critics who say the COVID-19 vaccine refusals are based more on politics than spirituality and moral beliefs.

“Why this vaccine? Military members get anywhere from 15 to 17 mandatory vaccines. I’ve had them,” said Mr. Younts, who spent more than a decade as an active-duty service member in the Air Force and served as a military attorney.

“All up until this vaccine, this is the first time there’s been a vaccine with a known tie with fetal cell tissue development,” he said. “That’s a huge issue for me. That’s a huge issue for my clients.”

Mr. Younts, along with other attorneys involved in COVID-19 vaccination cases, have argued that the military’s system of processing the thousands of religious waiver requests simply isn’t up to par. They say the system has been stretched thin and is struggling to handle the number of waivers filed. Some military officials have privately acknowledged that claim in past conversations with The Times.

“They don’t have the resources to handle this in a serious manner,” said Sean Timmons, a Houston lawyer whose firm, Tully Rinckey PLLC, represents more than 100 military personnel seeking COVID-19 exemptions.

“It’s a giant mess,” Mr. Timmons told The Times in November. “Nobody knows what’s going on. It’s been a complete and utter disaster every step of the way.”

Indeed, one SEAL told The Times, that they are “in complete limbo” with little clarity on when they will get a final decision on their waiver requests and whether they will be kicked out of the military.

Pentagon officials vehemently deny accusations that they are rushing through the process and issuing mass denials without proper consideration for each individual case. They say they are processing the cases fairly and as quickly as possible.

“All religious accommodation requests and appeals are reviewed and adjudicated on a case-by-case basis. Each request receives full and thorough consideration of the facts and circumstances presented by the service member,” a Navy spokesperson told The Times. “We do want to reiterate that the secretary and chief of naval operations’ top priority is protecting the health of service members. The health and readiness of our service members is of paramount importance to maintaining war-fighting readiness.”

#### *The ‘worst possible outcome’*

Navy officials stressed that service members have numerous forums where they can get answers to their questions about the coronavirus immunizations, including a host of information about any potential medical side effects.

Service members describe a much different environment behind the scenes.

“Just our normal baseline questions — they were not answered, and they’re still not answered,” one SEAL said.

Across the services, just a handful of religious waivers have been approved. In some cases, service members claim to have suffered punishment just for informing their commanders that they intended to file a waiver request.

Air Force Reserve officer Lt. Col. Brandi King said she met with superior officers in September and said she intended to file a waiver request.

“I just had this overwhelming feeling that I was not under any circumstance supposed to put whatever this is into my body,” she told The Times. “I just was adamant I was not to put this in my body at all costs, even if it means I was living under a bridge in a cardboard box with my kids.”

Col. King said her orders were canceled even before she formally submitted the request. She said she is now being shifted from her job into the Individual Ready Reserve. She said the move essentially amounts to being fired from her position.

Col. King said she filed numerous waiver requests, including several on medical grounds, after learning she was allergic to some ingredients in COVID-19 vaccines. None has been approved.

“I don’t say this lightly ...,” said Mr. Younts, who represents Col. King. “In my capacity as her attorney, there was no logical or reasonable justification for being fired from this position ... other than she was going to submit a religious waiver request.”

Air Force officials deny those claims. An Air Force spokesperson told The Times that the service “didn’t cancel any orders based on religious accommodation requests.”

“All requests for a COVID-19 vaccine exemption are reviewed thoroughly on a case-by-case basis so each is given full and fair consideration. Service members’ requests are evaluated to see if their accommodation can be supported with no impact to mission readiness,” an Air Force spokesperson said. “The Department of the Air Force has approved for the total force 21 religious accommodations and two religious accommodation appeals that meet that criteria.”

The Army has approved one religious waiver request, with thousands more to be processed. The Navy has approved none for its active-duty service members, the most recent figures show. The Marine Corps has approved six religious waiver requests. Each service has approved additional waivers on medical or administrative grounds.

The military is sorting through thousands more appeals from service members whose initial requests were denied. As that process plays out, the SEALs interviewed by The Times said they are anxiously awaiting their fates.

“We all were advised by more wise people than ourselves to count the costs before we started this ... and what could the repercussions be of this action,” one of the SEALs said, adding that they have braced themselves for the “worst possible outcome.”

## **EXECUTIVE/LEGISLATIVE**

### **6. White House: Biden to Visit Poland on Europe Trip This Week**

Associated Press, Mar. 21 (0018) | Colleen Long and Ellen Knickmeyer

WASHINGTON -- President Joe Biden has added a stop in Poland to his trip this week to Europe for urgent talks with NATO and European allies, as Russian forces concentrate their fire upon cities and trapped civilians in a nearly month-old invasion of Ukraine.

Biden will first travel to Brussels and then to Poland to meet with leaders there, press secretary Jen Psaki said in a statement Sunday night.

Poland is a crucial ally in the Ukraine crisis. It is hosting thousands of American troops and is taking in more people fleeing the war in Ukraine — more than 2 million — than any other nation in the midst of the largest European refugee crisis in decades.

Biden will head to Warsaw for a bilateral meeting with President Andrzej Duda scheduled for Saturday. Biden will discuss how the U.S., along with its allies and partners, is responding to “the humanitarian and human rights crisis that Russia’s unjustified and unprovoked war on Ukraine has created,” Psaki said.

On Monday ahead of his trip, Biden will discuss the war with European leaders. President Emmanuel Macron of France, Chancellor Olaf Scholz of Germany, Prime Minister Mario Draghi of Italy and Prime Minister Boris Johnson of the United Kingdom are expected to take part, the White House said Sunday.

White House officials have said Biden has no plans to travel to Ukraine. Secretary of State Antony Blinken, while in Poland this month, briefly crossed into neighboring Ukraine in a show of solidarity alongside that country’s foreign minister, Dmytro Kuleba. Poland has been one of the most vocal countries in asking fellow NATO members to consider getting more involved to rein in the bloodshed.

Russian President Vladimir Putin’s invasion of Ukraine largely has united the U.S. and NATO and European allies, as well as allies in Asia and elsewhere. The United States and European governments see Moscow’s military aggression as a threat to their security and strategic interests.

Biden and NATO have said repeatedly that while the U.S. and NATO will provide weapons and other defensive support to non-NATO member Ukraine, they are determined to avoid any escalation on behalf of Kyiv that risks a broader war with Russia.

The Pentagon on March 9 rejected a Polish proposal for providing Ukraine with MiG fighter jets via a NATO air base, saying allied efforts against the Russian invasion should focus on more useful weaponry and that the MiG transfer with a U.S. and NATO connection would run a “high risk” of escalating the war.

Ukraine’s president, Volodymyr Zelenskyy, has pleaded for the U.S. to provide his military with more aircraft and advanced air-defense systems. NATO and the United States have rejected his appeals to establish a “no-fly zone” over Ukraine to suppress Russian air power, saying it would put Western forces in direct conflict with Russian ones.

Determined resistance by Ukrainian fighters when Russian tanks and troops rolled into Ukraine in late February quickly defeated Russian forces’ attempts to storm Ukraine’s capital and unseat the westward-looking government. Denied an easy and early victory, Russia’s military is reverting to the scorched earth tactics of its

past offensives in Syria and Chechnya, and pounding population centers with airstrikes and artillery barrages that leave civilians like those in the port city of Mariupol able to safely venture out for food or water, to bury the dead, or to flee.

After Biden rallied European allies to join in sweeping sanctions against Russia over the invasion at the outset, his tasks now include dealing with some NATO members that are pushing for more involvement directly in the fighting. That includes proposals by Poland for peacekeepers.

Biden's trip includes a summit Thursday of NATO leaders, who will use the meeting to look at strengthening the bloc's own deterrence and defense, immediately and in the long term, to deal with the now openly confrontational Putin.

That gathering is intended not just to show NATO's "support to Ukraine, but also our readiness to protect and defend all NATO allies," NATO Secretary-General Jens Stoltenberg told CBS' "Face the Nation" on Sunday.

"And by sending that message, we are preventing an escalation of the conflict to a full-fledged war between NATO and Russia," Stoltenberg said.

Front-line NATO members on the alliance's eastern flank are also asking for advanced U.S. and British air defense systems to guard against the kind of missile and air assaults Russia is unleashing on Ukraine.

"We have to strengthen our eastern flank of NATO. We have been talking about this for years, but now it's time for action," Estonia's prime minister, Kaja Kallas, told CNN's "State of the Union."

She added: "We need some more capabilities to support ourselves and defend ourselves by air defense systems, what is definitely necessary here, but also the troops that are present that act as a deterrent also to the Russian military."

Noting that Russia is firing missiles "from such a long range that they can also reach Paris from where they are shooting right now," Kallas said European leaders must "understand that this defense is our common issue, and it's not a theoretical discussion, but issue in real life."

Biden also will participate in a European Council summit to discuss the allies' sanctions on Russia and humanitarian efforts for the millions of Ukraine's people displaced by Russia's attacks, Psaki said last week.

His agenda includes a meeting of leaders of the Group of Seven countries to discuss the punishing financial and economic penalties that the West and its allies have leveled on Russia over its invasion, Psaki said.

## 7. ‘Do the Right Thing’: How U.S., Allies United to Punish Putin

Associated Press, Mar. 20 (1256) | Josh Boak

WASHINGTON -- Just days before Russia invaded Ukraine on Feb. 24, President Joe Biden quietly dispatched a team to European Union headquarters in Belgium.

These were not spy chiefs or generals, but experts in reading fine print and tracking the flow of money, computer chips and other goods around the world. Their mandate: inflict maximum pain on Russian President Vladimir Putin, making it harder, if not impossible, for him to fund a prolonged war in Ukraine and denying him access to technologies at the core of modern warfare.

There were intense meetings in February in Brussels, Paris, London and Berlin, often running six hours at a time as the allies tried to craft the details of a historic economic blockade, according to Biden administration officials. Some of the exports the U.S. wanted to ban were met with reluctance by the Europeans, who would essentially be telling their own companies to forgo several billion dollars in annual revenues from Russia.

When there was a deadlock, U.S. negotiators would put Commerce Secretary Gina Raimondo on the phone.

“You can say ‘no’ now, but when the body bags are coming out of Ukraine, you’re not going to want to be a holdout,” Raimondo said she told allied counterparts. “Do the right thing.”

Everyone signed on — and before the invasion.

Raimondo said what ultimately drove the agreement and the fast timeline was the threat of Putin’s imminent attack on Ukraine.

“We all got religion fast that it was time to band together and stick together,” she said. “If you cause enough pain, isolate Putin, it will bring this war to an end.”

The wealthiest nations in the world — outside of China — are directly confronting Putin on their preferred terms. They have imposed sanctions in which their strengths intersect with Russia’s vulnerabilities. Russia is reliant on the U.S., the EU, Japan, South Korea and Taiwan for cutting-edge technologies and investment, so the allies decided to cut Moscow off.

It’s a strategic play designed to trap Putin in a downward spiral, as foreign investors pull out their money in response to the atrocities. It’s also a remarkable show of unity that could be tested in the coming weeks by the allies’ own dependence on fossil fuels.

A group of economists estimated Thursday that EU countries have transferred more than 13.3 billion euros (\$14.7 billion) to Russia for oil, natural gas and coal since the war began, essentially funding Putin’s war machine.

While the allied talks in the lead-up to the war were critical, the EU was not just waiting around for U.S. direction to act. Bloc members had been consulting for months.

One EU diplomat, speaking on condition of anonymity to discuss internal talks, outlined in an interview as far back as January potential penalties that included the export ban, noting that the EU had held together its coalition on enforcing sanctions since Russia's 2014 occupation of parts of the Donbas region in Ukraine.

But this time, the U.S. and EU responded to Russia's aggression with a novel set of policies to cripple Putin's ability to fight by denying it access to the semiconductors, computers, telecommunications equipment, lasers and sensors integral to war materiel.

This is a supply chain squeeze that will force Russia to raid existing airplanes, tanks and other gear for spare parts essentially eroding its military and economic capacity. The same U.S. and EU officials dealing with their own supply chain challenges after the pandemic found a way to amplify the problem for Russia through trade regulations.

In a sign of early success, U.S. officials point to the closing of Lada auto plants in Russia and the more than 300 companies that have stopped doing business with Russia. The companies are not just Starbucks, but chipmakers such as Germany's Infineon that said it stopped all direct and indirect deliveries to Russia as well as technical support.

Within days of the invasion, the allies blocked the foreign assets of Russia's central bank. Two senior Biden administration officials, who were not authorized to publicly discuss the strategy and spoke on condition of anonymity, said this option was not initially presented to allies out of concern that Russia could move its money ahead of time. They waited to present the asset freeze until the invasion started and the images of bombings and death compelled the Europeans to almost immediately agree.

The freeze rendered half of the more than \$600 billion in Putin's war chest unusable. While the Russian stock market has been closed and the value of the ruble has plunged, the sanctions are designed so that the financial effects tighten over time. As long as Ukraine is able to hold out with military aid against severe casualties, the sanctions will do more to exhaust Putin.

EU Commission Vice President Valdis Dombrovskis on Thursday praised the "very good coordination" among nations and said the sanctions "are biting hard. Russia's financial markets are close to collapse." He also noted that the sanctions create costs for the allies, though the price is much less than the consequences of the war spreading.

Yet with every new round of sanctions, the unity of the 27 EU members is tested ever more. If imposing a ban on Russian oil and gas comes up, Germany and Italy, both heavily dependent on Russian energy, will be in a tough

spot to contain the drive of several eastern member nations like Poland and the Baltic states that want to hit Putin as hard as possible as soon as possible. The U.S. is less dependent on Russian oil and natural gas, making it easier for Biden to ban those imports earlier this month.

There is also the risk that the sanctions will fail to stop Putin or that Russia can still find ways to bring goods into its economy. Trade data analyzed by ImportGenius show that China supplanted Germany in 2021 as the leading source of exports to Russia — and U.S. officials say that Russia has solicited help from the Chinese government.

On Twitter, Olivier Blanchard, former chief economist at the International Monetary Fund and now a fellow at the Peterson Institute of International Economics, equated the sanctions to the bombing of German factories during World War II. Those bombings disrupted the German war machine in ways that made it impossible to prolong an extended fight — and economists had a role in choosing the targets.

For all that has been done, question remain about whether it is enough.

Blanchard recommends expanding the export controls from defense-related production to “anything which disorganizes production” in the Russian economy. If Russian-made refrigerators need a gasket made in the EU, restricting access to that gasket makes it harder for the Russian economy to function, he said.

Tania Babina, a finance professor at Columbia University who was born in Ukraine, said that sanctions tend not to stop dictators and she warned that Putin might ultimately become even more entrenched unless the U.S. and EU take more aggressive action. She said Europeans need to add sanctions that ban the use of Russian oil and natural gas.

“He is going to throw everything to win, will send his grandma to fight if needed,” Babina said. “He cannot lose Ukraine. That is why it is so paramount to cut off Russia’s energy export revenues.”

But Babina noted that there is another far more chilling cost to the allied strategy of sanctions: Ukrainian lives.

“How many people do we let die before Putin runs out of assets?” she asked.

## **8. Prosecutors May Seek To Resolve Sept. 11 Case Without a Capital Trial**

*New leadership, an ever receding trial date and pressure to disclose more information about the C.I.A. torture of the accused plotters all contribute*

New York Times, Mar. 21 (0300), Pg. A13 | Carol Rosenberg

GUANTÁNAMO BAY, Cuba -- Pentagon prosecutors have struggled for more than a dozen years to hold the death-penalty trial of Khalid Shaikh Mohammed, the accused mastermind of the Sept. 11, 2001, attacks, and his four co-defendants at Guantánamo Bay.

They have litigated everything from Mr. Mohammed's choice of court attire -- he sometimes dons a paramilitary camouflage vest -- to how much evidence of C.I.A. torture the defense teams and, ultimately, a military jury should be allowed to see.

Now a trial prosecutor who has been on the case since the George W. Bush administration, Clayton G. Trivett Jr., is in talks with defense lawyers about trading guilty pleas for at most life in prison without parole.

Why are the two sides talking? Here is a rundown.

*Delays, Delays, Delays*

Between stalled litigation during the coronavirus pandemic and the pace of discovery and pretrial hearings, jury selection cannot start before mid-2024 -- and that is according to the most optimistic estimate.

But that was before the death-penalty lawyer for one of the defendants, Walid bin Attash, asked to quit the case, creating a potential vacancy in a key position that must be filled unless prosecutors abandon their insistence on a joint, five-man trial.

The coronavirus has already forced a 500-day recess. An earlier judge, the third on the case, retired at the start of the pandemic. The current judge, Col. Matthew N. McCall, did not get the assignment until August because prosecutors considered him too inexperienced. He has since limited the pace of litigation while he learns the court record, including thousands of pages of secret prosecution filings.

*New Political Leadership*

Detention operations at Guantánamo Bay, which have held 780 men and boys as detainees, have lasted for four administrations. Mr. Bush established the prison and court system, and President Barack Obama overhauled the court with the goal of ending detainee operations. Congress thwarted him.

President Donald J. Trump maintained the operation, and promised to add new prisoners, but never did. His first attorney general, Jeff Sessions, was opposed to negotiations. In 2017, after Mr. Sessions learned that the senior

Pentagon official overseeing the trial was discussing a plea with defense lawyers, he called Defense Secretary Jim Mattis and declared “no deal.” Mr. Mattis fired the overseer, Harvey Rishikof, citing other reasons.

President Biden came into office with the goal of ending detention operations at Guantánamo Bay.

A letter written by a lawyer at his National Security Council acknowledges that pretrial plea deals could be appropriate as a way to resolve some military commissions cases, but stresses that the White House takes no position on what should happen in any particular matter.

### *New Leadership on Trial Teams*

The long-running chief war crimes prosecutor, Brig. Gen. Mark S. Martins, retired from the Army in September. An even longer-serving case prosecutor, Robert Swann, left the case in late 2021. Relatives of some of the victims of the Sept. 11 attacks who have met the men -- including those who oppose and favor the death penalty -- describe them as solidly committed to bringing the case to a capital trial.

The new interim chief prosecutor, George C. Kraehe, an Army Reserve colonel, has delegated the authority to negotiate to three civilians, all Justice Department employees, who have been on the case since the beginning: Mr. Trivett, a Navy Reserve commander; Edward Ryan, a federal prosecutor; and Jeffrey D. Groharing, a Marine Corps Reserve colonel.

The defense teams have new leadership, too. Brig. Gen. Jackie L. Thompson Jr. of the Army took charge as the chief defense counsel in January and wrote Mr. Biden seeking support for resolving the case through pleas.

One of the nation’s leading and longest-serving capital defense lawyers, David I. Bruck, also made his first court appearance in the case in September.

### *The Majid Khan Case*

Last year, a military jury’s condemnation of torture by the C.I.A. in another war crimes case raised questions of whether prosecutors could win a unanimous death-penalty decision even for Mr. Mohammed, 53, the accused architect of the hijackings plot.

In the case of Majid Khan, a confessed courier for Al Qaeda, U.S. military officers on his jury called his cruel treatment “a stain on the moral fiber of America” and urged the Pentagon overseer of the war court to grant the prisoner clemency. Mr. Khan was abused rectally and kept nude, sleep deprived and nearly starved in the same program of “enhanced interrogation” that tortured Mr. Mohammed, who was also waterboarded 183 times.

Charles Stimson, a retired Navy judge who managed detainee policy at the Pentagon for the Bush administration from 2005 to 2007, said recently that the Khan case illustrated that, even if prosecutors get the Sept. 11 defendants

to trial and win a conviction, “the likelihood of their coming to a unanimous verdict with respect to the death penalty is close to zero.”

Negotiations are appropriate even for the “worst war crime that has been committed in our lifetime,” said Mr. Stimson, who is now a scholar at the conservative Heritage Foundation. “Any man or woman serving in the United States military who hears about the treatment that these detainees had at the hands of the United States government is going to weigh that quite heavily in the sentencing portion of the trial. And it won’t go over well.”

### *More Disclosures of Torture*

At first, court security officers briefed by the intelligence agencies forbade mention of the word “torture” in open court hearings.

A lawyer could not explain why the Saudi defendant Mustafa al-Hawsawi, 53, who is accused of helping the Sept. 11 hijackers with travel and expenses, sat gingerly on a pillow in court. In time, his lawyers were allowed to say he was sodomized by the C.I.A. during his detention in the black sites.

The more time has passed, the more grisly details about the program that held and tortured the defendants between 2002 and 2006 have emerged -- despite claims by prosecutors for years that the defense teams had all the evidence they needed to prepare for trial.

But three of the presiding judges have ordered the disclosure of more and more information, often requiring permission of the C.I.A. or other intelligence agencies.

Since getting the case over the summer, defense lawyers say, Colonel McCall has ordered even more disclosures.

In those situations, if prosecutors invoke a national security privilege and refuse to provide the material, the judge can order remedies. He could suspend the case until the government turns over the information. He could dismiss the case. Or he could downgrade it by making life in prison the ultimate possible sentence

### *Mounting Mental Illness Claims*

Lawyers for Mr. Mohammed’s nephew, Ammar al-Baluchi, 44, have long argued that the prisoner is brain damaged as a result of his torture by the C.I.A., and that he needs rehabilitation that the military at Guantánamo cannot provide.

His defense team recently submitted material to a federal court panel about a 2003 episode in which C.I.A. trainees were taught an enhanced interrogation technique called “walling.” They took turns slamming his head into a wall until he blacked out.

The health of the man accused of serving as a deputy to Mr. Mohammed in the Sept. 11 plot, Ramzi bin al-Shibh, 49, has also long clouded the case. At first, his claims that he was being sleep deprived by outside forces making noises and vibrating his prison cell interfered with his lawyers' ability to craft a defense. In recent years, the problems escalated to him howling from sharp pinprick pains in his genitals and other body parts.

Last month, the U.S. military delivered to Saudi Arabia for psychiatric care a schizophrenic prisoner whose torture by U.S. forces long ago made him ineligible for the Sept. 11 conspiracy trial. That man, Mohammed al-Qahtani, was held at Guantánamo as the suspected would-be 20th hijacker for two decades, only to be recommended for release after a Navy doctor concluded he could not get proper care at the prison.

### *Changing Political Climate*

Be it distraction by the events in Ukraine or a sense that something has changed 20 years after the Sept. 11 attacks, few Republicans protested the decision to release Mr. Qahtani, leading some critics of the military prison in Cuba to suggest that Guantánamo has receded as a political rallying point.

“The Bush administration tortured the defendants and built a system to avoid the consequences of it,” said Scott Roehm, the Washington director of the Center for Victims of Torture. “That was never going to work.”

He called it noteworthy that, while a few Republicans made an impassioned defense of the need to keep Guantánamo open, none of them spoke up at a Senate Judiciary Committee meeting in December after the chief defense counsel at the time, Brig. Gen. John G. Baker, argued for the “negotiated resolution of the cases.”

“Much of the hearing was a discussion of plea deals,” Mr. Roehm said. “And nobody said: ‘This is crazy. Don’t do this. We object to a plea strategy.’ There wasn’t any pushback at all.”

Instead, Senator Lindsey Graham, Republican of South Carolina, offered a spirited defense of Guantánamo-style detention under the laws of war.

“I’ve never accepted the false choice of ‘try them or release them,’” he said. “You can hold somebody until they die as an enemy combatant if it’s unsafe to release them if the war is not over.”

“If we can try them, great,” said Mr. Graham, a retired Air Force JAG colonel. “If we can’t, let’s hold them.”

### 9. Ukraine Rejects Russian Offer of Passage Out of Mariupol

Associated Press, Mar. 21 (0137) | Cara Anna

LVIV, Ukraine -- Ukrainian officials defiantly rejected a Russian demand that their forces in Mariupol lay down arms and raise white flags Monday in exchange for safe passage out of the besieged strategic port.

Russia has been barraging the encircled southern city on the Sea of Azov, hitting an art school sheltering some 400 people only hours before offering to open two corridors out of the city in return for the capitulation of its defenders, according to Ukrainian officials.

Fighting for Mariupol has continued to be intense, even as the Russian offensive in other areas has floundered to the point where Western governments and analysts see the broader conflict grinding into a war of attrition.

Ukrainian officials rejected the Russian proposal for safe passage out of Mariupol even before Moscow's 5 a.m. deadline for a response came and went.

"There can be no talk of any surrender, laying down of arms," Ukrainian Deputy Prime Minister Irina Vereshchuk told the news outlet Ukrainian Pravda. "We have already informed the Russian side about this."

Mariupol Mayor Piotr Andryushchenko also rejected the offer shortly after it was made, saying in a Facebook post he didn't need to wait until the morning deadline to respond and cursing at the Russians, according to the news agency Interfax Ukraine.

Russian Col. Gen. Mikhail Mizintsev had offered two corridors -- one heading east toward Russia and the other west to other parts of Ukraine. He did not say what Russia planned if the offer was rejected.

The Russian Ministry of Defense said authorities in Mariupol could face a military tribunal if they sided with what it described as "bandits," the Russian state news agency RIA Novosti reported.

Earlier attempts to evacuate civilian residents from Mariupol and other Ukrainian cities have failed or only partly succeeded, with bombardments continuing as civilians sought to flee.

Tearful evacuees from devastated Mariupol have described how "battles took place over every street."

Ahead of the latest offer, a Russian airstrike hit the school where some 400 civilians had been taking shelter and it was not clear how many casualties there were, Ukraine's President Volodymyr Zelenskyy said in a video address early Monday.

“They are under the rubble, and we don’t know how many of them have survived,” he said.

The fall of Mariupol would allow Russian forces in southern and eastern Ukraine to unite. But Western military analysts say that even if the surrounded city is taken, the troops battling a block at a time for control there may be too depleted to help secure Russian breakthroughs on other fronts.

Ukrainians “have not greeted Russian soldiers with a bunch of flowers,” Zelenskyy told CNN, but with “weapons in their hands.”

U.S. President Joe Biden was expected to talk later Monday with the leaders of France, Germany, Italy and Britain to discuss the war, before heading later in the week to Brussels and then Poland for in-person talks.

Zelenskyy has been pleading with the U.S. for more aircraft and advanced air-defense systems, while NATO members on the alliance’s eastern flank have also been looking for missile defense systems from the U.S. and Britain.

Three weeks into the invasion, the two sides now seem to be trying to wear down the other, experts say, with bogged-down Russian forces launching long-range missiles at cities and military bases as Ukrainian forces carry out hit-and-run attacks and seek to sever Russian supply lines.

“The block-by-block fighting in Mariupol itself is costing the Russian military time, initiative, and combat power,” the Washington-based Institute for the Study of War said in a briefing.

U.S. Defense Secretary Lloyd Austin said Ukrainian resistance means Russian President Vladimir Putin’s “forces on the ground are essentially stalled.”

“It’s had the effect of him moving his forces into a woodchipper,” Austin told CBS on Sunday.

The strike on the art school was the second time in less than a week that officials reported an attack on a public building where Mariupol residents had taken shelter. On Wednesday, a bomb hit a theater where more than 1,000 people were believed to be sheltering.

There was no immediate word on casualties in the school attack, which The Associated Press could not independently verify. Ukrainian officials have not given an update on the search of the theater since Friday, when they said at least 130 people had been rescued and another 1,300 were trapped by rubble.

City officials and aid groups say food, water and electricity have run low in Mariupol and fighting has kept out humanitarian convoys. Communications are severed.

The city has been under bombardment for over three weeks and has seen some of the worst horrors of the war. City officials said at least 2,300 people have died, with some buried in mass graves.

Some who were able to flee Mariupol tearfully hugged relatives as they arrived by train Sunday in Lviv, about 1,100 kilometers (680 miles) to the west.

“Battles took place over every street. Every house became a target,” said Olga Nikitina, who was embraced by her brother as she got off the train. “Gunfire blew out the windows. The apartment was below freezing.”

In Ukraine’s major cities, hundreds of men, women and children have been killed in Russian attacks.

In Kyiv, six people were killed by shelling in the densely populated Podil district not far from the center of the capital Sunday, according to AP journalists at the scene. It devastated a shopping center, leaving a flattened ruin still smoldering Monday morning in the midst of high-rise towers. The force of the explosion shattered every window in the high-rise next door and twisted their metal frames.

In the distance, the sound of artillery rang out as firefighters picked their way through the destruction. Kyiv Mayor Vitali Klitschko said Russian shelling hit several houses in Podil.

Russian troops have been shelling Kyiv for a fourth week now and are trying to surround the capital, which had nearly 3 million people before the war.

The U.N. has confirmed 902 civilian deaths in the war but concedes the actual toll is likely much higher. It says nearly 3.4 million people have fled Ukraine. Estimates of Russian deaths vary, but even conservative figures are in the low thousands.

The Ukrainian prosecutor general’s office says at least 115 children have been killed and 148 injured so far.

Some Russians also have fled their country amid a widespread crackdown on dissent. Russia has arrested thousands of antiwar protesters, muzzled independent media and cut access to social media sites like Facebook and Twitter.

## 10. Ukraine Assault Uproots 10 Million

*Attacks on population centers intensify; humanitarian situation in Mariupol worsens*

Wall Street Journal, Mar. 21 (0200), Pg. A1 | Alan Cullison, Isabel Coles and Matthew Luxmoore

KYIV, Ukraine -- Russia's assault on Ukraine has forced more than 10 million people to abandon their homes, the United Nations said, with the scale of the humanitarian disaster showing little sign of easing as Moscow presses its attack with missile strikes and artillery fire.

"The war in Ukraine is so devastating that 10 million have fled -- either displaced inside the country, or as refugees abroad," said Filippo Grandi, the U.N.'s high commissioner for refugees, on Sunday. That means almost a quarter of the country's prewar population has been uprooted.

About 3.4 million people have left Ukraine since the Russian offensive began Feb. 24, mostly women and children bound for Poland, according to the U.N., which said the number of refugees could reach four million. The flow of people has eased in recent days, but still tops 50,000 refugees a day, according to the latest U.N. figures.

In the southeastern port city of Mariupol, where fighting has reached the streets, the humanitarian situation worsened. Ukrainian officials said an art school where around 400 people had been sheltering was bombed by Russia, trapping people beneath the rubble. Their condition couldn't be determined.

The incident comes days after a theater in the city was bombed. Rescue workers had freed 130 people from the rubble as of Friday, though 1,300 people remained trapped in the basement where they had been sheltering, a local official said.

U.S. Secretary of Defense Lloyd Austin said Russia's military had been deliberately targeting population centers because President Vladimir Putin's campaign had stalled in the face of an effective Ukrainian defense and counterattack.

"He's not been able to achieve the goals that he wants to achieve as rapidly as he wants to achieve them," Mr. Austin said Sunday on CBS News. "It's had the effect of him moving his forces into a wood chipper."

Russia's Defense Ministry on Sunday gave defenders of the besieged city of Mariupol, the site of some of the worst civilian casualties of the war, until Monday morning to surrender and allow the evacuation of civilians.

"We call on all the units of Ukraine's armed forces, the battalions of its territorial defense and foreign mercenaries to cease their military activities and lay down their weapons," said Mikhail Mizintsev, the head of the Defense Ministry's National Defense Control Center, according to Interfax.

Mr. Mizintsev said that Kyiv must respond to Russia's offer by 5 a.m. Moscow time on Monday. Describing Mariupol city officials as "odious bandits," he said they had a "historic choice" to accept Russia's initiative, according to RIA Novosti, the official Russian state news agency.

The Russian Defense Ministry showed no sign of letting up even as its own military has taken big losses. It said Sunday that its forces carried out a range of activities, including firing a number of long-range weapons at targets in Ukraine, striking a military base in the country's Zhytomyr region, where it alleged foreign fighters were located, and attacking a large number of military facilities in helicopter raids.

On Sunday, the governor of the Crimean city of Sevastopol reported that the deputy head of Russia's Black Sea Fleet was killed in the attack on Mariupol, the latest in a number of high-ranking officers to die in the invasion.

President Volodymyr Zelensky of Ukraine said his country's military was imposing heavy losses on Russian troops but added, "We are well aware that Russia has just a bottomless human resource and a lot of equipment, missiles and bombs."

President Biden is heading to Europe this week for a round of meetings with allies and partners in the North Atlantic Treaty Organization, the Group of Seven and European states, where they are expected to discuss deterrence efforts, humanitarian relief and the campaign of sanctions against Russia. He will travel to Warsaw on Friday for talks with Polish President Andrzej Duda, White House press secretary Jen Psaki said Sunday.

The White House said that Mr. Biden wouldn't be visiting Ukraine.

Mariupol's City Council said on Sunday about 4,000 civilians in the city have been killed since the start of the fighting. It also accused Russian forces of forcibly evacuating some of the city's residents to Russia and into the territory of Donetsk and Luhansk, the pro-Russian breakaway regions in eastern Ukraine.

"People who are being forcibly transported onto Russian territory are having their Ukrainian passports seized and given papers that have no legal weight," the council said in a statement posted to Telegram.

Russia hasn't commented on the reports of forced evacuations from Mariupol.

Mariupol is a strategic objective for Moscow as it attempts to open an overland corridor to the Russia-annexed region of Crimea and shift the momentum in its three-week-old invasion. During weeks of bombardment and attack, Ukrainians said they had kept Russian forces at bay on Mariupol's outskirts, but that changed Saturday, Ukrainian officials said.

The capture of Mariupol would be a victory for Russia, which has so far failed to take any big Ukrainian cities since the start of its invasion.

“Mariupol has not yet fallen,” retired U.S. Gen. David Petraeus said on CNN. “It is out of food, fuel, water, everything except for heart. They are still fighting very hard. This is the first place where the Russians are having to do no-kidding urban fighting, having to go building to building.”

Dima Shvets, who left Mariupol last week with his wife and 7-year-old daughter, described scraping snow off cars to melt for drinking water and using supermarket shopping carts to carry the dead to hastily dug graves.

He said he had lost count of the number of Russian checkpoints through which the family passed on the way from Mariupol to Berdyansk, down the Sea of Azov coast to the west. The drive, which usually takes 40 minutes, lasted 15 hours. Russian soldiers made the men remove their shirts and checked their bodies for tattoos that would identify them as Nazis, he said.

## **11. As Russian advances slow, a stalemate may be on the horizon**

Washington Post, Mar. 21 (0115), Pg. A1 | Liz Sly and Dan Lamothe

Russia’s attempt to conquer Ukraine could be headed toward a stalemate as heavy casualties and equipment losses take a toll on unprepared Russian forces that have failed so far to achieve any of their initial objectives, Western officials and military experts say.

The front lines have barely moved in more than a week. Russians are being killed or injured at the rate of up to 1,000 a day, according to Western intelligence estimates, and even more according to Ukrainian ones.

Videos of burned-out tanks and abandoned convoys stream constantly on Ukrainian social media accounts, alongside footage of dead Russian soldiers, surrendering Russian soldiers, hungry Russian soldiers stealing chickens from local farmers - and, increasingly, the mangled bodies of Ukrainian civilians dying in missile and artillery attacks.

The ferocity of the Russian assault has only intensified as the advances have slowed, with Russia substituting harsh bombardments of civilian populations for progress on the battlefield. Regular Ukrainians living in cities surrounded, or partially surrounded, by Russian troops are paying the price for a war effort that began to go wrong in the first hours.

But in the absence of substantive progress on the ground and given the scale of the losses being inflicted on its ranks, Russia’s military campaign could soon become unsustainable, with troops unable to advance because they lack sufficient manpower, supplies and munitions, analysts and officials say.

The next two weeks could be critical in determining the outcome of the entire war, they say. Unless Russia can swiftly improve its supply lines, bring reinforcements and bolster the flagging morale of the troops on the ground, its goals may become impossible to achieve.

“I don’t think Ukraine forces can push Russian forces out of Ukraine, but I also don’t think Russian forces can take that much more of Ukraine,” said Rob Lee, a former U.S. Marine who is now a senior fellow at the Foreign Policy Research Institute.

An assessment Saturday by the Institute for the Study of War (ISW) went further. “Ukrainian forces have defeated the initial Russian campaign of this war,” it said. The conflict, it said, has now reached “a stalemate.”

Events on the battlefield could yet tilt in a different direction: for example, if the Russians succeed in capturing the besieged and desperate city of Mariupol, freeing up their forces to bolster their offensive elsewhere.

But in a widely shared March 14 article, a retired U.S. general and a European military academic argue that the Russian force is close to reaching what military strategists call the “culminating point” of its offensive, meaning that it will have reached the limits of its capacity to wage the war it set out to prosecute.

“The Russian war of conquest in Ukraine is now entering a critical phase; a race to reach the culminating point of Russia’s offensive capacity and Ukraine’s defensive capacity,” wrote retired Lt. Gen. Ben Hodges and Julian Lindley-French, who chairs the Alphen Group think tank in the Netherlands. They advocate a sustained effort by the United States and its allies to provide military supplies to Ukraine in hopes that Ukrainian forces can take advantage of this “window of opportunity” to win concessions at the negotiating table.

“I believe that Russia does not have the time, manpower or ammunition to sustain what they are doing now,” Hodges, who is now with the Washington-based Center for European Policy Analysis, said in an interview. The assessment assumes, he says, that the West continues to step up military support for Ukraine, thereby enabling Ukrainian forces to sustain the tempo of their resistance.

The Russian military still has overwhelming superiority in terms of numbers and equipment compared with the smaller and more lightly armed Ukrainian military. Russia could yet turn the fight around if it is able to replenish its manpower and supplies, cautioned Lindley-French.

“It would be a big mistake to think that Russia cannot sustain this war,” he said. “They can’t now, but they could fix it” by adjusting tactics and bringing in reinforcements.

However, he added, “Unless the Russians can really improve their game and start rotating [troop] formations into the front line, this particular force is facing a problem.”

U.S. officials decline to make public predictions about the course of the war but say there are clear indications that the Russians are struggling to sustain the existing forces they have and are scrambling to find reinforcements and resolve their logistical difficulties.

Appeals to China for military assistance, a so far fruitless attempt to recruit Syrians and talk of bringing in reinforcements from other parts of Russia and the breakaway territory of South Ossetia in Georgia have not yet produced evidence that fresh troops are on the way, the officials say.

“Just that they’re talking about resupply and re-sourcing tells you they are beginning to get concerned about longevity here,” said a senior U.S. Defense Department official, who spoke on the condition of anonymity to discuss sensitive subjects.

“It’s quite extraordinary, three weeks in, that they are still having these same logistical and sustainment issues, and that they are considering additional ways to overcome these shortages from outside Ukraine,” the official added.

The Russian troops that initially surged into Ukraine from at least four directions had expected to be welcomed as liberators and came unprepared for a long fight, officials and experts say. Instead, the Russians encountered fierce resistance, and now they are strung out along multiple fronts, bogged down in manpower-intensive sieges and without preplanned supply lines to sustain a protracted war, the officials and experts say.

The current map of the battlefield points to the scale of the difficulties, Lee said.

It was clear from the way Russian forces moved in the first hours of the war, he said, that their key objectives were to take Ukraine’s second-largest city of Kharkiv, link up the occupied Donbas region with the port city of Odessa along Ukraine’s southern coast, and - most crucially - capture the capital, Kyiv, with a lightning push from the north.

More than three weeks on, Russian troops still haven’t achieved any of those goals.

They have failed to fully encircle the northeastern city of Kharkiv, even though it lies just a few miles from the Russian border. Their push to take the port city of Odessa has been halted by fierce Ukrainian resistance at the gates of Mykolaiv. Their effort to link the Russian-annexed territory of Crimea has become ensnared by the grinding and increasingly bloody siege of Mariupol.

The Russians have been making gains in the east, in the oblasts of Luhansk and Donetsk, which Russia recognized as independent republics on the eve of the war and which have been partially occupied by Russian-backed forces since 2014. But those advances fall far short of the initial ambitious goal of the invasion.

The Russians' hopes of encircling Kyiv, let alone capturing it, are starting to recede, Lee said. Russian forces remain stuck about 15 miles outside the city, and though U.S. officials say Russia is moving rear forces toward the front in anticipation of a renewed push on the capital, the front line hasn't shifted.

Meanwhile, Russians are dying at a rate that is increasingly unsustainable, Lee said. Although Russia still has vast reserves of manpower, it has already committed the bulk of its combat-ready forces, and they are the ones that are almost certainly bearing the brunt of the casualties, he said.

There are no confirmed casualty figures, and Russia has not updated the figure of 498 dead that it announced a week into the war. But of the Russian army's 168 battalion tactical groups, 120 are already fighting on the ground, making up about 100,000 soldiers out of the total 190,000 sent into Ukraine. That means Russia has already committed 75 percent of its combat-ready force, U.S. officials say.

Western intelligence estimates say it is likely that at least 7,000 Russians have been killed and as many as 20,000 injured, and assuming that the combat forces are bearing the brunt of the casualties, that could mean up to a third of the main combat force is now out of action, Lee said.

"That's a huge loss, and you can't readily replace that," he said. Russia can bring in new conscripts or call up more reservists, but that will dilute the capabilities of the overall force, "and that is not in Russia's interest," he said.

Ukrainian forces have been taking casualties, too, though how many isn't publicly known because they also have not released any numbers. The longer the war drags on, the more perilous their position will become, too, and the greater the chance that Russia will overcome its initial mistakes, said Jack Watling of the London-based Royal United Services Institute.

But, he noted, the Ukrainian forces appear to remain highly motivated, while there are clear signs that morale continues to diminish among the Russian troops, he said. Russian forces continue to surrender, abandon their vehicles and show few signs of initiative in the areas they do control, signs "that this is not a force that is well motivated," he said.

As Russia's offensive capabilities slow, the risk is high that civilian casualties will mount. A stalemate is likely to become "very violent and bloody," the ISW assessment said, because Russian troops are more likely to rely on the bombardment of cities to apply pressure.

There are signs that Russia is running out of precision missiles, U.S. officials say, which means Russian forces will also increasingly resort to the use of "dumb bombs" indiscriminately dropped on civilian areas in an effort to cow them into submission.

Ukraine is unlikely to have the capacity to push Russia out of the territory it has taken so far, officials and analysts say. But the Russians' current difficulties open up the possibility that the Ukrainians could at least fight them to a standstill, thereby exerting pressure on Russia to accept a negotiated solution.

The main question now has shifted from how long it would take the Russians to conquer Ukraine to "can Ukraine fight Russia to a stalemate?" said a Western official who spoke on the condition of anonymity. "They're doing pretty well at the moment."

"The next two weeks are going to be pretty decisive," Watling said. The war won't be over in two weeks, he predicted, and all the signals from Moscow suggest the Russians are more likely to double down than climb down, making the war more deadly for Ukrainians even as it moves at a slower pace.

"The odds are stacked heavily in the Russians' favor. This is their war to lose. The reason they are not achieving their objective is largely about their own incompetence, their lack of coordination," he said.

"What this really comes down to is whether the Russians are going to get their act together."

## **12. US and NATO officials struggle to decipher status of negotiations between Russia and Ukraine**

CNN.com, Mar. 20 (2200) | Zachary Cohen, Natasha Bertrand and Alex Marquardt

US and NATO officials believe Russian President Vladimir Putin has not backed off his original demands in talks with Ukraine, and there is a heavy dose of skepticism in Western capitals about how credible Moscow's engagement truly is -- even as the status of those negotiations remains difficult to decipher, according to multiple sources briefed on the situation.

Ukrainian President Volodymyr Zelensky has recently indicated he is willing to consider some concessions to Russia to help bring an end to the violence, including a neutrality policy -- albeit one underpinned by robust security guarantees, raising more questions about the current state of talks and specific elements of any peace deal that may be under consideration.

"I'm ready for negotiations with (Putin). I was ready for the last two years. And I think that without negotiations, we cannot end this war," Zelensky told CNN's Fareed Zakaria in an exclusive interview Sunday. But he warned that any failure of negotiation attempts fail could lead to "a third World War."

Ukrainian and Russian negotiators have met four times since the start of Russia's invasion.

Russian Foreign Minister Sergey Lavrov weighed in on the possibility of Ukraine agreeing to neutral status during a media event in Moscow on Saturday.

“After our operation in Ukraine ends, and I hope it ends with a signing of a comprehensive agreement on the issues I mentioned -- security issues, Ukraine’s neutral status with the guarantees of its security as (Putin), a couple of months ago as I recall, commented at a news conference on our initiative of non-expansion of NATO, he said we understood every country needs guarantees of its security,” said Lavrov.

But details on negotiations remain scant with many NATO countries, including the US, remaining on the outside looking in when it comes to the secretive talks, with one European defense official calling negotiations “a bit of a dark avenue right now.”

The Biden administration still sees no indication that Putin is willing or ready to deescalate the conflict -- making it difficult for US officials to be optimistic about the current state of negotiations, one source familiar with the situation said.

But at the same time, this source also said that the US is not pressuring Ukraine to accept or reject specific concessions and is not involved in the negotiation process.

The US National Security Council declined to comment.

### *Russian demands*

Some of the terms Ukraine has said it may be willing to consider seem more feasible than others, but at the end of the day, NATO countries are still skeptical of Russia’s engagement.

“It is very close hold, and no one really knows what’s going on,” the European defense official said. “Ukraine’s positions haven’t changed -- ceasefire, withdrawal of troops and security guarantees.”

“Anyone who says they know something about the status of the talks, (they) really don’t,” the official added.

Putin laid out several issues to achieve a ceasefire with Ukraine in a Thursday phone call with Turkish President Recep Tayyip Erdogan, according to Turkish presidential spokesman Ibrahim Kalin.

“The first is Ukraine’s neutrality,” Kalin said in an interview with the Turkish newspaper Hurriyet published Saturday, adding that would mean Ukraine agreeing to not become a NATO member. “Second, disarmament and mutual security guarantees in the context of the Austrian model. Third, the process that the Russian side refers to as ‘de-Nazification.’ Fourth, removing obstacles to the widespread use of Russian language in Ukraine. It is understood that some progress has been made in the first four articles of the ongoing negotiations. It is too early to say that there is full agreement or that an agreement is about to be signed.”

Kalin said Putin had additional demands that were “the most difficult issues” -- the recognition of the annexation of Crimea and the two so-called republics in Donbas. Kalin said these final two issues “are not acceptable demands for Ukraine and the international community.”

“If a point is reached in the first four articles and an agreement is reached, there can be a discussion at the leaders’ level regarding the fifth and sixth articles,” Kalin said in the interview, adding that if the negotiations take place, “it may be possible to reach an agreement and end the war.”

US Ambassador to the UN Linda Thomas-Greenfield on Sunday declined to set terms on what the US would or would not accept when it came to an agreement between Ukraine and Russia to end the fighting.

“This is for the Ukrainians themselves to decide what is too much for them. It is not our decision on that and we support their efforts. So I can’t preview what they will end up coming up in their negotiations with the Russians,” she told CNN’s Jake Tapper on “State of the Union.”

Asked by Tapper again, if the US would recognize Crimea or Donbas as a part of Russia should that be a part of the agreement, Thomas-Greenfield again declined to answer.

“I can’t say that at the moment. We certainly have not recognized the independent Donbas regions just declared as independent. But I can’t review how we will respond to a negotiated settlement that the Ukrainians come up with the Russians to save the lives of their own people.”

The lack of clarity about the status of negotiations is raising additional questions about what Ukraine is willing to agree to and how Russia’s demands would be implemented if they ultimately reach some sort of agreement.

Zelensky said Saturday there were “compromises” his country could not make in negotiations with Putin.

“Any compromises related to our territorial integrity and our sovereignty and the Ukrainian people have spoken about it, they have not greeted Russian soldiers with a bunch of flowers, they have greeted them with bravery, they have greeted them with weapons in their hands,” he told CNN’s Zakaria when asked about the Russian demands.

“You cannot just make a president of another country to recognize anything by the use of force,” he added.

Many details of Russia’s demands, whether Ukraine would accept them and how Ukraine would even implement them remain unclear, a senior NATO official said. That includes what it would mean for Ukraine to adopt a “neutral” status with the West -- a possibility that one congressional source told CNN has caused heartburn for US officials.

“Does that mean they forswear NATO? Does that mean they forswear the (European Union)? Can they not have any other external assistance?” the NATO official said. “My sense is it’s going to be a very complex negotiation.”

### *Neutrality policy*

A European diplomat told CNN last week that if Ukraine were to adopt a neutrality policy and also demilitarize, it would effectively be a surrender -- calling such a move “Moscow-style neutrality.”

The Kremlin has floated the notion that Kyiv could adopt a Swedish or Austrian neutrality policy. However, a Swedish diplomat dismissed the notion of Swedish neutrality, saying the idea that their country is neutral is not true and attempts to try to frame it as such are consistent with longstanding Russian efforts to misrepresent Sweden’s national security policy.

“Whenever the term ‘Austrian neutrality’ comes up, it has to be remembered that this is a model of an armed neutrality. This form of neutrality doesn’t mean that a country lies down its arms and hopes that nobody attacks it. It’s a neutrality where a country -- at least in theory -- is armed and ready to defend itself against all foreign belligerents,” said Martin Weiss, Austria’s ambassador to the US.

The NATO official added that it is unclear what kind of agreement Russia and Ukraine might come to about the territory Russia has taken control of since invading on February 24. The official said the “hope” expressed by both Russian and Ukrainian officials in recent days appears to be belied by the fact that “some pretty clear differences remain” between the parties.

“I think we just need to be mindful that the Russians almost certainly will seek to continue to resupply and will probably continue to fight, up until the time that things are agreed,” the official said. “Whatever the solution, if there’s diplomatic resolution and there’s an agreement, it has to be clear and binding. And it has to be monitorable. ... People will be looking to ensure that the Russians end the war conclusively. And there isn’t some lingering threat that remains.”

While the source familiar with the Biden administration’s view of the talks told CNN that some of the terms Ukraine has said it may be willing to consider seem more feasible than others, the source also indicated that the US will be wary of Russia’s intentions until Putin shows some signs that he is ready to deescalate.

### **13. Ukraine finally rotates workers at Chernobyl – IAEA**

Agence France-Presse, Mar. 21 (0337) | Not Attributed

Ukraine has managed to rotate staff working at the Chernobyl nuclear power plant for the first time since Russia seized it last month as it invaded its neighbour, the UN's nuclear agency said.

Ukraine told the International Atomic Energy Agency that around half of the staff were “finally” able to return to their homes on Sunday after working at the Russian-controlled site for nearly four weeks, IAEA director general Rafael Grossi said.

Those who left were replaced by other Ukrainian staff, Grossi said in a statement late Sunday.

“It is a positive -- albeit long overdue -- development that some staff at the Chernobyl NPP have now rotated and returned to their families,” Grossi said.

“They deserve our full respect and admiration for having worked in these extremely difficult circumstances. They were there for far too long. I sincerely hope that remaining staff from this shift can also rotate soon.”

On February 24, the day Russia invaded Ukraine, Moscow's troops seized the Chernobyl compound, the site of the 1986 core meltdown that sparked the worst nuclear reactor catastrophe in history.

Around 100 technicians have been working under armed guard to maintain the site since then.

Grossi, who had expressed deep concern about the well-being of the Ukrainian staff at the site, “welcomed the news about the partial rotation of personnel,” the IAEA said.

“Before today's rotation, the same work shift had been on-site since the day before the Russian forces entered the area,” it continued.

It is unclear why Russian soldiers seized Chernobyl, where the destroyed reactor is kept under close supervision within a concrete and lead sarcophagus, and the three other reactors are being decommissioned.

In 2017, the site was one of several Ukrainian targets hit by a massive cyberattack thought to have originated in Russia, which briefly took its radiation monitoring system off-line.

#### **14. Ukraine's military is winning with agile defenses, measured weapons use and fierce will**

##### *Early restraint by Moscow led to heavy Russian losses*

Washington Times Online, Mar. 20 (1940) | Bill Gertz and Mike Glenn

Outgunned Ukrainian forces are winning the war so far against the invading Russians with unique tactics, effective use of weapons and fighters who have exhibited a fierce commitment to defending their nation, military analysts say.

In particular, the anti-tank missiles supplied to Ukraine in advance of the month-old war played a major role in thwarting the advances of Russian tanks and armored vehicles, and the anti-aircraft systems denied Moscow control of the skies.

Ukrainian military forces moved most of their air defense missiles shortly before the start of hostilities last month, blunting the impact of the first wave of Russian missile strikes.

The action prevented the Russians from taking key air bases inside Ukraine, and the invasion force wasted bombs on empty spaces where Moscow's intelligence mistakenly believed air defense batteries were located.

"The Ukrainians are doing a really nice job of staying mobile and agile," said a senior military officer familiar with Ukrainian tactics, with surviving mobile air defense missiles inflicting heavy losses on Russian jets and helicopters.

The Ukrainian military also has leveraged its familiarity with home territory to stymie the invaders.

Several bridges leading from the northern part of the country toward the capital, Kyiv, were destroyed to make it more difficult for tanks and artillery to reach firing areas.

Poor tactics by Russian tank columns also have slowed the attack. Ukrainian forces armed with precision-guided Javelin anti-tank missiles immobilized many columns by blowing up the first and last tanks in a procession, making it difficult for the others to advance.

"It was like [Russian tanks] were driving into a pencil sharpener," the military officer said. "It was a total miscalculation on their ability to maneuver on the battlefield."

##### *New tactic: Bomb civilians*

With the initial assaults bogged down, the Russians now seem to be digging in for siege warfare.

Defense Secretary Lloyd Austin and others on Sunday accused Russian President Vladimir Putin's forces of committing war crimes by deliberately targeting civilians.

“He’s taking these kinds of steps because ... his campaign has stalled,” Mr. Austin said on CBS News’ “Face the Nation.”

Mariupol, a crucial port city on the Azov Sea, has been encircled by Russian troops for weeks. City leaders said on social media that a local art school where about 400 residents — mostly women, children and the elderly — had taken shelter was bombed Saturday.

“The building was destroyed, and peaceful people are still under the rubble,” city leaders said Sunday.

Ukrainian President Volodymyr Zelenskyy said the siege would go down in history because of the war crimes being committed.

British military intelligence officials said Russia has increased “indiscriminate shelling of urban areas” across Ukraine.

### *The information battlefield*

Russia’s missteps in Ukraine extend well beyond the conflict on the ground. Moscow’s failure to disrupt communications infrastructure in its neighboring target provided a major boost to Mr. Zelenskyy, who emerged as a powerful, inspirational figure, bolstering military morale and fueling the hopes of an embattled country.

Mr. Zelenskyy appears regularly on Ukrainian and international media as a voice of opposition to the Russian invasion.

Retired Adm. James G. Stavridis, a former NATO commander, said Mr. Zelenskyy has been a major factor in the Ukrainian successes.

“The key to the Ukrainian resistance is clearly their fighting spirit,” Adm. Stavridis said. “It is without question the center of gravity in the conflict, personified by the extraordinary leadership of President Zelenskyy.”

Moscow also has largely failed in its efforts to use disinformation to disrupt Ukrainian resistance. A video supposedly showing Mr. Zelenskyy ordering troops to surrender was quickly exposed as a deep-fake attempt at disinformation.

“It should be obvious by now that the Kremlin’s Active Measures/disinformation machine, which supposedly took control of U.S. (and maybe Western) politics, 2016-20, isn’t quite as awe-inspiring as Twitter told you it was, since they’re getting bested in Ukraine by kids with TikTok,” former intelligence official John Schindler said in a tweet.

### *Every missile counts*

Geography and weather, along with the anti-tank and anti-aircraft missiles supplied to Ukraine, combined early to blunt much of the Russian military advantage, said Adm. Stavridis, now with the Carlyle Group.

The Ukrainians expertly marshaled limited domestic and international military resources — fuel and ordnance — better than the Russians. Ukraine’s stock of missiles, arms and equipment have been carefully expended on key targets at optimum times, a senior Pentagon official said.

“They’re hitting the Russians very effectively and not trying to defend everything at once,” the official told The Washington Times.

The Ukrainians also are using drones to deadly effect to pinpoint artillery and guide multiple rocket attacks, according to reports and videos.

The Russian military failed to launch a shock-and-awe-style military operation when the invasion began. Instead, it relied on lesser-equipped and poorly trained national guard troops to be the lead forces in some locations.

Russian military doctrine and the apparent battle plan for taking Ukraine were said to call for accepting large numbers of killed and wounded troops. Estimates of the number of Russians killed in fighting is about 7,000.

Even with those losses, though, the invasion force is substantial. “We assess that the Russians still have approximately 90% of their assembled combat power still available to them,” a senior Pentagon official said Friday.

Russian forces continue to target the capital of Kyiv and have been trying unsuccessfully to advance into positions from the north and northwest, and from the east.

“As you have seen, they are facing heavy resistance from the Ukrainians,” the official said.

### *Moving targets*

The Ukrainian military is beating the Russian army through the use of what the U.S. military calls “mobile defense-in-depth.”

Ukrainian ground force units armed with anti-tank weapons succeeded in attacking Russian columns deep into their advancing lines.

After the strikes, the Ukrainians retreat and allow the reformed tank columns to drive forward before hitting them again with more attack-and-retreat strikes.

Because of weather and ground conditions, Russian armor units in some areas have been forced to stick to roads rather than venture cross-country. On unfrozen terrain, tank formations have been seen stuck in mud, and reports reaching the Pentagon indicate that Russians abandoned significant numbers of immobilized tanks and armored vehicles in fields with soft ground.

### *Better supply lines*

Military logistics also favored the Ukrainian military in the early stages of the conflict.

While Russian advances were frequently stalled because of vulnerable supply lines stretched thin across the country, Ukraine's internal supply system has shown an ability to rapidly obtain and employ internationally supplied weapons and ammunition to its forces. As soon as the weapons arrive in Ukraine from outside the country, mainly through Poland, the arms are moved rapidly to front-line units battling the Russians.

The Pentagon regards this feature as a critical element of the Ukrainian military success.

Success on the battlefield is surprising because Ukraine's armed forces are significantly smaller than those of the Russian military.

Kyiv's total active-duty troops number around 196,000, far fewer than Russia's 900,000 active-duty troops.

The Russian military also has nearly 16,000 tanks and armored vehicles to Ukraine's 3,300. Russian artillery includes more than 4,800 pieces compared with 1,800 Ukrainian artillery pieces.

Russia has more than 150 surface-to-surface missile launchers; Ukraine has 90. Similarly, Moscow's air defenses include more than 714 systems, compared with 142 for Ukraine.

Despite the disparities, the Ukrainian military has prevented the Russian force of more than 100,000 troops from taking any major cities.

Nate Barrick, a former military officer and specialist on the Russian military, said the "extremely effective resistance by Ukrainians" contributed to the successes to date.

The Russian army, he said, is struggling because its forces, as with most other militaries, are better at fighting in defensive operations than offensive attacks.

Mr. Barrick said the initial advance largely failed because the Russians deviated from established military doctrine that calls for using overwhelming force.

Instead, the battle plan appears to have involved relative restraint. In a bid to correct the early errors, Moscow has switched to escalating the conflict with heavier air and artillery strikes that target more civilians.

Russia fired a hypersonic ballistic missile for the first time during the conflict last week. The ultra-high-speed weapon can be used for both conventional and tactical nuclear strikes.

“Putin wants Ukraine’s government to cave; he doesn’t want to own it or occupy it, [and] he might end up with an unplanned occupation due to Ukrainian resistance,” said Mr. Barrick, a former strategist with U.S. Special Operations Command. “His plan is being frustrated by Ukrainian resistance.”

Mr. Putin, in remarks reported on state television Wednesday, defended the invasion. “The operation is being carried out successfully, in strict conformity with the approved plan,” he said.

The remarks indicate that the Russian leader is continuing a military campaign of gradual escalation and pressure and does not regard the setbacks as a sign of failure.

#### *The resistance goes on*

The Ukrainian general staff, in a Facebook post on Friday, called the military’s efforts “the heroic resistance of the Ukrainian people to the Russian military invasion.”

The statement said Russian military leaders plan to transfer more forces from a military base in Armenia and that some Russian troops are refusing to fight after clashing with the Ukrainian forces.

About 130 Russian troops from the 20th Guards Motor Rifle Division surrendered, according to the statements.

“The enemy personnel [are] demoralized, suicides and self-mutilation became more frequent,” the statement said.

“The Defense Forces of Ukraine continue step by step to liberate the temporarily occupied territory of Ukraine in all directions,” the statement said.

The battle over the southern Ukrainian port of Mykolaiv is one example of a surprisingly decisive Ukrainian victory.

According to a Wall Street Journal report, Russian artillery fired on the city for weeks until the Ukrainian military launched an effective counteroffensive that drove them out.

The city, a strategic gateway to the main Black Sea port of Odesa, was bombarded since the earliest days of the conflict.

Fierce resistance from the Ukrainian military and local defense teams prevented the city from being taken, although not without heavy casualties on both sides.

Mykolaiv Gov. Vitaliy Kim told *The Journal* that the Russians expected an easy victory and would be welcomed, but instead were driven back.

Placed on the defensive outside the city, the Russians are preoccupied with defending their positions and are using fire against the Ukrainian military rather than firing at targets in Mykolaiv.

“Some of the Russian infantry vehicles and tanks are just lost, wandering around. They don’t have communications, they don’t know where they are,” Mr. Kim said. “Sometimes they appear in our rear and start firing at any civilian car they see because they are afraid someone will jump out of that car with a rocket-propelled grenade and blast them.”

Another key battle for the Ukrainians took place in the early days of the operation when the Russians failed to take control of the military airfield at Hostomel, about 20 miles from Kyiv.

Had the Russians controlled the airfield, it would have permitted large numbers of additional forces to be flown into the country for an assault on the capital.

The Ukrainians recognized the urgency of preventing the airfield from falling. The military launched a multipronged attack that was able to defeat hundreds of Russian paratroopers dropped in the area and prevent further aerial drops, according to Ukrainian government reports of the battle.

## **15. US delivers air defence system to Slovakia**

Agence France-Presse, Mar. 20 (1158) | Not Attributed

The US-made Patriot air defence system is on its way to Slovakia, Defence Minister Jaroslav Nad said Sunday, paving the way for Bratislava to possibly deliver similar hardware to Ukraine.

NATO member Slovakia said this week it was willing to provide its Russian-made S-300 anti-aircraft system to Ukraine but only on the condition that it received a substitute to avoid an Alliance security gap.

US President Joe Biden promised to help Ukraine get air defence systems with a longer range than the shoulder-borne Stinger missiles already on the ground, but to do so without entering into direct conflict with Russia.

The old S-300 system would be an ideal weapon since the Ukrainian army is already familiar with the hardware.

“I can confirm that the first units to deploy the anti-aircraft Patriot system are gradually arriving,” Nad said on Facebook, adding the delivery would continue over the next few days.

On Friday, the Netherlands said it would deploy a Patriot battery to the Sliac military base in central Slovakia, and Germany confirmed it would send two more batteries to the country.

Nad reiterated that in the current circumstances, the Russian system had no future in the Slovakian armed forces after the invasion of Ukraine.

Bratislava would instead seek to replace the system with another that would be more compatible with Slovakia’s allies and offer better defence, he said.

Nad added the Patriot system would be temporarily based at Sliac, noting that there would be further consideration about where to deploy the hardware that “covers the largest possible territory in Slovakia”.

## **16. Signed up to fight, some foreigners wait in frustration**

Washington Post, Mar. 21 (0115), Pg. A1 | Sudarsan Raghavan

KYIV, Ukraine -- Before he decided to buy a one-way plane ticket to Ukraine, Adam worked two jobs, as a security guard and as a cashier at a dollar store. He owned guns and fired them at shooting ranges, but the only fighting he had ever done was in mixed martial arts classes.

That didn’t stop the tall, lanky 24-year-old from Thousand Oaks, a Los Angeles suburb, from flying to this war-torn capital earlier this month. He joined a new international legion set up to fight Russian forces about 15 miles outside the city.

Adam, sporting camouflage pants, is unfazed by his inexperience in combat. He will rely, he said, on sheer determination - to save Ukraine and protect American values.

“Democracy and freedom are very important to the whole world,” said Adam, seated in the lobby of a Kyiv hotel, along with other foreigners dressed in their new military camouflage who have joined his unit. “What [Russian President Vladimir] Putin is doing is simply wrong. And Ukraine is the underdog, so they need help.”

Since Russia invaded Ukraine, thousands of Americans and other foreign nationals have signed up to fight for Ukraine, answering a call to action by Ukrainian President Volodymyr Zelensky. Now, with the conflict in its fourth week, a growing number of foreign volunteers are flowing into the capital, signing contracts and receiving weapons and combat training before being deployed to one of the numerous front lines of the war.

They have been compared to the 32,000 foreigners, mostly Americans and Europeans, many of them equally unprepared, who joined the republican forces in Spain's 1936-1939 civil war. That conflict became a losing battle against nationalists led by Gen. Francisco Franco, with the support of Nazi Germany and the fascist Italian government of Benito Mussolini.

In Ukraine's brutal modern war, though, the romance of adventure and political convictions can quickly vanish as volunteers get pounded by airstrikes, Grad rockets and artillery shells, or engage in urban warfare on the streets of cities.

While some experienced American veterans of wars in Afghanistan and Iraq are said to be among the volunteers, many of these would-be fighters, like Adam, are novices at best.

They say they do share a sense of righteous conviction. They've seen the images of civilians being killed by Russian bombardments, and like those who went to Spain, they believe they are on the right side of history.

"I've got very little military experience, but I am willing to go and fight and die with this guy," said Brian, a Canadian business analyst, referring to Adam standing nearby, "because my Ukrainian relatives are here."

"I have been a hunter all my life," Brian said. "I got assigned to a sniper team here. I am going to kill every ... Russian I can," he said, using an expletive to describe Russians.

"Never killed a man in my life, but ... I am going to enjoy [it]."

All the foreign volunteers interviewed for this article did not want their last names to be used. Some were concerned about their security, while others wanted to protect their relatives or had not yet told their families they were in Ukraine to fight the Russians.

It remains unclear what added utility the arriving foreign recruits can bring as soldiers, medical aides or logistics personnel on the battlefields.

And the government's volunteer program appears to be disorganized at times, according to interviews with five volunteers and an ethnic Georgian commander who has enlisted Americans and other foreigners into his own paramilitary force in Ukraine. Some would-be fighters are processed in their home nations. Others are landing in the capital without contacts or speaking the language, hoping that someone will get them trained and shipped to the front.

If nothing else, the foreigners may be useful for public relations purposes, demonstrating the global support for Ukraine.

“This is a way of tying in populations from other countries to the Ukrainian war and the outcome of the war,” said Ilmari Kaihko, an associate professor of war studies at the Swedish Defense University who has researched Ukraine’s conflict. “The political might be more important in the long term than the actual military contribution.”

But there is concern that some of these American and other Western volunteers could become liabilities on the battlefield. If Americans get captured by Russian forces, they could become fodder for the Kremlin’s propaganda machine, held up as evidence that Ukraine’s resistance is really an American and Western plot. If they get killed, it could bring more pressure on the United States to retaliate.

Adam just wants to get on the battlefield as soon as possible. His first choice, he said, is to be a medic because he took a first aid class in the United States, he said. His second choice?

“A sniper,” he said.

He has no experience at either job.

In the days after the Feb. 24 invasion, Adam said, he couldn’t stop watching the news. As a Jew with dual U.S.-Israeli citizenship, he said he saw similarities between the Russian assault on Ukraine and Israel’s conflict with the Palestinians. He believed that both Ukraine and Israel were “being attacked unprovoked” and that both nations needed more military help to fight their enemies.

He was working odd jobs and getting a degree in automotive technology at a community college in the San Fernando Valley. “Not much going on at home,” Adam said.

He said he liked “guns, cars, building stuff, basketball, sports and MMA,” referring to mixed martial arts, the sport where fighters battle inside a cage. At shooting ranges, Adam said, he would “shoot moving targets and practice pulling out my weapon and reloading.”

For months, he was planning to move to Israel and join the Israel Defense Forces, he said. But he decided to make a stop in Ukraine first.

Adam didn’t know much about the county, but he felt he knew Eastern Europe because his family descended from Polish and Lithuanian immigrants. He didn’t tell his parents, three sisters and brother that he was going to fight the Russians, he said. He told them instead that he was going to help Ukrainian refugees entering Poland.

He didn’t contact the Ukrainian Embassy or Consulate. Nor did he log into its recruitment website, [fightforUA.org](http://fightforUA.org), where foreign volunteers are supposed to register and learn about the process of joining Ukraine’s armed forces, Adam said.

“I only found out about [fightforUA.org](http://fightforUA.org) when I was already here,” he said.

He flew to Istanbul and then to Warsaw. He hitched a ride to the border and crossed into Ukraine, passing through the western city of Lviv and finally reaching Kyiv.

As many as 20,000 foreigners have expressed interest in joining the International Legion of Territorial Defense of Ukraine, as it is officially called, according to the Ukrainian government. That includes an estimated 4,000 Americans, an official with the Ukrainian Embassy in Washington told The Washington Post last week.

They had to sign contracts saying they will fight until the end of the war. Other volunteers said they were told the contracts meant Geneva Conventions rules would apply if they were captured or killed, though experts say it's unclear if they would be treated with full prisoner of war status.

Each volunteer would receive a salary of roughly \$3,000 a month, the same as a soldier, said Yaroslav, a Ukrainian military officer and head organizer of the International Legion in western Ukraine who declined to give his last name for security reasons.

There are already concerns about the international legion. Volunteers complain of delays in contracts, extensive paperwork, not getting weapons or training quickly enough, and days of waiting before getting assigned to battlefield units.

“There is a big bureaucracy, even now when there is war, and those guys have to experience that bureaucracy,” said Mamuka Mamulashvili, commander of the Georgian National Legion, a paramilitary force that has been fighting Russian separatists and forces in eastern Ukraine for eight years. “For me, it seems very amateur.”

He said “there is a very big flow” of inexperienced Americans and foreigners wanting to fight in Ukraine. “We cannot just take some guy from Brooklyn who wants to fight on the front line,” he said, adding that anyone with no military experience is turned away from his force.

Yaroslav says they are not disorganized. He said there is a thorough vetting process and only those with battlefield experience are allowed to fight.

“When they don’t have any experience, they aren’t useful here. We tell them they can be volunteers for something else.”

Foreigners can also join other Ukrainian militias that have lower requirements to join and allow volunteers to leave more easily for family or work reasons. All could face risks on the battlefield, and not just from bullets and bombs: A spokesman for Russia’s Defense Ministry, Igor Konashenkov, recently described the foreign volunteers as “mercenaries” who, if caught, could be “prosecuted as criminals.”

Legally, Americans can take part in another country's war. But the Biden administration has urged U.S. military veterans and other Americans not to join the Ukrainian forces and to leave if they are already in the country.

Kelso, another volunteer, didn't listen. The Montana-born construction worker left his job after seeing on the news "innocent civilians being directly targeted and attacked," said the tall, slim former U.S. soldier, who was also in Adam's group of foreign volunteers.

He said he had served in the U.S. Army for four years after high school, but had never seen combat. "This is my first war," Kelso said.

He registered on the Ukrainian government's recruitment website and filled out the forms. But he didn't hear back for days. "I am not going to wait for an email response while there are people dying," he said.

So, with some money saved, he paid \$700 for a one-way flight to Poland. He carried warm clothes, a sleeping bag, medical supplies, family photos and a bulletproof vest a friend had donated. When he arrived at the border, he was connected to people with the International Legion, he said.

"I do believe that God is on our side here," Kelso said. "We are on the side of good. What the Russians brought is pure evil."

Steps away stood other volunteers, among them a German who said he had served in Afghanistan for 4½ months with the German military, part of the NATO security forces there, and a Scottish grandfather who said that he was a British army veteran and that he had fought against the Islamic State in Syria with the YPG, or the People's Protection Units, a mainly Kurdish militia.

Some have been waiting for nearly 10 days for their contracts and other paperwork to be approved.

Zelensky "said we would be welcome here and we would be armed and ready to go," said Rob, 61, the grandfather from Edinburgh. "We should be at the front lines. There are young Ukrainians who are at this moment dying. And we are here."

"I came here to fight for Ukraine," Rob said.

Adam has not told his mother that he's part of a fighting unit, despite her concerns about his well-being expressed in messages on WhatsApp.

"I don't really need her to ruin my mental aspect right now," Adam said. "I am here on a mission."

Minutes later came the sound of an air raid siren, from an app on Adam's phone, and a message came up in Ukrainian. "I can't read it," Adam said. "But I know there is a missile somewhere."

On Saturday, when reached by phone, Adam was angry and emotional. Despite the legion's assurances of proper vetting, he was now in the northern section of the capital with a territorial defense unit mostly composed of Ukrainian civilians turned militiamen.

Adam still hadn't received a bulletproof vest, a helmet - or a weapon. And he could hear the sounds of shelling, he said.

"I have been here 15 days now and still nothing is happening," he said in a phone interview. "I am not putting up with that."

"They expect me to guard the base with no guns, no armor, no vest, no helmet and no knowledge of the Ukrainian language," he continued. "It makes absolutely no sense. I am not going to stand around and get hit with a missile with no guns or nothing. If am going to die, I'd rather get to the front line and do that."

So he was now trying to join another unit closer to the front line.

Adam said he intended to get as close as possible to the city of Irpin on Kyiv's northern fringes, a volatile battle zone where three journalists were recently killed.

"I got all the way here by myself. I will be just fine," he said.

## **17. On NATO's eastern edge, high stakes for exposed Baltics**

Washington Post, Mar. 21 (0115), Pg. A13 | Missy Ryan, Michael Birnbaum, Paul Sonne and Steve Hendrix

TALLINN, Estonia -- Late last month, Estonia's foreign minister, Eva-Maria Liimets, flew into Kyiv to join her counterparts from fellow Baltic nations in an expression of solidarity with Ukraine as tensions mounted with Russia.

Like Ukraine, the three Baltic states - Latvia, Lithuania and Estonia - were once part of the Soviet Union. Unlike Ukraine, they had joined NATO in the early 2000s, and now enjoy the protection the alliance's mutual defense guarantee provides.

After she arrived, Liimets, a soft-spoken career diplomat, took a walk around central Kyiv's cobblestone streets in the cold night air. A tense calm suffused the city.

Early the next morning, a little before 6 a.m. on Feb. 24, Estonia's ambassador in Ukraine called her with an urgent message: President Vladimir Putin's invasion had begun. Like it was for millions in Ukraine - where the

airspace was now closed and roads were quickly jammed by people trying to flee - the high stakes of the slow-building showdown with Russia were starkly apparent.

Within minutes, Liimets packed her bags and was on her way to Estonia's nearby embassy, and then, escorted by Ukrainian security, in a convoy headed west toward the Polish border. As they navigated droves of fleeing residents - it took more than four hours to get out of Kyiv - she could hear the sound of distant shelling.

As Russia presses its invasion deeper into Ukraine, Baltic leaders say the world has finally woken up to the admonitions they have been making for years: that Putin is prepared to use force, like he did in Georgia, Crimea and eastern Ukraine, to advance his political goals.

"Unfortunately, we were right," Liimets said in an interview. Putin's action in Ukraine, she said, "shows that Russia has not felt enough international pressure and they could continue with their ... plan to invade one of their neighboring countries."

As the global implications of Putin's assault set in, Baltic nations' appeals for greater deterrence are translating into additional troop and aircraft deployments. Already in recent months, new NATO and U.S. forces have been dispatched to the region. In Estonia, a British-led force of some 2,500 NATO troops conducts training and exercises with local forces. Additional NATO forces are there for the Baltic air policing mission, which now includes American F-35s and British and U.S. F-16s. There are also American F-35s in Lithuania.

Such forces provide valuable reassurance for a country like Estonia, which has an active-duty force of 4,000 troops, and no combat aircraft.

At the same time, the region's leaders are urging the bloc to do even more to bolster deterrence along its exposed eastern flank by abandoning a decades-old prohibition on permanent NATO basing there. They also want an expansion of the "air policing" mission over the Baltic Sea and the placement of NATO air defense systems, like Romania and Poland already have.

Lithuanian President Gitanas Nausėda issued a stark warning this month, saying that Putin "will not stop in Ukraine."

The NATO reinforcements come after years in which Baltic officials say their fears were dismissed by much of Europe as paranoia or some kind of post-Soviet stress disorder. Even after Russia launched the first state-on-state cyberattack in 2007, a digital assault on Estonia over its decision to relocate a Soviet-era monument, NATO's military planners moved slowly, drawing up detailed defense plans for the region only after Russia's annexation of Crimea in 2014.

Across the Baltic countries, residents are showing their support for Ukraine, hanging blue-and-yellow flags and protesting outside Russian embassies, and taking what action they can to push back against Putin.

In Lithuania, a volunteer corps of online “elves,” including at least one member of Parliament, methodically debunks and derides Russian trolls and bots. Others post five-star reviews of Russian hotels and restaurants merely as a way of including photographs and data about Russian attacks on Ukrainian civilians. A popular app automatically connects users to one of 40 million randomly generated Russian phone numbers and provides tips on starting a conversation about Ukraine when the call is answered.

“Our biggest weapon is that we understand the Russians and we speak their language,” said Aleksandra Ketleriene, 34, an online reporter for the national broadcasting service.

A large portion of the region’s population remembers the Soviet occupation, which ended in 1991. During the decades of Soviet rule, the Kremlin lured ethnic Russians to the Baltics by giving them better jobs and better housing than what was available to local residents, the most rebellious of whom were sent to prison camps in Siberia. When the Soviet Union collapsed, Russians who were left behind, especially in Latvia and Estonia, posed a challenge for local policymakers, who faced the difficulty of integrating large numbers of people who looked to Russia as their political and cultural homeland.

“The Ukrainians are fighting for us,” said Dainius Navikas, a management consultant in Vilnius, the Lithuanian capital. Last week, he donated a vehicle to be converted to military use and delivered to Ukrainian fighters as part of a private aid campaign that has already netted more than 17 million euros from Lithuania’s 2.8 million citizens. “If they lose, we could be next.”

Others are making preparations for what they fear might be an eventual Russian assault. At social gatherings in Riga, capital of Latvia, young families swap details of their plans to evacuate further west should it become necessary. Some are laying backup plans for their children to leave the country without them if need be. In the Estonian capital, Tallinn, residents are checking their basements in case they need to use them as shelters. In the university town of Tartu, one grocery store’s shelves were empty of iodine, the solution that protects against radiation exposure after a nuclear attack.

“So far we are not being threatened, as far as I understand,” said Dima Golubevs, a 40-year-old Latvian video producer at a recent protest outside Russia’s embassy in Riga. But he noted that he was still a tiny bit nervous about whether NATO would come to the aid of Latvia in the event of a Russian invasion.

“I can say 99 percent I feel safe,” Golubevs said. “But 1 percent is still a lot.”

Even as European leaders show a united front in support of Ukraine, some Baltic officials feel a more urgent threat to their security than do other NATO nations. Last week, Lithuania’s Parliament approved a resolution calling for a no-fly zone over Ukraine, a step the United States and other NATO leaders have said they will not take because it could trigger war with Russia.

While Baltic nations want to support Ukraine, officials feel constrained in the military aid they can supply, mindful of the need to keep weaponry in reserve in case they need it themselves.

More than a frontal attack on NATO, some officials worry about the possibility that Putin could launch a smaller maneuver to show that NATO is weak - for example, seizing an island off the coast of Estonia - or renew hybrid warfare, like the cyberattacks that struck Estonia in 2007.

“If he wins in Ukraine, it will legitimize war for him” as a way to achieve his goals with other countries, said one Baltic official, who spoke on the condition of anonymity to talk frankly.

Despite the stepped-up defenses, there is also concern that the West might relax its resolve, either due to a negotiated settlement between Ukraine and Russia or because of the high cost of economic sanctions on Russia - with potentially problematic results in Eastern Europe.

“My biggest fear is that the minute there is the slightest concession from Russia, countries will rush to lift these sanctions,” said Toomas Ilves, who was Estonia’s president from 2006 to 2016.

While the world may now share the Baltics’ perspective more than ever before, Ilves said, “there is little joy in being right.”

## **18. Is an EU Army Coming?**

*Russia’s war in Ukraine is turning the European Union into a serious military player*

ForeignPolicy.com (Interview), Mar. 20 (1338) | Elisabeth Braw

The war in Ukraine, politicians and pundits agree, is the European Union’s sudden birth as a serious military player. Germany has announced that it will dramatically increase its defense spending and is sending weapons to Ukraine—a previously unthinkable development. The European Union, heretofore mostly known as an outfit that voices concerns about military aggression but does nothing, has already sent Ukraine military aid worth more than half a billion dollars.

But what exactly the EU’s military role should be remains painfully unclear: Member states have widely different opinions on the matter, and European security is of course already being looked after by NATO. What, exactly, can the EU do to grow its military muscle without causing affront to its Brussels neighbor? Severe crises below NATO’s Article 5 threshold, in a way, pose an opportunity for the EU to make a real military contribution. Its Military Committee—composed of member states’ defense chiefs—has the daunting task of mapping a course. At the center sits its chair, Gen. Claudio Graziano.

Graziano, who spent the first part of his career within Italy's elite Alpini mountain infantry, was previously Italy's chief of defense and chief of the army. He also served in Afghanistan as commander of the Kabul Multinational Brigade and commanded the United Nations' peacekeeping mission in Lebanon. He assumed his EU post in 2018 after being elected by his fellow EU defense chiefs. The following interview has been edited for length and clarity.

*Elisabeth Braw: The EU has suddenly emerged as a serious actor in the security of Europe, and EU governments are increasing defense spending. Is the EU militarily stronger now than it was two months ago?*

*Claudio Graziano: Absolutely yes. Russia has brought war back to Europe, which was something so serious and dangerous that it wasn't even considered possible. Even for people who had read about the risk, it was impossible to believe it would happen. When it did happen, it was a shock of immense magnitude that provoked a huge common response from the European Union.*

At the Versailles meeting [on March 10-11], the heads of state and government discussed how the European Union can live up to its responsibilities in this new reality. Doing so requires a clear political will, and now the European Union is more united than ever. This gives an incredible push to building a more concrete and credible European defense union. And a defense union is really the only possible answer to this crisis.

We know that's a long path, but we know that we have to do it now because later will be too late. As part of this effort, we'll start developing an EU Rapid Deployment Capacity that will give us the chance to deploy a modular and multidomain force of up to 5,000 troops that can intervene in nonpermissive [hostile] environments.

This force will also have strategic enablers that have in the past normally been provided by the United States—for example, command and control structures, strategic airlift, strategic transport, intelligence surveillance and reconnaissance capabilities, cyberdefense, unmanned air vehicles, space communication assets, electronic warfare systems, anti-missile defense, and I hope in the near future main battle tanks and next-generation fighter jets.

*EB: But the EU already has battlegroups that have never been deployed. How can you be sure that this deployable force will be successful when the battlegroups have not?*

*CG: The EU battlegroups are designed to be used for stabilization management [crises less severe than war], and it's true that they've never been used. That's because we never reached an agreement among the EU member states on certain issues, such as cost and who was supposed to lead the effort. The other complication was that they shouldn't compete with NATO. In the past, I served in NATO missions for many years, including in Afghanistan, and NATO does foreign deployments well. It also has at least nine rapid reaction corps, and they're much bigger than the EU battlegroups. Our new EU Rapid Deployment Capacity is an effort to answer a security need without competing with NATO. But to be a real answer, the Deployment Capacity must also be used in exercises. And having it on the roster will send a message of European unity to Russia and others.*

*EB: Speaking of unity, Poland wants to give Ukraine its MiG-29 fighter jets but doesn't want this to be just a Polish initiative. The United States said no because it didn't want to be drawn into the war in the active way that sending aircraft from Ramstein Air Base in Germany would mean. Can the EU step in to help Ukraine now?*

*CG: The provision of combat aircraft is currently not on the agenda. But you have to remember that on Feb. 27, only 72 hours after Russia's invasion of Ukraine, the EU adopted an unprecedented aid package to help the Ukrainian armed forces defend Ukraine's territory and population. This aid package included lethal weapons. That's a milestone! It's even more than a historical moment. Remember that in 2013 we weren't able to provide anything to Mali. [Editor's note: Despite having monitored the 2012 Islamist takeover of the country's north closely, the EU failed to intervene militarily. Instead, France launched an intervention in which it was assisted by Germany, Denmark, and other EU member states.]*

Regarding lethal weapons, we're sending whatever the Ukrainians need most—for example, ammunition and anti-tank weapons. This will help the Ukrainians fight for freedom, and their will to do so is the most important surprise in this war. Neither the Russians nor we probably understood how far the Ukrainians would go to defend their freedom. It's so different from Afghanistan this past summer, when we saw the Afghan armed forces melt away.

*EB: What is your own role in this growing military role the EU is taking on? Does the Ukrainian government come to you directly with requests for military assistance?*

*CG: It works a bit differently. The Ukrainians tell us what they need, the EU member states check what they have and can give to the Ukrainians, and we—through the EU military staff—function as the clearinghouse.*

*EB: One idea that keeps being floated in every discussion about the EU and its military capabilities is the prospect of an EU Army. It's clearly not feasible, especially considering that it has taken Germany and the Netherlands years of painstaking work to establish their joint panzer division. Short of complete military integration, what can the EU do to strengthen its military capabilities, beyond increasing defense spending, of course? As we know, countries like to spend money on weapons made by their own companies.*

*CG: Integrating armed forces really is extremely difficult, but it's not impossible. It starts with the political will. But what we can do first to strengthen our military capabilities is to improve interoperability. After this war, we need to conclude that life won't be as it was before and that we've made a backward leap of at least 70 years.*

How do we improve interoperability? Consider this: The U.S. Army, and even the Russian army, uses only one type of main battle tank. We Europeans operate 17 different kinds. That creates enormous problems of maintenance and supply and of training together. Our navies and air forces have similar problems. We're talking about a total of 180 different platforms, while the United States has 30. This really is anachronistic and unacceptable, especially considering that we collectively spend more than 250 billion euros [about \$276 billion]

a year on defense, which is much more than what Russia spends. Yes, we need to spend more, but we also need to spend better by avoiding such duplication.

And it's not just about money. We have to have a mindset that we want to train together and work together. And when you deploy together, you become credible. When I was a lieutenant, I was part of a NATO war group that did exactly this; we deployed to countries on NATO's outer edges, such as Norway and Turkey. It was a very well-trained and credible group. Now that we're going back in history in European security, the EU should be able to do such things, too.

*EB: When will the EU be able to deploy forces?*

*CG:* We've set ourselves the target of 2025 for the Deployment Capacity to be fully operational. That's an ambitious term because it means you need to have all the strategic enablers I mentioned earlier. Then again, you have to remember that the EU is not in charge of collective defense. That's a NATO responsibility. But in the current crisis, we the EU responded immediately not just by sending military aid to Ukraine but by providing military assistance to other countries, too. At the moment, aircraft coordinated by the EU are, for example, flying reconnaissance missions over Bosnia and Herzegovina. That sends a message of solidarity to the people of Bosnia and a message to malicious actors that we're ready to react.

*EB: Your fellow army general Oleksandr Sirsky, commander of the Ukrainian ground forces, faces an unbelievably difficult task. What is your message to him?*

*CG:* I want to send him a message of support. Col. Gen. Sirsky is also in charge of the defense of Kyiv, and Russian President Vladimir Putin's original plan was to quickly capture Kyiv. Thanks to him and his troops, that didn't happen. I want to tell him that we're on their side, we'll remain on their side, and that he can count on us.

*--Elisabeth Braw is a columnist at Foreign Policy and a fellow at the American Enterprise Institute, where she focuses on defense against emerging national security challenges, such as hybrid and gray-zone threats. She is also a member of the U.K. National Preparedness Commission*

## **RUSSIA**

### **19. Putin Is Seen as Shifting to Plan B**

Wall Street Journal, Mar. 21 (0200), Pg. A1 | Michael R. Gordon and Alex Leary

After Russian forces failed to secure a quick victory over Ukraine, senior U.S. officials see signs the Kremlin is shifting to a new strategy to secure key territorial objectives while seeking leverage to compel the Ukrainian government to accept neutrality between Russia and the West.

The U.S. and its allies had widely interpreted Russian President Vladimir Putin's initial objectives to include the seizure of Kyiv in a matter of days, and the replacement of Ukrainian President Volodymyr Zelensky's government with a pro-Russian regime.

None of that has come to pass. A senior U.S. official said indications suggest more than three weeks of grueling combat -- in which Ukraine has put up fierce resistance to Russian forces -- has prompted Mr. Putin to adjust his tactics.

The new assessment of Mr. Putin's intentions, which is shared by senior officials within the Biden administration, is to compel Kyiv to accept Russian claims to Ukraine's southern and eastern territories. Having seized both Crimea and regions of Donbas in 2014, Russia seeks to secure a "land bridge" between western Russia and the Crimean Peninsula, and to expand Russian control of the Donbas region.

Mr. Putin would also continue his military pressure, including the pummeling of Ukrainian cities, calculating that it will lead Mr. Zelensky to abandon his hopes of joining the West and agree to a neutral status and other Russian demands.

Should Mr. Putin's demands for territory and neutrality be rebuffed, he is expected to try to hold all of the ground his forces have taken, and fight on, U.S. officials said. "Based on our assessments militarily, it does appear that he is reverting to siege tactics," another U.S. official said.

For Ukraine's beleaguered citizens, the shifting strategy means weeks -- possibly months -- of attacks from a weakened Russian military often content to fire missiles and artillery from a distance, they said. This shift is designed to pressure Mr. Zelensky's government into giving up territory and ceding security arrangements.

The assessment of Mr. Putin's "Plan B," as one official called it, comes with a number of important caveats. U.S. officials note Mr. Putin might expand his war aims, should his military begin to have more success against Ukraine's forces. The status of the capital remains an open question, and given stout Ukrainian resistance, it is unclear whether the Russian military can marshal sufficient troops to tightly cordon off Kyiv and take the Ukrainian capital, some U.S. officials said.

The interpretation of Mr. Putin's strategy isn't the result of a formal intelligence community assessment, but is the view of some U.S. officials with access to classified information who are not saying the strategy will work. Some analysts note the difficulty of assessing Mr. Putin's goals and objectives, and warn against reading too much into battlefield developments.

"His objective has not changed at all," said Daniel Fried, a former senior State Department official who served as U.S. ambassador to Poland. "What has changed is his tactics."

“The quick decapitation of the Ukrainian government didn’t work,” Mr. Fried said. “Now he just wants to pound them because they are resisting and therefore it must be purged. It’s Stalinesque.”

At present, Russian forces are faced with enormous challenges, including faulty logistics, a shrinking supply of precision-guided munitions and growing casualties, which could include as many as 7,000 Russian troops killed in action, according to U.S. calculations.

In Mariupol and other cities, his forces have reverted to some of the siege tactics they employed in Grozny in 1999 and 2000 during the second Chechen war, when Mr. Putin rose to power as prime minister and then president.

In Chechnya, Russian forces sought to gain control of a major city in a Russian territory that is smaller than New Jersey. In Ukraine, Russia faces the challenge of trying to gain control of multiple cities in a country that had a population of more than 40 million before more than three million Ukrainians fled, and is larger than France.

After weeks of tough fighting, Russian troops have pushed into the streets of the port city of Mariupol, an important strategic objective for Moscow as it seeks to establish a corridor from the Crimean Peninsula to western Russia. Seizing control of the city would give the Russians a battlefield victory, though one achieved at a high cost.

“We’ve seen deliberate targeting of cities and towns and civilians throughout in the last several weeks,” U.S. Defense Secretary Lloyd Austin said Sunday to CBS News. “He’s taking these kinds of steps because. . .his campaign is stalled.”

After initial rounds of negotiations, Ukraine and Russia remain far apart on key issues, including the Kremlin’s demands that the Zelensky government recognize Russian sovereignty over Crimea, formally cede control of the Donbas region and renounce its longer-term aspiration to integrate with the West, including its goal of eventually joining the North Atlantic Treaty Organization.

John Herbst, a former U.S. ambassador to Ukraine, agreed that the Russian military had shifted its tactics on the battlefield, but said there was no indication that Mr. Putin had backed away from his maximum demands.

Mr. Putin’s main purpose in agreeing to talks with Ukraine, Mr. Herbst said, was to encourage the West to offer concessions while creating the impression for the Russian public that he is open to diplomacy. The talks, he said, aren’t being led on the Russian side by a top-level official.

“I think he began the negotiations at a much lower level because he realized things were not working out on the battlefield,” Mr. Herbst said. “He is still trying to win the war on the battlefield, but he has in no way publicly endorsed anything other than his maximalist checklist.”

President Biden is traveling to Brussels for a NATO summit on Thursday and will also participate in a European Council meeting. The trip comes as Mr. Biden, a Democrat, has received both praise and criticism at home for his handling of the crisis. Some lawmakers continue to push a plan that would supply Soviet-built MiG-29 combat jets to Ukraine, an idea Mr. Biden and his advisers have rejected.

Mr. Zelensky has sought to apply pressure on Mr. Biden and leaders in other countries to establish a no-fly zone to shield his country from air attacks. The U.S. and NATO nations have rebuffed that proposal and are moving to send more air defense systems to Ukraine so the Ukrainians can better defend their airspace on their own.

Last week, Mr. Biden said the U.S. would send an additional \$800 million in security assistance to Ukraine, including Stinger anti-aircraft systems to help Ukraine defend its airspace and Javelin anti-tank missiles.

Russia said that it has fired two hypersonic missiles in recent days in an apparent effort to show it could overcome a no-fly zone and any air defenses Ukraine might field, experts said. Mr. Austin said in his television appearance that he wouldn't "confirm or dispute" that the Russians had used such a weapon. But he added the missile wasn't "a game changer."

## **20. Blame Game Begins For Russia Agencies**

Wall Street Journal, Mar. 21 (2020), Pg. A6 | Warren P. Strobel and Michael R. Gordon

WASHINGTON -- Recriminations and finger-pointing have begun within Russia's spy and defense agencies, as the campaign that Moscow expected to culminate in a lightning seizure of Ukraine's capital has instead turned into a costly and embarrassing morass, U.S. officials said.

The blame game, which includes the detention of at least one senior Russian intelligence official, doesn't appear to pose any immediate threat to Russian President Vladimir Putin's iron grip on power, but the U.S. officials are watching the machinations closely.

A U.S. official described as credible reports that the commander of the FSB intelligence agency's unit responsible for Ukraine had been placed under house arrest.

The official, in an interview, said bickering had broken out between the FSB and the Russian Ministry of Defense, two of the principal government units responsible for the preparation of the Feb. 24 invasion.

Central Intelligence Agency Director William Burns told Congress earlier this month that Mr. Putin had planned to seize Ukraine's capital of Kyiv within two days, suggesting the Russian leader expected minimal resistance.

Russian forces instead encountered fierce Ukrainian counterattacks and their ground advance stalled amid mounting casualties. Some U.S. government calculations estimate as many as 7,000 Russian troops have been killed in action, though officials caution those are uncertain estimates.

Current and former U.S. officials say Russian intelligence agencies often shy away from telling their bosses bad news and may have reinforced Mr. Putin's views, which he has expressed publicly, that Ukraine was a dysfunctional country whose leadership would rapidly collapse as some of its citizens welcomed Russian troops.

"It is hard to imagine some senior intelligence person talking with Putin and not telling Putin what he wants to hear, especially if it is a belief that is deeply held, like Putin's beliefs about Ukraine," said Jeffrey Edmonds, a former CIA and National Security Council official specializing in the region.

"When it comes to this guy, it's also clear that the culture of 'someone is at fault and is going to pay' is clearly still operative," said Mr. Edmonds, now at the nonprofit research organization CNA, of the Russian president.

The Russian Embassy didn't respond to a request for comment.

The FSB officer said to be under investigation and house arrest is Col.-Gen. Sergei Beseda, head of the intelligence agency's Fifth Service, also known as the Service for Operational Information and International Communications.

Another former U.S. intelligence official who has studied Russia for decades said Mr. Putin, a former FSB chief, helped create the Fifth Service, which operates as the de facto foreign-intelligence arm of the overall agency, which is primarily focused on internal security. It would have shared responsibility for preparing the way for the invasion of Ukraine, the former official said. That, he said, likely included a plot made public by the U.S. and U.K., but denied by Russia, to eliminate Ukraine's leadership and install pro-Moscow successors.

Russian investigative journalist Andrei Soldatov, who co-wrote the first report on Mr. Beseda's house arrest, said Mr. Putin may be blaming the FSB for failing to bring about the rapid collapse of the Ukrainian government that he had expected.

"Putin himself has been absolutely sure that he understands Ukraine really well," said Mr. Soldatov, who is a senior fellow at the Center for European Policy Analysis, a nonpartisan Washington think tank. "He expected his agencies, and first of all the FSB, to do some groundwork like cultivating political groups that could provide support for the Russian invasion. And now obviously that's not what is happening."

The Russian leader, Mr. Soldatov added, may also suspect the FSB of leaks, given U.S. intelligence agencies' detailed knowledge of the Russian invasion plan, some of which Washington made public.

Andrea Kendall-Taylor, who was U.S. deputy national intelligence officer for Russia and Eurasia from 2015-18, said Russian security services have overlapping responsibilities and compete for favor from the Kremlin.

Mr. Putin appears to be singling out individuals to “scapegoat and pass the blame,” said Ms. Kendall-Taylor, now at the Center for a New American Security. “I think he’s in a much more precarious position now.”

## **21. For Putin, ‘Truth’ Is Just Another Front Line**

New York Times, Mar. 21 (0300), Pg. A1 | Steven Lee Myers and Stuart A. Thompson

In the tense weeks before Russia invaded Ukraine on Feb. 24, Russian officials denied that it planned anything of the sort, denouncing the United States and its NATO allies for stoking panic and anti-Russian hatred. When it did invade, the officials denied it was at war.

Since then, the Kremlin has cycled through a torrent of lies to explain why it had to wage a “special military operation” against a sovereign neighbor. Drug-addled neo-Nazis. Genocide. American biological weapons factories. Birds and reptiles trained to carry pathogens into Russia. Ukrainian forces bombing their own cities, including theaters sheltering children.

Disinformation in wartime is as old as war itself, but today war unfolds in the age of social media and digital diplomacy. That has given Russia -- and its allies in China and elsewhere -- powerful means to prop up the claim that the invasion is justified, exploiting disinformation to rally its citizens at home and to discredit its enemies abroad. Truth has simply become another front in Russia’s war.

Using a barrage of increasingly outlandish falsehoods, President Vladimir V. Putin has created an alternative reality, one in which Russia is at war not with Ukraine but with a larger, more pernicious enemy in the West. Even since the war began, the lies have gotten more and more bizarre, transforming from claims that “true sovereignty” for Ukraine was possible only under Russia, made before the attacks, to those about migratory birds carrying bioweapons.

Russia’s message has proved successful domestically, where the Kremlin’s claims go unchallenged. Surveys suggest a majority of Russians support the war effort. Internationally, the campaign has seeped into an information ecosystem that allows them to spread virulently, reaching audiences that were once harder to reach.

“Previously, if you were sitting in Moscow and you wanted to reach audiences sitting in, say, Idaho, you would have to work really hard doing that,” said Elise Thomas, a researcher in Australia for the Institute of Strategic Dialogue, referring to disinformation campaigns dating to the Soviet Union. “It would take you time to set up the systems, whereas now you can do it with the press of a button.”

The power of Russia's claim that the invasion is justified comes not from the veracity of any individual falsehood meant to support it but from the broader argument. Individual lies about bioweapons labs or crisis actors are advanced by Russia as swiftly as they are debunked, with little consistency or logic between them. But supporters stubbornly cling to the overarching belief that something is wrong in Ukraine and Russia will fix it. Those connections prove harder to shake, even as new evidence is introduced.

That mythology, and its resilience in the face of fact-checking and criticism, reflects "the ability of autocrats and malign actors to completely brainwash us to the point where we don't see what's in front of us," said Laura Thornton, the director and senior fellow at the German Marshall Fund's Alliance for Securing Democracy.

The Kremlin's narratives today feed on pre-existing views of the war's root causes, which Mr. Putin has nurtured for years -- and restated in increasingly strident language last week.

The strategy to deceive, or at least confuse, international observers was used after the bombing of a maternity ward in Mariupol on March 9.

Twitter and Facebook eventually removed the posts, but gruesome photographs, stamped "Fake," continued circulating across the internet, including on the chat app Telegram.

Another meme gained even more traction, relying on a yearslong campaign in Russia to stoke unfounded fears that the United States was manufacturing biological weapons in Ukraine.

When Russia took such claims to an emergency meeting of the United Nations Security Council, however, it faced withering criticism. "Russia has today brought into the Security Council a series of wild, completely baseless and irresponsible conspiracy theories," the British representative, Barbara Woodward, told the Council. "Let me put it diplomatically: They are utter nonsense."

Russia's accusations about nefarious American activities in Ukraine date back decades, resurfacing in new forms with each new crisis, like the political upheaval in 2014 that led to Russia's annexation of Crimea.

Ukraine is waging an information campaign of its own, aiming to discredit Russia, exaggerate its own military successes and minimize its losses. It has also circulated false reports of heroism, including the martyrdom of soldiers defending an island in the Black Sea and the exploits of an ace fighter pilot in the skies over Kyiv.

By most accounts, Ukraine has so far been winning the information war, led by a powerful social media operation that flooded the internet with its own jumble of anecdotes and myths, bolstering morale among Ukrainians and uniting the Western world behind its cause. The most central figure in their campaign has been President Volodymyr Zelensky himself, whose video messages to Ukrainians and the world have combined bravery with the stage presence of the television performer he once was.

Russia, though, has more tools and reach, and it has the upper hand with weaponry. The strategy has been to overwhelm the information space, especially at home, which “is really where their focus is,” said Peter Pomerantsev, a scholar at the Stavros Niarchos Foundation Agora Institute at Johns Hopkins University who has written extensively about Russian propaganda.

Russia’s propaganda machine plays into suspicion of the West and NATO, which have been vilified on state television for years, deeply embedding distrust in Russian society. State media has also more recently echoed beliefs advanced by the QAnon movement, which ascribes the world’s problems largely to global elites and sex traffickers.

Those beliefs make people feel “scared and uncertain and alienated,” said Sophia Moskalenko, a social psychologist at Georgia State University. “As a result of manipulating their emotions, they will be more likely to embrace conspiracy theories.”

Mr. Putin’s public remarks, which dominate state media, have become increasingly strident. He has warned that nationalist sentiment in Ukraine is a threat to Russia itself, as is NATO expansion.

Yet when the invasion began, it seemed to catch the organs of the propaganda apparatus unprepared. Officials and state media had just spent weeks accusing the Biden administration of exaggerating what Russia claimed were simply regular military exercises, not the buildup of an invasion force.

“Clearly, they did not prepare the information warfare machine,” Mr. Pomerantsev said. “It takes months to prepare something like this.”

That could explain the changing, disjointed nature of Russia’s campaign. The threat of biological weapons in Ukraine -- let alone secret American weapons factories producing them there -- was not cited as a rationale for the “special military operation” that Mr. Putin announced at dawn on Feb. 24. These falsehoods emerged only later.

“They throw stuff out and they see what works,” said Ms. Thomas, the researcher from the Institute for Strategic Dialogue. “And what’s really working for them at the moment is the biolabs stuff.”

The Kremlin’s campaign has gone beyond simply propagating its message. It has moved swiftly to silence dissenting points of view that could cut through the fog of war and discourage the Russian population.

For now, the campaign appears to have rallied public opinion behind Mr. Putin, according to most surveys in Russia, though not as high as might be expected for a country at war.

“My impression is that many people in Russia are buying the government’s narrative,” said Alexander Gabuev, a senior fellow at the Carnegie Moscow Center. “They have doctored images on state-controlled media. Private

media don't cover the war, fearing 15 years in prison. Same goes for people on the social media. Russia has lost information warfare globally, but the regime is quite successful at home."

The question is for how long.

Cracks have appeared in the information fortress the Kremlin is building.

A week after the invasion began, when it was already clear the war was going badly for Russian troops, Mr. Putin rushed to enact a law that punishes "fake news" with up to 15 years in prison. Media regulators warned broadcasters not to refer to the war as a war. They also forced off the air two flagships of independent media -- Ekho Moskvyy, a liberal radio station, and Dozhd, a television station -- that gave voice to the Kremlin's opponents.

Access to Facebook, Twitter, TikTok and most recently Instagram has also been severed inside Russia -- all platforms the country's diplomats have continued to use outside to misinform. Once spread, disinformation can be tenacious, even in places with a free press and open debate, like the United States, where polls suggest that more than 40 percent of the population believes the 2020 election was stolen from former President Donald J. Trump.

"Why are people so surprised that this kind of widespread disinformation can be so effective in Russia when it was so effective here?" Ms. Thornton of the German Marshall Fund said.

As the war in Ukraine drags on, however, casualties are mounting, confronting families in Russia with the loss of fathers and sons. That could test how persuasive the Kremlin's information campaign truly is.

The Soviet Union sought to keep a similar veil of silence around its decade-long quagmire in Afghanistan in the 1980s, but the truth seeped into public consciousness anyway, eroding the foundation of the entire system. Two years after the last troops pulled out in 1989, the Soviet Union itself collapsed.

## **22. U.S. envoy to U.N. decries 'disturbing' accounts of Ukrainians deported to Russia**

Reuters, Mar. 20 (1350) | Ted Hesson and Richard Cowan

WASHINGTON -- Accounts that thousands of residents of Ukraine's besieged port city of Mariupol have been forcibly deported to Russia are "disturbing" and "unconscionable" if true, U.S. ambassador to the United Nations Linda Thomas-Greenfield said on Sunday.

Speaking on CNN's "State of the Union," Thomas-Greenfield said the United States had not yet confirmed the allegations made on Saturday by the Mariupol city council via its Telegram channel.

“I’ve only heard it. I can’t confirm it,” she said. “But I can say it is disturbing. It is unconscionable for Russia to force Ukrainian citizens into Russia and put them in what will basically be concentration and prisoner camps.”

Russia launched a large-scale invasion of Ukraine on Feb. 24, igniting a conflict that has led to more than 900 civilian deaths and nearly 1,500 injuries as of March 19, according to the U.N. human rights office.

Mariupol, a key connection to the Black Sea, has been a target since the start of the war, which Russian President Vladimir Putin calls a “special military operation” to demilitarize and “denazify” Ukraine. Ukraine and the West say Putin launched an unprovoked war of aggression.

The Mariupol city council also said Russian forces bombed an art school on Saturday in which 400 residents had taken shelter, but the number of casualties was not yet known.

Reuters could not independently verify the reports by the city council. The Russian Embassy in Washington did not respond to a request for comment, but Russia denies targeting civilians.

Ukrainian President Volodymyr Zelenskiy called on Saturday for comprehensive peace talks with Moscow.

The United States supports those attempts, Thomas-Greenfield said on Sunday, adding that the negotiations “seem to be one-sided,” with little response from Russia.

The North Atlantic Treaty Organization (NATO) will hold an emergency meeting on Thursday to discuss the conflict and the response of the 30-member alliance.

Poland will formally submit a proposal for a peace-keeping mission in Ukraine at the meeting, Polish Prime Minister Mateusz Morawiecki said last week.

When asked about the Polish proposal, Thomas-Greenfield reiterated President Joe Biden’s commitment to refrain from sending U.S. troops into Ukraine.

“Other NATO countries may decide that they want to put troops inside of Ukraine,” she said. “That will be a decision that they have to make.”

‘TRYING TO DO EVERYTHING WE CAN’

Estonian Prime Minister Kaja Kallas, speaking on CNN later on Sunday, said she would press NATO to strengthen its military capabilities in Eastern Europe and urge all member countries to devote at least 2% of their gross domestic product to defense.

Kallas said the allegations of Ukrainians deported to Russia were reminiscent of thousands of Estonians sent to Siberian labor camps in the 1940s.

“Right now we are in a different position, because we are NATO allies,” she said. “But we are trying to do everything we can to support and help Ukraine to fight this war.”

Turkey is also attempting to mediate a ceasefire in Ukraine, which NATO Secretary General Jens Stoltenberg praised during an interview on Sunday on NBC’s “Meet the Press.”

“Turkey is doing some real effort to try to facilitate, support talks between Russia and Ukraine,” Stoltenberg said. “It’s far too early to say whether these talks can lead to any concrete outcome.”

Earlier this month, NATO rejected Ukrainian calls to set up a “no-fly zone” over Ukraine to help it protect its skies from Russian missiles and warplanes.

When asked on Sunday whether a no-fly zone would be considered if Russia used chemical weapons in Ukraine, Stoltenberg raised concerns that such a step could escalate the conflict.

“Our allies support Ukraine,” he said. “But at the same time it is extremely important we prevent this conflict from becoming a full-fledged war between NATO and Russia that will cause much more damage, much more death, destruction than what we are seeing now in Ukraine.”

### **23. Why Russia’s tank war stalled in Ukraine**

CBSNews.com (Sunday Morning), Mar. 20 (0914) | Not Attributed

The stalled and sputtering spectacle the Russian military is making of itself in Ukraine came as a revelation to General Frank McKenzie – and almost certainly to Vladimir Putin as well. “I am surprised at the problems they were having,” McKenzie said. “It should be very concerning to Russian leadership.”

As commander of U.S. forces in the Middle East, McKenzie has spent the last three years operating in close proximity to the Russians in Syria, and knows their history as one of the world’s great tank armies – all of which has been belied by the first three weeks of war.

“They haven’t been able to maneuver their armor effectively,” McKenzie told CBS News national security correspondent David Martin. “There’s a tremendous history of that, actually, in the Russian military, being able to do deep-armored operations. At the end of the Second World War, they were as good at that as anybody else. But these guys don’t seem to have remembered that.”

“Should heads roll?” Martin asked.

“I would not be happy if that’s the way U.S. forces were performing,” McKenzie replied. “We have non-commissioned officers that are the backbone of the joint force. They’re the people that actually make sure things are done, that continuing actions are taken, that you dig in, that your tanks don’t run out of fuel.”

McKenzie, himself a tank commander as a young officer, watched in disbelief as an entire armored column advancing on Kyiv literally ran out of gas.

“If you’re going to drive and operate a main battle tank as a commander, and I have, then you are thinking all the time about fueling that beast. If you’re not thinking about fueling that beast, then you’re behind. And they appear to have not taken those basic logistical considerations and trying as they move forward.”

Martin asked, “Are you surprised they seem to be sticking to the roads?”

“That’s a lack of training,” he said. “You’ve got to get off the roads to maneuver. The roads are death traps, particularly for armored vehicles, particularly when you’re fighting people that have good anti-tank systems, and the Ukrainians do have good anti-tank systems.”

On Wednesday President Biden promised the U.S. will send 9,000 more anti-tank weapons. “The United States and our allies and partners are fully committed to surging weapons of assistance to the Ukrainians,” he said, “and more will be coming.”

Including the shoulder-fired Javelin, which dives down on the top of a tank where the armor is thinnest. Using everything from the high-end Javelin to the workaday rocket-propelled grenade launcher, the Ukrainians have destroyed several hundred Russian vehicles.

Martin asked, “How much of this is due to Russian incompetence as opposed to Ukrainian skill?”

“That’s a great question, and I think we’re going to have to see how this progresses a little further to be able to finally answer that question. I would say this: the Ukrainians have shown great bravery in defending their country. It’s less clear to me how aggressive and motivated Russian forces are down at the individual soldier level, the platoons that are actually driving on the roads, you know, meeting the enemy.”

Ukrainian resistance foiled Russia’s plan to take the capital of Kyiv with a lightning strike in the opening days of the war. With their vaunted tank army stalled, the Russians have reverted to siege tactics — pounding cities and their residents with rockets and artillery. But they are expected to regroup and try again.

“Is it conceivable to you that Russia could just flat-out fail to take Kyiv?” asked Martin.

“I would be surprised if that outcome happened,” McKenzie replied. “Taking Kyiv is very important to them. I predict they’ll try very hard to take it, and I think there could be a horrific price, actually, to be paid in the civilian population as they move against the city.”

## CHINA

### **24. China Will Work to De-Escalate War in Ukraine, Diplomat Says**

Bloomberg News, Mar. 20 (2256) | Tony Czuczka

China’s top envoy to Washington pledged his country “will do everything” to de-escalate the war in Ukraine, but refused to condemn Russia’s attack and branded such requests “naive.”

“There’s disinformation about China providing military assistance to Russia,” Ambassador Qin Gang said on CBS’s “Face the Nation” on Sunday. China isn’t sending “weapons and ammunitions to any party,” he said, calling Beijing’s “common interests” with Russia an “asset” that could help peace talks.

“Condemnation doesn’t solve the problem,” he added. “I would be surprised if Russia will back down by condemnation.”

Qin’s comments came days after President Joe Biden warned President Xi Jinping of “implications and consequences” should China support Russia’s invasion of Ukraine. Xi assured Biden his country didn’t want the war, according to Chinese readouts of the video call on Friday -- the first between the two leaders since the invasion.

China is walking a diplomatic tightrope as the Biden administration steps up international pressure on President Vladimir Putin to end the attacks. While Beijing has said it opposes the war, it has stopped short of blaming Putin for the invasion that came weeks after Xi declared a “no limits” friendship with the Russian leader.

Hu Xijin, former editor-in-chief of the Communist Party backed Global Times newspaper, said Sunday that Beijing’s “back-to-back” strategic relationship with Moscow was critical to its long-term ability to oppose what he characterized as U.S. efforts to limit China’s rise.

“Two countries -- China and Russia -- resisting U.S. hegemony verses one country facing the U.S. alone are completely different geopolitical dynamics,” he said in a post on China’s Twitter-like Weibo, where he has some 24 million followers.

“If the U.S. carries out extreme strategic coercion against China, with Russia as a partner, China will not be afraid of the U.S. imposing an energy blockade,” he added. “Our food supply will be more secure, as will many other raw materials.” Hu did not post the comments to his Twitter account.

Hu’s pro-Russia comments echoed that of China’s Vice Foreign Minister Le Yucheng in a Saturday speech that framed NATO’s eastward expansion as the catalyst for the war, and equated that policy with the U.S.’s Indo-Pacific strategy, which Beijing views as a plan to contain it.

“The Indo-Pacific Strategy is as dangerous as the NATO strategy of eastward expansion in Europe,” Le told the Fourth International Forum on Security and Strategy via video link. “If allowed to go on unchecked, it would bring unimaginable consequences, and ultimately push the Asia-Pacific into a fiery pit.”

The chorus of support for Moscow in China comes in the wake of what U.S. Ambassador to the United Nations Linda Thomas-Greenfield called an “extraordinarily frank” conversation between Xi and Biden.

“We made our position clear to the Chinese,” she said on CNN’s “State of the Union” on Sunday. “They’re in an uncomfortable position.”

## **INDO-PACIFIC**

### **25. India’s Dependence on Russian Weapons Tethers Modi to Putin**

Bloomberg News, Mar. 20 (1900) | Sudhi Ranjan Sen

For all the success of the U.S.-led campaign to isolate Russia on the world stage, India has stood out as one major democracy that has been reluctant to criticize Vladimir Putin -- and billions of dollars in weapons purchases mean that’s unlikely to change anytime soon.

Prime Minister Narendra Modi’s government is facing more pressure from fellow members of the Quad -- the U.S., Japan and Australia -- to help push Russia toward a cease-fire. After meeting Modi in New Delhi on Saturday, Japanese Prime Minister Fumio Kishida called for more cooperation between democracies while noting Putin’s war has “shaken the global order.” Modi, by contrast, only spoke on economic issues.

Modi is slated to hold a virtual summit later on Monday with Australian Prime Minister Scott Morrison, while U.S. Undersecretary for Political Affairs Victoria Nuland -- who has helped coordinate the American response to Ukraine -- is expected to visit New Delhi later this week.

India, the world's largest buyer of Russian weapons, plans to push back by arguing the purchases are necessary to counter China's growing military assertiveness and its other neighbor, Pakistan. Modi's government will also say the alternatives to Russian weapons are too expensive, according to people familiar with the situation, who asked not to be identified because they are not authorized to speak with the media.

India operates more than 250 Su-30 MKi Russian-made fighter jets, seven Kilo-class submarines and more than 1,200 Russian-made T-90 tanks -- all of which are operational for another decade, the people said. In the pipeline are weapon systems worth about \$10 billion, including a nuclear submarine to be leased to India and S-400 air defense system batteries.

India's Ministry of Defense didn't immediately reply to a request for comment outside of regular business hours.

"Despite efforts at diversification, India's military hardware is still almost 70% Russian," said Manjari Chatterjee Miller, a senior fellow for India, Pakistan and South Asia at the Council on Foreign Relations and author of "Why Nations Rise: Narratives and the path to Great Power." India "has to continue to rely on Russia for parts, maintenance and upgrades," she added.

The cost for India to replace all of its Russian-origin equipment is daunting. The country's entire defense budget for 2021-22 is \$70 billion, and a long-delayed plan to procure 114 fighter jets to replenish its fleet and replace some older Russian fighters is estimated to cost India between \$15 billion and \$18 billion even if produced domestically, the people said.

"New Delhi also lacks options to replace military systems like air defense platforms it cannot easily get elsewhere," said Ian Hall, professor of international relations at Griffith University and author of "Modi and the Reinvention of Indian Foreign Policy."

While India has supported calls for a cease-fire and a diplomatic solution, it abstained at the United Nations on votes for draft resolutions condemning Russia's invasion that were ultimately vetoed by Moscow. Still, so far the U.S. and its allies have sought to avoid an open rift with India: a joint statement after Quad leaders spoke in the wake of Putin's invasion failed to condemn Russia.

That's largely because India remains an important partner in countering China, particularly after deadly clashes along their Himalayan border prompted Modi to move more troops and Russian weapons to key hotspots. India has also changed laws to restrict Chinese companies and investment, banned over 300 China-affiliated mobile applications and cut back on visas for Chinese businessmen as the border standoff escalated.

"India is a really important security partner of ours now," Donald Lu, assistant secretary of state at the Bureau of South and Central Asian Affairs, told a U.S. Senate committee on March 2 when asked whether India could face sanctions for buying Russian weapons.

“We value moving ahead in that partnership,” he added, noting that India had recently hit the brakes on more orders for Russian MiG-29 fighter jets, helicopters and anti-tank weapons. “And I hope that part of what happens with the extreme criticism that Russia has faced, is that India will find it’s now time to further distance itself.”

India is also keen to avoid Russia becoming even closer to Pakistan, which is more likely if Modi’s government joined U.S. allies in censuring President Vladimir Putin. India and Pakistan have fought three wars, and their militaries remain on high alert.

Pakistani Prime Minister Imran Khan last month led the country’s first delegation to Moscow in two decades just as Putin’s invasion got underway. Last year, Russian Foreign Minister Sergei Lavrov visited Pakistan as Moscow sought to increase its stature in the region, particularly in Afghanistan after the chaotic U.S. withdrawal.

Pakistan was the world’s eighth-largest weapons buyer in 2017-2021, with Russia accounting for a small fraction of imports. India is concerned that more acquisitions of Russian weapons could “provide Pakistan a qualitative advantage,” according to Richard M. Rossow, Wadhvani Chair in U.S.-India Policy Studies at The Center for Strategic and International Studies.

Still, India will find it hard to maintain a “truly neutral position” without alienating the U.S. and other Quad countries particularly because Russia has viewed New Delhi’s positions as “silent support,” said Miller of the Council on Foreign Relations.

“The Ukraine crisis is not a geographically confined regional European crisis that does not affect India,” she said. “It has implications for the future of the liberal international order.”

## **26. Eyeing China, Japan breaks with past for strong Ukraine response**

Agence France-Presse, Mar. 20 (2153) | Not Attributed

Japan has broken with years of precedent in its tough response to the Ukraine invasion, and the conflict could reshape Tokyo’s defence strategy as it confronts China’s regional ambitions, analysts say.

When Russia last pushed into Ukraine in 2014, Japan’s response was seen as lukewarm, but this time around it has marched in lockstep with Western allies on unprecedented sanctions and tough rhetoric, even sending non-lethal military aid.

And the crisis is already impacting debates on security spending and capacity in a country whose constitution limits its military to defence.

“Japan has been accused before of paying its way out, in a way, just giving money but not being directly involved in any crisis,” said Valerie Niquet, an Asia expert at France’s Foundation for Strategic Research think tank.

This time, Tokyo is “putting a lot of emphasis on what they are doing... to show that they are not just sitting by and waiting to see how things will evolve”.

And the speed with which Tokyo has moved on measures such as individual sanctions has been “completely remarkable”, said Tobias Harris, a senior fellow at the Center for American Progress.

“This is much further than I thought we would see the Japanese government go.”

In part, that reflects the extraordinary nature of the conflict, but several other key factors are at play, including the departure of former prime minister Shinzo Abe, who long sought closer ties with Moscow.

Abe, who resigned in 2020, had hoped warmer relations would lead to a breakthrough over disputed islands held by Russia, which Moscow calls the Kurils and Japan calls the Northern Territories.

But with Abe gone and years of deadlock on the dispute, Japan’s government has felt freer to act against Moscow, though fears about energy needs have so far stopped Tokyo from pulling out of joint energy projects with Russia.

Looming even larger though is China, with its growing ambitions in the region, including its desire to “reunify” Taiwan and its claims to disputed islands it calls the Diaoyu, known as the Senkaku in Japan.

In the past, Tokyo worried aggressive actions on Russia could push Moscow into Beijing’s arms, said James D.J. Brown, an associate professor of political science at Tokyo’s Temple University.

“Now however, that’s completely flipped around,” he told AFP.

Instead, the view is that “Japan has to be tough on Russia, because otherwise it sets a precedent, and perhaps encourages China to think that they could do the same thing”.

In the immediate term, Japan is expected to completely overhaul its view of Russia in its National Security Strategy due later this year.

“Definitely Russia will be very much described as a threat,” said Niquet.

“In the last one, in 2013, Russia was seen more as, if not an opportunity, certainly not a threat. That will change completely.”

And the Ukraine crisis is likely to strengthen the hand of those calling for more defence spending.

In campaigning last year, the ruling Liberal Democratic Party set a long-term goal of raising the defence budget to more than two percent of GDP, up from its traditional one percent.

That is “now something that they can realistically push towards”, said Brown.

Discussion of obtaining a strike capacity such as attack drones that could carry out first strikes against an enemy has been controversial given the constitutional limits on Japan’s military.

But “the images we’ve seen out of Ukraine are going to be useful for people who want Japan to have a more robust national defence”, Harris said.

“Self-defence is going to look increasingly like a fig leaf, I suspect.”

Even more controversially, Japan’s ruling party is set to debate nuclear deterrence, after suggestions from lawmakers including Abe that the possibility of “nuclear-sharing” be considered.

That is likely to remain a bridge too far, at least for now.

While Japan relies on the US nuclear umbrella, its long-standing policy bars it from producing, possessing or hosting the weapons.

But even a discussion of the issue in a country that suffered the Hiroshima and Nagasaki bomb attacks indicates the far-reaching effects of the Ukraine crisis.

“I think we haven’t seen fully the impact this war will have on Japan’s internal discussions,” Harris said.

## **27. Biden administration rules Myanmar army committed genocide against Rohingya**

Reuters (Exclusive), Mar. 20 (1508) | Humeyra Pamuk and Simon Lewis

WASHINGTON -- The Biden administration has formally determined that violence committed against the Rohingya minority by Myanmar’s military amounts to genocide and crimes against humanity, U.S. officials told Reuters, a move that advocates say should bolster efforts to hold the junta that now runs Myanmar accountable.

Secretary of State Antony Blinken will announce the decision on Monday at the U.S. Holocaust Memorial Museum in Washington, U.S. officials said, which currently features an exhibit on the plight of the Rohingya. It comes nearly 14 months after he took office and pledged to conduct a new review of the violence.

Myanmar's armed forces launched a military operation in 2017 that forced at least 730,000 of the mainly Muslim Rohingya from their homes and into neighboring Bangladesh, where they recounted killings, mass rape and arson. In 2021, Myanmar's military seized power in a coup.

U.S. officials and an outside law firm gathered evidence in an effort to acknowledge quickly the seriousness of the atrocities, but then Secretary of State Mike Pompeo declined to make a determination.

Blinken ordered his own "legal and factual analysis," the U.S. officials told Reuters on condition of anonymity. The analysis concluded the Myanmar army is committing genocide and Washington believes the formal determination will increase international pressure to hold the junta accountable.

"It's going to make it harder for them to commit further abuses," said one senior State Department official.

Officials in Myanmar's embassy in Washington and a junta spokesperson did not immediately respond to emails requesting comment on Sunday.

Myanmar's military has denied committing genocide against the Rohingya, who are denied citizenship in Myanmar, and said it was conducting an operation against terrorists in 2017.

A U.N. fact-finding mission concluded in 2018 that the military's campaign included "genocidal acts," but Washington referred at the time to the atrocities as "ethnic cleansing," a term that has no legal definition under international criminal law.

"It's really signaling to the world and especially to victims and survivors within the Rohingya community and more broadly that the United States recognizes the gravity of what's happening," a second senior State Department official said of Blinken's announcement on Monday.

A genocide determination does not automatically unleash punitive U.S. action.

Since the Cold War, the State Department has formally used the term six times to describe massacres in Bosnia, Rwanda, Iraq and Darfur, the Islamic State's attacks on Yazidis and other minorities, and most recently last year, over China's treatment of Uyghurs and other Muslims. China denies the genocide claims.

Blinken will also announce \$1 million of additional funding for the Independent Investigative Mechanism for Myanmar (IIMM), a United Nations body based in Geneva that is gathering evidence for potential future prosecutions.

"It's going to enhance our position as we try to build international support to try to prevent further atrocities and hold those accountable," the first U.S. official said.

## FOCUS ON MILITARY

Days after U.S. President Joe Biden took office, Myanmar generals led by Commander in Chief Min Aung Hlaing seized power on Feb. 1, 2021, after complaining of fraud in a November 2020 general election won by democracy champion Aung San Suu Kyi's party. Election monitoring groups found no evidence of mass fraud.

The armed forces crushed an uprising against their coup, killing more than 1,600 people and detaining nearly 10,000, including civilian leaders such as Suu Kyi, according to the Assistance Association for Political Prisoners (AAPP), a campaign group, and setting off an insurgency.

Reuters was unable to independently verify the figures from the AAPP. The junta has said the group's figures are exaggerated and that members of the security forces have also been killed in clashes with those opposing the coup. The junta has not provided its own figures.

In response to the coup, the United States and Western allies sanctioned the junta and its business interests, but have been unable to convince the generals to restore civilian rule after they received military and diplomatic support from Russia and China.

Blinken's recognition of genocide and crimes against humanity refers mainly to events in 2017, before last year's coup. The step comes after two State Department examinations -- one initiated in 2018 and the other in 2020 -- failed to produce a determination.

Some former U.S. officials told Reuters those were missed opportunities to send a firm message to the Myanmar generals who later seized power.

Activists believe a clear statement by the United States that genocide was committed could bolster efforts to hold the generals accountable, such as a case in the International Court of Justice where The Gambia has accused Myanmar of genocide, citing Myanmar's atrocities against the Rohingya in Rakhine state.

Myanmar has rejected the charge of genocide and urged the court's judges to drop the case. The junta says The Gambia is acting as a proxy for others and had no legal standing to file a case.

The International Criminal Court (ICC), a separate court at The Hague, is also investigating the deportation of Rohingya from Myanmar, and the IIMM in Geneva is gathering evidence that could be used in future trials.

Myanmar opposes the investigations and has refused to cooperate, asserting the ICC does not have jurisdiction and that its decision to launch a probe was swayed by "charged narratives of harrowing personal tragedies which have nothing to do with the legal arguments in question."

John Sifton, Asia advocacy director at Human Rights Watch, said Myanmar's military has faced "few real consequences for its atrocities, whether against Rohingya or other ethnic minority groups in Myanmar."

As well as imposing more economic sanctions on the junta, the United States should press for a U.N. Security Council resolution that would refer all the military's alleged crimes to the International Criminal Court, Sifton said. If Russia and China veto a resolution, as is likely, Washington should lead action in the U.N. General Assembly, he said.

"Condemnations of Myanmar should be coupled with concrete actions," he said.

Before Blinken made the decision this month, officials debated whether blaming Myanmar's government -- rather than specifically its military -- for the atrocities could complicate U.S. support for the country's deposed democratic forces, according to a source familiar with the matter.

The State Department opted to pin the blame on the military, said the second senior department official.

"It's not clear to what degree the civilian leadership had control over actions that were happening in Rakhine State and so that's where the determination ends at this point," said that official, who did not comment on the internal deliberation.

Suu Kyi, forced to share power with the generals, traveled to the International Court of Justice in 2019 to reject the genocide charges brought by The Gambia.

She said the country would itself prosecute any soldiers found to have committed abuses, but maintained the alleged violations did not rise to the level of genocide, for which the specific intent to destroy a group has to be proven.

When they seized power, the generals put Suu Kyi on trial in nearly a dozen cases that could see her sentenced to more than 100 years in prison. She remains in detention.

## MIDDLE EAST

### **28. U.S. Delivers Patriot Missiles to Saudis**

Kingdom sent urgent request for resupply to repel drone attacks by Iran-backed rebels  
Wall Street Journal, Mar. 21 (0200), Pg. A12 | David S. Cloud

WASHINGTON -- The Biden administration has transferred a significant number of Patriot antimissile interceptors to Saudi Arabia within the past month, fulfilling Riyadh's urgent request for a resupply amid sharp tensions in the relationship, senior U.S. officials said.

The transfers sought to ensure that Saudi Arabia is adequately supplied with the defensive munitions it needs to fend off drone and missile attacks by the Iran-backed Houthi rebels in neighboring Yemen, one of the officials said.

The Saudi military had been appealing to the U.S. since late last year for more Patriot interceptors --- used to shoot down airborne weapons -- warning that their supply was running dangerously low.

U.S.-Saudi relations have deteriorated since President Biden took office over issues such as a White House decision to remove the Houthis from a list of designated terrorist groups as well as Mr. Biden's dealings with Saudi Crown Prince Mohammed bin Salman, the country's de facto leader.

The longstanding Saudi request for more interceptors had been a point of contention between Washington and Riyadh, feeding Saudi officials' displeasure over what they contend was a lack of U.S. support for their intervention in the Yemen civil war.

U.S. officials said the decision to send the interceptors had taken months because of the high demand for the weapons by other U.S. allies and the need to go through normal vetting -- not because the White House was deliberately delaying the resupply.

The interceptors and other munitions sent to Saudi Arabia were taken from U.S. stockpiles elsewhere in the Middle East, one of the officials said.

The decision to go ahead with the arms transfer was part of an effort by the administration to rebuild its relationship with Riyadh. Among other things, the U.S. hopes Saudi Arabia will pump more oil to mitigate soaring crude prices, officials said. But providing Patriot interceptors hasn't resolved all the strains in the relationship.

Mr. Biden also publicly criticized Saudi Arabia over its protracted war in Yemen and cut off the flow of some weapons Riyadh could use to target Houthis. The president also reversed a move by his predecessor that put the

Houthis on the U.S.'s official list of global terrorist groups, a move that Saudi leaders said had emboldened the Yemeni force and thwarted efforts to broker a cease-fire.

The latest attacks on Saudi Arabia came late Saturday and early Sunday when Houthi forces in Yemen fired missiles and drones at energy and water-desalination facilities run by Aramco, the Saudi state oil company.

The Houthis claimed responsibility for the attacks, which a spokesman said were in response to "the continued aggression and unjust siege of our people."

Jake Sullivan, Mr. Biden's national-security adviser, condemned the Houthi attacks Sunday.

"The Houthis launch these terrorist attacks with enabling by Iran, which supplies them with missile and UAV components, training, and expertise," he said, referring to unmanned aerial vehicles, or drones.

The missiles and drone attacks were fired at a water-desalination plant in Al-Shaqeeq; a distribution station in Jizan; a liquefied-natural-gas plant in Yanbu; a power station in Dhahran al Janub; and a gas facility in Khamis Mushait. Aramco said there were no casualties or impact on its supplies, while the Saudi-led military coalition backing the Yemeni government said the strikes damaged civilian vehicles and homes in the area.

Patriot antimissile batteries are only one of the weapons used by the Saudis and the United Arab Emirates to counter the Houthi attacks. Many of the slow-flying drones are shot down by fighter aircraft.

## **AFGHANISTAN-PAKISTAN**

### **29. How Afghanistan's Militant Groups Are Evolving Under Taliban Rule**

Voice of America News, Mar. 20 (1305) | Jeff Seldin

WASHINGTON — Intelligence agencies worldwide are warning that Taliban rule in Afghanistan is radically reshaping terrorist and militant groups in South Asia and around the world.

Specifically, intelligence and counterterrorism officials say that despite Taliban promises to sever ties with al-Qaida and oppose terror groups such as the Islamic State's Afghan affiliate, as codified in the 2020 Doha agreement with the United States, there has been scant evidence of progress.

"The Taliban is attempting to maintain pressure on ISIS [Islamic State group]," the top general at U.S. Central Command told lawmakers in Washington on March 15. "They're finding it difficult to do."

“They’re much less firm on the al-Qaida issue, in terms of opposing them and trying to limit them,” CENTCOM’s General Kenneth “Frank” McKenzie added.

A recent United Nations report based on member state intelligence echoed those fears.

“There are no recent signs that the Taliban has taken steps to limit the activities of foreign terrorist fighters in the country,” the report said. “On the contrary, terrorist groups enjoy greater freedom there than at any time in recent history.”

Despite such concerns, some diplomats, such as the U.S. special representative for Afghanistan, have expressed hope the Taliban will crack down.

Thomas West told the U.S. Institute of Peace on Feb. 15 that he believed the Taliban were “very sincere in their intent to contain” Islamic State terrorists.

Here is a look at the Taliban and the major terrorist organizations now operating in Afghanistan, and how they have fared in the six months since U.S. and coalition forces left the country.

### *Taliban*

Since its emergence in 1994, the Taliban movement, which calls itself the Islamic Emirate of Afghanistan, has been led by an emir, a central figure ostensibly appointed for life by a religious council of Taliban leaders.

Like his two predecessors, the current emir, Hibatullah Akhundzada, has made no public speeches and leads a reclusive life in southern Afghanistan’s Kandahar province. He has left the management of day-to-day government affairs to his appointed caretaker Cabinet in the Afghan capital, Kabul.

Various estimates by U.S. intelligence agencies and United Nations member states put the number of Taliban fighters between 58,000 and 100,000, with numbers fluctuating according to the time of year and battlefield conditions.

A U.N. report issued in June 2021, prior to the U.S. withdrawal, noted the Taliban force size was “robust in spite of significant attrition rates” over the past few years.

The Taliban have also benefited from the presence of some 8,000 to 10,000 foreign fighters in Afghanistan, most of whom are aligned with the Taliban. The Taliban’s defense minister recently said in an interview that the group is trying to build a 110,000-strong army.

Intelligence shared publicly by the United States and United Nations member states further accuses the Taliban of continuing to work closely with al-Qaida and maintaining ties with other terrorist groups, pushing some to become part of a new Taliban-run Afghan military force.

And even if the Taliban are planning to crack down on cells of IS-Khorasan, Islamic State's affiliate in Afghanistan, they may not have the right capabilities.

"I don't think what we'll see from the Taliban will be traditional [counterterrorism] as we think of it," Colin Clarke, director of research at the global intelligence firm The Soufan Group, told VOA last year.

"It's much easier to play a spoiler role than to perform effectively in the role of counterinsurgent," he said. "I think the Taliban could be effective in clearing an area, but it will struggle more with holding it."

For their part, Taliban officials have publicly denied that terrorism is an issue for Afghans under their leadership.

"We do not see anyone in Afghanistan who has anything to do with al-Qaida," Taliban spokesperson Zabihullah Mujahid told a news conference in Kabul last September.

"The ISIS that exists in Iraq and Syria does not exist here," he added. "We are committed to the fact that from Afghanistan, there will not be any danger to any country."

### *Islamic State Khorasan Province*

The Islamic State terror group's Afghan affiliate is a sworn enemy of both the Taliban and al-Qaida, which has deep and long-standing ties to Taliban leadership. But IS-Khorasan is also one of the groups that has benefited the most from the Taliban takeover.

As Taliban forces asserted control over Afghanistan, they emptied out many of the country's prisons, including the Parwan prison at Bagram Airfield, which had held hundreds of IS-Khorasan fighters.

Taliban commanders quickly executed former IS-Khorasan leader Abu Omar Khorasani, but many other IS followers were allowed to escape.

At the time, U.S. military officials said the prison releases helped swell IS-Khorasan's ranks from several hundred to at least 2,000 "hardcore" fighters. IS-Khorasan was also blamed for the August 26 bombing at Kabul airport that killed 13 Americans and more than 170 Afghans.

Intelligence shared by U.N. member states suggests that since then, IS-Khorasan has nearly doubled in size, to about 4,000 fighters, half of which may be from outside Afghanistan.

The same intelligence estimates say that the group, which lost all the territory under its control in early 2020, now “controls limited territory in eastern Afghanistan” and that it is “capable of conducting high-profile and complex attacks.”

IS-Khorasan also appears to be benefitting from financial support from its core in Syria and Iraq, receiving more than \$500,000 over the past six months, according to some intelligence estimates.

U.S. defense officials have further voiced concern about IS-Khorasan regenerating the capability to launch attacks against the U.S. and other foreign targets, initially warning that the group could launch global operations starting in April 2022.

More recent assessments by U.S. military intelligence officials indicate that the group is more focused at the moment on cementing its support within Afghanistan itself and that IS-Khorasan may not be ready to carry out external operations for another 12-18 months.

#### *Al-Qaida core*

Since its initial statement at the end of August congratulating the Taliban on its victory, al-Qaida leadership has been mostly silent on the situation in Afghanistan, though al-Qaida leader Ayman al-Zawahiri referenced “the defeat of the Americans” in a video released this month.

Zawahiri himself is believed to be hiding in Afghanistan, and intelligence agencies from a number of countries assess he is in ill health.

Intelligence shared with the U.N. for a recent report, however, indicates al-Qaida is benefitting from “a significant boost” due to the U.S. withdrawal and Taliban takeover of Afghanistan.

“Some of its [al-Qaida’s] closest sympathizers within the Taliban now occupy senior positions in the new de facto Afghan administration,” according to the U.N. report, which also says chances are now good that Zawahiri’s likely successor, Saif al-Adel, will seek to leave Iran and establish himself in Afghanistan.

Western counterterrorism estimates from before the Taliban takeover of Afghanistan suggested the al-Qaida core perhaps commanded several hundred fighters across at least 15 Afghan provinces. And in September, a top U.S. intelligence official said that there were “indications of some potential movement of al-Qaida [officials and followers] to Afghanistan,” though, he cautioned, “It’s still early days.”

While U.S. officials remain concerned that al-Qaida will focus again on conducting foreign attacks, a recent report based on U.S. military intelligence assessments indicates that the group has been keeping a low profile at the Taliban’s request, and that the Taliban, who are seeking to gain international recognition for their new government, are likely to dissuade al-Qaida leaders from launching attacks.

### *Al-Qaida in the Indian Subcontinent*

One of al-Qaida's key offshoots, al-Qaida in the Indian Subcontinent, has as much of a presence in Afghanistan as the group's core.

Intelligence estimates from U.N. member states say AQIS has up to 400 fighters in Afghanistan, spread across Ghazni, Helmand, Kandahar, Nimruz, Paktika and Zabul provinces.

AQIS fighters, including native Afghans and fighters from Bangladesh, Pakistan, India and Myanmar (Burma), are said to have fought alongside Taliban against the U.S.-backed government prior to its collapse. Earlier U.S. intelligence assessments said it appeared that AQIS fighters were actively integrated into Taliban units.

AQIS leader Osama Mehmood and AQIS deputy Atif Yahya Ghouri are both thought to reside in Afghanistan.

### *Haqqani network*

The Haqqani network is widely considered to be the most influential and strategically successful extremist group in the region. While nominally loyal to the Taliban, the network, as described by the U.N., is "semi-autonomous," maintaining ties with both al-Qaida and IS-Khorasan.

The group boasts a "highly skilled core of members who specialize in complex attacks and provide technical skills, such as improvised explosive device and rocket construction," according to the U.N.

It also oversees a force of between 3,000 and 10,000 traditional armed fighters in Khost, Paktika and Paktiya provinces.

The network is run by Sirajuddin Haqqani, a son of the late mujahedeen commander and network founder Jalaluddin Haqqani. For much of its existence, the group has been based in Pakistan's tribal areas as it operated across the border in Afghanistan. The more than 40-year-old Haqqani has a \$10 million bounty on his head from the U.S. government and works as a deputy emir of the Taliban as well as the interior minister of Afghanistan.

The Haqqanis have been accused of perpetuating some of the deadliest and most sophisticated attacks against U.S., Indian and former Afghan government targets in Afghanistan since 2001.

The network is believed to have strong ties to Pakistani intelligence and al-Qaida. The U.S. designated it a foreign terrorist organization in 2012.

Intelligence gathered over the past year from some U.N. member states said that at times, the Haqqanis have acted as a go-between for the Taliban and IS-Khorasan, and that with the tacit approval of the Taliban, they directed the Islamic State affiliate to attack the now defunct U.S.-backed Afghan government.

#### *Tehrik-e-Taliban Pakistan*

Most active on the 2,640-kilometer-long border between Afghanistan and Pakistan, the Tehreek-e-Taliban Pakistan, or TTP, is an insurgent group involved in terrorist attacks in both countries.

The latest U.N. intelligence estimates put the number of TTP fighters at between 3,000 and 5,500.

The group's stated objectives are to end the Pakistani government's control over the Pashtun territories of Pakistan and to form a strict government based on Islamic Shariah law.

U.S. forces in Afghanistan and the Pakistani military have killed or captured several TTP leaders over the past two decades.

The group's current leader, Noor Wali Mehsud, has publicly declared allegiance to the Afghan Taliban leader.

The Taliban's return to power in Afghanistan has reportedly reenergized the TTP, and Pakistani officials have sought the Afghan Taliban's assistance in dealing with the group.

The U.N. says those efforts have made some progress.

"Mediation from the Taliban has led to a reduction in TTP attacks against Pakistan," a recent U.N. report found, adding that one country's intelligence agency said the Taliban have been involved in talks aimed at allowing TTP family members to peacefully resettle in Pakistan.

#### *The Islamic Movement of Uzbekistan*

The Islamic Movement of Uzbekistan, or IMU, was founded in the late 1990s with help and financial support from al-Qaida founder Osama bin Laden, and several IMU leaders have served as part of the al-Qaida hierarchy. The group has sought to replace the Uzbek government with a strictly Islamic regime.

IMU launched its first attack in February 1999 by simultaneously detonating five car bombs in Tashkent, the Uzbek capital. The group is also believed to have carried out attacks in Afghanistan and Pakistan.

In 2015, then-IMU leader Usman Ghazi and other senior members of the group shifted allegiance from al-Qaida to the rival Islamic State. But the move did not sit well with Taliban leaders, who launched a major military campaign against Ghazi, killing him and nearly wiping out the group.

IMU's force size was estimated at several hundred in 2018, but the group was reportedly battered by a large-scale Taliban onslaught in Afghanistan's Faryab province that same year.

As of mid-2021, intelligence suggested IMU had broken into Uzbek and Tajik factions, with the Uzbek faction possibly entertaining the idea of joining IS.

Recent intelligence suggests the remnants of IMU were fighting alongside the Taliban as they took over Afghanistan, which has earned the terror group more freedom of movement.

#### *Khatiba Imam al-Bukhari*

Khatiba Imam al-Bukhari (KIB) was founded in 2011 by fighters who left the IMU and fought alongside the Taliban against the U.S.-backed Afghan government.

The group is led by Dilshod Dekhanov, a Tajik national.

KIB's forces are in Afghanistan's Badghis province, though the group is also thought to have about 100 or so fighters in Syria, possibly in Latakia or Idlib governorates.

According to the U.N., KIB's numbers in Afghanistan have been growing due to the successful recruitment of locals. KIB not only has received money from the Taliban but also raises funds through its leadership in Syria.

Intelligence shared with the U.N. indicates Dekhanov visited Kabul in September, asking the Taliban to unify KIB and IMU under his leadership.

Dekhanov's request was denied, reports say, with Taliban officials pushing to make the KIB part of a new Taliban army.

#### *Islamic Jihad Group*

According to intelligence assessments shared with the U.N., the Islamic Jihad Group is considered "the most combat-ready Central Asian group in Afghanistan" and known for expertise in "military tactics and the manufacture of improvised explosive devices."

The group is led by a Kyrgyz national named Ilimbek Mamatov. The group's second-in-command, Amsattor Atabaev, hails from Tajikistan.

IJG's fighters operate across Badakhshan, Baghlan and Kunduz provinces, fought alongside Taliban forces against the previous government, and even got some financial support from the Taliban over the past year.

Like KIB's leader, Mamatov is reported to have asked Taliban leaders to unite key Central Asian groups under his leadership. But, reports say, his request was rejected.

#### *Eastern Turkistan Islamic Movement/Turkistan Islamic Party*

The Eastern Turkistan Islamic Movement (ETIM), also known as the Turkistan Islamic Party (TIP), was first established in the Xinjiang region of China, with its first reported attack in 1998.

After 2001, it began getting help from both al-Qaida and the Taliban, and it has been consistently active in Afghanistan since 2007.

According to intelligence estimates provided by U.N. member states, ETIM has between 200 and 700 fighters in Afghanistan training and plotting for attacks on Chinese targets.

Most of the ETIM fighters had been in Badakhshan province, which borders China. But according to a recent U.N. report, the Taliban recently relocated many of the fighters "to both protect and restrain the group."

Recent intelligence suggests that ETIM fighters have embraced the Taliban takeover of Afghanistan and that members have been encouraged to forge deeper ties with Afghanistan.

"They also anticipate that the Taliban de facto administration will provide them with refugee status and passports, enabling them to travel internationally," the U.N. said in a recent report.

In addition to the group's close ties with the Taliban and al-Qaida, it has been reported to collaborate with other groups in Afghanistan including TTP and Jamaat Ansarullah, an ethnically Tajik faction of the IMU.

Intelligence also suggests that IS-Khorasan has increased its recruiting of ETIM members.

#### *Lashkar-e-Islam*

Lashkar-e-Islam was founded in the Khyber district of Pakistan in 2004 but relocated to Afghanistan's Nangarhar province in 2014, following clashes with the Pakistani military.

Since coming to Afghanistan, Lashkar-e-Islam has clashed with IS-Khorasan, with major skirmishes taking place in 2018 as the two groups fought for control of territory and resources.

#### *Hezb-e-Islami*

Hezb-e-Islami, or "Party of Islam," was founded in 1976 by former Afghan Prime Minister Gulbuddin Hekmatyar.

The group shares much of the same ideology as the Taliban, and its fighter have assisted in Taliban in the past.

In 2015, Hekmatyar ordered his followers to help IS fighters in Afghanistan but never pledged allegiance to IS.

Hezb-e-Islami was known to target U.S. forces in Afghanistan, carrying out a series of attacks on U.S. and coalition forces in from 2013-15.

### *Lashkar-e-Taiba*

Lashkar-e-Taiba (LeT), or “Army of the Pure,” was founded in Pakistan in the 1990s and is sometimes known as Jamaat-ud-Dawa.

Led by Hafiz Muhammad Saeed and aligned with al-Qaida, the group is perhaps best known for carrying out the November 2008 attacks in Mumbai, India, which killed more than 160 people.

LeT established an office in Quetta, Pakistan, in 2006 to assist the Taliban in Afghanistan, and the group has also reportedly sent fighters to Afghanistan to assist the Taliban in their efforts.

In June 2021, a blast outside Saeed’s home killed three people. The U.S. is offering a \$10 million reward for information leading to Saeed’s conviction in the Mumbai terror attacks.

## **MARINE CORPS**

### **30. Marines Corps identifies Marines killed in Norway Osprey crash**

Stars and Stripes Online, Mar. 20 (2045) | Phillip Walter Wellman

EVENES, Norway -- The Marine Corps on Monday identified four Marines killed during a training accident in northern Norway last week.

Capt. Matthew J. Tomkiewicz, 27; Capt. Ross A. Reynolds; 27, Gunnery Sgt. James W. Speedy; 30; and Cpl. Jacob M. Moore, 24, died when their MV-22B Osprey crashed near the town of Bodoe on Friday, the Marine Corps said in a statement.

All four were assigned to Marine Medium Tiltrotor Squadron 261, Marine Aircraft Group 26, 2nd Marine Aircraft Wing at Marine Corps Air Station New River, N.C., the statement said.

U.S. and Norwegian officials are still investigating what caused the Osprey to crash. There had been severe weather warnings in the region at the time.

“The pilots and crew were committed to accomplishing their mission and serving a cause greater than themselves,” Maj. Gen. Michael Cederholm, commander of the Marine Aircraft Wing, said in a letter to the Marines’ families.

The deceased are expected to be reunited with their families through dignified transfer in the coming days.

“We will continue to execute the mission while keeping these Marines and their service on the forefront of our minds,” Cederholm said. “We will never allow these Marines’ sacrifice to go unnoticed or unappreciated.”

The four Marines were among some 30,000 NATO and partner troops participating in Exercise Cold Response, which includes land, sea and air drills and is scheduled to run until April.

Their Osprey was scheduled to arrive in Bodoe at 6 p.m. Friday, according to a Norwegian armed forces statement. A missing persons report was received at about 6:30 p.m. and rescue aircraft were launched shortly afterward.

The crash site was discovered by air at about 9:15 p.m. the same day, but poor weather meant it couldn’t be reached until 1:30 a.m. Saturday, when police arrived and confirmed the deaths, the Norwegian military said.

Marines assisted with the Norwegian-led recovery effort, while numerous NATO allies and partner nations also offered an outpouring of operational support during and following the incident, the Marine Corps said Monday.

Tomkiewicz, of Fort Wayne, Ind., joined the Marine Corps in 2015 and served as an MV-22B Osprey pilot. His decorations include the National Defense Service Medal, Global War on Terrorism Service Medal and Sea Service Deployment Ribbon.

Reynolds, of Leominster, Mass., joined the Corps in 2017. His decorations include the National Defense Service Medal, the Global War on Terrorism Service Medal, the Sea Service Deployment Ribbon.

Speedy, of Cambridge, Ohio, had been a Marine since 2009, and served as an administrative specialist. His decorations include the Navy and Marine Corps Achievement Medal with two gold stars, the Marine Corps Good Conduct Medal, the National Defense Service Medal, the Global War on Terrorism Service Medal, the Sea Service Deployment Ribbon, the Marine Corps Drill Instructor Ribbon.

Moore, of Catlettsburg, Ky., served as an MV-22B Osprey crew chief after joining the Corps in 2018. His decorations include the Marine Corps Good Conduct Medal, the National Defense Service Medal, and the Global War on Terrorism Service Medal.

## MODERNIZATION & TECHNOLOGY

### 31. Q&A with Dr. Martin Lindsey, Science & Technology Advisor to U.S. Indo-Pacific Command

National Defense Magazine Online, Mar. 20 (1918) | Stew Magnuson

Dr. Martin Lindsey is the principal science and technology Advisor to U.S. Indo-Pacific Command. He advises command staff and advocates for S&T activities that better enable warfighters serving in the region to accomplish their assigned missions. He also engages with service and agency laboratories and pursues cooperative efforts with international partners and allies within the Indo-Asia-Pacific region.

Prior to assuming his current duties, Dr. Lindsey retired from the Air Force as a lieutenant colonel with 20 years of service.

He spoke by phone with National Defense Editor in Chief Stew Magnuson after the conclusion of the Pacific Operational Science and Technology (POST) conference in Honolulu, Hawaii, organized by the National Defense Industrial Association. The interview has been lightly edited for brevity and clarity.

*National Defense Magazine: What are the top three items on your wish list — some technologies that industry can help you with?*

*Dr. Martin Lindsey: A wish list from my seat out here as the science and technology advisor from industry would be of course to address [PACOM Commander Adm. John C.] Aquilino's priorities for the command, which are all about seizing the initiative in the theater, and making sure that we are postured correctly with the right forces and the right capabilities forward in order to do our contribution to integrated deterrence and be prepared should deterrence fail.*

*A little more specifically than that, we're obviously very interested in our ability to have a common operational picture and see what's going on throughout the theater — both to allow us to have better indications and warnings of instability as well as to be postured to respond to that.*

*We need the ability to protect our forces that we project forward. In that regard, [we need] the ability to move and maneuver as we need to move in the theater and protect those forces. That's a high priority.*

*And of course, should unfortunately we end up in some sort of conflict scenario, the ability to project force longer distances over the horizon from all domains is a big priority for us.*

I think those would be kind of the Top Three for industry. I don't want to leave out ... collaboration with our allies for all of those areas as well as industry. That is huge for us. And so we work very hard on increasing those partnerships.

*National Defense Magazine: None of those broad areas would have a single solution. Can you drill down further on some specifics? For example, for the common operating picture, are you looking at satellites or robotic systems to carry sensors?*

*Dr. Lindsey:* It's a combination of all those things — a multi-domain layered approach — because if we put all our capabilities in one domain or one basket then we just create a new center of gravity for an adversary to make it easy for them to take that away from us.

So definitely satellites. We are keenly interested in increasing the resilience and the robustness of our space-based capabilities. To that end, we follow what's going on with proliferated [low-Earth orbit satellite systems] quite closely and those technology developments both on the government side and the commercial side, because we see both as great contributors to that common operational picture.

You mentioned robotic systems and similarly the rapid advancements in AI-enabled, semi-autonomous human on-the-loop systems. It's very rapidly advancing and so we already see capabilities that are still in the development stage, but they are getting quite close to being suitable for fielding in capacities. And we are already working with the providers of those in the government and industry side to make sure that they will be suited for the vast geographic environment that's out here.

*National Defense Magazine: The last thing you mentioned was international cooperation. National Defense has been writing a lot about the Quad [the loose alliance of the United States, Japan, Australia and India] and its potential for cooperation developing technologies. What are you doing in those regards? Are you reaching out to the Quad members for more tech cooperation?*

*Dr. Lindsey:* We do — and with respect to the all three of the countries you mentioned — we do engage with them and even at POST we had engagements with those countries, and we will continue to follow those up and build off of those.

Specific to the relationship of the Quad and science-and-technology engagement under the auspices of the Quad, we have not to date looked into adding an S&T component into that from where we sit. I can't speak to whether that's going on elsewhere at the [Defense Department] but I find that personally very interesting to ponder: how we might do that. But to date we have not.

*National Defense Magazine: Where to you see potential areas of cooperation with these partners?*

*Dr. Lindsey:* I don't see areas where we couldn't potentially cooperate from a technology standpoint. If you look at [Undersecretary of Defense for Research and Engineering Heidi] Shyu's top 14 technology priorities — by and large — I can't find areas within all 14 of those where we could not cooperate with all three of those countries. From our perspective, it's more a vantage of prioritizing scarce resources of time and personnel.

With each country in the Quad, we kind of take a different approach. Our relationship with Australia is very mature and very robust ... We work with them in a lot of areas and we have — for lack of a better word — “operationalized” our S&T engagement with our Australian counterparts.

We are working to do the same thing with Japan. We're just kind of starting down that road with them. But we are working in those areas and identifying the areas of mutual cooperation that are priorities.

[With] India, similarly to Japan, we have just kind of scratched the surface again from our office's perspective. And we are very keen with both of those countries to develop those relationships which starts with just having these conversations from our respective positions. What are our technology priorities at Indo-PACOM from our end and our counterparts in those countries? What are our mutual priorities to collaborate on? All the 14 that Ms. Shyu is prioritizing for the department, I see places where those countries have capabilities, and we could do cooperation with them.

*National Defense Magazine: Switching to hypersonics, there are some programs coming to fruition — at least people hope — in the next couple of years. What will be the command's role in deploying, fielding and testing some of these new hypersonic weapons?*

*Dr. Lindsey:* That's one of my personal roles here at the command. I work in the hypersonic technology area. ... So our role here — and this won't be a surprise — is as a combatant command, we establish requirements and prioritize those requirements for what capabilities we need. And obviously, we're on the record: Hypersonics is one of those areas that we need.

As these systems are being developed and matured and are entering into flight tests, we are engaged with those program offices. We are similarly engaged with the [Office of the Secretary of Defense's], principal director of hypersonics to make sure that as these capabilities ... when they are fielded they will be ready for implementation if called upon.

Because we have been working really fast to get capability to the field, we haven't necessarily gone through and stood up and run through the entire whole program-of-record traditional acquisition process because we just don't have the luxury of taking all of that time to make that happen. We need to get capability fielded as soon as we can.

With that in mind, here at the combatant command, we've probably taken on additional roles that we normally would not do to ensure that those capabilities are ready when they hit early operational capability.

And by that, I mean the kind of the roles that you would traditionally just expect the services to do as part of the developmental testing and engineering phase the ... type of things that normally the service does before they present a capability. We're not doing all that but we are much more hands on in advising and helping shape the services do that then would be seen in a traditional acquisition.

*National Defense Magazine: So what you're saying is pretty much when they think the technology is good to go as far as basic capabilities, you're going to field and test at the same time?*

*Dr. Lindsey:* Yes, and that's no different than any acquisition program in the sense of even when you hit an [initial operating capability milestone] that the development, test and evaluation continues while you are going from IOC to fully operationally capable.

The terminology that I see a lot is "early operational capability" as opposed to "initial" and I think the nuance there is again, some of these programs aren't formal acquisition programs, so they just adopt different lingo. But in our minds an "early operational capability" is an "operational capability." It would be available for use if called upon.

*National Defense Magazine: As for the annual Rim of the Pacific international exercise that happens near Hawaii each year, how do you use it to test new technologies? Or is it mostly training on systems you already have?*

*Dr. Lindsey:* It's both. The emphasis at RIMPAC is that it's a training exercise — the largest multinational maritime training exercise in the world. But we do experimentation at RIMPAC. It is a Third Fleet-run exercise and it's naval centric. So the experimentation that takes place is run by and planned and executed by the Navy.

Having said that, Indo-PACOM does contribute to the planning of some of the experimentation — and in cases where we see we have joint experiments that we are interested in — we get more or less hands-on involved depending on specific experiments. And that applies to coalition stuff as well. So we will also support coalition experimentation that we're interested in.

*National Defense Magazine: And interoperability with allies is a big part of that?*

That's a huge part of it. Both from just the training perspective, as well as testing out new concepts and new technologies.

## NOTABLE COMMENTARY

### **32. Don't Go Wobbly on Ukraine Now**

Wall Street Journal, Mar. 21 (0200), Pg. A20 | Editorial

The Ukrainian people are making great sacrifices fighting against Russia's war machine, and their resistance is helping the free world. As NATO's leaders meet this week in Brussels, now is the time for the alliance to repay this fortitude by escalating support for Kyiv.

"Ukrainian forces have defeated the initial Russian campaign of this war. That campaign aimed to conduct airborne and mechanized operations to seize Kyiv, Kharkiv, Odesa, and other major Ukrainian cities to force a change of government in Ukraine," concludes the Washington-based Institute for the Study War (ISW) in a Saturday analysis. "Russian forces continue to make limited advances in some parts of the theater but are very unlikely to be able to seize their objectives in this way."

---

This is a remarkable achievement. Contrary to Western intelligence predictions, Ukraine's military and burgeoning civil-defense forces have fought the Russian invaders to a stalemate. The easy victory Vladimir Putin anticipated to install a puppet government has been stymied -- albeit at great cost in lost lives and ruined cities.

Yet Mr. Putin shows every sign of continuing his campaign of bombing and starving cities. The rape of Mariupol should be a permanent scar on Russia, like Stalin's 1940 murder of 22,000 Polish officers and intellectuals in the Katyn forest. Europe hasn't seen anything like this since World War II. ISW says Russians are digging in around cities as if they plan a long siege. Civilian casualties aren't incidental. They are central to the dictator's war strategy.

Mr. Putin hopes to break Ukrainian morale, and sooner or later kill President Volodymyr Zelensky to rob Ukraine of his charismatic leadership. The Russian also hopes to crack NATO's resolve by issuing threats of nuclear escalation while flooding Western Europe with millions of refugees -- at least three million so far.

As NATO meets, the temptation in Brussels will be to look for a way out of the war. The Washington Post is filled with reports, clearly informed by U.S. officials, fretting that Mr. Zelensky doesn't seem to have an "end game" for the war. The risk as the conflict continues is that the will of Team Biden and NATO will flag and at some point they will pressure Ukraine to settle.

That's exactly the wrong message to send to Ukraine and Russia, and the NATO leaders should signal the opposite this week. The top priority is escalating weapons shipments to Kyiv, especially air defenses against Russia's long-

range missiles and high-altitude aircraft. Ukraine also needs more Turkish drones that have been effective against Russian tanks and artillery.

The leaders should also banish talk of giving Mr. Putin an exit ramp other than complete withdrawal from Ukraine. He can take that exit at any time. But if he refuses, then the Western goal should be to inflict as much pain as possible on Russia as a lesson to Mr. Putin and any other country that might try to conquer its neighbors.

That means following Mr. Zelensky's lead on what Ukraine is willing to accept. Ukraine has earned the right to determine what concessions, if any, it can live with. The Ukrainian president has already taken NATO membership off the table, but he understandably is refusing to concede Russian control over Ukrainian territory. No one in the West should pressure him to accept such terms.

The U.S. and Europe can also increase the sanctions pressure on the Kremlin. Sanctions on Russian energy sales still aren't in place, though they would hurt Mr. Putin's war financing the most. Sanctions relief for Russia shouldn't even be on the table until Mr. Putin withdraws his tanks and concedes Ukraine's right to be an independent state.

What should be on NATO's agenda is why Western intelligence misjudged the war. The CIA did very well in anticipating that Mr. Putin would invade, but it vastly overestimated the ability of his military to conquer Ukraine. That pessimism may have convinced President Biden that more military aid earlier wouldn't have made a difference. Congress's intelligence committees should investigate.

---

Ukraine's brave resistance has given the West an opportunity to push back against Russia and show the world's authoritarians that democratic states can unite in defense for a righteous cause. As Margaret Thatcher once famously told George H.W. Bush, now is not the time to go wobbly.

RETURN TO TOP

### **33. The Next NATO Expansion**

*If Finland and Sweden want in, the alliance should welcome them*

Wall Street Journal Online, Mar. 20 (1655) | Editorial

One lesson of Russia's assault on Ukraine is that NATO continues to be vital to European security. Would Ukraine be under siege today if it were a member of the alliance? This is something to keep in mind as discussions about Sweden and Finland pursuing membership advance.

Unlike Ukraine, Sweden and Finland are members of the European Union and have been qualified to join NATO for years. They have held off for fear of angering Russia—and because joining was unpopular with the public in the traditionally neutral countries.

“If Sweden were to choose to send in an application to join NATO in the current situation, it would further destabilize this area of Europe and increase tensions,” Swedish Prime Minister Magdalena Andersson said this month. Finnish President Sauli Niinistö recently acknowledged the status quo wasn’t working for his country but warned that a NATO membership application would create “major risk” for escalation on the Continent.

Whether to join NATO is up to Finland and Sweden, but the idea that the act of joining is destabilizing is mistaken. Tensions could increase in the short term simply because Vladimir Putin would be upset that the defense alliance is larger, but a Europe with better defenses is inherently more stable.

The Finnish and Swedish political classes are moving cautiously, but they may start feeling more pressure. A February survey showed 41% of Swedes backed joining the alliance, compared with 35% opposed. It was the first time more citizens showed greater support for accession than opposition. A poll published last week showed 62% of Finns supported membership. Mr. Putin’s bloody invasion has upended decades of skepticism.

Current NATO members always have to ask if admitting a country makes the alliance stronger. The answer is yes for Sweden and Finland. Both countries are “enhanced opportunities partners” with NATO: They train with alliance forces and increasingly use interoperable equipment. Their strategic position would help NATO in a war with Russia in the Baltic Sea.

Sweden doesn’t have a land border with Russia and isn’t at risk of invasion as Ukraine or Georgia were. Although defense spending is well below NATO’s 2% of gross domestic product target, it has been growing and Stockholm said it will reach 2%. As a wealthy and technologically advanced country, it could afford to do more and would contribute to the alliance.

Finland shares an 830-mile border with Russia and has a history of being invaded by its eastern neighbor. But it takes the threat seriously and can punch above its weight. The country of 5.5 million has roughly the same number of reservists as Germany, population 83 million. In February Helsinki finalized a deal to buy 64 F-35 jets by 2030.

The Russian Foreign Ministry recently threatened “serious military-political consequences” if Finland and Sweden pursue NATO membership. The threat is exactly why they should be welcomed into the alliance if they decide to go for it.

# DEFENSE MORNING CLIPS

As of 0430 Hours, March 22

## OVERVIEW

Ukraine's Defense ministry claimed that Ukrainian troops forced Russian troops out of the Kyiv suburb of Makariv, retaking control of a key highway and preventing encirclement from the northwest, according to the *Associated Press*. Separately, Biden administration officials announced the U.S. would transfer previously obtained, Soviet-made, air defense equipment, including the legacy SA-8 system, to Ukraine to "surge new assistance" to blunt Russia's aircraft and missile attacks, the *Wall Street Journal* reported. Also of note, a senior Pentagon official said that while the Russian invasion of Ukraine was a "9/11 event for Europe" and the U.S. would "enhance our posture alongside our allies in Europe," the upcoming National Defense Strategy would still deem China as the top priority, the *Wall Street Journal* wrote.

## TOP STORIES

### **1. Ukraine Retakes Key Kyiv Suburb; Battle for Mariupol Rages**

*Associated Press, Mar. 22 (0413) | Cara Anna*

Ukrainian forces said they retook a strategically important suburb of the capital early Tuesday, while Russia's attack on the embattled southern port of Mariupol raged unabated, with fleeing civilians describing relentless bombardments and corpses lying in the streets. While Russian forces carried on with the siege of Mariupol after the southern port city's defenders refused demands to surrender, the Kremlin's ground offensive in other parts of the country advanced slowly or not at all, knocked back by lethal hit-and-run attacks by the Ukrainians.

### **2. U.S. Sends Soviet Air Defenses to Ukraine**

*Wall Street Journal, Mar. 22 (0200), Pg. A1 | Nancy A. Youssef and Michael R. Gordon*

The U.S. is sending some of the Soviet-made air defense equipment it secretly acquired decades ago to bolster the Ukrainian military as it seeks to fend off Russian air and missile attacks, U.S. officials said. The weapons are familiar to Ukraine's military, which inherited this type of equipment following the breakup of the Soviet Union. The U.S. over the decades has acquired a small number of Soviet missile defense systems so that they could be examined by U.S. intelligence experts and help with training U.S. forces.

### **3. Pentagon to Build Up European Presence**

*Wall Street Journal, Mar. 22 (0200), Pg. A6 | Gordon Lubold, David S. Cloud and Lindsay Wise*

The U.S. plans to boost military spending and increase its military presence near Russia in response to Moscow's invasion of Ukraine, while trying to maintain a long-term focus on countering China, current and former officials said.

## **DEFENSE DEPARTMENT**

### **4. Austin to join Biden's trip this week to NATO, Poland**

*Stars and Stripes Online, Mar. 21 (1743) | Corey Dickstein*

Defense Secretary Lloyd Austin will return to Europe for a second consecutive week, joining President Joe Biden's trip Wednesday to NATO headquarters in Brussels and visit Polish leaders later in the week, the Pentagon announced Monday. Biden and Austin are expected to meet with other NATO leaders Thursday before traveling to Poland on Friday, officials said. Biden will also meet with the European Council and G7 leaders to "discuss international efforts to support Ukraine and impose severe and unprecedented costs on Russia for its invasion," according to a White House statement.

### **5. Pentagon officials say the human element is key to JADC2's success**

*C4ISRNET.com, Mar. 21 (1632) | Colin Demarest*

The Pentagon's tech-centric campaign to overhaul military communications and better handle streams of data will not succeed if the human side of things is neglected, a top official recently warned.

## **COVID-19**

### **6. Biden pushes a new normal amid worries over next surge**

*Washington Post, Mar. 22 (0115), Pg. A1 | Lena H. Sun and Yasmeeen Abutaleb*

Cathy Colledge, who has Stage 4 metastatic breast cancer, feels like she's on her own trying to avoid a coronavirus infection that might kill her. But for many other Americans, there was palpable relief on Feb. 25, when the CDC shifted the vast majority of U.S. counties from red, signaling high transmission, to green, meaning low levels of disease and no need to mask indoors. The changes were based on a new framework designed to protect communities from the worst, a surge so big that it might overwhelm local hospitals, while being less disruptive to everyday life, amid falling case counts and a desire among many for relief from masking and other public health measures. But some worry it leaves the country unprepared for another wave and abandons those who are most vulnerable.

### **7. A Sign of the Times? DoD Skips Publishing Weekly COVID-19 Numbers**

*Military.com, Mar. 21 (1803) | Patricia Kime and Travis Tritten*

In a sign of the continued decline of COVID-19 across the country, the Defense Department last Wednesday skipped its update of coronavirus case numbers -- data it faithfully has published weekly since July 2021. The department released the information three times a week during the first year of the pandemic, while states across the U.S. reported the data daily. But as case numbers have dwindled, more than a dozen states have cut their output to once or twice a week, and it appears the DoD is following suit.

## **EXECUTIVE/LEGISLATIVE**

**8. Biden, allies discuss Russia’s ‘brutal’ war in key week for Western unity**

*Agence France-Presse, Mar. 21 (1703) | Sebastian Smith*

President Joe Biden and European allies discussed Russia’s “brutal” war in Ukraine on Monday, kicking off a crucial week in the Western standoff with Moscow that will see Biden visit Poland after attending NATO and EU summits. Biden hosted the call, lasting just under one hour, with French President Emmanuel Macron, German Chancellor Olaf Scholz, Italian Prime Minister Mario Draghi and UK Prime Minister Boris Johnson “to discuss their coordinated responses,” the White House said.

**9. Biden warns business leaders to prepare for Russian cyber attacks**

*CNN.com, Mar. 21 (1852) | Maegan Vazquez, Donald Judd, Sean Lyngaas and Zachary Cohen*

President Joe Biden on Monday issued an urgent warning to American business leaders, telling them to strengthen their companies’ cyber defenses immediately. Speaking at the Business Roundtable Quarterly Meeting in Washington, Biden said Russian President Vladimir Putin is likely to use cyber attacks as a form of retaliation against the United States for its actions to counter Russia’s incursion on Ukraine.

**10. Biden says Russia is considering using chemical, biological weapons in Ukraine**

*Reuters, Mar. 21 (2259) | Not Attributed*

Ukraine’s military said on Tuesday residents should brace for more indiscriminate Russian shelling of critical infrastructure, as U.S. President Joe Biden issued one of his strongest warnings yet that Moscow is considering using chemical weapons. Without citing evidence, Biden said Russia’s false accusations that Kyiv had biological and chemical weapons illustrated that President Vladimir Putin was considering using them himself.

**11. White House Bureaucracy Is Costing Ukrainian Lives, Senators Say**

*DefenseOne.com, Mar. 21 (1729) | Jacqueline Feldscher*

After seeing the situation on the ground this weekend, as Ukrainian refugees flood across the Polish border to escape violence, 10 senators have a message for the White House: Go faster. Sen. Joni Ernst, R-Iowa, led a group of 10 lawmakers who visited Germany and Poland to see American troops and observe the fallout from Russia’s war in Ukraine. At a press conference Monday, senators said they were touched by conversations with activists fighting for their country and single mothers fleeing Ukraine to keep their children safe, and they emphasized that aid is only helpful if it gets there in time.

**12. Bipartisan lawmakers call on Biden to form ‘aid airlift into Ukraine’**

*FoxNews.com, Mar. 21 (1703) | Houston Keene*

A bipartisan group of lawmakers called on President Biden to form an “international humanitarian aid airlift” into Ukraine amid Russian President Vladimir Putin’s brutal war. Reps. Young Kim, R-Calif., and Lou Correa, D-Calif., are leading the letter, which was first obtained by Fox News Digital.

### **13. Congressional spending bill boosts military outlay in Pacific**

*Honolulu Star-Advertiser, Mar. 21 (N/A), Pg. B4 | Kevin Knodell*

Congress has passed a fiscal year 2022 appropriation measure that includes billions of dollars in funding for military projects in Hawaii and the Pacific. The bill includes over \$700 million for response efforts to contamination of the Navy's water system by fuel from its Red Hill storage facility, \$235 million for military construction projects throughout the islands, and billions to fund the Pacific Deterrence Initiative, a Pentagon project to counter China's increasing military power.

## **EUROPE**

### **14. Russia may not stop with Ukraine – NATO looks to its weakest link**

*Reuters, Mar. 21 (1554) | Sabine Siebold and Robin Emmott*

It looks a lot like a return to the past. Founded in 1949 to defend against the Soviet threat, the NATO alliance is facing a return to mechanised warfare, a huge increase in defence spending, and potentially a new Iron Curtain falling across Europe. After struggling to find a new post-Cold War role, countering terrorism following the Sept. 11 attacks on the United States in 2001 and a humiliating withdrawal from Afghanistan in 2021, NATO is back defending against its original nemesis. But there's a difference. China, which split with the Soviet Union during the Cold War, has refused to condemn the Russian invasion of Ukraine, which Moscow calls a "special military operation." And the old Cold War blueprints no longer work, as NATO has expanded east since the 1990s, bringing in former Soviet states – including the Baltic states of Latvia, Lithuania and Estonia in 2004.

### **15. EU nations circle the wagons in new 'Strategic Compass'**

*Defense News Online, Mar. 21 (1753) | Sebastian Sprenger*

The defense ministers of European Union nations adopted the long-awaited "Strategic Compass" document on Monday, presenting a plan to beef up the bloc's defenses in the wake of Russia's invasion of Ukraine. Also part of the Strategic Compass is the plan of creating a 5,000-strong "EU Rapid Deployment Capability" allowing the "swift deployment of a modular force ... in a non-permissive environment" by 2025. EU officials said they would develop "operational scenarios" to guide the formation's future employment during 2022, and begin regular live-fire exercises in 2023 to prepare its forces.

### **16. The Next Two Weeks Could Determine the Fate of Ukraine**

*Politico Online, Mar. 21 (1731) | Paul McLeary and David Brown*

After the initial shock of Vladimir Putin's invasion of Ukraine, the biggest surprise of the war may be how badly the Russian army has performed. What did experts get wrong — and what does it mean for the next phase of the war? Michael Kofman, one of the most prominent U.S. authorities on the Russian military, told POLITICO in a lengthy interview that he and other experts "generally overestimated the Russian military, which is good. It's very good." And, he adds, "we really underestimated the Ukrainian military."

**17. ‘The only thing Putin understands is strength’: U.S. aircraft carrier flexes muscle in the Med**

*Politico Europe, Mar. 21 (2306) | Hannah Roberts*

The 20-story nuclear-powered Truman is the flagship of a strike group, a mobile fighting force of up to 10 destroyers and submarines, 8 aircraft squadrons and a missile cruiser that can move anywhere in the world’s seas, launching missile or air strikes or merely providing visible proof of American resolve. As a mobile U.S. airbase, the Truman will be on the front line if NATO decides to enforce a no-fly zone, or should the worst happen and NATO forces be drawn into a direct conflict. “The role of Truman, with other allies, is to deter Russians from further aggression and to be on constant standby for orders that might be given from our president or from other leaders around the world for the protection of Ukraine and the people of Ukraine,” Secretary of the U.S. Navy Carlos Del Toro told POLITICO during a visit to the carrier.

**RUSSIA**

**18. Ukraine refuses to surrender Mariupol**

*Washington Post, Mar. 22 (0115), Pg. A1 | David L. Stern, Missy Ryan, Dan Rosenzweig-Ziff and Ellen Nakashima*

Russia’s assault on Ukraine grew more destructive Monday, as civilians faced deadly obstacles in their attempts to flee the besieged city of Mariupol and a staggering flow of displaced Ukrainians strained neighboring countries. In Kyiv, a massive explosion hit a shopping mall, killing at least eight people and providing further evidence of Russia’s intent to capture the capital city. American officials said Russian forces are stalled about nine miles to the northwest and about 18 miles to the east of Kyiv.

**19. Air War Ramps Up in Russia-Ukraine Conflict as Russian PGMs Run Out**

*Air Force Magazine Online, Mar. 21 (1859) | Abraham Mahshie*

The air war is changing over Ukraine, with Russia picking up the pace of sorties but running low on precision-guided munitions, a senior defense official said March 21. Russia also has allegedly fired hypersonic weapons, a move possibly made to gain momentum after nearly a month of fighting and no major population centers under its control. “They are beginning to face some inventory issues with precision-guided munitions,” a senior defense official told reporters on a telephone briefing, explaining the increased use by Russia of unguided bombs, or “dumb bombs.”

**20. Intentions of Russian Amphibious Warships in Black Sea Still Unclear**

*U.S. Naval Institute News, Mar. 21 (1807) | Heather Mongilio*

About a dozen Russian warships remain in the Black Sea, raising concerns that Moscow is still considering an amphibious assault on the Ukrainian city of Odesa. It is unclear what Russia is planning for the ships, which include amphibious and surface combatants vessels, Pentagon Press Secretary John Kirby told reporters Monday. The Pentagon noted the increased naval activity last week, USNI News previously reported.

**21. ‘Winging It’: Russia Is Getting Its Generals Killed on the Front Lines**

*ForeignPolicy.com, Mar. 21 (1756) | Jack Detsch*

Russia has lost at least five generals fighting in Ukraine in less than a month, Western officials said Monday, as communications failures and a lack of discipline among hundreds of thousands of conscripted Russian troops have made it more difficult to communicate orders to the front lines. The tally of Russian generals killed in the nearly monthlong conflict—most of them one- and two-star commanders, including at least one lieutenant general—is likely the highest casualty rate among general officers in the Russian military since World War II.

**22. Smaller Bombs Raise a Specter Of Atomic War**

*New York Times, Mar. 22 (0300), Pg. A1 | William J. Broad*

In destructive power, the behemoths of the Cold War dwarfed the American atomic bomb that destroyed Hiroshima. Washington’s biggest test blast was 1,000 times as large. Moscow’s was 3,000 times. On both sides, the idea was to deter strikes with threats of vast retaliation -- with mutual assured destruction, or MAD. The psychological bar was so high that nuclear strikes came to be seen as unthinkable. Today, both Russia and the United States have nuclear arms that are much less destructive -- their power just fractions of the Hiroshima bomb’s force, their use perhaps less frightening and more thinkable.

**23. DoD official: Russia’s hypersonic missile boast ‘a bit of a head-scratcher’**

*Politico Online, Mar. 21 (1908) | Quint Forgey*

Russia may have launched a hypersonic missile over the weekend in an assault on a Ukrainian munitions depot, a senior Defense Department official said Monday, but Moscow’s claim about the nature of the weapon is “a bit of a head-scratcher.”

**24. Satellite jamming ‘normal’ by militaries during conflict, not peacetime – State Dept. official**

*BreakingDefense.com, Mar. 21 (1215) | Theresa Hitchens*

The Russian military’s jamming of GPS signals and communications satellites in Ukraine is considered by the US government as essentially a routine wartime activity, according to a senior State Department official. Judging from actual real world actions during recent conflicts around the globe, Washington and Moscow appear to be on the same page with this issue — a good thing for avoiding conflict between the two nuclear powers. But there may be a growing disconnect between the two sides on the question of satellite interference outside of direct conflict, with a senior Russian official earlier this month making the surprising claim that doing so is an act of war.

## **INDO-PACIFIC**

**25. Russia sends more warships through Japanese strait, halts peace treaty talks after sanctions**

*Stars and Stripes Online, Mar. 22 (0250) | Seth Robson and Hana Kusumoto*

In a move Japan's prime minister called "totally unacceptable," Russia has halted talks over a post-World War II peace treaty with Japan and ended visa-free entry for former residents of four Russian-controlled islands.

**26. Australia Forms A Space Force As Tensions Rise**

*New York Times, Mar. 22 (0300), Pg. A4 | Damien Cave*

Two years after the United States inaugurated a military Space Force to mixed reviews, Australia has created its own Space Command to counter threats from China, Russia and other extraterrestrial powers. The new force will expand Australia's space capabilities and contribute to "a larger, collective effort among like-minded countries to ensure a safe, stable and secure space domain," Peter Dutton, Australia's defense minister, said on Tuesday.

**27. U.S., Calling '17 Purge Genocide, Condemns Myanmar's Military**

*New York Times, Mar. 22 (0300), Pg. A6 | Lara Jakes*

Against the backdrop of a war in Ukraine and atrocities in Ethiopia, the United States on Monday formally accused Myanmar of committing genocide against its minority Rohingya population. "The day will come when those responsible for these appalling acts will have to answer for them," Secretary of State Antony J. Blinken said at the U.S. Holocaust Memorial Museum in Washington, which is exhibiting evidence of decades of discrimination and abuse against Rohingya Muslims by Myanmar's military.

## **MIDDLE EAST**

**28. Revolutionary Guard at Center of Talks**

*Wall Street Journal, Mar. 22 (0200), Pg. A10 | Laurence Norman*

The effort to revive the 2015 nuclear agreement hinges on perhaps the most politically sensitive issue in the negotiations: Whether to remove the U.S. terrorism designation for Iran's elite Revolutionary Guard, the country's powerful security force, diplomats said. Senior U.S. officials say a failure to find a compromise with Iran on the issue quickly could cause a breakdown in negotiations that -- over almost a year -- have resolved nearly every other disagreement.

**29. Oil Thirst Is Forcing Biden to Pivot U.S. Back to Saudi Arabia**

*Bloomberg News, Mar. 21 (1545) | Nick Wadhams, Annmarie Hordern and Matthew Martin*

President Joe Biden has been reluctantly drawn into closer ties with Saudi Arabia's king-in-waiting, forced by Russia's invasion of Ukraine to rethink a standoffish approach as the U.S. struggles to curb soaring oil prices. The problem is Crown Prince Mohammed bin Salman isn't ready to play along.

## **AFRICA**

**30. EU Freezes Some Mali Army Training Over Mercenary Concerns**

*Associated Press, Mar. 21 (1629) | Lorne Cooke*

The European Union's top diplomat said Monday that he has ordered the suspension of combat training for soldiers in Mali until he receives guarantees from the government there that the trainees will not be working with Russian mercenaries. "Clearly, our training mission cannot be implicated, in any way, in activities that could call into question the European Union's reputation," EU foreign policy chief Josep Borrell told reporters after chairing a meeting of the bloc's foreign ministers.

## **MODERNIZATION & TECHNOLOGY**

### **31. DOD sets FY-28 target for demonstrating hypersonic defense system**

*InsideDefense.com, Mar. 21 (1835) | Not Attributed*

The Defense Department has set a fiscal year 2028 target for demonstrating a prototype hypersonic defense system to defeat long-range, ultrafast maneuvering glide vehicles during mid-flight -- more than 10 years after Congress directed the U.S. military to establish a program to plug an anticipated hole in U.S. air- and missile-defense capabilities.

## **NOTABLE COMMENTARY**

### **32. There's Still Much More Sanctions Can Do**

*Wall Street Journal, Mar. 22 (0200), Pg. A17 | Sen. Pat Toomey (R-PA)*

By starting the largest land war on the European continent since World War II, Russia, a nuclear power, has unleashed the greatest threat to global security in recent memory. Not only are the Ukrainian people's lives and livelihoods at stake, but so is the security of people around the world. If Vladimir Putin does not conclude that his invasion was a disastrous mistake, the consequences for U.S. national security and the security of Europe, especially the Baltics and Poland, are grave. An insufficient Western response could be seen as a permission slip by other revisionist authoritarians, such as Chinese President Xi Jinping, for their own territorial ambitions.

### **33. Don't Expect China to Bring About Peace in Ukraine**

*Bloomberg Opinion, Mar. 21 (0930) | Minxin Pei*

Any hopes that U.S. President Joe Biden might persuade his Chinese counterpart Xi Jinping to help stop the war in Ukraine should probably be put aside. China wants to see an early end to the conflict. But it won't use its leverage to bring one about.

### **34. A Crisis in U.S.-Arab Relations**

*Wall Street Journal, Mar. 22 (0200), Pg. A19 | Firas Maksad*

When the leaders of Saudi Arabia and the United Arab Emirates decline phone calls from the president of the United States, rebuff his requests to help lower oil prices, and shy away from condemning Russia's invasion of Ukraine, and when the U.A.E. hosts Syrian dictator Bashar al-Assad in Abu Dhabi, there is no doubt that a major crisis in U.S.-Arab Gulf relations is under way.

### **35. The West is underestimating Russia's brutality**

*Washington Post, Mar. 22 (0115), Pg. A21 | Andriy Yermak*

Ukraine's resistance against Russia's horrific invasion has exceeded every outside prediction. Many in the West did not understand Ukrainians' love for their freedom, for their democracy. For us, losing our country would be worse than death. And that's why we fight - because defeat is not an option. President Volodymyr Zelenskyy delivered this message to a joint session of the U.S. Congress and to parliaments across Europe. He also pleaded for greater military assistance and the establishment of a no-fly zone for humanitarian - not military - purposes. Many countries have stepped up to provide critical military and humanitarian assistance. However, given Russian President Vladimir Putin's clear intention to ramp up the bloodshed, Ukraine still needs more.

## **TOP STORIES**

### **1. Ukraine Retakes Key Kyiv Suburb; Battle for Mariupol Rages**

*Associated Press, Mar. 22 (0413) | Cara Anna*

LVIV, Ukraine -- Ukrainian forces said they retook a strategically important suburb of the capital early Tuesday, while Russia's attack on the embattled southern port of Mariupol raged unabated, with fleeing civilians describing relentless bombardments and corpses lying in the streets.

While Russian forces carried on with the siege of Mariupol after the southern port city's defenders refused demands to surrender, the Kremlin's ground offensive in other parts of the country advanced slowly or not at all, knocked back by lethal hit-and-run attacks by the Ukrainians.

Early Tuesday, Ukrainian troops forced Russian forces out of the Kyiv suburb of Makariv after a fierce battle, Ukraine's Defense Ministry said. The regained territory allowed Ukrainian forces to retake control of a key highway and block Russian troops from surrounding Kyiv from the northwest.

But the Defense Ministry said Russian forces battling toward Kyiv were able to partially take other northwest suburbs, Bucha, Hostomel and Irpin, some of which had been under attack almost since Russia's military invaded late last month.

With troops bogged down in many places, Russian President Vladimir Putin's forces are increasingly concentrating their air power and artillery on Ukraine's cities and the civilians living there, killing uncounted numbers and sending millions fleeing.

A senior U.S. defense official, speaking on condition of anonymity to discuss the military's assessment, said Russia had increased air sorties over the past two days, carrying out as many as 300 in the past 24 hours, and has fired more than 1,100 missiles into Ukraine since the invasion began.

U.S. President Joe Biden, who is heading to Europe later in the week to meet with allies, suggested Monday evening that worse may be still to come.

“Putin’s back is against the wall,” Biden said. “He wasn’t anticipating the extent or the strength of our unity. And the more his back is against the wall, the greater the severity of the tactics he may employ.”

Biden reiterated accusations that Putin is considering resorting to using chemical weapons.

In a video address Monday night, Ukrainian President Volodymyr Zelenskyy hailed those who have fought back against Russia.

“There is no need to organize resistance,” Zelenskyy said. “Resistance for Ukrainians is part of their soul.”

Talks between Russia and Ukraine have continued by video but failed to bridge the chasm between the two sides. Zelenskyy told Ukrainian television late Monday that he would be prepared to consider waiving any NATO bid by Ukraine — a key Russian demand — in exchange for a cease-fire, the withdrawal of Russian troops and a guarantee of Ukraine’s security.

Zelenskyy also suggested Kyiv would be open to future discussions on the status of Crimea, which Russia seized in 2014, and the regions of the eastern Donbas region held by Russian-backed separatists. But he said that was a topic for another time. Zelenskyy plans to speak to Japanese lawmakers on Tuesday, part of a series of addresses to foreign legislatures as he seeks to drum up support.

In Mariupol, with communications crippled, movement restricted and many residents in hiding, the fate of those inside an art school flattened on Sunday and a theater that was blown apart four days earlier was unclear. More than 1,300 people were believed to be sheltering in the theater, and 400 were estimated to have been in the art school.

Perched on the Sea of Azov, Mariupol is crucial port for Ukraine and lies along a stretch of territory between Russia and Crimea. As such, it is a key target that has been besieged for more than three weeks and has seen some of the worst suffering of the war.

It is not clear how close its capture might be. Ukraine’s Defense Ministry said Tuesday that their forces were still defending the city and had destroyed a Russian patrol boat and electronic warfare complex.

Over the weekend, Moscow had offered safe passage out of Mariupol — one corridor leading east to Russia, another going west to other parts of Ukraine — in return for the city’s surrender before daybreak Monday. Ukraine flatly rejected the offer well before the deadline.

Mariupol had a prewar population of about 430,000. Around a quarter were believed to have left in the opening days of the war, and tens of thousands escaped over the past week by way of the humanitarian corridors. Other attempts have been thwarted by the fighting.

Mariupol officials said on March 15 that at least 2,300 people had died in the siege, with some buried in mass graves. There has been no official estimate since then, but the number is feared to be far higher after six more days of bombardment.

For those who remain, conditions have become brutal. The assault has cut off Mariupol's electricity, water and food supplies and severed communication with the outside world, plunging residents into a fight for survival. Fresh commercial satellite images showed smoke rising from buildings newly hit by Russian artillery.

Those who have made it out of Mariupol told of a devastated city.

"There are no buildings there anymore," said 77-year-old Maria Fiodorova, who crossed the border to Poland on Monday after five days of travel.

Olga Nikitina, who fled Mariupol for the western Ukrainian city of Lviv, where she arrived Sunday, said gunfire blew out her windows, and her apartment dropped below freezing.

"Battles took place over every street. Every house became a target," she said.

A long line of vehicles stood on a road in Bezimenne, east of Mariupol, as residents of the besieged city sought shelter at a temporary camp set up by Russian-backed separatists in the Donetsk region. An estimated 5,000 people from Mariupol have taken refuge in the camp. Many arrived in cars with signs that said "children" in Russian.

A woman who gave her name as Yulia said she and her family sought shelter in Bezimenne after a bombing destroyed six houses behind her home.

"That's why we got in the car, at our own risk, and left in 15 minutes because everything is destroyed there, dead bodies are lying around," she said. "They don't let us pass through everywhere there are shootings."

In all, more than 8,000 people escaped to safer areas Monday through humanitarian corridors, including about 3,000 from Mariupol, Deputy Prime Minister Iryna Vereshchuk said.

Russian shelling of a corridor wounded four children on a route leading out of Mariupol, Zelenskyy said.

Russia's invasion has driven nearly 3.5 million people from Ukraine, according to the United Nations. The U.N. has confirmed over 900 civilian deaths but said the real toll is probably much higher. Estimates of Russian deaths vary, but even conservative figures are in the low thousands.

## **2. U.S. Sends Soviet Air Defenses to Ukraine**

Wall Street Journal, Mar. 22 (0200), Pg. A1 | Nancy A. Youssef and Michael R. Gordon

WASHINGTON -- The U.S. is sending some of the Soviet-made air defense equipment it secretly acquired decades ago to bolster the Ukrainian military as it seeks to fend off Russian air and missile attacks, U.S. officials said.

The systems, which one U.S. official said include the SA-8, are decades old and were obtained by the U.S. so it could examine the technology used by the Russian military and which Moscow has exported around the world.

The weapons are familiar to Ukraine's military, which inherited this type of equipment following the breakup of the Soviet Union.

The Pentagon declined to comment on the U.S. decision to reach into its little-known arsenal of Soviet weapons, which comes as the Biden administration is mounting a major push to expand Ukraine's air defense capabilities.

The U.S. over the decades has acquired a small number of Soviet missile defense systems so that they could be examined by U.S. intelligence experts and help with training U.S. forces.

The secretive efforts received public attention in 1994 when a Soviet-made transport plane was observed at the Huntsville, Ala., airport within sight of a major highway. It was later disclosed that the plane was carrying an S-300 air defense system that the U.S. had acquired in Belarus as part of a clandestine project involving a Pentagon contractor that cost \$100 million, according to a former official involved in the mission.

The S-300 -- called the SA-10 by NATO -- is a long-range, advanced air defense system intended to protect large areas over a much wider radius. The SA-8 is a short-range, tactical air defense system designed to move with ground forces and provide cover from aircraft and helicopters. While the SA-8 has a shorter range, it is highly mobile and potentially easier to hide.

Some of the Soviet weapons have been kept at the Redstone Arsenal in Alabama, which its website notes serves as "the Army's center for missile and rocket programs." At least some of what the U.S. sent was from that base, said officials, who added that C-17s recently flew to a nearby airfield at Huntsville.

The S-300 from Belarus wasn't among the systems that are being sent to Ukraine, one U.S. official said.

The annual government spending bill recently passed by Congress and signed into law by President Biden includes language that authorizes the administration to transfer to the Ukrainian military and to North Atlantic Treaty Organization partners aircraft, ammunition, vehicles, and other equipment that is either already overseas or in existing stockpiles.

Staffers with Sen. Joni Ernst (R., Iowa), who advocated for the language, said Soviet-era air defense systems would be covered by the new legislation. Congress was notified about the U.S. decision, officials said.

Ukraine already possesses some Russian air defense systems, including the S-300. It needs more such systems, however, that can operate at medium and long range to blunt Russia's aircraft and missile attacks. The shoulder-fired Stinger missiles that the U.S. and NATO nations are providing to Ukraine are effective only against helicopters and low-flying aircraft.

The U.S. is hoping that the provision of additional air defenses will enable Ukraine to create a de facto no-fly zone, since the U.S. and its NATO allies have rebuffed Ukraine's appeals that the alliance establish one. Such a step, Biden administration officials have said, could lead to a direct confrontation between the U.S.-led alliance and Russian forces, which it is determined to avoid.

Mr. Biden is traveling to Brussels this week for a NATO summit to discuss "ongoing deterrence and defense efforts" for Ukraine. White House spokeswoman Jen Psaki said. Vice President Kamala Harris, Secretary of State Antony Blinken and Defense Secretary Lloyd Austin also have visited the eastern bloc to discuss ways to bolster Ukraine's defensive weapons.

"We are continuing to work with our allies and key partners to surge new assistance, including Soviet- or Russian-origin antiaircraft systems and the necessary ammunition to employ them, every day to Ukraine," a U.S. official said.

Mr. Austin visited Slovakia last week to explore if the country would send an S-300 from its arsenal. Slovakia has said that it would do so if the U.S. would provide it with a replacement, but such an arrangement has yet to be agreed.

U.S.-made weapons such as the Patriot air defense system are in short supply and require U.S. military personnel or months of U.S. training to operate. German and Dutch Patriot units are being sent to Slovakia as a stopgap, those governments have said.

"We've been in discussion" with the U.S., Slovakia Minister of Defense Jaroslav Nad' said during a joint news conference with Mr. Austin on Thursday. "Should there be a situation that we have a proper replacement or that

we have a capability guaranteed for a certain period of time, then we would be willing to discuss the future of [the] S-300 system.”

### **3. Pentagon to Build Up European Presence**

*U.S. seeks to counter Moscow, while keeping its long-term focus on Beijing*

Wall Street Journal, Mar. 22 (2020), Pg. A6 | Gordon Lubold, David S. Cloud and Lindsay Wise

WASHINGTON -- The U.S. plans to boost military spending and increase its military presence near Russia in response to Moscow’s invasion of Ukraine, while trying to maintain a long-term focus on countering China, current and former officials said.

The Feb. 24 invasion has triggered calls from Republicans and Democrats in Congress for tens of billions more in military spending, while allies in Europe have described the war as a wake-up call requiring military steps unthinkable only months ago. The Biden administration, however, is seeking to balance what it sees as a pivotal moment for Europe with a desire to keep the U.S. focused on Asia.

“I think it’s a 9/11 event for Europe,” said a senior Pentagon official, who added that while the Pentagon will respond accordingly to what those countries need, the main focus remains on countering Beijing. “I think there is room to enhance our posture alongside our allies in Europe without it being this huge sucking sound that prevents us from being able to focus on China.”

Since 2018, the Pentagon’s strategy has defined China and Russia as primary concerns and North Korea, Iran and violent extremism as secondary threats. That “two-plus-three” approach -- two chief adversaries with three secondary ones -- was expected to be supplanted by a “one-plus-four” strategy, which put China first and placed Russia among the lesser threats.

Despite the heightened focus on Moscow, a new U.S. defense strategy, which was due to be released earlier this year, had been held up as the Russia crisis brewed. Policy makers all but finished the document late last year and tweaked the language slightly after the invasion, officials said. But they didn’t do a wholesale rewrite of the document, and when it is released in the coming months, the strategy will still assign Russia a secondary priority behind China, according to the Pentagon official.

“China remains in our assessment the only country that can systematically challenge the United States for now and for the rest of this century, that means diplomatically, technologically, economically, militarily, geopolitically,” the official said. “And Russia is not in that camp, they weren’t a year ago, they’re not today.”

The invasion of Ukraine has sparked concerns among top policy, diplomatic and military officials about losing sight of the strategic threat from China, however.

“There is strong pressure in the building not to overdo Russia’s importance over the long term because of Ukraine,” said Mackenzie Eaglen, a senior fellow at the right-leaning American Enterprise Institute, referring to the Pentagon. “I think that what will ultimately come out will be a watered-down version of where they were going already, which was that China was the priority, including over Russia.”

Even so, Moscow’s invasion of Ukraine is forcing U.S. officials to grapple anew with countering two major adversaries at once, a problem that has revived long-dormant Cold War debates about quantity versus quality in apportioning scarce forces between Europe and Asia.

The White House declined to comment on changes to its military strategy, or on a separate, overarching strategy plan, called the national security strategy, which has also been delayed.

While it is unclear how much additional money would be available to the Pentagon to help ease these trade-offs, both Republicans and Democrats on Capitol Hill say that Russia’s invasion has transformed the debate over military priorities, making a sharp increase in military spending a virtual certainty.

Republican aides say GOP leaders’ target is more than \$800 billion for the Pentagon’s base budget in fiscal year 2023 -- far above the approximately \$740 billion authorized for fiscal year 2022. And some Democrats have signaled they, too, would support a substantial spending boost.

Rep. Elaine Luria (D., Va.), vice chairwoman of the House Armed Services Committee and a former Navy commander, says the U.S. needs to spend 5% of its GDP on defense, up from its current rate of less than 4%. “I think people are sort of waking up out of the snooze that we were living somewhere in a secure world,” she said.

Even with additional funding, the Pentagon isn’t likely to return to the massive force posture it had permanently deployed in Europe decades ago. But Moscow’s invasion has prompted the alliance to set aside for now restrictions it has observed since the 1990s on basing large numbers of combat troops on the territory of North Atlantic Treaty Organization members in Eastern Europe, the officials said.

The U.S. has already rushed more than 15,000 troops to Europe amid the crisis in Ukraine, raising American force levels in Europe to more than 100,000 personnel for the first time in decades. NATO members have also deployed reinforcements to the Baltics, Poland, Hungary and Romania.

U.S. Defense Secretary Lloyd Austin met at NATO headquarters last week with his counterparts from other alliance members to discuss beefing up forces even further. They directed military planners from all of the NATO members to draft plans that are likely to be discussed when President Biden meets with other alliance heads of government in Europe this week.

There, Mr. Biden will meet with leaders of the eastern NATO members who are eager for additional American commitments to the region. “We need some defenses, rocket artillery, this is what we need and of course, we would like to have American soldiers here permanently based,” Artis Pabriks, the Latvian defense minister, told reporters in Europe earlier this month.

But until the immediate crisis is over, Pentagon officials are loath to make those kinds of long-term commitments, said a U.S. military official familiar with the planning. “We’re just starting to wrestle with these issues.”

The question that NATO and the U.S. face is how quickly they can shift from a posture that relied largely on deterring Russia through political engagement to a more robust military approach, said Michal Baranowski, a senior fellow in Warsaw for the German Marshall Fund, a European think tank.

U.S. forces, he added, are still key, because NATO allies in the east see them as far more of a deterrent to Moscow than troops from other European countries and because Russia itself would see any move against NATO as more risky.

“In some ways, it goes back to a much more Cold War force posture,” Mr. Baranowski said. “For Russia, it’s really the American component that’s key.”

### **4. Austin to join Biden’s trip this week to NATO, Poland**

Stars and Stripes Online, Mar. 21 (1743) | Corey Dickstein

Defense Secretary Lloyd Austin will return to Europe for a second consecutive week, joining President Joe Biden’s trip Wednesday to NATO headquarters in Brussels and visit Polish leaders later in the week, the Pentagon announced Monday.

The U.S. leaders’ trip this week comes as Russia’s invasion of Ukraine nears its one-month anniversary and just days after Austin returned to Washington from a meeting March 15 with NATO defense ministers in Brussels. Austin met with leaders in Slovakia and Bulgaria late last week, as those NATO eastern flank nations seek to bolster their own security amid Russia’s aggression against Ukraine.

Biden and Austin are expected to meet with other NATO leaders Thursday before traveling to Poland on Friday, officials said. Biden will also meet with the European Council and G7 leaders to “discuss international efforts to support Ukraine and impose severe and unprecedented costs on Russia for its invasion,” according to a White House statement.

The meetings also come as Poland pitches a NATO peacekeeping mission in Ukraine, according to a Reuters news report on Friday. Pentagon spokesman John Kirby declined to discuss the Polish proposal, but he confirmed the Pentagon expected it would be formally submitted Monday.

“It kind of goes without saying, but I’ll say it anyway — there shouldn’t be a need for a peacekeeping force because there shouldn’t have been a war of choice by [Russian President Vladimir] Putin,” Kirby told reporters. “And he can end it today by negotiating in good faith and getting his troops out of Ukraine and stopping the killing and the death and destruction that he and his forces are responsible for. But again, I’m not going to get ahead of international discussions here in this particular proposal.”

Linda Thomas-Greenfield, the U.S. ambassador to the United Nations, told CNN on Sunday that American troops would not participate in such a peacekeeping force, reiterating Biden’s position that U.S. troops would not enter Ukraine to fight the Russian military.

“American troops will not be on the ground in Ukraine at this moment,” she said. “The president has been clear on that. And other NATO countries may decide that they want to put troops inside of Ukraine. That will be a decision that they have to make.”

Biden and other leaders of NATO countries have pledged new assistance for Ukrainian forces in recent days, as they fend off the Russian invasion. The United States expects to send some \$350 million in defensive weapons this week to Ukraine and another \$800 million of aid — including anti-tank and anti-aircraft missiles, rifles, ammunition, drones and body armor — in the coming weeks, Kirby said Monday.

A Pentagon official said Monday that Russian troops appeared to be struggling with low morale and have gained little ground in recent days. The Russian military has launched more than 1,000 missiles since it invaded Ukraine on Feb. 24, the official said, adding the Pentagon has observed an uptick in Russian air activity in recent days.

Nonetheless, the Russian military has made little progress in its goal of capturing Ukraine’s capital Kyiv and taking out its pro-West government. The official said Russian struggles to supply its troops with fuel, water and ammunition and to coordinate its air and ground efforts have likely led to an increase in attacks on civilian targets, including apartment buildings, hospitals and a shopping mall on Monday.

Kirby declined to say if the Pentagon believed Russia was altering its battle plans to inflict more pressure on ordinary Ukrainians, but he said the U.S. military believed Russia’s military was deliberately targeting civilians.

“We continue to see indiscriminate attacks on civilians, which we believe in many cases is intentional,” he said. “There’s no justification for it. So, I’m not even going to try to do that. But, clearly, they are causing increased numbers of civilian casualties.”

## **5. Pentagon officials say the human element is key to JADC2’s success**

C4ISRNET.com, Mar. 21 (1632) | Colin Demarest

WASHINGTON -- The Pentagon’s tech-centric campaign to overhaul military communications and better handle streams of data will not succeed if the human side of things is neglected, a top official recently warned.

Without the right people and without the right recruitment and retention considerations, Joint All-Domain Command and Control will fall short of its true potential, Director of Command, Control and Communications for the Joint Staff Lt. Gen. Dennis Crall told reporters March 18.

“Data is the element that we’re pursuing, and data-centricity has three parts to it. The first, really, is people. We hardly ever speak of this because we are so focused on the second tenet, which is technology,” Crall said. “And then the third piece is process or policy. If you want to capture data-centricity, you’ve got to line all three of those up.”

The general spoke to media days after Deputy Secretary of Defense Kathleen Hicks signed a JADC2 implementation plan laying out milestones and defining who is responsible for what and after the Pentagon unveiled an unclassified summary of its JADC2 strategy.

Among the summary’s highlights is an effort to establish the so-called JADC2 human enterprise. The endeavor hopes to reform the workforce as well as address “the professional development needed to train and educate leaders to be proficient in operations across all warfighting domains.”

Joint All-Domain Command and Control — more a philosophy than an actual product, the summary suggests — would enable the military to take data from any domain and service and quickly process and feed it to the correct people, who could then take action.

“We must maintain continued focus and momentum on these initiatives and programs, which enhance department capabilities to face current and future threats,” Hicks said in a March 17 statement. “Command and control in an increasingly information-focused warfighting environment have never been more critical. JADC2 will enable the DoD to act at the speed of relevance to improve U.S. national security.”

While Crall is confident the technical pieces of JADC2 will fall into place, he is less so about the human element, meaning changes are necessary.

“I really appreciate the question in the sense that we’ve got to take a look at people as strongly as we do technology,” Crall said. “Otherwise, this enterprise, the JADC2 experiment that we’re going through now in attempt to delivery, will not be successful.”

“There’s a whole smattering of things that we need to look at that would attract the right workforce,” he continued, “and recruitment is a key piece of this because it directly impacts our ability to execute JADC2.”

Secretary of Defense Lloyd Austin approved the full JADC2 strategy in May 2021. Officials, including Crall, at the time suggested the approval would really get the ball rolling.

“Planning is good. Talk is good,” the general said. “Now it’s delivery time, and we’ve been given a clear signal to begin pushing these outcomes to the people who need them.”

## **COVID-19**

### **6. Biden pushes a new normal amid worries over next surge**

Washington Post, Mar. 22 (0115), Pg. A1 | Lena H. Sun and Yasmeen Abutaleb

Cathy Colledge, who has Stage 4 metastatic breast cancer, feels like she’s on her own trying to avoid a coronavirus infection that might kill her.

New guidelines from the Centers for Disease Control and Prevention Centers for Disease Control and Prevention telling 99 percent of Americans living in counties labeled green or yellow that they can safely go without masks puts the onus on her to protect herself, whether she goes to the grocery store or travels to Florida to see her grandchildren.

“I want to move on, too,” said Colledge, 70, of Salt Lake City. “It’s kind of confusing for me because I feel like, ‘What about me? Why am I safer now than I would’ve been, I don’t know, three months ago?’”

The unsettling answer for Colledge is that her risk continues to be dangerously high because of her illness, even though transmission of the coronavirus has dropped significantly. That means she must now do a risk-benefit calculus for every journey outside of her home.

But for many other Americans, there was palpable relief on Feb. 25, when the CDC shifted the vast majority of U.S. counties from red, signaling high transmission, to green, meaning low levels of disease and no need to mask indoors.

The changes were based on a new framework designed to protect communities from the worst, a surge so big that it might overwhelm local hospitals, while being less disruptive to everyday life, amid falling case counts and a desire among many for relief from masking and other public health measures. But some worry it leaves the country unprepared for another wave and abandons those who are most vulnerable.

The plan's adequacy may soon be tested if the United States sees the same sharp increase in coronavirus cases now bedeviling Europe, a possibility federal officials are anticipating. If such increases lead some communities to be reclassified as red, it remains an open question whether state and local officials would be willing to reinstate controversial indoor masking guidelines. There may be little political appetite for such measures, even in Democratic-led areas.

"Convincing a large swath of the population to put masks back on will be very difficult," said Nirav Shah, director of the Maine Center for Disease Control and Prevention.

For President Biden and his administration, which has vowed to "follow the science," navigating a return to normalcy in the third year of the pandemic is an inherently messy and uncertain process. Federal officials have developed new metrics, based on previous coronavirus waves, that will anticipate the burden of severe disease on local hospitals by incorporating county data on covid-19 hospital admissions, as well as case counts.

But there are no distinct steps to a new pandemic normal, only judgment calls that will have to be continuously adjusted, depending on how an unpredictable virus mutates, said several senior administration officials and outside experts.

There are "tons of trade-offs" and "it's a messy business," Eli Perencevich, an infectious-disease physician at the University of Iowa, said of the effort to navigate a return to normalcy. "But I do think CDC is, you know, trying their best in a very, very continuously difficult situation. There's no policy that's going to please everybody."

Some experts worry the new framework moves the burden of protection almost entirely to individuals, particularly the most vulnerable, including the immunocompromised and families with children too young to get vaccinated.

Others wonder whether the agency's new metrics will alert communities in time to take action to avert future surges, especially if they face variants with more immune evasion and severity than the omicron variant or its cousin, BA.2, now fueling cases in Europe. Whether officials will act if they have sufficient notice is another question.

"I'm especially concerned about what seems to me to be a high hospitalization threshold for triggering implementation of community measures like indoor masking," Jeffrey Duchin, health officer for Seattle and King County in Washington state, said in an email, noting the CDC triggers range from the equivalent of to twice the highest weekly hospitalization rates for influenza over the past 12 seasons.

### *Officials say country is ready*

Several experts heralded the new guidelines and said they were appropriate as cases drop, especially given the nation's broad immunity. For most people who are vaccinated and boosted, the coronavirus is unlikely to result in severe infection, hospitalization or death, even though some immune protection wanes after a few months.

Experts and administration officials note that the picture in March 2022 is far different from March 2020, with access to coronavirus vaccines, treatments and tests, as well as N95 masks that offer stronger protection and a better understanding of the virus.

"I acknowledge how this pandemic has disproportionately affected certain communities, whether they are vulnerable by virtue of where they live and work, or by virtue of coexisting disease," CDC Director Rochelle Walensky said in an interview. "The benefit of where we are now compared to a year ago is that we have a whole host of things we can do with and for people," including widespread testing and vaccination.

Yet as the United States and the world have learned repeatedly, there is no guarantee cases will remain low when the virus is still circumnavigating the globe, creating hot spots in parts of Asia and Europe that in the past have preceded outbreaks in the United States.

When CDC released the new metrics, Walensky said they could be dialed up or down if an evolving virus posed challenges. Agency officials implied, but did not state forcefully, that another large surge would mean a return to indoor mask recommendations.

The effectiveness of the new metrics, as well as the willingness of officials to act, could be tested soon amid signs that the level of virus in wastewater is ticking up in New York, California, Colorado, Florida, Ohio, Maine and West Virginia, although it is not yet clear whether cases and hospitalizations will follow suit, as they have in parts of Asia and Europe.

"Science doesn't provide all the answers," said Richard Besser, president of the Robert Wood Johnson Foundation and a former acting CDC director. "The frustration that people are feeling, this sense that some people are feeling liberation and joy, and others are feeling a sense of fear and abandonment, I totally get that and expect that's how it's going to be for some time until this pandemic does hopefully one day recede."

### *Ringling alarms when needed*

In much of the country, particularly states and cities led by Republicans, mask mandates fell away long ago. But in February, a number of Democratic governors began lifting their mandates before the CDC updated its metrics.

The agency was in regular discussions with state health officials about what the rapid drop in cases meant and how to navigate the next phase of the pandemic. Despite polls showing the majority of Americans still favored some restrictions, including mask mandates, state and local leaders said residents were growing restive.

They wanted guidance from the CDC to help determine when mandates could be relaxed and when they might need to be reinstated, one senior administration official and two state health officials said. State officials said they asked that the capacity of their hospitals be included. These officials, along with others in this story, spoke on the condition of anonymity because they were not authorized to speak on the record.

Given the transmissibility of the omicron variant, almost the entire country's map was still red even as the surge was waning toward the end of February. The CDC metrics were still based on case counts and test positivity. But many infections go undetected because people have no symptoms or do not seek treatment for mild symptoms.

In addition, the results of rapid at-home tests are often not reported in official case counts. At the same time, many experts had been pushing for measurements of disease severity because the vast majority of those who were vaccinated, and especially those who received booster doses, would have mild or asymptomatic disease, according to three people familiar with the conversations.

Under its previous metrics, the CDC was “ringing the alarm constantly throughout the pandemic, saying transmission is high, transmission is high, transmission is high,” said a senior CDC adviser. But it “didn’t mean anything” while the current metrics “allow us to ring the alarm when we really need to. And to turn the alarm off when things are a little better and give people a break from the siren.”

Implicit in the latest guidance is a basic fact that the country is “at the point where we’re not able to prevent transmission from the virus from occurring,” said Aubree Gordon, an infectious-disease epidemiologist at the University of Michigan. “The severity of infection has dropped. A huge part of that is because of population-level immunity. I do think it’s appropriate guidance for the moment we are in now.”

With that in mind, officials “really thought through what is it that matters right now in this pandemic. And while cases are important, really, what we are most concerned about was medically significant disease,” the senior CDC adviser said. They wanted to be able to predict “when our hospitals are going to fill up, when our ICU beds are going to be full, and when are we going to see an increase in the risk of death in the community from covid-19. Those are the things that really mattered. We wanted to predict those.”

Officials spent weeks identifying new metrics and then validating that they would accurately predict the impact on health systems three weeks later. They sought indicators that were available at the county level, reported at least weekly, and directly reflected the goal of minimizing severe disease or strain on the health system, according to a CDC scientific brief posted a week after the new guidance was released.

Death rates were not used because they lag new infections by weeks. Emergency visits for covid-19 and wastewater surveillance would be solid early-warning systems, but data is not available for the whole country, so they were not included. One new hospital metric, coronavirus cases per 100,000 population in the past seven days, is important early in a surge to signal anticipated medical strain, the CDC scientific brief said.

But some people are pessimistic that the new metrics will alert communities in sufficient time to reinstate measures such as indoor masking to avert surges. New hospital admissions lag infections by at least a week, and by that time, a community could have significant amounts of disease.

The new metrics are of greater use “on the downside of a surge than on the upside,” said Andrew Pavia, a professor of pediatrics and infectious diseases at the University of Utah. “We need sensitive indicators to allow us to institute control measures when a new surge is beginning, not just to tell us when it is reasonable to stop them.”

Administration officials acknowledge the metrics are not perfect but believe they will sound alarms in time. Two senior administration officials said in a country as large and diverse as the United States, it remains difficult to get to a recommendation that makes sense for every state or county. In the end, they acknowledged, the new framework is a combination of science and judgment calls.

Figuring out when to reinstate prevention measures will require such judgment calls, the senior CDC adviser said. “When should you ask people to put on a mask? When should communities consider screening testing? When should schools think about test-to-stay programs? Those types of prevention measures are really hard to model” and there is no precise number, backed by evidence, indicating when you should implement each one, the adviser said. “That’s where I think policy came in and where judgment came in.”

Administration officials noted that even before they unveiled the new framework and withdrew masking guidance for much of the country, many people had stopped wearing face coverings. Studies have shown cloth masks do not offer sufficient protection, and mandates had not specified what types of masks people should be wearing.

None of which is any consolation to Jacki and Ken Churchill, who fear for his survival. Ken, 52, has an immune deficiency that prevents his body from producing antibodies. The couple continue to order groceries online, avoid eating out and home-school their 14-year-old son. Mask mandates in their corner of Alaska, outside Anchorage, had afforded some peace of mind on Ken’s rare trips to doctor appointments. Not anymore.

“We’re just left to protect ourselves,” said Jacki, 51, a cardiac nurse who is preparing to fly to Maine to help care for a sick family member. She worries that if she should pick up an infection at an airport or on a plane, that could prove deadly for Ken. To plan for her journey, she plans to “scarf down pre-packed food” in the open spaces where dogs are walked during her long layovers. “We’re not trying to dampen anybody’s party,” Jacki said. “We’re just trying to live.”

*--Dan Keating contributed to this report*

## **7. A Sign of the Times? DoD Skips Publishing Weekly COVID-19 Numbers**

Military.com, Mar. 21 (1803) | Patricia Kime and Travis Tritten

In a sign of the continued decline of COVID-19 across the country, the Defense Department last Wednesday skipped its update of coronavirus case numbers -- data it faithfully has published weekly since July 2021.

The department released the information three times a week during the first year of the pandemic, while states across the U.S. reported the data daily. But as case numbers have dwindled, more than a dozen states have cut their output to once or twice a week, and it appears the DoD is following suit.

“There’s been no decision ... to slim down our flow of information,” Pentagon spokesman John Kirby told Military.com during a press conference Monday, though he did not say how often the information will be published. “We’re still working on this very, very hard.”

Since the beginning of the pandemic, the DoD has logged 608,650 cases of COVID-19, including 391,341 cases among U.S. service members. More than 680 people have died, including 93 troops, 414 civilian employees, 35 dependents and 139 contractors, according to its published statistics.

In March 2020, DoD officials ordered individual military installations and combatant commands to cease publishing COVID-19 case numbers, citing concerns for operational security. The overall department numbers have been published online during the last two surges in the pandemic.

Meanwhile, Kirby noted that 97.7% of active-duty personnel are fully vaccinated and 93.8% of the National Guard and Reserve forces have received at least one dose.

Since the COVID-19 vaccinations were approved for emergency use, the DoD has administered more than 7 million shots, he added.

“Nobody’s doing any spiking of any footballs here. We know this pandemic is still ongoing, that the virus is still dangerous and deadly,” Kirby said. “We’re watching this every single day, and we’re not afraid to make adjustments.”

Speaking on PBS NewsHour last week, Dr. Anthony Fauci, chief medical adviser to President Joe Biden, said the country is “going in the right direction” in terms of cases, hospitalizations and deaths, but needs to be mindful of the rise of variants, including the new BA.2 subvariant of omicron in Europe.

“I would not be surprised ... if, in the next few weeks, we do see an uptick in cases,” Fauci said, adding that it didn’t appear, however, based on cases in the United Kingdom, that BA.2 is any more severe than omicron.

The White House has asked Congress for \$22.5 billion to continue funding COVID-19 response and research, to include surveillance, testing and monitoring.

Last week, officials wrote to Speaker of the House Nancy Pelosi asking her to back the additional funding, given that current pandemic support expires this month.

According to Shalanda Young, the director of the White House's Office of Management and Budget, and Jeffrey Zients, White House coordinator for COVID-19 response, the money is needed to continue testing, surveillance, research and more.

Without it, they added, the country could be "blindsided" by a future variant.

"Failing to provide additional funding for the COVID response now will leave us unequipped to deal with a future surge," they wrote in a letter published by NPR.

## **EXECUTIVE/LEGISLATIVE**

### **8. Biden, allies discuss Russia's 'brutal' war in key week for Western unity**

Agence France-Presse, Mar. 21 (1703) | Sebastian Smith

President Joe Biden and European allies discussed Russia's "brutal" war in Ukraine on Monday, kicking off a crucial week in the Western standoff with Moscow that will see Biden visit Poland after attending NATO and EU summits.

Biden hosted the call, lasting just under one hour, with French President Emmanuel Macron, German Chancellor Olaf Scholz, Italian Prime Minister Mario Draghi and UK Prime Minister Boris Johnson "to discuss their coordinated responses," the White House said.

"The leaders discussed their serious concerns about Russia's brutal tactics in Ukraine, including its attacks on civilians," a White House statement said.

"They underscored their continued support for Ukraine, including by providing security assistance to the brave Ukrainians who are defending their country from Russian aggression, and humanitarian assistance to the millions of Ukrainians who have fled," it said.

On Wednesday, Biden will depart on the most momentous foreign trip of his presidency to date. He attends the twin summits on Thursday in Brussels, then meets President Andrzej Duda in Poland, on the frontline of the West's confrontation with Russia, Saturday.

Russia's war is about to enter its second month, and US and Western allies have imposed unprecedented sanctions on Moscow, crippling the ruble and stock market, while going after President Vladimir Putin's wealthy supporters.

On the ground in Ukraine, Western-supplied weapons, backed by years of training and funding, have helped the country's military to bloody the Russian invaders on multiple fronts.

White House Press Secretary Jen Psaki said that Biden's mission was to make sure the West maintains closed ranks.

"Unity has been front and center for the president," Psaki said. "Unity with our European counterparts, unity among NATO, unity among the G7. And that doesn't happen by accident. And so, coming out of this what the president is hoping to achieve is continued coordination and a unified response to the continued escalatory actions of Putin."

However, with the war starting to look like a stalemate, Ukrainian President Volodymyr Zelensky is making increasingly desperate appeals for the West to do more.

What those additional steps could be remains far from obvious.

One big hole in the sanctions regime is China, the world's second biggest economy. Beijing is refusing even to condemn ally Russia and a nearly two-hour talk between Biden and his Chinese counterpart Xi Jinping on Friday appeared to result in no change.

While the sanctions have sent severe shockwaves through Russia's economy, US and especially European economies -- which rely heavily on Russian energy imports -- are likewise vulnerable.

The United States and Britain have already announced their own bans on Russian oil imports. A wider ban by EU countries would mark a huge escalation hurting Moscow -- but also Western consumers.

Brent North Sea crude traded at \$114.55 a barrel early Monday and earlier this month hit \$139, up from about \$79 at the beginning of the year.

A broad oil embargo "will hit everyone," Kremlin spokesman Dmitry Peskov warned.

Neither is there an easy path to significantly upgrading Ukraine's military.

Zelensky is pleading for more powerful tools beyond the effective but limited anti-tank rockets and Stinger missiles used to hit low flying aircraft.

But Biden has firmly rejected Zelensky's calls for a NATO-imposed no-fly zone, saying this would require the United States to go to war against Russia.

The alliance has also stumbled over a failed push by Poland to send Soviet-designed MiG-29 fighter jets to Ukraine through a US air base. Again, Washington said this would risk Russia declaring that NATO had actively entered the war.

Now, there is growing discussion about furnishing Ukraine with another piece of Russian-origin technology -- the S-300 anti-aircraft system. This would be a step up for Ukraine's defenders, because the missiles can hit planes at high altitude.

Slovakia says it is willing to provide the system it has in its arsenal to Ukraine, but only if NATO provides a replacement for its own defense.

One thing Biden won't be doing this week, the White House says, is making a trip to Kyiv himself.

Polish Prime Minister Mateusz Morawiecki, along with the Czech and Slovenian prime ministers, traveled to the embattled capital last week. But "there are no plans to travel into Ukraine," Psaki said, citing security concerns.

There is speculation, however, that Biden could meet with some of the nearly 3.5 million refugees who have fled Ukraine while he's in Poland.

Psaki said that the refugee issue would be "a key component" of his trip.

## **9. Biden warns business leaders to prepare for Russian cyber attacks**

CNN.com, Mar. 21 (1852) | Maegan Vazquez, Donald Judd, Sean Lyngaas and Zachary Cohen

President Joe Biden on Monday issued an urgent warning to American business leaders, telling them to strengthen their companies' cyber defenses immediately.

Speaking at the Business Roundtable Quarterly Meeting in Washington, Biden said Russian President Vladimir Putin is likely to use cyber attacks as a form of retaliation against the United States for its actions to counter Russia's incursion on Ukraine.

Biden said, "The magnitude of Russia's cyber capacity is fairly consequential and it's coming."

He added that “one of the tools (Putin’s) most likely to use, in my view -- in our view -- is cyber attacks. They have a very sophisticated cyber capability,” and later argued, “The point is that he has the capability. He hasn’t used it yet, but it’s part of his playbook.”

The President told business leaders the national interest is at stake, suggesting that it’s “a patriotic obligation that you invest as much as you can in making sure -- and we will help in any way -- that you have built up your technological capacity to deal with cyber attacks.”

Earlier Monday, Biden issued a statement pointing to “evolving intelligence” to suggest Russia could conduct malicious cyber activity against American companies and critical infrastructure.

While the Biden administration has been warning the nation of the prospect of cyber attacks by Russia for months, most recently as a response to the economic restrictions imposed on Russia over its invasion of Ukraine, the President’s statement suggests “evolving intelligence” has heightened the threat.

The details of exactly what that intelligence is remain unclear, but deputy national security adviser Anne Neuberger said during Monday’s White House briefing that Russia had been conducting “preparatory activity” for cyber attacks, which she said could include scanning websites and hunting for software vulnerabilities.

Neuberger said the administration is reiterating its warnings “based on evolving threat intelligence that the Russian government is exploring options for potential cyber attacks on critical infrastructure in the United States,” but also underscored that “there is no certainty there will be a cyber incident on critical infrastructure.”

The administration last week “hosted classified briefings with companies and sectors we felt would be most effective and provided very practical, focused advice,” Neuberger told CNN’s Phil Mattingly during Monday’s briefing.

Biden said in his statement that the administration would “continue to use every tool to deter, disrupt, and if necessary, respond to cyber attacks against critical infrastructure,” but acknowledged that “the federal government can’t defend against this threat alone.”

“Most of America’s critical infrastructure is owned and operated by the private sector and critical infrastructure owners and operators must accelerate efforts to lock their digital doors. The Department of Homeland Security’s Cybersecurity and Infrastructure Security Agency (CISA) has been actively working with organizations across critical infrastructure to rapidly share information and mitigation guidance to help protect their systems and networks,” the statement said.

The administration is recommending several steps to help private sector partners prevent against cyber attacks, including using multi-factor authentication, consulting with cyber security professionals to make sure systems are

protected against all known vulnerabilities, changing passwords across networks to prevent stolen credentials from being used, backing up and encrypting data and educating employees on cyber security.

### *Concerns that Putin might lash out*

The decision for Biden to issue the warning reflects concerns within the administration about what Putin might be willing to do next as it becomes increasingly clear his invasion of Ukraine is not going as expected, according to a US official familiar with the internal discussions on cyber security.

Biden officials have been discussing how the state of Russia's ground campaign might change Putin's calculus and how options are being considered in Russia as a result, the official said, noting the situation -- in some ways -- is more volatile than ever.

Russia still maintains its cyber capabilities and the administration believes Putin may be more willing to use those tools as he gets more desperate, the official added. The official would not provide details about the kinds of options for potential cyber attacks the US believes Russia may be exploring, but there has been an increase in observed activity, according to a source familiar with the situation.

The official said it is difficult to determine whether this is just noisy Russian activity meant to send a message to the US about what it could do or actual preparation of the environment.

"If you're Russia, disinformation doesn't seem to be working, they're not going to fire a shot at us, and so what's left is something in the middle: cyber," a second official added.

The US departments of Energy, Treasury and Homeland Security, among others, have briefed big electric utilities and banks on Russian hacking capabilities, and urged businesses to lower their thresholds for reporting suspicious activity. The FBI has been wary that Russian speaking ransomware groups could lash out at US businesses.

While the administration has issued warnings about possible Russian hacking activity for months, when the statement comes from the President, "it's generally because [the threat] has taken on additional significance in the eyes of the government," a third US official said.

Ukrainian government agencies have been hit by a series of cyber attacks before and after the Russian invasion but not the level of hacking that some analysts feared.

Cyber attacks have nonetheless played a supporting role in the war. As the Russian military began attacking Ukraine on February 24, satellite modems that provide internet service for tens of thousands of customers in Europe, including some in Ukraine, were taken offline in a cyber attack on US telecommunications provider Viasat.

The US government is investigating the hack of Viasat as a potential Russian state-sponsored cyber attack, a US official familiar with the matter previously told CNN.

Neuberger on Monday did not identify who was responsible for the hack. She said US officials continue to investigate the incident.

Earlier in March, a bipartisan group of senators also shared their concerns with the Biden administration about the potential of widespread Russian cyberattacks in the US as retribution for harsh sanctions against Russia in the wake of President Vladimir Putin's unprovoked invasion of Ukraine.

In a letter to Homeland Security Secretary Alejandro Mayorkas Sunday evening obtained by CNN, 22 senators, led by Nevada Democratic Sen. Jacky Rosen and South Dakota Republican Sen. Mike Rounds, raised questions about America's readiness for Russian cyber and disinformation threats.

Additional correspondence obtained by CNN indicated that DHS responded to the senators on Monday, saying that the CISA's Office of Legislative Affairs will work with the group to prepare a briefing on the matter.

## **10. Biden says Russia is considering using chemical, biological weapons in Ukraine**

Reuters, Mar. 21 (2259) | Not Attributed

MARIUPOL/LVIV/KYIV, Ukraine -- Ukraine's military said on Tuesday residents should brace for more indiscriminate Russian shelling of critical infrastructure, as U.S. President Joe Biden issued one of his strongest warnings yet that Moscow is considering using chemical weapons.

Russian troops have failed to capture any major Ukrainian city more than four weeks into their invasion, and increasingly are resorting to causing massive destruction to residential areas using air strikes, long-range missiles and artillery.

The southern port of Mariupol has become a focal point of Russia's assault and lies largely in ruins with bodies lying on the streets, but attacks were also reported to have intensified on the second city Kharkiv on Monday.

Ukraine's armed forces said in a statement issued on Tuesday that Russian forces were expected to continue to attack critical infrastructure using "high-precision weapons and indiscriminate munitions".

Without citing evidence, Biden said Russia's false accusations that Kyiv had biological and chemical weapons illustrated that President Vladimir Putin was considering using them himself.

Putin's "back is against the wall and now he's talking about new false flags he's setting up including, asserting that we in America have biological as well as chemical weapons in Europe, simply not true," Biden said at a Business Roundtable event.

"They are also suggesting that Ukraine has biological and chemical weapons in Ukraine. That's a clear sign he's considering using both of those."

The Russian embassy in Washington did not immediately respond to a request for comment.

Biden also told businesses to be alert for possible cyber attacks by Russia. "It's part of Russia's playbook," he said in a statement.

Washington and its allies have previously accused Russia of spreading an unproven claim that Ukraine had a biological weapons programme as a possible prelude to using such weapons itself, but Biden's remarks on Monday were some of his strongest yet on the subject.

Russia says it does not attack civilians although the devastation wrought on Ukrainian towns such as Mariupol and Kharkiv are reminiscent of previous Russian assaults on cities in Chechnya and Syria.

Putin calls the war, the biggest attack on a European state since World War Two, a "special military operation" to disarm Ukraine and protect it from "Nazis". The West calls this a false pretext for an unprovoked war of aggression.

Biden is due to travel to Europe this week for meetings with allied leaders to discuss tighter sanctions on Russia, on top of the unprecedented financial penalties already announced. Ahead of the trip he discussed Russia's "brutal" tactics in a call with European leaders on Monday, the White House said.

Russia's siege and bombardment of Mariupol port, which European Union foreign policy chief Josep Borrell called "a massive war crime", is increasing pressure for action.

But EU foreign ministers on Monday disagreed on whether and how to include energy in sanctions, with Germany saying the bloc was too dependent on Russian oil to declare an embargo.

## NO SURRENDER

The conflict has driven almost a quarter of Ukraine's 44 million people from their homes, and Germany predicted the refugee number could reach as high as 10 million in coming weeks.

Ukraine on Monday rejected a Russian demand to stop defending besieged Mariupol, where hundreds of thousands of civilians are suffering through Russian bombardments laying waste to their city.

A part of Mariupol now held by Russian forces, reached by Reuters on Sunday, was an eerie wasteland. Several bodies lay by the road, wrapped in blankets. Windows were blasted out and walls were charred black. People who came out of basements sat on benches amid the debris, bundled up in coats.

Some, though, have managed to escape. About 8,000 were safely evacuated on Monday through seven humanitarian corridors from towns and cities under fire, including about 3,000 from Mariupol, Ukraine's deputy prime minister said.

The eastern cities of Kharkiv, Sumy and Chernihiv have also been hard hit.

Among the dead in Kharkiv is Boris Romanchenko, a 96-year-old Holocaust survivor whose flat was shelled by Russian forces last week.

"Please think about how many things he has come through," Ukrainian President Volodymyr Zelenskiy said late on Monday.

"But (he) was killed by a Russian strike, which hit an ordinary Kharkiv multi-storey building. With each day of this war, it becomes more obvious what denazification means to them."

On Monday night, a witness in Kharkiv said she saw people on the roofs of apartment buildings dropping grenades or similar ordnance onto the streets.

A second witness, outside the city, reported hearing more intense explosions than on any day since Russian troops began attacking last month.

Reuters could not immediately verify the accounts.

In Kyiv, six bodies were laid on the pavement by a shopping mall struck overnight by Russian shelling. Emergency services combed wreckage to the sound of distant artillery fire.

The governor of Ukraine's Zaporizhzhia region said buses evacuating civilians from front line areas were hit by shelling on Monday and four children were wounded in separate incidents.

Ukrainian officials hope that Moscow will negotiate a withdrawal. Both sides hinted last week at progress in talks on a formula which would include some kind of "neutrality" for Ukraine, though details were scarce.

Japan reacted angrily on Tuesday after Russia withdrew from peace treaty talks citing Tokyo's decision to join the international campaign of sanctions. Japanese Prime Minister Fumio Kishida said Russia's decision was "completely unacceptable".

## **11. White House Bureaucracy Is Costing Ukrainian Lives, Senators Say**

***Lawmakers are urging Biden to send more aid and enforce sanctions as quickly as possible to help Ukraine beat Russia***

DefenseOne.com, Mar. 21 (1729) | Jacqueline Feldscher

After seeing the situation on the ground this weekend, as Ukrainian refugees flood across the Polish border to escape violence, 10 senators have a message for the White House: Go faster.

Sen. Joni Ernst, R-Iowa, led a group of 10 lawmakers who visited Germany and Poland to see American troops and observe the fallout from Russia's war in Ukraine. At a press conference Monday, senators said they were touched by conversations with activists fighting for their country and single mothers fleeing Ukraine to keep their children safe, and they emphasized that aid is only helpful if it gets there in time.

"There's a belief by Ukrainians that we are way too slow," said Sen. Jerry Moran, R-Kan. "We are late now. We were late yesterday....A slow march of bureaucratic policies and efforts does not save lives. It costs lives."

"Time is of the essence," echoed Sen. Angus King, I-Maine, adding that he is seeking answers about how long it takes for aid to arrive in Ukraine after Congress passes legislation. "We don't have weeks and months. We have hours and days. That is one of the things we are all committed to."

Moran also asked for an opportunity to meet with President Joe Biden ahead of his departure Wednesday on a trip to Brussels and Poland, to explain what the bipartisan congressional delegation saw on their visit.

In a virtual address last week, Ukrainian President Volodymyr Zelenskyy asked Congress for additional weapons, including aircraft and surface-to-air missile systems, to counter Russian attacks. Hours after the speech, Biden met many of those demands in an \$800-million military assistance package that included anti-aircraft systems, shoulder-mounted missiles to target tanks, small arms, ammunition, and drones.

But senators say the administration is still not doing enough, and they specifically urged the White House to send more lethal weapons, try Putin as a war criminal for his bombings of schools and hospitals, and more strictly impose sanctions on Russian officials. Sen. Roger Marshall, R-Kan., also said that all Western companies must stop doing business in Russia.

"We're only doing a fraction of what we could be doing," Marshall said. "We don't need to debate it. We don't need to talk about the pros and the cons. Get them the damn weapons."

Multiple Republican senators urged Biden to complete the transfer of MiG-29 fighter jets from Poland to Ukraine and give Warsaw updated F-16s to backfill its fleet of aircraft. Earlier this month, Poland offered to send their Soviet-era jets to Ramstein Air Base in Germany, making the United States responsible for facilitating their transfer to Ukraine. U.S. officials quickly rejected the idea, though it will almost certainly be discussed when Biden meets with Polish President Andrzej Duda on Saturday.

“We have to provide the Ukrainians with the means to prevent this bombardment,” said Sen. Susan Collins, R-Maine. “That means not only giving them the MiGs that the administration has held up, it means providing them with additional aircraft defenses.”

“We do not have time for endless debate and delay. If we delay, thousands more innocent Ukrainians will die,” she continued.

Other senators, however, said they understood the White House’s rationale in not sending the jets to Ukraine, which could further provoke Russia and may not be useful in winning the war.

“There is a lot we can be sending them immediately without having to make that ultimate decision on those particular aircraft,” said Sen. Kirsten Gillibrand, D-N.Y. “The way they’re going to win this war is not through the air, it is through the ground, so they need the ground defenses.”

## **12. Bipartisan lawmakers call on Biden to form ‘aid airlift into Ukraine’**

*The strategic airlift would not impose a no-fly zone, but would come with risks*

FoxNews.com, Mar. 21 (1703) | Houston Keene

A bipartisan group of lawmakers called on President Biden to form an “international humanitarian aid airlift” into Ukraine amid Russian President Vladimir Putin’s brutal war.

Reps. Young Kim, R-Calif., and Lou Correa, D-Calif., are leading the letter, which was first obtained by Fox News Digital.

“We write to you today in support of establishing an international humanitarian aid airlift into Ukraine to deliver urgently needed supplies to the Ukrainian people,” they wrote. “As the unprovoked Russian invasion of Ukraine continues to kill civilians and destroy homes, it is necessary for the United States to act immediately to save lives.”

The letter was sent to Biden on Monday.

“While we commend your Administration for taking action to approve Congressional funding for humanitarian and military aid for Ukraine and working with our allies and partners to impose sanctions on Russian President Putin and his government, more must be done to support the people of Ukraine and stop the war,” they continued.

The lawmakers wrote that Ukrainians “are trapped in bomb shelters, basements, and subways where they have limited access to food, water, and medicine, among other necessary supplies” and slammed Russia for attacking humanitarian corridors in the war-torn nation.

“As your Administration searches for more options, we strongly urge the consideration of a humanitarian airlift of urgently needed nonmilitary supplies organized and supported by the U.S.,” they wrote. “In response, Russia would be forced to either agree to supporting the delivery of humanitarian aid or threaten to shoot down planes carrying food and water to a war-torn country, which would further isolate Russia on the world stage and motivate stronger international action.”

Ukraine has long called for the implementation of a no-fly zone over the country as the war rages on, which U.S. officials warn would rope America into the conflict as Russia would view it as an act of war.

A strategic airlift, however, does not impose a no-fly zone, but the lawmakers on the letter conceded that their proposal for the airlift “does carry risks that planes could be shot down entering Ukrainian airspace.”

“Therefore, we urge your Administration to immediately reach out to nations viewed as nonthreatening to recruit pilots for these flights, including Brazil, India, Egypt, and the United Arab Emirates,” they wrote.

“Flights flown from countries viewed as non-hostile to Russia into Ukraine for humanitarian missions makes it difficult for President Putin to declare them as enemy combatants and motivates Russian forces to take strict measures to avoid targeting them.”

The lawmakers also called on Biden to instruct United Nations (UN) Ambassador Linda Thomas-Greenfield “to build support” for an international humanitarian airlift for Ukraine at the UN.

Joining Young and Correa on the letter are several of their colleagues, including Republican Reps. French Hill of Arkansas, Fred Upton of Michigan, and Victoria Spartz of Indiana, who was born in Ukraine.

“The U.S. has a moral responsibility to save lives where possible in Ukraine,” they wrote. “Establishing and organizing an international humanitarian aid airlift provides the U.S. and our allies and partners with a non-escalatory method of accomplishing this while countering Putin’s goal to starve the people of Ukraine.”

The letter was also sent to several Biden administration officials, including Thomas-Greenfield, Secretary of State Antony Blinken, and U.S. Agency for International Development (USAID) administrator Samantha Power.

Putin's barbaric war continues to rage in Ukraine, creating carnage that has driven Biden to label his Russian counterpart a war criminal.

### **13. Congressional spending bill boosts military outlay in Pacific**

Honolulu Star-Advertiser, Mar. 21 (N/A), Pg. B4 | Kevin Knodell

Congress has passed a fiscal year 2022 appropriation measure that includes billions of dollars in funding for military projects in Hawaii and the Pacific.

The bill includes over \$700 million for response efforts to contamination of the Navy's water system by fuel from its Red Hill storage facility, \$235 million for military construction projects throughout the islands, and billions to fund the Pacific Deterrence Initiative, a Pentagon project to counter China's increasing military power.

Approved earlier this month by both the Senate and House of Representatives, the measure awaits President Joe Biden's signature.

The Red Hill funding includes \$686 million to continue supporting displaced service members, civilians and their families as well as \$50 million to the Navy for planning and design of future water treatment and distribution infrastructure projects to address the Red Hill drinking water crisis.

It also includes \$5 million to continue improving the safety of underground fuel storage tanks at Red Hill as the Navy works to defuel the facility, and requires the Pentagon give Congress a report within 90 days that would identify future military construction and remediation requirements for Red Hill's permanent shutdown.

"These funds are in addition to the \$403 million in emergency funding we obtained in another bill we passed just weeks ago, bringing Congress' total funding for all aspects of Red Hill in the current fiscal year alone to over \$1.1 billion," U.S. Rep. Ed Case, D-Hawaii, said Monday in a news release. "But billions more will be required to complete all aspects of the cleanup, stabilization, de-fueling and closing of Red Hill and the relocation of its fuel and build fuel storage capacity elsewhere."

The Red Hill water crisis has strained relations between military leaders and lawmakers. However, Hawaii's congressional delegation has continued to push for boosting military budgets and operations in Hawaii and the Pacific.

Hawaii is the headquarters of U.S. Indo-Pacific command, which oversees all operations in the Pacific Ocean, much of the Indian Ocean and parts of the Arctic region.

INDOPACOM's top officer, Adm. John Aquilino, told Congress last week that Russia's invasion of Ukraine has been "a real wake-up" on the possibility of a major conflict in the region.

“I see actions that give me concern that the timeline is shrinking, and the mission that I’ve been given is to be prepared for it,” Aquilino told lawmakers.

He cited Beijing’s crackdown on Hong Kong and China’s actions in setting up positions in disputed territory in the South China Sea and skirmishing with Indian forces in disputed territory along the Chinese-Indian border.

The bill includes \$75 million to continue development of Homeland Defense Radar-Hawaii, along with \$19 million for advance planning and design efforts to support its construction.

The HDR-H has been a controversial project. Originally approved in 2018, the Pentagon has repeatedly tried to defund the program, citing a desire to explore alternatives and the potential difficulties placing it in Hawaii, while Hawaii’s congressional delegation has continued efforts to fund it.

“Given the prominence of Hawaii’s military and strategic value, Hawai’i has become far more of a target to those who wish to do us harm. The need for a fixed, persistent and comprehensive missile defense cannot be understated,” Case said. “The Homeland Defense Radar Hawaii is the solution. It is regarded by the Missile Defense Agency and U.S. Indo-Pacific Command as vital and appropriate.”

Congress also appropriated \$65 million to upgrade Marine Corps Base Hawaii’s aging electrical system. The base in Kaneohe is at the center of an ambitious restructuring of the Marine Corps. The Marines this month officially activated their first littoral regiment at the base, which will focus on amphibious and missile warfare, and is expected serve as a blueprint for reorganizing the entire service.

The bill puts \$51 million toward construction of the West Loch Naval Magazine Annex. The Army has made plans to move its munitions from its current storage facilities at the Navy’s Lualualei Annex near Waianae to the Navy’s West Loch Annex.

That move has been controversial, with the military facing pushback from Ewa Beach residents who believe it would put stockpiles of explosive munitions too close to residential areas. Army and Navy officials have argued that keeping the munitions there will be safer and more efficient than at the aging facilities in Lualualei.

The bill also includes \$59 million in the Pacific Defense Initiative for INDO-PACOM to support planning and design efforts to advance future construction projects throughout the region. Congress created the PDI in the 2021 fiscal year as a means of channeling funding into specifically countering China.

The PDI funding also includes \$80 million for the missile defense programs on Guam, twice the amount the Biden administration had included in its budget request.

During a March 9 congressional hearing, Aquilino told lawmakers he was concerned about the proliferation of hypersonic weapons and “the speed and pace they are showing up” in China’s arsenal and the threat they could pose to Guam, in particular.

“The area in the Indo-Pacific is expansive — half the globe and a lot of it water,” Aquilino told lawmakers. “About \$11 billion worth of construction, as we work through our posturing of our forces ... will end up on Guam, and we have to protect it.”

Guam is home to the new Marine Corps Base Camp Blaz, which is under construction and is expected to become a duty station for approximately 5,000 Marines.

Hawaii companies have been involved in building the base. Last year the Navy awarded the Hensel Phelps-Shimizu Joint Venture of Honolulu an initial \$53.9 million for the construction of what will be the base’s headquarters building.

## **EUROPE**

### **14. Russia may not stop with Ukraine – NATO looks to its weakest link**

Reuters, Mar. 21 (1554) | Sabine Siebold and Robin Emmott

ON BOARD THE SUPPLY SHIP ELBE, Latvia -- Hours after Russian missiles first struck Ukrainian cities on Feb. 24, German naval commander Terje Schmitt-Eliassen received notice to sail five warships under his command to the former Soviet Republic of Latvia to help protect the most vulnerable part of NATO’s eastern flank.

The hasty dispatch was part of Germany’s scramble to send “everything that can swim out to sea,” as the navy’s top boss phrased it, to defend an area military strategists have long deemed the weakest point for the alliance. The vessels’ sudden departure demonstrated how NATO, and Germany, were propelled by Russia’s invasion into a new reality and face what officials, diplomats, intelligence officials and security sources agree is the most serious threat to the alliance’s collective security since the Cold War.

Schmitt-Eliassen, who is based in the German Baltic port of Kiel, spoke to Reuters on the flight deck of the supply ship Elbe. Moored next to it, within sight of the church towers of the Latvian capital Riga, were a Latvian and a Lithuanian ship, and vessels and sailors from nations including Denmark, Belgium and Estonia were due to join the group later.

A total of 12 NATO warships with some 600 sailors on board are due to start a mine-clearing operation in the coming days.

On Feb. 16, when intelligence showed an invasion was imminent, NATO Secretary General Jens Stoltenberg called the current era a “new normal.”

It looks a lot like a return to the past. Founded in 1949 to defend against the Soviet threat, the NATO alliance is facing a return to mechanised warfare, a huge increase in defence spending, and potentially a new Iron Curtain falling across Europe. After struggling to find a new post-Cold War role, countering terrorism following the Sept. 11 attacks on the United States in 2001 and a humiliating withdrawal from Afghanistan in 2021, NATO is back defending against its original nemesis.

But there’s a difference. China, which split with the Soviet Union during the Cold War, has refused to condemn the Russian invasion of Ukraine, which Moscow calls a “special military operation.” And the old Cold War blueprints no longer work, as NATO has expanded east since the 1990s, bringing in former Soviet states including the Baltic states of Latvia, Lithuania and Estonia in 2004.

In early February, China and Russia issued a powerful joint statement rejecting NATO’s expansion in Europe and challenging the Western-led international order.

Direct confrontation between NATO and Russia could touch off a global conflict.

“We have reached a turning point,” said retired German general Hans-Lothar Domroese, who led one of the highest NATO commands in the Dutch town of Brunssum until 2016.

“We have China and Russia acting in concert now, boldly challenging the United States for global leadership ... In the past, we have been saying deterrence works. Now we have to ask ourselves: Is deterrence enough?”

This is underscored by Schmitt-Eliassen’s mission – a regular exercise that was brought forward by Russia’s invasion.

The issue is access. Before the Soviet Union was dissolved, NATO could have moved to contain the Soviet Union by blocking the western entrance of the Baltic Sea. That would seal in the Soviet Union’s Baltic Fleet to prevent it from reaching the North Sea where its warships could attack U.S. supply convoys.

Today, NATO’s and Russia’s roles have been reversed: An emboldened Moscow could encircle NATO’s new Baltic members, and cut them off from the alliance. If a new Iron Curtain is to fall, NATO needs to ensure its members are not behind it.

The three tiny countries, with a combined population of some six million people, have a single overland link to the alliance’s main territory. A corridor of some 65 km (40 miles) is squeezed between the heavily armed Russian exclave of Kaliningrad on the west and Belarus on the east.

So Schmitt-Eliassen's goal is to keep the waterway open, as a supply line also for non-NATO states Finland and Sweden. Millions of tons of old mines, ammunition and chemical weapons are believed to lie on the bed of the shallow Baltic Sea, a legacy of two World Wars.

Mines – whether old and unexploded or freshly laid – can have an impact beyond destruction, Schmitt-Eliassen said. A mine sighting, or rumoured sighting, can close harbours for days while the area is swept. If that happens in the Baltic, there's a risk "the supermarket shelves will remain empty."

Even commercial ships can become a military factor in the narrow western entrance to the Baltic, he said, referring to scenarios such as the March 2021 incident when the Ever Given container ship blocked traffic through the Suez Canal for days.

"You cannot blame anybody for this (kind of incident), it is not attributable," the chief of the German navy, vice-admiral Jan Christian Kaack, told Reuters.

#### NEXT TARGET?

Crucial for the Baltics is the land link between Kaliningrad and Belarus. Called the Suwalki Gap, its seizure would cut the Baltic states off.

"Putin could quickly seize the Suwalki Gap," said Domroese, the retired German general, adding this will not happen today or tomorrow, "but it could happen in a few years."

Putin's recent actions have not all been predictable. He put Russia's nuclear forces on high alert on Feb. 28, with rhetoric that Stoltenberg told Reuters is "dangerous, it's reckless."

The Kremlin did not respond to a request for comment. Putin says Russia's concerns expressed over three decades about NATO's expansion were dismissed by the West, and post-Soviet Russia was humiliated after the 1991 fall of the Soviet Union.

He says NATO, as an instrument of the United States, was building up its military on Ukraine's territory in a way that threatened Russia.

On March 11, Russia's Defence Minister Sergei Shoigu told Putin the West was beefing up military forces close to Russia's Western borders. Putin asked Shoigu to prepare a report on how to respond.

Ukraine's President Volodymyr Zelinskiy has warned that the Baltic states will be Russia's next target. The Baltic Sea is a large and busy shipping market for containers and other cargo, connecting Sweden, Finland, Estonia, Latvia, Lithuania and Russia with the rest of the world.

It “has gone from being a normal peaceful area, to an area where you tread carefully,” said Peter Sand, chief analyst at the air and ocean freight rate benchmarking platform Xeneta. With demand and logistics disrupted, the fees shippers pay to move cargoes from Hamburg to Saint Petersburg and Kaliningrad are down 15% since the invasion, according to Xeneta data.

For almost 25 years, the West believed Russia could be tamed by diplomacy and trade to maintain stability and security in Europe. In 1997, NATO and Russia signed a “founding act” that was designed to build trust and limit both sides’ force presence in eastern Europe.

The alliance also sought to build a partnership with Russia, which took part in NATO exercises in the Baltic as recently as 2012, according to retired U.S. Admiral James Foggo, who commanded U.S. and NATO fleets in Europe for almost a decade until 2020.

After Russia annexed Crimea in 2014, NATO created small, multinational combat units in Poland and the three Baltic states, which serve as a forward presence to deter Moscow. But the force numbers are designed not to violate the “founding act,” which has hindered NATO’s ability to move troops into the Baltics and Poland on a permanent basis.

“We all thought that there wouldn’t be an enemy anymore,” Admiral Rob Bauer, the chairman of NATO’s military committee, told Reuters. “We now are confronted with a nation that is showing that it is aggressive, that it has forces that we thought were not going to be used anymore.”

While the numbers are changing all the time, the number of troops under the command of NATO Supreme Allied Commander in Europe (SACEUR) Tod Wolters has more than doubled since Russia’s invasion, to around 40,000, according to NATO diplomats and officials.

NATO allies have also moved five aircraft carriers into European waters, in Norway and the Mediterranean, increased the number of warplanes in the air in NATO airspace and more than doubled the size of the combat units in the Baltics and Poland. Host nation forces number some 290,000 in the region, but mainly under national control.

## GERMANY’S MOMENT

The biggest shift in NATO’s “new normal,” diplomats, former officials and experts say, is Germany’s reversal of a decades-long policy of low defence spending. Held back by guilt over its wartime past and resulting pacifism among its population, Germany resisted pressure from the United States to increase this to a NATO target of 2% of economic output. France and Britain both meet the goal, but Germany’s defence spending was only 1.5% in 2021.

With ageing equipment and personnel shortages, Berlin had been seen for decades as a weak partner because of its reluctance to send troops to combat operations.

But on Feb. 27, Chancellor Olaf Scholz said Berlin would now meet the 2% target - and promised a 100 billion euros (\$110 billion) injection into the military.

Germany has been concerned by Moscow's presence in the Baltic Sea for a while. After Russia's annexation of Crimea, Berlin forged an alliance of the western navies on the Baltic Sea.

"We simply had to take note of the fact that - whether we like it or not - we are the 900 pound gorilla in the ring," said navy chief Kaack. "The way we look up to the United States as a smaller partner, that's how our partners here look at us."

Soon after Russia's invasion, Berlin announced it would buy 35 Lockheed Martin F-35 fighter jets from the United States to replace its ageing Tornado fleet.

#### NO MORE CONSTRAINTS

The United States is also moving more military equipment into Europe, including vehicles and weapons to Belgium, the Netherlands, Germany and Poland that could be used immediately by newly arriving U.S. troops, rather than waiting weeks for tanks and trucks to be shipped from U.S. bases.

Douglas Lute, a former U.S. ambassador to NATO, told Reuters that NATO's "new normal" should be a step up from what the alliance agreed after Crimea. It is likely to be set down in writing in NATO's official master strategy document, known as its "Strategic Concept," which will be agreed at the next NATO summit in Madrid in June.

"You'll see a push forward of combat capability to both reassure eastern allies and to make an even more prominent deterrence message to Russia," Lute said.

He said NATO's existing multinational combat units in the Baltics and Poland - originally some 5,000 troops in total - should be significantly increased in size. He said he expected "more sophisticated air defence systems postured forward," including Patriot and other systems in the Baltics and Poland.

And he expects more U.S. weapons and military equipment to be pre-positioned in Europe. More NATO troops could be stationed in Romania, Bulgaria, Slovakia and Hungary.

The U.S. delegation to NATO declined to comment. Its envoy, Julianne Smith, said on March 15 the alliance was making commitments to "have more force posture in Central and Eastern Europe and develop new policy tools."

But just as in the Cold War NATO will need to keep communicating with Russia to avoid risking accidents with potentially devastating consequences.

“NATO has some responsibility to do more than just trying to keep Russia out,” said Adam Thomson, a former British ambassador to NATO and now director of the European Leadership Network think tank in London. “It’s about the management of an unavoidable strategic instability.”

*--Additional reporting by Jonathan Saul and Guy Faulconbridge in London*

### **15. EU nations circle the wagons in new ‘Strategic Compass’**

Defense News Online, Mar. 21 (1753) | Sebastian Sprenger

WASHINGTON -- The defense ministers of European Union nations adopted the long-awaited “Strategic Compass” document on Monday, presenting a plan to beef up the bloc’s defenses in the wake of Russia’s invasion of Ukraine.

Officials had hastened to rewrite the document since the war began in late February, replacing the diplomatic approach where a would-be adversary is unnamed with plain language painting Russia as an aggressor against its neighbor and as a threat to Europe.

“We aim to become a more assertive security and defense actor by enabling more robust, rapid and decisive action, including for the resilience of the Union and our mutual assistance and solidarity,” the document read.

It formalizes several initiatives aimed at breathing operational nimbleness into an institution built on lengthy decision-making processes — albeit all in due time. For example, member states want to hammer out by 2023 the “practical modalities” for forming mini-coalitions of the willing, consisting of subsets of members that would deploy to hot spots on behalf of the bloc and under EU Council oversight.

Officials have long eyed that mechanism, hiding in plain sight in Article 44 of the EU Treaty, as a justification for short-circuiting the unanimous consent principle during crises. But discussions so far have been largely academic, though French officials indicated they would move the topic along during Paris’ six-month turn at the helm of the Council of the European Union that began in January.

The document also stresses the European Union’s mutual-assistance clause, which obligates members to aid “by all means in their power” those members facing armed aggression. Per the Strategic Compass, EU nations will “continue to invest” in capabilities toward that end.

Also part of the Strategic Compass is the plan of creating a 5,000-strong “EU Rapid Deployment Capability” allowing the “swift deployment of a modular force ... in a non-permissive environment” by 2025. EU officials said they would develop “operational scenarios” to guide the formation’s future employment during 2022, and begin regular live-fire exercises in 2023 to prepare its forces.

German Defence Minister Christine Lambrecht raised some eyebrows ahead of Monday’s ministerial meeting in Brussels by claiming Berlin is offering to provide the entire force of 5,000 for the inaugural year. But as German news site Der Spiegel reported, officers were surprised behind the scenes, and wondered how the Bundeswehr would deliver that amount of personnel plus heavy equipment.

The Defence Ministry eventually clarified that Berlin would contribute the “heart” of the envisioned formation, a battlegroup of roughly 1,500-2,000 forces.

The Strategic Compass also also highlights the bloc’s growing relationship with NATO and, above all else, the continent’s continued reliance on the United States.

“To uphold the international rules-based order, we will continue to strengthen our relations with partners and like-minded countries in the UN, NATO and G7,” the document read. “In this context, the United States remain the EU’s staunchest and most important strategic partner and are a global power contributing to peace, security, stability and democracy on our continent.”

## **16. The Next Two Weeks Could Determine the Fate of Ukraine**

*Russian military expert Michael Kofman lays out why Putin’s invasion hasn’t succeeded yet — but why it still might*

Politico Online, Mar. 21 (1731) | Paul McLeary and David Brown

After the initial shock of Vladimir Putin’s invasion of Ukraine, the biggest surprise of the war may be how badly the Russian army has performed.

What at first seemed like a certain rout by one of the world’s largest armies has turned into something between a slog and an embarrassment for Moscow.

What did experts get wrong — and what does it mean for the next phase of the war? Michael Kofman, one of the most prominent U.S. authorities on the Russian military, told POLITICO in a lengthy interview that he and other experts “generally overestimated the Russian military, which is good. It’s very good.” And, he adds, “we really underestimated the Ukrainian military.”

Over the past several weeks, Kofman has become a go-to source of fast-breaking analysis and a Twitter phenomenon — a former expert at the National Defense University, and currently the research program director

in the Russia Studies Program for the Virginia-based think tank CNA, with an unusually granular understanding of Russian equipment and tactics.

He has some cautions. One, it's too soon to count Putin out. Initial battle successes don't win a war, and in fact the most critical juncture of the war will arrive soon, in about two weeks, when a burned-out Russian military will need to mount a major resupply effort in order to keep going.

And two, he's careful to note that social media is giving us a distorted view of what's actually taking place on the ground, with Ukraine eager to tout any triumph, and Russia intentionally quiet.

In a conversation conducted by Zoom on Friday, he outlined what military analysts have learned about Russia from the conflict so far, why the war has been so surprising — and why time is likely on Putin's side.

“Wars of attrition come down to manpower and materiel and Russia has both,” he says. “I’m a lot less optimistic about Ukraine’s prospects in that regard.”

This transcript has been edited for length and clarity.

*POLITICO: What about the Russian performance in Ukraine over the past three weeks has surprised you?*

*Michael Kofman:* What initially surprised me about the invasion is that it started more as a strategic raid. The Russians clearly believed that in three days they could conduct a regime change and get Ukraine to surrender without fighting. Looking back at it, they did not seriously plan for the kind of military operation that would be required to invade the largest country in Europe and take on a country with a sizable conventional military like Ukraine.

The initial operation was clearly a failure — that was self-evident a few days in — because of how they tried to put it together. They didn't tell the troops, and didn't prepare psychologically or materially, and as a result it was a debacle at the outset. We didn't see an initial air campaign and we saw a very limited strike campaign. Since then, they've tried to put together a real military operation, the thrust of which is going for the capital as the center of gravity, trying to bypass major cities and take critical infrastructure, and try to encircle Ukrainian forces in the Donbas in the eastern part of Ukraine.

So I think their progress has been pretty sluggish and it came at high cost, but they have been making steady advances in some areas.

*POLITICO: For a war that is playing out on social media, there are major gaps in our knowledge of what the actual fighting on the ground looks like.*

*Kofman:* The first important thing to say is that we don't actually know much about Russian casualties, and we know far less about Ukrainian ones, so we really have almost no idea what's happening with the Ukrainian military. Here's the reality of this conflict right now as it's playing out on social media: This is like watching two boxers in a match. We only see one of them and all the footage is being edited and curated by their opponent. That's the perspective I see on this war on social media, and on the mainstream media outlets. It's unfortunately a limited outlook on what's happening, and so it's hard to assess the reality on the ground.

What is clear is that the Russian military doesn't stand a good chance of achieving its initial political aims, and that the Russian leadership has had to revise their war aims substantially towards a settlement since regime change is not an option. Now they're just trying to put themselves in the best possible position for that negotiation, and the Russian military probably only has a couple of weeks left in terms of combat effectiveness left inside Ukraine.

Frankly, the same is true for Ukrainian forces. I can't guess what their losses are, but they're not in any better shape. So one of two things is likely to happen over the next couple of weeks: We will either see a significant operational pause and some kind of ceasefire that will lead to a settlement, or that pause will introduce a rearming period where Russia will introduce a number of units that they're bringing up to the border right now. They have more forces, they have more materiel. Their losses are significant, but their rate of attrition as a share of the force is likely not as bad as Ukraine's. But we don't know. What matters is less the losses and more the losses as an actual share of the country's military capacity. So Ukraine may be doing well, but nonetheless they're still losing significant amounts of materiel and equipment.

*POLITICO:* *What are the possibilities in the near term?*

*Kofman:* The one thing I think we can tell right now is that it's not possible for the Russian military to take Kyiv. The best they can try is to encircle it in the coming weeks. It's not likely there'll be successful pushing west towards Odesa, they just don't have the forces for it.

The one front where they could achieve some success is in further compressing Ukrainian forces in the Donbas in the east, and they're trying to push two pincers to encircle them, which was pretty predictable at the outset.

And sure enough, here we are. We have two pincers coming toward Kyiv trying to circle the capital, and we have two pincer movements trying to circle the large percentage of the Ukrainian military in the east. That's probably where Ukrainian forces are in their most precarious position right now.

The Russian military probably has one more set of offensives left in it before they're really exhausted and become combat ineffective, and then you'll likely see a series of small, staggered attacks and counterattacks that will yield no significant changes in territory.

*POLITICO:* *When you say they've got maybe two weeks left, is that just with the 150,000-person invasion force without any reinforcements, or even with resupply and reinforcements?*

*Kofman:* I think they need to take a pause to reorganize. I suspect the reason we haven't seen them make substantial advances is because they've had setbacks and have taken a pause and they might try to make one more push to see how far they can get along some of these axes of advance. You can't predict the churn of battle, but I suspect that they have a couple more weeks left before they're going to have to make major shifts in this operation.

The Russians had already made significant adjustments by the fourth day of the war once it became clear that the regime change operation was a failure. The strategic raid on the Hostomel military airport near Kyiv that first day didn't work, and they got a bloody nose there. Now they had to settle in for a real war with a real military power in a very large country and slug it out.

You have essentially three different fronts playing out, and you see that the Russian military has really struggled to focus itself on what the hell it is trying to accomplish in the war. Is it the encirclement of the capital, or is it the encirclement of Ukrainian forces in the eastern part of Ukraine and taking Donbas? Is it the march to Odesa, which is the very opposite direction from Donbas? If I only have the forces for one, I really should pick.

As these operations play out, the question remains: What objective are they actually going for? Why are they not concentrating the force behind it to accomplish any one objective? To the outside observer [it's an open question] what is driving a military strategy that's diffusing Russian resources and not allowing them to achieve positive correlations of forces and sustained advances.

Somebody at the top — which is only one person in Russia — is setting political objectives that continue to be unachievable, and they've gone from regime change to attaining other political objectives, which are also not achievable with this force based on the performance they've had.

Maybe if they add more forces it would be achievable, or maybe if they performed much better it would be achievable. But as a military analyst looking at the current picture, they've really diffused their effort and that's problematic. So you have to try and figure out what is the theory of victory in Russian military operations and what position they are trying to put themselves in over the next couple of weeks if they want to achieve a better settlement, and it looks like they're still going for too many things at the same time.

*POLITICO:* *On the resupply matter, do you see many indications that troops and vehicles and other machinery of war are getting ready to deploy from Russia to relieve any of these units or is that just totally opaque to us?*

*Kofman:* They have been bringing units in from other parts of the country. We know they're on the way. We know that they have more units they can flow into this fight. The challenge they're going to have is that the units they're bringing in are probably not going to be as effective, because the forces they sent in at the beginning were the best troops Russia has. So these units will help fill the space and maybe consolidate some territory, but they're most likely not going to be as good as what they've already thrown into the fight and gotten chewed up.

If they choose, they can mobilize the country behind this war and press more people into service and pass special laws that give them access to greater manpower and start using reserve equipment they have in warehouses. And if it then gets into a war of attrition between Russia and Ukraine, it'll be a much bloodier war. It'll be dragged out. And that's where I'm a lot less sanguine about Ukraine's prospects, I'll be honest. Wars of attrition come down to manpower and materiel and Russia has both. I'm a lot less optimistic about Ukraine's prospects in that regard.

*POLITICO: So while Ukraine has committed everything to the fight, Russia still has troops and equipment in reserve. There could come a point here where quantity outweighs quality, and the Russians just keep coming. Do you think the sanctions are going to affect the Russian defense industrial base at all?*

*Kofman: BMPs [Russian armored personnel carriers] don't run on money. The sanctions are not going to affect the forces deployed forward right now. That's the reality of it. As long as Putin feels that he has public support for this war, which he does have outside of the cities, he can keep it going. He doesn't have great options otherwise, unless there's a deal that allows him to withdraw from Ukraine and claim victory. But the options for him are not great at this point.*

*POLITICO: Russia has used its best troops in the fight, including special forces, and they've run into trouble. The most famous case is the Russian airborne assault on the Hostomel military airport outside of Kyiv on the first night of the war, when the Russians took it, but were quickly outnumbered and driven off.*

*Kofman: It shows you how much in war and conflict can be contingent. Their airborne unit failed to hold on to the air base long enough, and the Ukrainians I think responded a lot faster than they expected. The Russians thought they were going to reinforce that unit, but they couldn't get more troops to reinforce them on time because they couldn't hold the airfield.*

*POLITICO: And then they were stuck.*

*Kofman: If they had held the airfield, they might have gotten reinforced because the whole point was to quickly build up airborne units outside of Kyiv and get them into the city. That's how they thought they were going to do it. And then within 72 hours get [Volodymyr] Zelensky to either flee or surrender. That was very clearly the concept of the operation. That's why they went for this air base at the opening of the war. This was a regime change operation.*

We don't know why exactly it failed, we have to be honest. I see a lot of criticism of the operation, but which part failed? Was it the ground reinforcements, was it the airborne reinforcements? Was it because the Ukrainians had much thicker air defenses around Kyiv than the Russians expected? Or is it because Ukrainian National Guard units reacted faster than the Russian military expected to retake the airport? I don't know. I'm being frank with you.

*POLITICO: And to go back to the eastern part of Ukraine where the Russian pincer movement is trying to encircle a large part of the Ukrainian army in Donbas, how close are the Russians to cutting off that force?*

*Kofman: Hard to tell, but they are making a steady rate of progress in those fights. I think they're probably going to take control of Mariupol, probably going to make some more progress towards encirclement of Sumy, but I don't see them taking any major cities beyond that.*

It's not a war about cities, anyway. The whole concept originally was clearly to avoid major cities. Go for key towns that are junctions and hubs and secure ground lines of communication and try to fight towards objectives that allow them to pick up rail links so that they can resupply by rail. That's why the campaign in the north is so challenging, because you have to truck everything from Belarus down south to Kyiv, and that's why the campaign in the south was a lot easier. Because once they took Mariupol and Kherson they can direct rail supplies into those cities and then use those supply depots for further operations.

*POLITICO: As this grinds on, what is the potential for this to turn into a long Ukrainian insurgency?*

*Kofman: Right now, Ukrainians are doing a pretty good job ambushing Russia supply columns, but it varies area by area. There are some areas where the Russians have a lot more actual control than others, so it's a very uneven picture of the battlefield.*

*POLITICO: Are there any indications that the Russians seem to be adjusting their tactics with respect to just that counterinsurgency aspect? Are they getting smarter about any of this?*

*Kofman: I think the Russian military got a lot better about that after the second week in how they run convoys and in general, but it's very hard to get around certain basic aspects of warfare. Urban settings dramatically favor the defender. If opponents choose to fight in smaller squad-sized units, and they're well armed, it's very difficult for a combined arms maneuver formation to enter the city. Most of their advantages in density and maneuver vanish right in the city and most of these fights become small fights. So it doesn't matter whether or not you have a battalion or regiment because these are all small-level fights and units can keep getting ambushed in these various pitched battles in the city. The downside for defenders fighting in urban terrain means the destruction of the city over time. There's no way to fight in a city without destroying parts of the city.*

*POLITICO: You talked about the two boxers and one side is putting out the information. Do you think this has created a false sense of how poorly the Russians are actually doing? Are people now at the point where they're underestimating the Russians because you see all these Ukrainian TikTok videos making them look bad?*

*Kofman: In general, yes. I think that it has painted a fair picture of the many problems the Russian military has had and the losses it has experienced, but it has also painted a caricature picture of what's really happening in the war, and how we should understand Russian military performance. And because the information environment*

we're operating in is not an objective information environment, we are consuming desired information and in practice feeding it to each other.

Russia has basically ceded the information environment because they tried to keep the war secret. And now they're trying to brand it, but they focus only on their own domestic audience because they do not care about contesting the information environment writ large since most of the world is united in condemning the Russian invasion. What would be the purpose of them trying to contest the information environment for a general global audience, and what would be their likelihood of success? I assess as close as nil to none. So I'm not surprised by their decision.

We must in some form recognize that we're an information environment that is very heavily dominated by one side that is doing really well with it. But that also gives us a very particular perspective on the war.

We can say that we generally overestimated the Russian military, which is good. It's much better than underestimating and being surprised. More importantly, we can say fairly that we really underestimated the Ukrainian military.

One, we didn't know that much about it. Two, it is a very young army. Three, we supplied this military with Western equipment and kit having little idea how it would work out. Would that aggregate their success, would they distribute and employ it effectively? There was no way to know the answers to those questions. So the honest answer is we grossly underestimated the Ukrainian military. That's probably the bigger takeaway.

## **17. 'The only thing Putin understands is strength': U.S. aircraft carrier flexes muscle in the Med**

Politico Europe, Mar. 21 (2306) | Hannah Roberts

NORTHERN IONIAN SEA -- The flight deck of the aircraft carrier USS Harry S. Truman was covered with jet engine gas vapor as F-18 Super Hornets rocketed into the sky one after the other. Watching takeoffs and landings at close quarters "is one of the most dangerous things you will ever do," claimed my minder, an officer with 28 years of experience in the Navy.

In the sound and fury of the flight deck, this didn't feel like hyperbole: The experience was jarring. Despite ear-defenders, the growl of the throttle from an aircraft that travels at 1.8 times the speed of sound makes your chest cage rattle and your heart race. More than once we were yelled at with drill-sergeant intensity to "GET BEHIND THE LINE!" as aircraft constantly taxied, took off and landed around us. Welcome to the danger zone.

While the high tempo was business as usual for the crew of the USS Truman, the backdrop, both geographically and politically, was not: Accustomed to the Pacific Ocean and the seas of the Middle East, the USS Truman's strike group are now in the northern Ionian Sea, its fighter jets and radar planes patrolling NATO's eastern borders and looking east, to a Ukraine now under invasion from Russian armed forces.

Since the invasion almost a month ago, these jets have flown more than 75 patrol missions across NATO's eastern flank up to the Ukraine border, from the Truman. The so-called Enhanced Air Policing mission is part of NATO's Assurance Measures introduced in 2014, after Russia's illegal annexation of the Crimean peninsula, and is aimed at defending NATO airspace, preventing incursions by Russians.

The 20-story nuclear-powered Truman is the flagship of a strike group, a mobile fighting force of up to 10 destroyers and submarines, 8 aircraft squadrons and a missile cruiser that can move anywhere in the world's seas, launching missile or air strikes or merely providing visible proof of American resolve.

As a mobile U.S. airbase, the Truman will be on the front line if NATO decides to enforce a no-fly zone, or should the worst happen and NATO forces be drawn into a direct conflict. "The role of Truman, with other allies, is to deter Russians from further aggression and to be on constant standby for orders that might be given from our president or from other leaders around the world for the protection of Ukraine and the people of Ukraine," Secretary of the U.S. Navy Carlos Del Toro told POLITICO during a visit to the carrier.

Since the war on terror began 20 years ago, U.S. Navy carriers have spent most of their deployments in the Middle East. More recently, as tensions with China have increased, there has been a "pivot" in the U.S.'s focus toward the Pacific, to counter the perceived security threat presented by Chinese ambitions in the region. But with the invasion of Ukraine, the center of gravity has, for now at least, shifted to Eastern Europe, and the strike group is now stationed in the Mediterranean.

Because of Russian pressure, there are more U.S. warships in the Mediterranean than ever before, said Del Toro. "There are numerous Russian ships and subs in the Mediterranean today and that's why it's important for NATO to have an equal presence, to deter them," he said, adding: "The only thing Putin understands is strength."

The mission is about demonstrating not just to Russia but to the U.S.'s NATO allies that, despite the lack of willingness to engage militarily on behalf of Ukraine, it is a different matter when it comes to countries inside NATO. After the Donald Trump years, when NATO faced an existential crisis, Truman's presence in the Mediterranean, on a NATO mission, is also a physical manifestation of President Joe Biden's message to NATO allies that America is back.

For Lieutenant Adam Wawro, one of the F-18 pilots, the mission is technically similar to hundreds he has been on during his five years of training. But it has a symbolic value — sending a message to both the Russians and allies that NATO is real.

"We are there to show NATO's resolve, show we are there for them with more than just words, with actions. That we are going to be there." They are showing that NATO "actually exists, that it's more than just a number of ideas on paper," he added.

This return to multilateralism after the wilderness years is reflected in the approach taken by U.S. forces to the Ukrainian conflict, which has obliged NATO forces to cooperate more significantly than in the last 25 years. “We are working at a level with NATO allies that most of the folks on board have never seen,” said Lt. Commander Shawn Ekland, a spokesman for the carrier group. “Usually we would zorch [sic] through the Med to the Middle East then zorch [sic] back, It’s very unusual to hang around here.”

Last week the carrier converged with French carrier FS Charles de Gaulle and Italian carrier Cavour. “They were operating as a combined unit. That’s a big deal,” said Ekland.

Following training with the Romanians in March, pilots involved in the Enhanced Air Policing mission are able to refuel in the air from NATO partners, which doubles the time they are able to stay on mission and builds capacity for the eventuality of fighting together seamlessly.

Captain Patrick Hourigan, commander of the battle group’s airwing, said: “We meet in the sky, we know where to meet, how to talk to them, how much gas to expect. We do this often enough it becomes standard practice.”

What goes unsaid is that as much as this is a show of force for the benefit of Russia, and perhaps China, signaling that the U.S. is willing to back up sanctions with military positions and reassure European allies of American resolve post-Trump, the show is also a salutary reminder to the Europeans to ramp up their spending in their own backyard. Since the end of the Cold War, the U.S. has pressed Europe to do more to police its own neighborhood. And to be fair, European resolve has stiffened. Mindful of the botched U.S. withdrawal from Afghanistan last year and conscious of the risk of a Trump presidency 2.0, European leaders realize that they can no longer lean so heavily on Washington to defend democracy.

Those on board deflected questions about the wider political nuances of the mission, more concerned with the immediate urgency of the conflict. In their day-to-day missions, the Ukraine conflict has created “more motivation, a greater sense of purpose, that we are actually out here for a very serious reason,” said Wawro.

Having a birdseye view of the war has brought home the reality of the Russian threat, he said: “We are right there on the border, where it’s all happening. We can see the fronts. We can see a lot.” He added: “It’s pretty humbling.”

## RUSSIA

### **18. Ukraine refuses to surrender Mariupol**

Washington Post, Mar. 22 (0115), Pg. A1 | David L. Stern, Missy Ryan, Dan Rosenzweig-Ziff and Ellen Nakashima

MUKACHEVO, UKRAINE -- Russia's assault on Ukraine grew more destructive Monday, as civilians faced deadly obstacles in their attempts to flee the besieged city of Mariupol and a staggering flow of displaced Ukrainians strained neighboring countries.

Ukrainian and Russian forces battled in the streets of the strategic southern city, as Moscow attempted on the 26th day of its offensive to lay claim to an area that would cement its control of the Black Sea coast from the Russian-controlled Crimean Peninsula to the Russian border. The fate of Mariupol remained in doubt Monday, as Ukrainians refused to give up in the face of withering Russian attacks.

Human rights groups have documented what they say are brutal tactics by Russian forces in the city, depriving residents of water, food and medicine and forcing them to shelter in basements. Because cellphone communication has been cut off since early March, only incomplete reports of residents' ordeal have filtered to the outside world. Two Associated Press journalists who had been in Mariupol detailed in a story Monday how they witnessed horrific scenes of children dying and homes and businesses being shelled; the journalists were rushed out after they said authorities told them the Russians were trying to hunt them down.

The European Union's top foreign policy official called the Russian operation in Mariupol, which has included the bombing of medical facilities and sites marked as shelters for children, a "massive" war crime. "The city will be completely destroyed," Josep Borrell told reporters in Brussels.

As Mariupol residents continue to flee, a car carrying children came under fire, Oleksandr Starukh, governor of the nearby Zaporizhzhia region, said Monday. It was one of a series of incidents that he said left minors in serious condition. He said more than 20 buses were attempting to transit negotiated humanitarian corridors.

"Everything will have to be answered for. For every child. For every life," Starukh said in a message on Telegram.

Addressing Ukrainians in a video address on Monday, President Volodymyr Zelensky praised the bravery of his people and condemned Russian troops, who are struggling to advance across different fronts, as "slaves of propaganda."

"During this invasion, heroes have constantly declared themselves among millions of our people. Once ordinary Ukrainians, and now fighters. Men and women who stand up for our state," he said. "Stand up so that the enemy does not believe that this is a reality. But we will make them believe."

Zelensky, who has sought to both rally his people and to obtain greater foreign support, referenced an incident in which gunfire erupted during a protest of Russia's capture of the southern city of Kherson, blaming Russian forces for the gunfire against residents. Video of the incident - which was verified by The Washington Post - showed a chaotic scene in which gunfire and explosions were heard and clouds of smoke appeared amid a group of demonstrators in Svobody Square.

"Kherson, hold on! We will never forget these shots," Zelensky said.

In Kyiv, a massive explosion hit a shopping mall, killing at least eight people and providing further evidence of Russia's intent to capture the capital city. American officials said Russian forces are stalled about nine miles to the northwest and about 18 miles to the east of Kyiv.

A U.S. defense official told reporters that Russia is now locked in a "near-desperate" attempt to accelerate its progress in Ukraine, having so far managed to seize only smaller cities such as Kherson, Berdyansk and Melitopol, instead of prizes such as Kharkiv, Mariupol and Kyiv.

Facing logistical challenges and Ukrainian resistance, the official said, the Kremlin has resorted to using long-range shelling and missiles to bombard cities from a distance, making the war "much more dangerous for civilians."

After a spate of initial attempts to broker safe passage for fleeing residents failed amid fighting, thousands of Ukrainians have been able to leave via humanitarian corridors. Ukrainian Deputy Prime Minister Iryna Vereshchuk said in a Telegram message that 8,000 people had been evacuated via such routes Monday, mostly from Kyiv and Mariupol.

But fleeing - like staying - remains a potentially perilous prospect for millions of families across the country. The war has unleashed an enormous wave of refugees, prompting 10 million people to flee their homes within Ukraine or to countries across Europe and beyond, the United Nations said this week. The figure amounts to a quarter of Ukraine's prewar population.

More than 3 million people have crossed into neighboring countries, including more than 2 million to Poland alone, fueling concerns from Polish officials that local services and accommodations could soon be overwhelmed.

The constant flow has stretched the capacity of refugee centers and exhausted the ranks of Polish volunteers. Ukrainian refugees are lining up for hours to obtain the equivalent of a Social Security number so they can access Polish government services and find work.

Warsaw Mayor Rafal Trzaskowski said 300,000 people had arrived in Warsaw in the past three weeks, around the same level that flowed into all of Europe each month during a refugee crisis in 2015. He said refugees needed to be distributed across the continent.

“We want to take everyone who needs help, but how many kids can we take into schools?” Trzaskowski said. “How can we do everything we can so the health system doesn’t break down in our city?”

In Russia, the government is holding more than 500 Ukrainian prisoners of war, the country’s human rights commissioner said Monday. Tatyana Moskalkova said the government was providing information about each captive to the International Committee of the Red Cross.

“These are Ukrainian prisoners of war ... that we are willing to exchange,” she said on the RT television channel.

The fighting continued as President Biden held talks about the war with the leaders of France, Germany, Italy and Britain. The White House said the men “discussed their serious concerns about Russia’s brutal tactics in Ukraine, including its attacks on civilians,” along with diplomatic initiatives aimed at securing a pause in the fighting. Biden is scheduled to travel to Europe later this week to talk with NATO and other leaders.

While discussions between Russian and Ukrainian officials have so far failed to yield a breakthrough, global efforts to broker a negotiated settlement continue. Turkey’s government suggested this week that the two countries were getting closer to reaching a possible agreement that would include Ukraine’s “demilitarization” and Kyiv remaining out of NATO.

Even as Western nations continue to provide military aid, including Stinger and Javelin missiles and other weapons, they have rejected calls to establish a NATO-enforced no-fly zone over Ukraine, a move that alliance leaders say would probably result in war with Russia, a nuclear power.

Andriy Yermak, the head of Ukraine’s presidential office, repeated Zelensky’s call for a no-fly zone and greater weaponry supplies on Monday, accusing some European countries of accepting a partial Russian occupation of Ukraine so they could continue buying energy from Russia.

“To freedom-loving people around the world we say: This is your war, too. Help us win it,” he wrote in a Washington Post opinion piece. He also wrote: “If we don’t get the equipment we need to succeed, [Russian President Vladimir] Putin won’t stop in Ukraine. He will go for NATO next.”

The war has triggered a sweeping global campaign of economic reprisal against Russia, sending the country’s economy into free-fall and isolating Putin as his government dismisses the prospect of compromising on its major objectives.

It has also had intense diplomatic repercussions as Russia grows more isolated. On Monday, Russia's Foreign Ministry said it had summoned Washington's ambassador in Moscow, John Sullivan, to protest Biden's description of Putin as a "war criminal."

"Such statements by the American president, unworthy of a statesman of such a high rank, put Russian-American relations on the verge of being severed," the ministry said in a statement.

Addressing Russia's complaint, State Department spokesman Ned Price said that it was "awfully rich to hear a country speak about inappropriate comments when that same country is engaged in mass slaughter." Price said the Biden administration would continue to communicate with Russia when "necessary," suggesting that Washington would not move first to sever ties with Russia.

The White House on Monday renewed its warning about potential cyber incursions from the Kremlin, citing intelligence that the Russian government is exploring options for potential attacks.

Anne Neuberger, deputy national security adviser for cyber and emerging technologies, said that there wasn't evidence of a specific attack, but that U.S. intelligence officials had detected "preparatory activity," such as scanning websites and looking for potential vulnerabilities.

Neuberger said the United States would respond to any actions taken by Russia. "We're not looking for a conflict with Russia," she said. "If Russia initiates a cyberattack against the United States, we will respond."

As the conflict continues, Ukrainians' support appears to be growing for continuing the fight, a new poll showed. The survey by Kyiv-based Info Sapiens found that 91 percent of Ukrainians now believe their country can repel Russia's assault, up from 56 percent before Putin's invasion.

## **19. Air War Ramps Up in Russia-Ukraine Conflict as Russian PGMs Run Out**

Air Force Magazine Online, Mar. 21 (1859) | Abraham Mahshie

The air war is changing over Ukraine, with Russia picking up the pace of sorties but running low on precision-guided munitions, a senior defense official said March 21. Russia also has allegedly fired hypersonic weapons, a move possibly made to gain momentum after nearly a month of fighting and no major population centers under its control.

“They are beginning to face some inventory issues with precision-guided munitions,” a senior defense official told reporters on a telephone briefing, explaining the increased use by Russia of unguided bombs, or “dumb bombs.”

The official also said Russia is seeing increased fail rates of its PGMs.

“They’re just not operating. They’re failing. Either they’re failing to launch, or they’re failing to hit the target, or they’re failing to explode on contact,” the official added. “Why would you need a hypersonic missile fired from not that far away to hit a building?”

Pentagon officials have not confirmed Russian claims that it used hypersonic weapons March 19 and March 20 to hit an ammunition depot in the Carpathian Mountains of Southwestern Ukraine and a fuel depot in Kostiantynivka, in Donetsk oblast. The second strike was just beyond the contact line of territory that Russian-backed forces have controlled since 2014. Both strikes are believed to have been fired from aircraft operating from Russian airspace.

“It could be that they’re running low on precision-guided munitions and feel like they need to tap into that resource,” the official said. “It could be that they’re trying to send a message to the West, but also to Ukraine, and trying to gain some leverage at the negotiating table.”

### *Securing Air Defenses*

In a televised interview with CNN’s Fareed Zakaria on March 20, Ukrainian President Volodymyr Zelensky said he was willing to sit down one on one at the negotiating table with Russian President Vladimir Putin. Earlier in the week, Zelensky asked the American Congress for help obtaining the S-300 missile defense systems possessed by numerous Eastern European countries.

DOD has repeatedly said it is working to facilitate a transfer that would help Ukraine to better protect its skies. While visiting Slovakia on March 17, Defense Secretary Lloyd J. Austin III secured a willingness to transfer an S-300, but the following day Bulgaria’s prime minister emphatically refused to transfer its S-300 systems, or any lethal defense assistance, to Ukraine.

“These are active consultations,” Pentagon Press Secretary John F. Kirby said in a March 21 press briefing, “not only with that nation but many others about how to provide Ukraine the kinds of defensive capabilities, to include long-range air defense, that we know that they’re comfortable using, they’re trained on, that they already have in their inventory and whether that can be bolstered,” he explained.

Once secured, an S-300 could be in place in Ukraine within a week. The Wall Street Journal reported that Ukraine already operates some Russian air defense systems, such as the S-300, but is in need of more “to blunt Russia’s aircraft and missile attacks.”

Austin plans to accompany President Joe Biden to a NATO leaders summit in Brussels on March 24, followed by meetings in Poland on March 25.

As DOD works to get Ukraine more air defense systems, the Pentagon has said it will not stand in the way of unilateral combat aircraft transfers. On March 8, the U.S. refused a deal to take possession of Polish MiG-29s for onward transfer to Ukraine.

Meanwhile, Russia is stepping up its sorties.

“In the last 24-48 hours, we have seen air activity from both sides increase,” the senior defense official said.

The Pentagon assesses that Russia flew more than 300 sorties, but DOD declined to quantify the increase on the Ukrainian side. Ukraine had been flying as few as five to 10 daily sorties into contested airspace covered in large part by Russian surface-to-air missile systems.

After suffering more than 1,100 missile strikes, and with no NATO appetite for imposing a no-fly zone, Ukraine has increased its call for air defenses.

Russia may be attempting to strike more from the air before such systems are in place.

Russian ground forces are stalled outside Kyiv, Kharkiv, and Mariupol, the Sea of Azov port city that would help Russia form a land bridge from the Donbas region to Crimea. On March 21, Ukraine dismissed a Russian proposal to surrender Mariupol.

Thus far, Russia has taken control of just three cities, all in the south near heavily fortified Crimea. They are Kherson, Berdiansk, and Melitopol.

Russia is suffering setbacks in other tactical areas, the senior defense official said, from communications and command-and-control to logistical, sustainment, and surface-to-air integration.

“They are taking casualties every day,” the defense official said. “They are losing aircraft. They are losing armor and vehicles there’s no doubt about that tanks, [armored personnel carriers] APCs, artillery units, helicopters, fixed wing jets.”

The Pentagon assesses that Russia still retains just under 90 percent of its combat power. Likewise, Ukraine retains more than 90 percent of its own combat power thanks to constant replenishment from Western partners.

DOD expects a \$300 million defense assistance package to run out by week’s end, but it is already sourcing an additional \$800 million defense assistance package, the White House announced March 16.

“What we’re seeing is a near desperate attempt by the Russians to gain some momentum and try to turn the course of this in their favor,” the official said. “Right now, it doesn’t appear like they have a lot of leverage to negotiate with.”

## **20. Intentions of Russian Amphibious Warships in Black Sea Still Unclear**

U.S. Naval Institute News, Mar. 21 (1807) | Heather Mongilio

About a dozen Russian warships remain in the Black Sea, raising concerns that Moscow is still considering an amphibious assault on the Ukrainian city of Odesa.

It is unclear what Russia is planning for the ships, which include amphibious and surface combatants vessels, Pentagon Press Secretary John Kirby told reporters Monday. The Pentagon noted the increased naval activity last week, USNI News previously reported.

“Is it the prelude to an assault on Odesa? Is it a diversionary tactic to sort of hold and fix Ukrainian troops in the south so that they can’t come to the relief of their comrades in Mariupol and Kyiv? It’s difficult to know,” Kirby said.

Ships could be positioned in such a way that Moscow could do an amphibious assault on Odesa, similar to the country’s tactics with Mariupol, which remains under Ukrainian control despite a Russian assault of the city.

It does not appear that Odesa is under imminent threat of an amphibious assault, a senior defense official told reporters Monday morning.

An amphibious assault on Odesa was possible, according to plans shared by the Belarusian president, but still has not happened 26 days into the Russian invasion on Ukraine, wrote Tayfun Ozberk for Naval News. Such an assault would be costly – in terms of lives – for the Russians, but it is not out of the realm of possibilities for Moscow, according to Naval News.

Assembling ships in the Black Sea could have another use, Ozberk suggested in his article. Moscow could be using the ships as a terror tactic.

“Russia creates the perception that there is a threat in this region by constantly performing amphibious demonstrations off Odesa, thus keeping Odesa on constant alert, which causes it to keep soldiers in this region,” Ozberk wrote. “This situation precludes troops waiting to defend the Odesa coastline from supporting forces fighting in other places.”

Russia is also likely using the ships to bombard Odesa, the senior defense official said. The defense official could not give a percentage of missiles coming from the Black Sea, as the Pentagon is no longer keeping count of how many missiles are coming from Belarus, Russia, the Black Sea and inside Ukraine.

Despite almost a month passing since Russia began its assault on Ukraine, Moscow has seen little progress, Kirby said, adding that the troops are “flummoxed” and “frustrated.” Much of the Russian movement, including at sea, is happening in “silos,” leading to some of the Russian struggles, he said.

While the Russians have taken the Ukrainian city of Kherson, the Ukrainians have launched an attack to reclaim the city. The Russians are in control of Berdyansk, which they captured on the way to Mariupol, but the troops have not managed to control port city Mariupol.

“When you look at what they’ve managed to do in 26 days, it’s not that impressive,” Kirby said.

It is likely that Russia aims to take Mariupol because controlling the port city would allow them to have a land bridge to Crimea and isolate the coast of Ukraine, the senior defense official said.

If Russia manages to isolate the eastern part of the country, it could prevent Ukrainian troops from helping to defend Kyiv and other population centers, the defense official said.

“So they are very much trying to fix the Ukrainians in the east and taking Mariupol would be a key part of that ability,” he said.

## **21. ‘Winging It’: Russia Is Getting Its Generals Killed on the Front Lines**

*Russian generals have had to lead from the front because its amateur army can’t move otherwise*

ForeignPolicy.com, Mar. 21 (1756) | Jack Detsch

Russia has lost at least five generals fighting in Ukraine in less than a month, Western officials said Monday, as communications failures and a lack of discipline among hundreds of thousands of conscripted Russian troops have made it more difficult to communicate orders to the front lines.

The tally of Russian generals killed in the nearly monthlong conflict — most of them one- and two-star commanders, including at least one lieutenant general — is likely the highest casualty rate among general officers in the Russian military since World War II.

On Sunday, Mykhailo Podoliak, a top advisor to Ukrainian President Volodymyr Zelensky, said six Russian generals had been killed, calling the invading army “fully unprepared” for the fight in Ukraine. Western assessments of deaths among Russian commanders are slightly more conservative. One European diplomat familiar with Western intelligence assessments told Foreign Policy on Monday that at least five Russian generals

had been killed, owing mostly to failures in electronic communications equipment that left them vulnerable to targeted strikes and to their efforts to get a large force of nearly 200,000 troops many of them young conscripts to follow orders by leading from the front.

“They’re struggling on the front line to get their orders through,” said the European diplomat, speaking on condition of anonymity to discuss recent battlefield intelligence. “They’re having to go to the front line to make things happen, which is putting them at much greater risk than you would normally see.”

The European diplomat said the Russian death toll among general officers is up to a fifth of the number of commanders deployed in Ukraine, which Western intelligence officials estimate at 20 officers, making the military less able to operate and more bogged down. “It’s all about a lack of preparedness among the military,” the diplomat said. “They are asking for things to happen, and they are not happening.”

While the war has featured almost no ship-to-ship combat, high-ranking naval officers appear to be getting killed in greater numbers. Over the weekend, a deputy Russian Black Sea Fleet commander, Andrey Paliy who was set to be promoted to a one-star admiral rank was shot dead by Ukrainian forces outside the besieged city of Mariupol.

Earlier on Monday, the pro-Kremlin tabloid Komsomolskaya Pravda reported that 9,861 Russian soldiers had been killed in Ukraine in nearly a month of combat, with 16,153 injured, a possible leak or hack of official Russian Defense Ministry statistics. The paragraph reporting this was later purged from the story. Officially, the Russian Defense Ministry reported that 498 Russian troops had been killed in Ukraine as of March 2, less than a week into the war.

But officials said Russian commanders are also making tactical errors. After Maj. Gen. Vitaly Gerasimov, a one-star equivalent, was killed outside the Ukrainian city of Kharkiv in early March, Ukrainian intelligence officials said they picked up on radio chatter expressing frustration over a breakdown in secure Russian communications equipment. Gerasimov was believed to be the nephew of Valery Gerasimov, Russia’s top military officer.

The nearly monthlong invasion of Ukraine appears to mark the largest deployment of Russian forces since the fall of the Soviet Union more than 30 years ago. The Soviet Union’s nine-year war in Afghanistan during the 1980s peaked at 115,000 troops, while claims of Russian troop strength in two wars in Chechnya were well below 100,000. Russia deployed even smaller numbers of forces to Georgia in 2008 and Ukraine in 2014, sometimes using nonuniformed troops to mask their movements.

The United States has not confirmed the deaths of any Russian commanders. But U.S. officials have cited in the same breath the size and complexity of the invasion of Ukraine, a country roughly the size of Texas, and the large Russian death toll, which has left morgues in neighboring Belarus overflowing with the dead.

“It makes sense that they would have senior leaders, even general officers, in the field for an invasion of this size,” a senior U.S. defense official told reporters on Monday, speaking on condition of anonymity to provide a candid assessment of the battlefield. “They haven’t done anything on [this] size and scale really ever.”

The senior U.S. defense official said Russia’s military also has a tradition of a more stringent top-down command structure than Western militaries, giving junior officers far less flexibility and involving high-ranking officers in the nitty-gritty of tactical decisions. “It’s apples to oranges in terms of how they organize themselves [and] how they lead,” the official added.

So far, Russia has announced the death of only one commander, Maj. Gen. Andrey Sukhovetsky, a veteran of the wars in Chechnya, Georgia, and the 2014 annexation of Crimea, who was killed in combat just four days after the invasion. Russian President Vladimir Putin has also reportedly fired the deputy chief of the Rosgvardia force, Russia’s rough equivalent of the U.S. National Guard, over charges of leaking information and wasting fuel.

“There’s direction coming from on high: You better get your ass out there and make progress or else,” said James Foggo, a retired four-star admiral who commanded the U.S. Navy’s 6th Fleet, responsible for Europe and Africa, and who now leads the Center for Maritime Strategy think tank at the Navy League of the United States. “Their military chain of command is a very threatening kind of environment. You either perform or you find yourself replaced or out of a job or even worse.”

U.S. and Western intelligence agencies have picked up on some degradation of Russian command and control ability, in line with logistics problems that Russian troops have encountered throughout the war, which could be causing Russian generals to die in larger numbers. Russia has also reportedly lost a large number of field-grade commanders beyond the fallen generals.

“It’s a bigger problem if you lose commanders of units because then it’s harder to have someone step in and take over,” said Rob Lee, a senior fellow at the Foreign Policy Research Institute who previously served in the U.S. Marine Corps.

Just one U.S. general has been killed in a war zone since the Vietnam War: Army Maj. Gen. Harold Greene, who was killed in an insider attack when an Afghan soldier opened fire on a visiting delegation at a U.S. base in 2014. Another, Lt. Gen. Timothy Maude, was killed at the Pentagon during 9/11 when a hijacked airliner crashed into the building. But there have been close calls: Gen. Austin “Scott” Miller pulled his handgun during an insider attack that killed two Afghan security officials in Afghanistan’s Kandahar province in 2018, but he escaped unharmed.

The European diplomat who spoke to Foreign Policy said Russian generals at times had gone further out into the field to deal with disciplinary issues, such as Russian conscripts looting stores and houses for food. Current and former U.S. officials have said Russia’s lack of a professional body of noncommissioned officers—which enforce discipline in Western militaries—has led to some of the war crimes that have flashed across social media.

“That is the mark of an undisciplined and unprofessional army that is poorly led and poorly trained, and to make up for it, [they] push the generals into the field,” said Foggo, the retired U.S. admiral. “They’re out there, and they’re kind of winging it. This is breaking down into an undisciplined rabble.”

## **22. Smaller Bombs Raise a Specter Of Atomic War**

*Military experts say a new generation of nuclear weapons has raised the risk that Mr. Putin might introduce less destructive atomic arms into the battlefields in and around Ukraine*

New York Times, Mar. 22 (0300), Pg. A1 | William J. Broad

In destructive power, the behemoths of the Cold War dwarfed the American atomic bomb that destroyed Hiroshima. Washington’s biggest test blast was 1,000 times as large. Moscow’s was 3,000 times. On both sides, the idea was to deter strikes with threats of vast retaliation -- with mutual assured destruction, or MAD. The psychological bar was so high that nuclear strikes came to be seen as unthinkable.

Today, both Russia and the United States have nuclear arms that are much less destructive -- their power just fractions of the Hiroshima bomb’s force, their use perhaps less frightening and more thinkable.

Concern about these smaller arms has soared as Vladimir V. Putin, in the Ukraine war, has warned of his nuclear might, has put his atomic forces on alert and has had his military carry out risky attacks on nuclear power plants. The fear is that if Mr. Putin feels cornered in the conflict, he might choose to detonate one of his lesser nuclear arms -- breaking the taboo set 76 years ago after Hiroshima and Nagasaki.

Analysts note that Russian troops have long practiced the transition from conventional to nuclear war, especially as a way to gain the upper hand after battlefield losses. And the military, they add, wielding the world’s largest nuclear arsenal, has explored a variety of escalatory options that Mr. Putin might choose from.

“The chances are low but rising,” said Ulrich Kühn, a nuclear expert at the University of Hamburg and the Carnegie Endowment for International Peace. “The war is not going well for the Russians,” he observed, “and the pressure from the West is increasing.”

Mr. Putin might fire a weapon at an uninhabited area instead of at troops, Dr. Kühn said. In a 2018 study, he laid out a crisis scenario in which Moscow detonated a bomb over a remote part of the North Sea as a way to signal deadlier strikes to come.

“It feels horrible to talk about these things,” Dr. Kühn said in an interview. “But we have to consider that this is becoming a possibility.”

Washington expects more atomic moves from Mr. Putin in the days ahead. Moscow is likely to “increasingly rely on its nuclear deterrent to signal the West and project strength” as the war and its consequences weaken Russia, Lt. Gen. Scott D. Berrier, director of the Defense Intelligence Agency, told the House Armed Services Committee on Thursday.

President Biden is traveling to a NATO summit in Brussels this week to discuss the Russian invasion of Ukraine. The agenda is expected to include how the alliance will respond if Russia employs chemical, biological, cyber or nuclear weapons.

James R. Clapper Jr., a retired Air Force general who served as President Barack Obama’s director of national intelligence, said Moscow had lowered its bar for atomic use after the Cold War when the Russian army fell into disarray. Today, he added, Russia regards nuclear arms as utilitarian rather than unthinkable.

“They didn’t care,” Mr. Clapper said of Russian troops’ risking a radiation release earlier this month when they attacked the Zaporizhzhia nuclear reactor site -- the largest not only in Ukraine but in Europe. “They went ahead and fired on it. That’s indicative of the Russian laissez-faire attitude. They don’t make the distinctions that we do on nuclear weapons.”

Mr. Putin announced last month that he was putting Russian nuclear forces into “special combat readiness.” Pavel Podvig, a longtime researcher of Russia’s nuclear forces, said the alert had most likely primed the Russian command and control system for the possibility of receiving a nuclear order.

It’s unclear how Russia exerts control over its arsenal of less destructive arms. But some U.S. politicians and experts have denounced the smaller weapons on both sides as threatening to upend the global balance of nuclear terror.

For Russia, military analysts note, edgy displays of the less destructive arms have let Mr. Putin polish his reputation for deadly brinkmanship and expand the zone of intimidation he needs to fight a bloody conventional war.

“Putin is using nuclear deterrence to have his way in Ukraine,” said Nina Tannenwald, a political scientist at Brown University who recently profiled the less powerful armaments. “His nuclear weapons keep the West from intervening.”

A global race for the smaller arms is intensifying. Though such weapons are less destructive by Cold War standards, modern estimates show that the equivalent of half a Hiroshima bomb, if detonated in Midtown Manhattan, would kill or injure half a million people.

The case against these arms is that they undermine the nuclear taboo and make crisis situations even more dangerous. Their less destructive nature, critics say, can feed the illusion of atomic control when in fact their use

can suddenly flare into a full-blown nuclear war. A simulation devised by experts at Princeton University starts with Moscow firing a nuclear warning shot; NATO responds with a small strike, and the ensuing war yields more than 90 million casualties in its first few hours.

No arms control treaties regulate the lesser warheads, known sometimes as tactical or nonstrategic nuclear weapons, so the nuclear superpowers make and deploy as many as they want. Russia has perhaps 2,000, according to Hans M. Kristensen, director of the Nuclear Information Project at the Federation of American Scientists, a private group in Washington. And the United States has roughly 100 in Europe, a number limited by domestic policy disputes and the political complexities of basing them among NATO allies, whose populations often resist and protest the weapons' presence.

Russia's atomic war doctrine came to be known as "escalate to de-escalate" -- meaning routed troops would fire a nuclear weapon to stun an aggressor into retreat or submission. Moscow repeatedly practiced the tactic in field exercises. In 1999, for instance, a large drill simulated a NATO attack on Kaliningrad, the Russian enclave on the Baltic Sea. The exercise had Russian forces in disarray until Moscow fired nuclear arms at Poland and the United States.

Dr. Kühn of the University of Hamburg said the defensive training drills of the 1990s had turned toward offense in the 2000s as the Russian army regained some of its former strength.

Concurrent with its new offensive strategy, Russia embarked on a modernization of its nuclear forces, including its less destructive arms. As in the West, some of the warheads were given variable explosive yields that could be dialed up or down depending on the military situation.

A centerpiece of the new arsenal was the Iskander-M, first deployed in 2005. The mobile launcher can fire two missiles that travel roughly 300 miles. The missiles can carry conventional as well as nuclear warheads. Russian figures put the smallest nuclear blast from those missiles at roughly a third that of the Hiroshima bomb.

Before the Russian army invaded Ukraine, satellite images showed that Moscow had deployed Iskander missile batteries in Belarus and to its east in Russian territory. There's no public data on whether Russia has armed any of the Iskanders with nuclear warheads.

Nikolai Sokov, a former Russian diplomat who negotiated arms control treaties in Soviet times, said that nuclear warheads could also be placed on cruise missiles. The low-flying weapons, launched from planes, ships or the ground, hug the local terrain to avoid detection by enemy radar.

From inside Russian territory, he said, "they can reach all of Europe," including Britain.

Over the years, the United States and its NATO allies have sought to rival Russia's arsenal of lesser nuclear arms. It started decades ago as the United States began sending bombs for fighter jets to military bases in Belgium,

Germany, Italy, Turkey and the Netherlands. Dr. Kühn noted that the alliance, in contrast to Russia, does not conduct field drills practicing a transition from conventional to nuclear war.

In 2010, Mr. Obama, who had long advocated for a “nuclear-free world,” decided to refurbish and improve the NATO weapons, turning them into smart bombs with maneuverable fins that made their targeting highly precise. That, in turn, gave war planners the freedom to lower the weapons’ variable explosive force to as little as 2 percent of that of the Hiroshima bomb.

The reduced blast capability made breaking the nuclear taboo “more thinkable,” Gen. James E. Cartwright, a vice chairman of the Joint Chiefs of Staff under Mr. Obama, warned at the time. He nonetheless backed the program because the high degree of precision lowered the risk of collateral damage and civilian casualties. But after years of funding and manufacturing delays, the refurbished bomb, known as the B61 Model 12, is not expected to be deployed in Europe until next year, Mr. Kristensen said.

The steady Russian buildups and the slow American responses prompted the Trump administration to propose a new missile warhead in 2018. Its destructive force was seen as roughly half that of the Hiroshima bomb, according to Mr. Kristensen. It was to be deployed on the nation’s fleet of 14 ballistic missile submarines.

While some experts warned that the bomb, known as the W76 Model 2, could make it more tempting for a president to order a nuclear strike, the Trump administration argued that the weapon would lower the risk of war by ensuring that Russia would face the threat of proportional counterstrikes. It was deployed in late 2019.

“It’s all about psychology -- deadly psychology,” said Franklin C. Miller, a nuclear expert who backed the new warhead and, before leaving public office in 2005, held Pentagon and White House posts for three decades. “If your opponent thinks he has a battlefield edge, you try to convince him that he’s wrong.”

When he was a candidate for the presidency, Joseph R. Biden Jr. called the less powerful warhead a “bad idea” that would make presidents “more inclined” to use it. But Mr. Kristensen said the Biden administration seemed unlikely to remove the new warhead from the nation’s submarines.

It’s unclear how Mr. Biden would respond to the use of a nuclear weapon by Mr. Putin. Nuclear war plans are one of Washington’s most deeply held secrets. Experts say that the war-fighting plans in general go from warning shots to single strikes to multiple retaliations and that the hardest question is whether there are reliable ways to prevent a conflict from escalating.

Even Mr. Clapper, the former director of national intelligence, said he was unsure how he would advise Mr. Biden if Mr. Putin unleashed his nuclear arms.

“When do you stop?” he asked of nuclear retaliation. “You can’t just keep turning the other cheek. At some point we’d have to do something.”

A U.S. response to a small Russian blast, experts say, might be to fire one of the new submarine-launched warheads into the wilds of Siberia or at a military base inside Russia. Mr. Miller, the former government nuclear official and a former chairman of NATO's nuclear policy committee, said such a blast would be a way of signaling to Moscow that "this is serious, that things are getting out of hand."

Military strategists say a tit-for-tat rejoinder would throw the responsibility for further escalation back at Russia, making Moscow feel its ominous weight and ideally keeping the situation from spinning out of control despite the dangers in war of miscalculation and accident.

In a darker scenario, Mr. Putin might resort to using atomic arms if the war in Ukraine spilled into neighboring NATO states. All NATO members, including the United States, are obliged to defend one another -- potentially with salvos of nuclear warheads.

Dr. Tannenwald, the political scientist at Brown University, wondered if the old protections of nuclear deterrence, now rooted in opposing lines of less destructive arms, would succeed in keeping the peace.

"It sure doesn't feel that way in a crisis," she said.

--David E. Sanger contributed reporting from Washington

### **23. DoD official: Russia's hypersonic missile boast 'a bit of a head-scratcher'**

*Russia's claim about the hypersonic missile has drawn scrutiny from arms observers in recent days, and the senior DoD official described the weapon's alleged deployment as confusing*

Politico Online, Mar. 21 (1908) | Quint Forgey

Russia may have launched a hypersonic missile over the weekend in an assault on a Ukrainian munitions depot, a senior Defense Department official said Monday, but Moscow's claim about the nature of the weapon is "a bit of a head-scratcher."

U.S. officials are "not able to refute" the Russian military's declaration Saturday that it used a Kinzhal hypersonic missile to strike an underground warehouse storing Ukrainian missiles and aviation ammunition, the official said. The launch would be the first use of the Kinzhal in combat.

But U.S. officials also "can't independently confirm" Russia's claim, said the official, who spoke on condition of anonymity. "It's not entirely clear, so what we would assess is it's certainly possible."

President Joe Biden appeared to confirm Russia's use of hypersonic missiles when speaking Monday night at the Business Roundtable's CEO quarterly meeting.

“They’ve just launched a hypersonic missile because it’s the only thing that they can get through with absolute certainty,” Biden said.

Russia’s claim about the hypersonic missile has drawn scrutiny from arms observers in recent days, and the senior DoD official described the weapon’s alleged deployment as confusing given the circumstances of its use.

Hypersonic missiles fly faster than five times the speed of sound and are maneuverable, making them difficult to shoot down. All ballistic missiles can achieve hypersonic speeds, but the Russians claim the Kinzhal can also be guided during flight, changing course to avoid air defenses. It is not clear if this missile used that capability or if it operated as a traditional ballistic missile.

“It’s a bit of a head-scratcher, to be honest with you, because it’s not exactly clear why if it’s true why would you need a hypersonic missile fired from not that far away to hit a building?” the official said.

Russia’s use of a hypersonic missile could serve as a sign that its forces are “running low on precision-guided munitions and feel like they need to tap into that resource,” the official said.

It is also possible that Russia is “trying to send a message” to Ukraine and the West by using the weapon and “trying to gain some leverage at the negotiating table,” the official added. “But ... from a military perspective, if it was a hypersonic missile, there’s not a whole lot of practicality about it.”

More than three weeks into its invasion of Ukraine, Russian forces are still “looking for a chance to break out” and achieve “some momentum” in the country, the official said. However, it is “very clear that the Ukrainians are showing no signs of stopping their resistance.”

As a result, Russian forces are engaged in a “near-desperate attempt” to make gains and “potentially get some leverage” when it comes time to negotiating an end to the fighting, the official said.

Russia’s combat power is operating at “just below 90 percent,” and Russian forces have fired 1,100 missiles in total since the start of the invasion, according to the official.

## **24. Satellite jamming ‘normal’ by militaries during conflict, not peacetime – State Dept. official**

BreakingDefense.com, Mar. 21 (1215) | Theresa Hitchens

WASHINGTON -- The Russian military’s jamming of GPS signals and communications satellites in Ukraine is considered by the US government as essentially a routine wartime activity, according to a senior State Department official.

Judging from actual real world actions during recent conflicts around the globe, Washington and Moscow appear to be on the same page with this issue — a good thing for avoiding conflict between the two nuclear powers. But there may be a growing disconnect between the two sides on the question of satellite interference outside of direct conflict, with a senior Russian official earlier this month making the surprising claim that doing so is an act of war.

During a March 17 virtual conversation at the National Security Space Association, Eric Desautels, acting deputy assistant secretary for emerging security challenges and defense policy in State’s Arms Control, Verification and Compliance bureau, explained that the US military has its own jamming capabilities for use in conflict zones.

“For example, the United States has our own communications jammer known as the CCS system,” he said. “We think that jamming is probably a normal part of conflict.”

CCS is the Space Force’s Counter Communications System, a mobile communications satellite jammer built by L3Harris and first fielded in 2004. The system has been upgraded routinely over the last 20 years, with the latest upgrade, called Block 10.2, declared operational in March 2020.

In the current conflict, Russian forces actively have been jamming GPS signals in Ukraine as they attempt to advance. In addition, a senior Ukrainian cybersecurity official this week suggested that a Feb. 24 cyber attack on commercial communications provider Viasat, which provides Internet connectivity in Ukraine and Europe, was part of an organized Russian cyber campaign against his country’s forces.

Reuters quoted Victor Zhora as saying that the attack, which shut down thousands of satellite receivers across Europe, “a really huge loss in communications in the very beginning of war.” While Zhora said the attack has yet to be formally attributed to Moscow, “we believe that Russia is attacking not just with missiles and with bombs, but with cyber weapons.”

While jamming Ukraine’s systems will certainly not be welcome by Ukraine or its supporters, it appears that in the US view, those actions are just part of any basic military engagement.

Jamming and hacking satellite capabilities in peacetime, however, is an entirely different matter — and the subject of planned UN discussions seeking to create norms for military activities in space, he said.

When employed outside a theater of conflict, the US considers satellite interference to be “irresponsible” and potentially dangerous — strong disapproval, but a far cry from calling it an act of war.

“Jamming in peacetime that disrupts activities of civilians — for example, Russia’s jamming of GPS during the Trident Juncture exercise off of Norway that caused aircraft ... to be unable to use GPS — that is an irresponsible behavior,” Desautels said.

For that reason, he said, the US wants to raise the issue of jamming of GPS receivers, as well as of satellite command and control, during the upcoming meetings of the UN Open Ended Working Group (OEWG) On Reducing Space Threats. “If you lose control of your satellite, that makes it a hazard to other satellites,” he explained. “And so there’s a lot of work that can be done on all of these various cyber attack methods, jamming methods, that we look forward to having discussions on in the Open Ended Working Group.”

*Peacetime (or what passes for it): Just Say No*

Contrast Desautels’ remarks to those of Dmitry Rogozin, the head of Russia’s space agency Roscosmos, earlier this month, and a disconnect seems to appear.

Reuters reported on March 2 that Rogozin, who has a history of hyperbolic statements and over-the-top tweets, told Russia’s Interfax News Agency that “Offlining the satellites of any country is actually a *casus belli*, a cause for war.”

Up to now, there has been no indication that any country seriously considers satellite interference as a legal act of war that allows an armed response. Under international law, a *casus belli* is a justification that a nation is being threatened, and thus has a right to self-defense.

Instead, Russia, China, the US and Iran (and most likely others) have used GPS and/or satcom jamming for both political and military purposes in what is at least technically peacetime. (For a good primer on the extent of such activities, see Secure World Foundation’s annual Global Counterspace Capabilities report.) This suggests that nations see reversible satellite interference as acceptable under what is known as customary international law, or in essence, real-world practice.

Which is precisely why the US, and the United Kingdom that sponsored the effort to launch the OEWG, want it to be on the table during the upcoming discussions.

And as far as electronic warfare in conflict zones, Russian forces practice it routinely. The Russian military has frequently jammed GPS in Eastern Ukraine since the Crimean conflict in 2014, according to experts inside and outside the US government, as well as in Syria.

Desautels said that the OEWG is now set to begin May 9, although it remains unclear whether it will actually happen due to the ongoing war. As Russian aircraft are now banned from landing in either the US or Europe, he explained, Moscow may try to block the meeting from going forward by arguing that Russian diplomats from the Foreign Ministry will be unable to attend.

In fact, the May 9 date for the launch of the first OEWG session is the result of Russia’s attempts to derail the talks during a preparatory meeting last month; the original plan was for Feb. 14-18 in Geneva, Switzerland. Russia’s invasion of Ukraine was initiated on Feb. 23.

Desautels stressed that the OEWG discussions are important to the United States as it seeks to promote more stability in military space relations — an effort the Pentagon is fully behind.

As first reported by Breaking Defense, Secretary of Defense Lloyd Austin last July issued a first-ever unclassified policy memo committing the US military to five overarching “tenets” to guide DoD space operations in peacetime. And one of those tenets states: “Avoid the creation of harmful interference.”

Meanwhile the National Security Council is leading an inter-agency effort to put more flesh on the bones laid out by Austin and years of declarations by US government officials. That work, Desautels said, is still ongoing and covers a number of complex issues, such as how to ensure that any agreements don’t prevent tests of missile defense systems.

Russia and China, on the other hand, have been less than supportive of the UN discussions, voting against the establishment of the group. That said, several Western diplomats have told Breaking Defense that Beijing has been less belligerent in the run up to the discussions (as well as parallel efforts taking place in Vienna to establish guidelines for best practices for space activities), and has shown willingness to seriously engage on the issues.

Desautels kept a hopeful tone in his remarks last week, but cautioned that the May meeting is the first in a two-year process that will run through 2023.

“This is going to be one of the first times where we really sit down with countries and start talking about these norms of responsible behavior,” he said. “So, the first meeting in May will most likely be focused very much on background information — what is the outer space environment; what are the security threats in the environment what is the existing legal regime in the environment — so that we can raise the level of education.”

## **INDO-PACIFIC**

### **25. Russia sends more warships through Japanese strait, halts peace treaty talks after sanctions**

Stars and Stripes Online, Mar. 22 (0250) | Seth Robson and Hana Kusumoto

TOKYO -- In a move Japan’s prime minister called “totally unacceptable,” Russia has halted talks over a post-World War II peace treaty with Japan and ended visa-free entry for former residents of four Russian-controlled islands.

Russia’s Foreign Ministry announced the measures Monday while indicating it would also not proceed with joint economic activity on the disputed islands — an apparent response to sanctions imposed after Russia’s invasion of Ukraine.

Japan and Russia never signed a peace treaty after WWII, and the status of four islands captured by the Soviets at the end of the war has been a sticking point for more than seven decades. Russia calls the islands north of Hokkaido the Southern Kurils and Japan refers to them as its Northern Territories.

“Russia’s actions are extremely unreasonable and totally unacceptable,” Japanese Prime Minister Fumio Kishida told a Diet committee session Tuesday, according to Kyodo News. “We strongly protest.”

The halt to peace-treaty negotiations is a response to Japan’s unilateral and unfriendly restrictions over the situation in Ukraine, the Russian ministry said in a statement reported by Kyodo.

Japan has imposed about a dozen sanctions on Russia in response to its invasion of Ukraine but the effort to hold them to account is ongoing, U.S. Ambassador to Japan Rahm Emanuel told reporters Wednesday at Yokota Air Base in western Tokyo.

Emanuel was there to see off a 38-ton shipment of nonlethal military supplies, including helmets and bulletproof vests, that Japan donated to Ukraine.

Japan has reported spotting numerous Russia warships on the move in international waters near its northern borders this month.

Most recently, four Russian amphibious ships, traveling in pairs, were spotted east-northeast of Japan’s main island of Honshu on March 15 and 16, Japan’s Joint Staff said in a news release last week.

The vessels included an Alligator IV-class tank landing ship, two Ropucha I-class tank landing ships and a Ropucha II-class tank landing ship, according to the release.

The ships, monitored by a Japanese surveillance plane and a destroyer, traveled west through Tsugaru strait — 12 miles wide at its narrowest point — to the Sea of Japan/East Sea, the release stated.

Photographs provided with the news release showed the ships loaded with military vehicles.

The vessels could be transporting troops and vehicles to Ukraine, Chief Cabinet Secretary Hirokazu Matsuno said during a news conference Thursday.

“We are closely observing movements by Russian forces with grave concern, including the situation in Ukraine,” he said.

The Russians have been looking for ways to respond to sanctions, James Brown, an international affairs expert at Temple University’s Japan campus, said in a telephone interview Tuesday.

The Russian flotillas spotted near Hokkaido earlier this month may have been a show of force, but the latest movements appear to be carrying equipment bound for Ukraine, Brown said.

“It indicates they are very much stretched as a result of the Ukraine invasion,” he said.

The most significant action Russia has taken in response to Japan’s sanctions is suspending visas for the disputed islands’ former residents, Brown said. They have not been able to visit since the coronavirus pandemic began two years ago.

Visiting ancestral graves on the islands is important for the former residents, Brown said.

“In normal times they have about 20 trips each year,” he said. “The average age of these former residents is 86. They will be thinking this is the end and they will never set foot back on those islands.”

## **26. Australia Forms A Space Force As Tensions Rise**

*The expanded commitment to space defense reflects the reality of a new, extraterrestrial landscape for war*

New York Times, Mar. 22 (0300), Pg. A4 | Damien Cave

CANBERRA, Australia -- Two years after the United States inaugurated a military Space Force to mixed reviews, Australia has created its own Space Command to counter threats from China, Russia and other extraterrestrial powers.

The new force will expand Australia’s space capabilities and contribute to “a larger, collective effort among like-minded countries to ensure a safe, stable and secure space domain,” Peter Dutton, Australia’s defense minister, said on Tuesday.

In a speech at a conference with several American military officers in attendance, Mr. Dutton also announced that Australia and the United States had agreed to partner on “a broad range of satellite activities.”

It is not clear how sizable the command’s ranks will be. The announcement came just two months before a federal election in which Australia’s conservative governing coalition is trying to make national security a key plank of its pitch to voters.

At the same time, the expanded commitment to space defense reflects the reality of a new technological landscape for war, in which satellites are vital tools for navigation, surveillance and attacks from unmanned weapons.

The announcement also amounts to yet another sign of deepening Australian-American security ties. The two countries, allies since World War I, have been working more closely together in recent years as China's ambitions and military investment have become a greater concern.

In September, Australia announced a new defense agreement in which the United States and Britain will help it deploy nuclear-powered submarines, a major advance in Australian military strength. The partnership, known as AUKUS, also includes plans to collaborate on new military capabilities in artificial intelligence, quantum computing and other next-generation technologies.

The space partnership has not been branded as a part of that agreement, but the backdrop -- an increasingly contested, multipolar era -- remains the same.

"Space is a sector that China has invested in heavily as part of its broader military modernization and efforts for technological advancement," said Jennifer Jackett, a security researcher focused on technology at the Australian National University. "This reflects the fact that space is a critical domain for both military capability and civil applications."

Some security analysts said that Australia had recognized, with both Russia and China advancing their ability to damage or destroy satellites, that space vulnerabilities must be managed for Australia's own security and in the case of an attack on America's satellite network.

The relative power of the United States compared to China continues to be a concern, with the war in Ukraine leading some to worry that demands in Europe will draw American attention and resources away from Asia, or lead China to challenge the United States more directly.

"There is a growing concern that reliance on large U.S. systems could leave us quite vulnerable if they were to be targeted in a confrontation," said John Blaxland, a defense expert at the Australian National University. "There is a lot of emphasis on smaller -- and greater volume and greater frequency of launching satellites -- that are going to be able to give Australia that greater resilience, and redundancy."

The United States seems determined to prove that its commitment is unwavering. Several senior officials from the U.S. Indo-Pacific Command, based in Honolulu, will be in Australia this week, along with senior commanders from the American Space Force. Secretary of State Antony J. Blinken visited Australia and Fiji last month.

When the Trump administration announced its intention to create a Space Force in 2018, the idea drew an uneven response, including inside the American military, with some questioning its necessity and cost.

But the Biden administration, after taking office last year, said it would not review the decision to create the force, and it has cemented itself as the sixth, and smallest, branch of the U.S. military.

Australia, for its part, is a small player in the global space industry, having created a national civilian space agency only in 2018.

Nonetheless, in his comments on Tuesday, Mr. Dutton emphasized that Russia's invasion of Ukraine had made space, highly technical military strength and traditional alliances all the more important.

"We must remain determined in what we can do to support liberty against the odious forces of tyranny," he said. "In the Indo-Pacific, Australia is contributing to collective efforts to maintain stability and deter aggression."

## **27. U.S., Calling '17 Purge Genocide, Condemns Myanmar's Military**

*Secretary of State Antony Blinken announced the official designation. More than 9,000 people were killed in the violence*

New York Times, Mar. 22 (0300), Pg. A6 | Lara Jakes

WASHINGTON -- Against the backdrop of a war in Ukraine and atrocities in Ethiopia, the United States on Monday formally accused Myanmar of committing genocide against its minority Rohingya population.

"The day will come when those responsible for these appalling acts will have to answer for them," Secretary of State Antony J. Blinken said at the U.S. Holocaust Memorial Museum in Washington, which is exhibiting evidence of decades of discrimination and abuse against Rohingya Muslims by Myanmar's military.

The violence in Myanmar's Rakhine State peaked in August 2017 with a campaign of mass rape, burnings and drownings against entire families that killed more than 9,000 people and forced nearly one million to flee the country.

It was the eighth time that the United States has issued a formal genocide declaration, committing to supporting international investigations to hold violators accountable and probably prompting additional sanctions or other penalties to isolate Myanmar's military-led government.

Messages left at the Myanmar Embassy in Washington on Monday were not immediately answered.

Officials who "bear the greatest responsibility for atrocities" will continue to face severe sanctions, Mr. Blinken said.

He did not mention any penalties against Daw Aung San Suu Kyi, the Nobel laureate who was Myanmar's de facto leader at the time of the 2017 massacres and had rejected accusations of genocide. Ms. Aung San Suu Kyi was arrested in a February 2021 coup. Since then, Myanmar's military, known as the Tatmadaw, has violently cracked down on civilians across the country, killing at least 1,670 people and detaining more than 12,000.

The designation bolsters international charges of genocide that have been brought against the leaders who ordered the atrocities against the Rohingya, some of whom Mr. Blinken said remain in power in Myanmar.

Canada, France, Turkey and other American allies have already declared the 2017 rampage to be genocide. Gambia, acting on behalf of the 57-member Organization of Islamic Cooperation, filed legal action against Myanmar in 2019 at the International Court of Justice, accusing Myanmar of violating the United Nations' Genocide Convention.

Monday's declaration "adds another layer to the already quite damning accusations against Myanmar for atrocities committed against the Rohingya," said Oumar Ba, an assistant professor of government at Cornell University and an expert on the international criminal justice system.

Noting Ms. Aung San Suu Kyi's possible culpability, Mr. Ba added, "We should, however, be careful not to attribute these crimes solely to the Myanmar's military junta."

Mr. Blinken said the Biden administration would continue to provide humanitarian aid to Rohingya refugees, the majority of whom have fled to neighboring Bangladesh, and would send \$1 million to a U.N. fact-finding mission that is gathering evidence on Myanmar's worst cases of atrocities since 2011.

American investigators conducted their own inquiry into the violence, interviewing more than 1,000 refugees who reported widespread and systematic attacks. More than half of the Rohingya interviewed witnessed sexual assaults, and three-quarters said they saw killings at the hands of the military. One of every five Rohingya interviewed witnessed a mass casualty event, where more than 100 people were killed or injured, Mr. Blinken said, citing the report.

"The evidence also points to a clear intent behind these mass atrocities -- the intent to destroy Rohingya," Mr. Blinken said.

The State Department stopped short of declaring the Myanmar atrocities to be genocide when it released the findings in 2018, in part to maintain an alliance with the government and keep neighboring China off balance in the region. More than two years later, at the end of the Trump administration, Secretary of State Mike Pompeo declared the systemic abuse and detention of Muslim Uyghurs in the Xinjiang region of China to be an act of genocide.

The Biden administration has also resisted declaring atrocities in Ethiopia's northern Tigray province to be a genocide, although Mr. Blinken has warned of cases of ethnic cleansing against civilians there. And just last week, Mr. Blinken said he believed that war crimes had been committed by Russian forces in their invasion of Ukraine but said investigators still had not concluded that officially.

Still, Mr. Blinken mentioned both conflicts on Monday. Shortly after his speech, the State Department also announced that it had designated Sudan's Central Reserve Police as a human rights violator after accusations of rape, torture and other abuses against pro-democracy protesters surfaced starting late last year, including as recently as last week.

"Over recent weeks, as I've spoken with diplomats from around the world about Ukraine, I've also heard a constant refrain," Mr. Blinken said. "Many of them say: 'Yes, we stand with the people of Ukraine. But we must also stand with people suffering atrocities in other places.'"

At one point, he stopped reading from his speech, displayed on a teleprompter. "It's painful to even read these accounts," he said after detailing some of the abuses against the Rohingya. "I ask each and every one of you listening: Put yourself in their place. Imagine this was your own child."

Mr. Blinken's speech came nearly 89 years to the day after the opening of the Nazis' first concentration camp, in Dachau, Germany, where his stepfather, Samuel Pizar, was held until he was liberated by American troops near the end of World War II. Mr. Pizar's experiences helped shape Mr. Blinken's zeal for advocating human rights and democracy in foreign policy.

"That pain ripples outward, from the individual victims and survivors to loved ones, friends, to entire communities," he said. "We also must remember to see these individuals as more than victims, but rather as whole human beings."

## MIDDLE EAST

### **28. Revolutionary Guard at Center of Talks**

*U.S. criticized for considering removing terrorism designation to revive Iran nuclear deal*

Wall Street Journal, Mar. 22 (0200), Pg. A10 | Laurence Norman

The effort to revive the 2015 nuclear agreement hinges on perhaps the most politically sensitive issue in the negotiations: Whether to remove the U.S. terrorism designation for Iran's elite Revolutionary Guard, the country's powerful security force, diplomats said.

The issue is galvanizing opposition to the nuclear pact in Washington and among Middle East allies such as Israel, where the government issued stinging public criticism of any attempt to remove the terrorism designation of the Islamic Revolutionary Guard Corps.

Senior U.S. officials say a failure to find a compromise with Iran on the issue quickly could cause a breakdown in negotiations that -- over almost a year -- have resolved nearly every other disagreement.

The U.S. has accused the Guard of killing hundreds of Americans, while its elite Quds Force has arranged weapons and support for proxy forces throughout the region and for pro-Iranian groups that fought in Syria. The Guard has long faced U.S. sanctions for its ballistic-missiles programs and alleged human-rights violations, and was placed on the counterterror sanctions list in 2017.

Those backing compromise argued that other sanctions on the Guard would still keep foreign companies away from dealing with Guard-linked Iranian firms, damping economic benefits of any nuclear deal for Iran. Opponents argue the foreign terror organization listing is a necessary, punitive deterrent.

In pressing for lifting the terror sanctions, U.S. officials have said the threat posed by the Guard and other terrorist-listed entities would be much worse if Iran gets nuclear weapons. Iran, which says its nuclear program is peaceful, is weeks away from having enough highly enriched uranium for a bomb, according to the U.N. atomic agency.

The divide over the Guard's terrorism designation comes at a critical moment in discussions about the steps Washington and Tehran will take to comply again with a deal that the U.S. withdrew from under former President Donald Trump, and that Iran has since breached with a massive expansion of its nuclear work. The deal lifted most international sanctions on Iran in exchange for tight but temporary restrictions on its nuclear program.

President Biden believes the U.S. should work to resolve the issue, U.S. officials said, given that Tehran's breakout time to amass enough nuclear fuel for a bomb was significantly reduced after the U.S. withdrew from the agreement.

The view among Mr. Biden and many of his top advisers is that reaching a deal with Iran now, and then improving upon the agreement later, is a better option than waiting, said these officials. The White House also views an agreement restraining Iran's nuclear program as key to Middle East stability, allowing the U.S. to focus on China and Russia. These U.S. officials argue that withdrawing from the 2015 pact didn't yield positive results.

"Not only has Iran's nuclear program advanced, but their behavior in the region and beyond has gotten more aggressive, including by the Islamic Revolutionary Guard," White House press secretary Jen Psaki said last week. "So the notion that the actions of the past administration pulling out of the Iran nuclear deal has cut down on the actions or the escalatory behavior of the (IRGC) is inaccurate."

According to people involved in the talks, the American offer would remove the Guard from the U.S. list of Foreign Terrorist Organizations if Iran commits to rein in its regional aggression and refrains from targeting Americans. If Iran doesn't abide by the pact, the listing could be reimposed.

Iran, which refuses to negotiate directly with Washington, hasn't responded, creating a stalemate that senior U.S. officials say could imperil a deal.

The Guard has complicated the talks by claiming responsibility for a missile attack this month from Iran on northern Iraq, which the force said targeted an Israeli compound but landed near a U.S. consulate under construction.

In a televised new-year's speech Monday, Iranian Supreme Leader Ayatollah Ali Khamenei, who has the final say on most important strategic issues, said Iran should continue pursuing the nuclear talks.

"Of course, I am not saying stop pursuing removal of the sanctions... The principle is to run the country in a way that the sanctions cannot hit the economy substantially," he said.

The issue of the Guard's terrorism designation has haunted the negotiations since they started last spring.

According to people close to the talks, the U.S. team dangled the possibility of lifting the Guard's terrorism designation in 2021 with the approval of some in Washington. At the time, there were strings attached. However, the U.S. team pulled back the offer over concerns from senior administration.

Now, Washington is behind the offer to lift the terror designation if Iran meets its conditions, recognizing that without that step, Tehran may walk away from a deal, say U.S. officials. They also say there is little room for negotiation on the conditions Iran must accept around the offer.

The Guard designation highlights the crosscurrents facing the Biden administration's efforts to revive the nuclear deal.

Iran has wanted the Biden administration to lift terrorism, human-rights and other sanctions on it that aren't related to its nuclear program. U.S. allies in the region, who are nervous about a deal that doesn't permanently constrain Iran's nuclear work, fear that if Washington lifts the terror sanctions on the Revolutionary Guard, it would embolden Iran-backed proxies, such as Hezbollah in Lebanon and the Houthis in Yemen.

"We are very concerned about the United States' intention to give in to Iran's outrageous demand and remove the IRGC from the list of terrorist organizations," Israeli Prime Minister Naftali Bennett said.

The Guard designation was part of a series of moves by the Trump administration to list Iranian people and entities under terror sanctions. Advocates said the moves would make it difficult for the next administration to restore the nuclear pact. It was the first time Washington had designated an element of a foreign state a terrorist entity.

Critical to the argument over the Guard is the economic impact it would have. The counterterror sanctions heighten the potential criminal liability for companies and people that do business with the group, said Mark

Dubowitz, chief executive officer of the Foundation for Defense of Democracies, which opposed the 2015 nuclear deal.

## **29. Oil Thirst Is Forcing Biden to Pivot U.S. Back to Saudi Arabia**

Bloomberg News, Mar. 21 (1545) | Nick Wadhams, Annmarie Hordern and Matthew Martin

President Joe Biden has been reluctantly drawn into closer ties with Saudi Arabia's king-in-waiting, forced by Russia's invasion of Ukraine to rethink a standoffish approach as the U.S. struggles to curb soaring oil prices.

The problem is Crown Prince Mohammed bin Salman isn't ready to play along.

The softening U.S. attitude, described by a dozen people familiar with the debate, follows months of efforts by some senior administration officials to convince a wary president that ignoring the de facto Saudi leader was hampering U.S. foreign policy goals. The need to isolate Moscow gave new impetus to that push. One official described Russia's aggression as a paradigm-shifting event that changes the way the U.S. looked at Saudi Arabia.

Saudi Arabia is the Middle East's economic powerhouse and for years has been a political heavyweight in the region's affairs and a dominant force in OPEC+ -- a powerful alliance between the oil-exporters' cartel and Russia. It's also one of the biggest buyers of American weapons.

The shift is in part an admission that Biden backed himself into a corner during his presidential campaign by calling Saudi Arabia a "pariah," a reflection of his revulsion over the 2018 murder of critic Jamal Khashoggi and a desire to retreat from his predecessor's cozier relations. Donald Trump deployed his son-in-law Jared Kushner to work directly with MBS -- as the prince is usually called -- often to the exclusion of his own top diplomat.

Conversations with people in Riyadh and Washington paint a picture of an administration that recognizes it must maintain a decades-old partnership that's guaranteed U.S. clout in the world's top energy-exporting region and yet also wants to punish Prince Mohammed, 36, over his human rights record.

### *The Call*

Three people familiar with the matter said the two sides were trying to arrange a call between Biden and the crown prince for the first time, but strains were now so deep that it would take time.

A spokesperson for the White House National Security Council said Monday it "is categorically false" that the White House made a formal request for a call with the crown prince, and denied that the Saudis have rebuffed the president.

NSC spokeswoman Emily Horne added: “The president spoke with King Salman on February 9th. In that call, they set forth an affirmative bilateral agenda from climate, to security, to energy cooperation. Since that important call, our teams have been engaged at every level. There have been no discussions of subsequent calls at the president’s level given this regular and ongoing engagement.”

A U.S. official who asked not to be identified said the Saudis agree with the protocol of the president speaking with his counterpart, the king. The official also said Biden has been open to conversations with Prince Mohammed, noting that if the crown prince had come to Rome in October during the G-20 gathering, Biden would have met with him.

### *A Serious Challenge*

Biden set himself up for a serious challenge after taking office in January 2021 by promising to reorient his foreign policy away from the Middle East and make human rights a greater priority. At the time, his spokeswoman said his counterpart was King Salman and phrased the shift as a “recalibration” in ties.

Yet the U.S. relies on Saudi Arabia for 7% of its oil imports, a number that won’t budge much unless it spurs more domestic output - something progressives in Biden’s party would resist. Saudi Arabia is also an important regional counterbalance to Iran, whose armed proxies launch near-daily attacks on U.S. allies across the Middle East. Yemen’s Iranian-backed Houthis struck six sites in the kingdom as recently as Sunday, including some operated by state oil giant Aramco.

Biden’s cold shoulder has been particularly poorly received as he seeks to revive the 2015 nuclear accord that would hand the Islamic Republic an oil windfall without addressing such security concerns.

### *Saudi View*

Saudi Arabia said in a statement Monday it refused to be held responsible for any shortage of oil on global markets as long as its energy facilities face attack from Iranian-backed Houthis, urging the international community to do more to secure supplies.

Now, Russia’s invasion of Ukraine adds further complication. It has contributed to soaring gasoline prices, which the Biden administration is eager to bring down before voters head into midterm elections that could hand control of Congress to the Republicans.

But rebuilding ties won’t be easy. Biden’s decision to bypass Prince Mohammed and deal only with his aging father is seen in Riyadh as a personal insult -- one that won’t be forgiven overnight.

The country's leaders also resent the attention the U.S. has lavished on their tiny neighbor Qatar, and have griped that the U.S. only calls when it needs a favor.

This time, Saudi Arabia - along with Israel and the United Arab Emirates -- want the U.S. to address longer-term concerns over Iran's support for armed groups and offer lasting security guarantees before they rally behind Biden's effort to isolate Russian President Vladimir Putin and relieve energy markets.

In a sign the message is filtering through, the U.S. condemned the latest attacks, with National Security Advisor Jake Sullivan pledging the U.S. would "fully support our partners in the defense of their territory."

The U.S. had transferred a significant number of Patriot anti-missiles interceptors to Saudi Arabia in recent weeks, acting on urgent requests amid tensions in the relationship, according to an official familiar.

One U.S. official said they're having ongoing discussions on oil and the administration believes they're heading to good place on price pressure cooperation.

In a recent interview with the Atlantic, when asked if Biden misunderstands him, the crown prince responded "simply, I do not care," adding that it was "up to him to think about the interests of America." Of the idea of alienating Saudi Arabia, he replied, "go for it."

Administration officials are debating whether those remarks were just posturing or a genuine shift in outlook by Saudi Arabia, which has built deeper ties with Russia and China as the U.S. has sought to shift focus from the region. Even as those ties grow, most officials argue that the Saudis recognize Beijing is no substitute for Washington.

One person familiar with the administration's stance, who asked not to be named, described Prince Mohammed as pouting, a characterization indicative of U.S. attitude to a key ally at a time of international crisis.

"It's not going well and it's not likely to go well," Kori Schake, director of foreign and defense policy studies at the American Enterprise Institute. "There's a strong tendency in American foreign policy to expect everybody else to drop what they're doing, and immediately turn their attention to helping us address whatever we're worried about."

The Saudi Foreign Ministry and government communications center didn't immediately respond to requests for comment on the kingdom's relationship with the U.S. or potential for a call with Biden.

### *The Holdouts*

People familiar with the matter said the biggest holdouts to softening the U.S. approach have been the president and Secretary of State Antony Blinken.

Antony Blinken, left, listens as U.S. President Joe Biden speaks on United States' assistance to Ukraine. Biden, according to people familiar, is concerned about blowback in Washington, including from congressional Democrats who've lambasted him as too soft, and from the Washington Post, the influential newspaper that published Khashoggi's columns.

Blinken frets that MBS is still doing things that warrant condemnation. The kingdom recently executed 81 people and civilian casualties have mounted in Yemen, where Saudi Arabia has been bombing the Houthis since they dislodged the internationally-recognized government in 2015.

Human Rights Watch executive director Kenneth Roth, describing in an interview his call with Blinken, said that the U.S. diplomat "acknowledged the limitations that the government faces of their countervailing values and interests."

Just as Biden may have run too hard away from the Saudis early in his tenure, now some in Washington worry he may overcompensate in the rush to align partners against Putin.

"It's all fine and good to argue that we need to work with bad actors against even worse actors," said Matt Duss, senior foreign policy adviser to Democratic Senator Bernie Sanders. "But we should remember that this was the same logic that led the U.S. to treat Vladimir Putin as a partner in the War on Terror."

### **30. EU Freezes Some Mali Army Training Over Mercenary Concerns**

Associated Press, Mar. 21 (1629) | Lorne Cooke

BRUSSELS -- The European Union's top diplomat said Monday that he has ordered the suspension of combat training for soldiers in Mali until he receives guarantees from the government there that the trainees will not be working with Russian mercenaries.

Rebel Malian troops have launched two military coups in recent years. The junta has postponed elections meant to usher in civilian rule, and the EU is concerned that Mali's leaders are working with mercenaries from the Wagner Group, which is accused of rights abuses in Africa and the Middle East.

The 27-nation bloc has been training the Mali armed forces since 2013. It had planned to continue to do so despite the severe instability and political upheaval that has wracked the country since 2012.

“Clearly, our training mission cannot be implicated, in any way, in activities that could call into question the European Union’s reputation,” EU foreign policy chief Josep Borrell told reporters after chairing a meeting of the bloc’s foreign ministers.

Borrell said he’s still waiting for guarantees from Mali’s junta, and until then he has ordered the commander in charge of the EU training “to adapt the activities of the mission to the circumstances they are facing.”

“We should maintain training activities that are not directly related to training Malian troops in military combat,” Borrell said, but he added that the mission would not yet be cancelled.

France announced last month that it all its troops would leave Mali by the summer amid tensions with the military junta, but Paris said it would maintain a military presence in neighboring West African nations.

French President Emmanuel Macron has accused Mali’s authorities of neglecting the fight against Islamic extremists.

More than 107 civilians have been killed in recent months in Mali in attacks by the army and jihadist groups linked to al-Qaida and the Islamic State group, Human Rights Watch said in a report last week.

Mali’s soldiers were responsible for at least 71 of the deaths recorded since December 2021, the international rights organization said. Mali’s army has contested some of the report, while adding that it is investigating a number of the attacks and allegations.

The army has been accused of abuses against civilians in southwest and central Mali as soldiers try to stem violence from jihadist fighters who have been staging attacks for nearly a decade.

## **MODERNIZATION & TECHNOLOGY**

### **31. DOD sets FY-28 target for demonstrating hypersonic defense system**

InsideDefense.com, Mar. 21 (1835) | Not Attributed

The Defense Department has set a fiscal year 2028 target for demonstrating a prototype hypersonic defense system to defeat long-range, ultrafast maneuvering glide vehicles during mid-flight -- more than 10 years after Congress directed the U.S. military to establish a program to plug an anticipated hole in U.S. air- and missile-defense capabilities.

The Pentagon's top weapons tester disclosed the 2028 objective in a report to Congress obtained by the Project on Government Oversight; the Missile Defense Agency had previously only said the goal of the Glide Phase Interceptor program was to demonstrate a capability by the end of this decade.

"Phase I will culminate in a prototype demonstration not later than FY-28," Director of Operational Test and Evaluation Nickolas Guertin wrote in his 2021 annual report of the GPI program.

Last November, MDA selected Lockheed Martin, Raytheon and Northrop Grumman to advance competing concept designs for a regional Glide Phase Interceptor, setting up a three-way contest for a new Aegis guided missile optimized to defeat a new class of ultra-fast maneuvering weapons and give the Navy a second layer of defense against hypersonic threats.

Nearly five years after MDA was directed by Congress to create a hypersonic defense program, the agency last fall announced the milestone development, awarding Lockheed Martin and Raytheon \$20 million contracts each and Northrop Grumman \$18.5 million to complete accelerated GPI concept designs.

This initial GPI capability development, according to the DOT&E report, includes "concept development, studies and analyses, and technical requirements generation."

GPI is intended to be a second layer of defense against hypersonic threats, building on the currently fielded Standard Missile-6 interceptor used for terminal defense. GPI would engage maneuvering glide vehicles during its "regional" phase -- a distance akin to midcourse engagement but inside the atmosphere against a non-ballistic target.

Because of their speed -- hypersonic weapons travel at least one mile per second -- their maneuverability and altitude, these ultra-fast systems promise military utility that includes the ability to penetrate even the most sophisticated air and missile defense systems.

Both Russia and China have fielded hypersonic glide vehicles, in 2019 and 2020 respectively, according to the Defense Department.

Congress added nearly \$40 million to the Pentagon's FY-22 budget request for hypersonic defense, appropriating \$287 million for the program that funds GPI.

## NOTABLE COMMENTARY

### **32. There's Still Much More Sanctions Can Do**

Wall Street Journal, Mar. 22 (0200), Pg. A17 | Sen. Pat Toomey (R-PA)

By starting the largest land war on the European continent since World War II, Russia, a nuclear power, has unleashed the greatest threat to global security in recent memory. Not only are the Ukrainian people's lives and livelihoods at stake, but so is the security of people around the world.

If Vladimir Putin does not conclude that his invasion was a disastrous mistake, the consequences for U.S. national security and the security of Europe, especially the Baltics and Poland, are grave. An insufficient Western response could be seen as a permission slip by other revisionist authoritarians, such as Chinese President Xi Jinping, for their own territorial ambitions.

The sanctions imposed by President Biden -- at Congress's urging -- have been economically damaging to Russia, but not crippling. The ban on American imports of oil minimally harms Mr. Putin, as Americans buy only 5% of Russia's crude oil. Since the sanctions imposed by the U.S. and Europe purposely allow Russia to continue exporting oil and gas, between \$5 billion and \$7 billion in hard currency funds Mr. Putin's war machine each week. Severing this revenue stream now, together with helping Ukraine's heroic defense, is the best chance the U.S. has to convince Mr. Putin that this war was a calamitous blunder that he should immediately abandon.

To cut off Mr. Putin's oil and gas sales globally, the administration and Congress should impose secondary sanctions on the entirety of Russia's financial sector. These penalties would effectively prohibit foreign banks anywhere in the world, under the threat of U.S. sanctions, from making payments to Russian banks, including for oil and gas. They would force the world to make a choice: Do business with the U.S. or do business with Russia. But you can't do both.

Europeans have begun to take modest steps toward ending their dependence on Russian energy. But some private companies in Europe can't cut off their purchases until sanctions are imposed. Orsted, a Danish power company, said it would like to reduce its intake of Russian energy but is contractually obligated to buy it until 2030. Only sanctions would allow the company to break its contract with Gazprom legally.

Russia could turn to China for exports to offset its declining trade with the rest of the world. But with secondary sanctions, China would be obligated, like every other country, to stop doing business with Russian banks. If the Chinese chose to violate these sanctions, they would then lose access to the U.S. financial system.

The Biden administration expressed concerns that secondary sanctions could hurt America's relationships with European allies. But there's a potential solution. As the Treasury Department is already doing with existing

sanctions, the U.S. can work with foreign governments to create so-called wind-down periods. These transitions will give European allies a say in how these secondary sanctions are implemented.

It would be temporarily costly for Europe to adapt to a world without Russian energy, but it is manageable. With warm spring weather arriving, European demand for Russian gas is about to drop precipitously. Economists and analysts predict that the higher prices Europeans will pay for non-Russian energy won't come close to being economically catastrophic for the eurozone. And Europeans can begin reducing their dependence on Russian gas by building new liquefied natural gas terminals, improving continental gas pipeline connectivity, and suspending the phase-out of nuclear power.

The U.S. must accelerate efforts to bolster its own energy independence. While President Biden claimed in a recent press conference that the current crisis "should motivate us to accelerate the transition to clean energy" and reduce our dependence on fossil fuels, this can't -- and won't -- happen overnight. It would take decades to develop the technology needed to produce consistent and reliable green energy at such an enormous scale. The administration implicitly acknowledged this by going on bended knee to plead with Venezuela's dictator to produce more oil.

The administration should instead bolster America's energy independence by reversing its disastrous anti-fossil-fuel policies: restart the Keystone XL pipeline, expedite approvals of natural gas pipelines and LNG facilities approvals, and repeal its broad and punitive regulations and restrictions on U.S. oil and gas production.

There is an undeniable cost to energy consumers from cutting off Mr. Putin's oil and gas revenue. But the price of thwarting his assault on the Ukrainian people isn't as expensive as allowing him to reconstitute a Russian empire. Secondary sanctions will give Ukraine a fighting chance to win this war, and defeating Mr. Putin now will prevent the next one.

--Mr. Toomey, a Pennsylvania Republican, is ranking member of the Senate Banking Committee

### **33. Don't Expect China to Bring About Peace in Ukraine**

Bloomberg Opinion, Mar. 21 (0930) | Minxin Pei

Any hopes that U.S. President Joe Biden might persuade his Chinese counterpart Xi Jinping to help stop the war in Ukraine should probably be put aside. China wants to see an early end to the conflict. But it won't use its leverage to bring one about.

Biden and Xi appear to have talked past each other when they spoke on the phone last Friday. In its readout of the call, the White House maintained that Biden focused on Ukraine and warned of consequences for China if it provided Russia "material support." The Chinese summary, on the other hand, mentioned Ukraine only in passing

and highlighted Biden's commitment to the "one-China" policy and his pledge not to engage in a new cold war with China.

That's not because China, as some officials in Beijing apparently believe, gains from standing aloof while the U.S. and Russia exhaust themselves in a drawn-out European conflict. In fact, China is losing every day that the fighting continues. The only question is how much damage it will suffer and how fast.

China finds itself in this predicament in large measure because of the Sino-Russia joint statement on strategic partnership it signed on February 4. At the time, many in Beijing and elsewhere saw the agreement as a geopolitical masterstroke. Having Russia as a quasi-ally would be a net strategic gain for China. Moreover, tensions between Russia and the U.S. would presumably force Washington to divert resources and attention away from the Indo-Pacific, allowing China freer rein in the region.

Now, the poor performance of the Russian military on the battlefield and the unified response of the U.S. and its allies to the invasion have scrambled that calculus. Instead of a lightning victory, Putin risks a humiliating defeat or a quagmire as Western sanctions cripple the Russian economy.

The former would be China's worst nightmare. The strategic consequences of such an outcome are unthinkable for Beijing. Putin undoubtedly understands this, which may be one reason why he is eager to suck China into the conflict by requesting military aid.

A prolonged war would be only slightly less disastrous for China. A Russian quagmire might at least buy leaders in Beijing some time to rethink their strategy. But an exhausted Russia will also raise pressure on China to provide more assistance.

Openly supporting Putin now might turn the tide on the ground in Russia's favor, enough at least to persuade him to accept a ceasefire and negotiated settlement. But the risks of providing such help are almost certainly too high.

The fact is that China is working off a different timetable than Russia. Unlike Putin, Xi believes that the current international order, however unsatisfactory, still allows enough space for China to gain power and influence. If tensions with the U.S. can be managed well enough to avoid a premature collision, time is theoretically on China's side. Its stronger growth momentum relative to the U.S. should gradually tilt the balance of power in China's favor.

Backing Putin's war efforts could precipitate an immediate confrontation with the West, for which China is not prepared. However bad China's ties with the U.S., Europe and Japan, it still needs access to their markets: Those three partners accounted for 52% of China's total foreign trade in 2021, compared with 3.8% for Russia. China also depends heavily on advanced Western technology, particularly microchips, while its big companies and banks cannot yet afford to be cut off from the dollar.

At the same time, Xi surely feels he cannot abandon Putin. An attempt to pressure the Russian leader to compromise quickly might fail, which would be a huge loss of face for Beijing. Or it might succeed but antagonize Putin and even weaken him at home so much that his hold on power is threatened.

With no good options, China's only coping strategy for now is to do what it can to help Russia without crossing U.S. red lines.

This is not a cost-free position. China's support for Putin has badly tarnished its international image. It is deepening tensions with the U.S., feeding the narrative that a Sino-U.S. confrontation is inevitable and raising the risks of one breaking out before China is ready.

Even more worrying, China is losing ground in Europe. If major European countries had been ambivalent about taking sides in the Sino-U.S. rivalry, China's embrace of Putin has made such strategic neutrality impossible. In coming years, Brussels will almost certainly move closer to Washington.

What seemed a brilliant move a few short weeks ago increasingly looks like a terrible strategic decision. Instead of benefiting from Russia-U.S. tensions, China finds itself at the mercy of events and its long game in grave peril. Whoever wins in Ukraine, China has already suffered irreparable losses.

### **34. A Crisis in U.S.-Arab Relations**

Wall Street Journal, Mar. 22 (0200), Pg. A19 | Firas Maksad

When the leaders of Saudi Arabia and the United Arab Emirates decline phone calls from the president of the United States, rebuff his requests to help lower oil prices, and shy away from condemning Russia's invasion of Ukraine, and when the U.A.E. hosts Syrian dictator Bashar al-Assad in Abu Dhabi, there is no doubt that a major crisis in U.S.-Arab Gulf relations is under way.

This will be exacerbated in the weeks ahead if the U.S. nears an agreement with Iran over its nuclear program, lifting many sanctions in the process. How Washington handles this unfolding predicament will shape the region's future, and America's place in it, for decades.

To some in the West, the behavior of some of America's Arab Gulf partners typifies the sort of erratic decisions made by strongmen such as Russia's Vladimir Putin. But does that explain why most of America's other Middle Eastern allies -- Israel, Jordan, Turkey and Egypt -- also are expanding ties to Russia and China at America's expense? Are all these countries led by irrational strongmen?

No, America's Middle Eastern partners have rationally concluded that they need to diversify their foreign-policy options given Washington's reluctance to uphold its defense commitments. Dramatic scenes of the disorderly U.S. exit from Afghanistan confirmed that America is in retreat. For Saudi Arabia and the U.A.E. in particular, the lack of a meaningful American response to Iran-sponsored drone attacks on airports and oil facilities in 2019 and 2022 was the straw that broke the camel's back.

After the last major attack this January, the U.A.E. didn't hear from U.S. senior administration officials, and when Gen. Frank McKenzie, America's top commander in charge of the region, paid a visit over three weeks later, Mohamed bin Zayed, the country's de facto leader, refused to meet with him. Concerns about America's commitment had morphed into feelings of abandonment and anger.

The Biden administration's behavior toward the Gulf Arab states contradicts its National Security Strategy, which emphasizes revitalizing America's alliances and partnerships. Team Biden has two mistaken assumptions: that the rise of China and return of Russia as great-power rivals necessitates a recalibration from the Middle East to Southeast Asia and now to Eastern Europe, and that achieving detente with Iran, beginning with a nuclear deal, would make the region more stable.

To U.S. officials, these assumptions are complementary and mutually reinforcing: An American retreat from the Middle East should make Iran less aggressive. In turn, a U.S.-Iran detente would allow Washington more time to focus on emerging threats elsewhere. On the surface this appears to be a win-win arrangement, since Saudi Arabia, the U.A.E. and Israel in theory stand to benefit from an Iranian commitment to de-escalation.

But this strategy is built on faulty foundations. In reality, the Middle East is "the Wild West of great power competition" according to Gen. McKenzie. It sits at the crossroads of three continents and includes three of the world's most important maritime choke points, vital for global trade and commerce. It also accounts for about half of global oil reserves and more than a third of oil production.

The U.S. can't engage effectively in a great-power competition while relinquishing its dominant position in such a strategic part of the world. When the void left by the U.S. is being filled by Russian military encroachment in North Africa, the Eastern Mediterranean and the Red Sea corridor, and as China has displaced the U.S. as the lead trading partner for most of the Middle East, allies and partners will need to adjust accordingly.

There is also no guarantee that an American-Iranian detente would lead to a more stable Middle East. Once most Western sanctions are lifted, and American deterrence across the region wanes, Iran's appetite for expansionism will likely increase. This could feed further conflict, stiffen Saudi determination to match Iran by also becoming a threshold nuclear state, and suck the U.S. into future military entanglements.

Saudi Arabia and the U.A.E. have deepened cooperation with both Russia and China out of necessity, not preference. Should the Biden administration renew its commitment to regional defense by publicly affirming a

strategic alliance, Riyadh and Abu Dhabi will revert to more-cooperative ties with Washington, including on oil prices, at the expense of Moscow and Beijing.

It isn't too late. The U.S. can signal its renewed commitment to the region by designating a special envoy assigned to restore trust and elevate the relationship, particularly since there hasn't been a U.S. ambassador in Riyadh or Abu Dhabi for years. The U.S. can also expand Arab Gulf air defenses by meeting requests for deploying more anti-missile defense systems, stepping up intelligence cooperation, and providing early warning against incoming attacks.

All these measures are purely defensive, and none are likely to draw the U.S. into new conflicts. To the contrary, they would deter unanticipated escalation and provide billions in revenue to the U.S. economy through new defense sales. More importantly, they would help assure that a strategic part of the world remains within America's orbit, that policies of key partners remain in sync with U.S. interests, and that phone calls from the president don't go unanswered.

### **35. The West is underestimating Russia's brutality**

Washington Post, Mar. 22 (0115), Pg. A21 | Andriy Yermak

Ukraine's resistance against Russia's horrific invasion has exceeded every outside prediction. Many in the West did not understand Ukrainians' love for their freedom, for their democracy. For us, losing our country would be worse than death. And that's why we fight - because defeat is not an option.

President Volodymyr Zelenskyy delivered this message to a joint session of the U.S. Congress and to parliaments across Europe. He also pleaded for greater military assistance and the establishment of a no-fly zone for humanitarian - not military - purposes. Many countries have stepped up to provide critical military and humanitarian assistance. However, given Russian President Vladimir Putin's clear intention to ramp up the bloodshed, Ukraine still needs more.

While the United States, Poland and many other freedom-loving countries are standing firm with Ukraine, some states in Europe seem willing to accept a Ukraine partially occupied by Russian invaders - anything so they can keep buying Russian gas and oil and conduct business as usual.

But business as usual now means accepting Russians bombing maternity hospitals and theaters full of civilians taking shelter. These atrocities are part of the Russian siege on the city of Mariupol, which has left hundreds of thousands of residents without food, clean water, electricity and communications. More than 1,200 civilians have been murdered. Russia violated an agreement on a humanitarian corridor almost before it began. This is how it

wages wars. It did it in Grozny in 1999 and in Syria in 2015. Now, it is doing it in Ukraine. This is a scorched-earth campaign to wipe Ukraine - its people, its culture, its history - off the map.

Just as many erroneously predicted that Ukraine would fall within 72 hours, many failed to predict the mass atrocities the Russian troops would commit despite their long history of absolute disregard for life, and lust for blood and destruction. Only the establishment of a no-fly zone to protect humanitarian corridors will stop the carnage, just as the United States and its allies and partners did in Iraq in 1991, in Bosnia from 1993 to 1995, and in Libya in 2011. Despite these countries not belonging to NATO, the West intervened to stop the inhumane targeting of civilians and facilitate humanitarian assistance, which saved countless lives.

If the West won't do it now, then we plead for the proper weapons so we can do it ourselves. If not, the loss of people, infrastructure, businesses, and our historic landmarks and monuments will be on the West's collective conscience.

On March 11, President Biden stated that the United States "will not fight a war against Russia in Ukraine." But the truth is that Russia is waging war against the West already, not just Ukraine. Russians are fighting the values Ukraine shares with the West to make the West recognize Moscow's exclusive right to dictate to other nations how they should live. You may be reluctant to go to war, but the Russian aggressor has made the choice for you.

There is now a new world order. Those who stand with Ukraine and fight for common values will lead it, and the others will lose their political, economic and ideological influence. The United States, Poland and many other countries are forging this new paradigm, but the undisputed leader is President Zelenskyy. He has shown fortitude and resilience to NATO and the European Union, and has rallied the collective West around the need to protect democratic values.

But Ukrainian soldiers are staring down a Russian military that is just getting started. A Russian military that keeps erasing Ukrainian cities with indiscriminate cruise-missile and MLRS barrages. Ukrainians are willing to fight this war for the West as well as for ourselves - but we can't do it without the necessary military equipment.

We need the defensive lethal assistance President Zelenskyy has requested repeatedly: fighter jets, air and missile defense systems, drones, anti-armor weapons, guns, ammunition, protective equipment. If we don't get the equipment we need to succeed, Putin won't stop in Ukraine. He will go for NATO next.

Ukrainian soldiers, citizens and volunteers from around the world are valiantly holding back the Russian invaders, for now. The Ukrainian people have shown they can lead the struggle for democracy against tyranny. We just need more support. To freedom-loving people around the world we say: This is your war, too. Help us win it. If not, the harshest dictatorship since World War II will triumph over Europe.

The West cannot allow this to happen.

*--The writer is head of the presidential office of Ukraine*

# DEFENSE MORNING CLIPS

As of 0430 Hours, March 31

## OVERVIEW

U.S. intelligence officials said advisers were shielding Russian President Vladimir Putin from adverse news, and Pentagon spokesperson John Kirby cautioned that Russian negotiators might be unable to arrive at an enduring agreement if President Putin wasn't "fully informed of how poorly he's doing," the *Washington Post* wrote. In testimony before the HASC, Assistant Secretary of Defense for International Security Affairs Celeste Wallander said the Biden administration is working to supply Slovakia with replacements for their S-300 missile systems, whose current stocks would be sent to Ukraine, according to *Defense News*. Also of note, Secretary of the Army Christine Wormuth told the Future of Defense Summit that the Ukraine war has resulted in "probably the most dangerous security environment that I've been in in 25 years of working in national security," *The Hill* reported.

## TOP STORIES

### 1. U.S. says Putin being misled, as Ukraine refugee tally hits four million

*Washington Post*, Mar. 31 (0115), Pg. A1 | Michael Birnbaum, Ellen Francis, Adela Suliman and Paul Sonne

Russian President Vladimir Putin's advisers are shielding him from how badly the invasion of Ukraine is going, top U.S. officials said Wednesday, as the conflict raged on despite peace talks and the number of Ukrainians who have fled their country topped 4 million. "We have information that Putin felt misled by the Russian military, which has resulted in persistent tension between Putin and his military leadership," White House spokeswoman Kate Bedingfield told reporters. "We believe that Putin is being misinformed by his advisers about how badly the Russian military is performing and how the Russian economy is being crippled by sanctions because his senior advisers are too afraid to tell him the truth."

### 2. Will Slovakia send Ukraine S-300 air defenses? The Pentagon is working on it

*Defense News Online*, Mar. 30 (1326) | Joe Gould

A top Pentagon official told lawmakers Wednesday the Biden administration is working to accommodate NATO ally Slovakia's offer to send more S-300 surface-to-air missile systems to Ukraine, following Russia's invasion. Slovakia has agreed to provide Ukraine with the Soviet-era system to help defend against Russian airstrikes, and Assistant Secretary of Defense for International Security Affairs Celeste Wallander said at a House Armed Services Committee hearing the U.S. is working out Slovakia's request for some kind of backfill.

### 3. Army secretary says now is 'most dangerous security environment' in 25 years

*The Hill Online*, Mar. 30 (1610) | Julia Mueller

U.S. Army Secretary Christine Wormuth said Wednesday that Russia's war on Ukraine and the risk of the conflict escalating make this moment the most dangerous in more than two decades. "That's why, you know, so much

emphasis is being placed on defending every inch of NATO territory and putting a very strong deterrent posture forward,” Wormuth said.

## **DEFENSE DEPARTMENT**

### **4. Putin is attacking ‘core of transatlantic security,’ US secretary of defense says**

*CNN.com, Mar. 30 (1330) | Ellie Kaufman*

Secretary of Defense Lloyd Austin said Russian President Vladimir Putin’s invasion involves not just attacking Ukraine, but also “attacking principles at the core of transatlantic security.” “Putin’s war of choice has taken a terrible toll on civilian casualties and forced millions of innocent Ukrainians to flee their country,” he said.

### **5. The list of military ‘items’ named for Confederacy is more than 750 long**

*Military Times Online, Mar. 30 (1318) | Meghann Myers*

A congressionally-mandated commission spent the past year traveling to military installations, meeting with interested groups and sifting through thousands of recommendations as part of an effort to rename posts, ships, buildings, streets and anything else the Defense Department has named in honor of the Confederacy.

### **6. Armed services didn’t implement dozens of measures to help stop sexual assault, GAO finds**

*Stars and Stripes Online, Mar. 30 (1150) | Chad Garland*

The military failed to keep up with the mushrooming number of measures that Congress has required the armed services to implement to address sexual assault, a government watchdog revealed. As of October 2021, the Defense Department had not fully implemented 18% of the nearly 200 unique requirements imposed in legislation since 2004, the Government Accountability Office found in a report published this week.

### **7. GAO: Cyber Command lacks metrics for assessing its weapons and platforms**

*FedScoop.com, Mar. 30 (1651) | Mark Pomerleau*

Despite some progress in maturing its architecture for guiding major purchases of platforms, U.S. Cyber Command still has not developed an outcome-based metric to support assessments of programs and staffing issues for acquisitions, according to a Government Accountability Office report released Wednesday.

### **8. Algorithmic Warfare: DoD Tackling Software Development Challenges**

*National Defense Magazine Online, Mar. 30 (2029) | Yasmin Tadjdeh*

The Pentagon is overhauling its acquisition of critical software as it increasingly relies on new systems for automation and decision making, officials say. The strategy will support Pentagon priorities such as the development of joint all-domain command and control and artificial intelligence platforms.

## **COVID-19**

**9. Navy Stops COVID-19 Vaccine Separations for 4,095 Sailors Who Requested Religious Exemptions**

*U.S. Naval Institute News, Mar. 30 (2102) | Heather Mongilio*

The Navy has stopped separating sailors for refusing the COVID-19 vaccine on religious grounds after a federal judge granted class-action certification in the case of Navy SEALs suing Department of Defense officials over the vaccine mandate, defense officials told USNI News on Wednesday.

**EXECUTIVE/LEGISLATIVE**

**10. Biden will use Defense Production Act to increase supply of critical minerals**

*Washington Post, Mar. 31 (0115), Pg. A15 | Steven Mufson and Paulina Villegas*

The White House might invoke the Defense Production Act as soon as this week to spur greater domestic output of raw materials for clean energy technology products and reduce U.S. dependence on foreign supply chains. President Biden could issue a presidential determination to encourage domestic production of critical minerals used for stationary large-capacity batteries and those used in electric vehicles, according to an official familiar with the plan who spoke on the condition of anonymity because it hasn't been formally announced.

**11. Biden's Nuke Review Omits 'No First Use', Kills Naval Cruise Missile**

*DefenseOne.com, Mar. 30 (1456) | Tara Copp*

President Joe Biden has walked back from his longtime preferred policy of "no first use" of nuclear weapons, according to his administration's 2022 Nuclear Posture Review, which also seeks to shrink nuclear arsenals, starting with a new missile introduced under Donald Trump.

**12. U.S. Diplomat Pressured on Promises to Add Consulates**

*New York Times, Mar. 31 (0300), Pg. A6 | Lara Jakes and Aida Alami*

In talks this week with the top American diplomat, Arab leaders made clear they wanted a concrete sign of the Biden administration's support: the opening of U.S. consulates in both Jerusalem and the disputed territory of Western Sahara. But Secretary of State Antony J. Blinken studiously avoided any public commitment as to when those diplomatic missions might become a reality, if ever.

**13. New food insecurity stipend should help as many troops as possible, lawmakers argue**

*Military Times Online, Mar. 30 (1547) | Leo Shane III*

House leaders are pushing military leaders to make eligibility and enrollment in the Defense Department's new financial assistance program as generous as possible, saying that is needed to "address food and financial insecurity among servicemembers."

**14. 'The Navy owes the American public an apology,' Luria says during rebuke of Biden's budget proposal**

*Daily Press Online (Newport News, VA), Mar. 30 (1708) | Dave Ress*

Rep. Elaine Luria, D-Virginia Beach, was blunt: “In the face of current threats, we are gutting the Navy now to say we’re going to rebuild it in 10 or 20 years,” she said Wednesday. As vice chair of the House Armed Services Committee and a key player pulling together a bipartisan agreement last year to overrule an administration proposal to mothball seven cruisers, Luria’s reaction signaled an unfriendly Congressional reception for the fiscal 2023 spending plan.

## **EUROPE**

### **15. Ukrainian President Says Defense Is At a ‘Turning Point’**

*Associated Press, Mar. 31 (0139) | Nebi Qena and Yuras Karmanau*

The Ukrainian president said his country’s defense against the Russian invasion is at a “turning point” and again pressed the United States for more help, hours after the Kremlin’s forces reneged on a pledge to scale back some of their operations. Russian bombardment of areas around Kyiv and the northern city of Chernihiv and intensified attacks elsewhere in the country further undermined hopes for progress toward ending the brutal war. Talks between Ukraine and Russia were set to resume Friday by video, according to the head of the Ukrainian delegation, David Arakhamia.

### **16. Western Allies Cool To Plan for Ukraine Security Guarantee**

*Wall Street Journal, Mar. 31 (0200), Pg. A1 | Jared Malsin, Lindsay Wise and Bojan Pancevski*

Western officials are balking at Ukraine’s proposal for a NATO-style mutual-defense pledge that could draw their military forces into a war with Russia, even as they expressed some receptiveness to the idea of international security guarantees as part of a deal to end hostilities. President Biden has yet to comment on the proposal, and White House communications director Kate Bedingfield declined to say Wednesday whether the U.S. would be willing to serve as a security guarantor for Ukraine.

### **17. NATO Commander Increases Prediction to 550 F-35s in Europe by 2030**

*Air Force Magazine Online, Mar. 30 (1736) | Greg Hadley*

F-35s in Eastern Europe have been performing some “elegant” intelligence, surveillance, and reconnaissance missions as part of the NATO response to Russia’s invasion of Ukraine, the head of U.S. European Command told lawmakers March 30—and he expects the fighter’s presence on the continent to expand dramatically by the end of the decade, exceeding earlier predictions.

### **18. Ukraine says Russia planting mines in Black Sea as shipping perils grow**

*Reuters, Mar. 30 (1022) | Jonathan Saul*

Ukraine accused Russia on Wednesday of planting mines in the Black Sea and said some of those munitions had to be defused off Turkey and Romania as risks to vital merchant shipping in the region grow. The Black Sea is a

major shipping route for grain, oil and oil products. Its waters are shared by Bulgaria, Romania, Georgia and Turkey as well as Ukraine and Russia.

**19. Baltic Presidents: 'Forward Defense' Needed to Deter Russia**

*U.S. Naval Institute News, Mar. 30 (1357) | John Grady*

The presidents of the three Baltic nations agree the time of providing “tripwire” forces to NATO’s eastern front is over and must be replaced with a strengthened “forward defense” to deter future Russian aggression in Europe. Speaking at an online Atlantic Council forum Tuesday, Lithuanian President Gitanas Nausėda said his country continues to face a “serious threat” along the Suwalki Gap, the 80-kilometer stretch of territory between Kaliningrad, home to large Russian naval base on the Baltic, and Belarus, a key Kremlin ally in the invasion of Ukraine.

## **RUSSIA**

**20. Pentagon says Russia sends 1,000 fighters from military contractor to Donbas region**

*The Hill Online, Mar. 30 (1640) | Ellen Mitchell*

About 1,000 mercenaries from the shadowy Russian military contractor the Wagner Group are now in the Donbas region of Ukraine, pointing to a shift in Kremlin tactics in the war, Pentagon press secretary John Kirby said Wednesday.

**21. U.S. official says export curbs on Russia hit car production and tank building**

*Reuters, Mar. 30 (1752) | Karen Freifeld*

Global restrictions on exports to Russia in response to its invasion of Ukraine have shut down a car maker, halted work on tanks and cut a Russian computer maker’s access to circuits used in communications equipment, a U.S. official said on Wednesday. Export controls were never expected to have immediate effects, she said, but noted the Ukrainian government reported that Russia’s two major tank plants halted work over a lack of foreign components. Baikal Electronics, a Russian semiconductor company and computer manufacturer, was cut off from integrated circuits to support its surveillance, servers, and other domestic communications equipment, she added.

**22. Russia sanctions should increase until full Ukraine withdrawal – UK**

*Agence France-Presse, Mar. 30 (1323) | Not Attributed*

UK Prime Minister Boris Johnson on Wednesday said Western powers should tighten the economic noose around Russia until it withdraws all its soldiers from Ukraine. Johnson said also that the government in London was looking at “going up a gear” in its military aid to Ukraine.

## **INDO-PACIFIC**

**23. U.S., South Korea seen resuming major military drills as North Korea tensions rise**

*Reuters, Mar. 31 (0258) | Not Attributed*

Joint South Korean and U.S. military drills set to kick off next month could for the first time in years include more weaponry and troops, and more aggressive messaging as tensions with North Korea rise. Neither the South Korean or U.S. militaries have confirmed what this year's annual drills may entail, but a recent series of unusual displays of military might in and around the Korean peninsula suggest a more muscular show could be in the works, analysts said.

**24. North Korea not telling the whole truth about latest ICBM test, South Korean official says**

*CNN.com, Mar. 31 (0216) | Brad Lendon and Gawon Bae*

North Korea's launch last week of an intercontinental ballistic missile (ICBM), reported to be its most formidable yet, may have been a less advanced weapon than previously believed, according to a South Korean military official. The official, who spoke under the condition of anonymity, said South Korean and US analysis of the March 24 launch of what North Korea claimed was a new Hwasong-17 ICBM, was in actual fact the older and slightly smaller Hwasong-15 -- an ICBM last tested by Pyongyang in 2017.

## **CHINA**

**25. China, Russia 'more determined' to boost ties, Beijing says**

*Reuters, Mar. 30 (0832) | Not Attributed*

Moscow and Beijing are "more determined" to develop bilateral ties and boost cooperation, Chinese Foreign Minister Wang Yi said on Wednesday following a meeting in eastern China with his Russian counterpart, Sergei Lavrov, amid the Ukraine crisis. The two also condemned what they called illegal and counter-productive Western sanctions imposed on Moscow over its actions in Ukraine, the Russian foreign ministry said in a statement.

**26. China, Solomon Islands agree controversial security pact**

*Agence France-Presse, Mar. 31 (0243) | Not Attributed*

The Solomon Islands on Thursday said it had inked a wide-ranging security pact with Beijing, an agreement Western allies fear will pave the way for the first Chinese military foothold in the South Pacific. "Officials of Solomon Islands and the People's Republic of China have initialled elements of a bilateral Security Cooperation Framework between the two countries today," said a statement from the prime minister's office in Honiara.

## **MIDDLE EAST**

**27. Invasion deepens rift between U.S. and gulf nations**

*Washington Post, Mar. 31 (0115), Pg. A1 | Karen DeYoung and Missy Ryan*

Russia's invasion of Ukraine has heightened existing strains in the Biden administration's relationships in the Middle East, even as it has brought new unity to NATO and transatlantic ties. Nowhere have the bonds been as frayed as with Persian Gulf partners Saudi Arabia and the United Arab Emirates. Their reluctance to increase oil output as gas prices rise, along with what the Biden administration sees as a less-than-robust condemnation of Moscow, are among the most visible current reasons.

**28. Ukraine war has 'deadly' impact on Arab region – US top diplomat**

*Agence France-Presse, Mar. 30 (1657) | Not Attributed*

Russia's invasion of Ukraine is having a "deadly" impact and threatening security in the Arab world, particularly through spiralling wheat prices, US Secretary of State Antony Blinken said in Algiers Wednesday. Addressing journalists in Algiers, he said that while Russia's invasion of Ukraine seemed distant, it has already had "deadly consequences for citizens in the region". "It's having a direct impact on their lives right now, particularly with regard to rising food prices... especially wheat," he said.

**29. U.N., U.S. press for broader Yemen truce after unilateral moves**

*Reuters, Mar. 30 (1913) | Aziz El Yaakoubi*

United Nations and United States envoys on Wednesday welcomed unilateral truce moves by Yemen's warring sides as encouraging steps, while stressing the need for a more comprehensive ceasefire that would help alleviate a dire humanitarian crisis. The Saudi-led coalition fighting Yemen's Houthis had said it would temporarily halt military operations from Wednesday after the Iran-aligned group this week declared a three-day cessation of cross-border attacks and ground offensives in Yemen.

**30. US imposes new sanctions against Iran's ballistic missile program**

*CNN.com, Mar. 30 (1413) | Jeremy Herb*

The Biden administration on Wednesday enacted new sanctions against Iran's ballistic missile program in response to a missile attack on Erbil in Iraq earlier this month. The Treasury Department announced the new sanctions against the Islamic Revolutionary Guard Corps unit responsible for research and development of ballistic missiles, as well as Iran's Parchin Chemical Industries and an Iranian intermediary who worked on procurement of parts for propelling missiles.

## **INSTALLATIONS**

**31. Plans for Hospital Closures as Part of Military Health System Reform Forging Ahead After Pause**

*Military.com, Mar. 30 (1142) | Patricia Kime*

The Defense Health Agency is moving ahead with plans to close some 50 hospitals and clinics following a pause that began at the onset of the COVID-19 pandemic in 2020. The closures are part of the agency's broader effort under a Defense Department initiative to shift management of the military services' 51 hospitals and 424 health

clinics to the Defense Health Agency and focus the Army, Navy and Air Force's medical commands on providing health care primarily for military personnel.

## **NOTABLE COMMENTARY**

### **32. There's a Better Way to Sell American Weapons**

*Wall Street Journal Online, Mar. 30 (1828) | Grant Rumley and David Schenker*

Arms exports are a key source of revenue for Russia, typically second only to oil and gas exports, and the war in Ukraine has jeopardized that revenue stream. Russia's arms sales have slumped in recent years, and the combination of Western sanctions and Russia's poor performance in Ukraine won't help. The U.S. can use this opportunity to lure partners away from Russian arms and begin to box Russia out of strategic markets. But it must change its approach.

### **33. Russia Could Still Salvage Victory in Ukraine**

*Wall Street Journal, Mar. 31 (0200), Pg. A17 | Samir Puri*

Russia has shown that no matter how badly things go, it can find a way to impose its influence on Ukraine. In 2014 Russia annexed Crimea but the uprisings it inspired in Odessa and Kharkiv fizzled, while its separatist republics in Donetsk and Luhansk gained only incomplete footholds in these regions. Yet that was enough to destabilize Ukraine: Russia's proxies waged a limited war in the Donbas for eight years, giving Vladimir Putin his veneer-thin justification for invading this February. Mr. Putin may settle for less than he set out to achieve, recasting this botched invasion as the next chapter in regaining Russia's postimperial influence in Ukraine.

### **34. How to Meet the Threat of Hypersonic Missiles**

*Bloomberg Opinion, Mar. 30 (0800) | Editorial*

Headlines about Russia's use of "hypersonic" missiles in Ukraine have fueled fears that the U.S. is falling behind its rivals in developing such weapons. Although the U.S. needs a strategy to counter the push by Russia and China to deploy hypersonic arsenals, it should be cautious about splurging on new technologies the military doesn't actually need.

### **35. A Megaton of Waste**

*Slate.com (War Stories), Mar. 30 (1354) | Fred Kaplan*

President Joe Biden's defense budget for 2023 is gargantuan. It comes to \$813.3 billion, nearly \$60 billion higher than the budget he requested a year ago for 2022. Just a few weeks ago, Congress passed a bill adding \$25 billion to that earlier budget. Biden's new budget, which he submitted on Monday, accepts the congressional hike as a baseline and raises the pot by another \$32 billion. And yet congressional Republicans say that, given Russia's invasion of Ukraine and its threats to expand further, Biden's new budget is much too small, and they're set to throw in tens of billions of dollars more. Does this make any sense? The world may be more dangerous than it

seemed a few months, much less a few years, ago. But have its dangers grown so much in the past year that they warrant spending an extra \$60 billion—and so much in the past few weeks that they demand \$30 billion or \$40 billion more? (For anyone wondering, these increases go beyond what’s necessary for the military budget to keep up with inflation.) Finally, does Biden’s budget spend this extra money in a way that actually deals with the growing threats from Russia or anyplace else?

## TOP STORIES

### 1. U.S. says Putin being misled, as Ukraine refugee tally hits four million

Washington Post, Mar. 31 (0115), Pg. A1 | Michael Birnbaum, Ellen Francis, Adela Suliman and Paul Sonne

Russian President Vladimir Putin’s advisers are shielding him from how badly the invasion of Ukraine is going, top U.S. officials said Wednesday, as the conflict raged on despite peace talks and the number of Ukrainians who have fled their country topped 4 million.

Putin’s advisers may be afraid to deliver bad news to a leader who has been willing to take increasingly extreme measures against people who dissent within the Russian system, U.S. intelligence officials said. One worrisome consequence, Pentagon officials said, was that negotiations underway between Russia and Ukraine to end the nearly five-week-old invasion could be undermined by misinformed expectations and directives from the Russian side.

“We have information that Putin felt misled by the Russian military, which has resulted in persistent tension between Putin and his military leadership,” White House spokeswoman Kate Bedingfield told reporters. “We believe that Putin is being misinformed by his advisers about how badly the Russian military is performing and how the Russian economy is being crippled by sanctions because his senior advisers are too afraid to tell him the truth.”

Both the Ukrainian and Russian negotiators had generally positive things to say Wednesday about the most recent round of talks, which concluded a day earlier in Istanbul. But adding to the general sense that there are splits on the Russian side or, at a minimum, a lack of understanding about Putin’s desires, some top Russian officials gave contradictory statements.

Ukrainian officials said Russian bombing and shelling continued on Wednesday, although forces did appear to be withdrawing from around Kyiv and the northern city of Chernihiv, something the Russian side had signaled a day earlier. A spokesman for the Russian defense ministry said that its military was refocusing its operations on eastern Ukraine, away from the Ukrainian capital.

Top U.S. officials said that Putin’s alleged information problems are one of the weaknesses of the Russian system.

“One of the Achilles’ heels of autocracies is that we don’t have people in those systems who speak truth to power or have the ability to speak truth to power. And I think that is something that we’re seeing in Russia,” Secretary of State Antony Blinken told reporters during a visit to Algiers.

At the Pentagon on Wednesday, spokesman John Kirby called it “discomforting” that Putin “may not fully understand the degree to which his forces are failing” thus far in Ukraine.

“One outcome of that could be a less-than-faithful effort at negotiating some sort of settlement here,” Kirby said. “If he’s not fully informed of how poorly he’s doing, then how are his negotiators going to come up with an agreement that is enduring?”

The exodus of Ukrainians - nearly 10 percent of the country’s prewar population fleeing in five weeks - underscored the regional crisis that Europe is now facing. The U.N. refugee agency estimates that an additional 6.5 million Ukrainians have been displaced inside Ukraine, meaning about a quarter of the nation of 44 million people has been uprooted. An estimated 2 million of those who have fled the country are children.

U.N. High Commissioner for Refugees Filippo Grandi arrived in the western Ukrainian city of Lviv, near the Polish border, and said he would look for ways “to increase our support to people affected and displaced by this senseless war.”

The flood of Ukrainians into other countries has started to overwhelm their ability to absorb them, officials warned. More than half of the refugees have fled to Poland, while others have gone to other neighboring countries such as Romania and Moldova. About 350,000 people have gone to Russia, according to the latest U.N. refugee figures.

The International Organization for Migration has said nearly 200,000 non-Ukrainians who were living in the country have also had to escape.

Ultimately, the refugees are likely to be spread across Europe, and some countries are bracing for the impact. Estonia, a country of 1.3 million people, may take in up to 100,000 Ukrainians by the end of April, for example, a step that would balloon the country’s population by nearly 8 percent. Proportionally, that would be as if the United States were to take in 25 million refugees in the same time frame.

The European Union has enacted unprecedented measures to allow Ukrainians “temporary protection” anywhere in the 27-country bloc for up to three years.

The apparent breakdown in communication inside the Kremlin adds to the challenges of Ukrainian and other European and American policymakers who are seeking to end the conflict. Leaders of both the Ukrainian and

Russian negotiation teams offered a mixed picture of the talks on Wednesday, saying they had made progress during talks in Istanbul on Tuesday but that there were still disagreements on key issues.

From the Ukrainian perspective, the Russian team “definitely moved the negotiations forward,” Ihor Zhovkva, deputy chief of staff to President Volodymyr Zelensky, told BBC Radio on Wednesday.

“This was the first time that, instead of giving its own ultimatums and red lines, the Russian side listened to Ukrainian positions,” Zhovkva said. He also said Ukraine is still seeking security guarantees in a legally binding treaty to end the war and stop future aggression.

“They took into consideration our proposals,” he said. “Hopefully, when they come back with their proposals, we will be moving forward to the conclusion of this international treaty.”

But Zhovkva insisted that Ukraine would not trade an “inch” of its eastern territory or ever consider it Russian land.

The head of the Russian delegation offered a similar, relatively positive assessment. “Yesterday, for the first time, the Ukrainian side provided . . . its readiness to fulfill a number of important conditions for building normal and, I hope, good neighborly relations with Russia in the future,” Vladimir Medinsky said in a televised statement.

Medinsky outlined some of Ukraine’s commitments, some of which Russia said it had demanded “for years,” including Ukraine’s promise not to join NATO, renunciation of nuclear weapons, a refusal to host foreign military bases and military contingents, and to conduct military exercises only with the consent of guarantor states, including Russia.

These sets of principles, Medinsky said, gave way to a “possible future agreement.”

But Kremlin spokesman Dmitry Peskov poured cold water on hopes of a speedy resolution, saying that an agreement is not close. “So far, we cannot say anything very promising, any breakthroughs. There’s still a long, long way to go,” he told reporters.

Consultations continued Wednesday, with a lower-level team of Ukrainian officials flying to Tel Aviv to talk to Israeli policymakers. Israeli Prime Minister Naftali Bennett has offered to be a mediator in the conflict.

President Biden spoke by phone to Zelensky, getting an update on negotiations and offering an additional \$500 million in aid on top of \$16.3 billion already promised for the country, according to a White House readout of the call.

Russia's promised drawdown around the key cities of Kyiv and Chernihiv did not halt hostilities near the cities on Wednesday. The governor of the Chernihiv region, Viacheslav Chaus, said that Russian forces "spent the whole night striking" the city.

But by Wednesday evening, the Ukrainian military said that it was indeed seeing a "partial withdrawal" of Russian forces around both cities. The British Defense Ministry said that the withdrawal may be connected to Russian units "suffering heavy losses" and returning to Belarus and Russia to "reorganize and resupply."

Russia meanwhile continued a high-stakes dance around energy supplies for Europe, for which it had been demanding payments in rubles starting Thursday. Europe currently pays for its natural gas in euros, and the switch in currencies would apparently enable Russia to sidestep sanctions that have frozen much of the country's hard currency reserves.

European leaders have refused to make the switch, entertaining the possibility that Russia will cut off energy shipments altogether. In a measure of European concerns, German policymakers on Wednesday activated the "early warning" phase of an emergency plan to ensure natural gas supplies in the event of a disruption, asking people to "reduce their consumption as much as possible."

In a sign that Russia isn't yet prepared to flip off the switch, Peskov said the Kremlin would postpone the March 31 deadline to switch to ruble payments as it continued discussions with European leaders. A Russian cutoff of natural gas and oil would be profoundly painful to Europe, potentially leading to energy rationing and some factories being asked to go offline temporarily. But it would also cut off one of the last and biggest remaining flows of cash to the Kremlin.

The disruption to global energy supplies can also be felt in the United States, amid rising prices at the gasoline pump and increased costs for the components and metals needed for battery technology. Acknowledging that challenge, Biden is expected to announce a massive release of the nation's strategic oil reserves Thursday, according to two people familiar with the matter. The White House's plan is expected to call for the release of 1 million barrels per day from the nation's Strategic Petroleum Reserve on an ongoing basis for several months, said the people who spoke on the condition of anonymity to discuss a matter not yet made public. The SPR currently holds roughly 570 million barrels of crude oil.

The White House also plans to invoke the Defense Production Act to secure materials necessary for clean energy with the aim to break dependence on foreign sources of oil and natural gas.

According to an official familiar with the plan, who spoke on the condition of anonymity because it hasn't been formally announced, Biden as soon as this week may sign a presidential determination to encourage domestic production of critical minerals for both stationary large-capacity batteries and those used in electric vehicles.

## **2. Will Slovakia send Ukraine S-300 air defenses? The Pentagon is working on it**

Defense News Online, Mar. 30 (1326) | Joe Gould

WASHINGTON -- A top Pentagon official told lawmakers Wednesday the Biden administration is working to accommodate NATO ally Slovakia's offer to send more S-300 surface-to-air missile systems to Ukraine, following Russia's invasion.

Slovakia has agreed to provide Ukraine with the Soviet-era system to help defend against Russian airstrikes, and Assistant Secretary of Defense for International Security Affairs Celeste Wallander said at a House Armed Services Committee hearing the U.S. is working out Slovakia's request for some kind of backfill.

But two weeks after Slovakia's defense minister, Jaroslav Nad, made an impromptu offer to send the S-300 if Western allies provide a "proper replacement," Rep. Mike Rogers, R-Ala., asked why the deal is not done. Wallander said the effort's "ongoing," with coordination afoot with a range of countries, and she asked to provide a fuller answer in the classified session to follow.

"We are working with Slovakia to identify the requirements for meeting their needs," she said. "We are working on this, and meanwhile we have focused on getting countries that hold Soviet legacy systems, including S-300 systems — that have spare parts, missiles, different parts of that S-300 — who are willing to send that to Ukraine."

The comments came weeks after Ukrainian President Volodymyr Zelenskyy, with his nation under attack by Russian aircraft and missiles, asked the U.S. Congress to create a no-fly zone over Ukraine or alternatively to supply S-300 and other air defense systems and warplanes.

Germany, whose defense minister visited U.S. Defense Secretary Lloyd Austin at the Pentagon Wednesday, has committed to sending Patriot air-defense capabilities to Slovakia, which borders Ukraine in the east. Nad has said the Patriot, part of a new NATO battlegroup, would complement the S-300 and not replace it.

In a separate exchange, Wallander affirmed 100 Switchblade drones are part of a U.S. package being delivered to Ukraine. It's been previously reported the drones, made by AeroVironment, are part of a \$800 million aid tranche in the process of being sent this month, with a range of anti-armor weapons, firearms, body armor and ammunition. (Ukrainian forces already use Turkish Bayraktar TB2 armed drones.)

Asked if 100 of the Switchblades would be enough to destroy the Russian invading force's logistics convoys, or if more would be needed, the commander of U.S. and NATO forces in Europe, Gen. Tod Wolters, said, "I'm convinced that when we get them first set of Switchblades, there'll be an immediate request from the Ukrainians for more."

At a separate event on Wednesday, HASC's chairman, Rep. Adam Smith, D-Wash., said he favors arming Ukraine with more drones as quickly as possible in order to take out the Russian artillery raining destruction on Ukrainian cities. He credited Ukrainian attacks on Russian supply convoys for thwarting Russia's efforts to take Kyiv.

"Drones have the ability to get out there and not be seen. They're survivable, they won't get shot down and they can deliver a punch. So those are the systems that we have to get to them," Smith said.

At the hearing, lawmakers asked about sending coastal defense cruise missiles to Ukraine or executing Poland's offer to send its Soviet-era MiG-29s, as well as the U.S. defense industrial base boosting production of the Javelin anti-tank missiles and Stinger anti-tank missiles the U.S. and allies are sending to Ukraine from their own stocks.

Wallander said the Pentagon's acquisition and sustainment office is studying industrial capacity as well as what new authorities and funding the Pentagon might need. Separately, she said her office leads the response to Ukraine's requests for military aid, in cooperation with the Defense Security Cooperation Agency, Joint Staff and diplomatic community.

Washington recently approved a \$13.6 billion package to address the Russia-Ukraine crisis, much of it to cover the costs of sending troops and weapons to Eastern Europe. The Biden administration has sent Ukraine a total of \$2 billion in security assistance, including direct transfers of U.S. equipment.

A bipartisan group of senators on Tuesday requested specifics from the Biden administration on the defense aid the U.S. has provided to Ukraine since Russia's invasion. The letter, led by Sens. Joni Ernst, R-Iowa, and Kirsten Gillibrand, D-N.Y., asked White House national security adviser Jake Sullivan for a list of lethal and nonlethal aid provided to date and the status of deliveries.

Russia has warned against any shipments of advanced air defenses to Ukraine and threatened it may target Western arms supplies.

Smith asked Wolters if the U.S. needs to balance the risk of Russia spreading the war outside of Ukraine in response to stepped up aid from the U.S. and its western allies.

"My first answer is: constantly," Wolters said. "The conditions change second by second, day by day, week by week."

### **3. Army secretary says now is ‘most dangerous security environment’ in 25 years**

The Hill Online, Mar. 30 (1610) | Julia Mueller

U.S. Army Secretary Christine Wormuth said Wednesday that Russia’s war on Ukraine and the risk of the conflict escalating make this moment the most dangerous in more than two decades.

“This is probably the most dangerous security environment that I’ve been in in 25 years of working in national security,” Wormuth said at The Hill’s Future of Defense Summit.

“So there’s no shortage of things to keep you awake at night,” she added.

Steve Clemons, The Hill’s editor-at-large and the event’s moderator, asked Wormuth about remarks she made earlier this month that the Russia-Ukraine crisis will “get worse before it gets better, as it looks like the Russians are going to turn to some potentially brutal tactics.”

Clemons also cited fears that the conflict could spill over into Poland or another NATO ally in the region, which could spark a collective response by the security alliance.

“I certainly think we have to prepare and plan for those kinds of possibilities,” Wormuth said, adding the Army has long been planning for operations in a nuclear, chemical or biological warfare landscape, “as terrible as it is to contemplate that.”

“That’s why, you know, so much emphasis is being placed on defending every inch of NATO territory and putting a very strong deterrent posture forward,” Wormuth said.

Deputy Secretary of Defense Kathleen Hicks, another speaker at Wednesday’s event, underscored U.S. dedication to Article 5, the NATO agreement that an attack against one member will prompt a response by all.

“We want to make crystal clear that our commitment to Article 5 and to defending every inch of NATO territory is iron-clad,” Hicks said.

Wednesday’s event was sponsored by Raytheon Missiles & Defense.

Officials and lawmakers including Sen. Mark Warner (D-Va.) have raised the possibility that a cyberattack on critical infrastructure could also trigger Article 5, though it’s unclear what a NATO response to cyber aggression would look like.

In February, all 30 members of NATO agreed to activate its response force for the first time since its founding. The troops are now on standby.

The Biden administration has also deployed troops to Eastern Europe in a show of heightened alert and solidarity with Ukraine and regional allies.

“We’ve got 40,000 Army troops alone in Europe to make very clear to President Putin that there are lines that can’t be crossed,” Wormuth said.

## **DEFENSE DEPARTMENT**

### **4. Putin is attacking ‘core of transatlantic security,’ US secretary of defense says**

CNN.com, Mar. 30 (1330) | Ellie Kaufman

Secretary of Defense Lloyd Austin said Russian President Vladimir Putin’s invasion involves not just attacking Ukraine, but also “attacking principles at the core of transatlantic security.”

Austin called the war in Ukraine “Putin’s war of choice” during opening remarks at the Pentagon on Wednesday ahead of a meeting with German Minister of Defence Christine Lambrecht.

“Putin’s war of choice has taken a terrible toll on civilian casualties and forced millions of innocent Ukrainians to flee their country,” he said.

Austin thanked Germany for working with the US to deploy forces “to and through Germany in recent months,” as part of the US’s increased security presence in Europe. He also said he applauds Germany’s decision to spend 2% of their “economic output on defense.”

“Together, we send a clear message, and that message is any challenge to our security will meet a firm and united response. And our commitment to NATO’s collective defense is ironclad,” Austin said.

Lambrecht said the relationship between the US and Germany is “good” and “permanent” in her opening remarks.

“We met in very troubling times, and what is important for me is that the transatlantic relationship, especially the relationship between Germany and the United States, is meant to last and is sustainable, so we were able to show that we were able to unite NATO, that we were able to unite Europe against President Putin in the form of the sanctions that we decided on together, and especially through the support that we have shown our allies in the alliance,” Lambrecht said via a translator.

## **5. The list of military ‘items’ named for Confederacy is more than 750 long**

Military Times Online, Mar. 30 (1318) | Meghann Myers

A congressionally-mandated commission spent the past year traveling to military installations, meeting with interested groups and sifting through thousands of recommendations as part of an effort to rename posts, ships, buildings, streets and anything else the Defense Department has named in honor of the Confederacy.

All told, the commission is looking at 757 things, according to a database posted Wednesday.

“We will update the inventory list in collaboration with the Department of Defense, including its sub-agencies and the military branches, as we continue to identify assets within our area of consideration,” retired Adm. Michelle Howard, chair of the Naming Commission, said in a press release. “This work is vital to understand the scope and estimated cost of renaming or removing Confederate-named assets, and will enable us to provide the most accurate report possible to Congress.”

The list’s debut follows a March 17 announcement that the commission would recommend nine Army posts for renaming. They include: Fort Hood, Texas; Fort Bragg, North Carolina; Fort Rucker, Alabama; Fort Polk, Louisiana; Fort Benning and Fort Gordon in Georgia; and Fort A.P. Hill, Fort Lee and Fort Pickett in Virginia.

Along with Virginia’s Fort Pickett’s name, according to the list, there are about three dozen roads, quarters and a fire station there that are named after Confederates. At Alabama’s Fort Rucker, there are more than 50 signs that may need to be replaced.

At Fort Benning, Georgia, there are four Ranger memorials that would have to come down because they commemorate Confederate soldiers.

The cruiser Chancellorsville, named for a Confederate victory, is on the list, as is the oceanographic survey ship Maury, named after a Confederate navy officer.

Ten streets, pieces of artwork and memorials also will be up for renaming or removal at the U.S. Military Academy in West Point, New York — Confederate Gen. Robert E. Lee’s alma mater. At the Naval Academy in Annapolis, Maryland, the superintendent’s house, named for Confederate admiral Franklin Buchanan, would get a rebrand, as would the street it’s on and nearby Maury Hall, named for Matthew Fontaine Maury, who headed water defenses for the Confederate Navy.

Some of the proposed changes cover installations as far flung as Germany and Japan, including three Yokohama-based Army landing craft named after Confederate battle victories: Mechanicsville, Malvern Hill and Harpers Ferry.

The commission's final recommendations to Congress, which will include pricing estimates to change signage and other materials, is due Oct. 1.

## **6. Armed services didn't implement dozens of measures to help stop sexual assault, GAO finds**

Stars and Stripes Online, Mar. 30 (1150) | Chad Garland

The military failed to keep up with the mushrooming number of measures that Congress has required the armed services to implement to address sexual assault, a government watchdog revealed.

As of October 2021, the Defense Department had not fully implemented 18% of the nearly 200 unique requirements imposed in legislation since 2004, the Government Accountability Office found in a report published this week.

The Homeland Security Department had not fully implemented six of 36, or about 16% of those affecting the Coast Guard, the report said.

The departments' lack of full implementation of dozens of requirements could have stymied efforts to combat what Defense Secretary Lloyd Austin has called "persistent and corrosive problems" of sexual assault and harassment.

Both DOD and Homeland Security concurred with the report's 23 recommendations, which largely call on the agencies to fully implement the unmet parts of the requirements that are still active.

In separate responses, the departments said they are addressing several of the requirements.

Many of the unmet requirements involve oversight, evaluation and reporting on military efforts to prevent sexual assault, investigate crimes and protect or advocate for victims.

DOD has long faced criticism for its handling of sexual assault and harassment issues, including from the public, service members and lawmakers.

Late last year, Austin approved a series of actions recommended by an independent review commission, ordering the military departments to implement the plan swiftly and deliberately.

Months later, Congress removed prosecution of sexual assault and related crimes from the military chain.

But the latest GAO audit, ordered by Congress two years ago, looked at earlier measures intended to combat the problem. Those measures were enacted in annual defense authorization bills from 2004 to 2019.

In all, some 249 measures were passed into law, of which 181 remained in effect at the end of the 15-year period.

The greatest share of these affected the Pentagon or the military branches. While DOD satisfied most of them, “several issues limit oversight” of prevention and response programs, the GAO found.

Noncompliance with all the requirements could have left DOD, Congress and the public without the data needed to ensure adherence to efforts to support victims and prevent sexual assault, or to direct resources where they were most needed, the report suggested.

For example, investigators found that from 2005 to 2021, DOD often omitted information about retaliation complaints and investigations of those complaints.

The Army and the Air Force failed to implement measures related to annual organizational climate surveys imposed in 2014. And the Army did not ensure that commanders complied with the requirement to conduct them, auditors reported.

The following year, Congress required that the appraisals of commanding officers’ performance consider elements of command climates concerning sexual assault issues. But the GAO found that the Marine Corps and the Air Force both failed to implement those measures.

Some of the issues the GAO found date back nearly 20 years to requirements that have since expired without being fulfilled. Others involve repeated failures to satisfy Congress’ specifications.

The independent review commission that Austin established found that training was “outdated and out-of-touch,” a deficiency that might have come to light sooner had assessments been reported annually, as Congress required several years earlier, the GAO said.

## **7. GAO: Cyber Command lacks metrics for assessing its weapons and platforms**

FedScoop.com, Mar. 30 (1651) | Mark Pomerleau

Despite some progress in maturing its architecture for guiding major purchases of platforms, U.S. Cyber Command still has not developed an outcome-based metric to support assessments of programs and staffing issues for acquisitions, according to a Government Accountability Office report released Wednesday.

The Senate mandated study, titled “Defense Acquisitions: Cyber Command Needs to Develop Metrics to Assess Warfighting Capabilities,” is the second such GAO assessment of Cybercom’s Joint Cyber Warfighting Architecture (JCWA), which was created in 2019 to help guide its acquisition priorities and programs.

The architecture includes four main programs: the Persistent Cyber Training Environment for conducting training and mission rehearsal, Unified Platform – considered the centerpiece where data is ingested, analyzed and shared – Joint Cyber Command and Control to command cyber forces and the larger cyber environment, and the Joint Common Access Platform for executing offensive operations.

Cyber Command has made progress in addressing concerns GAO raised in its original November 2020 report, such as creating new offices to provide a better governance structure. But inexperience and confusion have led to a lack of metrics and outcome-based approach in conducting so-called value assessments on the architecture and its programs, according to the watchdog.

These value assessments are formal and recurring assessments of an acquisition program’s effect on mission outcomes and whether those outcomes are worth the investment.

While such assessments were beginning to be scheduled in September 2021, GAO noted they weren’t done in a timely manner.

The assessments for some programs weren’t scheduled because officials misunderstood their role in leading them, believing they weren’t responsible for requesting them, according to the report.

Furthermore, Cybercom did not develop outcome-based metrics to assess whether JCWA programs are achieving their desired operational outcomes. Failure to develop such outcome-based metrics to inform a second round of value assessments will lead to greater risk of not understanding how new capabilities benefit the cyber mission, GAO said.

In spring 2021, command officials told GAO they had established a team to develop metrics, however, they could not provide a time frame for identifying them.

Reasons for the slow progress include inexperience with the Software Acquisition Pathway – which is being used for a majority of JCWA programs – the nature of the cyber mission continually changing, and the challenge of measuring new tactics or training on mission outcomes, according to the study.

The Pentagon concurred with GAO’s recommendation to develop outcome-based metrics to support future value assessments for JCWA programs.

The GAO report comes on the heels of the Pentagon’s chief weapons testers’ annual report charging that the command and JCWA lack a test and evaluation strategy as well as the proper authority and resources to manage new tools.

#### *Workforce issues*

GAO stated that Cybercom is continuing to assess workforce needs as it matures JCWA governance, and is working to get the right contract offices and officials in place to execute oversight on these programs.

Command officials that spoke with GAO stated that offices involved in executing JCWA and other responsibilities do not have sufficient personnel.

It will take time to fill positions, according to Cybercom officials, because they have to justify and validate that the command has a need before beginning to address workforce issues in fiscal 2025, GAO said, adding that the command has a workforce study underway that will likely be completed later in fiscal 2022.

“According to Cyber Command officials, understaffing is creating an all-hands-on-deck atmosphere, with individuals attempting to address emergent issues regardless of their office’s role, rather than a more coordinated approach,” GAO found. “JCWA program officials said this atmosphere creates confusion because they are in contact with multiple Cyber Command officials, but unsure which official has the authority to advise or make decisions for their programs.”

#### *Progress made*

Because the military services are procuring systems on behalf of Cybercom, there are inherent interoperability challenges associated with getting each system on the same page and integrated, according to GAO.

The command created the JCWA Capabilities Management Office to synchronize actions across platforms and identify gaps, the JCWA Integration Office to coordinate integration across programs and delivery while developing capabilities aligned with command priorities, and a JCWA concept of operations to define how it envisions employing and integrating the various capabilities in an operational context to better articulate how to put the disparate capabilities together and employ them.

GAO said the concept of operations serves as the core reference document for leaders to understand how JCWA can support operational planning and decision making and sets goals for interoperability between the programs. This document is intended to evolve as the cyber domain changes with the current document projecting five to 10 years into the future.

GAO found that Cyber Command plans to continue revising internal JCWA roles and responsibilities with action taken to address the intent of recommendations in the previous report.

## **8. Algorithmic Warfare: DoD Tackling Software Development Challenges**

National Defense Magazine Online, Mar. 30 (2029) | Yasmin Tadjdeh

The Pentagon is overhauling its acquisition of critical software as it increasingly relies on new systems for automation and decision making, officials say.

“Delivering a more lethal force requires the ability to evolve faster and be more adaptable than our adversaries,” said Deputy Secretary of Defense Kathleen Hicks in a February memo. “The department’s adaptability increasingly relies on software, and the ability to securely and rapidly deliver resilient software capability is a competitive advantage that will define future conflicts.”

In the memo, Hicks signed off on a new modernization strategy aimed at accelerating software delivery schedules.

“Transforming software delivery times from years to minutes will require significant change to our processes, policies, workforce and technology,” she said.

The strategy will support Pentagon priorities such as the development of joint all-domain command and control and artificial intelligence platforms.

“The approach is practical — unify efforts across DoD and partner with industry-leading software institutions to produce a portfolio of best-in-class software capabilities enabled by DoD processes,” according to the document. “These capabilities must augment and integrate with other infrastructure components to include zero-trust architectures, electromagnetic spectrum capabilities and a growing inventory of connected military devices.”

Implementation will be led by a software modernization senior steering group, according to Hicks. The group has been instructed to deliver an implementation plan within 180 days of the release of the memo.

Software delivery is “not a one-and-done activity” and approaching the development of the technology in that way is harmful, the strategy said. Instead, the document lays out a modernization framework that includes a minimum set of technical enablers and processes that must be addressed.

The framework “serves as a common lexicon and organizing construct for discussing and coordinating software modernization activities,” the strategy said. “It is not intended to be all-inclusive or final but instead serves as a guardrail to focus implementation.”

Danielle Metz, the Defense Department’s deputy chief information officer for information enterprise, said the Pentagon is considering how it can transform business processes to ensure agility is baked into every step of software procurement, including contracting, acquisition, testing, evaluation and delivery.

The offices of the chief information officer, undersecretary of defense for acquisition and sustainment, and undersecretary of defense for research and engineering are teaming together — in partnership with the combatant commands and other defense agencies — to remove impediments and roadblocks to the Pentagon’s current processes to streamline, improve, update and revolutionize software acquisition, Metz said during a recent roundtable with reporters.

The department wants to “democratize the exceptionalism” that has been seen in pockets throughout the military including the Air Force’s Cloud One program office and the Navy’s Black Pearl software factory through the establishment of a department-wide software factory ecosystem, Metz said.

“We want to be able to make sure that we inculcate that into the DNA of the department,” she said.

Jason Weiss, the Pentagon’s chief software officer, said the Pentagon currently has 29 software factories across the services.

“We’re starting to see some serious groundswell of traction around that,” he said. “We’re seeing lots of lessons learned start to percolate to the top and a lot of collaboration taking place. ... We are going to be looking at and listening to those software factories to determine what policy changes [we need] to prioritize.”

However, the ecosystem won’t create burdensome requirements or bureaucratic red tape for existing software factories, Weiss said.

“I see us as reinforcing and providing more momentum and encouragement for the software factories as opposed to them having to change the way that they are executing today,” he said.

As the Pentagon looks to scale technology from the various factories, officials hope they can create efficiencies and cost savings. For example, one core capability to target could include source code management, according to Weiss.

“Do we need every single software factory to go out there and procure and manage and operate their own source code repository?” Weiss asked. That’s an example “of where we can actually start to see economies of scale in terms of both operational capacity and cost reductions for the department across these software factories.”

If the Pentagon can achieve that, that will allow the ecosystem to continue to grow while allowing the factories to operate with higher degrees of scale and precision without having to start from scratch at every point, he said.

The new strategy is a subset of the Defense Department’s Digital Modernization Strategy and replaces the Pentagon’s cloud strategy that was released in 2018.

“Given software’s role and pervasiveness across all aspects of mission capabilities and supporting infrastructure, implementation success of this strategy will rely heavily on our partnerships across the department,” Weiss said.

Beyond acquiring new technologies, the guidelines reinforce the need to attract and retain workforce talent, Weiss noted. The Pentagon must hire the right individuals to fill leadership positions and individuals need to engage in “upskilling” efforts.

“No one can be left behind in this journey” including military service members and civil servants, he said. “In this era of competition and the race for digital dominance, we simply cannot settle for incremental change anymore. The department must come together to deliver software better and operate as a 21st century force.”

## **COVID-19**

### **9. Navy Stops COVID-19 Vaccine Separations for 4,095 Sailors Who Requested Religious Exemptions**

U.S. Naval Institute News, Mar. 30 (2102) | Heather Mongilio

The Navy has stopped separating sailors for refusing the COVID-19 vaccine on religious grounds after a federal judge granted class-action certification in the case of Navy SEALs suing Department of Defense officials over the vaccine mandate, defense officials told USNI News on Wednesday.

Judge Reed O’Connor Monday granted the class action in the case of 26 Navy SEALs and other members of the special warfare community who are suing Secretary of Defense Lloyd Austin and other Department of Defense officials to prevent being separated over the refusal to get vaccinated against COVID-19 due to their religious beliefs. O’Connor also granted the preliminary injunction for the class action, extending the Navy’s inability to separate any sailors who were denied religious exemptions to the vaccine mandate.

This now means 4,095 sailors, who submitted religious exemption requests and are part of the class, cannot be separated under the preliminary injunction. Sailors who did not submit religious exemptions can still be separated, according to service memo, released Wednesday evening and obtained by USNI News.

Sailors in the class who were told they would be separated within 10 days will now stay on, according to the NAVADMIN. Similarly, those who put in voluntary resignation or transfer to Fleet Reserve requests can withdraw or amend them.

What is not clear is if the class action will be applied to the 652 sailors already separated by the Navy. The Navy has not said how many of those separated had submitted a religious exemption request and were denied.

The Navy received 3,320 requests for religious exemptions from active-duty sailors and 864 from reservists, according to the Navy's March 23 COVID-19 update, the most recent available. It has not said how many were adjudicated, but that is not yet approved one.

The sea service has approved nine religious waivers for members of the Individual Ready Reserve, on the condition that they be fully vaccinated if they are called up to the reserves or active duty, USNI News previously reported.

The 4,095 members of the class action would include both active-duty and reserve sailors, based on the Navy's numbers. As of Feb. 3, 2022, the Navy had denied 3,728 religious requests with 285 still being adjudicated, according to the class action order.

Of those who received denials, 1,222 sailors appealed, with 81 of those cases resulting in final denials, according to the court order.

While the preliminary injunction prevents the separation of the 4,095 sailors, it does not prevent the Navy from reassigning them, due to a Supreme Court ruling Friday.

One interpretation of the ruling would suggest that the Navy can move sailors to non-deployable positions based on their vaccination status, said military defense attorney Phil Cave.

However, another one suggests vaccination status should be one, not the only, factor in assignment decisions, said Mike Berry, director of military affairs and senior counsel at First Liberty, the attorneys representing the SEALs.

The Navy is likely going to interpret it so that it can reassign based on vaccination status, Berry said.

"And thus far, in this litigation and with the vaccine mandate, the Navy has continued to act as if it's above the law," Berry said. "So that wouldn't surprise me. But at the end of the day, they need to follow, they need to abide by the rulings of the court."

The Navy will consider vaccination status in assignments, according to the memo, although it did not specify if it will be the only factor.

"Navy service members who are not vaccinated, regardless of exemption status, may be temporarily or permanently reassigned based on mission requirements [in accordance with] previous guidance," according to the NAVADMIN.

In granting the class action and the subsequent preliminary injunction, O'Connor wrote that the Navy failed to show a compelling interest for requiring vaccination, and the reasoning did not outweigh the burden placed on those who had religious objections to the shot.

"Without relief, each servicemember faces the threat of discharge and the consequences that accompany it," O'Connor wrote. "Even though their personal circumstances may factually differ in small ways, the threat is the same – get the job or lose your job."

A compelling interest is necessary because of the Religious Freedom Restoration Act, which says that the government must show a compelling interest and that they are using the least restrictive means possible when issuing mandates or laws that may infringe on religious rights.

Attorneys for the Department of Defense have argued in this case, as well as a similar one in Florida involving a naval commanding officer, that the compelling interest is the health of the Navy and the ability to complete its mission with vaccination as the least restrictive means.

While the class applies to the sailors who have submitted religious exemptions, they will have the option to opt out of the class action, Berry said.

That could be what happens in the case of the commanding officer of a Norfolk-based guided missile destroyer who is currently involved in his own litigation against the Navy and Department of Defense officials over the vaccine mandate.

The destroyer commander will likely not be allowed to be part of the class action and his own suit, which means he might need to opt out if he would rather pursue his own case, Berry said.

Mat Staver, the chairperson of Liberty Counsel, the religious ministry representing the naval commander, did not return a call for comment. He previously told USNI News that he was also seeking class action in his case, although it would be for the entirety of the military, unlike the Navy SEALs case, which is limited to the Navy.

The Navy commander's preliminary injunction has been appealed to the Eleventh Circuit Court of Appeals, USNI News previously reported, with other aspects of the case making their way through the Middle District of Florida.

It is unclear how the Supreme Court opinion allowing reassignment will affect the destroyer commander, although Cave said a narrow reading of it could allow the Navy to remove him as commanding officer of the ship.

For now, the Navy SEALs case returns to the Fifth Circuit Court of Appeals, where attorneys will argue if the Navy can dismiss sailors over COVID-19 vaccine refusal.

The government can also appeal the class certification.

## **EXECUTIVE/LEGISLATIVE**

### **10. Biden will use Defense Production Act to increase supply of critical minerals**

Washington Post, Mar. 31 (0115), Pg. A15 | Steven Mufson and Paulina Villegas

The White House might invoke the Defense Production Act as soon as this week to spur greater domestic output of raw materials for clean energy technology products and reduce U.S. dependence on foreign supply chains.

President Biden could issue a presidential determination to encourage domestic production of critical minerals used for stationary large-capacity batteries and those used in electric vehicles, according to an official familiar with the plan who spoke on the condition of anonymity because it hasn't been formally announced.

The determination would cover minerals such as lithium, nickel, graphite, cobalt and manganese, allowing their producers to get assistance under the Defense Production Act's Title III fund.

But the official said the presidential determination would not include loans or direct purchases of those minerals, financial tools common under Title III. Instead, the government would fund feasibility studies and productivity modernizations. The official also said that the determination would uphold "environmental, labor and Tribal engagement standards."

Many executives of renewable energy and electric vehicle companies fear that shortages of these minerals could slow the development of their products, but many environmentalists oppose unsightly projects and fear their long-term damaging effects.

"Extraction can do more harm than good," said Bobby McEnaney, senior lands analyst with the Natural Resources Defense Council. "It's essential that these measures not be exploited in ways that run roughshod over the commonsense safeguards we all depend on to protect our families, communities and all they support."

McEnaney acknowledged that "shifting to electric vehicles is a key part of breaking our dependence on oil, confronting the climate crisis, ending our support for belligerent petro-states like Russia and helping our European allies do the same."

But he said "what's important now is that supplies of these strategic minerals be secured in ways that are reliable, durable and sustainable. Rather than just digging up or importing more, we should start with improved recovery and waste reduction throughout supply chains."

The mining industry welcomed the president's expected comments.

“While the expected order itself may be limited in scope, the signal it sends to the markets and the world is clear,” said Rich Nolan, president and chief executive of the National Mining Association. “The minerals supply chain that will drive the electrification of our transportation sector and the energy transition is not only at risk from a perilous and growing import dependence, but the approaching minerals demand wave is set to strain every sector of the economy and requires an urgency in action from government and industry never before seen.”

Nolan said new mines and mineral processing plants are needed. “What we need is policy to ensure we can produce them and build the secure, reliable supply chains we know we must have,” he said.

The Defense Production Act gives the president authority to “create, expand or preserve” manufacturing capabilities for the industrial resources, technologies and materials needed to meet national security requirements, according to the Defense Department.

Both Biden and President Donald Trump invoked the DPA to help with the pandemic response and encourage pharmaceutical companies to focus their efforts.

Biden has also been concerned about the weakness of the U.S. supply chain and China’s strong position globally, especially when it comes to solar panels. South Korean companies are leaders in the electric-vehicle battery market.

The Russian invasion of Ukraine has only highlighted the heavy reliance of European countries on Russian oil and gas suppliers, triggering a severe energy crisis. European Union members collectively rely on Russia for roughly 40 percent of their natural gas supplies and more than a quarter of their oil. Overall, Russian oil last year accounted for about 3 percent of consumption in the United States, which has blocked all imports from Russia.

## **11. Biden’s Nuke Review Omits ‘No First Use’, Kills Naval Cruise Missile**

*The president, who pledged during the campaign to use nuclear weapons only in response to a similar attack, declined to set that as U.S. policy*

DefenseOne.com, Mar. 30 (1456) | Tara Copp

President Joe Biden has walked back from his longtime preferred policy of “no first use” of nuclear weapons, according to his administration’s 2022 Nuclear Posture Review, which also seeks to shrink nuclear arsenals, starting with a new missile introduced under Donald Trump.

His long-awaited policy review says the United States “would only consider the use of nuclear weapons in extreme circumstances to defend the vital interests of the United States or its allies and partners,” according to a three-paragraph summary released by the Pentagon Tuesday.

During his campaign, candidate Biden said he continued to support the idea of a “no first use” policy: that the United States would launch a nuclear weapon only in response to a nuclear attack. But this support never became official policy for the United States, which has for decades maintained a policy of “flexible deterrence.”

“The Nuclear Posture Review language does not apply exclusively to nuclear attack but extends to extreme circumstances that would require the United States to defend allies and partners,” assistant defense secretary for international security affairs Celeste Wallander told the House Armed Services Committee Wednesday.

The summary said the administration will pursue “strategic stability, seek to avoid costly arms races, and facilitate risk reduction and arms control arrangements where possible.”

“The NPR underscores our commitment to reducing the role of nuclear weapons and reestablishing our leadership in arms control,” it said.

It added that the full unclassified version of the NPR and also of the 2022 Missile Defense Review would be “forthcoming.”

In a background briefing with reporters before the release of the proposed 2023 budget, a senior defense official confirmed that the Navy’s nuclear Sea-Launched Cruise Missile, SLCM-N, had been defunded as a result of the 2022 posture review and “direction from the President to reduce the role of nuclear weapons in our defense strategy.”

SLCM-N was announced by the Trump administration in its own 2018 Nuclear Posture Review. It was intended to provide the Navy a nuclear cruise missile, about a decade after the last of its nuclear Tomahawk cruise missiles were retired in 2013.

At the time of its retirement, the Federation of American Scientists wrote that the Navy was “finally out of the non-strategic nuclear weapons business.” The Tomahawk nuclear cruise missile “had little military value but huge political consequences when they sailed into ports of allied countries whose governments were forced to ignore violation of their own non-nuclear policies.”

## 12. U.S. Diplomat Pressured on Promises to Add Consulates

*Secretary of State Antony J. Blinken, on travels through the Middle East and North Africa over the past week, was urged by Arab leaders to make good on past promises*

New York Times, Mar. 31 (0300), Pg. A6 | Lara Jakes and Aida Alami

RABAT, Morocco -- In talks this week with the top American diplomat, Arab leaders made clear they wanted a concrete sign of the Biden administration's support: the opening of U.S. consulates in both Jerusalem and the disputed territory of Western Sahara.

But Secretary of State Antony J. Blinken studiously avoided any public commitment as to when those diplomatic missions might become a reality, if ever.

The fate of the consulates already promised by the United States -- one to serve Palestinians in Jerusalem and the other in Western Sahara -- has hung over the Biden administration since its earliest days. Both would require President Biden to decide whether to stick with dramatic foreign policy shifts brought about by the Trump administration, or reverse them and face a diplomatic and political backlash from longtime allies.

Neither were mentioned in the Biden administration's \$1 billion spending plan for construction, maintenance and security at embassies and diplomatic compounds around the world in 2023 -- casting doubt that they would be open before the end of next year. That made Mr. Blinken's silence on the subject all the more notable when it surfaced after meetings in the West Bank city of Ramallah, the seat of the Palestinian Authority, and in Rabat, Morocco's capital.

"Moroccan and U.S. relations are strong -- ongoing, and moving forward in the right direction," Foreign Minister Nasser Bourita of Morocco said on Tuesday when asked at a news conference with Mr. Blinken whether he was concerned about the stalled U.S. consulate in Dakhla, a city in Western Sahara.

Morocco claims sovereignty over the territory, which the United Nations and other states have long viewed as under dispute.

The Trump administration, in its waning days, formally recognized Morocco's sovereignty over Western Sahara and agreed to open a U.S. consulate there in late 2020 as an incentive for Morocco to normalize relations with Israel.

On Tuesday, Mr. Bourita suggested that the U.S. administration's inaction so far on the consulate was merely a matter of timing.

Two days earlier, with Mr. Blinken sitting uncomfortably at his side, Mahmoud Abbas, the president of the Palestinian Authority, raised the issue of reopening a U.S. consulate in Jerusalem as part of what he described as "the implementation of what the administration of President Biden believes in."

Mr. Biden had promised during his 2020 presidential campaign to reverse President Donald J. Trump's decision in 2018 to close the consulate in Jerusalem, where it for decades had handled visas and other documents Palestinians needed to immigrate to the United States.

Its closing amounted to a diplomatic downgrading of U.S. ties to the Palestinians and followed the Trump administration's 2017 recognition of Jerusalem as Israel's capital -- moving the U.S. embassy there, seeking to curry political favor with evangelicals and pro-Israel American Jewish voters ahead of the presidential election.

Israel opposes reopening the consulate in Jerusalem, a position that Foreign Minister Yair Lapid underscored in a news conference on Sunday with Mr. Blinken.

"We have no problem, of course, and it's not even our place to say anything if the United States wants to open an office to deal with the day-to-day problems, or consular problems, of Palestinians," Mr. Lapid said in answer to a question about Israel's opposition. "We just don't think Jerusalem is the right place for this, because Jerusalem is the capital of Israel and Israel alone."

Palestinians view East Jerusalem as the capital of a future state, and most of the world considers it occupied territory. Mr. Trump's decision to recognize Israel's sovereignty over all of the city reversed nearly seven decades of American foreign policy and was roundly criticized by some of the United States' strongest allies.

Mr. Blinken did not address the issue in the three public venues in which the fate of either the consulate in Jerusalem or the one planned for Western Sahara was raised, and was not directly asked about them. He spoke at length in Ramallah and Rabat about financial assistance, coronavirus vaccines, job training, education support and other benefits the United States was giving to each government.

U.S. officials have largely sidestepped questions about the consulates in recent days by saying there was nothing to announce at this time, as Brian McKeon, the deputy secretary of state for management at the State Department told reporters on Monday when asked if there was money in the 2023 spending plan to open them.

While the peace process between Israelis and Palestinians has gone cold, the Biden administration is trying to de-escalate tensions between Morocco and the Polisario Front, a separatist movement in the Western Sahara.

The two sides have clashed for years over the territory, and Mr. Trump's recognition of Morocco's sovereignty inflamed the Polisario and its main ally, neighboring Algeria. While some countries consider Western Sahara as independent, others support U.N. efforts for a negotiated solution.

This month, Spain endorsed a Moroccan plan to govern Western Sahara but give local officials there some level of autonomy. Algeria responded by recalling its ambassador to Spain.

The shift was notable because Spain and Morocco had feuded over the fate of Western Sahara, a former Spanish colony that was later occupied by Moroccan forces, leading to a 16-year war with the Polisario movement. A 1991 cease-fire brokered by the United Nations was ruptured in late 2020, but the hostilities have cooled in recent weeks.

At the Tuesday news conference with the Moroccan foreign minister, Mr. Blinken also called the Moroccan plan “serious, credible, and realistic,” echoing Spain’s endorsement. But Mr. Blinken also appeared to hedge, calling the plan “one potential approach to meet the aspirations of the people of Western Sahara.”

At the same time, the Biden administration seems determined to slow-walk the consulate opening in Western Sahara and appear to remain neutral in the dispute.

Picking sides could also risk geopolitical fallout for another conflict -- the Russian invasion of Ukraine -- and Mr. Blinken has been trying hard this week to enlist Middle Eastern and North African nations in hampering Moscow, whether by military or economic means.

Algeria has offered to send gas to European markets that have been dependent on Russian energy, and Mr. Blinken must walk a fine line to support that offer without becoming snarled in Algeria’s feud with Morocco.

American officials have been warily watching to see whether Algeria will shut off its gas exports to Europe via a pipeline that goes straight to Spain as a result of the new dispute over Western Sahara -- an issue that Mr. Blinken was expected to raise on Wednesday during a brief visit to Algeria.

But he must also take care to not alienate Morocco, an ally with which the United States has close counterterrorism cooperation.

“The Biden administration’s last concern is to implement Trump’s empty promises,” said Sion Assidon, a prominent leftist figure and human rights activist in Morocco who often advocates for the Palestinian cause.

*--Lara Jakes reported from Rabat, Morocco and Aida Alami from Paris*

### **13. New food insecurity stipend should help as many troops as possible, lawmakers argue**

Military Times Online, Mar. 30 (1547) | Leo Shane III

House leaders are pushing military leaders to make eligibility and enrollment in the Defense Department’s new financial assistance program as generous as possible, saying that is needed to “address food and financial insecurity among servicemembers.”

In a letter to Defense Secretary Lloyd Austin, the group urged military leaders to move quickly on implementing the new Basic Needs Allowance and to automatically grant the financial help to all eligible families unless they specifically opt out of the program.

They also pushed for the department to exclude housing stipends in their calculations for program eligibility in order to benefit “as many service members as possible.”

On Monday, military leaders unveiled their budget plans for fiscal 2023, including the new Basic Needs Allowance authorized by Congress last year. Comptroller Michael McCord hailed the program as a way to help “the most vulnerable portion of our force to address economic insecurity,” but he offered few specifics on how the new benefit will be distributed.

Under guidelines approved by Congress last year, the new financial aid is targeted at military families whose household incomes are less than 130% of the federal poverty guidelines.

For a family of three, that equates to about \$30,000 this year. For a family of four, it’s about \$36,000.

The Congressional Budget Office has estimated that about 10,000 service members — mostly junior enlisted troops — would qualify for the new benefit, receiving an average monthly payout of about \$400.

However, the exact total depends on how DoD officials construct program rules and regulations.

Military planners in coming months are expected to decide which military benefits and compensation should be included in troops’ income totals. Things like combat pay, re-enlistment bonuses, food stipends and housing benefits could all be added to military basic pay to push troops’ total income into a higher level, making them ineligible for the new benefit.

The lawmakers who wrote to Austin this week — a group that includes House Armed Services Committee Chairman Adam Smith, D-Wash.; the committee’s personnel chairwoman, Jackie Speier, D-Calif.; and House Agriculture Committee Chairman David Scott, D-Ga. — urged officials “to exempt as much of the [housing stipends] as possible” in their rules.

The group also pushed for military planners to certify eligibility for the allowance once a year in order to simplify the application process for families and commanders, and to make the program an “opt-out” benefit rather than one troops have to apply for, in an effort to get the money to as many individuals as possible.

“We look forward to working with the department to ensure that no one who serves our country has to worry about putting food on their table,” the group wrote.

Service officials are expected to release additional details about the new Basic Needs Allowance in the coming months. The fiscal 2023 budget isn't expected to be finalized until this fall, and the new benefit wouldn't begin to be distributed until sometime in calendar 2023 at the earliest.

**14. 'The Navy owes the American public an apology,' Luria says during rebuke of Biden's budget proposal**  
Daily Press Online (Newport News, VA), Mar. 30 (1708) | Dave Ress

It took some deep breaths for one former sailor in Congress to set aside some salty words and politely say what she thought of President Biden's proposed Navy budget.

Rep. Elaine Luria, D-Virginia Beach, was blunt: "In the face of current threats, we are gutting the Navy now to say we're going to rebuild it in 10 or 20 years," she said Wednesday.

As vice chair of the House Armed Services Committee and a key player pulling together a bipartisan agreement last year to overrule an administration proposal to mothball seven cruisers, Luria's reaction signaled an unfriendly Congressional reception for the fiscal 2023 spending plan.

The administration budget proposal calls for decommissioning 24 ships, a move the Navy says will save \$3.6 billion. On the mothball list are the remaining nine Freedom-class littoral combat ships, the oldest of which has been in service for just a decade, as well as five cruisers, four landing ship docks — a type like the recently-deployed Little Creek based USS Gunston Hall — as well as two Los Angeles-class submarines and four support vessels.

Most of those ships are still well within their promised service life.

"The Navy owes the American public an apology," Luria said. "For two decades, they've been building failed classes of ships ... they like the highest tech, biggest and newest thing."

The Freedom-class ships, which have had major problems with their complicated drive trains, are just one example, she said.

Decommissioning so many ships, with a call to fund only nine new vessels — including one, Luria said, that's already been authorized — will put the fleet even farther from the goal of a 355-ship Navy, she said.

Luria, who served in the Navy from 1997 to 2017, said the two Virginia-class submarines and two new destroyers the administration proposal calls for aren't enough. She said the Navy needs to be building three of both a year.

She said the Navy also has its eye on the wrong kind of ships in the future — emphasizing the new and shiny instead of the flexible and easy to build.

That's the call to postpone funding the new Light Amphibious Warship from 2023 to 2025, followed by a pause for several years before the next in the class comes on. That kind of stop and go work is a major problem, both for new ship construction and ship repair, she has repeatedly said.

And the ship fits exactly with the latest Marine Corps and Navy amphibious strategy emphasis on small, dispersed unit operations, she said.

Luria said she's already hearing from Republican members of the House committee who share her concerns, and said she expects the committee will be even tougher on the fiscal 2023 proposal than it was with the just enacted 2022 spending plan.

Rep. Rob Wittman, R-Westmoreland, ranking member of the House seapower subcommittee, has said the budget proposal doesn't reflect the needs for ships, aircraft, vehicles and equipment that the military really needs.

"I am particularly disappointed that even as we aim to grow our naval and projection forces, this budget continues the divest to invest strategy that will shrink our fleet once again," he said.

While president can propose a budget, it is up to Congress to appropriate the money. The agreement the House and Senate just reached for fiscal 2022 boosted spending by nearly \$22.4 billion over Biden's proposed budget, including \$4 billion more for shipbuilding than the Biden Administration requested.

### **15. Ukrainian President Says Defense Is At a 'Turning Point'**

Associated Press, Mar. 31 (0139) | Nebi Qena and Yuras Karmanau

KYIV, Ukraine -- The Ukrainian president said his country's defense against the Russian invasion is at a "turning point" and again pressed the United States for more help, hours after the Kremlin's forces reneged on a pledge to scale back some of their operations.

Russian bombardment of areas around Kyiv and the northern city of Chernihiv and intensified attacks elsewhere in the country further undermined hopes for progress toward ending the brutal war. Talks between Ukraine and Russia were set to resume Friday by video, according to the head of the Ukrainian delegation, David Arakhamia.

A delegation of Ukrainian lawmakers visited Washington on Wednesday to push for more U.S. assistance, saying their nation needs more military equipment, more financial help and tougher sanctions against Russia.

“We need to kick Russian soldiers off our land, and for that we need all, all possible weapons,” Ukrainian parliament member Anastasia Radina said at a news conference at the Ukrainian Embassy.

Ukrainian President Volodymyr Zelenskyy made the case directly to U.S. President Joe Biden.

“If we really are fighting for freedom and in defense of democracy together, then we have a right to demand help in this difficult turning point. Tanks, aircraft, artillery systems. Freedom should be armed no worse than tyranny,” Zelenskyy said in his nightly video address to the nation, which he delivered standing in the dark outside the dimly lit presidential offices in Kyiv. He thanked the U.S. for an additional \$500 million in aid that was announced Wednesday.

There seemed little faith that Russia and Ukraine will resolve the conflict soon, particularly after the Russian military’s about-face and its most recent attacks.

Russia said Tuesday that it would de-escalate operations near Kyiv and Chernihiv to “increase mutual trust and create conditions for further negotiations.” Zelenskyy and the West were skeptical. Soon after, Ukrainian officials reported that Russian shelling was hitting homes, stores, libraries and other civilian sites in or near those areas.

Russian troops also stepped up their attacks on the Donbas region in the east and around the city of Izyum, which lies on a key route to the Donbas, after redeploying units from other areas, the Ukrainian side said.

Olexander Lomako, secretary of the Chernihiv city council, said the Russian announcement turned out to be “a complete lie.”

“At night they didn’t decrease, but vice versa increased the intensity of military action,” Lomako said.

A top British intelligence official said Thursday that demoralized Russian soldiers in Ukraine were refusing to carry out orders and sabotaging their own equipment and had accidentally shot down their own aircraft.

In a speech in the Australian capital Canberra, Jeremy Fleming, who heads the GCHQ electronic spy agency, said President Vladimir Putin had apparently “massively misjudged” the invasion, he said. Although Putin’s advisers appeared to be too afraid to tell the truth, the “extent of these misjudgments must be crystal clear to the regime,” he said.

U.S. intelligence officials have given similar assessments that Putin is being misinformed by his advisers about the poor performance of his military in Ukraine because they are too afraid to tell him the truth.

Five weeks into the invasion that has left thousands dead on both sides, the number of Ukrainians fleeing the country topped a staggering 4 million, half of them children, according to the United Nations.

“I do not know if we can still believe the Russians,” Nikolay Nazarov, a refugee from Ukraine, said as he pushed his father’s wheelchair at a border crossing into Poland. “I think more escalation will occur in eastern Ukraine. That is why we cannot go back to Kharkiv.”

Zelenskyy said the continuing negotiations with Russia were only “words without specifics.” He said Ukraine was preparing for concentrated new strikes on the Donbas.

Zelenskyy also said he had recalled Ukraine’s ambassadors to Georgia and Morocco, suggesting they had not done enough to persuade those countries to support Ukraine and punish Russia for the invasion.

“With all due respect, if there won’t be weapons, won’t be sanctions, won’t be restrictions for Russian business, then please look for other work,” he said.

During talks Tuesday in Istanbul, the faint outlines of a possible peace agreement seemed to emerge when the Ukrainian delegation offered a framework under which the country would declare itself neutral — dropping its bid to join NATO, as Moscow has long demanded — in return for security guarantees from a group of other nations.

Top Russian officials responded positively, with Foreign Minister Sergey Lavrov saying Wednesday that Ukraine’s willingness to accept neutrality and look outside NATO for security represents “significant progress,” according to Russian news agencies.

But those statements were followed by attacks.

Oleksandr Pavliuk, head of the Kyiv region military administration, said Russian shells targeted residential areas and civilian infrastructure in the Bucha, Brovary and Vyshhorod regions around the capital.

Russian Defense Ministry spokesman Maj. Gen. Igor Konashenkov said the military also targeted fuel depots in two towns in central Ukraine with air-launched long-range cruise missiles. Russian forces hit a Ukrainian special forces headquarters in the southern Mykolaiv region, he said, and two ammunition depots in the Donetsk region, in the Donbas.

In southern Ukraine, a Russian missile destroyed a fuel depot in Dnipro, the country’s fourth-largest city, regional officials said.

The U.S. said Russia had begun to reposition less than 20% of its troops that had been arrayed around Kyiv. Pentagon press secretary John Kirby said troops from there and some other zones began moving mostly to the north, and some went into neighboring Belarus. Kirby said it appeared Russia planned to resupply them and send them back into Ukraine, but it is not clear where.

The Ukrainian military said some Russian airborne units were believed to have withdrawn into Belarus.

In northern Ukraine, Russian forces took no offensive actions Wednesday, focusing on reconnaissance and logistics, the general staff said in a statement. But Russia is expected to increase attacks soon to protect its own troops as they are repositioned, it said.

The Russians also are expected to try to blockade Chernihiv.

Top Russian military officials say their main goal now is the “liberation” of the Donbas, the predominantly Russian-speaking industrial heartland where Moscow-backed separatists have been battling Ukrainian forces since 2014.

Some analysts have suggested that the focus on the Donbas and the pledge to de-escalate may merely be an effort to put a positive spin on reality: Moscow’s ground forces have been thwarted and have taken heavy losses in their bid to seize the capital and other cities.

In other developments:

- The U.N. is looking into allegations some residents of the besieged and shattered southern city of Mariupol were forcibly taken to areas controlled by Russian forces or to Russia itself.
- Germany said Russia had reassured it European companies won’t have to pay for Russian gas in rubles, a prospect that raised fears Russia could cut off supplies. Also, Poland said it would end Russian oil imports by the year’s end.

## **16. Western Allies Cool To Plan for Ukraine Security Guarantee**

Wall Street Journal, Mar. 31 (0200), Pg. A1 | Jared Malsin, Lindsay Wise and Bojan Pancevski

Western officials are balking at Ukraine’s proposal for a NATO-style mutual-defense pledge that could draw their military forces into a war with Russia, even as they expressed some receptiveness to the idea of international security guarantees as part of a deal to end hostilities.

At peace talks in Istanbul on Tuesday, Ukrainian negotiators handed Russia a detailed proposal of a neutral status for Ukraine with its security guaranteed by the U.S., U.K., France, Turkey, Germany, Canada, Poland and Israel. The Ukrainian proposal would ask countries to respond to a violation of its sovereignty the way members of North Atlantic Treaty Organization would act under Article 5, the alliance’s mutual-defense promise.

“That’s what we call Ukrainian NATO,” said Ukrainian negotiator David Arakhamia, the majority leader in the country’s parliament, in an interview in Istanbul. “So we get neutrality but our idea is to get fortified neutrality status.”

President Biden has yet to comment on the proposal, and White House communications director Kate Bedingfield declined to say Wednesday whether the U.S. would be willing to serve as a security guarantor for Ukraine.

“We are in constant discussion with Ukrainians about ways that we can help ensure that they are sovereign and secure,” she said. “But there is nothing specific about security guarantees that I can speak to at this time.”

A number of Western leaders have expressed support for some form of security guarantees for Ukraine, yet none have articulated what those would look like. Their reluctance to embrace a key plank of Ukraine’s blueprint -- the notion of a NATO collective defense mechanism -- shows how far apart all sides remain in finding a negotiated end to the war.

U.S. lawmakers also appeared skeptical of the proposal. Sen. Dick Durbin of Illinois, the chamber’s No. 2 Democrat and co-chairman of Ukraine Caucus, said he thought the proposal was a “little premature,” adding that he doesn’t trust Russia.

Jim Risch of Idaho, the top Republican on the Senate Foreign Relations Committee, said such a proposal might be possible, but would be a long way off. “You know, we already did that,” said Mr. Risch, referring to the 1994 Budapest Memorandum, when Ukraine gave up nuclear weapons in exchange for security guarantees. “How’s that working?”

U.K. Deputy Prime Minister Dominic Raab also expressed skepticism over a proposal to provide a security guarantee to a non-NATO member. “We’ll consider anything [Ukrainian President Volodymyr] Zelensky says he needs very carefully,” Mr. Raab said Wednesday on BBC radio. “But we’re not going to, I think, replicate unilaterally the NATO commitments that apply to NATO members.”

Other countries named as possible guarantors of Ukraine’s security expressed interest in the idea, but avoided committing to the proposal.

Chancellor Olaf Scholz of Germany told Mr. Zelensky that Berlin was “broadly willing” to act as a security guarantor for Ukraine as part of a peace deal, a spokesman said Wednesday. It is however too early to discuss such commitments, government spokesman Steffen Hebestreit said.

A senior German government official later clarified that the discussion was in an early stage, and it included a proposal for a group of countries including Russia to guarantee Ukraine’s security as part of a peace agreement under which Kyiv would declare independence of any military alliances, including NATO.

France is open to supporting a form of neutrality for Ukraine with its security guaranteed by several countries, according to a person familiar with the matter.

The person cautioned, however, that France is unwilling to sign up for a security guarantee that includes a mechanism similar to NATO's Article 5. Much will also depend on the details of Ukraine's neutrality, including the status of its national army, the person said.

Russia likely wouldn't agree to any arrangement that requires France and other permanent members of the U.N. Security Council to guarantee Ukraine's security, the person said.

Moscow's support would be required for any agreement to end the war, and it is unclear that the Kremlin would accept Kyiv's proposal. "No one said that the sides have made headway," Kremlin spokesman Dmitry Peskov said of the talks in Istanbul, declining to discuss specific proposals. "We can't point to anything particularly promising."

The Ukrainian government, however, seems set on a proposal that would provide strong security guarantees from Western countries.

"The activation mechanism is even stronger than NATO. In NATO if something happens you have to do the consultations first," said Mr. Arakhamia, the Ukrainian negotiator. "There is no mention of how long it might take. Considering how fast things are going on, we put 72 hours max. So within 72 hours, all the guarantors have to figure out what's going on, if it's aggression or special operation or war, they have to provide military assistance or armies."

Crimea and Donbas -- two Ukrainian regions Russia occupies -- wouldn't be a part of the guarantees, said Mr. Arakhamia. Those territories would be excluded until their status is settled in separate negotiations, he said.

Ukrainian officials proposed on Tuesday that the status of Donbas would be negotiated by the presidents of Ukraine and Russia, while Crimea would be subject to a 15-year period of negotiations on a separate track.

Ukraine first proposed Turkey, a NATO member, as a guarantor of its security on March 17. Turkey has good relations with Ukraine and has been playing a mediating role in the Russia-Ukraine crisis, hosting two rounds of peace talks.

The Turkish government hasn't endorsed or opposed the proposal but has offered broad support for the peace negotiations.

While Turkey has strongly condemned the Russian invasion, it has also chosen not to impose sanctions on Russia, opting to preserve its relationship with Moscow in order to act as a mediator.

Mr. Arakhamia said Israel, a non-NATO member, could also be a party to the proposed security guarantees.

“At this point, Israel is not in the position to provide a security guarantee to Ukraine,” a senior Israeli official said. “We will be willing to assist in reaching an agreement through trust-building measures and other efforts.”

## **17. NATO Commander Increases Prediction to 550 F-35s in Europe by 2030**

Air Force Magazine Online, Mar. 30 (1736) | Greg Hadley

F-35s in Eastern Europe have been performing some “elegant” intelligence, surveillance, and reconnaissance missions as part of the NATO response to Russia’s invasion of Ukraine, the head of U.S. European Command told lawmakers March 30 and he expects the fighter’s presence on the continent to expand dramatically by the end of the decade, exceeding earlier predictions.

Air Force Gen. Tod D. Wolters, who also serves as NATO’s Supreme Allied Commander in Europe, added to members of the House Armed Services Committee that getting more F-35s delivered to Europe, either as part of the U.S. Air Force or for other nations, is “critical.”

“They’ll deliver a tremendous improvement in our strategic ability, in indications and warnings, command and control, and mission command, as already demonstrated by U.S. F-35s that are contributing in the assure and deter mission at this time,” Wolters said.

In mid-February, just before the start of Russia’s attack on Ukraine, the U.S. deployed F-35s from Hill Air Force Base, Utah, to Spangdahlem Air Base, Germany, to enhance NATO’s defense posture. Those jets were later sent to Romania and Poland to bolster the eastern flank, arriving on Feb. 24.

At the time, U.S. Air Forces in Europe said six of the fifth-generation fighters were being deployed. More than a month later, Wolters told Congress that four are still being used in the region, to great effect.

“The U.S. F-35As, the four that we have right now, are in use, and they’ve been very effective doing some elegant ISR activities. And it just reveals to us how much greater capability we’re going to have once we get our full fleet on board,” Wolters said.

USAF has deployed more F-15s and F-16s to Eastern Europe during this crisis, but the performance of the F-35s is being closely watched by many—Sen. Jack Reed (D-R.I.), chair of the Senate Armed Services Committee, has said their success could go a long way in building his confidence in the program.

Wolters declined more discussion on the importance of the F-35's capabilities in Europe to a classified setting on March 30, but it appears more and more likely that the fighter will play a key role in the continent's future defense.

In June 2021, Wolters predicted during an Atlantic Council discussion that by 2030, there could be 450 F-35s in Europe. Since then, Finland and Germany have said they will buy the fighter as well, joining the U.S., Belgium, Denmark, Italy, the Netherlands, Norway, Poland, the U.K., and Switzerland as European nations and partners who have either started fielding the F-35 or have plans to do so.

The response to Russian aggression has helped to drive that demand, and Wolters told the HASC that he was upping his prediction.

“The disposition of the NATO nations with respect to the F-35 is dramatically growing,” Wolters said. “And our hope is, we have 100 on the continent right now, and we anticipate in 2030, growing to 550, and that's a good fleet.”

### *MiG-29s Raised Again*

While Wolters touted the capabilities that the F-35 has been able to offer during the recent crisis, he sounded less optimistic when it came to an issue that several representatives raised—the transfer of Soviet MiG-29s from Poland to Ukraine, using the U.S. as an intermediary.

The idea, put forward by Poland several weeks ago, was quickly shot down by the Pentagon, which said it didn't consider the proposal “tenable.”

Since then, however, a bipartisan group of lawmakers has pushed for the transfer, which Ukraine has asked for.

The issue was raised once more by both Republicans and Democrats on the congressional panel, and Wolters reiterated that his best military advice has been for the U.S. not to send any jets to Ukraine.

“It goes back to the military mission effectiveness weighed against strategic miscalculation, to make sure you take into account the protection of the citizens of Ukraine, as well as the citizens on the periphery. So all those variables have to come into play,” Wolters said.

### **18. Ukraine says Russia planting mines in Black Sea as shipping perils grow**

Reuters, Mar. 30 (1022) | Jonathan Saul

LONDON -- Ukraine accused Russia on Wednesday of planting mines in the Black Sea and said some of those munitions had to be defused off Turkey and Romania as risks to vital merchant shipping in the region grow.

The Black Sea is a major shipping route for grain, oil and oil products. Its waters are shared by Bulgaria, Romania, Georgia and Turkey as well as Ukraine and Russia.

Russia's military took control of waterways when it invaded Ukraine on Feb. 24, in what Moscow calls a "special operation".

In recent days Turkish and Romanian military diving teams have been involved in defusing stray mines around their waters.

Ukraine's foreign ministry said Russia was using naval mines as "uncontrolled drifting ammunition".

"It was these drifting mines that were found March 26-28, 2022 off the coasts of Turkey and Romania," it said in a statement.

The ministry said "the deliberate use by Russia of drifting sea mines turns them into a de facto weapon of indiscriminate action, which threatens, first of all, civil navigation and human life at sea in the whole waters not only of the Black and Azov Seas, but also of the Kerch and Black Sea Straits".

Russian officials did not immediately respond to requests for comment.

## ACCUSATIONS

Earlier this month Russia's main intelligence agency accused Ukraine of laying mines to protect ports and said several hundred of the explosives had broken from cables and drifted away. Kyiv dismissed that account as disinformation.

A Ukrainian foreign ministry official told Reuters separately that the sea mines were of the "R-421-75" type, which were neither registered with or used by Ukraine's navy currently.

The official said mines of this type - some 372 units - had been previously stored at Ukraine's 174th armament base in Sevastopol and were seized by Russia's military during its annexation of Crimea in 2014 - a move not recognised internationally.

"Russia, using sea mines seized in 2014, deliberately provokes and discredits Ukraine to international partners," Ukraine's foreign ministry added separately.

London's marine insurance market has widened the area of waters it considers high risk in the region and insurance costs have soared.

Five merchant vessels have been hit by projectiles - with one of them sunk - off Ukraine's coast with two seafarers killed, shipping officials say.

"Vessels navigating in the Black Sea should maintain lookouts for mines and pay careful attention to local navigation warnings," ship insurer London P&I Club said in an advisory note on Tuesday.

### **19. Baltic Presidents: 'Forward Defense' Needed to Deter Russia**

U.S. Naval Institute News, Mar. 30 (1357) | John Grady

The presidents of the three Baltic nations agree the time of providing "tripwire" forces to NATO's eastern front is over and must be replaced with a strengthened "forward defense" to deter future Russian aggression in Europe.

Speaking at an online Atlantic Council forum Tuesday, Lithuanian President Gitanas Nausėda said his country continues to face a "serious threat" along the Suwalki Gap, the 80-kilometer stretch of territory between Kaliningrad, home to large Russian naval base on the Baltic, and Belarus, a key Kremlin ally in the invasion of Ukraine.

It has only been 11 years since the last Russian soldier left Lithuania while still stationing forces nearby, Nausėda said. Kremlin attacks on neighboring states like Moldova, Georgia and in Ukraine's Crimea and eastern provinces have not stopped but accelerated with the unprovoked attack on Kyiv last month.

Nausėda, along with Alar Karis, president of Estonia, and Egils Levits, president of Latvia, applauded the alliance's decision last week to step up military assistance to Ukraine and send more alliance battle groups to member nations from the Baltic to the Black Sea at the same time.

The movement of more forces eastward sends "a very strong signal to Moscow we're ready to defend the territory of NATO," Levits said. The additional battle groups brings to more than 9,000 NATO soldiers to Latvia. These forces have come primarily from the United States, United Kingdom and Germany.

All three wanted a permanent beefed-up presence for eastern Europe on the NATO agenda for June's meeting in Madrid. Having a long history of Russian occupation following World War II, the three were admitted in 2004 to the alliance.

Karis said, "there was no alternative" then to joining for mutual security, and "no alternative now."

Madrid will be "where concrete decisions will be made" on permanent forward stationing is made, Levits added.

Nausėda said increased NATO presence to the Baltic states also means moving in advanced systems and other equipment, especially air and missile defense weapons to the Baltic states as well as more air and ground forces.

For Lithuania's part, it has already increased its spending on security and has begun improving infrastructure to better facilitate the movement of NATO forces and equipment to his nation and stationing there.

With the Russian invasion stalemated in Ukraine, the possibility of Moscow using chemical or biological weapons or tactical nuclear weapons to get its way "would change the situation completely" of NATO's response, Levits said.

Nauseda added, "in recent weeks, Russia has crossed so many red lines" by invading Ukraine, "NATO should be very decisive in its response" if weapons of mass destruction were employed. Without spelling out an exact alliance response, Nauseda said military options should be on the table in that case.

Karis said the Kremlin's use of weapons of mass destruction in Ukraine could drive long-time alliance partners Finland and Sweden to seek NATO membership.

On imposing a "no-fly zone" over all or parts of Ukraine, the presidents said that decision would have to rest with nations capable of carrying out such a mission. Options like a no-fly zone "must be credible," Nauseda said, and should be aimed at not provoking a Russian escalation.

He suggested no-fly zones around nuclear plants and facilities as a possibility.

As to how the conflict will end, Karis said it cannot end at any price. "I would be very cautious" about negotiations with the Kremlin now, he said.

Levits added, "the territory of Ukraine [must be] restored," its security stable and the "the Russians should go back."

The Lithuanian president saw the American and European Union sanctions working in not only hitting Russian oligarchs but reaching its middle class. The pressure, he said, is being felt in Moscow's financial sector and its exporting of strategic materials and energy, its prime source of foreign revenue. He wanted the United States and Europe to look at means to close any loopholes that Moscow is using to get around the sanctions, "namely China."

The three said their nations are moving rapidly to reduce their energy dependence on Russian supplies. To fill the gap, the three presidents are looking to the United States for liquified natural gas shipments to meet their future needs.

But "the worse thing that can happen is a frozen conflict" in Ukraine, Karis said, where refugees are left homeless for years.

“We are seeing millions and millions of refugees” fleeing to Moldova, Poland and other eastern European nations, he said. “They have to be integrated” into the societies where they have sought refuge. He added the impact on those nations will be felt in their school and medical systems and the need to provide humanitarian assistance.

## **RUSSIA**

### **20. Pentagon says Russia sends 1,000 fighters from military contractor to Donbas region**

The Hill Online, Mar. 30 (1640) | Ellen Mitchell

About 1,000 mercenaries from the shadowy Russian military contractor the Wagner Group are now in the Donbas region of Ukraine, pointing to a shift in Kremlin tactics in the war, Pentagon press secretary John Kirby said Wednesday.

In the past few days, U.S. intelligence has seen Russia become “much more active” in the Donbas region, including more airstrikes in the area.

“We think that the Wagner group now has about 1,000 people dedicated to the Donbas,” Kirby told reporters.

Wagner contractors have fought in the Donbas area over the past eight years since Russia aided a separatist movement in the region in 2014.

“This is an area where the Wagner group is experienced, so it’s not a surprise that they would try to try to look at using private military contractors there,” Kirby explained.

“We think it’s a reflection of the very tough fighting that continues to go on there, in the Donbas, and Mr. Putin’s desire to reinforce his efforts there.

In addition, over the last 24 hours, the U.S. has seen a little less than 20 percent of the troops Russia had arrayed against Kyiv begin to reposition elsewhere in the country and in Belarus.

“It’s our assessment that their intention is to reposition these units so that they can refit them for future operations,” Kirby said.

U.S. officials last week revealed that Russia had appeared to shift its plans for an invasion of the Ukrainian capital of Kyiv to an offensive focused in the Donbas. The move comes after the Kremlin has struggled to take the city and other major metropolitan areas since it invaded on Feb. 24 and was met with fierce Ukrainian forces armed with Western-provided weapons.

“It could actually be that they are reassessing now their strategic goals because they clearly are not moving on Kyiv anymore,” a senior U.S. defense official told reporters on Monday. “We’re not exactly sure what’s behind this reprioritization.”

## **21. U.S. official says export curbs on Russia hit car production and tank building**

Reuters, Mar. 30 (1752) | Karen Freifeld

Global restrictions on exports to Russia in response to its invasion of Ukraine have shut down a car maker, halted work on tanks and cut a Russian computer maker’s access to circuits used in communications equipment, a U.S. official said on Wednesday.

“Thirty-three countries have joined together with one export controls strategy,” said Thea Kendler, assistant secretary for export administration at the Commerce Department.

“Necessity brought together this unprecedented collaboration on export controls and other measures that are having a meaningful impact on Putin’s war.”

While only about 5% of Russia’s imports came from the United States, Kendler said, adding the European Union and other coalition countries accounts for roughly 50 percent of Russia’s imports.

Export controls were never expected to have immediate effects, she said, but noted the Ukrainian government reported that Russia’s two major tank plants halted work over a lack of foreign components. Baikal Electronics, a Russian semiconductor company and computer manufacturer, was cut off from integrated circuits to support its surveillance, servers, and other domestic communications equipment, she added.

Taiwan’s TSMC, the world’s largest contract chipmaker, exited the Russian market, cutting off the Moscow Center of SPARC Technologies access to Elbrus chips, which are widely used in Russian intelligence and military systems, she said. Lada halted auto production as export controls deprived it of needed parts and supplies, she added.

Renault, which controls the company that produces the Lada, said it would suspend operations at its plant in Moscow while it assesses options on its majority stake in Avtovaz AVAZI\_p.MM, the country’s No. 1 carmaker.

Renault did not immediately respond to a request for comment. Nor did TSMC, Baikal Electronics, the Moscow Center of SPARC Technologies, and Russian tank maker UralVagonZavod could not immediately be reached for comment.

Kendler said she and other U.S. Treasury Department and Commerce officials traveled to London, Brussels, Paris and Berlin to bring the coalition together, and that extensive talks also are going on with Japan, South Korea, Canada, Australia and New Zealand.

“I expect to be able to announce additional like-minded export controls countries soon,” she said.

## **22. Russia sanctions should increase until full Ukraine withdrawal – UK**

Agence France-Presse, Mar. 30 (1323) | Not Attributed

UK Prime Minister Boris Johnson on Wednesday said Western powers should tighten the economic noose around Russia until it withdraws all its soldiers from Ukraine.

At a hearing in parliament, Johnson told lawmakers that to lift G7 sanctions simply in return for a Russian ceasefire in Ukraine would go “straight into (Vladimir) Putin’s playbook”.

“My view is we should intensify sanctions with a rolling programme until every single one of his troops is out of Ukraine,” he said.

Johnson said also that the government in London was looking at “going up a gear” in its military aid to Ukraine.

He said that could include the provision of armoured personnel carriers to help Ukrainian forces break out of the besieged city of Mariupol.

Following peace talks this week in Turkey between Ukraine and Russia, reports suggested the UK, France and the United States could sign up to guarantee Ukraine’s security in return for a Russian pullout.

Johnson ruled out giving Ukraine the equivalent of NATO’s Article Five, which says an attack on one member is an attack on all.

But Ukraine could benefit from a different security concept “based on the idea of deterrence by denial”, he said.

Ukraine would be armed so much with Western aid, and “the quills of the porcupine have become so stiffened, that it is ever-after indigestible to Putin”.

“That is the path we are on,” he told the lawmakers, while also defending the pace of the UK visa programme to bring over Ukrainians fleeing the fighting.

The prime minister meanwhile said he understood US President Joe Biden’s frustration when he said last week that Putin could not stay in power.

But Johnson stressed that regime change in Moscow is “not the objective of the UK government”.

“We are simply setting out to help protect the people of Ukraine and protect them from absolutely barbaric and unreasonable violence.”

The government said separately that sanctioned Russian oligarchs and their businesses would now be banned from using Britain’s aviation and maritime industries and engineers.

It immediately used the new powers laid in parliament against the billionaire oil tycoon Eugene Shvidler and Oleg Tinkov, the founder of Tinkoff bank.

Both were slapped with asset freezes and travel bans last week.

The latest announcement comes after the UK authorities on Tuesday detained a Russian-owned \$50-million superyacht, the Phi, docked at London’s Canary Wharf.

The 58.5-metre (192-foot) vessel, which was in London for a refit, is registered to a company based in the Caribbean nation of St Kitts and Nevis and sails under a Maltese flag.

But the National Crime Agency anti-kleptocracy unit said its ultimate owner was an unnamed Russian businessman.

At least two oligarch-linked private jets have previously been impounded in the UK.

Transport Secretary Grant Shapps said: “Today’s legislation adds new routes at our disposal to deprive oligarchs’ access to their luxury toys.

“Our economic and transport sanctions are working to suffocate those most complicit in Putin’s regime ensuring that no one on UK soil can support Putin’s inhuman assault in Ukraine.”

Foreign Secretary Liz Truss said the new legislation has also extended finance, trade and shipping sanctions imposed on Crimea to Russian-seized Ukrainian territory in Donetsk and Luhansk.

## INDO-PACIFIC

### **23. U.S., South Korea seen resuming major military drills as North Korea tensions rise**

Reuters, Mar. 31 (0258) | Not Attributed

SEOUL -- Joint South Korean and U.S. military drills set to kick off next month could for the first time in years include more weaponry and troops, and more aggressive messaging as tensions with North Korea rise.

Neither the South Korean or U.S. militaries have confirmed what this year's annual drills may entail, but a recent series of unusual displays of military might in and around the Korean peninsula suggest a more muscular show could be in the works, analysts said.

North Korea conducted a full intercontinental ballistic missile (ICBM) test for the first time since 2017 last week, and South Korean officials have reported new construction at the North's only known nuclear test site, which was shuttered in 2018.

Monitors in the United States also reported this week "unusual" activity by a North Korean ballistic missile submarine at its base, suggesting repairs, modifications, or preparations for a new missile launch.

South Korea conducted rare missile drills and an unprecedented F-35A fighter jet display in explicit response to North Korea's latest ICBM test, warning Pyongyang it has the willingness and capability to respond and "punish" the North if necessary.

This follows the U.S. military saying it was stepping up its military efforts in the Yellow Sea, and conducted an aircraft carrier drill in a demonstration of force against North Korea.

In a report on North Korea's ICBM launch provided to lawmakers this week and obtained by Reuters, South Korea's ministry of defence said deterring future actions by North Korea requires not only displays of the South's military power, but also "timely manifestation" of strong capabilities and posture at the South Korea-U.S. alliance level.

It is a stark contrast with recent years when the two allies played down their military exercises, holding computer-based training, scaling down field exercises, avoiding major weapons and not publicising some of the drills, at least partly as they sought to placate Pyongyang and restart stalled denuclearisation talks.

Col. Lee Peters, a spokesman for U.S. Forces Korea (USFK), said its policy is not to comment on planned or executed combined exercises, but said training is something all militaries conduct to maintain readiness, proficiency, credibility and trust.

“Any decision regarding combined training will be made by the U.S.-ROK Alliance,” he said, using the initials for South Korea’s official name.

South Korea’s ministry of defence said the drills have yet to be finalised.

It denied local media reports there had been discussions about holding trilateral exercises with the United States and Japan, according to Yonhap news agency.

The exercises will likely return to a more normal pre-COVID tempo amid eased pandemic restrictions and diminished political benefit to cancelling or limiting the drills given the diplomatic deadlock with North Korea, said Daniel Pinkston, a Seoul-based lecturer for Alabama’s Troy University.

“The North Korea threat continues to increase while ROK and USFK military readiness arguably has declined because of insufficient training,” he said.

A coalition of U.S. and South Korean peace activists have called for the upcoming drills to be scrapped.

“Suspending these costly and highly provocative military exercises will be a crucial step toward restarting genuine diplomacy with North Korea,” the groups said in a statement they plan to send to U.S. and South Korean leaders.

Yonhap reported South Korea and the United States are “leaving all possibilities open” for responding to a possible resumption of nuclear testing by the North.

They have also discussed resuming “Blue Lightning” exercises involving strategic bombers, including some that are nuclear capable, which have been on hold for about five years, Yonhap reported.

President-elect Yoon Suk-yeol, who takes office in May, has vowed to “normalise” joint drills and to boost South Korea’s military deterrent against the North, but has said the April drills will be decided by the current administration in consultation with the United States.

## **24. North Korea not telling the whole truth about latest ICBM test, South Korean official says**

CNN.com, Mar. 31 (0216) | Brad Lendon and Gawon Bae

North Korea’s launch last week of an intercontinental ballistic missile (ICBM), reported to be its most formidable yet, may have been a less advanced weapon than previously believed, according to a South Korean military official.

The official, who spoke under the condition of anonymity, said South Korean and US analysis of the March 24 launch of what North Korea claimed was a new Hwasong-17 ICBM, was in actual fact the older and slightly smaller Hwasong-15 -- an ICBM last tested by Pyongyang in 2017.

Several missile experts have since reached a similar conclusion, but they caution the significance of last week's successful ICBM launch -- North Korea's first in more than four years -- should not be discounted, pointing out the test still demonstrated a weapon with the theoretical ability to hit all of the continental United States.

The ICBM fired by North Korea last Thursday flew to an altitude of 6,000 kilometers (3,728 miles) and to a distance of 1,080 kilometers (671 miles) with a flight time of 71 minutes before splashing down in waters off Japan's western coast last Thursday, according to Japan's Defense Ministry.

Japan's Vice Defense Minister Makoto Oniki told reporters shortly afterward that the missile's altitude would suggest it is a "new type of ICBM."

Japanese officials were sticking to that assessment this week, with Chief Cabinet Secretary Hirokazu Matsuno saying on Monday that Tokyo judged the missile to be a new type based on flight altitude and other information.

But the South Korean official and missile experts said further close analysis of images in North Korean state media of last week's launch gave two potential clues relating to Pyongyang's alleged subterfuge.

The South Korean official said assessments by Seoul and Washington showed the ICBM launched last week only had two engine nozzles, like Hwasong-15, whereas Hwasong-17 has four.

And video released last Friday by state-run Korean Central Television (KCTV) purporting to show Kim Jong Un guiding the launch reveal the North Korean leader's shadow appearing westward, meaning it was filmed in the morning, but the launch took place in the afternoon, the official said.

Also, it was cloudy in the launch area last Thursday, but the weather in the KCTV video appears to be sunny, the official said.

*Analysts say US must still be wary*

Several missile experts have also begun to cast doubt on North Korea's claim to have launched a Hwasong-17.

Jeffrey Lewis, director of the East Asia Nonproliferation Program at the James Martin Center for Nonproliferation Studies, said the KCTV video appears to have been made during a failed launch on March 16, in which a North Korean missile exploded soon after liftoff around an altitude of 20 kilometers (12.5 miles).

“North Korea released a video after the March 24 test. We measured the shadows in it, however, and it is clear from the altitude and angle of the sun that the video is from the test on the morning of March 16,” Lewis said.

“The video is of the (previous) test that failed. That strongly suggests the other test was something different that they don’t want us to see.”

Ankit Panda, a nuclear policy expert at the Carnegie Endowment for International Peace, said Pyongyang may have altered the Hwasong-15 -- first tested nearly five years ago -- to make it look like a more powerful missile.

“They claimed that it’s the Hwasong-17, which is the new, very large ICBM they inaugurated at a parade in October 2020, but it looks like what they actually did was they put a very light or perhaps no payload on a Hwasong-15, which is the ICBM they first tested in November 2017. And they used that to stage a demonstration,” Panda said.

Panda said Pyongyang’s apparently inflated claim was aimed at a domestic audience rather than internationally.

“The only thing going well in North Korea right now is the missile program, so perhaps Kim Jong Un plans to use this demonstration to indicate to his own people that they are suffering, the food shortages, the economic difficulties, the lockdown over Covid, that all of this has been worth it, because their national defense capabilities are still advancing,” he said.

On Tuesday, South Korean lawmaker Ha Tae-keung told reporters that, according to a military briefing, debris rained down over the North Korean capital, Pyongyang, following the failed March 16 test.

Ha’s office confirmed the lawmaker’s remarks to CNN on Thursday, adding North Korea may have been prompted to announce the March 24 Hwasong-15 launch as a Hwasong-17 to temper negative opinions in Pyongyang, where citizens witnessed the March 16 failure. North Korea has not acknowledged reports of a failed March 16 test.

Lewis, the nuclear weapons expert, said regardless of which missile was fired last Thursday, the test showed a powerful offensive capability that US defense officials have to be wary of.

“The missile fired on March 24 would have had a range of about 12,000 kilometers (7,500 miles), which is certainly within the capability of a Hwasong-15, which can deliver a nuclear weapon anywhere in the United States,” Lewis said.

And Matsuno, the Japanese official, said Monday that North Korea’s missile program remains a serious threat to the security of Japan, the region and the world.

## CHINA

### **25. China, Russia ‘more determined’ to boost ties, Beijing says**

Reuters, Mar. 30 (0832) | Not Attributed

BEIJING -- Moscow and Beijing are “more determined” to develop bilateral ties and boost cooperation, Chinese Foreign Minister Wang Yi said on Wednesday following a meeting in eastern China with his Russian counterpart, Sergei Lavrov, amid the Ukraine crisis.

The two also condemned what they called illegal and counter-productive Western sanctions imposed on Moscow over its actions in Ukraine, the Russian foreign ministry said in a statement.

Wang and Lavrov spoke in the eastern Chinese province of Anhui, where China is hosting two days of multilateral meetings on Afghanistan.

“Both sides are more determined to develop bilateral ties, and are more confident in promoting cooperation in various fields,” Wang said.

“China is willing to work with Russia to take China-Russian ties to a higher level in a new era under the guidance of the consensus reached by the heads of state,” he said.

### ‘INTERNATIONAL TURBULENCE’

The meeting comes a little over a month after Russia launched an invasion of Ukraine, in what it calls a “special operation”, triggering unprecedented Western economic sanctions.

Russia is looking to China for support and partnerships as it becomes ever more isolated from global financial systems and supply chains.

China has refused to condemn Russia’s actions in Ukraine or to call it an invasion. It reiterated support on Wednesday for peace talks between Russia and Ukraine.

Russia’s foreign ministry said Lavrov had informed Wang about the progress of military operations in Ukraine and the state of Moscow’s negotiations with Kyiv.

“The sides noted the counterproductive nature of the illegal unilateral sanctions imposed on Russia by the United States and its satellites,” the ministry said in a statement.

The two ministers agreed that Russia and China would continue to strengthen their strategic partnership and to speak on global affairs “with a united voice”, it added.

China’s foreign ministry quoted Wang as saying that bilateral relations had “withstood the test of international turbulence”.

Lavrov said on Monday that Russia’s relations with China were at their strongest level ever.

On the eve of last month’s Winter Olympics in Beijing, China and Russia declared a “no-limits” strategic partnership.

## **26. China, Solomon Islands agree controversial security pact**

Agence France-Presse, Mar. 31 (0243) | Not Attributed

The Solomon Islands on Thursday said it had inked a wide-ranging security pact with Beijing, an agreement Western allies fear will pave the way for the first Chinese military foothold in the South Pacific.

“Officials of Solomon Islands and the People’s Republic of China have initialled elements of a bilateral Security Cooperation Framework between the two countries today,” said a statement from the prime minister’s office in Honiara.

It is now awaiting signature by foreign ministers of the two countries.

A draft version of the agreement, leaked last week, detailed measures to allow Chinese security and naval deployments to the crisis-hit Pacific island nation.

It included a proposal that “China may, according to its own needs and with the consent of the Solomon Islands, make ship visits to, carry out logistical replenishment in, and have stopover and transition in Solomon Islands”.

It would also allow armed Chinese police to deploy at the Solomon Islands’ request, to maintain “social order”.

The “forces of China” would also be allowed to protect “the safety of Chinese personnel” and “major projects in the Solomon Islands”.

Without the written consent of the other party, neither would be allowed to disclose the missions publicly.

The leaking of the draft sent political shock waves across the region.

The United States and Australia have long been concerned about the potential for China to build a naval base in the South Pacific, allowing its navy to project power far beyond its borders.

Any Chinese military presence would likely force Canberra and Washington to change their military posture in the region.

Australia's Chief of Joint Operations Lieutenant General Greg Bilton said Thursday that the China-Solomon Islands pact would "change the calculus" of his country's operations in the Pacific.

The Solomon Islands' Prime Minister Manasseh Sogavare dismissed critics of the deal in a fiery speech Tuesday, saying there was "no intention whatsoever... to ask China to build a military base in the Solomon Islands".

He added that it was "very insulting... to be branded as unfit to manage our sovereign affairs" by other nations.

Word that the pact had been initialled came just hours after the president of the Federated States of Micronesia made public an impassioned plea to Sogavare to reconsider signing the deal.

President David Panuelo voiced "grave security concerns about this proposed agreement" in a March 30 letter to the leader, citing rising tensions between China and the United States.

"My fear is that we -- the Pacific Islands -- would be at the epicentre of a future confrontation between these major powers," Panuelo wrote.

In his letter to Sogavare, Panuelo asked the Solomons leader to consider the long-term consequences "for the entire Pacific region, if not the entire world" of signing the security pact.

There are also fears the deal could fuel domestic strife inside the Solomons.

The nation of 800,000 has been wracked by political and social unrest, and many of its people live in poverty.

In November, protesters tried to storm the parliament and went on a deadly three-day rampage, torching much of Honiara's Chinatown.

More than 200 peacekeepers from Australia, Fiji, Papua New Guinea and New Zealand were deployed to restore calm, and Sogavare avoided being deposed.

The unrest was sparked by opposition to Sogavare's rule and fuelled by unemployment and inter-island rivalries.

But anti-China sentiment also played a role.

Leaders on the most populous island of Malaita fiercely oppose Sogavare's decision to recognise Beijing and break ties with Taiwan in 2019.

## MIDDLE EAST

### **27. Invasion deepens rift between U.S. and gulf nations**

Washington Post, Mar. 31 (0115), Pg. A1 | Karen DeYoung and Missy Ryan

Russia's invasion of Ukraine has heightened existing strains in the Biden administration's relationships in the Middle East, even as it has brought new unity to NATO and transatlantic ties.

Nowhere have the bonds been as frayed as with Persian Gulf partners Saudi Arabia and the United Arab Emirates. Their reluctance to increase oil output as gas prices rise, along with what the Biden administration sees as a less-than-robust condemnation of Moscow, are among the most visible current reasons.

But in both cases, the sources of estrangement go far deeper. Gulf officials describe a mix of complaints that have caused them to doubt U.S. security guarantees, including what they consider the administration's failure to respond vigorously enough to ongoing missile attacks on their countries by Iran-backed Houthi rebels in Yemen, and its eagerness to sign a new nuclear deal with Tehran that does not address Iranian aggression in the region.

Equally important is what they see as a lack of respect from a long-standing ally. "It goes beyond policy," said Jeffrey Feltman, who served for years as a top U.S. diplomat in the region and as U.N. undersecretary for political affairs. "It goes to the personal."

President Biden, who described Saudi Arabia as a "pariah" state during his campaign, has not yet met or even had a conversation with the de facto Saudi leader, Crown Prince Mohammed bin Salman. Bin Salman's Emirati counterpart, Abu Dhabi's Crown Prince Mohammed bin Zayed, was said to be livid when weeks passed without a high-level U.S. visit or immediately positive response to requests for more air defense supplies after the first of a series of Houthi missile attacks hit the UAE on Jan. 17, according to people familiar with the matter who, like others, spoke on the condition of anonymity to discuss sensitive diplomacy.

In an effort to get the relationship back on track, Secretary of State Antony Blinken on Tuesday met with the Emirati crown prince in Morocco. Blinken was effusive as they shook hands for the cameras, saying he was "grateful for the time today, and actually I'm grateful for the time every day, because the partnership between our countries truly matters to the United States." The UAE, he said, was "a leader in the region, increasingly a leader in the world."

Bin Zayed was terse. It was an “important opportunity,” he said. “I’m sure we have a lot to talk about, especially between our bilateral relationship.”

Speaking to reporters Wednesday, Blinken said he had “made very clear to him . . . that the United States is a true partner to the UAE,” but provided few details. He said they did not focus on energy supply.

The administration, according to people familiar with the divide, has little patience with their complaints, and sees the resentments as business as usual in the region. With many crises to address, and pressure from within the Democratic Party and beyond to take a tougher line against the gulf monarchies, particularly Saudi Arabia, Biden has had little room to maneuver. U.S., Saudi and Emirati officials declined to comment.

A meeting, or even a phone call, with bin Salman, the Saudi crown prince - identified by the CIA as having ordered the 2018 killing of Saudi journalist and U.S. resident Jamal Khashoggi - would be problematic for Biden’s already tenuous relations with many in Congress, where the crown prince is regularly denounced. Biden was willing to meet him at last year’s Group of 20 conference in Rome or at the climate summit in Scotland, but bin Salman did not attend. The White House would not have objected, people familiar with events said, if the crown prince had participated during a February call between his father, King Salman bin Abdul Aziz, and Biden.

For the Emiratis, the reasons for estrangement are more diffuse, including U.S. delays in the sale of F-35 fighter jets, and the Iran negotiations. But those irritants pale beside what the Emiratis consider a tepid U.S. response to Houthi attacks when the first missiles rained down from Yemen on fuel tankers in Abu Dhabi, killing three civilians.

Relatively common against Saudi Arabia, the rare strike against the Emiratis - whose direct involvement in the Saudi-led war against the Houthis ended several years ago - was the beginning of weeks of similar attacks, all but the first intercepted by U.S.-provided missiles from Patriot and THAAD air defense systems. In response, the UAE appealed to the United States for more interceptors, more intelligence on Houthi movements, and the U.S. re-designation of the Houthis as a terrorist organization, a measure that would open those dealing with them to criminal penalties.

Donald Trump had imposed the designation the day before leaving office, a move that led to criticism from humanitarian groups that the action was an impediment to aid shipments for civilians. In response, Biden lifted the measure.

The recent attacks heightened the Emiratis’ sense of vulnerability over the pending Iran nuclear deal, and they found the U.S. response lacking, according to the people familiar with exchanges between the two.

Compounding their ire were reports that the administration is considering lifting its designation of Iran’s Islamic Revolutionary Guard Corps as a foreign terrorist organization, as part of the nuclear negotiations. An IRGC delegation showed up at a defense show last week in Doha, Qatar - a regional rival for U.S. affections. Qatar

insisted it had invited only Iran's defense ministry, and didn't know the IRGC was coming. The State Department released a statement saying it was "deeply disappointed and troubled" by the appearance.

But the Arab states and others in the region share a concern about U.S. priorities regarding Tehran, said James Jeffrey, a former U.S. ambassador who served as the Trump administration's envoy to defeat the Islamic State. Calling on the administration to take steps that would prove to gulf allies that Biden is willing to embrace more than harsh rhetoric about Iran, Jeffrey described the action as "a football game where your team never scores any points and keeps on losing the ball, but the coach keeps yelling" that the team can win.

In response to the UAE appeals for more weapons, U.S. officials - juggling demands for Patriots and other interceptors from Saudi Arabia and European allies on NATO's eastern flank - note that UAE stockpiles are far from depleted. The Emiratis already have more advanced U.S.-made weaponry than many American partners, including the THAAD system, which was first used in combat in response to the Houthi attacks.

The administration, which had cut off all but defensive assistance to the Saudis in the Yemen war, said it had no access to the high-altitude surveillance of the Houthis the Emiratis wanted, something the UAE didn't believe, several people familiar with the situation said. The Houthis are undoubtedly a terrorist organization, but the administration considers re-designation complicated, not necessarily because of the lobbying of humanitarian groups but because U.S. and international banks would refuse to facilitate aid and transport to Yemen for fear of criminal charges.

But none of these disputes appeared to mean as much to the UAE - or to more exasperate the Americans - as the failure to publicly show up in the Emirati hour of need. While both sides agree that there were many high-level telephone calls; a U.S. statement denouncing the Houthis; and visits in February by Gen. Kenneth F. McKenzie Jr., then head of the U.S. Central Command, and Brett McGurk, the senior Middle East official on the National Security Council, it was not seen as enough by a country that has participated with U.S. forces in conflicts from Kosovo to Afghanistan.

When Biden finally called bin Zayed recently, he was told that the time was not right, and promises from both sides to reschedule have so far come to naught.

Bilal Saab, a former Pentagon official who is director of the defense and security program of the Middle East Institute, said that gulf nations didn't seem to fully grasp the slow workings of U.S. bureaucracy. "Even with our closest NATO allies, we can't instantly send our senior emissaries and deploy military equipment to support them," he said. "It may just be that the gulf states' expectations of the United States are too high, which is causing much of this disappointment."

In recent weeks, the breach has worsened. A week after Emirati Foreign Minister Abdullah bin Zayed al-Nahyan met with his Russian counterpart, Sergei Lavrov, in Dubai last month, and joined his call for the world to stop isolating Syrian President Bashar al-Assad, the UAE hosted Assad for a visit.

The UAE and Saudi Arabia declined U.S. appeals to increase their oil output to make up for market shortfalls during the Ukraine crisis, and the Emiratis abstained in a U.S.-backed U.N. Security Council vote condemning Russia.

Explaining the U.N. vote, the UAE's representative said the outcome - failure because of a Russian veto - was a foregone conclusion. Others familiar with the situation said that the abstention was a trade-off for Russia not to veto an upcoming resolution sanctioning the Houthis. But while the Emiratis later voted in favor of a U.N. General Assembly resolution condemning the Russians in Ukraine, the lack of support was noticed.

Speaking Tuesday at the annual World Government Summit in Dubai, oil ministers from both countries said they had no regrets about restraining production. Their focus, they said, is on the "sustainability" of world energy supplies, and they said they tried never to mix politics and oil.

"I've been at this for the last 35 years, and I know how we manage to compartmentalize our political issues to what is for the common good for all of us," Saudi Minister Suhail bin Mohamed al Mazrouei said.

## **28. Ukraine war has 'deadly' impact on Arab region – US top diplomat**

Agence France-Presse, Mar. 30 (1657) | Not Attributed

Russia's invasion of Ukraine is having a "deadly" impact and threatening security in the Arab world, particularly through spiralling wheat prices, US Secretary of State Antony Blinken said in Algiers Wednesday.

He was speaking on the final leg of a trip that began with an unprecedented summit in an Israeli kibbutz, attended by Blinken and the foreign ministers of Egypt, the Jewish state and three Arab countries that normalised ties with it in 2020.

Addressing journalists in Algiers, he said that while Russia's invasion of Ukraine seemed distant, it has already had "deadly consequences for citizens in the region".

"It's having a direct impact on their lives right now, particularly with regard to rising food prices... especially wheat," he said.

This poses "grave threats to security" in Arab countries, he added.

North African nations are heavily dependent on wheat imports and Blinken earlier said they were facing "disaster" over the massive shock the war dealt to already tight supplies.

Both Russia and Ukraine are major wheat producers, and Moscow also exports vast amounts of oil and gas.

Blinken said there was “a clear aggressor and a clear victim” in the Ukraine conflict.

“It’s important to stand with the victim and to stand for the principles that have also been violated,” he said.

Blinken met Algeria’s President Abdelmadjid Tebboune after holding talks with Foreign Minister Ramtane Lamamra.

It was his first visit as top US diplomat to the North African country, a Moscow ally and a major gas producer that has faced calls to boost exports to Europe after prices soared.

But Blinken made no mention of that subject during a press conference after his meetings on Wednesday.

The top US diplomat had flown in on Wednesday morning from Algeria’s arch-rival Morocco, which in 2020 normalised ties with Israel under a deal that sparked renewed tensions between Algiers and Rabat over the disputed territory of Western Sahara.

Relations between Washington and Algiers had also soured as a result of Morocco’s normalisation deal, brokered under then-president Donald Trump.

As a quid pro quo for normalisation, the Trump administration recognised Moroccan sovereignty over Western Sahara, a phosphate-rich desert territory where Algeria has long backed the Polisario independence movement.

In Rabat on Tuesday, Blinken had voiced support for a Moroccan autonomy plan for the Western Sahara, which he described as “serious, credible and realistic”.

In Algiers on Wednesday, he refrained from mentioning the Moroccan plan, instead voicing Washington’s support for United Nations mediation.

“We’re very focused on diplomacy and on advancing a resolution through diplomacy,” he said, insisting that there had been “no changes” in Washington’s position.

Officials in Algeria, a longtime supporter of the Palestinian cause, have voiced concerns over Morocco’s normalisation with Israel, particularly over the possibility their rival could access advanced Israeli military technology.

Bahrain and the UAE were the other countries to establish formal ties with Israel in the last months of the Trump administration.

Blinken said on Wednesday that he hoped that the “real practical benefits” to normalisation would encourage other Arab nations to follow suit.

But he re-emphasised that the normalisation process was “not a substitute for dealing with the conflict between Israelis and Palestinians” and reaching a two-state solution.

The Palestinians have described the 2020 deals, which broke with decades of Arab consensus that Israel should not be recognised in the absence of a peace deal creating a Palestinian state, as a stab in the back.

Israel was keen to cast its summit, attended by the foreign ministers of Morocco, Bahrain and the United Arab Emirates, as an alliance of powers against its arch-foe Iran.

Israel is fighting a regional shadow war against Iran and accuses it of seeking a nuclear bomb, something Tehran denies.

The summit in Israel came after the UAE has come under cross-border missile and drone attack from Yemen’s Iran-backed Huthi rebels.

Blinken said Wednesday that during talks the day before with the UAE’s de facto ruler Mohammed bin Zayed he expressed Washington’s strong support.

“One of the things I made very clear to him is the value that we attach to that partnership,” he said.

## **29. U.N., U.S. press for broader Yemen truce after unilateral moves**

Reuters, Mar. 30 (1913) | Aziz El Yaakoubi

RIYADH -- United Nations and United States envoys on Wednesday welcomed unilateral truce moves by Yemen’s warring sides as encouraging steps, while stressing the need for a more comprehensive ceasefire that would help alleviate a dire humanitarian crisis.

The Saudi-led coalition fighting Yemen’s Houthis had said it would temporarily halt military operations from Wednesday after the Iran-aligned group this week declared a three-day cessation of cross-border attacks and ground offensives in Yemen.

As part of efforts to end the seven-year-old war that has killed tens of thousands and pushed millions into hunger, the initiatives followed a U.N. call for a truce during the Muslim holy month of Ramadan that starts this week.

U.N. special envoy Hans Grundberg and U.S. special envoy Tim Lenderking, speaking at a gathering of allied Yemeni factions in Riyadh on Wednesday, said the unilateral announcements were a step in the right direction.

The two envoys have been pressing Riyadh to ease coalition sea and air restrictions on areas held by the Houthis, who ousted the Saudi-backed government from the capital, Sanaa, in late 2014, prompting the coalition to intervene months later.

They have also urged the Houthis to end an offensive in energy-producing Marib, the internationally recognised government's last stronghold in North Yemen.

"Yemen needs a truce. I am engaging with the parties with a sense of urgency to reach this truce by the beginning of Ramadan. The truce will ease the fuel crisis and facilitate the freedom of movement," Grundberg told the gathering.

Lenderking said the U.N. proposal could serve as a first step towards a comprehensive ceasefire and a "new, more inclusive political process".

Two sources familiar with the matter had said the proposal was for a temporary truce in exchange for allowing fuel ships to dock at Houthi-held Hodeidah port and a small number of commercial flights to operate from Sanaa airport.

A senior U.S. State Department official said there were "real opportunities" for progress because there was "buy in" within Yemen and from countries in the region.

"We've seen positive statements from the Houthis that they would be willing to engage," the official said.

A permanent ceasefire has proved elusive as both sides resisted compromise. The Houthis want the coalition to lift its blockade ahead of any truce talks while the alliance, which controls Yemen's seas and air space, wants a simultaneous deal.

Houthi chief negotiator Mohammed Abdulsalam told Reuters the group has for over a month been discussing a "humanitarian truce" with Grundberg and hoped "those efforts will succeed".

"On Riyadh's dialogue, we are not concerned about it nor its outcomes," he said, referring to the week-long Yemeni talks that the Houthis shunned for not being held in a "neutral" country.

Riyadh has struggled to exit the conflict that is largely seen as a proxy war between Saudi Arabia and Iran. The Houthis say they are fighting a corrupt system and foreign aggression.

### **30. US imposes new sanctions against Iran's ballistic missile program**

CNN.com, Mar. 30 (1413) | Jeremy Herb

The Biden administration on Wednesday enacted new sanctions against Iran's ballistic missile program in response to a missile attack on Erbil in Iraq earlier this month.

The Treasury Department announced the new sanctions against the Islamic Revolutionary Guard Corps unit responsible for research and development of ballistic missiles, as well as Iran's Parchin Chemical Industries and an Iranian intermediary who worked on procurement of parts for propelling missiles.

"Iran's ballistic missile-related activities continue to destabilize the Middle East region, and the United States will continue to use every tool at our disposal to disrupt them," Secretary of State Antony Blinken said in a statement on Wednesday.

The new sanctions come as the US is still trying to reach an agreement with Iran to reenter the nuclear deal, also known as the Joint Comprehensive Plan of Action. While US officials had said a deal seemed close earlier this month, there have been signs in recent days that it may not be imminent.

US special envoy for Iran Robert Malley told CNN's Becky Anderson in Doha on Sunday that a nuclear deal "is not around the corner and is not inevitable" due to outstanding issues, including Tehran's demands related to the Islamic Revolutionary Guard Corps.

Also on Sunday, Blinken said during a meeting with Israeli Prime Minister Naftali Bennett that the US would counter hostile actions from Iran regardless of what happens with the nuclear agreement. "Deal or no deal, we will continue to work together and with other partners to counter Iran's destabilizing behavior in the region," Blinken said.

The Treasury Department said Wednesday's sanctions were being enacted following the March 13 missile attack on Erbil. The missiles landed near the US consulate building in Erbil that's under construction, though the State Department said they did not hit any US facilities.

The Treasury statement also cited the "Iranian enabled Houthi missile attack against a Saudi Aramco facility on March 25 as well as other missile attacks by Iranian proxies against Saudi Arabia and the United Arab Emirates," saying all of the attacks "are a reminder that Iran's development and proliferation of ballistic missiles continues to pose a serious threat to international security."

"While the United States continues to seek Iran's return to full compliance with the Joint Comprehensive Plan of Action, we will not hesitate to target those who support Iran's ballistic missile program," Treasury Undersecretary

for Terrorism and Financial Intelligence Brian Nelson said in a statement. “We will also work with other partners in the region to hold Iran accountable for its actions, including gross violations of the sovereignty of its neighbors.”

### **31. Plans for Hospital Closures as Part of Military Health System Reform Forging Ahead After Pause** Military.com, Mar. 30 (1142) | Patricia Kime

The Defense Health Agency is moving ahead with plans to close some 50 hospitals and clinics following a pause that began at the onset of the COVID-19 pandemic in 2020.

The closures are part of the agency’s broader effort under a Defense Department initiative to shift management of the military services’ 51 hospitals and 424 health clinics to the Defense Health Agency and focus the Army, Navy and Air Force’s medical commands on providing health care primarily for military personnel.

The plan calls for trimming roughly 12,800 military health billets and moving many non-military beneficiaries to private-sector health care -- a change that would let DoD downsize or close some health facilities, assuming Congress doesn’t step in.

Reforms were placed on hold on April 2, 2020, when the military shifted resources to address the pandemic, both within the Department of Defense and across the country as part of the nation’s public health response.

With the pandemic winding down, the Defense Health Agency has modified its plans to take into account lessons learned during COVID-19, according to David Smith, who is performing the duties of assistant secretary of defense for health affairs.

The agency will submit the new plan to Congress in the coming weeks, Smith said.

Congress then has 180 days to examine the proposal, and “after that, we’ll begin the work that needs to be done to implement,” Smith said during an interview with Military.com.

Reforms have been underway within the military health system since 2013, when the Pentagon established the Defense Health Agency to assume duties such as medical administration, IT, logistics and training that existed in triplicate under the separate Army, Navy and Air Force medical commands.

In 2017, Congress gave DHA broad authority to reevaluate the scope of its facilities and how DoD serves Tricare beneficiaries who aren’t in the military, such as family members and retirees.

The services became responsible mainly for military operational medicine and maintaining combat-ready medical forces.

As a result, the Pentagon is planning major changes to 50 military health facilities, including 37 health clinics that no longer will see civilian patients and effectively forcing more than 200,000 beneficiaries to the private sector over the course of the next two to four years.

Smith said that as part of the reforms, DoD will uphold access standards, which include being seen at urgent care within 24 hours, same-day acute care for primary appointments and specialty appointments within 28 days, and in some cases may provide “better access.”

“We’ve made clear, though, that the access may be in a different venue, right, for example purchased care versus direct care,” Smith said, referring to Tricare-covered civilian care as opposed to military hospital care.

Although DoD said it would not commence cuts to military medical staffing until it receives the go-ahead from Congress, some facilities already are seeing the pinch through attrition, with military providers leaving and their billets not being filled.

At Joint Base Lewis-McChord near Tacoma, Washington, the loss of medical personnel through attrition and focus on military personnel have “oversaturated the civilian capacity,” according to Rep. Trent Kelly, R-Miss., a former member of the House Armed Services Personnel Subcommittee.

“We sent all our people with problems, with identical problems, and now we’ve oversaturated the civilian market. We have to pay attention to second and third order [effects],” Kelly said during a hearing in December 2019.

Smith said that with the upcoming changes, DoD will constantly monitor patient access to care and appointment times to ensure that patients are getting the care they need.

“The clear intent is to do conditions-based assessments, so if we’re getting feedback – and that’s also why we’re going to take up to four years to transition because we want to make sure that everywhere we are doing it, [it’s working],” Smith said. “Clearly industry has assured us that they can do this, right, but the proof will be in the pudding.”

The Defense Department’s proposed fiscal 2023 budget calls for \$54 billion for the military health system, a nearly 8% increase from the start of the pandemic. This year, along with continuing reform efforts, the Defense Health Agency will also award contracts for the next generation of Tricare services.

The contracts, worth up to more than \$58 billion, will determine which companies will oversee the Tricare health program for the next decade.

According to Smith, DHA's new plan contains modifications as a result of changes in the medical infrastructure that occurred in some communities as a result of the pandemic.

He did not give specifics, noting that the plan is still being vetted through the Department of Defense.

"All of these transitions are conditions-based. I think you'll find that a few [targeted facilities] have been pulled off, because we're constantly looking at it and our promise is that we're going to continue to look at it," Smith said.

## **NOTABLE COMMENTARY**

### **32. There's a Better Way to Sell American Weapons**

Wall Street Journal Online, Mar. 30 (1828) | Grant Rumley and David Schenker

Arms exports are a key source of revenue for Russia, typically second only to oil and gas exports, and the war in Ukraine has jeopardized that revenue stream. Russia's arms sales have slumped in recent years, and the combination of Western sanctions and Russia's poor performance in Ukraine won't help. The U.S. can use this opportunity to lure partners away from Russian arms and begin to box Russia out of strategic markets. But it must change its approach.

America's most notable attempt to dissuade countries from buying Russian arms was the bipartisan 2017 Countering America's Adversaries Through Sanctions Act, known by the acronym Caatsa, which included a directive to impose sanctions on nations that engage in a "significant transaction" with Russia's defense or intelligence sectors. Penalties entail a range of financial restrictions, including on exports and loans as well as on banking transactions with U.S. institutions. A later amendment gave the president authority to issue waivers in specific instances. Caatsa sanctions were invoked against Turkey after Ankara took possession of the Russian S-400 air-defense systems in 2020. Turkey, a North Atlantic Treaty Organization member, was subsequently kicked out of the F-35 Joint Strike Fighter program for its deal with Russia.

But Caatsa provides too much wiggle room for U.S. policy makers, which weakens its ability to deter potential Russian customers. India bought the same S-400 system from Russia and hasn't been subjected to sanctions under Caatsa. Policy makers regularly make the case that India—which is a key partner in the U.S. competition with China but has a long history of buying arms from Russia—is worthy of a Caatsa waiver. Yet America's willingness to impose sanctions on a NATO ally and not India has confused many other countries.

In the Middle East, Caatsa sanctions loom large but likewise suffer from inconsistent application. In 2017 the United Arab Emirates and Russia announced plans to jointly produce a Russian fifth-generation jet fighter.

Though that deal has yet to produce an actual plane, the first prototype of the Russian fifth-generation Su-75 Checkmate made its debut at the Dubai Air Show in November. Egypt, a reliable customer of both American and Russian arms, seems to have crossed Caatsa red lines, though Washington hasn't responded with sanctions. In 2018 Cairo placed a \$2 billion order for more than two dozen Russian Su-35 fighters. By 2021 Egypt had begun taking delivery of several jets.

Turkey, Egypt, India and the U.A.E. are all countries that either have purchased Russian arms or engaged in significant activity with Russia's defense industry since the passage of Caatsa. They are, respectively, a NATO member, a major non-NATO ally, a major defense partner and a country currently hosting U.S. troops. Taken together, this group is a cross-section of Washington's most important strategic partners, and all have rebuffed U.S. efforts to discourage weapons acquisitions from Moscow through the threat of Caatsa sanctions. The U.S. needs to change tack if it wants to wean customers off Russian arms, gradually reduce another revenue stream for Moscow, and win back partners.

The complacent U.S. defense establishment too often sees itself as the "preferred partner of choice" for foreign customers, viewing U.S. materiel and support as superior to its competitors' despite onerous bureaucratic obstacles, long delivery times and often less-than-competitive price tags for U.S. arms. It must take a hard look at itself to see these deficiencies and address the reasonable complaints of its partners.

The U.S. must also change the way it markets materiel globally. One option is to explore the possibility of co-production of select U.S. weapons systems with dependable partners. Outside the F-35 program, the U.S. has been reluctant to share technology for fear of placing proprietary information at risk. For some top-tier systems, that makes sense. For others, it's an idea worth entertaining. U.S. partners have sought co-production for years but are now beginning to look elsewhere. Saudi Arabia recently signed an agreement with China to produce armed drones jointly and is reportedly producing ballistic missiles with China's help.

Another option is to entice potential customers by rewarding longstanding ones. Partners that have consistently purchased from the U.S. and don't seek closer relationships with Russia or China should be given priority for premium U.S. materiel. The Trump administration opened the door for one such approach when it relaxed the exports of armed drones such as the MQ-9 Reaper to select partners. The Biden administration should continue to offer the MQ-9 to America's closest partners.

Caatsa is a blunt tool that punishes bad choices, but it doesn't motivate countries to make good ones. Worse, its inconsistent implementation alienated friendly states, driving them away from the U.S. and closer to Moscow. Washington should change its approach by clarifying its implementation of Caatsa, streamlining the military procurement process, and making some of the crown jewels of America's arsenal available to close partners. The U.S. can and should leverage the momentum against Russia's invasion to correct a policy that simply isn't working.

### **33. Russia Could Still Salvage Victory in Ukraine**

Wall Street Journal, Mar. 31 (0200), Pg. A17 | Samir Puri

The year I served in east Ukraine as a cease-fire monitor was framed by dramatic events. I arrived in September 2014, shortly after a Malaysia Airlines flight was shot down by a Russian missile above the Donbas. I left in September 2015, as Russia switched its military attention to Syria. Russia was then fighting only in Ukraine's eastern regions, but that first incarnation of the Russia-Ukraine war has lessons for today.

Russia has shown that no matter how badly things go, it can find a way to impose its influence on Ukraine. In 2014 Russia annexed Crimea but the uprisings it inspired in Odessa and Kharkiv fizzled, while its separatist republics in Donetsk and Luhansk gained only incomplete footholds in these regions. Yet that was enough to destabilize Ukraine: Russia's proxies waged a limited war in the Donbas for eight years, giving Vladimir Putin his veneer-thin justification for invading this February.

Mr. Putin may settle for less than he set out to achieve, recasting this botched invasion as the next chapter in regaining Russia's postimperial influence in Ukraine.

As Ukrainian and Russian negotiators meet this week in Turkey, Russian officials may try to impose a fresh set of destabilizing terms on Ukraine. Russia's military has declared an end to the first phase of the invasion and a shift in operational priorities to east Ukraine -- a declaration widely seen by Ukraine's supporters in the U.S. and the U.K. as an admission that the invasion is failing.

The move follows a crucial tenet of war: Modify your strategic goals instead of sticking doggedly to unachievable ones. Russia's goal moderation can be derided as face-saving but in fact Moscow's less-ambitious aims are more achievable than Mr. Putin's dream of regime change.

Strategic failure beckons when maximalist campaign goals are maintained amid a faltering military effort. Afghanistan is a recent example: The North Atlantic Treaty Organization clung to its nation-building goal for almost two decades before leaving in a rout last summer. Goal moderation can be a sensible way to stay in the fight on more advantageous terms, by still advancing some strategic aims while jettisoning others as setbacks mount.

Mr. Putin will be desperate to emerge from the war with something to show for it to counter internal critics who see this as a botched invasion. If he moderates his strategic goals, there are two logical outcomes of Russia's

campaign: Either Russia will “butcher and bolt” by withdrawing on terms at least partly favorable to some Russian objectives, or its forces will remain and bisect a greater portion of Ukraine.

“Butcher and bolt” is a 19th-century phrase for a punitive expedition that wreaks havoc on disobedient imperial subjects after which the aggressor withdraws. Russian forces have demolished cities and shattered many Ukrainians’ lives. The city of Mariupol, where local officials say 5,000 Ukrainians have died, has suffered the sort of devastation once meted out by Russia’s air force in Syria. The Ukrainians may seek reparations if there is discussion of withdrawing Russian forces, but the toll on the country already is huge.

Russian forces are more likely to try to remain in parts of Ukraine. Kyrylo Budanov, head of Ukrainian military intelligence, said Russia wants to “create North, South Korea.” But South Korea retains huge U.S. military garrisons to deter future land grabs. A comparable scenario is unlikely here unless the U.S. sends major troop deployments to western Ukraine.

Divided Cyprus offers another analogy. Since Turkey invaded in 1974, Ankara has sustained the “Turkish Republic of Northern Cyprus” and Turkish forces are based there despite low levels of diplomatic recognition. That didn’t stop the Republic of Cyprus from joining the European Union in 2004. The division has evolved into a feature on Europe’s political map.

Russia may try to secure a stretch of land from the Donbas to Crimea even if it faces insurgency later on. Ukraine will never willfully give up its territory, but barring an unforeseen escalation that brings other countries into the fight, a total Russian rout looks unlikely. Even if Ukraine dislodges Russian forces from the 2022 territorial gains, evicting Russia from the 2014 gains will be almost impossible.

This is a bleak prognosis for Ukraine, which is no stranger to division. Its lands were bisected by Austria-Hungary in the west and Russia in the east until both empires collapsed in World War I. Mr. Putin is bent on securing something from his military misadventure. Whether he can depends on his awareness of the shrinking reality of what Russia’s invasion force can achieve.

### **34. How to Meet the Threat of Hypersonic Missiles**

Bloomberg Opinion, Mar. 30 (0800) | Editorial

Headlines about Russia’s use of “hypersonic” missiles in Ukraine have fueled fears that the U.S. is falling behind its rivals in developing such weapons. Although the U.S. needs a strategy to counter the push by Russia and China to deploy hypersonic arsenals, it should be cautious about splurging on new technologies the military doesn’t actually need.

Hypersonic weapons fall into two categories: glide vehicles that are launched on booster rockets before detaching and gliding to a target, and cruise missiles that use oxygen to generate propulsion. Both travel at least five times faster than sound, but that’s true of nearly all ballistic missiles. What distinguishes hypersonics is their ability to fly low and maneuver instead of following a trackable arc — meaning they could potentially evade U.S. missile defenses.

While Vladimir Putin has touted Russia’s gains in building such weapons, the true potency of its arsenal remains unclear. The Kinzhal (“Dagger”) missiles used in Ukraine aren’t technically hypersonics; they’re air-launched ballistic missiles likely modified from Russia’s Iskander missile. Military experts are also skeptical of the progress Russia claims to have made on other hypersonic weapons. China’s test of a globe-spanning hypersonic glider last summer, on the other hand, demonstrated more advanced capabilities.

After once leading the field in developing such weapons, the U.S. has made slow progress in recent years. The Air Force has struggled with its air-launched glider, and the Army and Navy aren’t expecting to deploy their own gliders before 2024 and 2025. Continued investment in research and testing is surely prudent.

Before pouring tens of billions of additional dollars into a new arms race, however, the Pentagon needs to carefully assess how hypersonics can help meet its strategic goals. The aim shouldn’t be to match China or Russia missile-for-missile. Even a large arsenal of such weapons won’t directly mitigate the threat posed by Russian and Chinese weapons. And though hypersonics could prove useful against certain enemy targets, a cheaper and more effective option for many missions may be to improve America’s stealth technology and upgrade its existing ballistic missiles.

Similarly, the Pentagon needs to step up its defenses against hypersonics, while being realistic about what it can actually achieve. Defending the entire U.S. against such weapons would be impossible at any affordable cost and would only drive Russia and China to deploy more missiles to ensure enough got through. A more sensible approach would be to invest in strengthening theater defenses to protect likely targets, such as aircraft carriers and command centers.

Finally, U.S. leaders shouldn’t lose sight of how destabilizing hypersonic weapons could one day become. In a crisis, officials might well be unable to tell what type of warhead a glider is carrying or its intended target, thereby

increasing the risk of unintended escalation. While transparency measures and hypersonic arms control agreements with Russia and China may be hard to envision right now, they may become necessary.

Pentagon planners are right, then, to carefully monitor the threats posed by hypersonics. The key is to avoid a costly overreaction. Foresight and sensible investment will serve the U.S. much better than an unfettered new arms race.

### **35. A Megaton of Waste**

*The White House's new defense budget lavishes money on America's nuclear weapons program in the name of competing with China and Russia. It's totally unnecessary*

Slate.com (War Stories), Mar. 30 (1354) | Fred Kaplan

President Joe Biden's defense budget for 2023 is gargantuan. It comes to \$813.3 billion, nearly \$60 billion higher than the budget he requested a year ago for 2022. Just a few weeks ago, Congress passed a bill adding \$25 billion to that earlier budget. Biden's new budget, which he submitted on Monday, accepts the congressional hike as a baseline and raises the pot by another \$32 billion.

To put this in perspective, Biden's \$813 billion exceeds President Donald Trump's final defense budget by \$75 billion—which, for a sense of proportion, is about 2.5 times what the government spends on Pell grants for low-income college students. It tops the amount that the Trump administration figured it would spend in 2023 by \$40 billion.

And yet congressional Republicans say that, given Russia's invasion of Ukraine and its threats to expand further, Biden's new budget is much too small, and they're set to throw in tens of billions of dollars more.

Does this make any sense? The world may be more dangerous than it seemed a few months, much less a few years, ago. But have its dangers grown so much in the past year that they warrant spending an extra \$60 billion and so much in the past few weeks that they demand \$30 billion or \$40 billion more? (For anyone wondering, these increases go beyond what's necessary for the military budget to keep up with inflation.) Finally, does Biden's budget spend this extra money in a way that actually deals with the growing threats from Russia or anywhere else?

In other words, it is time to ask the vital question: How much do we really need to spend on defense?

It's a question that remarkably few in official or congressional circles ask. Or, to the extent they do, their answer is always one word: more. They think that a dollar sign backed by a very high number sends a signal of our serious intent to our friends and foes. They focus on how much to spend—not on what to buy.

Some of Biden's budget hikes do go to counter the new Russian threat. For instance, it increases funding for the European Deterrence Initiative—a program that enables the movement of U.S. troops and equipment into NATO's eastern nations, such as Poland, Romania, and the Baltics—from \$3.7 billion to \$6.9 billion.

But that only accounts for about 5 percent of Biden's \$60 billion increase. What about the rest? Much of it will fund more combat planes and warships; research and development into 5G, A.I., and hypersonic missiles; and improvements in the communications tools that link commanders and their weapons. There are legitimate cases to be made for these upgrades, quite aside from Russia's invasion and the subsequent anxieties of NATO allies on the western border of Ukraine.

But the most visible, and surprising, share of Biden's defense budget is the enormous sum for nuclear weapons \$50.9 billion, a 17 percent increase over this year's (already considerable) \$43.2 billion. About a third of this outlay is for the Energy Department's nuclear complex including its weapons labs, plutonium pits, and the production and testing of warheads and bombs. The other two-thirds, controlled by the Defense Department, goes to the major defense contractors.

A debate has raged for years among defense analysts over whether to revamp all three "legs" of America's "strategic nuclear triad"—the land-based intercontinental ballistic missiles, nuclear-missile-carrying submarines, and long-range bomber aircraft. Some argue that all three elements of the arsenal are on the verge of obsolescence and need to be replaced. Others contend that, while this will be true for the submarines in the next decade or so, the missiles and bombers can be merely modified (as they have been a few times already); still others add that the land-based missiles should be eliminated or drastically reduced in number (say, from their current 400 to maybe 40). I'm among this last group.

The Pentagon's fact sheet on the budget makes clear that Biden has decided to replace all three legs and build a new long-range air-launched cruise missile, to boot. These new weapons, and their associated gear, consume \$34.3 billion of his proposal—a 24 percent increase over what the administration devoted to them in this year's budget. All of these new missiles, bombers, and submarines are in the research-and-development phase, meaning that, as they move into production, their costs will grow. In other words, starting in a few years, the budget for nuclear weapons will skyrocket.

This decision is surprising because, in his years as senator and vice president, Biden was never enamored of the "nuclear priesthood." As president, some of his appointments to key positions in the Pentagon, the State Department, and the National Security Council staff were equally skeptical specialists. Two things happened between Inauguration Day and now.

First, Russia and China kept building new nuclear weapons (not more nuclear weapons, but upgrades to existing models). Some analysts argue that, objectively, this shouldn't affect our decisions; as long as we're able to carry out our nuclear war plans—as long as we can deter Russia and China from attacking us and, to some extent, limit

damage if nuclear war breaks out anyway — no need for us to follow Russia’s or China’s wasteful practices. But politically, this is a hard argument to make, especially given the influence of a bipartisan group of legislators whose home districts manufacture missiles, bombers, or submarines.

Second, back when Biden was vice president, he and President Barack Obama got snookered by a particularly agile group of these legislators. In 2010, Obama needed two-thirds of the Senate to ratify the New START arms reduction treaty, which he had signed with Russia’s then-president, Dmitry Medvedev. Several senators threatened not to ratify unless Obama spent more on the nuclear stockpile and agreed to build new missiles, bombers, and submarines. Hawks have pulled this ploy ever since the first U.S.-Soviet arms control treaty back in 1972. Almost every new American nuclear weapon since then has been funded as a bribe for ratification or as a “bargaining chip” for future arms negotiations — except that, once nuclear weapons enter production, they’re almost never bargained away.

Obama tried to be clever under this pressure, pledging to “modernize or replace” all three legs of the triad. He did not regard this as a promise to buy any new weapons. To “modernize” a missile could mean upgrading its software or installing new communications gear.

But in response, the congressional critics rolled out a grand list of new weapons, which carried a 30-year price tag of \$1.3 trillion (it has since grown), and claimed that Obama had signed on to the whole package as part of the deal to ratify New START. When Trump was elected, key Pentagon officials—some of whom had worked for Senate Republicans—labeled this package as “the Obama plan of record.” The message was clear: Obama (who was viewed by Republicans and several centrist Democrats as a weak-on-defense dove) approved these weapons; therefore, you’re an even weaker-on-defense dove if you try to cancel them.

And so from that point on, these weapons — which won’t be fielded for several years — have been presented as part of the U.S. arsenal’s status quo. To oppose their funding is seen as an act not of restraint but of unilateral disarmament.

Last year, Biden raised defense spending and retained the plan to build new nukes, in part because he needed a few moderates to support his extravagant domestic spending plan — and he wouldn’t get them unless he supported extravagant Pentagon spending. Now this year, as the political mood has shifted and as midterms loom ahead, Biden has scaled back his domestic ambitions even while pushing the defense budget upward and onward.

And what will we get for this massive military spending binge? Mostly theater. Nobody has come up with a persuasive scenario in which the U.S., armed with its current nuclear arsenal, is unable to deter Russia or China (or North Korea or some other foe) from aggression, but would be able to deter them, if we only had all these new missiles, bombers, and submarines now.

The war in Ukraine illustrates the point. Biden (properly) refuses to send U.S. troops or pilots into the battle directly, for fear that Russia would see such intervention as an existential threat and respond with nuclear

weapons. Some think Biden is excessively cautious. But none of his critics has claimed that we could gain the upper hand over Russia—that we could intervene and stare down Putin’s threat to respond with nukes—if only we had all these new missiles and bombers and submarines today.

The course of the war in Ukraine calls into question the broader claim that we need to spend a lot more money on defense in order to counter Russia’s new threat in Europe. Russia’s military is doing poorly against Ukraine’s army and civilian resistance forces. Russian tanks are running out of fuel and food as Ukrainians cut their supply lines; these same tanks and other vehicles are getting blown up by easy-to-operate anti-tank missiles that cost not millions but thousands of dollars apiece; Russian planes and helicopters are getting shot out of the sky by similarly inexpensive, shoulder-fired Stinger missiles.

Yes, NATO’s new Eastern European front lines need to be strengthened, because they were barely manned at all before Putin’s move against Ukraine. But do they need to be strengthened so much? It may be smarter and would certainly be cheaper to rethink what we need for defense before we start spending a lot more money in the same old ways. We’ve overrated Russia’s military power; let’s not underrate our own.

Subject: The Official Russian MOD Statement of "Proof" of DoD Bioweapons Labs in Ukraine

Dr. Williams,

FYSA, Russian MOD's Telegram channel media is reporting that they have "evidence" of U.S. bioweapons activities in Ukraine (see below and attached). Our media monitor is looking for any additional reporting on the subject.

Wall Street Journal is asking for comment on the following: "Russian military spokesman Maj. Gen. Igor Konashenkov claimed, without providing evidence, that Russia has uncovered a biological weapons program in Ukraine funded by the U.S. defense ministry that was destroyed on February 24, when Moscow launched its assault."

DASD Johnson and DASD Rcif are tracking (DASD Johnson received tip-off of the reporting from another OSD office and alerted us). DASD Johnson and OSD PA have DTRA's "Break Glass" book for this. No action for DTRA at this time.

-----Original Message-----

In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

We have received documentation from employees of Ukrainian biolaboratories on the emergency destruction on February 24 of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases. Now the documents are being analyzed by Russian specialists from the troops of radiation, chemical and biological protection.

Obviously, with the start of a special military operation, the Pentagon had serious concerns about disclosing the conduct of secret biological experiments on the territory of Ukraine.

The received documents confirm that in the Ukrainian biological laboratories, in the immediate vicinity of the territory of Russia, the development of biological weapons components was carried out.

In order to prevent disclosure of the facts of violation by the United States and Ukraine of Article 1 of the UN Convention on the Prohibition of Bacteriological (Biological) and Toxin Weapons, the Ukrainian Ministry of Health sent an instruction to all biological laboratories to urgently eliminate stored stocks of dangerous pathogens.

In the near future we will present the results of the analysis of the received documents. Some of them, in particular, the

instructions of the Ministry of Health of Ukraine on the destruction of pathogens and the acts of destruction in the Poltava and

Kharkiv biological laboratories, we are publishing right now: <https://disk.yandex.ru/d/dyWUEF3tDZGauw>

WITNESSES:

GENERAL GLEN VANHERCK, COMMANDER, UNITED STATES NORTHERN

COMMAND AND NORTH AMERICAN AEROSPACE DEFENSE COMMAND

GENERAL LAURA RICHARDSON, COMMANDER, UNITED STATES SOUTHERN

## COMMAND

REED: Good morning. The committee meets today to receive testimony from General Glen VanHerck, Commander of the United States Northern Command and North America Aerospace Defense Command or NORAD and General Laura Richardson, Commander of the United States Southern Command. General Richardson, I would like to welcome you to your first posture hearing in your current command and I want to thank both of you for your decades of service to our nation.

On behalf of the committee, I also want to thank the women and men serving under your commands for their selfless dedication and service. Thank you very much.

The United States is faced with a wide range of security threats around the globe, but we are increasingly finding these threats edging closer and closer to home. Our strategic competitors, China and Russia, are seeking ways to expand their power regionally in South America and the Arctic, as well as for advancements in long-range missile capabilities and offensive cyber tools.

At the same time, this competition is unfolding amidst a global pandemic, environmental degradation from climate change and the emergence of highly disruptive technologies. The interconnected nature of these threats compounds the challenges that NORTHCOM and SOUTHCOM have been tackling for decades and we must calibrate our approach to these regions carefully. I expect today's hearing to help inform that approach.

General VanHerck, your command is responsible for protecting the homeland. Importantly, NORTHCOM is tasked with operating our homeland ballistic missile defense, the ground based Midcourse Defense System, to defend the United States against intercontinental ballistic missiles and hypersonic missiles. The rapid advancements we have seen on this front from states like China, Russia and North Korea are concerning as the nature of hypersonics difficult to defeat with the technology we currently use.

General VanHerck, I would like to know your assessment of the Next Generation Interceptor program's current schedule for deployment and in light of recent, very recent North Korean missile tests, your confidence in the capability of our current ground based interceptors to meet these threats.

NORTHCOM also can use to play a vital role for its defense support to civil authority mission by which the U.S. military responds to requests from civil agencies for domestic assistance. This vision was highlighted recently by NORTHCOM's leadership of operation Allies Welcome, which housed and cared for more than 84,000 evacuees from Afghanistan on military bases across the country.

Further, NORTHCOM was integral to our nation's response to the COVID-19 pandemic, when personnel from NORTHCOM and the National Guard distributed vaccines, ran testing centers and food banks and supported federal health efforts.

General VanHerck, I would like to know whether your command and other federal agencies have the preparations in place to manage the next pandemic outbreak or humanitarian crisis should they arise.

Turning to Southern Command, SOUTHCOM has traditionally focused on counter-narcotics and counter Transnational Criminal Organization missions. Even with limited resources, including minimal intelligence, surveillance and reconnaissance platforms, SOUTHCOM has sought to leverage non-traditional approaches, such as artificial intelligence and machine learning to serve as a testbed for new tactics and operational concepts.

The SOUTHCOM region also continues to experience a rise in political instability, including violence in Haiti, Cuba and Venezuela and security deterioration in the Northern Triangle countries of Honduras, Guatemala and El Salvador. The political and economic instability in these SOUTHCOM nations presents a situation that China, Russia and other state actors are now seeking to exploit to increase their own influence.

Short of armed conflict, a critical task of SOUTHCOM is to find ways to counter our competitors malign activities that are coercing our partners. This includes identifying and addressing sources of insecurity and vulnerabilities among our partners that our adversaries seek to exploit to gain leverage or sow division. It's also important to strengthen the resilience of U.S. partners' security forces, including by building defense, institutional capabilities that adhere to the rule of war and respect human rights.

General Richardson, I'm interested in your assessment of the threat from near-peer competitors in the SOUTHCOM area and how we might work strategically with partners in our neighborhood, such as Mexico and Colombia, to build resilience to China and Russia's malign activities.

I want to thank again our witnesses. I look forward to your testimony. As a reminder for my colleagues, there will be a closed session immediately following this hearing in Room STC 217. Let me now turn to the Ranking Member, Senator Inhofe.

INHOFE: Thank you, Mr. Chairman and welcome to our witnesses who we've known very well for a long period of time. Our attention is rightly focused on Russia's unprovoked invasion of the Ukraine and the Chinese Communist Party's constant march toward dominance in the Pacific.

General VanHerck, you are responsible for a defense of the homeland. That's the big deal as we discussed, given Putin's threats against our homeland during the Ukraine war and China's threats of a military conflict with the United States over Taiwan. I hope you'll candidly speak about your requirements. Do you have the resources you need and get in much detail, as this the place to do it.

I'm mostly concerned about the situation on the southwest border, it's situation that people have put that somehow that moved off the front page and people are not as concerned about that as we think they should be right now, that we've had the 12 straight months of 150,000 plus illegal immigrants being stopped at the border. And nothing like that ever happened before.

Last month that CBP encountered nearly 165,000 illegal immigrants at the border, which is the highest total for February in the Department of Homeland Security's history. Many of my good friends on the other side of the aisle strongly opposed President Trump when he deployed troops to assist the CBP at the border in 2018. But given the scale of the current crisis, General VanHerck, I wonder whether more border support might be necessary in the near future or currently.

General Richardson, as we discussed in my office, I'm concerned about the growing Chinese threat in your area of responsibility and its national security implications. What China is doing in SOUTHCOM reminds me of what they were doing in Africa 15 years ago. They're using predatory economic and diplomatic practices to bribe and bully countries while they set conditions to build up their military presence and limit United States access and influence.

So I hope you will explain your strategy for this very daunting task. And thank you very much for being here. Thank you, Mr. Chairman.

REED: Thank you, Senator Inhofe. Let me recognize General VanHerck for his testimony. General, please sir.

VANHERCK: Chairman Reed, Ranking Member Inhofe and distinguished members of the committee, thank you for the opportunity to appear today alongside General Richardson. It's my honor to represent the men and women of the United States Northern Command and North American Aerospace Defense Command as we defend the United States and Canada.

United States Northern Command and NORAD face the most dynamic and strategically complex environment in their respective histories. The commands face multiple simultaneous challenges from strategic competitors who have openly declared their intent to hold our homelands at risk in an effort to advance their own interests.

Today, strategic competitors, rogue nations, non-state actors possess the capability to strike institutions and critical infrastructure in the United States and Canada. Our country is already under attack every day in the information space and the cyber domain. Our competitors, especially Russia and China, are spreading disinformation, actively sowing division and internal discord with the intent to undermine the foundation of our nation, our democracy and democracies around the world.

We're seeing this play out with Russia's invasion of Ukraine. Those same competitors have invested heavily in conventional precision strike capabilities and advanced delivery platforms which Russia is currently displaying to the world. Their intent is to hold critical infrastructure in the homeland at risk below the nuclear threshold in order to disrupt and delay our ability to project power globally, while attempting to undermine our will to intervene in a regional overseas crisis.

I believe the strategic deterrent is the foundation of Homeland Defense and that it is necessary for the United States to maintain a reliable and effective nuclear triad. At the same time, I'm concerned that deterrence by cost imposition is currently overweighted and does not adequately account for the conventional capabilities our competitors have already fielded.

This over-reliance increases the risk of miscalculation and escalation because it limits our national leaders' options in crisis and in conflict. Our competitors' advanced conventional capabilities make it necessary to balance deterrence by cost imposition, with a model of deterrence by denial, an integrated deterrence that employs all elements of national influence, leverages our asymmetric advantage of our alliances and our partnerships and provides leaders with a wide range of timely deterrence options.

We must continually demonstrate to potential aggressors, that an attack on our homeland will result in failure. We do that by demonstrating homeland readiness, responsiveness and resiliency, and by displaying a range of kinetic and non-kinetic capabilities to defend the homeland.

NORTHCOM support of civil authorities, our security cooperation relationships with allies and partners, are critical to integrated deterrence as is NORAD's mission to provide warning and defend the approaches to North America.

This strategic environment is the new normal. This operating model that we assumed we could project power globally from a safe and secure homeland, has been eroding over the last decade. To provide national leaders with timely and informed options that they need to achieve favorable outcomes, NORTHCOM and NORAD and our homeland defense design are focused on four key principles that starts with all-domain awareness, from undersea to on orbit, and everywhere in between to include cyber domain.

All-domain awareness is required to achieve information dominance, which is the use of advanced capabilities, like machine learning and artificial intelligence to quickly analyze process and deliver data to decisionmakers at the speed of relevance. By doing so, we will increase senior leader decision space and enable decision superiority over our competitors.

Finally, our problems are global in all-domain and they demand globally integrated strategies, plans and actions. These principles are vital elements of our ability to execute a layered defense and integrated deterrence, and they are critical to our nation's ability to deter in competition, de-escalate in crisis and if necessary defeat in conflict.

I'll end by thanking the committee for all you've done to support our soldiers, sailors, airmen, Marines, guardians, the FY '22 NDAA and the recent passage of the FY '22 appropriations omnibus continue to advance our national defense priorities and the missions of U.S. Northern Command and NORAD.

Today's strategic environment calls for sustained, sufficient and predictable funding in order to prevail. Persistently operating under continuing resolutions over the last decade has contributed to the erosion of our nation's competitive advantage. I join my fellow commanders, the service chiefs, and the Secretary in expressing my appreciation for the resources provided in the FY '22 omnibus, and in urging the on-time passage of both the NDAA and a full year appropriations bill for FY '22 or '23, excuse me.

Again, thank you for the opportunity to appear today and I look forward to your questions.

REED: Thank you, sir. General Richardson, please, your testimony.

RICHARDSON: Chairman Reed, Ranking Member Inhofe, and distinguished members of the committee, thank you for the opportunity to appear before you alongside General VanHerck, my most important teammate in keeping the Western Hemisphere safe.

I'm honored to be here with you representing the men and women of U.S. Southern Command to discuss the challenges we share with our neighbors in this hemisphere and the opportunities that we can unlock together.

Today more than ever, America's fate is inextricably linked to events beyond our shores. This region, our shared neighborhood, is under assault from a host of trans-boundary challenges that directly threaten our own homeland. I've been in command almost five months now and the biggest eye opener for me has been the extent to which China and Russia are aggressively expanding their influence in our neighborhood.

Latin America and the Caribbean are experiencing insecurity and instability that has been greatly exacerbated by COVID-19. The People's Republic of China, our long-term strategic competitor, continues its relentless march to expand economic, diplomatic, technological, informational and military influence in Latin America and the Caribbean, and challenges U.S. influence in all these domains.

Without U.S. leadership and modest investment, negative PRC influence in this region could soon resemble the self-serving, predatory influence it now holds in Africa. Let's be clear, the PRC doesn't invest. They extract. Meanwhile, Russia, a more immediate threat, is increasing its engagements in the hemisphere as Putin looks to keep his options open and maintain relationships on our near abroad.

In January, the Russian deputy foreign minister said he could neither affirm or exclude that Russia would send military assets to Cuba and Venezuela. Just days before the Russian unprovoked invasion of Ukraine, the Russian deputy prime minister visited Nicaragua, Cuba, and Venezuela, countries that maintain close ties with Russia and offer Putin a foothold in our hemisphere.

Finally, recent visits between the presidents of Brazil and Argentina with Putin in Russia demonstrate a concerning potentially broadening of Russia ties in the region. In this hemisphere, Transnational Criminal Organizations operate nearly uncontested and blaze a trail of corruption and violence that creates a wedge and allows the PRC and Russia to exploit these countries.

They threaten citizen security, undermine public confidence in government institutions, and drive irregular migration to our homeland. These TCOs traffic opioids, cocaine, and other deadly drugs into the U.S. fueling both drug overdoses and drug-related violence.

In my initial travels to Latin America and the Caribbean, it's become obvious to me that our partners are our best defense as we work together to counter our shared threats. We must use all available levers to strengthen our partnerships with the 28 like-minded democracies in this hemisphere.

We must maximize important tools like security cooperation programs to train and equip our partner militaries, multilateral exercises to build interoperability, and the State Department's IMET, FMF, and FMS programs to educate, train, and build capacity that our partners use to stand shoulder-to-shoulder with us.

Colombia, for example, our strongest partner in the region, exports security by training other Latin American militaries to counter transnational threats. U.S. SOUTHCOM is putting integrated deterrence into action every day using innovative methods to work seamlessly in all-domains with the other combatant commands, the joint force, allies and partner nations, Congress, the U.S. interagency, NGOs, and the private sector.

Now more than ever, the U.S. must lead in this hemisphere and that requires consistent focus and a sustained investment to help build a shared neighborhood that is free, secure and prosperous for our generation and generations to come.

Thank you and I look forward to your questions.

REED: Well thank you very much General Richardson and thank you also General VanHerck.

General VanHerck, the North Korean missile activity is quite disturbing. Indeed, hours ago they launched a missile which from analysis of the flight path suggest could hit the United States. Given this behavior, what are your thoughts about the current 44 ground-based interceptors and their current capability?

VANHERCK: Mr. Chairman, I'm comfortable with where we are today based on the intelligence I have with the current capabilities and capacity of North Korea.

Going forward, I do believe that they could exceed my capacity and capabilities. That's why it's crucial to keep Next Generation Interceptor on time or early. In my discussions with Admiral Hill, he's confident right now that they're on that path.

As far as the total number of 44 interceptors, that's a policy decision, I look forward to seeing the missile defense review and the policy that it provides in guidance to me to get after the capacity and challenges that you allude to, sir.

REED: So you are at this point confident that the Next Generation Interceptor is on track for deployment. I think the plan is 20 interceptors at Fort Greely by FY2028, is that true?

VANHERCK: Chairman, that is correct. And I'm confident that it is on track for that now or slightly early based on what I've seen.

REED: Very good. You have made your input into the national defense strategy which is yet to be announced. Are you confident that your contribution it will be forwarded to us?

VANHERCK: I am confident that my input will be included. They have been very transparent in the department as they work this.

REED: Thank you very much sir. General Richardson, SOUTHCOM because of a lack of resources which as a veteran of USARSO, I can tell you has been the case for many, many decades, is now relying upon artificial intelligence and other new technologies to compensate. Could you comment upon what you're doing and how successful you are?

RICHARDSON: Absolutely, Chairman. So the advanced ISR or nontraditional ISR that we utilize, since we're not given a lot of resources, we look for other ways of being innovative and using other capabilities that either the Department of Defense has or the other services are trying to use.

And so we'll use that all different kinds of capabilities that use the AI and ML a lot with unclassified data that can rapidly sort through that data and then we use it to tip and cue what limited assets, the higher end assets that we do have to help out with our challenges in the AOR.

REED: You're working closely with the Department of Defense to essentially test some new innovative prototypes in a whole range of both air, land, and sea?

RICHARDSON: Absolutely. And we have five joint capability technology demos that we have in the AOR. And I'd like to highlight, in a permissive environment I offer that because where our adversaries maybe aren't paying as much close attention to us, we can put that to real world use in our area of operations. And then it helps me with domain awareness to find our threats, see what our threats are doing because the AOR is so big.

REED: Well, I want to thank you because I know you've been in contact with civil society groups particularly the Sisters of Mercy and this whole of government and beyond approach is necessary everywhere, but particularly in SOUTHCOM.

And in the Northern Triangle, particularly Honduras, there is a need to support the recent elected government and to begin to seriously isolating individuals who are either involved with criminal activities or other inappropriate activities and support on more vibrant constitutional order. And I thank you for that. Any comments about the situation in the Northern Triangle?

RICHARDSON: Well, first, Chairman, I've had two meetings so far with the human rights leaders and Sisters of Mercy being one of them, Human Rights Watch, and a couple of others.

And they have such an important perspective of the region, they've been traveling there for decades, they've been working in those countries for decades, and certainly taking their perspective and their insight of what they've seen over that period of time is truly valuable.

And we bake human rights into everything that we do in U.S. SOUTHCOM. I have a human rights office in SOUTHCOM. We have had that for 25 years, but it's not about having an office, it's actually what you do with that capability and how we make that a priority in everything that we do in the AOR.

REED: Thank you very much General VanHerck and General Richardson. Let me recognize Senator Inhofe, please.

INHOFE: Thank you Mr. Chairman. As I said in my opening statement, the crisis at the border is worsening considerably under the current administration.

We've had 12 straight months of over 150,000 illegal migrants which was a 63 percent increase from February 2021 and a DHS record for the month of February. And according to the internal Border Patrol estimates from January through August of '21, over 273,000 migrants avoided apprehension and entered our country illegally.

These are new records, this has not happened before. I'm deeply concerned that the crisis will soon get even worse as we discussed in my office, if the Biden Administration ends the Title 42 Border Policy in April, illegal immigration will surge even beyond the current record-setting level.

So General VanHerck, given the worsening conditions and the crisis at the southwest border, are you aware of any discussion within the administration or DHS that could result in any request for additional troops at that border?

VANHERCK: Senator Inhofe, there is a request from the Department of Homeland Security, it's in the planning stages right now of the department to provide additional capability or capacity based on the potential for additional immigration or folks coming through the southwest border.

I don't have the details of that right now and I haven't been tasked to provide any additional support to the Department of Homeland Security at this time.

INHOFE: And I understand that. But is it a reality that's in discussion? General Richardson, it's clear that SOUTHCOM continues to be under resourced despite all of the threats in your AOR and that's something that we need to take closer look at as we develop our NDAA and we'll have to do that.

China as we discussed in my office this week, I'm concerned about their growing presence in SOUTHCOM and consequences for our military. So General Richardson, what do you find most concerning about China's growing presence in your AOR and how could it undermine DOD's ability to operate in these years to come?

RICHARDSON: So thank you Senator. And my concern regarding China and the region is just the access and presence that they have and they've been able to create partly due to the COVID-19 pandemic and the economic rollbacks that this has had in the region.

So eight percent of the world's population is in SOUTHCOM AOR, 33 percent of the world's COVID deaths were suffered. So they've had a hard time with that. Economy has contracted eight percent, plunging 22 percent of the population into poverty.

And so when these 28 like-minded democracies in this region, out of 31, are trying to deliver for their people, it's hard. And when China has the Belt and Road initiative, 21 of the 31 countries in this region have signed up and are signatories to that BRI. They need to show that they're delivering for their populations and infrastructure projects is probably the best way that with the BRI that shows progress. But as we know, the work is not done to standard.

A lot of times it leaves these countries with even more debt than when they started. A highway in Jamaica, Jamaica now has six loans as a result of this, they lost 1,200 acres of land and, oh by the way, the highway has a toll on it that most Jamaican's can't even drive on.

The Chinese don't bring in and don't hire host nation workers, they bring in Chinese laborers. So they don't invest. It looks like they're investing, all they do is they take, they extract, and they have strings tied to what they offer.

INHOFE: Yes. You and I talked about this in the office. It's so similar to what the Chinese have been doing now for about 15 years in Africa, and no surprises here.

But I think it's important we get into the record what is happening now because it's happening in your AOR. Something that you didn't anticipate, none of us anticipated the gravity of that situation. I'm glad you're there at the helm. Thank you.

RICHARDSON: Senator, what I would like to mention or my two greatest concern strategically and that's with the Panama Canal.

The projects that Chinese have around the Panama Canal which is a strategic line of communication that we want to keep free and open for the global economy, but also for our global war plans. Also the Straits of Magellan down around the tip of the southern cone from Argentina and the presence of China and projects and things like that. And so that's what bothers me most are those two strategic global lines of communication areas that the Chinese have projects in and around those areas.

INHOFE: So with everything that's going on now, I think it's important that we and you, particularly, need to keep reminding us of that because that's something that people are just not aware of. But Thank you Mr. Chairman.

REED: Thank you very much Senator Inhofe. Let me recognize Senator Gillibrand please.

GILLIBRAND: Thank you Mr. Chairman. General Richardson, just to continue the line of questioning that Senator Inhofe started. Given the investments that China's making regardless of how extractive they are, what do you think our best response is?

And in particular, can you talk a little bit about how we're engaging with elected governments in the region to counter authoritarian actors? Are we collaborating with agencies and other institutions, with partner countries like judiciaries, legislators, NGOs to support human rights and democracy?

And further, I do want to get a sense of China's also adopted a partner force training model that is of some concern to me and I'd like you to assess how effective is China's partner force training in those countries that participate and how do we ensure these relationships are not enduring?

RICHARDSON: So the way I look at it, Senator, is in terms of our partnerships the U.S. has partners, China has clients. They don't have the partners and our partner nations in the SOUTHCOM AOR want to partner with us.

I go to these countries, I have visited Colombia, Brazil, Jamaica, Belize where I got to visit with leaders from seven Central American countries, Honduras. And you look in their eyes and they want to partner with us and they're having a hard time delivering for their population.

I will tell you though that the PRC is using our playbook in terms of how I do security cooperation in the other combatant commands, the train and equip, the partnering, the exercises. The Chinese don't have exercise like we do. When we have exercises, the U.S. bring 19, 21, 29 different countries together. As I said, they want to partner with us and we have partners.

A great relationship with the interagency and Department of State in the AOR I'd like to highlight. I have my deputy who is a former ambassador for El Salvador sitting behind me, Jean Manes. And I will tell you, we're so lucky to have an ambassador for the Department of State who can help bridge and communicate and help us work more collaboratively with our chiefs of mission in the AOR.

We have 12 more to go for ambassadors to fill those very important seats and eight have been nominated. So thank you for your support in getting those ambassadors in there as quickly as possible.

GILLIBRAND: And then just one final question before I move on to General VanHerck, SOUTHCOM has played an important role in humanitarian operations, especially in nations like Haiti where U.S. support was needed not only after the natural disaster but after the political crisis.

Can you explain how you foresee any changes to SOUTHCOM's posture to continue providing humanitarian assistance, especially as climate and other issues continue to increase migration?

RICHARDSON: We'll continue to watch this AOR, Haiti, all of the challenges that we have in this AOR that are ongoing. And work very closely for a whole of government, a democratic solution to instability and insecurity in the region.

We take that very seriously. We bake in, as I said before, human rights, the rule of law, everything that we do in our security cooperation programs. Everything that I do, my main lever because I don't get assigned forces in SOUTHCOM, I get very limited gif map resources that are assigned to me as well. So I really rely on that 333 security and cooperation funding to work with these partner nations, to help them increase the capacity and capability of their militaries or their defense forces.

GILLIBRAND: That's helpful General. Thank you. General VanHerck, China has attempted to establish a foothold in the Arctic through economic relationships with smaller Arctic states like Iceland, Denmark, Sweden, and Finland that grant China access to their vital natural resources.

This strategy is coupled with an increase in China's Arctic capabilities to create something like a polar silk road. Do you see these relationships as leading to an eventual movement of Chinese military assets into the region? And then further, New York Air National Guard conducts several unique missions in support of our scientific missions with the National Scientific Foundation in the Arctic. Can you speak to the importance of our scientific missions in the Arctic and how it supports our overall strategic goals when it comes to that region?

VANHERCK: Thanks. First Senator, absolutely the Chinese are active in the Arctic. Each of the last five years they've sent a vessel under the guise of resource vessel into the Arctic, for military purposes we assess as well. And so they are there. They're influencing nations, they want to change and influence international norms and behavior as well. I would also point out Senator that the Arctic is a strategic location and being able to operate persistently in the Arctic is something that we need to do. So the research that you're talking about is crucial and the investments.

Finally, I understand my time is up. But they're not only active in the Arctic, they're active in the Bahamas, they're active in Mexico as well and I would point that out. Thank you.

REED: Thank you Senator Gillibrand. Thank you. Senator Wicker, please.

WICKER: General VanHerck, let's keep talking about the Arctic then. During your posture hearing last year, I asked you about the Coast Guard's authorization to build six new icebreakers.

And I appreciated your response in support of these ships. But as we all know, they cannot operate in the high north without fuel and supplies. Currently the farthest north deepwater port we have is Dutch Harbor. On the other hand, Nome, Alaska nearly 800 miles north of Dutch Harbor has been granted money to dredge and develop a port in order to provide services to deep draft ships. How would additional icebreakers and the development of the port in Nome enable NORTHCOM to accomplish your mission in the Arctic?

VANHERCK: Thanks Senator. First, the six icebreakers that are on plan for the Coast Guard are crucial to enabling persistence to operate within the Arctic.

Persistence is also enabled by having a fuel capability further north than currently in Dutch Harbor in Nome as you alluded to. That allows either the Coast Guard through their cutters or their icebreakers or Navy vessels to remain more persistent. That's strategically important to that location.

I would like to clarify one thing, the Infrastructure and Jobs Act that was just passed provided about \$250 million for the Port of Nome. The dredging portion of that is not currently funded and it would require that dredging from a 30-foot depth to 40-foot for these vessels that we're talking about to get in there. We're going to work closely to make sure we can get that additional funding for that persistence I need.

WICKER: So, the additional funding is not adequate unless we get the dredging done.

VANHERCK: It is certainly adequate for commercial operations, benefit for the local communities, indigenous people in Alaska, absolutely. For military use, we have to get the additional dredging, that's correct.

WICKER: Okay. Let me switch to General Richardson. The Navy Small Craft Instruction and Technical Training School, NAVSCIATTS, provides training to partner nations from every combatant command. To date, the school has trained over 13,000 students from more than 120 partner nations.

What's the importance of keeping NAVSCIATTS? What are the potential risks in terms of international support and partnerships? Should its capacity be reduced?

RICHARDSON: Well, thank you for the question, Senator, because NAVSCIATTS is a force multiplier and it's for all of our nations. As you said, 123 partner nations utilize this school, over 13,000 trained.

This school has been open for 52 years and quite honestly, what it does low level, it's pennies to operate. You talk about a low cost, high return on investment, this is it. And quite honestly, if you think about it, the U.S. Navy has big ships. Other nations, there are very few other nations that have really big vessels. And most of the other navies and coast guards from the other partner nation militaries as well as the coast guards have smaller vessels.

You talk about the Amazon, they don't have highways, they have rivers and they need the training. They need their smaller vessels to get this training and it's absolutely critical to our security cooperation and helping build our defense forces and our militaries and naval maritime operations.

WICKER: Good. I do appreciate that. Let me follow up on an engagement that that Senator Inhofe and Senator Gillibrand had with you. I think the discussion with Senator Inhofe was like-minded democracies in SOUTHCOM working with us. Senator Gillibrand asked about engaging with elected governments.

Let me just mention that the Organization of American States is based here in Washington D.C., is the only multilateral organization that includes every country in the western hemisphere except for Cuba. And I would point out to my colleagues that in 2020, President Trump signed into law the Organization of American States Legislative Engagement Act.

Senator Cardin and I were leaders in this effort just as we have tried to enhance our participation with European parliamentarians both in and out of majorities in government in Europe through the OSCE. Do you agree that moving to a parliamentary assembly as the Trump law anticipates would be a positive and could promote cooperation in a variety of government and security issues?

RICHARDSON: Senator, I think that increased engagement in this AOR can be nothing but good. I can only cover so much. Our Department of State can over only cover so much.

And with a program, a strategy, a focus on this area, as I said in my opening statement, can only be more goodness because out of 31 countries and 16 dependencies in the Caribbean, it's a lot of ground to cover. And I would certainly welcome the focus and the attention.

WICKER: Thank you.

Thank you, Mr. Chairman.

REED: Thank you, Senator Wicker.

And now, since a quorum is present, I ask the committee to consider a list of 2,766 pending military nominations. All of these nominations have been before the committee the required length of time. Is there a motion to favorably report this list of 2,766 pending military nominations to the Senate?

(UNKNOWN): I so motion.

REED: Is there a second?

(UNKNOWN): Second.

REED: All in favor say aye. Thank you very much. The motion carries.

And let me recognize Senator Kaine and thank Senator Tillis for staying with us.

KAINE: Thank you. Mr. Chair and thanks to our witnesses for your service.

General Richardson, I want to echo a point that Senator Inhofe made, I continue to believe that SOUTHCOM is really under-resourced. You've talked about the value of the security cooperation program. Describe the kinds of activities that you engage with our regional partners and through the security cooperation program.

RICHARDSON: So, we have a myriad of things that we do in terms of the training and the equipping. We do things from small teams, 8 to 13-man teams. We do it in all the domains, special ops included, cyber, information ops.

We do big exercises as I mentioned before, PANAMAX, which is really a defense of the Panama Canal exercise, 29 countries from this AOR participate in that with us. We have Tradewinds, that's been a name that's been around for decades and that's a security operation in a contested environment that we train to, that will bring 21 countries together.

My components, my Navy component will do UNITAS this year; Brazil will host that. That will bring 19 countries together. And when you see the picture of UNITAS, of all the different vessels, the ships and vessels from the other countries and the navies and the coast guards, it's just really impressive.

KAINE: And, General Richardson, just to give the committee kind of a magnitude, you have nearly 30 countries in your AOR. I believe Admiral Faller last year testified that the total security cooperation budget for SOUTHCOM to do the activities you described with that many nations is \$120 million. So, that's sort of what we're talking about, right?

RICHARDSON: That's correct, Senator. And I know that seems like a lot of money, but when I don't have assigned forces and gif map capabilities and that's my main lever for engaging with the partner nations, that's really a low cost, high return on investment.

KAINE: Let me ask about another program, the IMET program, International Military Education Training program, that's another -- security cooperation tends to be in the AOR, but IMET, we bring leaders from SOUTHCOM militaries, nations to the United States for training, that has also very small budget but describe to the committee the value of the IMET program in SOUTHCOM.

RICHARDSON: That's huge. That's the professional military education. That's where they get to come, for example, to our War College which is at the lieutenant colonel level.

Right now, I have 17 chiefs of defense and six ministers of defense that have been to school in the United States. They know that they get the best education and training when they come here. They want to come here. And what we try to work with at \$13 million annually is to have sustained consistent personnel from their militaries attending our professional military education.

KAINE: Well, these are both relatively small investments in SOUTHCOM, a region without assigned forces as General Richardson says, and I'm just going to suggest to my Committee colleagues watch this space. I think there's going to be a budget submitted to us very soon and look at the dollars in these two accounts to SOUTHCOM.

I have a grave concern that challenges elsewhere in the world are going to take these de minimis investments and shrink them even more. And if that's the case I'm going to be advocating strongly that we don't do less but we do more in the region.

My understanding, General Richardson, is also with respect to cyber assets, I know nations like Colombia are dealing with a lot of cyber attacks and misinformation from actors in Venezuela and elsewhere. They get particularly active around elections. There are many elections that are happening in the region this year.

U.S. Cyber Command has so much on them. I understand in SOUTHCOM, your cyber assets are pretty limited. You're making good use of a state partnership program with the South Carolina Guard, good on them and good on you for using them in an effective way. But I understand that Cyber Command does not have many assets that it can currently allow to be used in SOUTHCOM, am I right about that?

RICHARDSON: That's correct, Senator. They have more higher priorities looking towards Europe and then also in the INDOPACOM region. And so, it -- and I'd just like to highlight and thank all the Senators for the support of this National Guard State Partnership Program which is a huge force multiplier for SOUTHCOM.

KAINE: We are not paying attention to this region. We're not paying attention to them on diplomatic circles. We're not we're not paying sufficient attention to them in terms of vaccine distribution. And we're not paying attention to them in the military area. But other nations especially China are paying a lot of attention and I think we should do better.

I want to thank you for your testimony.

REED: I want to thank you, Senator Kaine. And let me now recognize Senator Fischer, please.

FISCHER: Thank you, Mr. Chairman.

General Richardson, General VanHerck, thank you so much for being here today.

General VanHerck, in your prepared testimony's discussion of hypersonic threats, you state quote, "the impact is the loss of critical decision space for national level decision makers regarding continuity of government and the preservation of retaliatory capabilities, resulting in an increase in the potential for strategic deterrence failure," end quote.

You make a similar assessment of cruise missile threats saying quote, "additionally, these advanced cruise missiles and their supporting platforms will limit national leadership decision space and my ability to provide threat warning and attack assessment which directly influences my ability to support continuity of government operations and provide support to STRATCOM missions, again, the potential consequence is an increased risk of strategic deterrence failure."

Can you elaborate, please, on what you mean about the threat to continuity of government and the risk of deterrence failure?

VANHERCK: Senator, sure. So, one of my biggest challenges is domain awareness, and hypersonics and cruise missiles significantly challenge my ability to conduct my NORAD mission of providing threat warning and attack assessment, what you can't see and what you can't deter and you can't defend from and they will significantly challenge me.

Why I primarily do that is exactly to support continuity of government and the survivable of our nuclear posture, our nuclear forces as well. And when you can't do that, then you have to make some assumptions, that those threats might be nuclear threats that will be inbound and that increases the risk of miscalculation and also the risk of strategic deterrence failure.

So, that's my number one priority is to gain that domain awareness so I can provide that threat warning and attack assessment. I'm currently not tasked to defend against hypersonics. I look forward to seeing the missile defense review. I am tasked to defend against cruise missiles and that's a very tough mission for me right now without domain awareness.

FISCHER: Thank you. You mentioned NORAD, could you update us on our partnership with the Canadians there, please?

VANHERCK: The Canadians are an outstanding ally. Militarily, I have hundreds of them working for us at the headquarters at NORAD, my combined headquarters. I've met multiple times the chief of the defense staff, my boss on the NORAD side is coming to visit me next week as well. Minister Anand, I've met with her in person as well in Canada, great allies.

Canada is in the decision-making process to support NORAD modernization. I look forward to seeing where they go with NORAD modernization. I think the world requires us to think hard about modernizing the forces to operate across the entire AOR for NORAD which includes the Arctic and the infrastructure and the communication capabilities as well. And so, I look forward to seeing what they come up with.

FISCHER: Thank you. We saw this morning that North Korea did another long-range missile test to demonstrate that their ballistic missile capabilities continue to grow and that the threat to the homeland I believe is continuing to increase. With this in mind, is it your view that Next Generation Interceptor, the NGI, needs to be fielded as soon as possible?

VANHERCK: Absolutely, Senator. As soon as we can get that here, I'm confident the contract mechanism rewards fielding it faster and I'm glad it's on track right now.

FISCHER: To be clear on this, when you say it's on track right now, so to be clear on this, do you think delaying the schedule or changing the requirements would put us at a serious risk of being unable to pace ballistic missile threats to our homeland?

VANHERCK: Senator, I'm very concerned about my ability to pace the capacity of production that we assess and the capability that we assess the North Koreans continue to adapt to. That's why the funding for the service life extension program for the current ballistic missile defense capability is so crucial, thank you for that funding. And that's why Next Generation Interceptor is crucial as well, because it will help both get after the additional capacity problems and the capability problems.

FISCHER: Thank you. General Richardson, in the time we have remaining, can you talk about the role that you see that China and Russia are playing in your AOR and specifically how do we improve the relations we have, the quality of our engagements to better compete. I know we're friends and they're clients, viewed as clients, but can you be more specific on what needs to be done?

RICHARDSON: The way I'm on the field, I don't need to outspend China to out-compete them, but I do need my security cooperation funding, that triple three funding, to do security cooperation to help build the capacity and capability within those militaries and defense forces which helps them secure their borders, which helps them with internal security in their country and then also be exporters of training to other Latin American countries, and then in peacekeeping operations around the world, too.

FISCHER: Thank you. Thank you, Mr. Chairman.

REED: Thank you, Senator Fischer. Senator King, please?

KING: Thank you, Mr. Chairman. With regard to NORTHCOM, EUCOM and PACOM, my concern is that in a moment of crisis is a question of who's in charge. Are you satisfied with the coordination level between the three combatant commands and the Canadians in case of some kind of crisis in the in the Arctic?

VANHERCK: Senator, I'm comfortable with the way the unified campaign plan is currently laid out. We have outstanding relationships with Canada, outstanding relationships with EUCOM and INDOPACOM. I do think we need to look at based on threat changes, how we would command and control those capabilities.

So, for example, the threats to the homeland today do not reside in my area of responsibility. They are actually existing in other areas of responsibility such as the INDOPACOM area of responsibility, and the EUCOM area of responsibility. So, I do think there's potential gaps and seams that we need to make sure that we close those in a time of crisis and conflict to ensure we don't have challenges that were unaccounted for.

KING: That's exactly my question. And I hope that there will be work actively done to close those gaps and seams because we don't want to be working on that in the middle of a crisis. We want the structure to be on the shelf ready to operationalize. Can the current missile defense system that we have defend us against hypersonics?

VANHERCK: Senator, I'm not tasked to defend against them, but no, it can't because we don't have the domain awareness at this time.

KING: We don't have the domain awareness. We also don't have the technology to deal. So, I think that's important to understand that we do have missile defense, it's important for ballistic missiles, but it will not suffice when it comes to -- when it comes to hypersonics.

General Richardson, could you estimate what percentage of worldwide ISR resources we have to utilize in the in SOUTHCOM AOR?

RICHARDSON: So, Senator, I get about one percent or a little bit less than one percent of the global ISR.

KING: I was going to -- that's what I was afraid you were going to say. And, frankly, I just can't believe that because we're talking -- America is under attack. The principal attack on America right now is drugs, 300 people a day, that's one 9/11 every two weeks, two people in my state every day are dying of overdoses.

And yet, we're treating it as if it's some kind of domestic problem or a law enforcement problem. This is an attack and the fact that you have one percent of the ISR to keep track of this threat to me is a gross misallocation of resources. I realize it's not your responsibility.

But I guess my next question is why, in your opinion, are we so short of ISR if this is -- if we need it in a particular area, why don't we build more Global Hawks? I just don't understand why this is not something that we can't budget for and deal with.

RICHARDSON: So, Senator, I and all my fellow combatant commanders as well, we'll always say that we don't have enough to see and be able to see the threats in our AOR.

KING: Well, the budget ought to reflect that fact so that we could fill that gap. I mean, that's a pretty straightforward sort of mathematical question.

RICHARDSON: Well, and I certainly appreciate Congress always gives me a little extra funding for ISR and so, we have some contracted operated contractor-owned assets for airplanes that actually help me with ISR in the region, be able to look for threats and look for counter-narcotics illicit trafficking.

KING: Let me ask -- let me ask you the same question that I asked General VanHerck and that is, one of my principles of management is that you always want to have one throat to choke. Who's in charge of the anti-drug activities in Latin America? Who's in charge?

RICHARDSON: So, Senator, I am in charge for detection and monitoring and that is to get actionable information about illicit drug trafficking either by air or maritime.

KING: Who's in charge of interdiction?

RICHARDSON: And for interdiction that would be DHS and our law enforcement agencies.

KING: But there's no one individual who can be held responsible for the overall dealing with this issue, is that correct?

RICHARDSON: I would say that that would be our Department of Homeland Security, Senator.

KING: Well, I think that's something we have to -- we have to strengthen and clarify. I'm not going to pursue this, but for the record I would hope you would give us more detail on what you mentioned just earlier about the Panama Canal and Chinese activity, I understand at either end of the Panama Canal as well as the Strait of Magellan. I think that's a very, very serious matter and would like to have more detail. Thank you.

Thank you, Mr. Chairman.

REED: Thank you, Senator King. Senator Cotton, please?

COTTON: General Richardson, I'll give you a chance to talk in a little bit more detail about the Panama Canal because I was troubled by the brief comments you had to Senator Inhofe of all the things you've described that China is doing in your area of responsibility. I think the strategic investments it's made along the Panama Canal is most striking.

I know that this is primarily a State Department and Treasury matter, but can you tell us a little bit more about what's going on around the canal and how SOUTHCOM plays into the interagency efforts to counter the threat and what else you'd like to see from the U.S. government to do so?

RICHARDSON: Thank you for the question, Senator. We work very closely with Panama. And our Corps of Engineers just was able to negotiate a water tender contract with Panama which I think is huge because it's been 15 years in the making.

And so, we have a lot of ground to make up with Panama, but in terms of the investment, China and the strategic investments that they make, just like the Panama Canal when you enter and exit and on either side you have Chinese state-owned enterprises.

And what I worry about Chinese state-owned enterprises that have capability and infrastructure there is that they're used -- they can be used for dual use, which means civilian but also military.

And quite honestly, if you just look at where the port projects are, 29 port projects in the AOR in 17 countries. I mean, these are very methodically thought out, in my opinion, and again, I worry about the access that they get in there under the guise of infrastructure and looking like they're helping economies when they're really not, as well as the resources that are in this AOR.

It's just off the charts. I've got 60 percent of the world's lithium in the Lithium Triangle in South America, that's in Argentina, Bolivia, and Chile. You've got 31 percent of the world's fresh water. You have the Amazon.

You have the oil reserves in Venezuela, the light sweet crude that was discovered off the shores of Guyana. There are a lot of resources in this region and, again, I go back to the -- it's not an investment by our competitors, it's there to extract in some way shape or form.

COTTON: What do you think China is up to there, in all those investments around the canal? Is it more about advancing their own interests or holding at risk and threatening ours?

RICHARDSON: I think it's both.

COTTON: I mean, we depend on the canal more because of our geography than does China, right?

RICHARDSON: I would say that the -- I would say yes, but the Panama Canal as well as the Strait of Magellan in my AOR, those two very strategic global lines of communication, must remain open.

COTTON: I agree. I mean should we ever have a conflict with China the decisive effort would be somewhere in the Western Pacific not in the Caribbean Basin or the Eastern Pacific. And it's the very essence of strategy to try to force your adversary to defend what he has no choice but to defend far removed from the theater of decision, which is one reason I'm so worried about these investments around the canal.

The Panama Canal Treaty was actually two treaties, one of them was the Neutrality Treaty. We retained under that Neutrality Treaty the uncontested right to ensure the neutral operation of the canal, correct?

RICHARDSON: That's correct, Senator.

COTTON: Good. One other area I wanted to discuss was agriculture. I know this is somewhat removed from the Department of Defense's lane, but as we've heard you have no assigned forces.

And a lot of what you do is with interagency partners and looking at non-military non-traditional ways to cooperate. Sometimes people overlook the importance of agriculture. I don't think China overlooks it if you consider their investments in South America, especially targeting crops like soybeans.

I think this economic investment seems to be aimed at creating alternative markets for them to buy as well as to crowd out our exports. Fortunately for us, Brazil's soybean crop didn't compare so well to ours, especially in Arkansas.

Can you give me your thoughts on how you can work with agencies like AID and the trade representative to dissuade countries in your area of responsibility from continuing down the path of further economic entanglement with China in the agriculture domain?

RICHARDSON: So, Senator, we work very closely as I mentioned before regarding the folks that we have that work in the western hemisphere. And so, we have a very close working relationship with USAID.

And I've met with Director Powers previously and then she travels the region as well, but none of us have the resources. And so, I think that that helps us work together more collaboratively across all of the interagency and work so close together to figure out how we can invest in this region.

But I'd also like to highlight that China gets 36 percent of its food source from this AOR as well. And so, the AOR just has a lot of resources that are being eyed by our competitors.

COTTON: Yes. They are. And I think this is going to be a matter of growing importance this year given the war in Ukraine and how much grain Ukraine and Russia provide to the rest of the world as well as how many inputs they provide into fertilizer or other agricultural inputs, not only in increasing prices on our grocery shelves here in America but also threats to stability in your region and in Africa, in the Middle East and places that have pretty fragile governments and very limited food supplies.

Thank you.

REED: Thank you, Senator Cotton.

Senator Blumenthal, please?

BLUMENTHAL: Thanks, Mr. Chairman. Thank you both for your service. Thanks for being here today. This morning, President Biden announced that the United States will welcome 100,000 Ukrainian refugees who are fleeing an absolutely intolerable situation in Ukraine.

I recently visited the border of Ukraine and Poland with a number of colleagues, bipartisan trip and saw the women and children. They are almost all women and children fleeing the horror and terror that Putin has caused to their country.

And they'll come here through a variety of legal pathways and likely follow the same general program as the Afghan refugees did. I continue to call on the administration to enable more of our at-risk Afghan allies to escape the Taliban. They have targets on their backs. They helped Americans, our troops our diplomats while we were there. And they are under dire threat from the Taliban, but I also applaud the President for his effort to welcome Ukrainians into the United States and there's much more to be done.

The 3.5 million refugees who have already fled Ukraine and the 10 million more internally displaced have added to an already burgeoning refugee and humanitarian crisis around the globe. Literally, last year 26 million refugees -- 26 million refugees were displaced from areas as diverse as Syria, Venezuela, Afghanistan, South Sudan, Myanmar and other countries.

And these refugees represent a threat as well as an opportunity, literally an opportunity because they have a great deal of talent and skills and potential for contributing to the countries that they may be moving to, but also a threat in so far as the failure to aid them will lead to potential terrorism and other adverse activity.

I've seen the tremendous support that NORTHCOM provided to operation Allies Welcome over the last year in finding capacity on U.S. bases and efficiently housing and processing Afghan refugees fleeing the Taliban.

And I hope that NORTHCOM will play a role as well in welcoming and resettling the Ukrainian refugees. General VanHerck, have you been given instructions on the role for NORTHCOM with respect to Ukrainian refugees?

VANHERCK: Senator, I'm aware of the President's announcement. I do not have any direct mission tasks to plan for that yet, as we did with operation Allies Welcome, we stand ready if directed by the Secretary of Defense to do that.

It was an honor to support nearly 74,000 Afghans as we process them through eight installations from DOD. And so once -- if directed, we'll move out, Senator.

BLUMENTHAL: Are there lessons that we should learn from the OAW experience with the Afghan refugee?

VANHERCK: There are absolutely lessons that we've incorporated that we learned during Allies Welcome that I'm sure would make us better prepared if we had to stand up to do this mission again.

BLUMENTHAL: What kinds of lessons?

VANHERCK: Interagency coordination, lessons to make more efficient use of data and information, the ability to track, categorize whether it be medical, whether it be security screening, all of these things were worked closely. And we're in a much better place today than we were when we started last July.

BLUMENTHAL: Well, I was tremendously impressed when I visited Quantico, which is only one of those eight with the enthusiasm and dedication of the Marines who were involved at Quantico in welcoming and aiding the refugees there.

Most of them had never served in either Afghanistan or Iraq. For them this was their deployment so to speak, and they loved doing it and they provided a real American welcome to these new Americans.

And I think that we can all be proud of the work that was done by our military at those bases in providing that first American experience to the Afghan refugees. And I hope the same is done with respect to Ukrainian refugees.

Thank you.

REED: Thank you, Senator Blumenthal. Senator Rounds, please?

ROUNDS: Thank you, Mr. Chairman. Let me begin by thanking both of you for your service to our country. I'd like to begin with General VanHerck. With regards to your mission and your role in keeping our country safe, could you share with us what the activities at our southern border and the challenges that we face on our southern border right now with regard to Transnational Criminal Organizations, violent extremist organizations, and so forth and the porousness of that border right now. Can you share with us what the impact is that that might have on your responsibilities and role?

VANHERCK: Senator, currently, I'm in direct support of the Department of Homeland Security, providing about 2,450 National Guards troops on Title X status. What they're doing is detection and monitoring, intel analysis, and aviation support.

We're really treating the symptoms, counter-narcotics, migration, human trafficking those kinds of things are symptoms, in my mind, of a broader problem and that's Transnational Criminal Organizations who created an environment that's not conducive to raising a family for economic success.

And we see that happening right on our border in Mexico. My concern with that, Senator, is the instability it creates, the opportunity it creates for actors such as China, Russia, and others who might have nefarious activities on their mind to seek access and influence in our AOR from a national security perspective.

ROUNDS: Do you see evidence of that at this time?

VANHERCK: There are actors who are very aggressive and active all across the NORTHCOM AOR to include in the Bahamas and Mexico, China, and Russia. I would point out that the largest portion of GRU members in the world is in Mexico right now. Those are Russian intelligence personnel. And they keep an eye very closely on their opportunities to have influence on U.S. opportunities and access.

ROUNDS: General Richardson, this is your AOR. Would you concur with the General's assessment?

RICHARDSON: Yes, Senator.

ROUNDS: Does that impact your ability to do your role or how does that impact your ability to, to complete your assignments there?

RICHARDSON: So, we work very closely with our partner nations, and as I've said how important the lever is for security cooperation, for us to be on the field, to have our jersey on, have our number and work shoulder to shoulder with our partners. They really want to work with us and everything that, all the levers that I have that you all provide and that I get from the Department of Defense, the Department of State, go into action.

A little goes a long way in this AOR. Again, I don't need to out-compete my competitors but the -- or out-spend them to out-compete them, but we do have to be present and we do have to be there with them.

ROUNDS: Today, we fight war or at least we have to be able to defend against war that comes from multiple domains -- air, land, and sea, space, and cyber space. I understand that right now with regard to cyber capabilities, there's a limit to the number that we have.

General Richardson, can you share with us the challenges you face in terms of being able to meet your responsibilities with the limited cyber capabilities or cyber defense capabilities that we have?

RICHARDSON: So, the -- we do our best in terms of the small teams, the subject matter exchanges -- subject matter expert exchanges that we do with our partner nations, we'll go with like a cyber-assessment team to help with an assessment of their network, maybe 13 -man team that works with the partner nation.

We work over the shoulder. We cannot. We can provide direction and subject matter expertise, but we can't get on the keyboards with them and go to work with them.

ROUNDS: Well, let me ask this in a different way. If in order to do your mission, are you able to receive the number and types of cyber mission teams that you request?

RICHARDSON: We're able to do that through our National Guard State Partnership Program. Cyber Comm does not have the full capacity and capability to support all the combatant commands. And I'm not a priority AOR. And as we see the EUCOM and INDOPACOM are the, right now, the two priorities. And so, I...

ROUNDS: Demand exceeds supply then.

RICHARDSON: That's correct.

ROUNDS: Thank you.

General VanHerck, with regards to all-domain awareness can you very briefly describe to us just how critical cyber is and the challenges that you face in getting the resources that you need?

VANHERCK: Senator, cyber domain awareness is absolutely critical. The vast majority of the key critical infrastructure in the United States of America and Canada for that matter, exists in the private sector. Today, I'm very comfortable where we are with General Nakasone and his teams on the DODIN of the Department of Defense Infrastructure, CISA with other federal networks.

But domain awareness outside of that is relatively an unknown. Many of those municipalities -- companies, their reporting is all we get. And so they actually are voluntarily playing. And so from a domain awareness perspective, we don't know exactly what we don't know.

ROUNDS: Thank you my time has expired.

Thank you, Mr. Chairman.

REED: Thank you, Senator Rounds.

Senator Sullivan, please?

SULLIVAN: Thank you, Mr. Chairman. I want to thank both the witnesses. I think you both are doing an exceptional job in an important AOR that don't always get the attention that they deserve. General VanHerck, I appreciate our meeting the other day.

I want to talk a little bit more and follow up on the discussion about the provision that Senator King and I co-sponsored in the NDAA on the Arctic Security Initiative. You're already hearing here in this hearing a number of senators -- bipartisan group of senators are very focused on that.

As you know, it authorizes the SecDef to establish an Arctic Security Initiative, which is modeled on the Pacific Deterrence Initiative and the European Deterrence Initiative, essentially initiatives from this committee where we have thought the Pentagon wasn't focusing enough on critical regions.

And I think both of them -- PDI and EDI have been quite prophetic saying, hey, Pentagon, focus, Europe, Asia, Taiwan and now the Arctic. Can you please provide a status on the update regarding the assessment, any conclusions you've drawn as you know the Arctic Security Initiative that was passed into law directs you, the NORTHCOM Commander, not OSD to complete an independent security assessment of the Arctic?

VANHERCK: Senator, we're in progress with the assessment. What I commit to you is you will get an honest candid assessment from me. I will coordinate that across the Department. I expect to have my portion of it complete within the next few weeks then the coordination will begin.

The suspense is here in the very near future. I'm likely going to ask for an extension. I believe it's crucial to not do this fast but to do it right. And I hope to have it done by early summer at the latest. I would point...

SULLIVAN: And...

VANHERCK: ... point out real quick if you don't mind that I look forward to seeing what the budget comes out with next week with regards to Arctic for inclusion into my assessment.

SULLIVAN: Are there any things that you can highlight already right now with this committee in terms of your assessment?

VANHERCK: Senator, without seeing the '23 budget, I really can't give you a full assessment of what we're going to see for infrastructure support. I believe we will see additional domain awareness capabilities, significantly funded with the '23 budget. But I look forward to seeing that.

I would assess that there may still be some work to do with regards to the strategies that each of the services have funded or are not funded but put out and the Department strategy. But when the budget comes out, I'll give you the final assessment.

SULLIVAN: Let me ask specifically on that when Secretary Austin was here for his confirmation hearing. I asked if he would commit to work with this committee to ensure the Arctic strategies from the different services are fully resourced.

And he said, quote, "You have my commitment to do that." That's what he told the committee. Do you believe funding for the Arctic Security Initiative in a similar manner that has been done for PDI and EDI is critical to our integrated deterrence efforts in the Arctic? And are -- and are you seeing that funding? Now, I'm not talking about the upcoming budget, I'm talking about what you've seen in the last year?

VANHERCK: To answer the last question we have not seen the funding that I would like to see with regards to the Arctic.

SULLIVAN: So the strategies are coming together. I think they're all coming together well. They're serious. That's a big change from a couple years ago. But you're not seeing the funding as of yet.

VANHERCK: In the past -- that's correct, Senator. I look forward to seeing the 23 budget. The Arctic is strategic in nature. We must be persistent there to compete. That's a part of the integrated deterrence that you mentioned as well.

SULLIVAN: So just for the Pentagon folks watching, it's not just forces, but as Senator Wicker talked about it's infrastructure. I know that it gives some people neuralgia in the Pentagon when we talk about strategic Arctic ports, but that's what we need, isn't it, General? The capability to have presence in a strategic region where one of the most brutal dictators in the world Vladimir Putin has said he's going to own the Arctic, he's going to create the new Suez Canal in the Northern Sea route, and he's going to dominate it. Don't we need a presence ourselves to push back on this dictator in that region of the world?

VANHERCK: We do. We do need a presence. And fuel north of Dutch harbor would do that, as would infrastructure and communications capabilities. I look forward to working with the Canadians on their part of this. They need to be part of it as well, not only the Department of Defense, especially on the infrastructure piece.

SULLIVAN: Well, just a final point, Mr. Chairman, I think this committee has been very strong on this over the last several years in a bipartisan way. And I think the Pentagon needs to wake up. They need to wake up and recognize this is a strategic interest for our nation, and the signal that's coming from the Congress couldn't be more clear. Just like with the European Deterrence Initiative, the Pacific Deterrence Initiative, this Arctic Security Initiative falls in that line. And I look forward to working with you and this committee on your assessment and seeing it soon. Thank you.

REED: Thank you, Senator Sullivan.

And Senator Peters, please.

PETERS: Thank you, Mr. Chairman. And I couldn't agree more with Senator Sullivan on the strategic importance of the Arctic and investments in the Arctic, and I think it is a consensus with members of this committee in a bipartisan way that we need to be focused on that. I had some questions related to that. Senator Sullivan did a great job of addressing some of the questions that that.

But maybe just pick up one thing with you, General Herrick is that the National Guard Bureau, to what extent are you working with them to ensure that they're ready to conduct some cold weather operations in that region?

VANHERCK: We work with all the services including the National Guard Bureau to do that. Actually I'm highly reliant on the National Guard Bureau to execute my day-to-day campaign plan in a voluntary status, actually, so I couldn't be more proud, and appreciate the support because I don't get access to the forces through the Global Force Management Process, and I don't have the assigned forces to do that campaign plan. I'd point out that we need ready, trained and equipped forces to operate throughout my entire area of responsibility, and that includes the Arctic. That's part of the services strategy and something that we have to work on. I just concluded an Arctic edge exercise which included some of the National Guard and many of the services, a joint exercise and some allies and partners in a classified environment. I'll share some observations with you from that, but the Arctic is a challenging environment to operate in and we have work that remains.

PETERS: Right. I appreciate that. General -- General VanHerck, U.S. intelligence indicates that Russia may be positioning itself to use chemical weapons in Ukraine under the guise of a false flag. And certainly while our hearts go out to the brave Ukrainians who are defending their country from this illegal invasion and fighting for freedom, I think we also must use this crisis as an opportunity to consider our own preparedness for such an attack. So my question for you is do you believe the United States is properly prepared to contain and respond to chemical attacks in the homeland, and are there any resource shortfalls impacting Sea-burn Response Enterprise?

VANHERCK: So I believe we're prepared to execute a response to a small event such as we have planned for based on a violent extremist type organization event. For a large scale event in the homeland I think there's much work that still needs to be done that could be additional resources applied to, Senator.

PETERS: Great. Thank you.

General Richardson, in your reply to Senator Kaine, a question that Senator Kaine offered you described the importance of small team engagement with our allies and partners. Nearly every nation in SOUTHCOM AOR participates in the National Guard State Partnership Program, as you're well aware. My question for you is how do you plan to employ your National Guard State Partnership Program units to deepen the defense relationships that we have in the region?

RICHARDSON: So this is a huge force multiplier, Senator, the State Partnership Program. And in some cases two, three decades of relationships that have evolved. And we see the impact of that with Ukraine and California, and that relationship that they have. And so, there was a creation a few years ago, the bilateral affairs officer, which is a National Guard officer that's actually embedded in the embassies with the DOD team there, and then helps integrate that state partnership program in my campaign plan and strategy for the region, and as was brought out and other questions. I don't have all the resources I need but that is reach back into the National Guard and the capabilities especially with the cyber battalions to help me with operations in the cyberspace domain.

PETERS: Yes. An area that we need to have increased focus on without question. Another question for you, General, is are you seeing the Chinese or the Russian military's copy these types of efforts in collaborating with regional militaries for training opportunities? Is this something they're picking up as well?

RICHARDSON: I do, Senator. I see them using part of our playbook against us, actually. And what I've said before is that they don't have partners, they have clients. And so, when we do our big exercises and bring 20 some countries together from the region they don't do that, but they do have a lot of funding to bring large groups of personnel from the militaries or the defense forces to all expense paid professional military education in Beijing for either a year or two years. And if they do that, if I take the country of Guyana, for example, and they do 15 or 20 a year they can get through their defense force in about five years. And so, we've got to -- as I've said before I don't need to outspend China, but I do -- to out-compete them, but I do need to be on the field and my security cooperation and IMET funding. A little bit goes a long way.

PETERS: Great. Thank you.

Thank you, Mr. Chairman.

REED: Thank you, Senator Peters.

Senator Scott, please?

SCOTT: Thank you, Chairman.

General Richardson, can you -- first off, I thank both of you for being here. Thanks for the people, your service and the people the men and women that work with you.

General Richardson, can you describe what you've seen from our enemies over the past six months? Have you had this command and what do you believe their primary goals are in our hemisphere?

RICHARDSON: So, frankly, I'm surprised at how much that our competitors have been able to expand within the region and how they've done that with the proximity to the homeland. And what I've -- what I find myself doing is a lot of educating and informing about my AOR as I travel around and speak to different groups and go to different places to offer the message, and just educate folks because we tend to look east and west, not necessarily south. And I can fly to 80 percent of this AOR. It's huge. It looks huge and it looks really far away. I can fly to 80 percent of it in two to three hours from Miami, and a lot of people don't -- we just kind of forgotten about that.

I would say with the investment of infrastructure over the last five years by our long-term strategic competitor, China, from '17 to '21 an investment of over 50 billion. I a core of engineers, and we average about 50 million per year, so from '17 to '21, about 250 million investment in the region. Now that's not it. I mean USAID is there, and there are other businesses and corporations that are in the region, but there's a -- there's a huge investment by our long-term strategic competitor in the region. Some of these countries as well, as I look to levers, levers that allow me to out-compete my adversary, foreign military sales.

I met for military financing security cooperation, being able to have responsive levers. We can't take a year to two years when our partner nations are asking for capability. A couple of helos, a fighter jet, weapons, vehicles, and we take two years. Our process has got to be able to evolve with the -- with the times, and we got to be faster.

SCOTT: Do you see in our hemisphere that Russia and China have become, clearly no question about, they are adversaries.

RICHARDSON: They are definitely competitors. And I do look at them as adversaries.

SCOTT: So when you see American companies that go do business in China, with the Chinese government, the Chinese military, does that make your job harder or less hard?

RICHARDSON: I look at it from a perspective of the dual use. You have -- they come under the guise of infrastructure doing a good thing for that particular country. That they're -- they look like they're investing in. They don't do a good -- a good job on the project in the first place. That generally becomes evident in anywhere from five to seven years after a project is done. They don't hire host nation workers. They bring in their own laborers. It's, I would say from my perspective it's -- I worry about the civilian and dual use with the military and the PRC being able to bring in and use -- switch something over that's a state-owned enterprise to military use.

SCOTT: When they -- when the Chinese bring in their own labor do they take it back when it's finished, when the project's finished, or do they leave their labor there?

RICHARDSON: I think it depends. I think they actually do both.

SCOTT: Do you see signs of our enemies actively supplying weapons to any state or group, state, or group in Latin America?

RICHARDSON: Yes.

SCOTT: Right, and is that increasing, decreasing, what's happening?

RICHARDSON: I think over -- recently, probably over the past couple of years that's increased. Again, it takes whether they can do it faster or cheaper than us, is that's why I say our levers and our ability to be able to deliver has to --has to speed up and our processes have to get faster with the times.

SCOTT: What type of weapons are they sending into our hemisphere?

RICHARDSON: Fighter aircraft, helicopters, air defense systems, small arms vehicles.

SCOTT: So SOUTHCOM has had an office that supports trade and investment, and works to connect small businesses in the region. How is that doing?

RICHARDSON: In terms of the small business we had the small business director actually attend the Chile inauguration for the president. And in terms of small business I'll tell you what I've done, Senator, is the we were able to bring BENS, which is the Business Executives for National Security, who coordinated a trip into Panama in October with 10 CEOs. And I just took the out brief a couple of weeks ago. It was organized under my predecessor, and then just seeing the value of getting that perspective on the ground because when you talk about the investment levels that the PRC has when they go into these countries with over 50 billion in five years across the AOR, I'm looking at OPM, other people's money. How can we get investment in the region to help with the economic problems that these countries are having?

SCOTT: All right. I thank both of you for your service.

REED: Thank you, Senator Scott.

Senator Ernst, please?

ERNST: Thank you, Mr. Chair. And thank you, General VanHerck, and General Richardson for being here today. We really do appreciate your service to our country. And you both are acutely aware of our adversaries, and how they are actively spreading their economic and military influence beyond their borders to our own doorstep. This is right here as your predecessor Admiral Faller used to say, "in our own neighborhood." And that's such a great way to phrase that because they are there right here.

China in particular is on the offensive here in the Western Hemisphere. And there are days that I truly worry that our posture remains very reactive at best, and on certain days weak at worst. And that's not due to you, it's because we have many, whether it stems all the way from Pennsylvania Avenue, all the way here, we just don't give enough attention to our own neighborhood. Many of my colleagues have already stated that. So I think it's imperative that we must give you all the tools that you need to have at your fingertips the authorities, making sure that they are flexible. But we also need realists in the DOD policy shop, and at the State Department that will actually acknowledge the significance of a great power threat that is emanating through our area.

So, General Richardson, I know that Senator Cotton focused very heavily on the Panama Canal. I had a line of questioning as well in that area. I'm going to skip over quite a bit of that. But just for everyone's information I think last year there were about 14,000 transits through the Panama Canal, and the United States is the number one user of the Panama Canal, and 60 percent of what goes through the Panama Canal, it either originates in the United States or is headed to the United States. And of course I come from a very ag heavy state. A lot of those commodities or products do transit through the Panama Canal, so it is extremely important for us.

So, if we could just hammer down just a little bit more just very briefly, General Richardson, if you could talk about what you see going on around the Panama Canal with the Chinese influence that exists there.

RICHARDSON: So, thank you, Senator. Certainly I'd like to highlight that our country does 740 billion in trade with Latin America and the Caribbean. It's huge. And so, the importance of keeping that, the Panama Canal open and free, and for global economics and the economies, not just the war plans which I worry about as well is extremely important. But the strategic way of the investments and the proximity, and the continued investment with other projects that they make in and around the Panama Canal is very concerning. And so, six billion additional, in addition to the -- on either side of the canal, having state-owned enterprise companies along the canal.

ERNST: Yes. It is very concerning. About a week or so prior to the BENS group and Joe Votel's BENS group going into Panama, I had traveled there with a group of other congressmen to just really see the Chinese influence that is on the ground there and it is extremely concerning, that's why I'm so thankful that the BENS group is engaging in Central America, in Panama and other regions. We do need that economic support in that region so that we can also be a good partner. And if there are ways that the United States maybe won't invest if we can't find other allies and partners that do have the type of supports that might be necessary in that area, I think that we should facilitate where we can.

I'd like to focus a little bit on the mining activities that occur in South America as well. This is an area where we have seen a number of businesses from the United States attempt to get into places like Chile where they have lithium resources. But who beat us to the punch? The Chinese. So if you can talk a little bit about mining activities and how valuable that would be to the United States if we were able to engage in those types of activities?

RICHARDSON: So, the region is just rich with with rare earth minerals. And as you talked about, I mean I just took my granddaughter to the history museum on the mall a couple of weeks ago and got to see just all the minerals and the precious metals, and things like that, resources from the region. The rubies, the emeralds, all of those kinds of things, but when you talk about illegal mining, it's illegal mining, it's illegal logging, it's illegal fishing that happens.

If I -- I know you asked about mining, but if I could mention the fishing. At any given day I have over 600 PRC fishing vessels in my AOR that are off the coasts of Ecuador, Peru, Chile, and they follow the fishing migration patterns, and so, you know where they're going to be by the migration of the fish, and this is about three billion in lost economics productivity that those nations desperately need that the Chinese are taking away. And so, it's all three of those things that are extremely prevalent in this AOR.

ERNST: Yes. I appreciate that very much. I'm glad you brought up all of those other resources. It's just incredibly important that we pay attention to our own neighborhood and not only through our military, but also through our State Department, but also economically as well. So I really appreciate your presence here today.

Thank you, General VanHerck, and thank you so much, General Richardson.

And I yield. Thank you.

REED: Thank you, Senator Ernst. Senator Hawley, please?

HAWLEY: Thank you, Mr.

Thanks to you both for being here. Thank you to you -- for your service to our country.

General VanHerck, let me start with you and let me say it's great to see a fellow Missourian here as always. I noticed something you said in your opening statement, I want to quote it to make sure I get it correct. You said, I think that, "our reliance, America's reliance on deterrence by cost imposition is currently overweighted and significantly increases the risk of miscalculation by limiting our national leaders' options following an attack."

That caught my attention because I have been arguing for a while now about the importance of adopting a strategy of denial, deterrence by denial versus deterrence by constant position, especially as it relates to China. So I wonder if you could just expand on your comments a little bit and tell us why you think it's important to end an over reliance on deterrence by constant position?

VANHERCK: Thanks, Senator. First, I would say cost imposition. The nuclear deterrent is the foundation of homeland defense and we must fully fund a triad. That is the foundation. We also must have a strong conventional force, but that has to also be balanced with deterrence by denial. And deterrence by denial is the capability to deny a potential adversary the ability to believe they can inflict damage on us that may bring us to our knees, and it's the ability to demonstrate readiness, resiliency across the whole of government, responsiveness. We do this every day with hurricanes, wildfires. We demonstrated it with We've demonstrated it with Allies Welcome. All of those contribute to the overarching integrated deterrence. That's what my campaign plan is focused. I don't want to start with defense kinetically in the homeland. I want to keep us out of the crisis and conflict by focusing on that deterrence by denial on a day-to-day basis.

HAWLEY: Let me ask you this. When you say that one of the - one of the dangers of over-relying on deterrence by cost imposition is that it increases the risk of miscalculation and limits options. Can you just explain that piece of it?

VANHERCK: Absolutely. So, without the deterrence by denial and the belief in a potential adversary's mind that they can't be successful, they may actually believe that because the homeland is vulnerable and they could bring us to our knees, that that may be the emboldening factor that leads them to make a decision to attack, whether that be in Taiwan or another place, because they believe that they can disrupt, delay, or destroy our will in the homeland. We want to create the - them to believe and understand that we have the capability that they could never do that to us by defending the key critical infrastructure and having the resiliency and readiness to respond.

HAWLEY: Very good. Thank you for that. Let me shift to the situation involving the drug supply at the southern border and particularly, fentanyl which is our state. Absolutely devastating and we're seeing mass quantities of it. Can you just give us an update on NORTHCOM's efforts to help DHS stem the flow of illegal drugs and particularly fentanyl there at the southern border.

VANHERCK: Senator, currently, NORTHCOM's providing about 2,450 guardsmen from various states in a Title X status doing detection and monitoring, intel analysis, and also aviation support. The request for support for FY23 is in the Department as well and being adjudicated at the Department level. I don't have a tasking yet for '23.

HAWLEY: Let me ask you about the Mexican government. Have they been helping with this - with the flow of drugs, the human trafficking? Has it gotten better or worse in the last year?

VANHERCK: The Mexicans are extremely good partners. I have great relationships with General Sandoval of SEDENA, with Admiral Hada of Sumar. Both are coming to visit me next month. They have tens of thousands of Mexican troops conducting the mission what we need with the common objections and we're very grateful for their partnership.

HAWLEY: What are you looking for them to do in the year ahead?

VANHERCK: Continue to partner, provide additional security. Sumar has port security now. For fentanyl, that's crucial because those precursors often come into ports. We'd like to work additional information sharing to enable them to be more successful in interdicting much of those precursor chemicals that come into Mexico.

HAWLEY: Very good. Let me shift back to China here quickly in my little bit of remaining time. You mentioned Taiwan a second ago. It's no secret Beijing would love to seize Taiwan. They'd love to execute a fait accompli with regard to Taiwan. And we also know that if they attempted to do that, they would seek to prevent us from deploying forces from west coast end of the theater. Tell me about your concerns about China's ability to strike military targets in the homeland using cyber capabilities.

VANHERCK: Well, China possesses extensive cyber capabilities. Those responsible to defend the homeland primarily reside with CISA, Director Easterly, and General Nakasone. My role is to provide defense support of civil authorities in the case of municipalities industry ask for support. We have a good capability. What we don't know, Senator, is the unknown. We don't know where the vulnerabilities are, because of the way we're set up across multiple agencies, across industries that we rely on volunteering their information for cyber vulnerabilities.

HAWLEY: Got it. Thank you both for your service again. General Richardson, I'll give you a few questions for the record. Thanks for being here. Thank you, Mr. Chairman.

REED: Thank you, Senator Hawley. Senator Rosen, please.

ROSEN: Thank you, Mr. Chairman. And I would really like to thank Generals Richardson and VanHerck today and for your service to our country. Thank you. I want to speak a little bit about Iran's presence in the western hemisphere. General Richardson, during your confirmation hearing, we discussed Iran's presence in Latin American through its proxy, Hezbollah. Its involvement in the Tri-Border region of Paraguay, Argentina, and Brazil. And its exchange of arms for oil with, of course, Venezuela.

Over a year ago, Brazil extradited a leading Hezbollah financier to Paraguay which dealt a blow, of course, to the terrorist group. However, we don't often receive the same support in combating Iran or its proxy activities from other countries in the region. Just a little over two months ago, Iranian official, Mossan Rezi, was wanted by INTERPOL for his role as leader of the Iranian Revolutionary Guard Corps in the 1994 AMIA Jewish Community Center bomb in Argentina. He made an appearance at the inauguration of Nicaraguan President Daniel Ortega in Nicaragua.

To hold Iran accountable and Hezbollah accountable for their activities in Latin America, Senator Blackburn and I introduced the Hezbollah in Latin American - Latin American, excuse me, Accountability Act. So, General, could you please update the committee on Hezbollah's recent activity in Latin America? Are we effectively disrupting their agenda? And to your knowledge, is Hezbollah continuing to exchange arms for oil with Venezuela?

RICHARDSON: So, thank you for the question, Senator. And I think the - quietly honestly, thank you for the - for the Act and the - and the work that we partnering with our partner nations is so important through the Security Cooperation Train and Equip 333 funding. That's my main lever to work with these militaries and these defense forces to counter our competitors and counter our threats in the region.

And just as you listed off, you know, what Iran does and has done in our - in our - in my AOR is very concerning and obviously, to impact that - and when I - Secretary of Defense uses the integrated deterrence and as I look at that and you partner with all of the capabilities that are in the region, it's so important that the partner nationals that are dealing with this internally be able to have the capacity and capability to do that, too. I just request that I'm able to continue with that 333 funding, so I am there because they want to partner with us.

ROSEN: Mm-hmm.

RICHARDSON: They want to partner. They look to us. They look for help. They look for assistance. They look for coaching, teaching, mentoring. They want to come to our schools. This is how we make them stronger to handle their own - their issues internally as we work together to counter the threats.

ROSEN: Thank you. I want to - I'll continue on this line of questioning because we know there's also Chinese surveillance technology in South America. And so, I asked you at the confirmation hearing about Chinese state companies deploying that smart city, safe city technology in Latin America. And, of course, you said countries don't like that in the region. So, I'm concerned about the national security ramifications of this. So, I know I have a short time left, but can you provide us an update on the countries who are trying to get rid of the technology implemented in their countries by China and what can we do to help stop this widespread Chinese surveillance?

RICHARDSON: So, we do our best. I mean, not just DOD but also Department of State as we consistently work with them. My senior defense officials and my senior cooperation officials that are down range, that are actually embedded in the embassies and working with our partner nations to advise them about the technology, the surveillance technology, a back door of getting into the defense networks and things like that. Certainly, the possibility of 5G, and if nations get 5G, then our inability to be able to continue to work with them because of that cyber threat.

ROSEN: Thank you. I want to kind of keep on the cyber threat and I'd move over to General VanHerck about missile defense cybersecurity. As MDA works to rapidly deploy missile defense systems to stay ahead of threats, I'm concerned that we might not be taking potential cyber vulnerabilities seriously enough before fielding new systems.

So, on the 2019 Missile Defense Review, as software mentioned - software mentioned only once, this is a key way hackers get in. Even more alarming, GAO's May 2021 reports highlights that none - none of MDA's 17 operational cybersecurity tests planned for fiscal year 2020 were conducted and that cybersecurity testing since 2017 has revealed vulnerabilities. I will take my answer off the record, but I'd just like to know what steps NORAD is taking to address the cybersecurity vulnerabilities. I see my time is up. So, I'll yield to my next question, take it for the record. Thank you. Thank you both, Generals.

REED: Thank you, Senator Rosen. Senator Tuberville, please.

TUBERVILLE: Good morning. Save the best for last. Glad to see you all. General VanHerck, we're hearing Title 42 is going to expire March the 30th. Are we prepared for it?

VANHERCK: I would defer to the DHS. That's their mission. We are actively planning based at the request of DHS. I don't have a task to do that at this time, but I understand the Department is working through that with DHS.

TUBERVILLE: One of my favorite movies is, I think, We Were Soldiers. Mel Gibson play Col. Hal Moore, who's a friend of mine a few years ago and have since passed away. In that movie, they're getting run over and the code was broken arrow. In other words, they're up - they're on top of us. I saw a Facebook page this morning from Border Patrol calling broken arrow. We got huge problems and - I know we got huge problems all over the world. It doesn't seem like we're addressing this enough and we're going to have sooner or later because it's really going to affect - and it is affecting our country as we speak, but - with the drugs and all that. But just wanted to bring that up. Given your 32 hundred hours of flight time, you've flown about everything, I guess. Is there anything you haven't flown?

VANHERCK: There's plenty. I haven't flown what General Richardson flies, helicopters.

TUBERVILLE: A former Thunderbird Squadron, Commander JV Venable, recently wrote that a fighter pilot needs at least 200 hours a year or four a week. In coaching, we call it practice. But the Air Force and Navy flight hours have fallen to historic lows. Is that concerning?

VANHERCK: From a readiness perspective, from somebody who receives forces from the service, it is concerning to ensure that every force that we receive is ready to execute the missions that I'm tasked to do. Best answered by the services specific to their actual training, but it would be concerning if the trend continues to drop on the flight hours.

TUBERVILLE: Thank you. Mr. Chairman, I'd like to submit Mr. Venable's report on Air Force readiness and a Wall Street Journal article that references his assessment for the record please.

REED: Without objection.

TUBERVILLE: General Richardson, last week, I met with the Colombian Ambassador. Good guy. They're huge allies. What in-roads have you made then and relationships have you made, because we've got - even from my state, we've got a lot of input down on what goes on in Colombia, you know, with their business dealings, minerals, those things. What have you - what have you seen from Colombia?

RICHARDSON: Our number one security partner and I look to them as like a key linchpin to the security and the stability of the region quite honestly. If you just look over, you - it's really hard to take a snapshot in time of - of a country, but if you look for when - when they - in 1999 and where they were to where they are now, it's just really tremendous. I have the Chief of Defense, General Navarro, visiting on Monday.

TUBERVILLE: Good.

RICHARDSON: We had our staff talks. SOUTHCOM, Colombia staff talks in January. We have - that was the first country I visited in the AOR when I came into command of SOUTHCOM. So, our relationship is excellent. It's strong. It's - we share information. We're constantly communicating. Again, it's coaching, teaching, mentoring. I look at our partners. I mean, they're there on the ground. They see the threats. They're dealing with the threats every day. We have to have those good relationships with them in order to increase our domain awareness to make up for what I don't have in domain awareness and ISR and things like that, but the partnership gives you the trust and the access and the presence with your partner nation.

TUBERVILLE: It's obvious. You're going to be a big key for us in your AOR. But thanks to you all. I'll cut my time short. I yield.

REED: Thank you very much, Senator Tuberville. Senator Kelly, please.

KELLY: Thank you, Mr. Chairman. And, General VanHerck and General Richardson, thank you for being here today. Yesterday, I held a hearing in this committee's panel on emerging threats to focus on how our military can work with our partner nations to improve security conditions in our hemisphere that in turn impact the U.S. border and our national security.

Throughout South and Central America, criminal elements, China and Russia are seeking to destabilize the region for their own gain. This is a national security challenge and we need to treat it as a national security challenge. With that context in mind, I would like to touch on NORTHCOM's, first, NORTHCOM's mission at the southwest border. The National Guard plays a critical role in this mission providing much needed relief to over-stretched Border Patrol agents and local law enforcement.

I've been to the border many times and I stay in close contact with local elected leaders and law enforcement. I've also delivered additional federal resources. And the Assistant Secretary of Defense for Homeland Defense and Hemispheric Affairs committed to me earlier this year that National Guard troops would be well-resourced during these missions. So, General VanHerck, in your view, is the National Guard's border mission properly resourced to significantly assist in addressing the crisis at the border?

VANHERCK: First, I share your assessment of the national security imperative, the challenge for us with what's going on at the border. The National Guard forces that are working for us in a Title 10 status are not only resourced by DOD but they're provided resources by DHS. And my assessment is, for the most part, they're resourced to where they need to be. They could have additional resources for observation, detection, and monitoring of those kinds of things from DHS.

I think long term this is not an enduring mission of the Department of Defense. We need to fully fund and resource DHS to do their mission. And the DOD should be used in extremist times for the support on the border mission. I'd like to just make sure that our mission is understood. We're not there enforcing the law as the DHS can do. We're supporting them to free up capacity, so they can do that mission and we provide support, detection and monitoring, aviation support to help them and also the intel analysis.

KELLY: Well, until DHS is fully resourced to do this, let's make sure that the Guard and Reserve have the resources they need in their interim there. General, are you in regular communication with CBP, with Customs and Border Protection and local law enforcement partners on this issue?

VANHERCK: Me personally, yes, not daily or anything like that. I've been to the border multiple times. I was at the border last month as well. I met with both - the Customs and Border Patrol agents and discussed. We had eight in the room as well. I visited in your state as well in Nagales (ph) and been to the border. So, we do that. I have multiple liaisons from 40 government agencies that work in my head quarters to include from DHS and the Border.

KELLY: Well, that's good to hear. We need to - this is a comprehensive and challenging problem and we need to all have - all agencies working together to try to deal with this crisis. General Richardson, in your posture statement, you mentioned the insecurity and instability that's been exacerbated by COVID-19. You know, we know that Transnational Criminal Organizations routinely exploit poverty and stability and corruption to gain political and criminal power.

This is bad for stability. It's bad for our partners who are trying to sustain democratic societies and it's bad for our own interests. When we spoke earlier this week, you specifically mentioned that criminal organizations are using the instability brought about by the economic impacts of COVID-19 to create a wedge that Russia and China are taking advantage of. Can you elaborate on the relationship between Russia, China, and criminal organizations in the region? And how does the instability caused by criminal groups and opportunism of countries like China allow them to expand their reach?

RICHARDSON: So, overall, Senator, I just look at the insecurity and instability, the cycle of vicious threats, this wedge that the TCOs can create which allows the - our competitors, you know, the PRC and Russia to flourish and look like the heroes of the day, right, when they come in with their projects and their money and - or equipment and capability and things like that. And so - and as we talked about as well, the Chinese money launderers that take the money from these TCOs when these TCOs have all this cash, huge, \$310 billion a year annual revenue and move it back and turn it around and the goods that they - that they send back for the TCOs to be able to sell. And it's all cleaned money if you will.

And so, we have to - you know, this isn't just a DOD or a DHS. We also have to, I think, get after this money. And in terms of what our whole of government approach is to follow the money and then be able to crack down, but I know that it's very difficult. These are complex cases that Treasury and Justice have to deal with, but until I think we get it at - we get at - we get after that specific problem, we can't interdict our way out of this. We're not going to be able to do that. We got to go after and follow the money.

KELLY: Well, I want to thank you for the comprehensive answers from our phone call the other day that your staff sent out. I really appreciate that and those are really helpful. I also want to make sure that you have the resources, you know, that you need to tackle this challenge. So, I'm interested to see, you know, what the President's budget looks like for SOUTHCOM, NORTHCOM as well. And since I'm over, thank you, Mr. Chairman. And I have some additional questions for the record.

REED: Thank you very much, Senator Kelly. And let me thank you, General VanHerck and General Richardson, for your thoughtful and very, very responsive testimony. At this juncture, I will adjourn the open hearing and we will reconvene at 11:45, approximately 15 minutes in SCC 217 for a closed session. Thank you very much.

END

AS OF 0600 HOURS, FEBRUARY 28

## SUMMARY

Amid a growing global backlash against Russia's invasion of Ukraine, President Vladimir Putin put his country's nuclear deterrence forces on high alert, according to the *Wall Street Journal*, which described the announcement as, "a warning to the countries lining up to help Ukraine fend off its Russian attackers." In Belarus, voters approved a referendum to allow the country to host nuclear weapons and Russian forces permanently as part of a package of constitutional reforms that also extended the rule of President Alexander Lukashenko, according to *Agence France-Presse*. Also of note, South Korean and Japanese officials said that North Korea launched a ballistic missile toward the sea off its east coast in its eighth missile test of the year, the *Wall Street Journal* reported.

## TWEETS

"STRATCOM: 'We saw Mr. Putin's statement on his nuclear forces. STRATCOM remains at an appropriate posture and remains ready should the president call upon us,'" according to a tweet from *CBS News* reporter Olivia Gazis. Relatedly, Sen. Jim Inhofe (R-OK) wrote: "Reports that Putin has placed Russia's nuclear forces on higher alert is a stark reminder of why we need a strong, effective deterrent to meet the growing threats facing the U.S. and our allies. The upcoming Nuclear Posture Review cannot ignore this reality." And Aircraft Spots tweeted: "While the situation in Ukraine unfolds, USAF B-52H Stratofortress bombers deployed to Guam, continue to fly power projection missions in the South China Sea & East China Sea."

### TOP STORIES

#### 1. Putin Puts Nuclear Forces on Alert

*Wall Street Journal, Feb. 28, Pg. A1 | Ann M. Simmons and Matthew Luxmoore*

With much of the world moving against him, economic sanctions piling up and a military campaign less successful than he expected, President Vladimir Putin of Russia issued on Sunday the ultimate deterrent threat. Mr. Putin put his country's nuclear-deterrence forces on high alert, a warning to the countries lining up to help Ukraine fend off its Russian attackers. The announcement was a window into Mr. Putin's increasing isolation and anger. His behavior is making his inner circle appear visibly uncomfortable.

#### 2. Belarus votes to give up non-nuclear status

*Agence France-Presse, Feb. 27 | Not Attributed*

Belarusians voted Monday to allow the country to host nuclear weapons and Russian forces permanently, results showed, part of a package of constitutional reforms that also extended the rule of leader Alexander Lukashenko.

**3. North Korea Fires Missile, Signaling A Return to Tests**

*Wall Street Journal, Feb. 28, Pg. A22 | Timothy W. Martin*

North Korea launched a suspected ballistic missile off its east coast on Sunday morning, Tokyo and Seoul authorities said, restarting weapons tests after nearly a month of inaction.

**RUSSIA**

**4. Putin's Nuclear Arsenal Rhetoric Pushes Bounds of Brinkmanship**

*New York Times, Feb. 28, Pg. A1 | David E. Sanger and William J. Broad*

When Vladimir V. Putin declared Sunday that he was putting his nuclear forces into "special combat readiness" -- a heightened alert status reminiscent of some of the most dangerous moments of the Cold War -- President Biden and his aides had a choice.

**5. Pentagon wants Moscow back channels to prevent nuclear escalation**

*POLITICO Online, Feb. 27 | Bryan Bender*

When Gen. Mark Milley emerged from six hours of tense talks with his Russian counterpart in Helsinki last September, the Joint Chiefs chair looked almost buoyant. Or at least as chipper as the gruff soldier of more than 40 years ever gets in public. "When military leaders of great powers communicate, the world is a safer place," Milley said, striking an optimistic tone. Now, just five months later, with Russian military forces pummeling Ukraine from the air, land and sea, Milley's paean to a common understanding with Moscow is virtually dead. But his relationship with Gen. Valery Gerasimov, the chief of the general staff of the Russian Armed Forces, is at the center of a highly sensitive behind-the-scenes effort to prevent the biggest war in Europe in generations from spinning into a wider conflict. It's a situation that became more urgent on Sunday, when Russian President Vladimir Putin ordered his nuclear forces on high alert after a series of what he called "aggressive statements" by NATO powers.

**6. Russian Strategic Forces Reportedly on High Alert as Fighting in Ukraine Intensifies**

*DOD News, Feb. 27 | David Vergun*

U.S. officials don't doubt reports that Russian President Vladimir Putin has placed Russia's nuclear deterrence forces on high alert, a senior defense official said at a press briefing today. "We have no reason to doubt the validity of these reports," the official said.

**7. UK says no 'significant change' in Russia's nuclear posture**

*Agence France-Presse, Feb. 28 | Not Attributed*

The UK government has seen no major change to Russia's nuclear posture despite President Vladimir Putin placing his strategic forces on higher alert, Defence Secretary Ben Wallace said on Monday. "We've looked at their posture. There isn't a significant change," he said on LBC radio, accusing Putin of trying to "flex muscles" with his invasion of Ukraine bogged down. Wallace said he had assured his 12-year-old son: "No, we're not going to have a nuclear war."

**8. Putin nuclear threat linked to 'halted' offensive – Germany**

*Agence France-Presse, Feb. 27 | Not Attributed*

President Vladimir Putin's decision to put Russia's nuclear weapons on high alert "crosses another line" and shows his offensive in Ukraine is not going to plan, Germany's defence minister said Sunday. "In his (Putin's) megalomania, the rapid invasion of Ukraine has been halted by Ukraine's brave and determined actions," Christine Lambrecht told public broadcaster ZDF.

**9. West takes Putin's nuclear threat seriously**

*Financial Times Online (UK), Feb. 27 | Henry Foy, Max Seddon and Demetri Sevastopulo*

Western capitals have long been anxious about Moscow's military doctrine, which allows it to use nuclear weapons to end a conflict as part of its "escalate to de-escalate" strategy. So when Russian president Vladimir Putin put strategic nuclear forces on high alert on Sunday, they took it seriously.

**10. Russia's nuclear forces are on alert. Here's what it means.**

*Washington Post, Feb. 28, Pg. A17 | Missy Ryan, Karoun Demirjian, John Hudson and Shane Harris*

President Vladimir Putin's decision to put Russian nuclear forces on alert thrust the crisis over Ukraine into a more volatile phase on Sunday, fueling the potential for deadly miscalculation as the West's campaign of economic reprisal increases the chances the Russian leader could see his survival and that of the Russian state at risk.

**11. What Just Happened With Putin's Nuclear Forces? Here's What Experts Say**

*DefenseOne.com, Feb. 27 | Caitlin M. Kenney and Bradley Peniston*

Even expert Russia-watchers aren't sure what changed when Vladimir Putin ordered the country's "deterrence forces" to be put on a "special regime of combat duty" on Sunday. A U.S. defense official who spoke to reporters on Sunday called the move "escalatory" but declined to offer more details. Many news organizations interpreted the order as placing Russia's nuclear weapons units on a higher state of alert.

**12. Putin's nuclear posturing requires west to tread extremely carefully**

*The Guardian Online (UK), Feb. 27 | Julian Borger*

Successive generations have experienced what it is like to feel the shadow of nuclear annihilation loom over their daily lives, from the Cuban crisis of 1962, to the missile standoff in Europe in the 1980s. This is shaping up to be our turn. "I'll be honest – I'm nervous," Pavel Podvig, one of the world's leading experts on Russian nuclear forces, said after Vladimir Putin declared a "special mode of combat duty of the deterrence forces".

**13. Biden Halts Russian Arms Control Talks Amid Ukraine Invasion**

*ForeignPolicy.com (Exclusive), Feb. 25 | Jack Detsch and Robbie Gramer*

The Biden administration has cut off arms control talks with Russia, sources familiar with the decision told Foreign Policy. The move came after Russian President Vladimir Putin sent troops into Ukraine's breakaway regions but before he launched the full-scale invasion of the country.

**14. Ukraine demands 'immediate ceasefire', Russian withdrawal**

*Agence France-Presse, Feb. 28 | Not Attributed*

Ukraine demanded an immediate Russian ceasefire and troop withdrawal on Monday as its delegation arrived in Belarus for talks with Russian negotiators on the fifth day of the Kremlin's offensive.

**15. As War Rages, Ukraine Agrees to Talks With Russians 'Without Preconditions'**

*New York Times, Feb. 28, Pg. A1 | Valerie Hopkins, Anton Troianovski and Steven Erlanger*

As Russian forces bore down on Ukraine's capital and officials put the toll of civilian dead at more than 350 since the invasion began, the two countries agreed Sunday to sit down for talks "without preconditions," but hopes were not high for a peaceful resolution of the conflict.

**16. Russian forces appear to shift to siege warfare in Ukraine – U.S. official**

*Reuters, Feb. 27 | Idrees Ali and Phil Stewart*

Russia, frustrated by early battlefield setbacks in Ukraine, could be shifting its strategy to siege warfare just as President Vladimir Putin raises the risk of a catastrophic miscalculation by putting nuclear forces on heightened alert, a senior U.S. defense official said on Sunday.

**17. Russia's Modernized Military Stumbles**

*Wall Street Journal, Feb. 28, Pg. A8 | Michael R. Gordon, Max Colchester and Daniel Michaels*

The Russian military has faltered early in its invasion of Ukraine, as stiff resistance threatens to turn Moscow's hopes for a swift victory into a protracted and costly war, U.S. officials and allied military experts say.

**18. Russia's missiles see mixed results in Ukraine war as world watches**

*Reuters (Analysis), Feb. 28 | Josh Smith*

Russia has employed hundreds of powerful and precise ballistic missiles in the first days of its Ukraine attack, but analysts and U.S. officials say many Ukrainian defences remain intact - effects that countries around the world are watching closely.

**19. Ukraine says it downed missile launched by Russian bomber flying over Belarus**

*Reuters, Feb. 27 | Pavel Polityuk*

Ukrainian forces have downed a cruise missile that was launched by a Russian Tu-22 strategic bomber from the territory of Belarus, Valery Zaluzhny, the chief commander of the armed forces, said on Sunday.

## **EUROPE**

**20. B-52s Patrol Europe as U.S. Touts Ironclad Defense After Russia Nuclear Alert**

*Newsweek Online, Feb. 25 | Naveed Jamali and Tom O'Connor*

The Pentagon has emphasized its commitment to the defense of the 30-member NATO alliance as the U.S. sent B-52 strategic bombers to the bloc's eastern front and Russia raised its nuclear alert level. Newsweek asked a senior Pentagon official how the U.S.-NATO nuclear deterrence doctrine is affected by rising tensions between Washington and Moscow over the latter's decision to conduct a "special military operation" that has seen Russian troops advance through Ukraine in an attempt to surround the capital Kyiv.

**21. Offutt aircraft spotted over Europe amid Ukraine crisis**

*Omaha World-Herald, Feb. 26, Pg. A1 | Steve Liewer*

U.S. and NATO ground forces may be steering clear of Ukraine following Russia's invasion, but the alliance's military reconnaissance aircraft - including several from Offutt Air Force Base - have been venturing close enough to keep eyes and ears on the battle below. At least five of the 55th Wing's C-135 variants have been spotted in European skies by air traffic control websites this week. Two have been operating from the Souda Bay naval base in Greece, and three are deployed to RAF Mildenhall, England - though one of those jets has apparently been sidelined after suffering an in-flight mechanical emergency Tuesday.

**22. In Turnaround, Germany Vows Military Boost**

*New York Times, Feb. 28, Pg. A1 | Melissa Eddy*

It took an invasion of a sovereign country nearby, threats of nuclear attack, images of civilians facing off against Russian tanks and a spate of shaming from allies for Germany to shake its decades-long faith in a military-averse foreign policy that was born of the crimes of the Third Reich.

## CHINA

### **23. China calls for de-escalation as Ukraine talks begin**

*Agence France-Presse, Feb. 28 | Not Attributed*

Beijing on Monday called for de-escalation and "restraint" over the Ukraine crisis as Russia and Ukraine prepared to meet for their first talks since Moscow's invasion of its western neighbour.

### **24. Xi Weighs His Alliance With an Isolated Putin**

*New York Times, Feb. 28, Pg. A6 | Steven Lee Myers*

They visited a hockey rink in Beijing and the panda enclosure at the Moscow Zoo. They shared blinis layered with caviar in Russia and, reciprocally, the popular variant in China, jianbing. They have shared birthday cakes and exchanged toasts with shots of vodka, while demurring that neither would dare go overboard with the stuff. For more than a decade, Xi Jinping of China and Vladimir V. Putin of Russia have forged a respectful, perhaps even warm relationship, reflecting the deepening ties between two world powers that share common cause against American military and economic might.

### **25. U.S. Takes Aim at China Over Russia Ties**

*Wall Street Journal, Feb. 28, Pg. A13 | William Mauldin*

The U.S. wants to pry China away from its tight partnership with Russia. One step, U.S. officials said, is making Beijing feel pain over Russia's invasion of Ukraine.

### **26. Putin threat tests China's nuclear umbrella pact with Ukraine**

*Washington Times Online, Feb. 26 | Bill Gertz*

Russian President Vladimir Putin ordered Moscow's military to raise the alert status of its large nuclear forces on Sunday, and the threat will test a 2012 agreement that calls on China to provide a nuclear deterrent umbrella for Ukraine. Chinese President Xi Jinping and then-Ukrainian President Viktor Yanukovich signed the agreement on Dec. 5, 2012, promising that China's nuclear forces would protect Ukraine from nuclear threats. The bilateral treaty described the two states as "strategic partners."

### **27. 'Blitz' Tactics Likely To Be Used in Any P.L.A. Attack on Taiwan, Experts Say**

*South China Morning Post (Hong Kong), Feb. 26, Pg. 4 | Liu Zhen*

Chinese experts say Russia's rapid tactics in Ukraine are likely to be replicated in any People's Liberation Army attack on Taiwan.

### **28. China says U.S. warship sailing in Taiwan Strait 'provocative'**

*Reuters, Feb. 26 | Ben Blanchard and Tony Munroe*

A U.S. warship sailed through the sensitive Taiwan Strait on Saturday, part of what the U.S. military calls routine activity but which China described as "provocative".

## KOREAN PENINSULA

### **29. N.K. missile launch aimed at gaining attention amid Ukraine crisis – defense minister**

*Yonhap News Agency (South Korea), Feb. 28 | Not Attributed*

North Korea's ballistic missile launch this week appears aimed at demonstrating its policy line of "power for power" and grabbing global attention amid the armed conflict in Ukraine, South Korea's defense minister said Monday.

**30. Moon calls for impenetrable defense posture**

*Yonhap News Agency (South Korea), Feb. 28 | Kim Deok-hyun*

President Moon Jae-in called for a powerful defense posture Monday, saying peace can be achieved only based on strong defense, as the world is reeling from Russia's shocking invasion of Ukraine.

**31. China vows cooperation with North Korea under 'new situation' – KCNA**

*Agence France-Presse, Feb. 26 | Not Attributed*

China's President Xi Jinping emphasised the importance of cooperation between Beijing and Pyongyang in an unspecified "new situation", North Korea's state media reported Saturday.

**32. Presidential candidates spar over missile defense, nuclear-sharing in TV debate**

*Yonhap News Agency (South Korea), Feb. 25 | Lee Hye-ah*

The four main presidential candidates faced off Friday over a range of national security issues, including nuclear-sharing arrangements and the U.S.-led missile defense system, as they jostled for position during their fourth televised debate.

## **INDO-PACIFIC**

**33. Japan PM Opposes Sharing U.S. Nuclear Weapons After Abe Proposal**

*Bloomberg News, Feb. 28 | Isabel Reynolds*

Prime Minister Fumio Kishida said sharing nuclear weapons with the U.S. in a way similar to NATO members would not be allowed under Japan's non-nuclear principles, pushing back against a predecessor who floated the idea.

**34. Japan, U.S. confirm need to boost deterrence capabilities**

*Kyodo News (Japan), Feb. 26 | Not Attributed*

The foreign ministers of Japan and the United States on Saturday condemned Russia's invasion of Ukraine and confirmed the need to enhance the deterrence and response capabilities of the bilateral alliance, the Japanese government said.

## **IRAN**

**35. Iran says three key issues remain unresolved in Vienna nuclear talks**

*Reuters, Feb. 28 | Parisa Hafezi*

Iran said on Monday that reviving a 2015 nuclear deal is possible if Western powers take a political decision to resolve three remaining issues, as indirect negotiations between Tehran and Washington enter a crucial stage.

**36. Iran to enrich uranium to 20% even after nuclear deal – nuclear chief**

*Reuters, Feb. 25 | Not Attributed*

Iran will continue to enrich uranium to 20% purity even after sanctions on it are lifted and a 2015 nuclear deal with world powers is revived, Iranian news agencies quoted the country's nuclear chief as saying on Friday. "(Uranium) enrichment ... continues with a maximum ceiling of 60%, which led Westerners to rush to negotiations, and it will continue with the lifting of sanctions by both 20% and 5%," the head of Iran's Atomic Energy Organization, Mohammad Eslami, was quoted by the semi-official news agency Fars as saying.

## AIR FORCE

### **37. Air Force Global Strike Command Team Visits Team Minot**

*5th Bomb Wing Public Affairs, Feb. 25 | Senior Airman Caleb S. Kimmell*

General Anthony Cotton, Air Force Global Strike Command commander, and Chief Master Sergeant Melvina Smith, AFGSC command chief, visited here Thursday and Friday. While here, the command team toured the Base, hearing first-hand experiences from Airmen and families about their day-to-day support and impact for the nation's long-range strike and nuclear strategic deterrence mission.

### **38. Get to know your local Missile Alert Facility**

*Wyoming Tribune-Eagle (Cheyenne, WY), Feb. 27, Pg. A1 | Will Carpenter*

In a seemingly aimless, but determined drive, the small tour bus takes highways and dirt roads out to a place so barren, there likely isn't another human being for miles. The snow covers the ground and merges with the silver sky, while the cold air seems to penetrate the thick safety-grade windows, through which clouds of horned larks skip and dance out over vast plains like one dense organism. But then there's something different: Two tan metal structures, fenced in and containing warning signs that advise approaching vehicles of something their drivers already know.

### **39. Red Flag 22-1: Integrated mission planning is the first step to B-2 mission success**

*509th Bomb Wing Public Affairs, Feb. 25 | Press Release*

Red Flag is a large-scale exercise that offers the 393rd Expeditionary Bomb Squadron an opportunity to enhance their integrated mission planning capabilities with the use of ever-evolving intelligence.

### **40. Missouri Airman joins rare group, flying 1,500 hours in B-2**

*131st Bomb Wing, Feb. 25 | Airman 1st Class Whitney Erhart*

Successfully completing 1,500 flight hours is an accomplishment few achieve and one to be remembered. Doing so in a B-2 Spirit stealth bomber is rarer still.

### **41. AFNWC civilian appointed to senior executive service position**

*Air Force Nuclear Weapons Center Public Affairs, Feb. 25 | Leah Bryant*

An Air Force Nuclear Weapons Center civilian was promoted to the Senior Executive Service during a virtual ceremony hosted here on Feb. 9. Maj. Gen. Anthony Genatempo, AFNWC commander, promoted Scott Hardiman to his new SES position. Hardiman is the director for the AFNWC Nuclear Command, Control and Communications (NC3) Integration Directorate. He is also dual-hatted as the Air Force program executive officer for NC3.

## ARMY

### **42. RCCTO leader explains hypersonic acquisition strategy**

*InsideDefense.com, Feb. 25 | Ethan Sterenfeld*

If the Army fields the Long-Range Hypersonic Weapon on schedule next October, it will meet a target set by then-service Secretary Ryan McCarthy in 2019: develop and build the country's first hypersonic missile in a little more than four years. This was an ambitious goal for an Army that has struggled in recent decades to field new weapon systems on any timeline at all, especially for technology that nobody could produce outside a scientific laboratory. But so far, the program has stayed on track.

## CONGRESS

### **43. Top Republican defense voice in the Senate set to retire this year**

*Defense News Online, Feb. 25 | Leo Shane III and Joe Gould*

Jim Inhofe, the ranking member on the Senate Armed Services Committee and the top Republican defense voice in the Senate, announced on Thursday that he will retire from Congress at the end of the year. The move comes with almost four years left in Inhofe's current Senate term and could leave a significant leadership void in the Senate GOP's military caucus.

## COMMENTARY

### **44. The Ukraine crisis is now a nuclear crisis**

*Washington Post Online ("Monkey Cage" Blog), Feb. 27 | Caitlin Talmadge*

Russia's publicly announced nuclear alert has turned the Ukraine war from a crisis involving nuclear powers to an actual nuclear crisis. With the caveat that we do not have many details about what the Russian alert entails, it is nevertheless a clear sign that President Vladimir Putin does not believe that the conventional military campaign in Ukraine is achieving the political outcomes he wants.

### **45. How Should the U.S. Respond to Putin's Nuclear Provocation?**

*The Atlantic Online, Feb. 27 | Tom Nichols*

Russian President Vladimir Putin has ordered Russia's strategic nuclear forces to raise their alert status. (Specifically, he has ordered Russia's "strategic deterrence forces" to "transition to special regime of combat duty.")

### **46. With his war going slowly, Vladimir Putin raises the nuclear stakes**

*The Economist Online (UK), Feb. 27 | Editorial*

As Vladimir Putin declared war on Ukraine in the early hours of February 24th, he warned the West to stay out of it. "Whoever tries to hinder us... should know that Russia's response... will lead you to such consequences that you have never encountered in your history," he said. It was interpreted as a barely veiled threat to use nuclear weapons. On February 27th, several days into his war, and without much to show for the fighting so far, Mr Putin removed the veil entirely.

### **47. A hurting stalemate? The risks of nuclear weapon use in the Ukraine crisis**

*Bulletin of the Atomic Scientists, Feb. 27 | Francesca Giovannini*

Nuclear experts are trained to think the unthinkable. So, here is an unthinkable scenario that might actually happen in real life: The battle over Ukraine drags on. From both the European Union and the United States, fresh weapons and other supplies continue to enter into Ukraine and allow the Ukrainian forces to fight on. The battle reaches what conflict resolution expert William Zartman calls "a hurting stalemate" situation. The balance of forces on the ground is not completely or perfectly symmetrical, but what was once considered a completely disproportioned asymmetry of forces has been gradually re-equilibrated, in favor of the Ukrainian forces.

### **48. Putin's Nuclear Threat Shatters a Security Shield**

*Bloomberg Opinion, Feb. 27 | Stephen Mihm*

All eyes are on the conventional war unfolding in Ukraine. But a very different kind of conflict looms over the conflict. Before invading, Putin staged nuclear weapons drills around Russia's border with Ukraine. In case anyone missed the point, his speech justifying the invasion reminded listeners that his country remained "one of the most powerful nuclear powers."

#### **49. Russia's Ukraine War Heightens Urgency Around Biden's Nuclear Weapons Strategy**

*TheIntercept.com, Feb. 25 | Sara Sirota*

As the week began, nonproliferation advocates weren't optimistic that President Joe Biden would stand by his early commitments to "reduce the role of nuclear weapons in our national security strategy." He might reverse former President Donald Trump's decisions to pursue a nuclear-armed, sea-launched cruise missile or to retain the B83 gravity bomb, the most destructive weapon in the U.S. nuclear arsenal, they thought. He might roll back Trump's policy allowing a nuclear response to "significant non-nuclear strategic attacks" or even consider a coveted "no first use" policy that Biden had shown interest in as vice president. But prospects that he would do the heavier lifting and halt Northrop Grumman's contract to replace the intercontinental ballistic missile system — considered one of the most dangerous and unnecessary weapons in the nuclear arsenal — were practically nonexistent. Combined with multiple other weapons programs, the brand-new ICBM system puts the U.S. in its largest nuclear modernization effort since the Cold War.

#### **50. Is the United States Ready for the Third Nuclear Age?**

*National Interest Online, Feb. 26 | Andrew Futter*

In the next few weeks, the Biden administration is likely to release both a Nuclear Posture Review (NPR) and a Missile Defense Review (MDR). These two documents are the chance for President Joe Biden and his national security team to "put their stamp" publicly on how they intend to approach issues of nuclear deterrence and national security policy. All previous NPRs and MDRs have marked an important moment in the evolution of U.S. nuclear thinking (each president has released an NPR since 1994 and an MDR since 2010), but the nuclear environment confronting the United States and the wider global nuclear order today will be quite different than what we have seen before.

#### **51. Ukraine Leads the World**

*Wall Street Journal, Feb. 28, Pg. A20 | Editorial*

Vladimir Putin's Ukraine invasion isn't going according to his script, and for that the world owes a great debt to the heroic people of that besieged country of 41 million. Their resistance against fearsome odds is an inspiration and has awakened the world to the menace of the Kremlin autocrat. Ukraine deserves more support to raise the costs of war for Mr. Putin with arms, the toughest sanctions, and global ostracism.

#### **52. We must stand with Ukrainians**

*Washington Post, Feb. 28, Pg. A22 | Editorial*

Five Days after Vladimir Putin launched his war on Ukraine, it is apparent that things are not going the overconfident Russian president's way. Russia has so far failed to take any of Ukraine's major cities, disable its military communications or decapitate the government. The Russian Ministry of Defense's own extended battle report on Sunday admitted for the first time to Russian dead and wounded - but claimed no major victories. In video of a meeting with Mr. Putin, Russia's top two military chiefs looked stricken as he ordered them to place his nation's nuclear forces into a "special mode of combat duty."

#### **53. Taking NATO's Article V Seriously**

*Wall Street Journal, Feb. 26, Pg. A16 | Editorial*

Vladimir Putin's likely conquest of Ukraine raises an uncomfortable question: Could Russia next attack a member of NATO? The alliance had better prepare for the possibility because the Russian dictator has all but promised to test it. "The United States will defend every inch of NATO territory with the full force of American power," President Biden said Thursday. "There is no doubt -- no doubt that the United States and every NATO ally will meet our Article V commitments, which says that an attack on one is an attack on all."

## STATE-RUN MEDIA

### **54. Putin orders "special duty regime" in Russia's deterrence forces**

*TASS (Russia), Feb. 27 | Not Attributed*

In response to aggressive statements in the West Russian President Vladimir Putin has issued orders to introduce what he described as a "special duty regime" in Russia's deterrence forces.

### **55. Sanctions may interrupt dialogue on strategic stability, Medvedev says**

*TASS (Russia), Feb. 26 | Not Attributed*

Deputy Chairman of the Russian Security Council Dmitry Medvedev noted that sanctions may serve as an excuse to interrupt dialogue on strategic stability and to exit the Treaty on Measures for the Further Reduction and Limitation of Strategic Offensive Arms (the New START Treaty).

### **56. It would be US 'golden dream' to have nuclear weapons in Ukraine – diplomat**

*TASS (Russia), Feb. 27 | Not Attributed*

Russian Foreign Ministry Spokeswoman Maria Zakharova said the emergence of nuclear weapons in Ukraine would be a "golden dream" for Washington.

### **57. Kiev Aims to Create Ballistic Missiles Able of Reaching Urals – Rogozin**

*Sputnik News (Russia), Feb. 26 | Not Attributed*

Kiev wants to create ballistic missile systems that have the ability to strike far into the Russian territory and Ukraine has the potential for this, Dmitry Rogozin, head of the Roscosmos state corporation Roscosmos state corporation, said on Saturday.

### **58. Russia doesn't want Ukraine to develop 'dirty bomb' – Russian envoy to UN**

*Interfax (Russia), Feb. 26 | Not Attributed*

The Russian and Ukrainian military have agreed to jointly ensure security of the Chernobyl Nuclear Power Plant, while Russia does not want Ukraine to develop a "dirty bomb," Russian Permanent Representative to the United Nations Vasily Nebenzya said.

### **59. Kiev regime's leaders to be inevitably punished – Russian Defense Ministry**

*TASS (Russia), Feb. 27 | Not Attributed*

The Kiev regime's ringleaders and their minions will be tracked down and inevitably and properly punished, Russian Defense Ministry spokesman Igor Konashenkov told a news briefing on Sunday.

### **60. Kremlin Spokesman Refers Question on Special Channel With US to Defense Ministry**

*Sputnik News (Russia), Feb. 28 | Not Attributed*

Kremlin spokesman Dmitry Peskov redirected the question on a possible special communication channel between the Russian military and the Pentagon to the Ministry of Defense. Politico has reported, citing sources, that the Pentagon wants to establish a channel, like the one that was set up in Syria in 2015, to communicate with Russia on the situation in Ukraine.

### **61. Belarus will agree to host nuclear arms, if Poland or Lithuania do so – Lukashenko**

*TASS (Russia), Feb. 27 | Not Attributed*

Minsk will address Russia with an invitation to deploy nuclear weapons in Belarus, if the United States deploys them in Poland and Lithuania, Belarusian President Alexander Lukashenko said on Sunday.

## **62. US distorts China's neutral stance, 'uses Ukraine crisis to sow discord between China, Russia'**

*Global Times (China), Feb. 26, Pg. 2 | Yang Sheng and Xu Yelu*

The US has tried very hard to distort China's neutral stance of calling for dialogue on the Ukraine crisis, with the US State Department asking China to "pressure Russia" to respect the principle of national sovereignty and territorial integrity, and even accusing China of "using Russia to create a new world order."

## **63. Alert! Abe's remarks are unlocking Japan's militarism**

*Global Times Online (China), Feb. 28 | Editorial*

Former Japanese prime minister Shinzo Abe said on Sunday that Japan should consider a nuclear-weapons sharing agreement with the US in the wake of the crisis in Ukraine. He took some NATO member states as example, saying that NATO's nuclear sharing arrangement enables the US to keep its nuclear weapons in Europe under its custody. He claimed that "we should not put a taboo on discussions about the reality we face," in spite of Japan's participation in the Nuclear Non-Proliferation Treaty and the three principles of no producing, no possessing or not allowing nuclear arms on its territory. Despite the obscurity of his words, Abe's intention is clear: He wants to move toward the pursuit of nuclear weapons.

## **TWEETS OF NOTE**

*Twitter, Feb. 25-28*

## **TOP STORIES**

### **1. Putin Puts Nuclear Forces on Alert**

Wall Street Journal, Feb. 28, Pg. A1 | Ann M. Simmons and Matthew Luxmoore

With much of the world moving against him, economic sanctions piling up and a military campaign less successful than he expected, President Vladimir Putin of Russia issued on Sunday the ultimate deterrent threat.

Mr. Putin put his country's nuclear-deterrence forces on high alert, a warning to the countries lining up to help Ukraine fend off its Russian attackers. The announcement was a window into Mr. Putin's increasing isolation and anger. His behavior is making his inner circle appear visibly uncomfortable.

Mr. Putin issued his warning Sunday sitting at one end of a very long table. Seated far down the table were two top lieutenants who typically exude confidence. After Mr. Putin ordered them to put the country's nuclear weapons on high alert, Sergei Shoigu, his longtime defense minister and stalwart ally, lowered his head in a sign of consent.

So far, the Russian leader appears to have miscalculated the economic and political costs as well as the on-the-ground challenges of an attack on Ukraine. His aggression threatens to have far-reaching consequences for both his global standing and the stability of his nation.

Just before the attack, he singled out another close adviser in a televised national security council meeting seen by millions of Russians, taking to task his spy chief, Sergei Naryshkin, for his failure to "speak directly." Mr. Naryshkin appeared uncomfortable and stumbled over his words as the Kremlin leader pressed him to express his views on whether the breakaway eastern Ukraine regions of Donetsk and Luhansk should be recognized as independent.

For more than a decade, Mr. Putin has pushed the boundaries of international behavior, often coming away with what he wanted with penalties that were manageable. He invaded the former Soviet republic of Georgia in 2008 to support two breakaway republics, seized Ukraine's Crimean Peninsula in 2014 and threw Russia's military might behind Syrian leader Bashar al-Assad.

But he built toward his biggest gamble ever during the isolation of Covid-19. Mr. Putin retreated to his residence outside Moscow and imposed stringent quarantine requirements on anyone wanting to see him.

It was during that period that he began making his current case for attacking Ukraine. In a 7,000-word essay written last summer and published on the Kremlin's website, Mr. Putin outlined what he said was evidence that Ukraine is an artificially created country infiltrated by foreign forces and overrun by nationalists who threaten Russia's security.

Mr. Putin's essay soon became so core to the Kremlin's narrative on Ukraine that the Defense Ministry added it to the curriculum studied by all Russian service members, including the 190,000 troops estimated to have massed near Ukraine's borders ahead of Thursday's invasion.

Mr. Putin's rhetoric grew increasingly hostile, in particular to the West and to Ukraine's leader, Volodymyr Zelensky.

Russian and Ukrainian negotiators met in Paris in January to discuss ways to implement an earlier deal between the two countries called the Minsk-2 agreement. The deal, which remained dormant amid disagreements over how to implement it, gave Russia significant say in Ukraine's future and Mr. Putin a potentially face-saving way to de-escalate -- until he chose to invade and rendered the agreement unviable.

"The current president recently said that no part of the Minsk agreements is to his liking," Mr. Putin said, referring to Mr. Zelensky. Then Mr. Putin used a common Russian quip: "Like it or not, you've got to suffer through this, my beauty."

"Ukraine is truly a beauty," Mr. Zelensky later responded, "but when he says 'my beauty,' that seems a bit much."

After talks with President Emmanuel Macron of France around the same time, the blame again shifted to NATO.

"We are not moving toward NATO, but NATO is moving toward us," Mr. Putin charged at a briefing following talks with Mr. Macron on Feb. 8. "Therefore, to say that Russia is behaving aggressively, at least, does not correspond to sound logic."

Mr. Putin's treatise on Ukraine ultimately became the basis of two angry, threatening speeches given last week, one announcing Russia's recognition of the breakaway regions of eastern Ukraine as independent states and another, on Thursday, launching a "special military operation" to rid Ukraine of NATO-supplied weapons and what Mr. Putin falsely claims are the Nazis who run the country.

"Now a few very important words for those who may be tempted to interfere in events," Mr. Putin said in Thursday's address. "Whoever attempts to interfere with us, let alone create threats to our country, to our people, should know that Russia's answer will be immediate and will lead to consequences of the kind you've never faced before in your history."

Mr. Putin's nuclear threat came as much of the world declared him an international pariah. He is among a small number of leaders to be hit by personal sanctions. That club includes Mr. al-Assad of Syria, North Korea's Kim Jong Un and Venezuela's Nicolas Maduro.

Now evidence is mounting that even some allies might be moving away from him. Turkey is weighing a request from Ukraine to block Russian warships from entering the Black Sea through a strategic chokepoint. Ibrahim Kalin, a spokesman and top aide to President Recep Tayyip Erdogan, tweeted Sunday that his country would "continue our efforts to help the people of Ukraine and end bloodshed in this unjust and unlawful war." Azerbaijan, a former Soviet republic and ally of Russia, has sent humanitarian aid to Ukraine.

Mr. Putin will face added pressure from ordinary Russians who are already being hit by sanctions. Long lines at ATMs over the weekend prompted the central bank to say the Russian financial system was stable. The ruble and stocks are expected to decline in Moscow on Monday as sanctions hit those markets. Prominent Russians including some oligarchs have criticized the invasion.

A senior U.S. defense official said Mr. Putin's move on nuclear weapons was unnecessary because Russia has never been under threat by NATO and it is dangerous because of the possibility of a miscalculation.

Mr. Putin first touted Russia's nuclear power before the invasion when he reminded his nation that it is one of the most powerful nuclear nations in the world, and warned that an attack on Russia would lead to defeat of any potential aggressor.

The potential use of nuclear weapons -- by Ukraine, not Russia -- was a well-trodden justification for Russia's attack.

But Ukraine has no nuclear weapons. In 1994, three years after the demise of the Soviet Union, the newly independent state agreed to give up its roughly 1,800 nuclear weapons in exchange for security assurances from the U.S., the U.K. and Russia. Experts in nuclear weaponry have said that while Ukraine has a rich history of nuclear research and has deposits of uranium, it has never had key elements of nuclear industrial infrastructure critical for building nuclear weapons.

## **2. Belarus votes to give up non-nuclear status**

Agence France-Presse, Feb. 27 | Not Attributed

Belarusians voted Monday to allow the country to host nuclear weapons and Russian forces permanently, results showed, part of a package of constitutional reforms that also extended the rule of leader Alexander Lukashenko.

The referendum was held Sunday as the ex-Soviet country's neighbour Ukraine is under attack from Russian troops and delegations from Moscow and Kyiv are expected to meet for talks on the Belarusian border.

Central Election Commission head Igor Karpenko said 65.16 percent of referendum participants voted in favour of the amendments and 10.07 percent voted against, Russian news agencies reported.

According to Karpenko, voter turnout stood at 78.63 percent.

To come into force, the amendments need to receive at least 50 percent of the vote with a turnout of over half the electorate.

Lukashenko, who has been in power since 1994, promised the referendum in the wake of historic protests against his disputed re-election in 2020.

By amending the constitution Lukashenko, 67, follows in the footsteps of Russian President Vladimir Putin, who in 2020 oversaw a vote on constitutional changes that made it possible for him to remain in power until 2036.

The constitutional changes also grant immunity to former leaders for crimes committed during their term in office.

Russia is a key ally of Belarus and last week Lukashenko allowed Russian troops to use Belarusian territory to invade Ukraine from the north.

Belarus inherited a number of Soviet nuclear warheads following the break-up of the USSR in 1991, according to the Nuclear Threat Initiative think tank, which it then transferred to Russia.

Lukashenko first floated possible changes after a presidential vote in August 2020 sparked unprecedented demonstrations that were met with a brutal crackdown.

He claimed a sixth term in the vote and imprisoned leading opposition figures, while his main rival Svetlana Tikhonovskaya was forced to seek refuge in neighbouring Lithuania.

The amendments would reinstate presidential term limits -- previously ditched by Lukashenko -- to two five-year terms, but they would only apply to the next elected president.

Were Lukashenko to put himself forward as a candidate for re-election in 2025, he could remain in power for an additional ten years.

Tikhonovskaya's office in Lithuania has hit out at the vote, saying that a sweeping crackdown on any dissenting voices since the 2020 election made any real discussion of the proposals impossible.

### **3. North Korea Fires Missile, Signaling A Return to Tests**

Wall Street Journal, Feb. 28, Pg. A22 | Timothy W. Martin

SEOUL -- North Korea launched a suspected ballistic missile off its east coast on Sunday morning, Tokyo and Seoul authorities said, restarting weapons tests after nearly a month of inaction.

The single missile was fired around 7:52 a.m. local time from the Sunan area, Seoul's military said. It traveled around 185 miles and hit an altitude of more than 370 miles, before splashing into the waters between Korea and Japan, Tokyo's military said.

Japanese Defense Minister Nobuo Kishi criticized the test. "If their idea was to conduct this at an unguarded moment for the international community while it was responding to the Russian invasion of Ukraine, we absolutely cannot condone this."

North Korea said it had tested reconnaissance satellite technology, conducting "vertical and oblique photographing of a specific area on earth," according to state media on Monday. Systems for high-definition photography, data transmission and altitude-control devices were verified by the country's aerospace and defense science officials, state media said.

The rocket technology required to launch a reconnaissance satellite into space closely mirrors that of long-range missiles, weapons experts say. Pyongyang, while detailing a five-year weapons strategy policy early last year, listed reconnaissance satellite technology for military purposes as a key pursuit.

The Kim Jong Un regime started 2022 by conducting a flurry of missile launches. Its seven weapons tests in January were more than all of last year. But until Sunday, North Korea had stayed quiet since Jan. 30.

Some security experts said Pyongyang would have wanted to keep a low profile during the Winter Olympics so as not to embarrass Beijing, one of the regime's few allies.

In January, Pyongyang fired missiles from a train and from an airfield. Mr. Kim attended the final test of the country's self-proclaimed hypersonic technology, making his first in-person visit to a launch in nearly two years.

The U.S. and North Korea haven't held formal nuclear talks in more than two years. The Kim regime has brushed off outreach from the Biden administration and has kept its borders largely sealed off throughout the pandemic. It has spurned offers by international relief groups to provide millions of Covid-19 vaccinations.

North Korea's Politburo, at a meeting in January, threatened to resume nuclear or long-range missile tests, having refrained from such behavior for more than four years. Pyongyang's dozens of missile launches in recent years have showcased shorter-range technology.

With global attention diverted to Russia's invasion of Ukraine, North Korea may see it as a chance to test weapons without as much risk of punishment, said Jean H. Lee, a senior fellow at the Korea program at the Wilson Center, a think tank in Washington.

"Regardless, I think Kim has his own timeline and goals for new weapons in 2022," Ms. Lee said. "He wants to have new weapons to unveil this spring. Tests get him closer to perfecting the technology."

A more distracted U.S. could also influence how North Korea views the prospects of denuclearization negotiations, should the Biden administration be forced to deal with a sustained conflict in Europe and juggle a tense relationship with China, said Go Myong-hyun, a senior fellow at the Asan Institute, a Seoul-based think tank.

"North Korea will be able to tell Washington: 'We could save you some trouble -- let's settle this,'" Mr. Go said. "It's something North Korea can definitely put on the table."

North Korea counts neighboring Russia and China as among its closest allies. In recent weeks, the Kim regime reopened its borders to allow in a handful of cargo-train shipments inbound from China. Beijing and Moscow have recently blocked Washington's move to impose extra United Nations sanctions on the Kim regime and have previously advocated for the world to relax the economic restrictions.

### **4. Putin's Nuclear Arsenal Rhetoric Pushes Bounds of Brinkmanship**

New York Times, Feb. 28, Pg. A1 | David E. Sanger and William J. Broad

WASHINGTON -- When Vladimir V. Putin declared Sunday that he was putting his nuclear forces into "special combat readiness" -- a heightened alert status reminiscent of some of the most dangerous moments of the Cold War -- President Biden and his aides had a choice.

They could match the move and put American forces on Defcon 3 -- known to moviegoers as that moment when the Air Force rolls out bombers, and nuclear silos and submarines are put on high alert. Or the president could largely ignore it, sending out aides to portray Mr. Putin as once again manufacturing a menace, threatening Armageddon for a war he started without provocation.

For now, at least, Mr. Biden chose to de-escalate. The American ambassador to the United Nations reminded the Security Council on Sunday afternoon that Russia was "under no threat" and chided Mr. Putin for "another escalatory and unnecessary step that threatens us all." The White House made it clear that America's own alert status had not changed.

But to many in the administration, who spoke on Sunday on the condition of anonymity, it was a stark reminder of how quickly the Ukraine crisis could spin into a direct superpower confrontation -- and how it may yet do so, as Mr. Putin tests how far he can go and threatens to use the ultimate weapon to get there.

And his outburst highlighted anew the question, coursing through the American intelligence community, about the state of mind of the Russian leader, a man previously described as pragmatic, calculating and cunning. The former director of national intelligence, James R. Clapper Jr., said in public today what some officials have been saying in private since the Russian leader began accusing Ukraine of genocide and claiming it was developing nuclear weapons of its own.

"I personally think he's unhinged," Mr. Clapper said on CNN. "I worry about his acuity and balance."

Others wonder if Mr. Putin wants to create that impression, to add to Washington's unease. Similar concerns drove the decision not to have Mr. Biden, in Delaware for the weekend, respond to Mr. Putin's threats. It was the second time in a week that Mr. Putin has reminded the world, and Washington, that he has a massive arsenal and might be tempted to use it. But what made the latest nuclear outburst notable was that it was staged for television, as Mr. Putin

told his generals that he was acting because of the West's "aggressive comments" about Ukraine. Russia's most senior military officer, Valery Gerasimov, sat stone-faced as Mr. Putin issued his directive, leaving some wondering what he was thinking, and how he might respond.

"It was bizarre," said Graham T. Allison of Harvard University, whose study of the Kennedy administration's handling of the Cuban missile crisis, "Essence of Decision," has been read by generations of international relations students -- and many of the national security staff surrounding Mr. Biden today. Mr. Putin's citation of "aggressive comments" as a justification for putting one of the world's largest nuclear arsenals on alert status seemed both disproportionate and puzzling, he said. "It makes no sense."

Professor Allison, who worked on the project to decommission thousands of nuclear weapons that once belonged to the Soviet Union, which centered on Ukraine, said the incident is "adding to the worry that Putin's grasp on reality may be loosening."

Now the question is how General Gerasimov will translate Mr. Putin's vaguely worded order for "special combat readiness" into action. The answer should be clear in the next day or two.

A vast nuclear-detection apparatus run by the United States and its allies monitors Russia's nuclear forces at all times, and experts said they would not be surprised to see Russian bombers taken out of their hangars and loaded with nuclear weapons, or submarines stuffed with nuclear weapons leave port and head out to sea.

Both Russia and the United States conduct drills that replicate various levels of nuclear alert status, so the choreography of such moves is well understood by both sides. A deviation from usual practice would almost certainly be noticeable.

The ground-based nuclear forces -- the intercontinental ballistic missiles kept in silos by both nations -- are always in a state of readiness, a keystone to the strategy of "mutually assured destruction" that helped avoid nuclear exchanges at even the most tense moments of the Cold War.

Whatever one thinks of Mr. Putin's judgment, the decision to put the forces on alert in the midst of extraordinary tensions over the invasion of Ukraine was highly unusual. It came only a few days after he warned the United States and other NATO powers to stay out of the conflict, adding that "the consequences will be such as you have never seen in your entire history."

It has put an end, at least for now, to the discussions between Russia and the United States about what they do in four years, when the one remaining nuclear treaty between the two countries, called New START, expires. The treaty limits each side to 1,550 deployed strategic weapons, down from tens of thousands at the height of the Cold War. But that does not include smaller, tactical weapons designed for battlefield use, a major worry in the current crisis. Just as Mr. Putin claimed last week that the United States had designs to put such weapons on Ukrainian territory -- one of his many justifications for the invasion -- American officials fear that Mr. Putin's next move is to put them in Ukraine, if he succeeds in seizing the country, and in Belarus.

Until last week, the two nations were meeting regularly to discuss new arms-control regimes, including a revival of the Intermediate-Range Nuclear Forces Treaty, which President Donald J. Trump abandoned in 2019. But the United States said last week that it was suspending those talks.

The immediate concern is that a heightened alert level, by design, loosens the safeguards on nuclear weapons, making it more possible that they could be used, by accident or design.

In recent years, Russia has adopted a doctrine that lowers the threshold for using nuclear arms, and for making public threats of unleashing their powers in deadly atomic strikes.

"It's what he does," Hans M. Kristensen, the director of the Nuclear Information Project at the Federation of American Scientists, a global policy think tank in Washington, said in an interview. "It's verbal saber-rattling. We'll see where he goes with it. This war is four days old and he's already made nuclear threats twice."

Mr. Kristensen noted that in 2014, when Mr. Putin annexed Crimea, the peninsular part of southern Ukraine that juts into the Black Sea, the Russian president also raised the possibility that his forces might turn to atomic weapons. He recalled that when Mr. Putin was asked how he would react to retaliatory sanctions by the West, he "said he was willing to put his nuclear forces on alert."

Mr. Putin's announcement on Sunday came hours after Europe and the United States announced new sanctions, including banning some Russian banks from using the SWIFT financial messaging system, which settles international accounts, and crippling the Russian central bank's ability to stabilize a falling ruble.

Matthew Kroenig, a professor of government and foreign service at Georgetown University who specializes in atomic strategy, said history bristled with cases in which nuclear powers had threatened to unleash their arsenals on one another. He pointed to the Berlin crisis of the late 1950s, the Cuban missile crisis of 1962, a border war between the Soviet Union and China in 1969, the Arab-Israeli war of 1973, and a war between India and Pakistan in 1999.

He also noted that Mr. Trump had leveled similar threats against Kim Jong-un, the North Korean leader, after his armed forces conducted a series of long-range missile tests. In his first year in office, 2017, Mr. Trump threatened "fire and fury like the world has never seen."

Mr. Putin's outburst reminded many nuclear experts of one of Mr. Trump's tweets, in which he noted: "North Korean Leader Kim Jong Un just stated that the 'Nuclear Button is on his desk at all times.' Will someone from his depleted and food starved regime please inform him that I too have a Nuclear Button, but it is a much bigger & more powerful one than his, and my Button works!"

Mr. Trump later insisted that the threat was calculated, and that it had brought Mr. Kim to the negotiating table for a series of three high-profile meetings between the two leaders. But the talks collapsed, and Mr. Kim's nuclear stockpile is now significantly larger, by most unclassified estimates, than it was before Mr. Trump issued the threat.

"Nuclear-armed states can't fight nuclear wars because it would risk their extinction, but they can and do threaten it," Dr. Kroenig noted on Sunday. "They play games of nuclear chicken, of raising the risk of war in hopes that the other side will back down and say, 'Geez, this isn't worth fighting a nuclear war over.'"

Mr. Kristensen of the Federation of American Scientists said the threats could be empty unless matched with evidence that nuclear weapons are being removed from storage and prepared for action.

"Unless we see that kind of thing," Mr. Kristensen said, "it's rhetoric -- it's madman brinkmanship."

#### **5. Pentagon wants Moscow back channels to prevent nuclear escalation**

***As the U.S. and NATO rush weapons into Ukraine, DoD officials want more military channels to Putin's top leaders. But Russia's not picking up the phone***

POLITICO Online, Feb. 27 | Bryan Bender

When Gen. Mark Milley emerged from six hours of tense talks with his Russian counterpart in Helsinki last September, the Joint Chiefs chair looked almost buoyant. Or at least as chipper as the gruff soldier of more than 40 years ever gets in public. “When military leaders of great powers communicate, the world is a safer place,” Milley said, striking an optimistic tone.

Now, just five months later, with Russian military forces pummeling Ukraine from the air, land and sea, Milley’s paean to a common understanding with Moscow is virtually dead.

But his relationship with Gen. Valery Gerasimov, the chief of the general staff of the Russian Armed Forces, is at the center of a highly sensitive behind-the-scenes effort to prevent the biggest war in Europe in generations from spinning into a wider conflict. It’s a situation that became more urgent on Sunday, when Russian President Vladimir Putin ordered his nuclear forces on high alert after a series of what he called “aggressive statements” by NATO powers.

Since their meeting in Finland, the two men have spoken multiple times, including during the initial Russian buildup in November and again earlier this month.

Milley and Gerasimov have not spoken since the latest hostilities, two DoD officials told POLITICO. But Pentagon officials say they hope their line of communication — which has been more frequent than that of Defense Secretary Lloyd Austin and his counterpart, Russian Defense Minister Sergey Shoygu — can help open up more regular links with Russian forces as the conflict ratchets up.

“Now that Ukrainian airspace is in dispute and being contested and Ukrainian airspace runs right up alongside NATO airspace, we have conveyed to the Russians that we believe a conduit at the operational level is needed ... so we can avoid miscalculation,” a senior Pentagon official told POLITICO. “And we have not received any response from them in terms of whether they agree, whether they are willing to set something up.”

The official cited as a possible model the “deconfliction” line that U.S. and Russian forces set up in 2015 to prevent their forces operating in close proximity in Syria from coming to blows. The purpose, the official said, would be to have a reliable means to telegraph, “We’re about to do this, stay the heck out of the way.”

But with the U.S. and other NATO militaries resupplying Ukrainian forces, that demarcation seems fuzzy at best. Western powers, while committed to not putting troops into direct conflict with Russia’s invading army, have been overt in recent days about backing Ukraine’s war effort. And with two nuclear powers just a border away from a potential shooting war, the potential for conflict is real — as is the necessity for a de-escalation process, say officials.

A battlefield-level mechanism to ensure each sides’ red lines aren’t violated, would likely fall under the top NATO commander in Europe, U.S. Air Force Gen. Tod Wolters, who has authority to directly reach out to the Russian high command, according to two DoD officials in Europe who are directly involved in Ukraine planning.

But the relationship between Milley and Gerasimov, the two nations’ top military officers, is seen as a way to pave the way for more urgent communication at lower levels. “That is what the Milley-Gerasimov thing is for,” said the senior Pentagon official.

The sources all spoke on condition that they not be identified discussing internal deliberations. And they were reluctant to offer many details to avoid violating confidences that could prove critical in the coming days.

Current and former officials and experts said the links at the highest levels of the U.S. and Russian military commands are proving increasingly important as the fighting in and around Ukraine expands and as the world’s two largest nuclear powers have cut off most diplomatic engagements.

Putin has consistently accused the United States of stoking the conflict and pressuring Russia into a war as a pretext to cripple its economy, while President Joe Biden has labeled Russia's assault on Ukraine as a "war of choice" without any justification.

### *Planes in close proximity*

In the past 48 hours, Washington and Moscow have halted "strategic stability talks," aimed at lowering the temperature. Now, with new instructions late last week that U.S. diplomats must cancel most contacts with Russian counterparts, some level of back-channel communications is more necessary than ever.

"We're constantly seeing fighter planes come into very close contact" in the region, said Emma Claire Foley, a Russia specialist at disarmament group Global Zero who oversees the Military Incidents Project, which tracks "close calls" between NATO and Russian military forces. "They're not always using transponders. They are not communicating with air traffic control. In those situations, there can be accidents ... that can have massive consequences."

"Any personal relationship is immensely important when you are dealing with these issues of incredible consequence," she added, singling out "these unnecessary missions using nuclear-capable aircraft."

"All of this presents a risk of escalation," Foley said.

When the Russian invasion began in earnest last week, U.S. forces in the region were immediately ordered to pull back from the war zone.

"As soon as the Russians did what they did, we had to get out of the way," said one of the U.S. military officials in Europe directly involved in the planning.

That included redirecting a "pretty robust" operation of spy planes and drones flying over Ukrainian airspace, the official said.

Now, the U.S. Air Force is relying on high-flying aircraft over Ukraine such as the U-2 spy plane that can avoid most anti-aircraft missiles and drones because there is "a little bit more risk tolerance for that."

"One of the things we don't want to do," the official said, "is provoke a conflict with the Russians directly."

Still, the risk of direct confrontations between NATO forces and Russia is only growing as the conflict intensifies, according to a number of current and former national security officials.

The U.S. and its allies are stepping up air patrols along NATO's eastern region and on Saturday announced a slew of new arms shipments for Ukrainian forces.

In a sign of growing concern these actions could escalate the conflict, the Pentagon on Saturday publicly pushed back on Russian claims that U.S. forces were assisting the Ukrainians in defending their territory on the Black Sea, where a flotilla of Russian warships carrying troops has opened another front. "Chalk this up to just one more lie by the Russian Ministry of Defense," Pentagon press secretary John Kirby tweeted.

There is deepening uncertainty about Putin's ultimate intentions — particularly whether he intends to violate the territory of NATO members. Any such incursion would trigger Article 5 of the NATO treaty that stipulates an attack on one is an attack on all.

NATO outlined on Friday a laundry list of Russian actions it sees as threatening a wider military conflict.

"Beyond Ukraine, we see provocative Russian military activities near NATO's borders stretching from the Baltic to the Black Sea," it said. That includes "irresponsible and aggressive nuclear rhetoric," along with "military posturing."

NATO Secretary-General Jens Stoltenberg also warned on Friday that a cyberattack on one of the alliance's members would trigger the "commitment clause" in the NATO treaty that compels a collective response.

The Biden administration has also made it clear to Russia that it will not sit out the conflict if Russia attacks a NATO ally. "We're going to do what we need to do to defend every inch of NATO territory," Kirby told reporters.

*'It could get dicey'*

But the rhetoric out of Moscow has only grown more bombastic. "It's time to padlock the embassies and continue contacts looking at each other through binoculars and gun sights," said Dmitry Medvedev, the former Russian president who is now the deputy head of Russia's security council, on Saturday.

Foley said she is watching how the decision by NATO countries to send more arms to Ukraine "will be interpreted" by Russia.

It all makes the behind-the-scenes messaging between military leaders so important, said Lynn Rusten, former senior director for arms control and nonproliferation on the White House National Security Council during the Obama administration and now vice president at the nonprofit Nuclear Threat Initiative.

"There is a lot of uncertainty about where Putin is going to go and what his aims are," she said. "There are lots of opportunities for things to escalate. It could get dicey."

Only NATO and Russian military officials can effectively "deconflict" their forces in the region and ensure clear "signaling and intent," Rusten added. "The military-to-military links are the most important."

Publicly, the Pentagon has been mum on how the two sides are communicating. Asked this week whether there were any new deconfliction mechanisms like Washington and Moscow fashioned during Syria's civil war, Kirby told reporters, "There's been no guidance by the department with respect to broader communications. It's normal channels on normal issues with the Russians."

"Obviously," he added, "we're always going to be mindful of force protection risks, we're always going to be mindful of the potential for miscalculation and for mistakes to be made that could escalate things."

White House press secretary Jen Psaki also punted when asked Friday about whether Biden or other top leaders were communicating directly with the Kremlin.

"Obviously, our national security team has a range of means of communicating with the Russians," she said.

But she made clear it's "not the moment where diplomacy feels appropriate."

"It does not mean we have ruled out diplomacy forever," Psaki added. "[T]he president remains open to engaging on — at a leader-to-leader level, but this is not the moment."

That leaves the generals and commanders close to the fight to avoid a larger war.

*A history of de-escalation communication*

Washington and Moscow first set up a direct “hotline” in 1963 after the Cuban missile crisis, when the two sides came perilously close to nuclear war. (They only learned later how close to Armageddon that faulty intelligence and miscalculation had brought them.)

The hotline was originally in the form of a teletype, then a facsimile machine; it is now a secure email link located in the National Military Command Center, the 24-hour operations hub in the Pentagon.

One former top U.S. commander said in the current crisis there are multiple ways the U.S. and Russian military leaders can communicate quickly, but sees the Milley-Gerasimov relationship as more crucial than ever.

“Know your enemy as you know your friends,” he said, paraphrasing the ancient Chinese general and philosopher Sun Tzu. “Those relationships are so, so important in helping you not misjudge and misstep, because a lot of times you don’t get the direct communication during the crisis. You really just have to rely on your knowledge of each other.”

“I hope that that relationship has been allowed to grow,” added the retired general, who asked not to be identified because he was not authorized to speak on Milley’s behalf. “Politically, there is some difficulty in mil-to-mil relationships but hopefully that one hasn’t deteriorated to the point of not having spoken for any extended period of time.”

He worries about miscues with the Russian forces at lower levels: “a misstep someplace by a tactical commander, or something like that — a miscommunication.”

A number of people cited the Russian separatists’ deadly shutdown of a commercial airliner over eastern Ukraine in 2014 as one example of how “the fog of war” could lead to a direct confrontation between NATO and Russian forces.

As for a nuclear miscalculation, that is seen as highly unlikely but not out of the question.

“Most of the time nuclear weapons are self-detering,” said the retired general. “But sometimes something could trap you in a logic train that puts you in a position that you think it’s a plausible approach. That’s the scary part.”

## **6. Russian Strategic Forces Reportedly on High Alert as Fighting in Ukraine Intensifies**

DOD News, Feb. 27 | David Vergun

U.S. officials don’t doubt reports that Russian President Vladimir Putin has placed Russia’s nuclear deterrence forces on high alert, a senior defense official said at a press briefing today.

“We have no reason to doubt the validity of these reports,” the official said.

This is an unnecessary step for Putin to take because Russia has never been under threat from NATO and certainly not from Ukraine, the official said.

It is escalatory because it’s potentially putting at play forces that could, if there’s a miscalculation, make things much more dangerous, the official said.

“We remain confident in our ability to defend ourselves and our allies and our partners, and that includes in the strategic deterrent realm,” the official said.

Regarding the situation in Ukraine, the official said that roughly two-thirds of Russian forces arrayed along the border are now inside Ukraine, an increase over the last 24 hours when roughly half of those forces were inside Ukraine.

Ukrainians are putting up stiff resistance in the face of invading Russian forces, the official said, adding that no major cities inside Ukraine have yet been captured.

"We believe that their advance was slowed both by resistance from the Ukrainians, who have been quite creative in finding ways to attack columns, and, number two, by the fuel shortages and the sustainment issues that they have had," the official said.

Logistics shortages have been particularly acute in their advanced on Kharkiv," which is in northeast Ukraine, the official said.

Some Russian reconnaissance elements have been in Kyiv over the last two days, and there are reports that they are wearing Ukrainian military uniforms to disguise themselves, the official said. In some cases, they have been identified by locals and by the Ukrainian military.

Russian forces, which are converging from the northeast and northwest, remain about 30 kilometers from the city center of Kyiv, Ukraine's capital, the official said.

In the south of Ukraine, Russian forces are moving northeast toward Mariupol and are now about 50 kilometers from the center of that city, the official said. They are also moving northwest toward the city of Kherson.

"Our assessment is that Mariupol is defended, and the Ukrainians will put up stiff resistance there," the official said.

The airspace over Ukraine is still contested, and that means that Ukrainians are still using their own aircraft and air and missile defense systems, which are believed to be still intact and still viable, although somewhat degraded, the official said.

Russians continue launching missiles against targets in Ukraine, mostly short-range, ballistic missiles, the official said. There are indications that some of the missiles launched have experienced failures.

There are indications that Russian forces are adopting siege tactics around the city of Chernihiv, which is northeast of Kyiv. This is particularly troubling as it could result in civilian casualties, the official said.

The U.S. and NATO continue providing Ukraine with lethal and nonlethal assistance, the official said.

An increased number of people, including some Americans, are leaving Ukraine, with many going to Poland, the official said. The 82nd Airborne Division is poised near the border and prepared to assist should the need arise.

"Ukraine's president Volodymyr Zelenskyy is still governing his country, still viable, still active," the official said. "He still has command and control over his armed forces."

## **7. UK says no 'significant change' in Russia's nuclear posture**

Agence France-Presse, Feb. 28 | Not Attributed

The UK government has seen no major change to Russia's nuclear posture despite President Vladimir Putin placing his strategic forces on higher alert, Defence Secretary Ben Wallace said on Monday.

"We've looked at their posture. There isn't a significant change," he said on LBC radio, accusing Putin of trying to "flex muscles" with his invasion of Ukraine bogged down.

Wallace said he had assured his 12-year-old son: "No, we're not going to have a nuclear war."

"What I've said to him is, look, President Putin is dealing at the moment in a rhetoric, he wants to distract from what's gone wrong in Ukraine, and he wants us all to be reminded that he has a nuclear deterrent."

But Britain, France and the United States had their own nuclear deterrence available, Wallace stressed: "It's kept us safe for decades. It is a deterrent by definition and design."

The minister said the progress of Russia's advance into Ukraine was deteriorating, telling BBC radio in a separate interview: "There are many reports of Russians either sort of deserting or surrendering.

"Because they are confused as much as anyone why they are engaged in a war with people they're probably related to."

### **8. Putin nuclear threat linked to 'halted' offensive – Germany**

Agence France-Presse, Feb. 27 | Not Attributed

President Vladimir Putin's decision to put Russia's nuclear weapons on high alert "crosses another line" and shows his offensive in Ukraine is not going to plan, Germany's defence minister said Sunday.

"In his (Putin's) megalomania, the rapid invasion of Ukraine has been halted by Ukraine's brave and determined actions," Christine Lambrecht told public broadcaster ZDF.

Earlier Sunday Putin ordered his defence chiefs to put the country's "deterrence forces" on high alert, accusing Western countries of taking "unfriendly" steps against his country amid Moscow's invasion of Ukraine.

"We would be well advised to take Putin and his declarations very seriously and not to underestimate him," said Lambrecht, calling on the West to remain "very vigilant".

The White House has already condemned Putin's announcement as "totally unacceptable" and an unnecessary escalation.

NATO chief Jens Stoltenberg also denounced it as "dangerous" and "irresponsible".

### **9. West takes Putin's nuclear threat seriously**

***Russian president's 'escalate-to-de-escalate' strategy comes after military setbacks and rising pressure from sanctions***

Financial Times Online (UK), Feb. 27 | Henry Foy, Max Seddon and Demetri Sevastopulo

BRUSSELS/MOSCOW/WASHINGTON -- Western capitals have long been anxious about Moscow's military doctrine, which allows it to use nuclear weapons to end a conflict as part of its "escalate to de-escalate" strategy. So when Russian president Vladimir Putin put strategic nuclear forces on high alert on Sunday, they took it seriously.

Putin's decision to prepare Russia's nuclear weapons for increased launch readiness sparked immediate condemnation from the US and Nato that it had made the world "much more dangerous".

"This is not only an unnecessary step for him [Putin] to take but an escalatory one," said a senior US defence official. "Unnecessary because Russia has never been under threat by the west or by Nato and certainly wasn't under any threat by Ukraine. And escalatory because it is clearly potentially putting at play forces that, if there's a miscalculation, could make things much, much more dangerous."

Announced amid an invasion of Ukraine that has struggled to achieve Moscow's primary objectives and a day after the US, EU and other western allies unveiled potentially crippling economic sanctions, it signalled the Kremlin felt that it had no option but to intensify its threats, analysts said.

"There's a real possibility Putin could turn to nuclear weapons if he continues to experience military setbacks and sees the diplomatic and political situation crumbling," said Caitlin Talmadge, a nuclear policy expert at Georgetown University.

"It's not just a response to how his conventional campaign [in Ukraine] is going but to these other developments, with sanctions and Germany sending weapons to Ukraine," she added. "The entire picture to him looks pretty bleak. If he wanted to use tactical nuclear weapons to achieve [his aims] in Ukraine, he could do that."

Putin's order, which applies to Russia's traditional nuclear deterrent and its new hypersonic missiles, does not mean he is ordering preparations for a nuclear strike.

But according to Russia's nuclear doctrine, published in 2020, the Kremlin "reserves the right to use nuclear weapons", including "for the prevention of an escalation of military actions and their termination on conditions that are acceptable for the Russian Federation and/or its allies".

Western countries interpreted that as a lowering of the bar for the use of nuclear weapons: until 2020, Moscow's stated policy was to use nuclear weapons when "the very existence of the state is threatened".

Matthew Kroenig, a nuclear expert at the Atlantic Council, said Putin's response on Sunday was textbook Russian strategy.

"This really is Russia's military strategy to backstop conventional aggression with nuclear threats, or what is known as the 'escalate to de-escalate strategy'. The message to the west, Nato and US is, 'Don't get involved or we can escalate things to the highest level'," Kroenig said, adding that he thought Putin was bluffing.

Putin's decision followed a warning he issued at the outset of his invasion of Ukraine last Thursday, that any attempt by other countries to "meddle" would be met with consequences, a phrase interpreted to mean possible nuclear attacks.

Since the start of the invasion, Russia has failed to capture Kyiv or Kharkiv, Ukraine's two biggest cities, and suffered heavy losses against a far stronger Ukrainian defence than even its allies expected.

In addition, western countries have agreed on a sanctions package that cuts off some Russian banks from the global Swift financial messaging network and attempts to prevent Russia's central bank from using its \$630bn worth of international reserves, the toughest economic restrictions imposed on Moscow.

The nuclear announcement also came shortly after Russian and Ukrainian government delegates agreed to meet for talks, the first such discussions since the invasion began. Lawrence Freedman, emeritus professor of war studies at King's College London, said Putin might see the threat of a nuclear strike combined with the offer of a potential peace deal as a "way out of this mess he is in".

"While this might be an attempt to deter the west from imposing new, harsh sanctions on the country's financial sector or supplying weapons to Ukraine, the move escalates tensions between Russia and the west to an unprecedented

level," said Andrius Tursa, eastern Europe expert at political risk consultancy Teneo. "The fact that Putin is turning into a pariah on the international stage makes him even more dangerous and unpredictable."

Under the order, Russia could begin dispersing intercontinental ballistic missiles from their bases and fitting them to long-range heavy bombers, threatening the US, or move tactical warheads from their centralised storage facilities to their deployment locations, threatening Ukraine, said James Acton, a senior fellow at the Carnegie Endowment.

"Equipping bombers with warheads and then having those bombers in the air is clearly a more aggressive signal than keeping those bombers on the ground," Acton said.

While conventional clashes between nuclear-armed Pakistan and India in 2000-2001 alarmed the world and Israel began preparations to make nuclear weapons deployable during the 1973 Yom Kippur war, Putin's decision is the first time a recognised nuclear state has overtly moved to such a state of preparedness since the 1962 stand-off between Washington and Moscow over Soviet nuclear missiles in Cuba.

Putin's order is a "preliminary command" rather than active preparations for a strike, said Pavel Podvig, a senior research scientist at the UN Institute for Disarmament Research in Geneva.

"In peacetime, the system is there but the circuitry is disconnected. So you cannot physically transmit the signal even if you want to," Podvig said. "Even if you press the button, nothing would happen."

Podvig warned, however, that "there is a deficit of rational thinking in certain quarters" that added to the tensions. "People said invading Ukraine was crazy and irresponsible — this is an order of magnitude higher."

#### **10. Russia's nuclear forces are on alert. Here's what it means.**

Washington Post, Feb. 28, Pg. A17 | Missy Ryan, Karoun Demirjian, John Hudson and Shane Harris

President Vladimir Putin's decision to put Russian nuclear forces on alert thrust the crisis over Ukraine into a more volatile phase on Sunday, fueling the potential for deadly miscalculation as the West's campaign of economic reprisal increases the chances the Russian leader could see his survival and that of the Russian state at risk.

U.S. officials were scrambling in the hours following Putin's order, issued as Russian troops face stiff resistance in the fourth day of their invasion of Ukraine, to decode what the enigmatic leader's decision meant in practice. Experts said it was the first time the Kremlin, which has the world's biggest nuclear stockpile, had made such an announcement since the Russian Federation was established in 1991.

Putin described the move as a response to what he called "aggressive statements" from the West and its escalating package of economic retaliation. The sanctions, including new steps unveiled Saturday that would cut off Russia's financial institutions from the global economy and cripple its central bank, have already sent the ruble tumbling to a record low, raising questions about how Russia's economy can hold on.

Biden administration officials condemned Putin's order as a warning over Ukraine, where Putin has depicted his invasion as a security imperative rather than a signal of his intent to employ a nuclear device. They noted that Russia, just last month, was one of the nations signed on to a declaration saying that atomic war could not be won and should never be fought.

"This is just an attempt, an escalatory attempt, to justify further action on their part," White House press secretary Jen Psaki told MSNBC. "We have the ability, of course, to defend ourselves, as does NATO. But I think we all need to be very clear-eyed and call this out for what it is."

Linda Thomas-Greenfield, President Biden's ambassador to the United Nations, said the decision illustrated Putin's desire to browbeat his opponents into submission. "Certainly, nothing is off the table with this guy," she said on CBS News' "Face the Nation." "He's willing to use whatever tools he can to intimidate Ukrainians and the world."

But Samuel Charap, a Russia expert at the Rand Corp., said the United States and its allies would have to tread carefully as they seek to increase the pain on Russia's economy without triggering a violent response from Putin or a round of unpredictable tit-for-tat escalation.

"Credibly communicating the limits of our intentions - even though the sanctions themselves are totally justified - is really difficult," he said. "It is plausible for them to interpret our sanctions as an attempt to fundamentally damage the Russia state and overthrow its government."

Pavel Podvig, an expert on Russia's nuclear forces at the United Nations Institute for Disarmament Research, said Sunday's announcement would enable Russia's military command and control system to transmit a nuclear launch order and would make it less vulnerable to decapitation in the event that either Putin or his top military advisers were dead or incapacitated.

Russia has nearly 6,000 warheads, slightly more than the United States' approximately 5,400, according to the Federation of American Scientists.

The move follows Putin's warning, in a speech last week announcing his operation in Ukraine, that outside countries interfering in Ukraine would face consequences "such as you have never seen in your entire history," a remark many analysts saw as a nuclear hint.

Putin also personally oversaw nuclear exercises earlier this month as tensions mounted over Ukraine.

But instead of backing off, Ukraine's allies in the West have vowed to increase military support to the government in Kyiv. For the first time, European Commission President Ursula von der Leyen announced on Sunday that the European Union will finance arms supplies to a country under attack, and the bloc will bar landing and flyovers by Russian aircraft.

NATO nations, including the United States, have said they will not send forces to fight in Ukraine but will attempt to help the government of Volodymyr Zelensky fend off Russia's attack, as it bars men of fighting age from the leaving the country and hands out weapons to lightly trained volunteers.

Perhaps even more than the military aid, the new economic measures, orchestrated in large part by the Biden administration, are likely to be seen as an unacceptable attack on Putin's regime, analysts said. The new measures to sever access to the SWIFT interbank messaging system and prohibit Russia's central bank from rescuing the domestic economy signal a new level of global unity against Putin's invasion and will dramatically increase the challenges the Russian leader faces at home.

Analysts predicted the new penalties could trigger bank runs and massive inflation in Russia, potentially sparking domestic unrest and representing the harshest such measures slapped on any country in modern times. They follow another signal decision last week when Germany announced it would not approve a major gas pipeline that would have given Russia needed foreign cash.

While Russia's own military doctrine lays out the potential use of nuclear weapons only in the event the existence of its state is at risk, some Russia experts believe its true trigger point may fall beneath that threshold.

"Here we have to ask to what extent Putin feels that 'l'état, c'est moi,' " said Olga Oliker, Europe and Central Asia director at the International Crisis Group, using a French phrase that translates to "I myself am the nation." "I can't answer that question. I can say it worries me just about now."

A European diplomat, who spoke on the condition of anonymity to describe an internal analysis of the alert decision, said that Western nations' apprehension about what they assessed to be Putin's isolation, his decision-making and his access to realistic information "makes it more concerning than it would otherwise be."

Some U.S. officials believe the move's timing, just as Moscow and Kyiv agree to talks on the Belarusian border, is aimed at extracting maximum concessions from Ukraine, such as the resignation of its president and cabinet of advisers, deactivating the country's military, and a declaration of permanent neutrality, said a senior State Department official, who like others spoke on the condition of anonymity citing the situation's ongoing sensitivity.

Another diplomat said Putin is not serious about the negotiations with Ukraine, and the nuclear alert combined with its alleged firing of Iskander missiles into Ukraine from Belarus - are a sign to the West to stay out of the conflict.

A senior defense official, speaking to reporters on Sunday morning, said the decision was unnecessary and escalatory.

"Unnecessary because Russia's never been under threat by the West or by NATO and certainly wasn't under any threat by Ukraine," the official said. "And escalatory because it's clearly potentially putting at play forces that, if there's a miscalculation, could make things much, much more dangerous."

While experts said they did not expect Putin to attempt any sort of nuclear strike on the West or a smaller-scale nuclear attack within Ukraine - where conventional Russian forces already have a major advantage - they said the fact the alert was occurring at a time when a major conflict is unfolding on NATO's borders made it much more dangerous. With tensions already at their highest level in decades, an encounter between Russian and NATO planes over the Baltic Sea, for example, becomes much more perilous.

Officials have said they will not disclose any changes to America's own nuclear alert status.

Daryl Kimball, executive director of the Arms Control Association, said the Biden administration was right to refrain from making such an announcement.

"This is where it's important for President Biden and Putin immediately back away from nuclear saber-rattling and any discussion of nuclear weapons, which have absolutely no place at this moment," he said.

While Ben Hodges, the former commanding general of U.S. Army forces in Europe, said Putin's move was dangerous, he noted that the threat of using nuclear weapons "cost him nothing" while actually using them would "cost him everything."

"I hope/believe that many of his inner circle will work to prevent this," Hodges said. "I am looking for signs of dissension within the Kremlin as protests in Moscow grow stronger."

**11. What Just Happened With Putin's Nuclear Forces? Here's What Experts Say  
Whatever it is, U.S. officials are calling it escalatory—but not "high alert"**

Even expert Russia-watchers aren't sure what changed when Vladimir Putin ordered the country's "deterrence forces" to be put on a "special regime of combat duty" on Sunday.

A U.S. defense official who spoke to reporters on Sunday called the move "escalatory" but declined to offer more details. Many news organizations interpreted the order as placing Russia's nuclear weapons units on a higher state of alert.

Several experts said that Putin's order might have been most directly about nuclear command-and-control.

"We've never heard announcements like that before," said Pavel Podvig, a senior researcher with the United Nations Institute for Disarmament Research, or UNIDIR. "I don't have absolute certainty what it means. My best guess is that he was referring to the way the command-and-control systems operate."

"The way I believe it works, and the way it's supposed to work, is that normally, under the day-to-day status, the system is not capable of transmitting orders" to launch nuclear weapons, Podvig said in an interview with Defense One. "But you can bring it into the status where it is capable."

A command-and-control shift is one possibility, said James Acton, who co-directs the Nuclear Policy Program at the Carnegie Endowment for International Peace. In an interview, he said he believes the increased alert is for a select group of people and units, and possibly not even for all of Russia's nuclear forces.

Acton noted that there are many other steps required for nuclear use that may or may not be announced. He laid out some of them in an earlier Twitter thread, including warheads for non-strategic systems being moved out of centralized storage and mobile ICBMs being dispersed. And he said U.S. intelligence officials are probably monitoring Russia's nuclear forces for visible changes.

While the likelihood of use of nuclear weapons is still fairly small, it is now higher than a few weeks ago, Acton said.

"So this is unusual. This hasn't happened for a long time. And that's concerning," he said.

The last time nuclear alert levels were raised by the United States or Russia or the Soviet Union was 48 years ago, when the U.S. raised its level during the Yom Kippur War.

Adding to the uncertainty, it's unclear what Western reaction Putin hoped to provoke with the announcement, Acton said. Putin said Sunday that he was reacting to sanctions imposed on Russia and "aggressive statements" made by Western governments.

"I don't know that he knows exactly what he wants us to do in his own mind. And that's kind of concerning for me," Acton said. "I do think we have to try and find a face-saving way for Putin to extricate himself from this crisis."

Defense Secretary Lloyd Austin was in a scheduled meeting with Joint Chiefs Chairman Gen. Mark Milley, head of U.S. European Command Gen. Tod Wolters and others when they heard Putin's announcement of the heightened nuclear forces posture, a senior defense official told reporters on Sunday.

The official would not say whether the United States had made any changes to its own posture in response, and called Putin's actions "escalatory."

"It's clearly potentially putting into play forces that could, that if there's a miscalculation, could make things much, much more dangerous," the official said.

Asked about any change to U.S. posture, the official said, "I would just tell you that we remain confident in our ability to defend ourselves and our allies and our partners, and that includes in the strategic deterrent realm, and that is as far as I'm going to go on that question."

Podvig said the main danger is of an escalatory spiral, and he said other countries should refrain from nuclear signaling of their own.

"In my view, the response to that should be a forceful and clear message from everyone, not just the U.S. or nuclear power states, that this is not acceptable, waving your nuclear forces like that, it should not be done, under any circumstances," he said.

That was the kind of message sent on Sunday morning by Linda Thomas-Greenfield, U.S. ambassador to the United Nations, who called the alert a "totally unacceptable" escalation of Russian aggression against Ukraine.

In contrast, Podvig called a Thursday statement by French Foreign Minister Jean-Yves Le Drian—"I think that Vladimir Putin must also understand that the Atlantic alliance is a nuclear alliance"—"exactly the wrong kind of message."

[RETURN TO TOP](#)

## **12. Putin's nuclear posturing requires west to tread extremely carefully**

The Guardian Online (UK), Feb. 27 | Julian Borger

WASHINGTON -- Successive generations have experienced what it is like to feel the shadow of nuclear annihilation loom over their daily lives, from the Cuban crisis of 1962, to the missile standoff in Europe in the 1980s. This is shaping up to be our turn.

"I'll be honest – I'm nervous," Pavel Podvig, one of the world's leading experts on Russian nuclear forces, said after Vladimir Putin declared a "special mode of combat duty of the deterrence forces".

It is first time it has been done at least since the end of the cold war, and probably longer, according to Podvig, an analyst based in Geneva, where he runs a research project on Russian nuclear forces. "Things have not been rational in the Kremlin recently, and so it's not a good sign," he said.

Among Russia watchers and nuclear weapons experts, there is no dispute that Putin's penchant for brandishing Russia's arsenal reflects weakness and insecurity. And that is not a good trait in the leader of a nuclear superpower.

The country's economy is hollowed out, smaller in dollar terms than South Korea's and dependent on the vagaries of the oil and gas market. His regime relies increasingly on repression, and its armed forces are proving far from invincible in Ukraine. Russia's 6,000-warhead arsenal is the only thing that makes it a superpower.

Putin's nuclear signalling is designed to deter the US and its allies from further intervention in Ukraine and economic measures that he may see as an existential threat. But escalation can also take on a momentum of its own, and because the margins are so thin – leaders have only a few minutes to make decisions if they believe their countries are under attack – the US and its allies will have to tread extremely carefully in their response.

It is not immediately clear what the practical implications of Putin's announcement will be. It could mean that bombs are loaded on to bombers, intercontinental ballistic missiles on mobile launchers are dispersed, or more nuclear-armed submarines put out to sea. Or it could be more of an administrative process.

"As I understand the way the system works, in peacetime it cannot physically transmit a launch order, as if the circuits were 'disconnected'," Podvig said. Putin's order could involve "connecting the wires, so a launch order can go through if issued".

The challenge for the Nato allies now is maintaining the support Ukraine needs for its survival while making clear Putin has a way out of the crisis, rather than climbing up the escalation ladder to the point where it takes on a logic of its own.

The threat of a no-fly zone over parts of Ukraine implies Nato is willing to shoot down Russian planes, and would represent a dramatic escalation, while hints at regime change in Moscow are likely to deepen Putin's paranoia.

Laura Kennedy, an expert on disarmament and a former US deputy assistant secretary of state, said there was "no need or sense in mirroring Putin's reckless nuclear threats, which should be universally condemned".

"I think it's in everyone's interests for the west to spell out that the most punishing sanctions ... will be lifted when the status quo ante is restored," said James Acton, co-director of the nuclear policy programme at the Carnegie Endowment for International Peace.

But he added that off-ramps only work as long as Putin can see them and wants to take them. That is in question if the Russian leader has come to see the subjugation of Ukraine as essential to his political survival at home.

"It's difficult for the west to create a de-escalation pathway," Acton said. "Much presumably depends on how Putin views the domestic consequences of his backing down – something over which the west has no control."

[RETURN TO TOP](#)

### **13. Biden Halts Russian Arms Control Talks Amid Ukraine Invasion**

#### ***Officials said the talks had become an arena for Russia to complain about NATO***

ForeignPolicy.com (Exclusive), Feb. 25 | Jack Detsch and Robbie Gramer

The Biden administration has cut off arms control talks with Russia, sources familiar with the decision told Foreign Policy. The move came after Russian President Vladimir Putin sent troops into Ukraine's breakaway regions but before he launched the full-scale invasion of the country.

The decision, while perhaps unsurprising given Russia's dramatic escalation in the conflict, interrupts a major Biden administration foreign-policy priority to revive arms control talks with Washington's former Cold War rival.

Shortly after U.S. President Joe Biden took office, he launched a "strategic stability dialogue" with Russia, with the aim of finalizing a new strategic arms control deal and pursuing possibilities for new negotiations on cyberattacks and cutting-edge nuclear weapons technology.

That dialogue has now been completely halted, officials and sources familiar with the matter confirmed, as Putin continues his all-out military assault on Ukraine and has threatened any country thinking of intervening with "consequences like you've never seen." The U.S. State Department is still clarifying diplomatic guidance for U.S. interactions with Russia moving forward.

The halt in arms talks could have outsized significance after Putin made veiled threats about Russia's nuclear weapons arsenal in the runup to Russia's invasion of Ukraine—though Western officials caution that any chance of a nuclear escalation over the Russian invasion remains highly remote.

"Today's Russia remains one of the most powerful nuclear states," Putin said in a televised address before the invasion early Thursday morning. "There should be no doubt for anyone that any potential aggressor will face defeat and ominous consequences should it directly attack our country."

U.S. Secretary of State Antony Blinken responded to Putin's veiled threat in a CBS News interview that evening. "I can't begin to get into his head and to say exactly what he means by that," Blinken said. "But again, we've been prepared for whatever course that he chooses to take."

The decision to halt strategic stability talks follows past U.S. precedent. After Russia annexed Crimea from Ukraine and launched an invasion into Ukraine's Donbass region in 2014, the Obama administration suspended most arms control dialogues with Russia, though it continued working with Russian diplomats on the Iran nuclear deal, the so-called New START deal, and efforts to eliminate Syrian chemical weapons.

In 2019, under then-U.S. President Donald Trump, the United States formally withdrew from a Cold War-era treaty with Russia to eliminate intermediate-range nuclear forces (INF) that could strike between a range of around 310 to 3,400 miles, accusing Russia of having violated the treaty by testing and deploying missile systems that the treaty banned. All NATO allies backed Trump's decision and blamed Russia's violations for the INF treaty's demise. But some arms control experts still criticized the move at the time, voicing fears that Trump was dismantling an important arms control regime before exhausting all avenues to salvage the treaty.

After entering office, Biden vowed to reverse Trump-era arms control policies and revive arms talks on a variety of weapons systems with Moscow.

Just days after being inaugurated, Biden reauthorized the New START Treaty, which limits the number of strategic nuclear missiles that both sides can possess, such as deployed ballistic missiles and strategic bombers, warheads, and missile tubes. That agreement covers both countries' arsenals until 2026 but does not include Russia's novel nuclear weapons systems first unveiled by Putin in 2018, such as nuclear-powered cruise missiles, ballistic missiles launched from the air, and underwater vehicles—all of which boast ranges beyond the New START limits.

The U.S.-Russia dialogue had initially started off on promising footing, and both Biden and Putin agreed to continue talks after they met in person in Geneva in June 2021, despite rising tensions between their two countries.

But in recent weeks, as Russian forces amassed for an attack on Ukraine and the Biden administration publicized U.S. intelligence on Kremlin plans to create a pretext for invasion, officials familiar with the matter said the dialogue became mostly an arena for Russia to air its grievances about NATO military buildups in Europe and other topics of Kremlin displeasure.

One senior U.S. congressional aide, who spoke to Foreign Policy on condition of anonymity to speak about sensitive policy deliberations, said the decision to kill the talks was a good move because it denies Putin a forum through which to gain additional leverage.

"The Russians want these things. They like these things. They want to be seen as world players sitting down with the U.S. face to face," the aide said of the arms control talks. "They also see it as a way to get further concessions and things that will benefit them." Russia has also repeatedly complained about U.S. missile defenses in Europe, such as sites for Aegis Ashore batteries in Romania that will soon be active in Poland, fearing they could be converted to launch offensive weapons at Russia.

In a statement, a U.S. State Department spokesperson said the administration had no plans to convene another strategic stability dialogue with Russia at this point. Other officials and sources familiar with the matter said the Biden administration made the decision to halt the dialogue even before Russia's full-fledged invasion. The officials and aides do not foresee any context in which talks could restart if troops remain in Ukraine.

"As long as Russia is illegally occupying parts of Ukraine, the security dialogues should come to a full and complete halt," the senior congressional aide said.

In the week leading up to the invasion, Russia conducted military exercises of its nuclear forces in neighboring Belarus, including by test-firing its latest hypersonic and cruise missiles. Belarus's embattled president, Aleksandr Lukashenko, a close Putin ally on the Ukrainian border, has also offered to host Russian tactical nuclear weapons in his country.

U.S. officials aren't yet concerned about nuclear escalation, however. On Thursday, a senior U.S. defense official said the Defense Department has seen no signs that Russia has put its nuclear forces on alert after the invasion. But some nonproliferation experts said the freeze out can't continue forever.

"Although Putin's regime must suffer international isolation now, U.S. and Russian leaders must eventually seek to resume talks through their stalled strategic security dialogue to defuse broader NATO-Russia tensions and maintain common sense arms control measures to prevent an all-out arms race," Daryl Kimball, executive director of the Arms Control Association, wrote in a recent editorial.

But other Western officials appeared more eager to send a clear message to Putin to avoid a spillover of the conflict. "I think that Vladimir Putin must also understand that the Atlantic alliance is a nuclear alliance," French Foreign Minister Jean-Yves Le Drian said on Thursday.

#### **14. Ukraine demands 'immediate ceasefire', Russian withdrawal**

Agence France-Presse, Feb. 28 | Not Attributed

Ukraine demanded an immediate Russian ceasefire and troop withdrawal on Monday as its delegation arrived in Belarus for talks with Russian negotiators on the fifth day of the Kremlin's offensive.

Ukraine's delegation is set to meet Russian representatives for the first talks since Moscow's invasion, as the fighting for several Ukrainian cities continues and the Russian ruble collapses.

The meeting will take place just across the border in neighbouring Belarus, a key Kremlin ally that has allowed Russian troops passage to attack Ukraine.

"The Ukrainian delegation arrived at the Ukrainian-Belarusian border to take part in talks with representatives of the Russian Federation," the Ukrainian presidency said in a statement.

"The key issue of the talks is an immediate ceasefire and the withdrawal of troops from Ukraine."

Ukrainian President Volodymyr Zelensky in a separate statement urged Russian troops to abandon their equipment and leave the battlefield in order to save their lives, claiming that more than 4,500 Russian soldiers had already lost their lives.

He also urged the European Union to give Ukraine "immediate" membership, via a special procedure.

Russian state media posted video of Ukrainian delegates arriving by helicopter.

Russian delegate Leonid Slutsky, the head of the Russian parliament's international affairs committee, wrote on the Telegram messenger service: "We will start soon".

The talks come as Ukraine's forces fiercely resist the Russian offensive, a day after President Vladimir Putin ordered his defence chiefs to put the country's nuclear forces on high alert.

The Ukrainian delegation includes defence minister Oleksiy Reznikov as well as deputy foreign minister Mykola Tochytskyi.

The talks come after a phone call between Zelensky and Belarusian President Alexander Lukashenko.

Zelensky has said he is sceptical about the possibility of a breakthrough.

"As always: I do not really believe in the outcome of this meeting, but let them try," he said.

Kyiv was initially reluctant to send a delegation to Belarus, given the country's role as facilitator in Russia's attack on Ukraine.

### **15. As War Rages, Ukraine Agrees to Talks With Russians 'Without Preconditions'**

New York Times, Feb. 28, Pg. A1 | Valerie Hopkins, Anton Troianovski and Steven Erlanger

KYIV, Ukraine -- As Russian forces bore down on Ukraine's capital and officials put the toll of civilian dead at more than 350 since the invasion began, the two countries agreed Sunday to sit down for talks "without preconditions," but hopes were not high for a peaceful resolution of the conflict.

Even as Ukraine's president, Volodymyr Zelensky, agreed to send a delegation to meet with Russian officials near the border with Belarus, he said that he expected little to come of it. He declined to agree to any conditions or concessions before the talks, making it clear that he would not grant Russia the upper hand after its unprovoked attacks.

"I do not really believe in the outcome of this meeting," he said, "but let them try to make sure that no citizen of Ukraine has any doubt that I, as a president, have not tried to stop the war."

As world leaders moved to isolate Moscow and inflict heavy economic pain over the invasion, Russia showed little apparent interest in de-escalating.

President Vladimir V. Putin, denouncing the West's "aggressive" actions, said he had told his defense minister and his top military commander to place Russia's nuclear forces on alert. Not only are Western countries imposing "illegitimate sanctions" against Russia, Mr. Putin said, "but senior officials of leading NATO countries are allowing themselves to make aggressive statements directed at our country."

In Ukraine, Russian forces were on the move in the south, threatening a major port, and in the north, where they were continuing their drive toward Kyiv.

But Ukrainian officials took some obvious satisfaction in Russia's call for talks, which came as its forces met far more resistance than expected, failing to quickly seize the capital, Kyiv.

"The enemy expected an easy walk, but got real hell," said Prime Minister Denys Shmyhal. Russia's leadership, he said, "does not understand that it is at war not only with the armed forces of Ukraine, but with the entire Ukrainian people."

But international military experts cautioned that the war is young.

They noted that Ukrainian forces are spread thin, with only limited ammunition, and that thousands of better-trained Russian soldiers have not yet been thrown into the fight. The worry is that Mr. Putin may move to harsher tactics, including the shelling of cities, if his forces get bogged down.

The Ukraine Interior Ministry said Sunday that 352 civilians have been killed since the invasion began, including 14 children.

The request for talks also came as the European Union moved to impose tough new economic sanctions on Russia, and as demonstrations in Berlin, Prague, London, Madrid and Brussels over the weekend on behalf of Ukrainians made Moscow's isolation clear.

The White House, through Jen Psaki, the press secretary, cast the nuclear alert as another example of Mr. Putin's manufacturing threat and using it to justify confrontation.

Top Pentagon leaders remain confident about the United States' ability to defend itself and its allies, according to a Pentagon official who briefed reporters. The official called the move to put Russia's nuclear forces on alert unnecessary and escalatory, and said that Mr. Putin had made the possibility of a miscalculation much more dangerous.

Slowed by Ukrainian resistance and their own logistical shortcomings, Russian forces have already begun adopting harsher methods such as rocket attacks in the city of Chernihiv, to the northeast of Kyiv, the Pentagon official said. Those tactics could produce many more civilian casualties.

Russian troops, he said, are adopting a siege mentality, which increases the likelihood of their taking civilian life and damaging infrastructure.

In Ukraine's south, the official said, Russian troops are advancing, moving up from Crimea and also mounting an amphibious assault near Mariupol, where they are within 50 kilometers of the city. Mariupol, a major port, is viewed as part of any Russian land bridge from Donetsk and Luhansk -- the eastern Ukrainian regions Moscow just recognized as independent states -- to Crimea, which Moscow annexed in 2014.

Russian forces were also on the move from the north, where they were making a drive toward Kyiv.

In the center of Ukraine, Russia appears to be trying to cut off the main Ukrainian military forces, which have been defending the former line of contact with the Donetsk and Luhansk enclaves, to prevent them from moving toward the capital and getting supplies sent by Western allies overland through Poland.

Russian troops, at least for a time, also drew closer to the center of Kharkiv, Ukraine's second-largest city, according to videos and photographs analyzed by The New York Times. The footage showed Ukrainians firing rockets toward Russian troops, as well as some Russian military vehicles burning and others being ransacked by Ukrainian forces.

With each passing day of war, Mr. Zelensky, a former comic, has embraced his new role: as a symbol of bravery and patriotism who has united his citizens against an invader.

Once derided because of his entertainment past as the unlikeliest of presidents, Mr. Zelensky has transformed into the leader Ukraine did not know it needed. Dressed in an army-green T-shirt or fleece, unshaven and wan, he has inspired Ukrainians to defend their streets with the most rudimentary of weapons. He has also won over much of Europe, which has been moved to aid a country it sees as fighting bravely for independence, freedom and democracy.

Mr. Zelensky's decision to remain in Kyiv -- and his family's decision to remain in Ukraine -- has moved many. Some have drawn an unflattering contrast with the Afghan president, Ashraf Ghani, who fled Kabul as soon as the Taliban were on the outskirts, demoralizing what was left of the Afghan Army.

And Mr. Zelensky's response to a reported American offer to evacuate him -- "I need ammunition, not a ride" -- will most likely go down in Ukrainian history, whatever the outcome of the battle.

The Ukrainian president and his team have made deft use of social media. His impassioned speeches from the streets of Kyiv have gone viral. And they have also posted photos and short videos of Ukrainians filling Molotov cocktails, volunteering to fight, being issued automatic weapons and vowing to defend their country.

Mr. Zelensky has also inspired European leaders to do more to help his country. His leadership and the resilience of the Ukrainian people "are an inspiration to us all," said Ursula von der Leyen, president of the European Commission.

Appearing onscreen during an emergency summit meeting of European Union leaders several days ago, he gave a passionate 10-minute speech that moved some reluctant leaders to endorse a harsher package of economic sanctions on Russia, said a senior European official who was in the room.

"This may be the last time you see me alive," Mr. Zelensky told them.

The silence in the room after Mr. Zelensky spoke was impressive, the official said, and it was his impression the speech made a major difference in convincing more reluctant countries, like Germany, Italy and Hungary, to agree to tougher financial and banking sanctions and to deliver defensive weapons to Ukraine.

The new government of Germany also made what some consider a historic shift toward taking more responsibility for European security. Hampered by its own totalitarian history, Germany has been a reluctant hard-power player since the collapse of the Soviet Union. But on Sunday, in a strong speech before the German Parliament, Chancellor Olaf Scholz turned the page.

Germany will send defensive weapons to Ukraine; support tougher economic sanctions, including the exclusion of major Russian banks from the SWIFT payments system; and raise military spending to more than 2 percent of its gross domestic product for the foreseeable future -- long a NATO goal that Germany had resisted. Mr. Scholz also proposed a 100 billion euro fund to strengthen the German army.

Mr. Scholz, German officials say, believes that Mr. Putin lied to him personally in their direct talks in Moscow about the Ukraine crisis and that the Russian invasion created serious new threats to German and European security that cannot be ignored.

In an emergency virtual meeting of European Union foreign ministers on Sunday, the bloc agreed to further tough economic sanctions on Russia and to ban Russian aircraft from E.U. bloc's airspace. They also agreed for the first time to use E.U. funding to reimburse member countries for the purchase and shipment of military equipment to a country under attack.

Ms. von der Leyen, the commission president, called it "a watershed moment."

Weapons and equipment of all kinds are being sent overland through Poland into western Ukraine, which is still out of Russia's reach. Some experts think Russian efforts to disrupt such convoys will increase once the shipments are inside Ukraine.

Ms. von der Leyen also said that the European Union would move to ban the state-owned news outlets Russia Today and Sputnik, so they "will no longer be able to spread their lies to justify Putin's war and to sow division."

Europe will continue to welcome refugees, she said. As many as seven million Ukrainians are internally displaced by the conflict, European officials said.

In Kyiv, Nataly Kasianenko, 31, has been sheltering for days with her husband and a dachshund in a parking garage in the northern Obolon neighborhood, six miles from the city center, which was the scene of intense fighting on Friday and Saturday. "I actually lost track of days and nights and nights," she said. "We even forgot to eat because of this tension."

Despite the fear, she said, they are staying.

"It's in our blood, it's Ukrainian blood," she said. "We can't just leave, we cannot just surrender -- we will always stay on our land."

## **16. Russian forces appear to shift to siege warfare in Ukraine – U.S. official**

Reuters, Feb. 27 | Idrees Ali and Phil Stewart

WASHINGTON -- Russia, frustrated by early battlefield setbacks in Ukraine, could be shifting its strategy to siege warfare just as President Vladimir Putin raises the risk of a catastrophic miscalculation by putting nuclear forces on heightened alert, a senior U.S. defense official said on Sunday.

Putin gave the order to his nuclear forces as Washington assesses that Russian troops have made limited progress in their four-day-old invasion due to stiff Ukrainian resistance and planning failures that have left some units without fuel or other supplies, U.S. officials said.

As missiles rained down on Ukrainian cities, hundreds of thousands of civilians, mainly women and children, were fleeing the Russian assault into neighboring countries.

The United States assesses that Russia has fired more than 350 missiles at Ukrainian targets so far, some hitting civilian infrastructure, the senior U.S. defense official said, speaking on condition of anonymity. Still, it had so far mainly focused on military targets.

Citing a Russian offensive on the Ukrainian city of Chernihiv, north of Kyiv, the official cited early indications that Russia might be adopting siege tactics.

"It appears that they are adopting a siege mentality, which any student of military tactics and strategy will tell you, when you adopt siege tactics, it increases the likelihood of collateral damage," the official said.

So far, the Russian offensive cannot claim any major victories. Russian has not taken any Ukrainian city, does not control Ukraine's airspace, and its troops remained roughly 30 km (19 miles) from Kyiv's city center for a second day, the official said.

Siege tactics typically involve encircling enemy positions, cutting off supply and escape routes, then attacking with a combined force of armor, ground troops and engineers.

The senior U.S. defense official said it remained to be seen what Russian forces would do next, but the early signs were worrying.

"The indications are enough in terms of how they're positioning their forces around the city (of Chernihiv), how they're beginning this barrage using rockets, that gives us concern," the official said.

"In order for a siege ... to be successful, you basically, by design, are going to be targeting civilian infrastructure and causing civilian harm."

Images on social media showed some Russian military vehicles in Ukraine, including battle tanks, that had apparently been abandoned after running out of fuel, raising questions about logistical failures.

"They simply don't have a lot of experience moving on another nation state at this level of complexity and size," the official said.

The official said it was unclear whether it was a failure in planning or execution, but added that Russian forces were likely to adapt and overcome the challenges.

Russia has still not moved into Ukraine about a third of the troops that Putin had arrayed around its borders, the official said. But it has rapidly increased the number of forces Moscow has sent into Ukraine in recent days.

## NUCLEAR RISK

The Pentagon learned of the heightened Russian alert for its nuclear forces from Putin's televised announcement, the senior U.S. defense official said, instead of from American intelligence sources.

Just after Putin spoke, Defense Secretary Lloyd Austin, General Mark Milley, chairman of the Joint Chiefs of Staff, and the top U.S. commander for Europe, General Tod Wolters, held a pre-scheduled meeting at 8:30 a.m. (1330 GMT) at which they discussed the Russian president's decision.

Although Washington was still gathering information, Putin's move was troubling, the official said.

"It's clearly, essentially, putting in play forces that, if there's a miscalculation, could make things much, much more dangerous," the official said.

Asked whether the United States would continue to provide military assistance to Ukraine following Putin's announcement, the official said: "That support is going to go forward."

Mick Mulroy, a former senior Pentagon official and retired CIA paramilitary officer, said he believed Putin's decision to elevate the alert of his nuclear forces was a reaction to battlefield losses.

## 17. Russia's Modernized Military Stumbles

### *Initial setbacks spur expectation that Putin's forces will step up their firepower*

Wall Street Journal, Feb. 28, Pg. A8 | Michael R. Gordon, Max Colchester and Daniel Michaels

The Russian military has faltered early in its invasion of Ukraine, as stiff resistance threatens to turn Moscow's hopes for a swift victory into a protracted and costly war, U.S. officials and allied military experts say.

The Kremlin's invasion represents the most formidable challenge for the Russian military since it was modernized under Gen. Valery Gerasimov, Russia's top military officer who was appointed to his post in 2012. Yet no Ukrainian cities have been taken by the Russian military. Some of the Ukrainian Air Force and air defenses are still intact.

Western officials and analysts say Russia's strategy had been based on the premise that an initial barrage of missile strikes and a thrust toward Ukraine's capital would bring about the quick collapse of President Volodymyr Zelensky's government. Mr. Zelensky, however, remains defiant while facing long odds.

Russia holds many military advantages over Ukraine. One third of Russia's combat power near Ukraine is still outside the country, the Pentagon says, and has yet to enter the fray. The next few days could prove pivotal, as Russian President Vladimir Putin ponders whether to take a more aggressive approach to bludgeon Mr. Zelensky's government into submission, potentially causing more civilian casualties.

Russia has an array of artillery, rockets and air power. Employing these weapons, however, would only further antagonize the population that Moscow is hoping to draw into its sphere of influence and make it harder for the Kremlin to control the country of 44 million.

Since the start of the conflict, Russia has fired more than 320 missiles. Its ground forces have advanced from Belarus to within 30 kilometers of Kyiv's center. Russian forces moved swiftly from bases in Crimea and carried out a rare amphibious landing from the Sea of Azov.

Now, the Pentagon says there are signs Russia is resorting to more firepower, including rockets, in its attempt to take Chernihiv, a city 150 kilometers northeast of Kyiv.

Mick Ryan, a retired Australian Army major general who has studied advanced warfare, says Russia's failure so far to achieve decisive gains and its potential depletion of precision-munition supplies "probably will force them to use older weapons that are less precise and more deadly."

"In the next 72 hours I expect greater lethality on the battlefield," he added.

Western analysts say there are few parallels between Russia's approach in Ukraine and how it would face off against a NATO force, where mass firepower would be used from the outset and the potential use of nuclear weapons could also be threatened.

The Russian military has improved considerably since its wars to subdue insurgents in Chechnya, which lasted until 2000, and intervention eight years later in Georgia, which secured two breakaway regions.

Russia's operations since then had been limited and sometimes were carried out in areas where there was a reservoir of support. In 2014, the Russians quietly infiltrated Crimea with special forces, naval infantry and intelligence operatives and secured the peninsula with nary a shot. That same year, Russia intervened in the Donbas region in southeast Ukraine and marshaled a proxy force of separatists.

Russia's 2015 intervention in Syria to buttress Syrian President Bashar al-Assad showcased its air power and long-range missile capability. In contrast to the invasion of Ukraine, however, the Syria operation didn't include the deployment of a large number of Russian ground forces or combat against an organized army.

James Hackett, senior fellow for defense and military analysis at the International Institute for Strategic Studies in London, noted Russia still retains advantages in personnel and equipment, though movement could now be more difficult than before since bridges have been destroyed and the Ukrainians have had time to better prepare defenses. The course of the conflict, analysts say, will turn on whether Ukraine can hold Kyiv and what kind of guerrilla battle the Ukrainians can maintain.

Jack Watling, an expert on land warfare at the Royal United Services Institute, a British defense think tank, says his analysis before Russia's invasion had been that Ukraine's conventional forces would hold out for 10 days before shifting to more unconventional resistance warfare.

Previous conflicts, Mr. Watling said, have shown that "the Russians always take more military losses than they should." But a question is how much public support Mr. Putin will have at home, as the war drags on and Russian soldiers die.

Moscow's hope, he said, had been to avoid this prospect by planning a "shock and awe" demonstration that involved rapid advances and the seizure of a few key objectives in the hope the Zelensky government would quickly surrender or flee.

"That failed," he said.

## **18. Russia's missiles see mixed results in Ukraine war as world watches**

Reuters (Analysis), Feb. 28 | Josh Smith

Russia has employed hundreds of powerful and precise ballistic missiles in the first days of its Ukraine attack, but analysts and U.S. officials say many Ukrainian defences remain intact - effects that countries around the world are watching closely.

The use of short-range ballistic missiles (SRBMs) is likely being watched closely as a real-world case study by China, North Korea, and other countries that have been developing increasingly advanced arsenals of such weapons in recent years. And Western governments who see Russia as an adversary are eager to gather data on the missiles' effects in combat.

Russia had fired more than 320 missiles as of Sunday morning, with the majority of them SRBMs, a U.S. official told reporters.

According to U.S. estimates, the initial hours of the Russian onslaught last week included more than 100 missiles launched from land and sea, mostly SRBMs but also cruise missiles and surface-to-air missiles.

That would make it the most intense SRBM bombardment between two territorial contiguous states in a conflict, said Ankit Panda, a senior fellow at the U.S.-based Carnegie Endowment for International Peace.

"What we've seen in Ukraine corresponds to how many military establishments in many countries, including China and North Korea, may think of using precision ballistic missiles in future conflicts," he said.

### **ACCURATE MISSILES**

Russia most likely used its only SRBM in active service, the Iskander-M, said Timothy Wright, a research analyst with the International Institute for Strategic Studies (IISS) International Institute for Strategic Studies (IISS).

First used in combat in 2008 in Georgia, the Iskander is designed to confound missile defences by flying on a low trajectory and manoeuvring in flight to strike targets as far out as 500km with an accuracy of 2-5 metres, according to the Center for Strategic and International Studies (CSIS).

"It is likely to be able to accurately target and destroy what it is being fired at," Wright said, adding that Russia appears to possess around 150 launchers, which can also fire cruise missiles.

There also appears to be evidence that Russia has used the OTR-21 Tochka SRBM, which was believed to have been retired, he said. "If these were in storage, Russia may have decided to put them to use, rather than scrap them."

What the missiles targeted and how much damage they caused remains unclear amid the confusion of the developing war, but analysts said there appear to have been some strikes on Ukrainian air bases.

Iskander missiles launched from Belarus had hit an airport in Zhytomyr in northern Ukraine on Sunday, an adviser to Ukraine's interior minister said.

"We see some damage at airports, and it looks fairly accurate," said Jeffrey Lewis, a missile researcher at the James Martin Center for Nonproliferation Studies (CNS).

Some strikes by unknown weapons at air bases appeared relatively limited in scope, however, and in some instances potentially misplaced, such as hitting stored rather than operational aircraft, said Joseph Dempsey, a defence researcher at IISS.

Ukraine has the Cold War-era Russian-made S-300v anti-aircraft missile system, which also has anti-ballistic missile capabilities, Wright said. It is unclear whether any engaged the Russian missiles, and some S-300v vehicles appeared to have been destroyed by strikes, he added.

The U.S. official said on Sunday that there were indications that some Russian missiles experienced launch failures.

"It's not the majority," the official said. "But we do believe that some number of their launches have not been successful."

Russia has not demonstrated its full air and missile capabilities and will most likely increase its waves of strikes in the coming days to degrade Ukraine's surviving defences, including anti-aircraft units that have shot down several Russian aircraft, the U.S.-based Institute for the Study of War said in a report.

"The Russian failure to comprehensively strike key Ukrainian assets is a surprising break from expected Russian operations and has likely enabled stiffer Ukrainian defence," the report said.

Some of Russia's hesitancy could be due to a lack of real-time reconnaissance and targeting data, but given the number of static targets, a more likely explanation is a desire to minimize casualties among Ukrainians, said Dmitry Stefanovich, a weapons researcher at Moscow's Institute of World Economy and Politics.

"While Iskander-M is a very capable and precise system, the probability of collateral damage, obviously, increases with the number and intensity of weapons used," he said. "If any takeaway is relevant for other SRBM-owning states, it is that those can be employed in limited manner and cautiously, an all-in salvo is not the only option."

## GLOBAL IMPLICATIONS

As the heir to the former Soviet Union's substantial missile arsenal, Russia boasts the widest inventory of ballistic and cruise missiles in the world, according to CSIS.

But other countries are buying or developing their own new missiles, driven by security concerns and a desire to reduce reliance on other suppliers.

Before the decade is out, Asia in particular will be bristling with conventional missiles that fly farther and faster, hit harder, and are more sophisticated than ever before.

China is mass producing its DF-26 - a multipurpose weapon with a range of up to 4,000 kilometres - while the United States is developing new weapons aimed at countering Beijing in the Pacific.

Taiwan and Japan are also boosting their missile capabilities, as well as defence systems designed to counter missile threats.

South Korea's defence minister said on Monday the country would accelerate development of various "long-range, ultra-precision, and high-power ballistic missiles... and possess overwhelming striking capabilities against strategic targets" to counter North Korea's growing arsenal.

Although it hasn't tested its longest-range intercontinental ballistic missiles (ICBMs) since 2017, North Korea has rolled out a flurry of new SRBMs, including one that appears influenced by the Iskander's design.

Like the Iskander, North Korea's latest missiles - including "hypersonic" weapons tested in January - are designed to be faster and more manoeuvrable than older weapons, enabling them to potentially evade missile defences.

Analysts say that although such SRBMs can't reach the United States, they would likely be used in the first wave if a war broke out, striking nearby air defences, air bases, and other targets similar to the way Russia used its missiles in the ongoing invasion.

"North Korean and (Chinese) militaries are taking copious notes right now," said Markus Garlauskas, a former U.S. intelligence officer on North Korea.

## **EUROPE**

### **20. B-52s Patrol Europe as U.S. Touts Ironclad Defense After Russia Nuclear Alert**

Newsweek Online, Feb. 25 | Naveed Jamali and Tom O'Connor

The Pentagon has emphasized its commitment to the defense of the 30-member NATO alliance as the U.S. sent B-52 strategic bombers to the bloc's eastern front and Russia raised its nuclear alert level.

Newsweek asked a senior Pentagon official how the U.S.-NATO nuclear deterrence doctrine is affected by rising tensions between Washington and Moscow over the latter's decision to conduct a "special military operation" that has seen Russian troops advance through Ukraine in an attempt to surround the capital Kyiv.

"The defense of our allies in Article 5 remains ironclad across the realm of military capabilities," the official said.

Article 5 outlines the principle of "collective defence" in NATO's founding treaty. It stipulates that "an attack against one Ally is considered as an attack against all Allies," according to the NATO website. It was invoked for the first time after the 9/11 attacks, and also "in response to the situation in Syria and the Russian attack on Ukraine," according to their website.

The announcement came the same day as Putin instructed his armed forces to "introduce a special combat service regime in the Russian army's defence forces," after he said that "top officials in NATO's leading countries have been said making aggressive statements against our country." He also condemned a growing list of sanctions and restrictions from the West targeting Russia, including those that blacklist Putin himself.

NATO Secretary-General Jens Stoltenberg criticized what he called "dangerous rhetoric" from the Russian leader and slammed the move as "irresponsible." White House Press Secretary Jen Psaki accused the Kremlin of "manufacturing threats that don't exist in order to justify further aggression."

The U.S. and its allies have dismissed Putin's pretext for attacking Ukraine, which the Russian leader has accused of threatening Russia's national security by seeking to join NATO and even seeking nuclear weapons of its own. As

tensions mounted earlier this month, with Washington warning of an impending invasion and Moscow denying such plans, the U.S. sent B-52s to the United Kingdom.

About a week later, Putin ordered an exercise of Russia's strategic deterrence forces, involving warplanes, warships, submarines and intercontinental ballistic missiles that make up the country's nuclear triad.

Then, after Russia began its attack on Ukraine, the U.S. sent B-52s directly to NATO's eastern front, conducting operations over the Arctic and Baltic Sea, as well as over Poland.

The U.S., France and the United Kingdom are the only nuclear powers within NATO, but a number of allied nations operate dual-use aircraft capable of delivering U.S. weapons of mass destruction.

NATO issued a statement Wednesday, the same day that Russian President Vladimir Putin announced the beginning of hostilities against Ukraine, outlining the coalition's "nuclear deterrence posture," which the bloc said "relies on nuclear weapons forward-deployed by the United States in Europe, as well as on the capabilities and infrastructure provided by Allies concerned."

"A number of NATO member countries contribute a dual-capable aircraft (DCA) capability to the Alliance," the statement said. "These aircraft are central to NATO's nuclear deterrence mission and are available for nuclear roles at various levels of readiness. In their nuclear role, the aircraft are equipped to carry nuclear bombs in a conflict and personnel are trained accordingly."

So while the U.S. "maintains absolute control and custody of their nuclear weapons forward deployed in Europe," other "Allies provide military support for the DCA mission with conventional forces and capabilities."

The arrangement has been at the core of Moscow's fears about NATO's eastward expansion and military activities near Russia's borders. The U.S. has previously conducted exercises involving B-52s near Russia's borders, including a 2019 drill with Norway that Moscow saw as training for a potential strike against Russia.

In declaring Russia's military operation against Ukraine, Putin added a stark warning against anyone outside forces that may seek to intervene.

"Whoever tries to interfere with us, and even more so to create threats for our country, for our people, should know that Russia's response will be immediate and will lead to such consequences that you have never experienced in your history," Putin warned at the time.

"We are ready for any development of events," he added. "All the necessary decisions in this regard have been made. I hope that I will be heard."

In another potentially high-stakes development on Sunday, Russian ally Belarus, from which Russian troops have penetrated Ukraine in a push for Kyiv, announced the successful passing of a referendum that would renounce the nation's non-nuclear status and potentially allow for the deployment of Russian nuclear weapons on Belarussian territory.

## **21. Offutt aircraft spotted over Europe amid Ukraine crisis**

***Crews keep eyes, ears on action; one jet sidelined; Air Force recon crews from Offutt keeping eyes and ears on Ukraine action***

Omaha World-Herald, Feb. 26, Pg. A1 | Steve Liewer

U.S. and NATO ground forces may be steering clear of Ukraine following Russia's invasion, but the alliance's military reconnaissance aircraft - including several from Offutt Air Force Base - have been venturing close enough to keep eyes and ears on the battle below.

At least five of the 55th Wing's C-135 variants have been spotted in European skies by air traffic control websites this week. Two have been operating from the Souda Bay naval base in Greece, and three are deployed to RAF Mildenhall, England - though one of those jets has apparently been sidelined after suffering an in-flight mechanical emergency Tuesday.

Collectively the Offutt jets flew 10 of the 86 surveillance missions known to have been flown over Europe by U.S., NATO, Swedish and Ukrainian aircraft between Sunday and Thursday, according to Amelia Smith, an online aircraft tracker who has been posting daily summaries on Twitter using her handle @ameliairheart.

Thursday, the first full day after Russia launched its widespread attack, saw 25 reconnaissance flights over the continent, the busiest day in the past three months. But the U.S. and NATO didn't fly manned aircraft over Ukraine and the nearby Black Sea, instead pulling back to listen from the skies of Poland and Romania, which border Ukraine on the west.

Instead, they left flights over the conflict zone to unmanned aircraft. Smith noted that two remotely piloted RQ-4 Global Hawks flew long-duration missions over Ukraine and the Black Sea. Flying twice as high as other planes, the Global Hawks can see and hear far into Russian territory.

Three of the 55th Wing planes spotted this week are RC-135V/W Rivet Joints. They can listen to radar and radio signals on the ground up to 300 miles away, allowing them to monitor the location and movements of Russian forces.

Rivet Joint crews include analysts and linguists who can make sense of intercepted voice communications. The three planes flew a total of five missions earlier this week over Ukraine and near Crimea, a territory occupied and annexed by Russia in 2014. One Rivet Joint flying Thursday stayed in Poland.

The 55th Wing has also deployed an RC-135U Combat Sent to Greece, and a WC-135W Constant Phoenix to England.

The Combat Sent's specialty is honing in on radar installations and pinpointing adversaries' air defense systems. Though it flew missions off of Crimea earlier this month, its two flights earlier this week were both in the Eastern Mediterranean Sea near Lebanon and Syria, with no apparent connection to the Ukraine crisis.

The Constant Phoenix crew uses sensitive on-board equipment to gather atmospheric samples and check them for radioactive particles. It has previously been deployed off the coast of North Korea after that country's nuclear tests. The same plane, tail number 61-2667, was used in 2011 to measure atmospheric radiation after the nuclear disaster at Fukushima, Japan.

The Constant Phoenix arrived in England Jan. 30, according to air-traffic monitoring websites, and has flown four times since. Air Force officials have said its deployment is also unrelated to Ukraine, and none of its flights have been near Ukrainian territory.

The Air Force's only remaining nuke-sniffer, No. 61-2667 is known at Offutt as the oldest, crankiest and most trouble-prone plane in the fleet.

And it lived up to its reputation Tuesday, when its pilot declared an emergency shortly before landing at Mildenhall.

The aircraft, flying with the callsign JAKE21, had been airborne for 11 hours on a mission over the Baltic Sea when the pilot declared the emergency. He told controllers that the plane had experienced a failure of its hydraulic system,

which controls braking and flaps, according to a recording posted on social media by a Dutch airplane spotter using the Twitter handle @EHEH\_Spotter.

That's a common problem among aged aircraft like the WC-135W, which was delivered to the Air Force from a Boeing assembly line in April 1962.

Robert Hopkins III, a former RC-135 pilot and a current historian of Air Force reconnaissance flights, said the plane has two hydraulic systems plus a manual backup.

Still, he said, in some cases the lack of anti-skid protection can lead to blown tires, among other problems.

Fire, rescue and police vehicles met the plane when it landed at Mildenhall at 4:39 p.m. local time carrying a crew of eight.

"The crew followed all prescribed emergency and safety procedures," according to a statement from the 100th Air Refueling Wing at Mildenhall. "Everyone on board returned safely with no injuries."

The same plane was grounded for nearly two months last year in Australia, also after suffering a hydraulic failure. The WC-135W had the second-worst "mission-capable" rate of any aircraft type in the Air Force in 2021 at just over 48%, meaning it was mechanically capable of flying its assigned missions less than half the time.

No. 61-2667 is the only one of the 55th Wing's C-135 variants that hasn't received upgraded engines and flight systems since it was built. Only very experienced pilots are allowed to fly it.

The plane won't be around much longer. The Air Force ordered three RC-135R aerial tankers refitted for the radiation-monitoring mission, at a cost of \$218 million. The first is scheduled for delivery this summer. No. 61-2667 is slated to be retired to the Air Force's Arizona boneyard soon after.

## **22. In Turnaround, Germany Vows Military Boost**

New York Times, Feb. 28, Pg. A1 | Melissa Eddy

BERLIN -- It took an invasion of a sovereign country nearby, threats of nuclear attack, images of civilians facing off against Russian tanks and a spate of shaming from allies for Germany to shake its decades-long faith in a military-averse foreign policy that was born of the crimes of the Third Reich.

But once Chancellor Olaf Scholz decided to act, the country's about-face was swift.

"Feb. 24, 2022, marks a historic turning point in the history of our continent," Mr. Scholz said in an address to a special session of Parliament on Sunday, citing the date when President Vladimir V. Putin ordered Russian forces to launch an unprovoked attack on Ukraine.

He announced that Germany would increase its military spending to more than 2 percent of the country's economic output, beginning immediately with a one-off 100 billion euros, or \$113 billion, to invest in the country's woefully underequipped armed forces. He added that Germany would speed up construction of two terminals for receiving liquefied natural gas, or LNG, part of efforts to ease the country's reliance on Russian energy.

"At the heart of the matter is the question of whether power can break the law," Mr. Scholz said. "Whether we allow Putin to turn back the hands of time to the days of the great powers of the 19th century. Or whether we find it within ourselves to set limits on a warmonger like Putin."

The events of the past week have shocked countries with typically pacifist miens, as well as those more closely aligned with Russia. Both have found the invasion impossible to watch quietly. Viktor Orban, the pro-Russia, anti-immigrant prime minister of Hungary, who denounced sanctions against Russia just weeks ago, reversed his position this weekend. And Japan, which was hesitant to impose sanctions on Russia in 2014, strongly condemned last week's invasion.

In Germany, the chancellor's speech capped a week that saw the country abandon more than 30 years of trying to balance its Western alliances with strong economic ties to Russia. Starting with the decision on Tuesday to scrap an \$11 billion natural gas pipeline, the German government's steps since, driven by the horror of Mr. Putin's attack on the citizens of a democratic, sovereign European country, mark a fundamental shift in not only the country's foreign and defense policies, but its relationship with Russia.

"He just repositioned Germany strategically," Daniela Schwarzzer, executive director for Europe and Eurasia at the Open Society Foundations, said about Mr. Scholz's address.

Germany, and especially the center-left Social Democratic Party of Mr. Scholz, has long favored an inclusive approach toward Russia, arguing about the danger of shutting Moscow out of Europe. But the images of Ukrainians fleeing the invasion dragged up older Germans' memories of fleeing from the advancing Red Army during World War II, and triggered outrage among a younger generation weaned on the promise of a peaceful, unified Europe.

On Sunday, several hundred thousand Germans marched through the heart of Berlin in a demonstration of support for Ukraine, waving signs that read "Stop Putin" and "No War."

Appealing to Germans' commitment to European unity and the deep cultural and economic ties that reach back centuries, Mr. Scholz placed the blame for Russia's aggression squarely on Mr. Putin, not the Russian people. But he left no doubt that Germany would no longer sit back and rely on other countries to provide its natural gas, or its military security.

"The narrative that Scholz employed today is there to last," Ms. Schwarzzer said. "He spoke about responsibility to Europe, what it takes to provide for democracy, freedom and security. He left no doubt that this has to happen."

The country's firm repudiation of its horrific Nazi past meant that it had long adopted a foreign policy of diplomacy and deterrence. But since the Russian invasion, many of Germany's allies have accused it of not doing enough to fortify itself and Europe.

Germany pledged in 2014 that it would increase its military spending to 2 percent of its overall economic output -- the goal set for NATO member states -- within a decade, but projections had shown the government was not on track to meet that target, even as that deadline approached. The topic had long been a source of conflict between Berlin and Washington, which spends more than 3 percent of its G.D.P. on defense. The debate escalated under former President Donald J. Trump, who would regularly berate the German government for failing to carry its weight in the alliance.

In his speech, Mr. Scholz proposed that the military spending be anchored into the country's constitution. That would ensure, he said, that the country would not again find itself with a military force of soldiers equipped with rifles that misfire, planes that can't fly and ships that can't sail. And he made clear that the doubling down on defense was for Germany's own good.

"We are doing this for us as well, for our own security," he said.

On Saturday, the German government dropped its resistance to two other measures the country's allies in Europe and the United States were seeking: cutting off key Russian banks from the money transfer network known as SWIFT and sending weapons to Ukraine.

That came after an admonishment from Prime Minister Mateusz Morawiecki of Poland, who traveled to Berlin to personally "shake Germany's conscience" on how to respond to Russia's attack on Ukraine. "Today there is no time for selfishness," Mr. Morawiecki said, in announcing his visit on Twitter.

Germany has had a policy of refusing to send weapons into conflict zones, although it has a steady business selling them to countries in the Middle East. But after the meeting with Mr. Morawiecki -- who was joined by President Gitanas Nausėda of Lithuania -- the government announced it would send 1,000 shoulder-launched anti-tank rockets and 500 surface-to-air Stinger missiles to Ukraine.

It also lifted its objections to allowing German-made weapons that were held by the Dutch and Estonian governments to be sent to Ukraine, enabling transfers that it had blocked for months.

Just weeks ago, the German government was pilloried for what critics called its tepid response to Russia's troop buildup, after it announced that it would send Ukraine 5,000 helmets and a field hospital to help the country defend itself.

"In a matter of a week, political taboos about military spending to relations with Russia have fallen to the wayside," said Sudha David-Wilp, a trans-Atlantic fellow with the German Marshall Fund in Berlin. "Germany is putting money where its mouth is to strengthen defense capabilities, and is braced to isolate Russia even at a cost to its own economy."

Last week, Mr. Scholz also caved to pressure from abroad to abandon a disputed natural gas pipeline that would link Russia directly to Germany, Nord Stream 2, as his economy minister declared the country would pivot away from its dependence on Russia, which currently supplies more than half of its natural gas needs.

Going forward, Germany will ensure that there are strategic reserves of coal and natural gas, Mr. Scholz said, similar to those the country holds for oil. In the long run, Germany would like to radically transform its energy sector to lessen its dependence on fossil fuels, but the process will take time and in the short term, Germans will feel the pinch in rising prices for energy and other goods.

The Ukrainian ambassador in Berlin, whose demands for German weapons for months had seemingly fallen on deaf ears, listened to Mr. Scholz's speech on Sunday from the visitors' balcony and was given a minute-long standing ovation by lawmakers of all parties, even the far-right Alternative for Germany party.

Its lawmakers, who regularly use their positions to grandstand and loudly oppose speeches coming from the government instead applauded some elements of Mr. Scholz's remarks, which the largest opposition party, the Christian Democrats, agreed to support.

"The mainstream political parties in Germany realize this is a 1939 moment and seem ready to support this new government in meeting the challenge at hand," Ms. David-Wilp said.

## **CHINA**

### **23. China calls for de-escalation as Ukraine talks begin**

Agence France-Presse, Feb. 28 | Not Attributed

Beijing on Monday called for de-escalation and "restraint" over the Ukraine crisis as Russia and Ukraine prepared to meet for their first talks since Moscow's invasion of its western neighbour.

Russia invaded on Thursday and quickly announced it had neutralised key Ukrainian military facilities, with Russian President Vladimir Putin on Sunday ordering his country's nuclear forces onto high alert.

Representatives from Moscow and Kyiv are set to meet on the border with Belarus on Monday, after Western allies hit Russia with a slew of sanctions and pledged arms for Ukraine.

China has trod a cautious diplomatic tightrope on the crisis as it tries to balance its core foreign policy line -- that a country's sovereignty is sacrosanct and others should not interfere -- with its support for close ally Moscow.

Instead it has called for Russia's "reasonable" security demands to be heard, repeatedly refusing to condemn Putin's actions or use the term "invasion".

Foreign ministry spokesman Wang Wenbin on Monday urged both sides to "remain calm and exercise restraint to prevent further escalation of the situation."

"China pays close attention to changes in the Ukraine situation and supports all efforts to de-escalate the situation and resolve it politically," Wang said at a regular press briefing.

Among a range of sanctions imposed on Moscow over its aggression towards Ukraine, the West has said it would remove some Russian banks from the SWIFT bank messaging system and freeze central bank assets.

China does not support the use of sanctions, Wang added, saying Beijing is "even more opposed to unilateral sanctions that have no basis in international law."

Sanctions against Russia could "interfere with the process of political settlement," and China will continue normal trade relations with Moscow, he said.

Beijing voted to abstain from a Friday UN Security Council resolution condemning Russia's actions in Ukraine, which was vetoed by Russia.

China's President Xi Jinping told Putin in a call last week that he hoped the crisis could be resolved with a "balanced, effective and sustainable European security mechanism through negotiations."

But as Beijing tries to stick to a neutral position, Chinese nationals in Ukraine have claimed to face rising hostility as public perceptions of the Asian country sour given China's position on the invasion.

The Chinese embassy in Kyiv on Sunday warned citizens not to "provoke" locals and to refrain from revealing their nationality, just days after telling those leaving Kyiv to display a Chinese flag on their vehicles.

The embassy had announced Thursday that it would prepare charter flights to evacuate its citizens -- but later said it was still too unsafe to do so.

#### **24. Xi Weighs His Alliance With an Isolated Putin**

New York Times, Feb. 28, Pg. A6 | Steven Lee Myers

They visited a hockey rink in Beijing and the panda enclosure at the Moscow Zoo. They shared blinis layered with caviar in Russia and, reciprocally, the popular variant in China, jianbing. They have shared birthday cakes and exchanged toasts with shots of vodka, while demurring that neither would dare go overboard with the stuff.

For more than a decade, Xi Jinping of China and Vladimir V. Putin of Russia have forged a respectful, perhaps even warm relationship, reflecting the deepening ties between two world powers that share common cause against American military and economic might.

The invasion of Ukraine could upend all that -- or forge, in diplomatic isolation, an alliance that reshapes the world order in the 21st century.

Three days into the conflict, it seemed clear on Sunday that Mr. Putin's expectation of a quick subjugation of Ukraine was foundering. Ukrainian resistance slowed or stalled Russia's forces, while Western nations sharply escalated economic pressure on Russia, which was looking almost totally isolated.

Mr. Putin's attack on Ukraine has forced Mr. Xi into what Kevin Rudd, the Australian ex-prime minister who was once a diplomat in Beijing, called an "impossible balancing act" between his personal camaraderie with the Russian leader and the potential for blowback for China, should it be seen as endorsing an invasion condemned by most of the world.

On Friday, Mr. Xi spoke by telephone with the man he called his "best friend" in 2019, but stopped far short of endorsing the assault on Ukraine. He said all countries should "abandon a Cold War mentality," and he expressed support when Mr. Putin told him he would seek a negotiated resolution to the war, according to the Chinese government's summary of the call.

But there is no sign that Mr. Xi did anything to ward off the invasion, if he knew it was coming. His senior advisers rebuffed American requests to use China's influence with Mr. Putin to discourage an attack; instead, China shared the Americans' intelligence with the Russians and accused the United States of trying to sow discord, according to American officials.

For China, the costs of Mr. Putin's adventurism could be high.

"I don't think this is good for anybody," said Wang Huiyao, president of the Center for China and Globalization, a research organization in Beijing that advises the government. "Conflict is not a solution, and China doesn't want to see things deteriorate."

China has deep ties with Europe and the United States that it cannot afford to sever, despite growing tensions in those relationships. The Ukraine invasion has rattled Chinese stock markets and threatens to roil the global economy during an important political year for Beijing that is expected to end with an extension of Mr. Xi's rule.

The international furor over Ukraine -- and the diplomatic isolation Mr. Putin is expected to face -- could also serve as a warning of what Mr. Xi can expect if he uses force to subdue Taiwan, the self-governing democracy that China claims as its territory.

Mr. Putin, for his part, appears to be banking on China's support over Ukraine -- explicit or not -- in the face of punitive measures that the United States and others have already begun to impose.

China has already lifted some restrictions on Russian wheat imports, but it has yet to indicate whether it will abide by American and European sanctions meant to restrict Russia's access to capital.

"It's really going to be an acid test," said John Culver, a retired Central Intelligence Agency officer who studied China. "It's going to demonstrate whether China would really support Russia and provide economic support in violation of sanctions, or even face sanctions itself."

Only three weeks ago, on the eve of the Winter Olympics in Beijing, Mr. Putin and Mr. Xi met for the 38th time since Mr. Xi became China's leader, declaring that the friendship between their countries had "no limits."

Outside their inner circles, it is not known whether Mr. Putin disclosed his plans for Ukraine to Mr. Xi then. A Chinese Foreign Ministry spokeswoman, Hua Chunying, suggested that he had not.

Now, Mr. Putin has forced China into the awkward position of explaining how the invasion does not violate the principle of respect for national sovereignty that is, officially, a pillar of China's foreign policy.

"They must feel like they've been played," Mr. Culver said of the Chinese leaders.

China's uncertainty over the issue has been clear in the statements of officials like Ms. Hua, who declined to call the invasion an invasion and sought to shift the blame for it to the United States. China may consider Taiwan an unconquered province, but it has explicitly recognized Ukraine as a sovereign nation, one with which it has close economic ties.

However the war ends, it has already underscored how important -- and complex -- the relationship between Mr. Xi and Mr. Putin has become.

It has been shaped by striking biographical parallels, but also by differences that could test their "no limits" pledge.

Mr. Putin and Mr. Xi were born only eight months apart -- Oct. 7, 1952, and June 15, 1953, respectively -- and both were children of Communist powers that rose out of the catastrophic convulsions of war and revolution. They idolized their fathers, veterans of those conflicts, and were inculcated in the Marxist-Leninist view of world affairs.

Mr. Xi's father oversaw China's cadre of Soviet experts and visited the Soviet Union in 1959, bringing back gifts for his son that were later destroyed during the Cultural Revolution, according to Joseph Torigian, an assistant professor at American University and author of a forthcoming biography of Mr. Xi's father, Xi Zhongxun.

Mr. Xi has recalled in interviews that he grew up reading Russian literature and was inspired by a minor character in "What Is to Be Done?" the 1863 novel by Nikolai Chernyshevsky, who sleeps on a bed of nails.

"They have very similar views of the role of history in politics and how attacks on their own history are seen as treacherous and dangerous," Mr. Torigian said of the two leaders.

Both ended up in government service, Mr. Putin as an intelligence officer in the K.G.B. and Mr. Xi as a regional party functionary after the political rehabilitation of his father, who had been imprisoned during the Mao era, accused of spying for the Soviets.

Sergey Alexsashenko, who was a deputy chairman of the Russian central bank during Mr. Putin's rise in the 1990s, said there was a key difference between the two leaders' biographies.

Mr. Putin, he noted, served in the intelligence service when the Soviet Union was entering its inexorable decline in the 1970s and 1980s, while Mr. Xi joined the government ranks as China's transformation from impoverished nation to global economic powerhouse began.

"For Xi, the history of China while he's a mature man is a history of success," Mr. Alexsashenko said. "He wants to move ahead with this rebuilding for the future. For Putin, all good was in the past."

The experience that most closely binds them is the global political turmoil of 1989, beginning with the protests in Tiananmen Square in Beijing that China crushed, followed by the demonstrations that toppled the Soviet Union's satellite states in Europe.

Mr. Xi, then an official in Fujian Province, warned in a party newspaper that democracy without restriction meant "no constraints or sense of responsibility."

Mr. Putin was by then a lieutenant colonel at the K.G.B.'s Dresden outpost, watching helplessly as protesters ransacked the local headquarters of the Stasi, East Germany's secret police. He was forced to retreat to the Soviet Union, which collapsed two years later, creating new borders that he is now essentially trying to erase.

Both leaders have spoken often about the lessons of that period, reinforcing what they see as the need for a strong state hand to control popular sentiment.

In a speech in 2013, Mr. Xi denigrated the last Soviet leader, Mikhail S. Gorbachev, for letting the Soviet Union fall on his watch, something Mr. Putin has called the "greatest geopolitical catastrophe of the 20th century."

"In the end," Mr. Xi said, "nobody was a real man."

Mr. Putin's pivot toward China began under Mr. Xi's predecessors. He settled a border dispute that had flared into a short war between the Soviet Union and China in 1969, and he eased visa restrictions that allowed for a trade boom across their border.

When Mr. Xi came to power a decade ago, the entente between the countries accelerated into a deepening relationship that has overcome decades of division and suspicion. Trade has skyrocketed, reaching \$146 billion last year. The two militaries train together and conduct joint air and naval patrols along China's coast.

"Even though the bilateral relationship is not an alliance, in its closeness and effectiveness this relationship even exceeds that of an alliance," Mr. Xi told his counterpart during virtual talks in December, according to Mr. Putin's foreign policy adviser Yuri V. Ushakov.

That relationship seemed to reach a new peak at the Olympics. After their meeting, the leaders issued a lengthy joint statement that raised alarms in Washington.

It was the first time China had explicitly endorsed Russia's demand for a halt to NATO expansion, though it had criticized previous NATO applications by individual countries, including Montenegro and North Macedonia.

The two leaders also vowed to resist American-led efforts to promote pluralistic democracy and said they would fight foreign influence under the guise of what both call "color revolutions," after the popular uprisings in former Soviet republics like Ukraine and Georgia.

Even so, Mr. Xi now appears uncomfortable with how Mr. Putin has chosen to bring Ukraine to heel. "I think the Chinese are going to have balance how much they want to invest in Putin," Mr. Culver, the former intelligence officer, said, "and how much it's going to cost them strategically."

## **25. U.S. Takes Aim at China Over Russia Ties**

### ***Sanctions, U.N. debates seek to press Beijing not to support Ukraine invasion***

Wall Street Journal, Feb. 28, Pg. A13 | William Mauldin

WASHINGTON -- The U.S. wants to pry China away from its tight partnership with Russia. One step, U.S. officials said, is making Beijing feel pain over Russia's invasion of Ukraine.

Washington is looking to gain from any divisions between Moscow and Beijing, the officials said, and Russia's full-scale assault on Ukraine is an opportunity to force China to choose between siding with Russia and maintaining valuable economic ties to Europe, the U.S. and other parts of the world.

Punitive economic measures imposed on Russia, particularly export controls on certain technologies, would potentially hit China if its businesses and banks try to help Moscow, the officials said.

If China "or any other country wants to engage in activity that would be subject to our sanctions, they'll be subject to our sanctions," a State Department official said.

The U.S. is using international forums to force China to take a public stand on the invasion, an administration official said. At the United Nations Security Council on Friday, when Russia vetoed a U.S.-backed resolution requiring Russia to withdraw from Ukraine, China abstained, along with India and the United Arab Emirates, drawing criticism from the U.S.

U.S. Ambassador Linda Thomas-Greenfield said the countries that abstained were aligning themselves with the "aggressive and unprovoked actions of Russia."

The U.S. is pushing for a U.N. General Assembly debate this week on a similar resolution, with an eye toward dividing Russia from China, U.N. diplomats said. A meeting of the U.N. Human Rights Council in Geneva this week is another opportunity.

China has called for a negotiated solution to the Ukraine crisis and has chafed at U.S. suggestions that Beijing will be tainted by association with Moscow.

"The truly discredited countries are those that want only to interfere in other countries' internal affairs and wage wars in the name of democracy and human rights," Chinese Foreign Ministry spokesman Wang Wenbin said in Beijing last week.

The Beijing-Moscow entente presents a geopolitical challenge for the U.S., potentially requiring Washington to prepare for conflict on both ends of the Eurasian continent, instead of focusing on what has been the Biden administration's top priority of countering China. Already, the Ukraine conflict has delayed release of key strategy documents on defense and national security as the administration works through the new challenges.

Getting China to lessen support for Russia would further isolate Moscow over Ukraine, reduce the ability of the two to work together on other issues and call into question Beijing's reliability as a partner, the officials said.

The sanctions and other measures the U.S. and European allies are assembling against Russia, the officials said, also serve as a signal to Beijing of what it might face if it attacks Taiwan, a democratically ruled island that Beijing claims as Chinese territory.

Coaxing Beijing to ditch Moscow will require a combination of careful diplomacy and signaling, since the two governments see the U.S. as trying to blunt their global ambitions, former officials and foreign-policy specialists said.

If the administration proceeds down the path of seeking to divide Russia and China, "we could make China feel very, very uncomfortable and perhaps rethink the advantages of being close to Moscow," said Bonnie Glaser, director of the Asia program at the German Marshall Fund, a Washington-based think tank.

China has been struggling to adjust its public position on Ukraine since the invasion, trying to honor its partnership with Russia, while calling for negotiations and reiterating its long-professed principles of national sovereignty and noninterference.

China's balancing act has proved difficult on the ground in Ukraine, despite the countries' robust trade and investment relations; China is a major purchaser of Ukrainian corn and wheat.

Under Chinese leader Xi Jinping and Russian President Vladimir Putin, China-Russia relations are as close as they have been since the Sino-Soviet bloc of the early 1950s, united by the leaders' shared goal to diminish U.S. power, which they see as aimed at hampering their interests. That was given bold expression when Mr. Xi hosted Mr. Putin on the eve of the Olympics, amid the Russian buildup of forces around Ukraine.

A 5,000-word statement released afterward criticized the U.S. and its alliances for undermining China's and Russia's security interests. It opposed expansion of the North Atlantic Treaty Organization -- adopting the position taken by Mr. Putin as he threatened Ukraine and marking the first time Beijing explicitly backed Moscow on a European security issue.

Since November, when the Biden administration began warning about Russia's positioning of troops in border areas near Ukraine, officials have tried to get Beijing to use its influence with Moscow to stop an invasion. In recent weeks, Secretary of State Antony Blinken spoke twice with Chinese Foreign Minister Wang Yi on the matter.

"We asked the PRC that they use that influence in a constructive way, in the first instance, to prevent war, and now that we're in the midst of an invasion to put a halt to it as quickly as is can be achieved," the senior State Department official said, referring to the People's Republic of China, China's official name. Another official said the outreach to China was similar to that to other countries that might have influence with Moscow, including Kazakhstan.

After the Putin-Xi statement this month, Biden administration officials huddled to discuss strategies for dealing with the Beijing-Moscow cooperation, people briefed on the matter said. The officials decided on a tactic to highlight the partnership and make China pay a price for it, the people said.

Escalating sanctions are among the sharpest warning flares to Beijing. The U.S. and European Union are largely cutting off Russia's financial sector from the Western financial system and ordering freezes of any assets in the West held by Mr. Putin and members of his inner circle. Export controls enacted by the U.S., the EU, Japan and others prohibit the transfer of critical technologies.

Washington is watching to see if Chinese financial institutions will try to fill the financing shortfall or whether Chinese technology companies will seek to skirt new limits on exports to Russia.

## **26. Putin threat tests China's nuclear umbrella pact with Ukraine**

Washington Times Online, Feb. 26 | Bill Gertz

Russian President Vladimir Putin ordered Moscow's military to raise the alert status of its large nuclear forces on Sunday, and the threat will test a 2012 agreement that calls on China to provide a nuclear deterrent umbrella for Ukraine.

Chinese President Xi Jinping and then-Ukrainian President Viktor Yanukovich signed the agreement on Dec. 5, 2012, promising that China's nuclear forces would protect Ukraine from nuclear threats.

The bilateral treaty described the two states as "strategic partners."

"China pledges unconditionally not to use or threaten to use nuclear weapons against the nuclear-free Ukraine and China further pledges to provide Ukraine nuclear security guarantee when Ukraine encounters an invasion involving nuclear weapons or Ukraine is under threat of a nuclear invasion," a joint statement on the pact said.

A Chinese Embassy spokesman did not immediately return an email request for comment on whether China will invoke the agreement in providing a nuclear deterrent for Ukraine.

Nearly two decades earlier, Ukraine voluntarily gave up the nuclear weapons it inherited upon the dissolution of the Soviet Union, which would've been the world's third-biggest arsenal, and joined the global treaty on the Non-Proliferation of Nuclear Weapons as a non-weapons state.

As Russian military forces bogged down in efforts to pacify Ukraine rapidly using a three-pronged military offensive, Mr. Putin said Sunday that "aggressive statements" by NATO prompted the directive.

"Western countries aren't only taking unfriendly actions against our country in the economic sphere, but top officials from leading NATO members made aggressive statements regarding our country," Mr. Putin said in comments broadcast on Russian television.

If the higher alert status is detected by U.S. and western intelligence agencies, U.S. strategic forces – missiles, submarines and bombers – would almost certainly respond by raising their alert status.

The nuclear alert is part of a new Russian military doctrine called "escalate to de-escalate" that reflects Moscow's weaker conventional forces and stronger nuclear power.

U.S. defense officials have said the new doctrine means Russia's military will more rapidly escalate to the use of nuclear weapons, tactical nuclear arms or possibly strategic weapons, in a regional conflict.

At the Pentagon, a senior defense official said the United States "had no reason to doubt" the ordering of a higher nuclear alert status.

The official said the action represented an unnecessary "escalatory" threat since Russia is not facing any nuclear dangers from NATO or the west.

"And escalatory because it is clearly potentially putting at play forces that if there's a miscalculation could — could — make things much, much more dangerous," the official said.

Regarding whether U.S. nuclear forces have gone on a higher alert status in response, the senior official said "we do not talk about the specifics of our strategic deterrent posture."

"I would just tell you that we remain confident in our ability to defend ourselves and our allies, and our partners, and that includes in the strategic deterrent realm, and that is as far as I'm going to go on that question."

The increased nuclear danger comes as the office of Ukrainian President Volodymyr Zelenskyy said talks between Ukrainian and Russian officials would take place at the Belarusian border.

China's government has tacitly supported the Russian military operation against Ukraine by not condemning the military aggression and repeatedly announcing that Moscow had "legitimate security concerns" with Ukraine.

The Biden administration also shared U.S. intelligence with Chinese officials in the run-up the conflict in a failed bid to gain Beijing's support for pressure on Mr. Putin not to invade Ukraine.

Instead of helping the west, China's government shared the intelligence on Russian troop deployments with Moscow, highlighting the growing alliance between the two countries.

Ukraine developed a close arms relationship with China since it achieved independence from the Soviet Union in 1991.

China bought an unfinished aircraft carrier from Ukraine for \$20 million in the 1990s and turned it into the People's Liberation Army's first aircraft carrier.

Ukraine also has sold jets and aircraft engines to China, and provided design information that was incorporated into Chinese Y-series military transport and surveillance aircraft.

Former State Department policy official Miles Yu, who first disclosed the China-Ukraine nuclear pact, said the nation most likely to threaten the use of nuclear weapons against Ukraine is Russia, another strategic partner of Beijing.

"In the hypothetical scenario of a Russian nuclear threat against Moscow's former satellite Ukraine, would China keep its pledge to confront Moscow with its nuclear weapons?" Mr. Yu stated.

## **27. 'Blitz' Tactics Likely To Be Used in Any P.L.A. Attack on Taiwan, Experts Say**

South China Morning Post (Hong Kong), Feb. 26, Pg. 4 | Liu Zhen

BEIJING -- Chinese experts say Russia's rapid tactics in Ukraine are likely to be replicated in any People's Liberation Army attack on Taiwan.

There has been speculation that Beijing could seize the opportunity to take the self-ruled island while the attention of the United States and Europe is on Ukraine.

Beijing considers Taiwan a breakaway province and has never ruled out using force, if necessary, to return it to the fold.

The Russian "blitz" into Ukraine was also seen in 1968 when Soviet forces invaded Czechoslovakia to crush the "Prague Spring", according to Shanghai-based commentator Shi Lao.

Any PLA attempt to take Taiwan would also have to be a very quick campaign, although the crossing of the Taiwan Strait – 100km at its narrowest point – would add extra difficulties.

In an article in 2018, retired PLA lieutenant general Wang Hongguang outlined a scenario for an operation against Taiwan based on a rapid, brief campaign.

"In short, there will be at most three days left for outsiders like the Americans or the Japanese to assist Taiwan ... otherwise they need not bother trying," said Wang, a former vice-commander of the Nanjing Military Region which included Taiwan and the East China Sea.

Wang said the PLA would first conduct three waves of air strikes with missiles, long-range rockets and air force bombers to target airports, naval facilities, air defence bases and radar and electronic positions.

Communications, power and transport hubs, bridges and tunnels, television and radio stations would all be included in the initial strikes, as well as a "decapitation" of the island's political and commands.

Ground forces would follow up with landings at multiple locations. At the same time, paratroopers would be dropped to in-depth rear locations and rapidly advance to lay siege to and seize the capital Taipei.

There are stark similarities to Wang's scenario and the invasion of Ukraine.

Short-range missiles were reported to be the Russians' main weapon. There were also reports of medium-range missiles, cruise missiles, surface-to-air missiles, and sea-launched missiles from the Black Sea. Helicopters later

infiltrated at low altitude and paratroopers were reported to have landed in the outskirts of the capital Kyiv, as ground forces advanced on three fronts.

Military commentator Song Zhongping said the PLA must have factored the possible intervention of the US into its calculations for an operation in Taiwan.

"Russia used its nuclear deterrence to prevent the US and Nato from direct involvement before launching the blitz at Ukraine with conventional weapons. Nuclear is the key here," he said.

Comments by Russian President Vladimir Putin in a speech before launching his invasion were widely interpreted as a threat that he would use nuclear weapons if other countries came to Kyiv's aid.

## **28. China says U.S. warship sailing in Taiwan Strait 'provocative'**

Reuters, Feb. 26 | Ben Blanchard and Tony Munroe

TAIPEI -- A U.S. warship sailed through the sensitive Taiwan Strait on Saturday, part of what the U.S. military calls routine activity but which China described as "provocative".

The U.S. Navy's 7th Fleet said the Arleigh Burke-class guided-missile destroyer USS Ralph Johnson was conducting a "routine" transit through international waters.

"The ship's transit through the Taiwan Strait demonstrates the United States' commitment to a free and open Indo-Pacific," 7th Fleet spokesperson Nicholas Lingo said in a statement. "The United States military flies, sails, and operates anywhere international law allows."

The Eastern Theatre Command of China's People's Liberation Army monitored the passage, which a spokesperson in a statement called a "provocative act."

Taiwan's Defence Ministry said the ship sailed in a northerly direction through the Strait, that its forces had monitored its passage and observed nothing out of the ordinary.

Taiwan is currently in a heightened state of alert due to Russia's invasion of Ukraine, nervous that China may try to take advantage of the situation to make a move on the island though the government has reported no unusual Chinese manoeuvres.

Last year, U.S. naval ships transited the Strait roughly monthly. Saturday's sailing was the first since November.

China claims democratically ruled Taiwan as its own territory and has mounted repeated air force missions into Taiwan's air defence identification zone (ADIZ) over the past two years, provoking anger in Taipei.

Taiwan's Defence Ministry said that on Saturday eight Chinese aircraft - six fighters and two anti-submarine aircraft - flew into its ADIZ, to the northeast of the Taiwan-controlled Pratas Islands at the top end of the South China Sea.

Beijing calls Taiwan the most sensitive and important issue in its relations with Washington.

Like most countries, the United States has no formal diplomatic ties with Taiwan but is its most important international backer and arms supplier.

## **KOREAN PENINSULA**

## **29. N.K. missile launch aimed at gaining attention amid Ukraine crisis – defense minister**

Yonhap News Agency (South Korea), Feb. 28 | Not Attributed

SEOUL -- North Korea's ballistic missile launch this week appears aimed at demonstrating its policy line of "power for power" and grabbing global attention amid the armed conflict in Ukraine, South Korea's defense minister said Monday.

Suh Wook made the remarks during a hastily assembled meeting of top commanders, following Sunday's missile launch that the North claimed to be a test for developing a "reconnaissance satellite."

Pyongyang unveiled its policy principle of "power for power and good-will for good-will" during last year's key party congress, in what appears to be a call for Washington to show flexibility to move stalled nuclear talks forward.

"North Korea appears to have demonstrated its policy line of 'responding to power with power' to arouse international attention in the midst of the situation in Ukraine," Suh said.

"Our military should prepare against additional North Korea missile launches," he added.

Sunday's launch, the North's eighth show of force this year, came amid speculation that the North appears to be lower on the Joe Biden administration's policy priority list as Washington is preoccupied with the Ukraine crisis, the domestic fight against COVID-19 and other challenges.

The missile test also followed beefed-up efforts by Seoul and Washington to bolster combined defense against evolving North Korean missile threats.

Suh also commented on takeaways from the unfurling conflict in Ukraine, including Russia's "hybrid" tactics combining cyberwarfare, psychological operations and irregular battle maneuvers.

"Under such security conditions, we have to check our readiness posture and pore over (the Ukraine crisis) implications," the minister said.

In line with such efforts, the military unveiled a video during the meeting that included footage of a recent test-firing of a long-range surface-to-air missile (L-SAM) under development.

South Korea has been seeking to deploy the L-SAM by 2026 as part of the country's multilayered, low-tier missile defense program.

If deployed, the L-SAM interceptor would form a key part of South Korea's anti-missile program, including the Patriot Advanced Capability-3 missile and a medium-range surface-to-air missile (M-SAM).

Monday's meeting was attended by Joint Chiefs of Staff Chairman Gen. Won In-choul and the top brass of the Army, Navy, Air Force and Marine Corps.

## **30. Moon calls for impenetrable defense posture**

Yonhap News Agency (South Korea), Feb. 28 | Kim Deok-hyun

SEOUL -- President Moon Jae-in called for a powerful defense posture Monday, saying peace can be achieved only based on strong defense, as the world is reeling from Russia's shocking invasion of Ukraine.

"The peace and prosperity we enjoy have been achieved on the foundation of strong security," Moon told a commencement and commissioning ceremony for the Korea Army Academy in Yeongcheon, North Gyeongsang Province.

Based on strong defense capabilities, South Korea has pushed for peace efforts on the Korean Peninsula and turned North Korea's nuclear crisis into a mode of dialogue, Moon said.

North Korea fired a ballistic missile Sunday, marking the North's eighth show of force this year.

"Recently, North Korea has been test-firing missiles one after another," Moon said. "We have superb missile capabilities and defense capabilities that will thoroughly prevent any threats."

The United States and other Western nations agreed on new sanctions aimed at isolating Russia's financial system as global condemnation grows over the invasion.

"As the international order fluctuates and conflicts between powers are exposed, the security environment is rapidly changing around the world," Moon said. "We must have the strength to protect ourselves in any circumstance."

Moon said South Korea has the "biggest security burden" in the world.

"For now, the top priority is to deter war between the South and the North, but from a broader and long-term point of view, the geopolitical situation of the Korean Peninsula itself represents a grave security environment," Moon said.

South Korea's military has beefed up its defense capabilities by successfully firing a submarine-launched ballistic missile and developing a homegrown supersonic fighter jet, Moon said.

### **31. China vows cooperation with North Korea under 'new situation' – KCNA**

Agence France-Presse, Feb. 26 | Not Attributed

China's President Xi Jinping emphasised the importance of cooperation between Beijing and Pyongyang in an unspecified "new situation", North Korea's state media reported Saturday.

North Korea, officially known as the DPRK, carried out an unprecedented seven weapon tests in January -- including its most powerful missile since 2017 -- with negotiations with the United States at a standstill.

It paused testing during the Beijing Winter Olympics, with analysts saying the decision could have been made out of deference to China.

Beijing is Pyongyang's most important ally and economic benefactor, their relationship forged in the bloodshed of the Korean War in the 1950s.

In his message to North Korean leader Kim Jong Un, Xi said Beijing was ready to "develop the China-DPRK relations of friendship and cooperation" under a "new situation", the official Korean Central News Agency (KCNA) reported.

KCNA did not further elaborate on what the "new situation" entailed.

North Korea is reeling economically from a self-imposed coronavirus blockade, and restarted cross-border trade with Beijing last month.

China accounts for more than 90 percent of the isolated country's bilateral trade.

Pyongyang is under multiple sets of international sanctions over its nuclear and ballistic missile programmes.

But regardless, it has warned it could abandon its self-imposed moratorium and resume testing intercontinental ballistic missiles or nuclear weapons.

Some experts have warned that with the eyes of the world focussed on the Russian invasion of Ukraine, North Korea might take the opportunity to test-fire long-range missiles.

### **32. Presidential candidates spar over missile defense, nuclear-sharing in TV debate**

Yonhap News Agency (South Korea), Feb. 25 | Lee Haye-ah

SEOUL -- The four main presidential candidates faced off Friday over a range of national security issues, including nuclear-sharing arrangements and the U.S.-led missile defense system, as they jostled for position during their fourth televised debate.

The two-hour debate was held under the theme of politics and featured candidates Lee Jae-myung of the ruling Democratic Party, Yoon Suk-yeol of the main opposition People Power Party, Ahn Cheol-soo of the centrist People's Party and Sim Sang-jeung of the progressive Justice Party.

Lee asked Yoon if he still hoped to redeploy tactical nuclear weapons to the Korean Peninsula as stated early in his campaign, but the PPP candidate denied ever making such an argument.

The two front-runners have clashed repeatedly over national security issues, especially in the wake of Russia's invasion of Ukraine, with Lee calling for creating the conditions conducive to peace and Yoon advocating for a "peace through strength" approach.

Ahn also disagreed with Yoon on the effectiveness of U.S. extended deterrence in responding to North Korea's nuclear and missile threats, saying he believes South Korea should enter into a nuclear-sharing arrangement.

When asked by Sim if he sees the need for South Korea to join the U.S.-led missile defense system, which has long been viewed as a threat by neighboring countries, such as China and Russia, Yoon responded affirmatively.

"If supersonic and hypersonic missiles are developed, I believe a missile defense system between South Korea and the United States might be needed to respond," he said.

The candidates also discussed the DP's proposal for political reform, which centers on ensuring the political participation of minor parties and fostering national unity by revising the Constitution to change the single five-year presidential term to a renewable four-year term.

Ahn questioned the DP's sincerity in putting forth the proposal with only days to go until the March 9 election, saying the "key" is to pass it through a plenary meeting of DP lawmakers.

When asked by Sim if the possibility of a candidacy merger remained open between Ahn and Yoon, Ahn insisted it was over.

Yoon, meanwhile, was cautious to go into detail, saying "we are also working on it."

The possibility of a Yoon-Ahn merger has continued to hang over the race, as it could break the current tie in polls in favor of Yoon, with Lee and Yoon currently neck and neck at around 40 percent support each.

Friday's debate was the second to be hosted by the National Election Commission, the state election watchdog.

The third and final debate will be held on March 2 on the theme of social issues.

## **INDO-PACIFIC**

### **33. Japan PM Opposes Sharing U.S. Nuclear Weapons After Abe Proposal**

Bloomberg News, Feb. 28 | Isabel Reynolds

Prime Minister Fumio Kishida said sharing nuclear weapons with the U.S. in a way similar to NATO members would not be allowed under Japan's non-nuclear principles, pushing back against a predecessor who floated the idea.

An opposition lawmaker pressed Kishida on the idea in parliament after former premier Shinzo Abe told a TV show Sunday the concept should be discussed and there should be no taboos on such defense issues.

"From the perspective of maintaining our three non-nuclear principles, it could not be allowed," Kishida said. Foreign Minister Yoshimasa Hayashi told the same committee Japan wasn't thinking of revising its non-nuclear principles.

The disagreement between the premier and his former boss comes as Tokyo watches developments in the Ukraine and their consequences for East Asia with growing alarm. Japan for decades has campaigned for the elimination of nuclear weapons after its cities of Hiroshima and Nagasaki were devastated by atomic bombs dropped in the final stages of World War Two.

A survey carried out by the Nikkei newspaper found that more than three quarters of respondents were concerned that failure to prevent a Russian invasion of Ukraine could embolden China to attack Taiwan. Japan sees neighboring Taiwan's security as closely linked to its own, and has a separate territorial dispute with Beijing.

Japan, the only country to suffer nuclear attacks, has officially maintained three non-nuclear principles of not possessing, not producing and not permitting the introduction of nuclear weapons outlined by then-Prime Minister Eisaku Sato in 1967.

Hemmed in by a pacifist constitution, and beset by threats from North Korea and China, it nevertheless relies heavily on the U.S. "nuclear umbrella" for its security. Declassified documents have shown that the U.S. stored nuclear weapons in Okinawa before it reverted to Japanese control in 1972.

The issue is particularly sensitive for Kishida, who hails from Hiroshima, and has called nuclear disarmament his life's work. In 2016, he accompanied Barack Obama on the first visit to the Hiroshima Peace Memorial by a sitting U.S. president.

### **34. Japan, U.S. confirm need to boost deterrence capabilities**

Kyodo News (Japan), Feb. 26 | Not Attributed

TOKYO -- The foreign ministers of Japan and the United States on Saturday condemned Russia's invasion of Ukraine and confirmed the need to enhance the deterrence and response capabilities of the bilateral alliance, the Japanese government said.

In their telephone talks, Japanese Foreign Minister Yoshimasa Hayashi and U.S. Secretary of State Antony Blinken also agreed that the impact of the conflict "will not be limited to Europe," with Hayashi saying it could affect the Indo-Pacific region, where China is increasingly assertive.

The foreign ministers "strongly condemned" Russia for its attack on the East European nation that began Thursday, saying it "shakes the foundation of international order" and vowing to never tolerate attempts to unilaterally change the status quo by force.

They "agreed on the need to appropriately deal with Russia's actions so as not to leave the wrong lesson," the ministry said in a statement following their 25-minute talks.

Describing the Russian attack as an "invasion," Hayashi told reporters that the act "violates Ukraine's sovereignty and territorial integrity, gravely violating the international law that bans use of force."

Hayashi said that Tokyo and Washington also confirmed to continue to cooperate on the promotion of a free and open Indo-Pacific region.

The talks came a day after Japan unveiled a set of tighter sanctions, including a freeze on assets held by three Russian banks and export controls on high-tech products such as semiconductors to military-linked groups, in response to Moscow's invasion of Ukraine.

Blinken "thanked" Hayashi for the imposition of the sanctions on Russia as well as Japan's efforts to build a coalition to "amplify the joint impact" of Western nations' response to the invasion, the U.S. State Department said.

The new sanctions package, also including a suspension of visa issuance for certain Russian individuals and entities, followed softer initial measures announced by Japan after Russia's recognition of two pro-Moscow separatist regions in eastern Ukraine as independent, which paved the way for troop deployments as "peacekeeping" operations.

Hayashi and Blinken also reaffirmed that the two governments will continue to work with other Group of Seven nations on imposing further sanctions against Russia, the Japanese ministry said.

## **IRAN**

### **35. Iran says three key issues remain unresolved in Vienna nuclear talks**

Reuters, Feb. 28 | Parisa Hafezi

Iran said on Monday that reviving a 2015 nuclear deal is possible if Western powers take a political decision to resolve three remaining issues, as indirect negotiations between Tehran and Washington enter a crucial stage.

Iran's foreign ministry spokesman identified the remaining outstanding issues as: the extent to which sanctions would be rolled back, providing guarantees that the United States will not quit the pact again, and resolving questions over uranium traces found at several old but undeclared sites in Iran.

After 10 months of talks in Vienna, progress has been made toward the restoration of the pact to curb Tehran's nuclear programme in exchange for sanctions relief, which the United States abandoned in 2018. Both Tehran and Washington have cautioned that still there are some significant differences to overcome.

"Reaching a good deal is possible ... three key issues still remain to be resolved. The U.S. and European powers have not taken political decisions on these major issues," Iran's Foreign Ministry spokesperson Saeed Khatibzadeh told a weekly news conference.

"We believe that we need an appropriate pathway to solve remaining issues in the areas of lifting sanctions, guarantees and political claims that have been levelled against our peaceful civilian nuclear programme," Khatibzadeh said.

Iran's lead nuclear negotiator Ali Bagheri Kani, who flew to Tehran last week for consultations with Iranian officials, "has returned to Vienna to pursue the negotiations with a clear agenda", Khatibzadeh said.

"The return to the nuclear deal will not be a one-day process, it will rather be a journey of many verifications on the part of the U.S."

Diplomats from parties involved in the negotiations have said they have entered a crucial stage, while Tehran rejects any "fabricated deadline" for the talks.

The 2015 deal between Iran and world powers limited Tehran's enrichment of uranium to make it harder for it to develop material that could be used for nuclear weapons, in return for a lifting of international sanctions against Tehran.

But in 2018, then-U.S. President Donald Trump abandoned the pact and reimposed sanctions that have devastated Iran's oil-reliant economy. In response, Tehran violated nuclear limits in the agreement.

### **36. Iran to enrich uranium to 20% even after nuclear deal – nuclear chief**

Reuters, Feb. 25 | Not Attributed

DUBAI -- Iran will continue to enrich uranium to 20% purity even after sanctions on it are lifted and a 2015 nuclear deal with world powers is revived, Iranian news agencies quoted the country's nuclear chief as saying on Friday.

"(Uranium) enrichment ... continues with a maximum ceiling of 60%, which led Westerners to rush to negotiations, and it will continue with the lifting of sanctions by both 20% and 5%," the head of Iran's Atomic Energy Organization, Mohammad Eslami, was quoted by the semi-official news agency Fars as saying.

The 2015 deal restricts the purity to which Iran can enrich uranium to 3.67%, far below the roughly 90% that is weapons-grade or the 20% Iran reached before the deal. Iran is now enriching to various levels, the highest being around 60%.

Eslami did not elaborate or explain how 20% enrichment would be acceptable under the 2015 nuclear deal which Iran has been trying to revive through indirect talks with the United States.

Iranian officials had told Reuters earlier that Iran had agreed to suspend its 20% and 60% enrichment if an agreement is reached in the Vienna talks to salvage the 2015 pact Separately, a senior Iranian cleric said earlier that ending Iran's economic isolation by lifting banking and oil trade sanctions was Tehran's most important demand in talks with world powers in the Austrian capital Vienna.

Iran on Wednesday urged the West to be "realistic" in the talks, as its top negotiator returned to Tehran for what might be final consultations ahead of a possible accord following months of indirect talks with the United States.

"Our negotiators... do their best to ensure the nation's interests, and know that the final point is the lifting of all sanctions, especially on banking and trade," Ayatollah Ahmad Khatami said at Friday prayers in Tehran.

"If these sanctions are not lifted, it is as if there were no talks," state media quoted him as saying.

The general content of sermons delivered at Friday prayers is set by the office of Supreme Leader Ayatollah Ali Khamenei, who has the final say on Iran's nuclear policy and all other matters of state.

After 10 months of talks in Vienna, progress has been made toward the restoration of the pact to curb Tehran's nuclear program in exchange for sanctions relief, but both Tehran and Washington have cautioned that still there are some significant differences to overcome.

A majority of Iran's hardline-led parliament demanded in a letter last week that the United States should guarantee that they would not abandon a restored agreement. The assembly has not voted on the letter.

A senior Iranian official has told Reuters that Iran has shown flexibility by agreeing to "inherent guarantees" that the U.S. administration will not quit an agreement, as Washington says it is impossible for President Joe Biden to provide the legal assurances Iran has demanded.

Iran insists on the immediate removal of all sanctions imposed under former U.S. President Donald Trump in a verifiable process, including those imposed under terrorism or human rights measures.

## **AIR FORCE**

### **37. Air Force Global Strike Command Team Visits Team Minot**

5th Bomb Wing Public Affairs, Feb. 25 | Senior Airman Caleb S. Kimmell

MINOT AIR FORCE BASE, N.D. -- General Anthony Cotton, Air Force Global Strike Command commander, and Chief Master Sergeant Melvina Smith, AFGSC command chief, visited here Thursday and Friday. While here, the command team toured the Base, hearing first-hand experiences from Airmen and families about their day-to-day support and impact for the nation's long-range strike and nuclear strategic deterrence mission.

With two wings on base, each independently supporting the B-52H Stratofortress and Minuteman III ICBM missions at Minot Air Force Base, the installation is the only one in the Department of Defense which hosts two components of the nation's nuclear triad.

Gen. Cotton and Chief Smith used their visit to discuss the importance of the mission Striker airmen support day in and out, 24 hours a day, 365 days a year.

"Our strategic vision is composed of four lines of effort and we want to make it so the youngest airman and the oldest officer could understand it and succinctly apply that to their day-to-day support to the Striker mission," said Gen. Cotton.

Gen. Cotton and Chief Smith lead AFGSC, the United States Air Forces lead proponent for global strike capabilities which support Department of Defense and U.S. Strategic Command objectives. The AFGSC mission includes responsibility for the nation's intercontinental ballistic missile, bomber force, and Nuclear Command, Control, and Communications.

They took time to discuss the command priorities with Airmen and families on base. Some of the topics included creating a foundation of people who take care of each other, ensuring Airmen remain prepared and ready, efforts underway for modernization of the bomber and ICBM fleets, and engaging with communities who support the Global Strike mission.

"Everyone here at Team Minot is collaborating to take care of our families and our military members," said Chief Smith. "We've allowed them to embed themselves within the units and organize events to allow them to come together and get that support they need."

Gen. Cotton and Chief Smith also took time to converse with airmen and leaders about their experiences in protecting and maintaining the nation's strategic force of the current generation taking the mantle from them to continue the mission for Global Strike Command, the Air Force and the Nation.

"I want to make absolutely sure that we are taking the steps to develop a 21st century Airman to take care of 21st century issues, utilizing 21st century weapons systems," said Gen. Cotton. "To be able to do that is talent management, and quality of life. Air Force Global Strike Command doesn't just represent the Air Force in long range strike, it represents the entire world."

Gen. Cotton and Chief Smith said today's leaders need to think of today's junior airmen and officers in terms of the leaders the Air Force needs in 2032 and work toward talent management initiatives which build toward that vision.

According to Gen. Cotton and Chief Smith, Minot AFB and the people who support the base remain key to ensuring the nation's defense requirements, now and into the future. When discussing the importance of the bomber fleet and strategic deterrence for the American people as well as America's allies and partners, Gen. Cotton stated, "Nobody else has strategic bomber capabilities. Nobody else has land-based intercontinental ballistic missiles. It's Global Strike Command. It's incredibly important for our men and women to understand the role we play in the security of this nation and our allies and partners."

[RETURN TO TOP](#)

### **38. Get to know your local Missile Alert Facility**

Wyoming Tribune-Eagle (Cheyenne, WY), Feb. 27, Pg. A1 | Will Carpenter

CHEYENNE -- In a seemingly aimless, but determined drive, the small tour bus takes highways and dirt roads out to a place so barren, there likely isn't another human being for miles.

The snow covers the ground and merges with the silver sky, while the cold air seems to penetrate the thick safety-grade windows, through which clouds of horned larks skip and dance out over vast plains like one dense organism.

But then there's something different: Two tan metal structures, fenced in and containing warning signs that advise approaching vehicles of something their drivers already know.

They have reached Alpha-01 Missile Alert Facility, a structure identical to 15 other facilities found throughout Wyoming. Each one supervises 10 missile silos, every one built to contain an intercontinental ballistic missile known as the LGM-30G Minuteman III.

The warhead on a Minuteman III is estimated to produce around 300-350 kilotons of energy. Though it detonates through a different process, that's 20 times more than the 15 kilotons of energy produced by "Little Boy," the U.S. nuclear bomb dropped on Hiroshima, Japan during World War II, killing 140,000 people.

#### *A rare opportunity*

It's rare that the media has the permission to tour a facility like this, but today is different. Normally, the only ones who travel through the heavily secured front gate are the members of the United States Air Force that live at Alpha-01 on and off throughout the year in a series of controlled deployments.

On Feb. 16, there were 15 airmen and women stationed at this location. One facility manager, one chef, four missileers and nine security officers, all of whom make Alpha-01 their home for seven days at a time, each with specific responsibilities.

The facility is unassuming, even underwhelming, but it houses the military personnel that are responsible for the United States' mission of land-based nuclear deterrence.

Nuclear deterrence provides a level of security that most Americans struggle to comprehend, even in times like these, when Russian President Vladimir Putin has launched an invasion of neighboring Ukraine and threatened the rest of the world with his country's nuclear arsenal.

Consider the varying levels of security an average person experiences in a day, from protecting themselves with a firearm to knowing that there's a local police force that will respond to any distress. Think bigger, then think bigger again, and still one might fail to understand how protected Americans really are by the nuclear triad, or the accumulation of all land, air and sea-based nuclear weaponry constantly on alert around the globe, at the ready.

"There is layer, upon layer, upon layer, upon layer, upon layer of security before they even reach our nation," Joseph Coslett, Public Affairs Office chief of operations, said while helping lead the tour of the facility. "Having something happen, even if it was clandestine, we have layer upon layer upon layer for stuff like that."

It's seems like a scary reality to occupy every day, but just by walking through the living quarters of the MAF, it's hard to tell there's anything grave at stake. Besides two heavily armored Humvees, equipped with ascending calibers of weaponry, it's almost like a college dormitory.

There's a living quarter, where off-shift airmen and women gather to watch TV, play video games and eat food made by services journeyman Nadia Carter, who works as the chef.

It may sound excessive, but having Carter's fresh cooking is a significant morale booster when those stationed at Alpha-01 could be required to eat MREs for every meal.

#### *Maintaining 50-year-old tech*

The MAF is self-sustaining, and if anything breaks or fails, Staff Sgt. Anthony Glaister, the facility manager, has to take care of it. A "Swiss Army knife" when it comes to responsibility, Glaister keeps operations running according to plan, from clearing snowdrifts to fixing plumbing.

Glaister's been stationed there since 2016, but his responsibilities have been particularly taxing recently.

The Alpha-01 facility, and others like it, are still largely functioning off of original infrastructure from the 1960s. There are plans to upgrade these facilities in the coming years, gutting them almost completely so the military personnel aren't regularly working to maintain 50-year-old equipment.

In one sense, these upgrades — to a new missile system known as Ground Based Strategic Deterrent — are well overdue.

"We've already pushed the limits of this for three generations, when it was only created for one," Coslett said. "There's been somebody on alert out in these fields for the last 50 years. There's never been a day we have not had somebody on alert."

This doesn't stop the facilities from running the way they should. Security operators, like Airman 1st Class Justin Smith, are on a 12-hour shift, constantly making rounds and responding to signals at the surrounding silos.

Smith had just returned from the field, stepping away from the Humvee to speak with the media on the importance of his role. It is Smith's responsibility to protect the people stationed at this facility, and the weight of his mission is constantly at the forefront of his mind.

"Security is very meticulous — it's nuclear, it's serious," Smith said. "You've got to know how to do everything to a T. There's checklists to follow. There's multiple guidelines and standards you need to know to achieve yours."

Because of security operators, everything looks normal topside. Where things begin to change, and the true purpose of the operation reveals itself, is when one crosses behind security doors and rides an elevator some 60 feet below surface, like descending a mineshaft.

At the bottom, behind doors designed several feet thick that are meant to withstand a nuclear blast, sit the missileers. They just might be in the safest location in the state — a spot designed similar to an egg safely suspended in a shoebox.

The inside of the command console looks eerily similar to any military office space. With khaki-colored walls, carpet and filing cabinets — there are even some papers held up by clothes pins, the old-fashioned way.

It's in this office, one as unassuming as the rest of the facility, that the missileers monitor the status of the United States' nuclear missiles. If they had to, in some extreme scenario, they are also the ones that turn the key to launch the missile.

This office is suspended in a grand circular bunker meant to withstand a nuclear blast. Should an incoming missile make contact and rattle the earth, the office would better absorb the blast and keep the missileers safe.

In this disaster scenario, the missileers, now the sole survivors at Alpha-01, would then eventually climb out of command center, open a hatch and ascend to the surface, which would certainly be flattened.

If this sounds like the revealing of classified information, it isn't. Prior to the media's entry, the area was swept clean. But yes, normally, there's restricted data circulating in this office, and it's heavily secure.

Residents can take a tour like this for themselves at the retired Quebec-01 Missile Alert Facility, which is now a Wyoming State Parks Historic Site, north of Cheyenne.

### *Protecting America and the world*

There's no "going rouge," as popular media likes to depict. There are so many checks and balances to launching a nuclear missile that it seems almost impossible to get a shot off. That being said, the entire process for one missile to launch, reach outer space and travel back down to a target across the world take about 20 minutes.

"If you guys know where we are, they know where we are," missileer 1st Lt. Linda Rivera Matsuo said. "This may be it. The person you're downstairs with maybe the last person you see, so get to know him well. Life is short."

Missileers spend a whole 24 hours underground, each normally serving a 12-hour shift. Matsuo is the Missile Atomic Group Commander, and on Feb. 16, she just wanted to get some sleep after a surprise 36-hour shift.

Being the group commander, Matsuo has to know everything there is to know, even outside her own responsibilities. At a moment's notice, she must recall all the information she has acquired over the past several days and form it into the decision she makes, should it become time to act.

The current policy of the United States is "second strike," a defensive stance meaning that no missile will be launched unless an enemy missile is already inbound. Matsuo, and the other missileers, understand their own impact at all times.

It isn't just a matter of protecting the American people, it's a matter of protecting the world.

"We will only go if we already know something's on the way, but Americans don't go down without a fight," Matsuo said. "So that's what we're here for, and that's what missileers are here for."

By the end of that week, the team stationed at Alpha-01 will have rotated out, and a new team like them will have moved in to assume their duties. In a month, they will return.

So is the life of the airmen and women of the 90th Missile Wing at F.E. Warren Air Force Base.

[RETURN TO TOP](#)

### **39. Red Flag 22-1: Integrated mission planning is the first step to B-2 mission success**

509th Bomb Wing Public Affairs, Feb. 25 | Press Release

WHITEMAN AIR FORCE BASE, MO -- Red Flag is a large-scale exercise that offers the 393rd Expeditionary Bomb Squadron an opportunity to enhance their integrated mission planning capabilities with the use of ever-evolving intelligence.

Red Flag is hosted multiple times a year at Nellis Air Force Base, Nevada, and includes a variety of units and airframes from across the Department of Defense, U.S. allies and partners.

This yearly exercise was created to prevent the aircraft casualties that occurred during the Vietnam War from happening again. One of the most critical lessons learned from the war was the need for integration between multiple airframes, such as bombers and fighters. This integration creates a dominant, multi-capable force that starts with a mission planning cell before the pilots even leave the runway.

"In the B-2 community, we say 'mission planning is our primary tactic' and our quality of mission planning is what sets us apart," said Lt. Col. Christopher Conant, 393rd Expeditionary Bomb Squadron commander. "Preparing our mission with the best plan possible, with the best data possible, is important because that can reduce challenges and errors, as variables on the battlefield inevitably change. Our mission planning philosophy combines the tenants of flexibility with a holistic perspective on how to execute a joint air campaign."

The strategic implementation of air crew tactics and intelligence analysis allows for quality preparation that is a vital component to combat superiority.

"Intel plays a critical role early in the mission planning process," said Conant. "Initial assessments are what we base facts and assumptions on, to then build the plan. But, intel never stops. As the mission planning progresses, they are constantly updating and refining their products so we can adjust."

Red Flag trains our air crew and intelligence officers to mission plan with their counterparts from fellow Air Force units, which tests their integration capabilities on a grander platform within a stable environment. For the 393rd EBS, it is important to learn from other air crews and understand how their aircraft can assist and benefit the execution of the B-2 mission.

"Intel and operations go hand in hand," said Maj. Jonathan Waag, 509 Operation Support Squadron chief of intelligence. "Red Flag provides us the opportunity to practice our processes as Unit Level Intel and develop our analytical skills at the tactical level. The mission planning process at Red Flag allows us to network among the Intel community and learn from our collective experiences."

The 509th Bomb Wing prioritizes multi-aircraft integrations because it offers the most realistic and valuable training for the Airmen. The B-2 primarily integrates with their fellow low observable platforms, the F-35 and F-22. These integrations are typically conducted four to five times a year, one of the biggest collaborations being Red Flag. As these airframes have modernized, so have the mission planning tactics to optimize the new stealth capabilities.

Much like tactics and aircraft capabilities, the technology used by intelligence analysts has also improved with new variants of remotely piloted aircrafts, satellites and communication networks providing more timely and accurate information before, during and after mission flights.

"Intelligence tools and training are constantly evolving to meet the operational needs of the Air Force," said Waag. "Advancements in technology have increased both the quantity and quality of information that we can provide to our pilots to increase their lethality. As a community we are well equipped to provide the necessary intelligence to accomplish our mission.

As the most technologically advanced stealth bomber, the B-2 Spirit has more than a leg up on the aircraft used during the Vietnam War. Coupling its modern tactical capabilities with its updated data analysis tools and mission planning expertise, the B-2 Spirit and its' aircrew and intelligence officers make an extremely lethal team.

"Warfighting is a team sport, always has been and always will be," said Conant. "Integration exercises build our combat capabilities, and, serve to communicate to everyone (allies and potential adversaries) that we are getting better and ready to fight as a warfighting team...anytime, anywhere."

#### **40. Missouri Airman joins rare group, flying 1,500 hours in B-2**

131st Bomb Wing, Feb. 25 | Airman 1st Class Whitney Erhart

WHITEMAN AIR FORCE BASE, Mo. -- Successfully completing 1,500 flight hours is an accomplishment few achieve and one to be remembered. Doing so in a B-2 Spirit stealth bomber is rarer still.

Lt. Col. Drew Irmischer, the 110th Bomb Squadron's director of operations, 131st Bomb Wing, became the 17th member of this elite community when he safely touched down in the stealth bomber Jan. 27.

"I think it's truly an honor just to be in the same category as some of the other really high-time B-2 pilots that I've looked up to throughout my career," he said. "It's been a great opportunity to be with the B-2 community, especially the 131st. I was excited. But the level of accomplishment didn't set in for a few days."

A milestone such as this is commendable throughout the pilot community.

"This accomplishment is one to be proud of in any B-2 pilot's career," said Col. Jared Kennish, the 131st Bomb Wing vice wing commander who has reached the same mark. "It demonstrates the dedication and commitment of the pilot and the Airmen on the ground who make the mission possible."

Irmischer began flying the B-1 Lancer bomber at Mountain Home Air Force Base, Idaho. This is also where he got his call sign, "Lefty."

"While I was going through the mission qualification training, I was on a squadron ski trip, and I ended up breaking my left arm while snowboarding," he said. "Lefty stuck."

Irmischer flew the B-1 for three years and deployed after 9/11, flying combat missions in Afghanistan.

Irmischer started amassing flight hours in the revered airframe in 2004 when he transitioned to the B-2.

From there, he worked his way up through the B-2 community and eventually switched from active duty to the Missouri Air National Guard.

"When I joined the Guard in 2016, I was the 131st chief of safety for a few years," he said. "Then I went and flew for a commercial airline for about a year before coming back full time as the 110th director of operations."

Irmischer's active duty experience carried over to the Guard smoothly due to guidance from other Guard pilots and his familiarity with the B-2 community and aircraft.

"Being in the Guard and part of the 131st and the 110th has been my best experience in the military," he said. "The people, atmosphere and the culture of the 131st are much more conducive to my personality."

#### **41. AFNWC civilian appointed to senior executive service position**

Air Force Nuclear Weapons Center Public Affairs, Feb. 25 | Leah Bryant

HANSCOM AFB, Mass. -- An Air Force Nuclear Weapons Center civilian was promoted to the Senior Executive Service during a virtual ceremony hosted here on Feb. 9.

Maj. Gen. Anthony Genatempo, AFNWC commander, promoted Scott Hardiman to his new SES position.

Hardiman is the director for the AFNWC Nuclear Command, Control and Communications (NC3) Integration Directorate. He is also dual-hatted as the Air Force program executive officer for NC3.

Previously, Hardiman served in the same positions in an acting capacity. Prior to that, he was both the AFNWC NC3 Integration deputy director and the NC3 PEO deputy.

"Professionally, I'm very much looking forward to seeing what the next step is for the NC3 weapon system as you continue to give our customers the capabilities they need," Genatempo said. "Personally, we met at the beginning of my career as a colonel. You have absolutely defined for me what a partner 'in the front office' should be. We were often on the same page and never afraid to tell each other when we weren't. It didn't happen very often, but when it did, it always resulted in something better. My heartfelt congratulations to you."

Hardiman has over 38 years of experience as both as an active duty officer and Department of the Air Force civilian employee.

"This promotion is symbolic of the work done by everyone in the NC3 Integration directorate," Hardiman remarked to the small audience in attendance and a virtual audience of about 180. "It's not about me. Instead, it is about the mission we have and an acknowledgement by senior leadership within the U.S. Air Force that it warrants the establishment of a Senior Executive Service position to carry the weight of what this directorate performs every day."

"This is really about the work all of you do, day in and day out, to guarantee our national security and I thank you all for that," he said.

For AFNWC, he directs the acquisition execution of a \$13.9-billion portfolio of Acquisition Categories (ACAT), non-ACAT, and sustainment programs. He is responsible for integrating the Air Force's NC3 Weapon System and leading over 400 Airmen, government civilians and support contractors. As the PEO for NC3, he reports directly to the Service Acquisition Executive and is the milestone decision authority for delegated ACAT II and all ACAT III programs in the NC3 portfolio.

Hardiman was commissioned in 1984 as an Air Force second lieutenant after graduating from the Air Force Reserve Officer Training Corps at the University of Southern California, Los Angeles, as a distinguished graduate. During his 22-year military career, he served in a number of program management, logistics, and higher headquarters positions.

He began his civilian government service in 2006 as the deputy director of the 851st Electronic Systems Group, Electronic Systems Center, Hanscom AFB, where he was responsible for a \$5-billion program providing next-generation airborne sensor and battle management capabilities. He then served in a number of positions over the years, including as a research fellow at the RAND Corporation, Santa Monica, California.

He assumed his current dual-hatted responsibilities in February.

Members of the SES are charged with leading the government and “producing results for the American people,” according to the Office of Personnel Management. They operate and oversee nearly every government activity in about 75 federal agencies. The service covers managerial, supervisory and policy positions classified above GS-15.

## **ARMY**

### **42. RCCTO leader explains hypersonic acquisition strategy**

InsideDefense.com, Feb. 25 | Ethan Sterenfeld

If the Army fields the Long-Range Hypersonic Weapon on schedule next October, it will meet a target set by then-service Secretary Ryan McCarthy in 2019: develop and build the country's first hypersonic missile in a little more than four years.

This was an ambitious goal for an Army that has struggled in recent decades to field new weapon systems on any timeline at all, especially for technology that nobody could produce outside a scientific laboratory.

But so far, the program has stayed on track.

Success next year could validate the unconventional acquisition strategy taken by the Rapid Capabilities and Critical Technologies Office, which is responsible for the Army's development of a hypersonic glide body for the missile.

Novel acquisition practices, notably increased transparency and robust coordination between the government and all major contractors, have enabled the LRHW's success to date, Lt. Gen. Neil Thurgood, the RCCTO director, told Inside Defense in a Feb. 22 interview.

All the contractors on the program share a single master schedule and earned value management system, he said. This allows the government to maintain a close relationship with each individual company, but still hold the whole group to performance markers.

This strategy was built into the program from the beginning, when the Army made awards to six companies that would develop components of the glide body, Thurgood said.

“We got them all in a room, all the CEOs plus one and said, ‘Look, we want to do things a little bit differently, and it's going to make you uncomfortable initially,’” he said. “We believe that transparency equals speed.”

In return, the Army shared more public budget documents and future plans with contractors than it typically would have, which allowed for more frank discussions about timelines and requirements, Thurgood said.

"Stuff that is public domain information once it goes to Congress, sometimes we act like we can't share that," he said. "It's really [Freedom of Information Act]-able information. So, you can make it really hard to find out, or you can help people be successful on the team."

Transparency has also allowed the Army and RCCTO to tell the same message to industry, Congress, the other services and academia, which has given them greater credibility, according to Marcia Holmes, deputy director at RCCTO.

The Army plans to field three batteries of the LRHW, which is also known as Dark Eagle. The missile is a key part of the Army's future long-range fires portfolio, the top modernization priority as the service prepares for large-scale conflict.

Thurgood, Holmes and his Navy counterpart chair a two-hour meeting every week with the companies that lead the hypersonic missile program, Thurgood said. The Army presents its budgets and progress with whichever part of the program is on the agenda, and the company that makes that component must share its progress or challenges with everyone else.

The Army and Navy have agreed to share a hypersonic glide body for ground- and sea-launched missiles, to avoid creating redundant programs. The Army is responsible for the glide body, while the Navy will develop and buy two-stage rockets for the missiles.

Each company with a contract for the glide body must send someone with decision-making power to the weekly meeting, Thurgood said.

"The first time that one of them comes to the meeting and says, 'Hey, I need to come back to my company,' they don't ever come back," he said. None of the companies have tested this rule yet.

RCCTO has increased its visibility into the supply chain as well, talking directly to companies as far as five layers down from the prime contractors, according to the general.

"They just love that engagement," he said. "They're making a subset of a component, maybe some build-out box, some cable. They don't really understand the big picture, where it fits into the weapon system and why it's important that they're not a minute late."

Flat organizational structures are the norm for RCCTO, which also manages many of the Army's directed-energy and hybrid vehicle efforts, Thurgood said. The hypersonic development program continues that practice and brings it to partners in industry and across the military.

Just as there are regular meetings with contractor decision-makers on the hypersonic missile program, there is a group of three-stars from different services and the Pentagon that meet to discuss the program, according to Thurgood.

The three-star group meets every three months, and the meetings are dedicated to hashing out decisions, he said.

RCCTO has created higher-level groups for more significant decisions, with four-star generals, service undersecretaries and corporate C-suite executives, Thurgood said. When it is time to get higher-level approval, the office already knows who to call.

This structure for efficient decision-making has allowed the program to maintain its focus on rapid development without sacrificing flexibility in the design, according to the general. Some participating companies have had their scope of work change repeatedly, and that has required efficient contract adjustments.

Transparency and flexibility requirements were not written into the contracts the government made with contractors, he said.

"What we have is a group of industry partners who recognize the focused mission that we started with for our nation," Thurgood said. "They recognize that it's up to them to do it, and us as a partnership to do it."

RCCTO has decided to use a similar acquisition strategy for its directed-energy programs, which involve a slightly more developed industrial base, Thurgood said. These practices might work for other new technologies, at least at the office's rapid prototyping stage.

Rather than create a firm requirements document now, the Army and Navy have created a list of desired characteristics, he said. There will be trade-offs during prototyping, as the military learns what industry can build.

Army Futures Command has championed this approach for other modernization programs, including the Bradley Fighting Vehicle replacement.

Some requirements have already been set -- for example, a C-17 cargo plane must be able to transport all components of the finished missiles and their ground equipment. But it would have been impossible to set every requirement before any missiles were actually built, according to Thurgood.

A set of requirements will come out of the desired characteristics and the lessons from the prototype phase, and companies will have to meet them for production contracts, the general said.

To make sure there would be real competition in the future for these programs, the components of the missile were split into their own contracts, Thurgood said. In a typical program, there would be a single prime contractor who deals directly with the government, or just a couple large components the government competes and buys directly.

Six companies won contracts, mostly in the form of other transaction agreements, for the glide body: Dynetics, General Atomics, Lockheed Martin, Northrop Grumman, i3 and Raytheon. Lockheed has since acquired i3's hypersonics portfolio.

"In an emerging industrial base, the way you keep competition is in the major components," Thurgood said. "So instead of awarding a glide body contract to one and then letting them have a dominant market . . . what we did is we broke it up into component parts."

The thermal protection system, a coating on the glide body that allows it to travel at hypersonic speeds without melting or exploding, is its own component that the government buys directly from a contractor, according to Thurgood.

That coating is provided to the glide body manufacturer as government-furnished equipment. The glide body, in turn, is provided to the missile integrator as government-furnished equipment.

Fundamental technology for the glide body comes from Sandia National Laboratories, which has worked with Dynetics to develop a production process, he said.

The military will retain ownership of the technical data package, and the Army will be able to provide it to other companies for future competitions, a RCCTO spokeswoman told Inside Defense after the interview.

Behind the transparency and the later requirements-writing is the recognition that not everything will work perfectly, especially in the first missiles, Thurgood said. The Army must determine what qualifies as the minimum viable product.

A priority technology, such as hypersonics, must take some risks, and that requires a greater tolerance for failure along the way, according to the general.

“We need to move much, much quicker, and part of that means it doesn’t have to be perfect,” he said. “We need to prove that it can do it -- or not do it -- and recognize that not everything will work, and some things will work.”

Industry appreciates this attitude, because it matches the risks that private businesses often take, Thurgood said.

“They want this kind of transparency, to be able to go fast, use their best and brightest, and use the technology, balanced against risk,” he added.

## **CONGRESS**

### **43. Top Republican defense voice in the Senate set to retire this year**

Defense News Online, Feb. 25 | Leo Shane III and Joe Gould

Jim Inhofe, the ranking member on the Senate Armed Services Committee and the top Republican defense voice in the Senate, announced on Thursday that he will retire from Congress at the end of the year.

The move comes with almost four years left in Inhofe’s current Senate term and could leave a significant leadership void in the Senate GOP’s military caucus.

Inhofe, 87, told The Oklahoman in an interview that he and his wife, Kay, “have decided that we need to have time together.” Her health has been deteriorating in recent years.

Inhofe has been the top Republican on the Armed Services Committee since 2018, serving in both the ranking member role and as chairman for two years. He succeeded longtime-Sen. John McCain, R-Ariz., in that role.

Under Oklahoma law, Inhofe had to announce his retirement before March 1 to trigger a special election to fill the Senate seat later this year.

The former Tulsa mayor and Army veteran has represented Oklahoma in Congress since 1987, first in the House of Representatives and in the Senate since 1994.

Inhofe has been a staunch supporter of bigger military budgets and increased military end strength, and a critic of defense cutbacks in recent Democratic presidential administrations. More recently, he has pushed for the United States to provide more military assistance to foreign allies, particularly Ukraine.

He was also a vocal advocate for the 2018 National Defense Strategy that prioritized Russia and China, and would often wield a paper copy in hearings to make points about the country’s defense spending needs.

During Donald Trump’s presidency, Inhofe worked to balance support for the Republican commander-in-chief with pressure to raise defense budgets higher than the White House wanted. He also publicly struggled to counter Trump’s plans to slash America’s troop presence in Europe.

Though Trump endorsed his reelection in 2020, the relationship fractured soon after, when Congress overrode Trump’s veto of the annual defense policy bill, with Inhofe defying Trump on the vote.

The second-ranking Republican on the Senate Armed Services Committee is Roger Wicker of Mississippi. Whoever succeeds Inhofe in the leadership role could become chairman of the powerful military affairs committee next year if Republicans take the majority in the Senate after this fall’s elections.

Inhofe told The Oklahoman that he wanted to work on one last annual defense authorization bill before leaving Congress, predicting that this year's will be difficult. He also endorsed his chief of staff, Luke Holland, in the upcoming special election to serve out the remainder of his Senate term, which ends in 2026.

## **COMMENTARY**

### **44. The Ukraine crisis is now a nuclear crisis**

#### ***Russian President Vladimir Putin just put his nuclear forces on alert***

Washington Post Online ("Monkey Cage" Blog), Feb. 27 | Caitlin Talmadge

Russia's publicly announced nuclear alert has turned the Ukraine war from a crisis involving nuclear powers to an actual nuclear crisis.

With the caveat that we do not have many details about what the Russian alert entails, it is nevertheless a clear sign that President Vladimir Putin does not believe that the conventional military campaign in Ukraine is achieving the political outcomes he wants.

Putin has turned to nuclear weapons because they offer another way to increase pressure on both Ukraine and its international backers to come to the settlement that Russia wants regarding Ukraine's status. Yet his decision raises serious risks of both deliberate and inadvertent nuclear escalation.

This is a scary moment, but it's not unprecedented or that surprising. Here is why.

#### *Nuclear signals like this are not new*

Putin has explicitly signaled from the beginning of the Ukraine war that he might turn to Russia's nuclear arsenal if outside powers interfered with his campaign or were perceived to be threatening Russia itself.

In fact, Putin's initial nuclear threat likely was intended as a shield to keep the West out of Russia's conventional operations. This highlights what international relations scholars call the stability-instability paradox. The danger of nuclear war may keep nuclear powers from fighting all-out because they fear it would escalate. However, precisely because all-out war would be so mutually damaging, the likelihood of conventional war or even limited nuclear use can increase.

Amid reports of Russia's lagging conventional invasion, Putin may now believe that climbing up to the next rung on the so-called escalation ladder is the only way to achieve the coercive effect he wants.

Such a move fits with his decision to announce the alert so publicly — rather than keeping it secret, as nuclear matters usually are — to ensure that the world gets the message and other nations have to respond.

Putin's approach is not new. Countries often rely on their nuclear arsenals to compensate for inferiority with conventional weapons as shown by Pakistan, North Korea, and NATO's threats to escalate during the Cold War. The idea is to deter conventional attack or prevent conventional defeat through threats of nuclear first use. The world has even seen episodes of explicit signals that nuclear weapons could be used, as Putin has done, by states losing conventional battles in the past: Pakistan versus India in 2001-2002, for example, and Israel versus the Arab coalition in 1973.

#### *There are real escalation risks — both intentional and unintentional*

Putin's alert raises two types of risks that the conflict might escalate into a nuclear conflict: deliberate and inadvertent.

First, the deliberate nuclear escalation risk comes from the possibility that Putin might actually use nuclear weapons, particularly tactical (short-range) nuclear weapons, to achieve his military objectives in Ukraine. Again, this is a major reason countries develop such weapons in the first place — to achieve what they think conventional forces cannot.

It is the same reason that the odds of Russian attacks against civilians have increased in the last day or two. From Putin's standpoint, nuclear threats are likely just another escalatory lever to force the political outcome Russia wants.

Putin might also turn to medium-range nuclear weapons to coerce neighbors in Europe who are seeking to support Ukraine militarily, diplomatically, or politically. Of course, doing the latter against any NATO ally would be extremely escalatory and invoke U.S. commitments to defend its NATO allies under Article V of NATO's founding treaty.

Second, raising the alert status of nuclear weapons inherently raises the likelihood of their use — and this is what generates inadvertent nuclear escalation risk. Details are sparse, but we could expect the readiness of Russia's nuclear forces to now be heightened, and the command and control arrangements governing use of nuclear weapons to possibly be loosened, meaning they could be launched more easily.

Whether Russia has actually practiced these operations and how safely they can be conducted remain unclear. Risks of accidents and unauthorized use could increase. Countries sometimes undertake dangerous measures to signal their readiness to use nuclear weapons, as China did in 1969 when it fueled its rudimentary nuclear weapons in a lengthy border crisis versus the Soviets.

Furthermore, Russia's alert could prompt counter-reactions in the United States, France and Britain. If they alert their forces as well, the chances of misperception — including Russian misperception of an impending nuclear attack — heighten further. Much depends on whether Russia is alerting its strategic nuclear forces, which would focus on protecting the regime from attack on Russian soil, or its theater forces, which would be oriented toward influencing the military and political situation on the continent.

Worryingly, this is happening in a time of deep distrust and mutual suspicion, in which ambiguous signals from one country are likely to be viewed in the worst possible light by its opponents. This is precisely the sort of environment in which inadvertent nuclear escalation becomes most likely.

In the fog of war, countries may shoot first and ask questions later. This is how the Soviets ended up mistakenly shooting down a Korean civilian airliner in 1983 during a period of heightened nuclear tension with the United States, and why the Iranians did the same thing in the aftermath of the U.S. strike on Maj. Gen. Qasem Soleimani in early 2020.

*Putin is a personalist dictator — and that has its own risks*

Adding to both the deliberate and inadvertent escalation dangers is Putin's status as a personalist dictator. As Jessica L.P. Weeks and Jeff D. Colgan explained here at TMC, these autocrats have few constraints on decision-making authority and are very unlikely to get candid information from advisers. Putin, an aging leader by Russian standards, likely views the current crisis as threatening not only his foreign policy goals but also his domestic political prospects at home, including his personal survival and freedom.

Putin may also want the world to worry that he is just enough of a madman to lash out when his back is against the wall. Again, this is a tactic leaders have tried before, including Khrushchev in the Berlin Crises of 1958 and 1961, and President Richard Nixon when he attempted to pressure the Soviets over Vietnam in 1969. This approach did not work well for these leaders — but they were all far more constrained than Putin.

This institutional and personal context may make Putin more risk-acceptant — that is, more willing to gamble on dangerous nuclear threats to save his regime — than other leaders. It also likely makes him more paranoid. These tendencies again reinforce the escalatory dangers stemming from Putin's recent decision.

#### **45. How Should the U.S. Respond to Putin's Nuclear Provocation?**

***Putin's order to raise Russia's nuclear-alert status is aimed as much at a domestic audience as it is at the West***

The Atlantic Online, Feb. 27 | Tom Nichols

Russian President Vladimir Putin has ordered Russia's strategic nuclear forces to raise their alert status. (Specifically, he has ordered Russia's "strategic deterrence forces" to "transition to special regime of combat duty.")

If Russia's alerts look anything like ours, this means that the crews and institutions that control strategic missiles, submarines, and bombers will be told to make preparedness a higher priority. They will cancel leaves, conduct inspections, check their communications, and so on, and their intelligence organizations will devote more time and attention than usual to monitoring for indications of possible launches against Russia.

In this heightened state of alert, it is easier to make mistakes yet there is less time to correct them. This is not yet a direct threat to the United States, but it is a signal from Putin, and a gamble.

I had expected that Putin might resort to raising the nuclear-alert status if the invasion of Ukraine went poorly, but I am surprised that he reached for this measure so soon.

And the invasion is, indeed, going poorly for Putin. The Ukrainians did not greet the Russians as liberators. Russian military performance has been worse, and Ukrainian military performance has been better, than many observers (including me) might have expected. Russia still has plenty of time to start bringing down a lot more force on Ukraine, but that will begin a bloodbath and Putin will have to admit that his earlier confidence in a quick victory was unwarranted.

Putin might also be rattled by the scale of the protests erupting in Russia itself. The Russian authorities have already jailed many hundreds of people, and at some point, even Putin must realize that he can't arrest everyone (as much as he'd probably like to do so).

This all suggests that Putin's order—conducted on television and captured on video—is a measure aimed as much at a domestic Russian audience as it is at the West. He may be hoping to produce a kind of Cold War rallying-around-the-flag among the Russian people. Or, at the least, to increase the sense that protest during a nuclear crisis is even more traitorous than usual.

Had Putin wanted to send a message solely to NATO, he could have merely given the order to the Russian chain of command, and Western intelligence and defense sources would have picked it up immediately. We know what such an order sounds like and what kind of activity would follow it.

In fact, that's exactly what we did in 1973, when the Nixon administration increased U.S. nuclear readiness during the Yom Kippur War. We made no announcement, but we sent the alert orders in the clear, where we knew Moscow could hear them. Our public silence allowed for a certain amount of ambiguity, which we hoped would induce even more caution in the Kremlin.

Putin, however, gave a short speech before issuing the official order to Russian Defense Minister Sergey Shoigu and Chief of the General Staff Valery Gerasimov (who were wearing the Russian equivalent of daily battle-dress uniforms rather than formal military dress). Like all his statements since the Ukraine crisis began, Putin's preamble sounded

like it was cribbed from a Soviet leadership speech circa 1975. He griped about economic sanctions, which have clearly gotten his attention, and he accused “the leading NATO nations”—an old Soviet formulation that always means the United States, sometimes along with the United Kingdom and Germany—of directing “aggressive statements” at Russia.

If Putin was signaling his own people, however, the fact remains that those forces now on higher alert are readying for combat with the United States and the rest of NATO. The missiles and bombers are pointed at us, not the people of Moscow. Putin is playing an insanely dangerous game here. He’s holding a weak hand and yet threatening to go all in. This is yet more evidence that years of isolation, in which his only contact is with sycophants and security guards, have taken its toll on his mental state.

What should the U.S. do?

For now, the sensible, and confident, American answer should be to do nothing. This might seem counterintuitive: The Russians have gone to higher alert, and it would seem only prudent to answer this with a reciprocal raising of U.S. alert status. But that Cold War reaction would, I suspect, exactly what Putin wants. He’s in a jam and he’s trying to look strong, and part of the way he can do that is to turn his hare-brained scheme in Ukraine into a gigantic Russian-American confrontation. Putin would like nothing better than to take everyone’s mind off Ukraine and focus us all on a game of nuclear chicken.

We should not take this bait. There’s no good strategic reason to give Putin what he wants, and we should hope that President Biden will pointedly ignore this obvious provocation.

*--Tom Nichols is a contributing writer at The Atlantic and the author of its newsletter Peacefield*

#### **46. With his war going slowly, Vladimir Putin raises the nuclear stakes *Why Russian nuclear forces have been put on a higher state of alertness***

The Economist Online (UK), Feb. 27 | Editorial

As Vladimir Putin declared war on Ukraine in the early hours of February 24th, he warned the West to stay out of it. “Whoever tries to hinder us... should know that Russia’s response...will lead you to such consequences that you have never encountered in your history,” he said. It was interpreted as a barely veiled threat to use nuclear weapons. On February 27th, several days into his war, and without much to show for the fighting so far, Mr Putin removed the veil entirely.

At a televised meeting with Sergei Shoigu, his defence minister, who looked taken aback, and the chief of the general staff, General Valery Gerasimov, Mr Putin accused the West of “unfriendly economic actions”. He was referring to the heavy sanctions announced in recent days, which threaten to batter Russia’s economy, as well as “aggressive statements” about Russia. “Therefore I order the minister of defence and the chief of the general staff to transfer the deterrence forces...to a special mode of combat duty.” In effect, it suggests that Russian nuclear weapons are moving to higher readiness.

This does not mean Mr Putin is preparing a nuclear strike. “Announcing it means that it is primarily a political message designed to impress us,” says Bruno Tertrais, an expert on nuclear deterrence at the Foundation for Strategic Research, a think-tank in Paris. “If he was getting ready to use nuclear weapons he would not [say so first].” Mr Putin’s aim is probably to deter the West from offering further support to Ukraine, which has so far fiercely resisted Russian ground assaults on several targets including Kyiv, the capital, and on February 27th Kharkiv, the second-largest city.

In recent days that support has been increasing. On February 25th Britain held a conference with more than 25 countries, including America and Canada, at which they pledged to continue sending ammunition, anti-tank weapons

and other arms to Ukraine. A day later even Germany, which had previously refused to send lethal aid, and had blocked German-made weapons from being sent by others, changed its mind.

It said it would send 1,000 anti-tank weapons and 500 Stinger shoulder-fired anti-aircraft missiles “as quickly as possible”. It also allowed the Netherlands and Estonia to send rocket-propelled grenade launchers and howitzers respectively. The next day it went even further, announcing a huge expansion in defence spending, with a special fund of €100bn (\$112bn). In addition to stanching the flow of such things to Ukraine, Mr Putin may also hope to stamp out any Western debates over the idea of a no-fly zone over parts of Ukraine.

His threat amounts to releasing the safety catch on a firearm. The reference to “special mode of combat duty” probably refers to the command and control of Russian nuclear forces. In peacetime, the system is thought to be incapable of transmitting launch orders, as if its circuits are disconnected, says Pavel Podvig, an expert on Russian nuclear forces at the United Nations Institute for Disarmament Research, a think-tank in Geneva. In moments of crisis Russian officials can “bring the system into a working condition, connecting the wires”, says Mr Podvig, “so if a launch order is issued it can go through”.

Once that happens, he says, the system is designed to allow a launch to occur even if Mr Putin is incapacitated—though that requires detecting a nuclear detonation on Russian soil. In addition to all that, “combat duty” might also trigger other preparations, such as nuclear-armed submarines leaving port or weapons being loaded onto bombers—things that would be visible to America and its allies through satellites and other means.

Russia is estimated to have 1,588 deployed nuclear warheads and 2,889 in reserve (America has 1,644 and 1,964 respectively). Its “deterrence forces” are not just nuclear ones, though. Russia considers strategic deterrence to span nuclear and conventional forces, including missiles such as the ground-launched Iskander), sea-launched Kalibr and air-launched Kh-101 and Kinzhal. Some of these missiles are dual-capable, which means that they can carry both conventional and nuclear warheads. Many have been spotted in recent weeks. The Kinzhal was seen under a Russian warplane in Kaliningrad on February 8th and Iskanders are thought to have been used in the first wave of missile strikes on Ukraine.

Jens Stoltenberg, the secretary-general of NATO, said that Mr Putin’s move was “dangerous rhetoric”. The alliance includes three nuclear powers—America, Britain and France—although France does not participate in joint nuclear planning and its forces are not formally assigned to NATO. In addition to their strategic forces, America also deploys “non-strategic” (sometimes called tactical) nuclear weapons to Europe, which have lower explosive yields. These can be carried by Belgian, German, Italian, Dutch and Turkish jets, the idea being to ensure a wider range of allies have a stake in nuclear deterrence.

Western nuclear forces do not need to go on higher alert, Mr Tertrais thinks. “I see no reason for a tit-for-tat,” he says. “Quite the contrary: we must appear cool-headed and show that he [Mr Putin] is the one losing his temper.” But the risks of misperception and misunderstanding are higher in wartime, and Mr Putin’s willingness to gamble has been proven to be greater than many assumed. Jon Wolfsthal of Global Zero, an advocacy group, and a former arms-control official in the Obama administration, urges America’s chairman of the joint chiefs of staff, the country’s top military officer, to remain in regular contact with General Gerasimov—and to remind him, and his colleagues, that any resort to nuclear weapons “makes them personally accountable under the laws of war”.

Mr Putin himself seems accountable to no one. In the 1950s Thomas Schelling, an economist and nuclear strategist, pointed out that the most credible threats were not those that promised an action with certainty, but left something to chance. “The threat is not quite of the form ‘I may or may not, according as I choose,’” noted Schelling, “but... ‘I may or may not, and even I can’t be altogether sure.’” Mr Putin has gambled heavily. Now he is raising the stakes.

[RETURN TO TOP](#)

#### **47. A hurting stalemate? The risks of nuclear weapon use in the Ukraine crisis**

Bulletin of the Atomic Scientists, Feb. 27 | Francesca Giovannini

Nuclear experts are trained to think the unthinkable. So, here is an unthinkable scenario that might actually happen in real life:

The battle over Ukraine drags on. From both the European Union and the United States, fresh weapons and other supplies continue to enter into Ukraine and allow the Ukrainian forces to fight on. The battle reaches what conflict resolution expert William Zartman calls “a hurting stalemate” situation. The balance of forces on the ground is not completely or perfectly symmetrical, but what was once considered a completely disproportioned asymmetry of forces has been gradually re-equilibrated, in favor of the Ukrainian forces.

The crisis becomes a war of endurance.

Theories of international relations tell us the defenders have a strategic advantage. They know the terrain in which they fight, and above all they have an absolute resolve to repulse the attacker. What news outlets report largely confirms these theoretical arguments. The extraordinary competence of the Ukrainian military is further strengthened by an unprecedented level of civilian mobilization and resistance.

Meanwhile, Russian forces meet considerable challenges in re-supplying their forward-deployed troops. The army has visibly underperformed. No strategic objective has been achieved. And for the first time since the beginning of the conflict, the Russian media acknowledge the country’s first casualties. As the situation endures, Russian troop morale wanes. Fighting becomes sloppy, casualties continue to climb on the Russian side.

Generally, in a situation of hurting stalemate, according to Zartman, the costs of continuing the struggle exceed (oftentimes greatly exceed) the benefits to be gained. Yet, it is reasonable to assume that for Putin, losing the war with Ukraine is a non-option. He has claimed Ukraine is an indivisible part of the Russian identity and territory. In addition, with two-thirds of Russia’s entire military forces on the ground, losing a war against what is perceived as a much weaker military would inflict major reputational costs to the Russian Federation and to Putin.

Neither might he be willing to accept a negotiated solution that leaves the current regime in power. The costs that Putin has been already willing to pay for his invasion of Ukraine have been astronomical. Settling for a half-baked victory seems very unlikely. For the costs of the invasion to be worth it, Putin needs a decisive victory.

The question of what “winning” means for Putin comes into play.

What options does Putin have? A decision by Putin to use tactical nuclear weapons seems, perhaps, no longer completely far-fetched. In fact, he ordered Russia’s nuclear forces to a higher alert status on Sunday, although it was unclear what the order meant in practical terms. The land- and submarine-based nuclear missiles of Russia and the United States are generally thought to be kept at high readiness at all times.

Today, as I write this article, a scenario that leads Russia to use nuclear weapons in Ukraine seems improbable. Like many others, I make three assumptions: that Russia has a strong interest in not destroying Ukraine, because Putin wants to occupy it; that even though Putin is a thug, he is not a crazy enough thug to break a taboo against the use of nuclear weapons in war, a taboo that has held for 75 years; and that there are plenty of other options that the Russians can exercise in subduing Ukraine.

But perhaps those assumptions should be questioned.

First, the assumption that Putin wants to avoid destroying Ukraine hardly stands the test of reality. While it was true that in the first phase of the conflict the Russians took measures to reduce civilian costs and infrastructure destruction, in the last 24 hours, Russian tactics have shown a clear change in targeting and pace. The targeting of residential buildings, gas pipelines, and energy stations is indicative of how much the Russians now feel the urgency of time and the fear that Ukrainian resistance is coalescing. The longer the conflict drags on, the more the Russians will have

to escalate to break the “resolve” of the Ukrainians. Ultimately, having a decisive victory might matter more to Putin than the preservation of infrastructure. And if Putin’s goal is to make Ukraine a buffer zone between Russia and the West, limiting damage on Ukraine soil might ultimately count little in Putin’s mind.

As regards the second assumption: How much crazier would Putin need to be, to break the so-called “nuclear taboo”? It seems to me that he has been willing to break the taboo regarding national sovereignty more than once. While I don’t think he will take the decision of using tactical nuclear weapons lightly, I also don’t believe that the fear of breaking a precedent (real or imaginary) is something that would constrain him. It is interesting also to note that Putin has repeatedly referred to nuclear weapons during this crisis. On Sunday, he ordered his country’s nuclear forces on high alert in what he said was a response to aggressive statements from Western countries. In the speech that announced the invasion of Ukraine, Putin claimed that “Ukraine was on the path to acquiring nuclear weapons.” No proof exists of course to support such a claim, but it is interesting to note how preeminent the nuclear argument plays in Putin’s thinking. More important, the Russians apparently are considering a retaliatory measure to push back against the West’s support of Ukraine; it would include Russia leaving the New START nuclear arms control agreement, which caps the deployed nuclear arsenals of the United States and Russia—a move implied on Saturday by former Russian President Dmitry Medvedev, currently deputy head of Russia’s Security Council.

Finally, we know the Russians still have plenty of conventional and non-nuclear strategic options. They have not deployed their full cyber capabilities. More tanks are being sent in. Use of swarm drones and other “exotic” weapons might also be in the planning phase. And several of my colleagues at the Belfer Center have pointed out, Russia has enough fire power to destroy Ukrainian cities without having to resort to nuclear weapons.

In addition, as this mad war rages on, windows for diplomacy and negotiations might appear along the way. One seems to be opening tomorrow, with talks between Russian and Ukrainian delegations set to begin in Belarus.

What makes the use of tactical nuclear weapons plausible (although not likely) to me is their unequivocal messaging value. The use of one or more tactical nuclear weapons would be an unmissable attempt by Putin to break the unity of the West, and to test the resolve of some NATO countries. It would also signal once and for all his willingness to do whatever it takes to achieve his political and strategic goals.

I don’t claim this is a likely scenario, but I do worry.

I have celebrated the military victories of the fierce and proud Ukrainians. I cried over the images showing on TV. I gasped in reading the messages of President Zelensky confirming over and over his unshakable will to stay and fight with the Ukrainian people until the end. But a more ominous scenario is emerging and with it a catastrophic dilemma for both President Zelensky and the West. The longer he and the West resist, the more they might involuntarily push Putin to consider further escalations, including to the nuclear threshold. Should Zelensky surrender and leave, hoping to appease Russia? Or should he continue to fight with his people, with increasing help from the West, to defend their right to live freely? Is the fight for freedom worth the price of a possible nuclear attack?

This is an existential dilemma without a perfect solution, one that nobody should ever face. It’s a dilemma that could haunt us all soon, unless sanity is restored by renewed diplomacy.

#### **48. Putin’s Nuclear Threat Shatters a Security Shield**

All eyes are on the conventional war unfolding in Ukraine. But a very different kind of conflict looms over the conflict. Before invading, Putin staged nuclear weapons drills around Russia's border with Ukraine. In case anyone missed the point, his speech justifying the invasion reminded listeners that his country remained "one of the most powerful nuclear powers."

Worse, this rant went hand in hand with a sinister warning: "Whoever tries to hinder us, and even more so, to create threats to our country," he declared, would suffer "consequences that you have never encountered in your history." Next came his announcement that Russia's nuclear forces had been put on a "high alert."

Many Western strategists have interpreted all this as a threat to prod the Ukrainians to surrender or intimidate the Europeans.

Whatever his motives, Putin is using nuclear deterrence as cover for a massive conventional military offensive. This is an ominous turn of events. To the extent this has ever worked in the nuclear age, it did so by forcing adversaries to adopt cautious, non-confrontational positions. But understanding how doctrines of deterrence developed during the Cold War underscores the degree to which we are in uncharted waters.

Most accounts of nuclear strategy begin with the U.S. dropping atomic bombs on Japan in 1945. In the weeks and months that followed, a group of scholars at Yale wrote essays on nuclear warfare they collected in a short book titled "The Absolute Weapon."

The most influential piece of the bunch came from military thinker Bernard Brodie. In the space of a few paragraphs, he laid out the mind-bending implications of the bomb for military strategy. His essay is still worth reading.

Brodie pointed out that "if the atomic bomb can be used without fear of substantial retaliation in kind, it will clearly encourage aggression." The only way to counteract this, he argued, was "to make it as certain as possible that the aggressor who uses the bomb will have it used against him."

Writing at the end of the worst war in world history, Brodie acknowledged that "the possibility of irresponsible or desperate men again becoming rulers of powerful states cannot ... be ruled out in the future." But it was possible, he averred, that such leaders and their military supporters could be disabused of the idea "that aggression will be cheap."

Brodie concluded with these oft-quoted lines: "Thus far the chief purpose of our military establishment has been to win wars. From now on its chief purpose must be to avert them. It can have almost no other useful purpose."

The argument found few takers at first. Other doctrines found favor instead. Secretary of State John Foster Dulles, for example, advanced the doctrine of "massive retaliation," where conventional attacks could be met by a disproportionate nuclear response.

Others, like Henry Kissinger, thought there was a space for "limited" nuclear war, where tactical nukes might coexist with conventional weaponry. Still others thought it possible to launch a pre-emptive "first strike" that destroyed an adversary's entire nuclear arsenal.

Brodie had little patience for such thinking. In 1951, he moved to the RAND Corporation, where he expanded the idea first proposed in his seminal essay. Other civilian strategists joined him there: the political scientist Albert Wohlstetter; the economist Thomas Schelling; polymath, game theorist and provocateur Herman Kahn, and many others.

These thinkers began to debate the nuances of nuclear strategy with the fervor of medieval scholastics. RAND was their monastery, and their deliberations gave rise to the rudiments of modern nuclear strategy.

They proceeded as technological advances made a successful first strike increasingly impossible: Newly commissioned submarines could lurk undetected, firing the retaliatory second strike; missiles waiting in subterranean silos could do the same.

These developments nudged these thinkers toward a revolutionary conclusion: If both sides realized that a first strike would inevitably trigger a devastating second strike in return, neither side would pre-emptively use nuclear weapons. Instead, a “stable balance of terror” would prevail. In turn, this would deter conventional conflict as well out of fear it might spiral into a nuclear exchange.

The subtleties of these doctrines defy easy summary, particularly because they beget counterintuitive corollaries. For example, some RAND theorists maintained that government-sponsored efforts to survive a potential nuclear war — building civil defense shelters, for example — were a bad idea, because the Soviets would assume the Americans intended to survive a nuclear exchange. This in turn could be misinterpreted to mean we meant to launch a pre-emptive attack.

All of this might have remained a macabre intellectual exercise, but Secretary of Defense Robert McNamara, himself a devotee of the RAND way, put these ideas into practice in the wake of the Cuban Missile Crisis. They became known as “assured destruction” or, eventually, “mutually assured destruction,” or MAD.

This was the basic theory of deterrence that remained operative, with some modifications, until the end of the Cold War. As Brodie anticipated, MAD scrambles conventional understandings of strategic advantage and deterrence.

For example, when it became apparent that the Soviets had developed an impregnable second-strike capacity, McNamara publicly acknowledged this as a welcome development. Why? Because by doing so, the Soviet Union now knew that we knew that they possessed a second-strike option. The balance of terror had been achieved.

This generated an eerie stability in Europe, with a sharply defined line separating two sides, each armed to the teeth with conventional and nuclear weapons. But they would not fight. Instead, the superpowers would fight conventional wars by proxy elsewhere in the world.

In 1981, the nuclear strategist Kenneth Waltz observed: “Never since the Treaty of Westphalia in 1648 ... have great powers enjoyed a longer period of peace than we have known since the Second World War. One can scarcely believe that the presence of nuclear weapons does not greatly help to explain this happy condition.”

A decade later, though, the Cold War was over. There was much debate in strategic circles about whether deterrence would work in a messy, multipolar world. Some, like Waltz, believed that it would. “With nuclear weapons,” he wrote, “it’s been proven without exception that whoever gets nuclear weapons behaves with caution and moderation.”

A recent review of nuclear strategy has described this point of view as the “easy deterrence” school of thought. But there is an alternative — and dissenting — theory of nuclear deterrence, one rooted in a recognition that, well, leaders don’t always behave rationally.

Albert Wohlstetter, one of the original crew at RAND, put this well back in 1958. He acknowledged that many people, including some of his colleagues, believed that the “stability of the thermonuclear balance ... would make aggression irrational or even insane.” But, he argued, “the balance is in fact precarious.”

These words are worth remembering as we contemplate Putin’s alarming rhetoric. The world no longer operates within the carefully constructed scaffolding of deterrence fashioned during the Cold War. That was already too hazardous by half, leading to a number of close calls.

We now confront a challenge of a different order entirely, where a leader driven by grievance and pride is using nuclear deterrence to fight a land war in Europe. In the process, Putin has turned the old doctrines upside down. What formerly was a means of maintaining the status quo has become a threat to destroy it.

If this continues much longer, the old logic of nuclear deterrence may be gone for good. But the terror? Not so much.

#### **49. Russia's Ukraine War Heightens Urgency Around Biden's Nuclear Weapons Strategy**

***With the Russian invasion of Ukraine, prospects for U.S. nuclear disarmament look bleak. The Biden administration was already cutting corners on its policy***

TheIntercept.com, Feb. 25 | Sara Sirota

As the week began, nonproliferation advocates weren't optimistic that President Joe Biden would stand by his early commitments to "reduce the role of nuclear weapons in our national security strategy." He might reverse former President Donald Trump's decisions to pursue a nuclear-armed, sea-launched cruise missile or to retain the B83 gravity bomb, the most destructive weapon in the U.S. nuclear arsenal, they thought. He might roll back Trump's policy allowing a nuclear response to "significant non-nuclear strategic attacks" or even consider a coveted "no first use" policy that Biden had shown interest in as vice president. But prospects that he would do the heavier lifting and halt Northrop Grumman's contract to replace the intercontinental ballistic missile system — considered one of the most dangerous and unnecessary weapons in the nuclear arsenal — were practically nonexistent. Combined with multiple other weapons programs, the brand-new ICBM system puts the U.S. in its largest nuclear modernization effort since the Cold War.

Now that Russia has invaded Ukraine in what could amount to the worst conflict in Europe since World War II, the prognosis looks even more grim, and the urgency for prudence much greater. Russia is armed with a trove of nuclear weapons, spreading fear to concerned observers about the prospect of an escalation involving the most destructive arms on the planet. During a televised address Wednesday night, Russian President Vladimir Putin issued a stark warning that anyone who interferes "will face consequences greater than any you have faced in history" — which some experts have interpreted as a reference to nuclear weapons. Allen Hester of the Friends Committee on National Legislation told The Intercept on Thursday that Russia is "very much using their nuclear arsenal as a shield to pursue conventional warfare in the region," adding that it's crucial nevertheless to keep the lines of communication open.

There will now likely be heightened pressure on Biden, who is yet to approve his final nuclear weapons strategy, to continue Trump's expansionist course. Stephen Young of the Union of Concerned Scientists warned that hawks in the administration will try to convince Biden to keep the cruise missile and gravity bomb that his predecessor endorsed. "People will see it, they will claim it's a sign of weakness if the U.S. cancels anything right now," he told The Intercept. Hester said Biden may also be less willing to adopt a "no first use" policy, especially if fearful European allies, who've already lobbied against it, urge Biden again not to make major reforms. And, in what Hester described as a worst-case scenario, the president could decide to increase spending on cyber operations and other non-nuclear capabilities, then frame the relative change as a reduction in nuclear weapon reliance without cutting the arsenal at all.

Biden will weigh his options as he considers the draft Nuclear Posture Review that, prior to the crisis in Ukraine, was expected early this year. The NPR is a public document that each president since Bill Clinton has released to declare their policy on nuclear weapons. According to Hester, the draft is currently sitting on the president's desk awaiting approval and any changes that he may deem necessary. Young said Defense Department officials have told him that the strategy's rollout will be delayed until after the crisis in Ukraine settles. The White House and Pentagon did not reply to requests for comment.

Nuclear policy expert Joe Cirincione of the Quincy Institute for Responsible Statecraft told *The Intercept* that the war on Ukraine, and Americans' tendency to immediately react by "bringing down the hammer," shows why Biden should pull back his NPR and consider a more restrained approach. He especially warned about the administration repackaging the same old maximalist policies under new lingo like "integrated deterrence" that can "create a slipper[y] slope where conventional conflict can escalate quickly and seamlessly to cyber war and nuclear war."

"It is completely inadequate for the task ahead of us," Cirincione said of the draft review, arguing: "If Biden issues the NPR the Pentagon wrote, he will not just be accepting obsolete Cold War doctrines and weapons, he will be blessing them. All his officials will be required to embrace these weapons and strategies as the Democratic view. Members of Congress will be kneecapped, unable to oppose these new weapons no matter what the cost."

Skeptics of nuclear weapons are already at a disadvantage. In 2010, after President Barack Obama successfully negotiated the New Strategic Arms Reduction Treaty to limit the number of deployed ICBMs and other weapons, disarmament activists hoped that he would continue his 2009 pledge "to seek the peace and the security of a world without nuclear weapons." But according to Cirincione, Obama faced so much wrath from Republicans and the nuclear-industrial complex, as well as a demanding Putin, that he turned away from plans to reduce arms further and allowed research for a new ICBM program, known as the Ground Based Strategic Deterrent, to proceed. The weapon, whose development was greenlighted in the final months of Trump's presidency, is slated to cost \$264 billion through 2075 and begin replacing the current system in the late 2020s.

Similar forces have come for Biden. Last year, for example, the White House had selected Leonor Tomero, a longtime congressional staffer known for questioning excessive weapons buildup, to oversee the NPR, leading to a revolt by the defense establishment. In the Senate, Nebraska Republican Deb Fischer reportedly threatened to obstruct confirmations of nominees if Tomero stayed. The Department of Defense eliminated her position in September, calling the move a reorganization.

Another impediment to restraint arises from claims that nuclear weapon programs result in jobs and economic development in some lawmakers' home states. Sen. Jon Tester, D-Mont., who has outsize influence over the military budget as chair of the Appropriations Committee's defense panel, has reiterated his support for the new ICBM system, which will partially be based in Montana. (Nonproliferation advocates like Global Zero's Emma Claire Foley argue that the public could be better served by directing the new weapon's funds toward programs like Medicare expansion.)

And the two most powerful Republicans on the Senate and House Armed Services committees — Sen. James Inhofe, R-Okla., and Rep. Mike Rogers, R-Ala. — have sought to shut down assessment of whether the new weapon system is necessary. Last month the two criticized the Defense Department for contracting with the Carnegie Endowment for International Peace to assess whether the current ICBM system, known as the Minuteman III, could remain viable as an alternative to its replacement. Rogers spokesperson Justine Sanders told Bloomberg that the review was redundant because the Obama administration had already examined other options, a common argument that proponents of the Ground Based Strategic Deterrent use. But that prior assessment, which is classified, was likely grounded in assumptions that the size of the force and deterrence needs would not change, Matt Korda of the Federation of American Scientists told *The Intercept*.

The contract began with the premise that the U.S. would continue to have an ICBM force rather than consider the possibility of eliminating the missiles, James Acton, co-director of Carnegie's nuclear policy program, told *The Intercept*. ICBMs carry "inherent risks in a crisis in the sense that because [leaders] have a 'use them or lose them' mentality around these weapons, because they're framed as sitting ducks, essentially, in the event of a nuclear war, the pressure on the president to use them in a crisis is very high," Hester explained.

The weapons also serve as "nuclear sponges," meaning that "they're there to absorb the enemy's nuclear missiles and sacrifice those communities in the Midwest who house these missiles in the name of saving ... larger-population coastal cities," he added.

Despite resistance from Inhofe and Rogers, the Carnegie study was nowhere near the thorough technical evaluation sought by Sen. Elizabeth Warren, D-Mass., and 19 other Democratic lawmakers last year. According to Acton, it was never meant to be: “Our study was entirely unclassified, and precisely because the NPR is coming out relatively soon, it was also a fairly short study. So our study was not, could not be, it was never intended to be a detailed, technically informed feasibility assessment of different options.”

Politico reported last month that the Biden administration decided to ignore the 20 Democrats’ request for an in-depth analysis of whether the Minuteman III could continue serving into the future. The Intercept has also learned that the Pentagon appears to have used a bogus excuse to justify why it didn’t seek out such an evaluation.

During one of Carnegie’s virtual workshops, held January 6, a Biden political appointee claimed that JASON, the Pentagon’s go-to independent scientific advisory group, had neither the time nor contracting mechanism to conduct the requested analysis, attendee Daryl Kimball, executive director of the Arms Control Association, told The Intercept. He said the appointee, Deputy Assistant Secretary of Defense for Countering Weapons of Mass Destruction Richard Johnson, was speaking from prepared remarks — suggesting that the justification came from more senior policymakers. The Defense Department declined to comment on Johnson’s remarks.

An email sent after the workshop and shared with The Intercept suggests that Johnson’s claim was untrue. According to the email, his comments prompted another attendee to email Ellen Williams, the chair of JASON and a physics professor at the University of Maryland, to ask whether the group had the capacity to conduct the evaluation. Williams replied that JASON indeed had the contracting means in place. The name of the original sender was redacted, but Kimball referred to him as a former member of the Obama administration.

“JASON does and has had mechanisms to contract with DoD – for instance we did studies for DOD [acquisition and sustainment office] both of the last two summers, and are now discussing topics for next summer with DOD [research and engineering office],” Williams wrote in her reply. “I don’t recall any conversation with them about a study, and don’t know when or whether they might have been in touch with us.” She did not respond to a request for comment from The Intercept.

Gordon Long, JASON program office director at the Mitre Corp., which manages the group, declined to say whether the organization discussed the possibility of an ICBM review with the Pentagon. However, he told The Intercept in an email that Mitre has a contract with the Office of the Under Secretary of Defense to provide JASON with logistical support that the Pentagon can use to order studies.

The absence of the in-depth technical assessment calls into question the completion of the draft nuclear strategy, which was already concerning to nonproliferation experts. “The Nuclear Posture Review, by going ahead with the ICBM without doing studies, contributes to this sort of mindless nuclear buildup without thoughts about where it leads,” Cirincione said. “It’s not balanced by an equally strong, you might say, disarmament plan that talks about how we get out of this — and without that, you’re basically throwing nuclear fuel on the fire.”

## **50. Is the United States Ready for the Third Nuclear Age?**

***The most pronounced component of this emerging nuclear context is the impact on U.S. deterrence and stability thinking driven by rapid and in some cases novel technological change***

National Interest Online, Feb. 26 | Andrew Futter

In the next few weeks, the Biden administration is likely to release both a Nuclear Posture Review (NPR) and a Missile Defense Review (MDR). These two documents are the chance for President Joe Biden and his national security team to “put their stamp” publicly on how they intend to approach issues of nuclear deterrence and national security policy. All previous NPRs and MDRs have marked an important moment in the evolution of U.S. nuclear thinking (each president has released an NPR since 1994 and an MDR since 2010), but the nuclear environment confronting the United States and the wider global nuclear order today will be quite different than what we have seen before.

This is because we are in a world far removed from 1994 when the Clinton administration sought to reorient U.S. nuclear policy toward the challenges of a post-Cold War “Second Nuclear Age,” a reorientation that was broadly followed by Presidents George W. Bush, Barack Obama, and, to a lesser extent, Donald Trump in the years that followed. But today we stand on the cusp of a different nuclear world where the challenges to the United States and the global nuclear order are changing and diversifying. We can think of this as the start of a “Third Nuclear Age.”

The move into a Third Nuclear Age does not necessarily mean that everything that the United States has done in the last three-quarters of a century to deter nuclear use against the homeland, allies, or forces based overseas is wrong or defunct, but rather that the locus of the nuclear threat has altered. Much as the attention of U.S. policymakers shifted from nuclear war and arms racing with the Soviet Union to the dangers posed by regional and non-state actors in the 1990s and 2000s, today we are witnessing another transition to a world of disruptive technological change, nuclear great power competition, and challenges to the very foundation of the U.S.-led nuclear order. The response will require a concerted shift away from three decades spent “tailoring” U.S. deterrence efforts to the perceived threats posed by “rogue states” such as North Korea by pursuing limited missile defenses, precision counterforce options, and “counter-proliferation,” towards a renewed focus on strategic deterrence both above and below the nuclear threshold against major nuclear-armed adversaries and great powers. Balancing these deterrence pressures will not be easy.

Perhaps the most pronounced component of this emerging nuclear context is the impact on U.S. deterrence and stability thinking driven by rapid and in some cases novel technological change. Of course, the impact and risk of technological innovation by adversaries has always played a role in U.S. nuclear thinking, and for most of the nuclear era the United States has been at the forefront of military technological innovation, but today this is different.

This is because it is not just the “exotic” nuclear delivery systems such as hypersonic, orbital, or nuclear-powered missiles being developed by Russia, China, and others that matter, but rather the more subtle emergence of a suite of non-nuclear and in some cases non-kinetic capabilities that can be used by U.S. adversaries for strategic missions (such as very accurate ballistic, cruise, and hypersonic missiles for conventional counterforce attacks, increasingly capable defenses, kinetic and non-kinetic anti-satellite/counterspace operations, advances in anti-submarine warfare, and left of launch attacks on missiles and nuclear command and control using computer network operations). All of which are increasingly taking advantage of improvements in remote sensing, artificial intelligence, and autonomous platforms.

These strategic non-nuclear weapons (SNNW) are being developed by U.S. competitors—in many cases as a direct challenge to regional conventional deterrence architectures ultimately underpinned by U.S. nuclear guarantees. The development of SNNW is creating two interlinked sets of nuclear risks: first, that a U.S. adversary will view strategic non-nuclear weapons as more usable than nuclear weapons and threaten their use for coercion or to take greater risks in order to achieve some type of perceived advantage in a crisis; and second, that these systems become entangled in unforeseen ways which leads to rapid unintended escalation from the conventional to the nuclear level. A good example of this might be a “cyber” attack on a U.S. satellite or a command-and-control facility designed to degrade a particular tactical capability that is interpreted—incorrectly—as a precursor to a pre-emptive disarming strike because the “target” is used for both missions. Concurrently, a greater reliance on U.S. non-nuclear weaponry for strategic missions—including deterrence—may lower the threshold for nuclear use by U.S. adversaries, and at best, undermine nuclear arms control and stability.

Technological change is happening at the same time as—and is in many ways reflective of—a transition from an era of U.S. global predominance and unipolarity to a system of great power multipolarity and nuclear competition. One likely offshoot is the return of nuclear weapons, strategic posturing, and nuclear rhetoric to statecraft in a way reminiscent of the Cold War, with a concurrent likelihood of proliferation and possibly arms racing in both nuclear and strategic non-nuclear weaponry. Indeed, we have already seen the announcement of a suite of Russian strategic weapons systems ostensibly designed to overcome any future U.S. missile defense capability and a growing concern about the possibility of a rapid expansion of the Chinese long-range nuclear missile force for the same reason.

Such moves, of course, reflect the perceived deterrence requirements by adversaries to achieve “stability,” but also the expanding political aspirations of Russia and China—and, to a lesser extent, India—to (re)shape their immediate security contexts. Consequently, these moves also have implications for both strategic deterrence and perceived regional imbalances in conventional forces and by implication for U.S. extended deterrence frameworks. We can see this playing out most acutely through recent events in Ukraine, but also reflected by increased competition in Northeast Asia and by a rising India seeking to balance the competing interests of other major powers in the subcontinent. To some extent, this return of great power competition was recognized by the Trump administration, but it will be more complex than just nuclear threats and involve competition across a number of levels including strategic non-nuclear weapons.

The final piece of the nuclear puzzle is that the Third Nuclear Age is likely to be characterized by a fissure in the nuclear order between those broadly wedded to the existing “orthodox” mechanisms of arms control and nuclear disarmament, and those demanding a different and more radical approach. We can most conspicuously see this in the agreement of the Nuclear Ban Treaty in 2017, calling for the abolition of nuclear weapons. For a generation, global society has acquiesced to an “incremental approach” to nuclear disarmament centered on the Non-Proliferation Treaty and parallel advances in nuclear arms control and non-proliferation. But patience is wearing thin. While the Ban Treaty almost certainly won't force the United States or the eight other nuclear-armed states to disarm any time soon, it is nevertheless symbolic of the view held by many outside the elite nuclear club that a nuclear order based on the efficacy of nuclear weapons for deterrence, and one that has effectively been fashioned and led by the United States, may be unsustainable in the longer term. This, in turn, raises awkward political questions about the role of nuclear weapons in U.S. defense and deterrence posture, and might potentially further increase the interest in using advanced conventional capabilities for various deterrence missions instead.

The most likely outcome of the NPR and MDR documents is a certain amount of business as usual: a commitment to maintain a safe and secure nuclear force, continued development of homeland and theater missile defenses, and perhaps a pledge to work towards stability and arms control with major strategic competitors. There will also almost certainly be reference to “great power competition,” “new deterrence challenges,” and perhaps “novel technologies.” But the question is whether this will go far enough to meet the demands of a rapidly changing, and some would say deteriorating global nuclear order.

Ultimately, the Third Nuclear Age will be about more than nuclear threats and nuclear deterrence, it will also involve engaging with a growing range of strategic non-nuclear capabilities and missions (both in terms of threats posed to the United States and as capabilities for the United States to deploy); challenges to regional nuclear stability in the Euro-Atlantic, Asia-Pacific, and South Asia; and a broader push back against the U.S.-led system of global nuclear governance and non-proliferation. In the longer term, it is not inconceivable that the Third Nuclear Age may also represent a gradual shift away from the United States as the major player in global nuclear politics; a position it has occupied since 1945.

## 51. Ukraine Leads the World

Vladimir Putin's Ukraine invasion isn't going according to his script, and for that the world owes a great debt to the heroic people of that besieged country of 41 million. Their resistance against fearsome odds is an inspiration and has awakened the world to the menace of the Kremlin autocrat. Ukraine deserves more support to raise the costs of war for Mr. Putin with arms, the toughest sanctions, and global ostracism.

\*\*\*

Ukraine President Volodymyr Zelensky is proving to be the man for the moment as he rallies his country and the world to resist the invasion. "I need ammunition, not a ride," Mr. Zelensky said, in a line for the ages, in response to a U.S. offer to help him leave Kyiv to escape a possible assassination.

His leadership has put to shame the New York Times op-ed last week that ran under the headline, "The Comedian-Turned-President Is Seriously in Over His Head." His pleas on behalf of Europe's principles have helped to persuade European leaders that Ukraine's fight is also theirs.

The state of the battlefield is confusing as always in war, but the main news so far is the success of the Ukrainian resistance. Russia still doesn't appear to control a major city, and on Sunday Ukrainian forces repelled an attempt to take Kharkiv, the second-largest city. This operation was supposed to be a quick Russian march to Kyiv followed by a frightened surrender and the installation of a puppet government. Most Western analysts predicted the same.

They underestimated the tenacity of Ukrainians. The sight on TV and social media of Ukrainian civilians preparing to defend their cities is something to behold. Men with desk jobs are grabbing rifles, and teachers are making Molotov cocktails. This is a lesson in the price of freedom that ought to instruct Westerners offended by "microaggressions." Real aggression is a tank rolling down your street.

But Ukrainians shouldn't have to fight urban battles with bombs made in their kitchens, and Europe and the U.S. are finally sending the weapons to Ukrainians that should have been provided long ago. The U.S. is providing some \$350 million more in military aid, and the Biden Administration is asking Congress for another \$6.4 billion for humanitarian and military assistance. Congress should approve the request this week.

Even the Germans are stepping up, with Chancellor Olaf Scholz saying Berlin will provide 1,000 antitank weapons and 500 Stinger missiles. The Netherlands is chipping in 200 Stingers and 50 Panzerfaust 3 antitank weapons with 400 rockets. Sweden is sending antitank weapons, and many other countries are also contributing.

Former Ukraine Defense Minister Andriy Zagorodnyuk tells us there's an urgent need for bulletproof vests and helmets. The U.S. can also provide communications gear like tactical radios that will help small groups of Ukrainians carry out operations against Russian troops. As the war continues, the U.S. and NATO will need to develop means of supply from havens in Poland and other border nations. Air drops shouldn't be ruled out.

Europe, the U.S. and Japan are also strengthening sanctions in a meaningful way. The weekend decision to ban select Russian banks from the Swift financial clearinghouse is a positive step, though it looks like it will still exempt energy transactions. That is an unfortunate bow to the dependence of Western Europe on Russian natural gas. It will diminish the impact of the Swift sanction because energy exports are Mr. Putin's main financial lifeline.

Much of the world is also increasingly isolating Russia and Russians from travel and commerce. Sports leagues are refusing to compete in Russia, companies are refusing to do business, and Europe and Canada have closed off their airspace to Russian airlines. These may seem like symbolic gestures, but they send a message to the Russian people that their ruler is taking them down a blind alley.

\*\*\*

Despite the good news, Ukraine's position remains perilous. Russian forces are still besieging several cities, including Kyiv. Mr. Putin is ruthless, as he showed in a Chechnya campaign that reduced cities to rubble. He could do the same in Ukraine if he feels defeat would jeopardize his political control inside Russia.

On Sunday Mr. Putin put his nuclear forces on high alert in response to what he called threatening comments from NATO leaders. But no one is threatening Russia. It's tempting to dismiss this as more of Mr. Putin's intimidating talk, except the Russian's public statements have been erratic and extreme.

The threats shouldn't stop the growing support for Ukrainian resistance. The stakes of this war are very high, including for American interests. Mr. Putin is trying to restore Greater Russia and make himself the dominant European state and a global power. He wants a new world disorder.

If he succeeds in Ukraine, breaking NATO will be his next ambition. The people of Ukraine are showing a too complacent West what it means to fight for freedom.

## **52. We must stand with Ukrainians**

Washington Post, Feb. 28, Pg. A22 | Editorial

Five Days after Vladimir Putin launched his war on Ukraine, it is apparent that things are not going the overconfident Russian president's way. Russia has so far failed to take any of Ukraine's major cities, disable its military communications or decapitate the government. The Russian Ministry of Defense's own extended battle report on Sunday admitted for the first time to Russian dead and wounded - but claimed no major victories. In video of a meeting with Mr. Putin, Russia's top two military chiefs looked stricken as he ordered them to place his nation's nuclear forces into a "special mode of combat duty."

The main reasons for this situation - ones that offer signs of hope and yet are fraught with danger - are the resistance of Ukraine's army, bolstered by civilian volunteers, and by the inspirational leadership of President Volodymyr Zelensky. Yet Mr. Putin must also be perplexed by the unified support for Ukraine from the United States, the European Union, Japan, Australia and more. Democracies which waffled over tough sanctions and military aid only a couple days ago announced them Saturday and Sunday with defiant certitude: expulsion of Russian banks from the SWIFT payments system and blockage of Russian central bank reserves; lethal weapons shipments to Ukraine; ouster of Russian airlines from European airspace. BP will disinvest from Russia's state oil company; the E.U. will bar Russian propaganda's TV outlets.

In a dramatic speech to Germany's parliament, Chancellor Olaf Scholz announced that Germany will not only arm Ukraine's forces, but rearm its own, committing to spend more than the NATO minimum of 2 percent of its economic output on defense. Mr. Scholz urged a shift from Russian energy supplies to other sources. These are extraordinary changes in Germany's postwar foreign and security posture, but Mr. Scholz - correctly and courageously - said Mr. Putin's war is "a turning point in history" to which Germany must swiftly adapt. The applause that greeted Mr. Scholz's words was the sound of a mature democracy, Europe's richest and largest, dealing a strategic defeat to the Kremlin's decades-long effort at co-opting it.

Mr. Putin interprets the West's firm response as evidence of hostility to Russia, not proof that he made a bad bet on democratic decline and disarray. Issuing his nuclear order, he cited the West's "aggressive statements." The practical effect of this alert remains unclear; the Biden administration rightly both condemned it and expressed confidence in the United States' deterrent capability. However, the blunting of Russia's initial military thrust might increase Mr. Putin's desperation and prompt him to try to break Ukraine's will through increased and even less discriminate shelling, rocket and missile fire.

The next step for the United States is for Congress to move quickly on a bipartisan aid plan when it returns this week. The White House is requesting \$6 billion, though independent estimates suggest Ukraine's military and humanitarian needs call for around \$10 billion. As they deliberate, lawmakers should consider these data from a new Washington Post-ABC News poll: Sixty-seven percent of American adults favor sanctions against Russia. More than half of adults said they would support sanctions even if it meant higher energy prices. Between the resistance of the Ukrainians and the unity of the West, Mr. Putin appears baffled. Congress should add to his troubles.

[RETURN TO TOP](#)

### **53. Taking NATO's Article V Seriously**

Wall Street Journal, Feb. 26, Pg. A16 | Editorial

Vladimir Putin's likely conquest of Ukraine raises an uncomfortable question: Could Russia next attack a member of NATO? The alliance had better prepare for the possibility because the Russian dictator has all but promised to test it.

"The United States will defend every inch of NATO territory with the full force of American power," President Biden said Thursday. "There is no doubt -- no doubt that the United States and every NATO ally will meet our Article V commitments, which says that an attack on one is an attack on all."

It's good Mr. Biden made that clear about the NATO pledge to defend any member under attack. But the U.S. and Europe also warned Mr. Putin about invading Ukraine, yet they did little to deter him and still haven't delivered the "massive consequences" they promised if he did invade. Mr. Putin might consider Mr. Biden's words Thursday as a challenge to break NATO, especially if he suffers little for his Ukraine slaughter.

NATO nations held a virtual summit on Friday and decided to activate its response force for the first time. Secretary General Jens Stoltenberg said that "thousands of troops" would be deployed to reassure frontline states, including troops from France, Germany and the U.S. More than 100 planes and 120 ships have also already been deployed.

Yet if Russian forces moved today on the Baltic states or even Poland, it's unclear whether NATO could repel them. The U.S. has ordered more than 12,000 troops to Europe this month, bringing the total to nearly 100,000. But American deployments are spread around the Continent. While NATO has a rotational forward presence in the Baltic states and Poland, most forces are far from the eastern front.

More forward deployments, with permanent troops and munitions, are essential. The small Baltic states near Russia are the most likely Putin target given their strategic position, ethnic Russian minorities and smaller military forces. There's also the risk of hybrid attacks to undermine the democratic governments in Lithuania, Latvia or Estonia.

The West will have to prepare for the worst, especially given Mr. Putin's remarks that he doesn't want NATO forces in any frontline states on Russia's periphery. Non-NATO nations Finland and Sweden took part in Friday's NATO summit, and Russia's foreign ministry warned the countries would "face some military and political consequences" if they pursued membership. Those threats are all the more reason for them to join the alliance.

Mr. Putin staged a cyberattack against Estonia in 2007, with almost no repercussions. What kind of Russian attack would trigger an Article V intervention? Mr. Putin understands that if he did attack a NATO member and the alliance failed to respond, NATO is effectively dead. Western leaders have to expect that he'll conclude the reward is worth the risk.

The Ukraine invasion has triggered revisionists to say NATO should never have expanded after the collapse of the Soviet Union. But the best argument for expansion was that the alliance would be useful someday if Russia threw up a modern Napoleon Bonaparte bent on rebuilding the empire. Someone like Vladimir Putin. Does anyone think that Mr. Putin wouldn't have already moved on the Baltics if they weren't members of NATO?

The alliance will survive this new threat only if its nations take their obligations seriously. Angela Merkel, the former German Chancellor, on Friday condemned Russia's invasion of Ukraine "in the strongest terms" and called it "a profound turning point in European history." Now she tells us. No one did more than Mrs. Merkel to make Europe and NATO vulnerable to Russia with her energy policies and failure to spend more on defense.

European members in particular will have to rearm, and start immediately. Once Mr. Putin sets up his puppet state in Ukraine, and moves his forces to NATO's borders, the Russian will look for the right moment to expose it as an alliance in name only. He'll succeed unless NATO learns the lesson of Ukraine.

## **STATE-RUN MEDIA**

### **54. Putin orders "special duty regime" in Russia's deterrence forces**

TASS (Russia), Feb. 27 | Not Attributed

In response to aggressive statements in the West Russian President Vladimir Putin has issued orders to introduce what he described as a "special duty regime" in Russia's deterrence forces.

"Top officials in NATO's leading countries have been making aggressive statements against our country. For this reason, I give orders to the defense minister and chief of the General Staff to introduce a special combat duty regime in the Russian army's deterrence forces," Putin said at a meeting with Defense Minister Sergey Shoigu and Chief of the General Staff Valery Gerasimov in the Kremlin on Sunday.

Putin stressed that the Western countries were also taking unfriendly actions against Russia in the economic sphere.

"I am referring to the illegitimate sanctions, which are very well-known to everybody," he added.

The meeting took place against a backdrop of Russia's special military operation in Ukraine, which Moscow began in response to a request for assistance from the leaders of the Donbass republics.

#### *Strategic deterrence forces*

The strategic deterrence forces' task is to deter aggression against Russia and its allies, and also to defeat an aggressor in a war by using various types of weapons, including nuclear ones. The deterrence forces incorporate the Strategic Offensive Force (SOF) and Strategic Defensive Force (SDF). The strategic nuclear potential constitutes the backbone of the SOF, armed with intercontinental missiles and aircraft, including high accuracy long-range weapons. The strategic nuclear potential includes the Strategic Missile Force. The SOF also includes the strategic conventional dual-purpose force - strategic and long-range bombers and also submarines, surface ships and naval missile-carrying naval aircraft carrying high-accuracy long-range weapons.

The SDF's key components are combat-ready forces and means of the aerospace defense, such as the missile attack warning system, the system for monitoring outer space and the missile defense, space defense and air defense.

### **55. Sanctions may interrupt dialogue on strategic stability, Medvedev says**

TASS (Russia), Feb. 26 | Not Attributed

Deputy Chairman of the Russian Security Council Dmitry Medvedev noted that sanctions may serve as an excuse to interrupt dialogue on strategic stability and to exit the Treaty on Measures for the Further Reduction and Limitation of Strategic Offensive Arms (the New START Treaty).

"There is also good news. The sanctions may become a wonderful excuse to finally review all ties with those states that introduced them," he wrote on his official VKontakte page.

"Among other things, in order to interrupt dialogue on strategic stability. Actually, it is possible to renounce anything, including the New Start Treaty that I concluded with [Barack] Obama and V. V. Putin extended with the current US leader," Medvedev added.

Russia and the US signed the New START Treaty in 2010. On February 3, 2021, the Russian foreign ministry and the US embassy exchanged notes on the completion of domestic procedures to enforce the New START five-year extension agreement.

Russian President Vladimir Putin said in a televised address on Thursday morning that in response to a request by the heads of the Donbass republics he had made a decision to carry out a special military operation in order to protect people "who have been suffering from abuse and genocide by the Kiev regime for eight years." The Russian leader stressed that Moscow had no plans of occupying Ukrainian territories.

Russia's Defense Ministry reported later on Thursday that Russian troops were not delivering strikes against Ukrainian cities. It emphasized that Ukrainian military infrastructure was being destroyed by precision weapons.

A number of countries announced severe sanctions against Russia. The EU introduced financial and technological sectoral restrictions against Russia's 64 key structures, including the presidential administration, the Defense Ministry, the Foreign Intelligence Service and other state organizations as well as companies in military-industrial, energy, aircraft industry and financial spheres. The countries also blacklisted political leaders, including Russian President Vladimir Putin, Foreign Minister Sergey Lavrov and others.

[RETURN TO TOP](#)

#### **56. It would be US 'golden dream' to have nuclear weapons in Ukraine – diplomat**

TASS (Russia), Feb. 27 | Not Attributed

Russian Foreign Ministry Spokeswoman Maria Zakharova said the emergence of nuclear weapons in Ukraine would be a "golden dream" for Washington.

"The US deployed its nuclear weapons on the territory of European countries. It's not France and the UK that have their own nuclear weapons. This is Italy and many other countries that possess the US nuclear weapons but they do not have access to them. The US controls them there. It was a golden dream that it would appear in Ukraine," she said in an interview with Vladimir Solovyov on the Rossiya-1 television channel.

According to Zakharova, this "unbridled and absolutely uncontrolled conduct of the Anglo-Saxon pseudo gurus" will cover not only Russia, but also everyone who will somehow "get in their way". "They didn't believe us then. That was ten years ago. China is now facing this on all fronts," Zakharova concluded.

#### **57. Kiev Aims to Create Ballistic Missiles Able of Reaching Urals – Rogozin**

Sputnik News (Russia), Feb. 26 | Not Attributed

MOSCOW -- Kiev wants to create ballistic missile systems that have the ability to strike far into the Russian territory and Ukraine has the potential for this, Dmitry Rogozin, head of the Roscosmos state corporation Roscosmos state corporation, said on Saturday.

"They [Ukraine] have legendary factories in Dnepropetrovsk, Yuzhnoye Design Bureau and Yuzhmashzavod. There is enormous potential there. Now their goal is to create own ballistic systems, which will have a real ability to strike our territory," Rogozin told the Soloviev Live YouTube show.

He noted that increasing the range of the Grom complex already operating in Ukraine will not be a problem for any team of engineers.

"This is a real threat to Russia right up to the Urals," he said.

[RETURN TO TOP](#)

#### **58. Russia doesn't want Ukraine to develop 'dirty bomb' – Russian envoy to UN**

Interfax (Russia), Feb. 26 | Not Attributed

MOSCOW -- The Russian and Ukrainian military have agreed to jointly ensure security of the Chernobyl Nuclear Power Plant, while Russia does not want Ukraine to develop a "dirty bomb," Russian Permanent Representative to the United Nations Vasily Nebenzya said.

"An agreement has been reached with servicemen of Ukraine's separate security battalion of the nuclear power plant to jointly ensure the security of the power units and the confinement facility of the Chernobyl Nuclear Power Plant," Nebenzya said at a UN Security Council meeting on Ukraine.

"We do not want Ukraine to develop a 'dirty bomb,'" the Russian ambassador said.

[RETURN TO TOP](#)

#### **59. Kiev regime's leaders to be inevitably punished – Russian Defense Ministry**

*The civilian population is not at risk, the Defense Ministry said*

TASS (Russia), Feb. 27 | Not Attributed

MOSCOW -- The Kiev regime's ringleaders and their minions will be tracked down and inevitably and properly punished, Russian Defense Ministry spokesman Igor Konashenkov told a news briefing on Sunday.

"All faces, voices, telephones, whereabouts, IP-addresses and messages among all Ukrainian Nazis, who are responsible for humiliation and torture of our comrades are being identified and put on record. The same concerns the ringleaders of the Kiev regime and their minions, who call for torture of Russian soldiers in violation of the prisoners-of-war treatment convention. All of you will be tracked down and inevitably and properly punished," he said.

Russian President Vladimir Putin on February 24 said in an early morning televised address he had launched a special military operation in Ukraine in response to a request for help from the leaders of the Donbass republics. He stressed that Moscow had no plans for an occupation of Ukrainian territories. The sole purpose is the country's demilitarization and denazification. The Russian Defense Ministry has said that its forces are not attacking cities, key military infrastructures being its main targets. The civilian population is not at risk, the Defense Ministry said.

[RETURN TO TOP](#)

#### **60. Kremlin Spokesman Refers Question on Special Channel With US to Defense Ministry**

Sputnik News (Russia), Feb. 28 | Not Attributed

MOSCOW -- Kremlin spokesman Dmitry Peskov redirected the question on a possible special communication channel between the Russian military and the Pentagon to the Ministry of Defense.

Politico has reported, citing sources, that the Pentagon wants to establish a channel, like the one that was set up in Syria in 2015, to communicate with Russia on the situation in Ukraine.

"Such a channel did function quite well during the operation in Syria when our soldiers were carrying out their combat duty not far from one another. It was efficient. As for the details, I do not have them and I suggest asking this question at the defense ministry," Peskov told reporters.

## **61. Belarus will agree to host nuclear arms, if Poland or Lithuania do so – Lukashenko**

TASS (Russia), Feb. 27 | Not Attributed

Minsk will address Russia with an invitation to deploy nuclear weapons in Belarus, if the United States deploys them in Poland and Lithuania, Belarusian President Alexander Lukashenko said on Sunday.

"I had a conversation with French President Emmanuel Macron yesterday. He starting asking questions about the referendum, but in the context of the deployment of nuclear weapons. I am acquainted with him, and I said: "Emmanuel, if it were necessary to deploy nuclear weapons, we would be able to do so under the current Constitution. There are no hindrances to us in this respect... If the United States, or France, which is a nuclear power too, moves nuclear weapons to Poland or to Lithuania close to our borders, I will be unable to do the same on my own. I do not have any such weapons. But I will tell President Vladimir Putin I would like to have back the nuclear weapons that I had agreed to give away without any preconditions," Lukashenko said after voting in a referendum on the revised Constitution.

He also remarked that plans for the protection of Belarus had been drafted and there was an understanding of what extra military hardware would be necessary in the near future.

"Putin and I will reach an agreement and we will redeploy extra weapons capable of inflicting a damage serious enough to cause the Poles and Lithuanians lose the wish to go to war with us," Lukashenko added.

[RETURN TO TOP](#)

## **62. US distorts China's neutral stance, 'uses Ukraine crisis to sow discord between China, Russia'**

Global Times (China), Feb. 26, Pg. 2 | Yang Sheng and Xu Yelu

The US has tried very hard to distort China's neutral stance of calling for dialogue on the Ukraine crisis, with the US State Department asking China to "pressure Russia" to respect the principle of national sovereignty and territorial integrity, and even accusing China of "using Russia to create a new world order."

China on Thursday said the US, a country which launched a series of wars and military interventions that trample on other countries' sovereignty, has no qualification to accuse others on the matter.

Chinese Foreign Ministry spokesperson Hua Chunying made the remarks at Thursday's routine press conference as she had received many questions on Russia's latest military operations and the China-Russia ties from the media due to the US continually raising odd questions to target China.

Chinese analysts said the US, by distorting China's neutral stance, is trying to make China look embarrassed, but Washington is the one that should be ashamed as it has done nothing to prevent conflict but only strained the situation, when others were trying to mediate the crisis.

On Wednesday, Ned Price, spokesperson of the US Department of State, claimed that every responsible country should pressure Russia, to "incentivize, to advocate for Vladimir Putin to back down, for the Russian Federation to deescalate [the crisis]," while accusing China of being inconsistent with words and deeds.

"When it comes to respect for state sovereignty and territorial integrity, I'm afraid the US is in no position to tell China off," Hua said, noting that just about 20 years ago, the Chinese embassy in the Federal Republic of Yugoslavia was hit by NATO bombing, which killed three Chinese journalists and injured many more. NATO still owes the Chinese people a debt of blood, she said.

"Even today, China still faces a realistic threat from the US, flanked by its several allies as they wantonly and grossly meddle in China's domestic affairs and undermine China's sovereignty and security on issues related to Xinjiang, Hong Kong and Taiwan. China remains the only permanent member of the UN Security Council that has yet to realize complete national reunification," Hua noted.

It is because of all these that China consistently and firmly upholds the purposes and principles of the UN Charter and basic norms governing international relations, firmly safeguards its sovereignty, security and territorial integrity, and firmly defends international equity and justice, Hua said,

If we look at the US, during its nearly 250 years of history, there were only 20 years when it was not conducting military operations overseas. The pretexts it used can be democracy or human rights or simply a test tube of laundry powder or even fake news, Hua said, noting such a country's understanding of respect for state sovereignty and territorial integrity is definitely different from China's.

Cui Heng, an assistant research fellow at the Center for Russian Studies of East China Normal University, told the Global Times on Thursday that the US has long been "trying to sow discord between China and Russia. This time the US just wants to use the crisis to embarrass China by making trouble between China and Russia. However, the principle was first damaged by the US."

The principle of respecting sovereignty and territorial integrity was established after World War II with the cost of tens of millions lives, Cui said. "But it seems the US has already forgotten it was the US that broke the principle first in the Kosovo War, the Iraq War and other wars. These made the principle exist in name only. The principle had already been damaged many times by the US."

The US is still trying to distort China's position of neutrality, and "Washington, as the creator of a bad precedent in breaking the principle, wants to blame China for the mistake the US itself has made," Cui said.

#### *New international order?*

Price also said that "you will have to ask the PRC (People's Republic of China) whether they have used their own considerable influence with the Russian Federation to that end. Of course, we've all read the 5,000-word joint communiqué, and we can glean our own conclusions from that."

"I don't believe Russia would be too pleased to hear that," Hua said. Russia is a permanent member of the UN Security Council and an independent major power. It is fully capable of formulating and implementing its diplomatic strategy independently based on its judgment and national interests, she said.

She also noted China has no interest in the friend-or-enemy dichotomous Cold War thinking and the patchwork of so-called allies and small cliques, and has no intention to follow such a path.

On the China-Russia joint statement signed earlier this year, "I suggest the US read it carefully," Hua said, as China and Russia strengthening strategic communication and coordination is firmly safeguarding the United Nations-driven international architecture and the international laws-based world order, which is exactly what a responsible act should look like.

Wang Yiwei, director of the institute of international affairs at the Renmin University of China, told the Global Times on Thursday, "The US does not only want to impose sanctions on Russia but also wants to drag China [into the crisis]. At the NATO summit to be held in Madrid in June, when NATO needs to formulate a strategic action plan in 2030, the US also wants to turn China into NATO's main enemy after Russia."

"The fact is that these European countries are not willing to make more enemies. They cannot even deal with Russia, how can they deal with China and Russia at the same time? But the US just wants Europe to obey and serve its big-power competition strategy, and this just proves that the US does not respect the opinions of its allies," Wang said.

For the China-Russia-US triangular relations, the sanctions that the West imposed on Russia are like "a test," said observers, because these sanctions could also happen to China in the future if the Chinese mainland is forced to solve the Taiwan question by non-peaceful means.

A Beijing-based expert who asked for anonymity said comparing the Ukraine crisis to the Taiwan question is not correct because Taiwan is not a country and the one-China principle is universally recognized by the international community. Even the US dares not abandon it openly. So even if China is forced to reunify Taiwan by force, China should not receive the same criticism that Russia has received now.

Lü Xiang, a research fellow at the Chinese Academy of Social Sciences, said China is way more connected with the world than Russia as China is the biggest and most energetic market and key supplier in many fields, and China-US trade ties are way more intertwined than US-Russia trade. So imposing sanctions on China in the future is unimaginable and extremely difficult for the US.

How the world order would change is a question, but one thing is for sure: That with the big headache in Europe, the US does not have any more resources to build its anti-China Indo-Pacific Strategy, said Chinese analysts.

[RETURN TO TOP](#)

### **63. Alert! Abe's remarks are unlocking Japan's militarism**

Global Times Online (China), Feb. 28 | Editorial

Former Japanese prime minister Shinzo Abe said on Sunday that Japan should consider a nuclear-weapons sharing agreement with the US in the wake of the crisis in Ukraine. He took some NATO member states as example, saying that NATO's nuclear sharing arrangement enables the US to keep its nuclear weapons in Europe under its custody. He claimed that "we should not put a taboo on discussions about the reality we face," in spite of Japan's participation in the Nuclear Non-Proliferation Treaty and the three principles of no producing, no possessing or not allowing nuclear arms on its territory. Despite the obscurity of his words, Abe's intention is clear: He wants to move toward the pursuit of nuclear weapons.

Abe's remarks are not just a whim. Such intention has been stirring for quite a long time among right-wing Japanese politicians. Abe himself, for example, said in May 2002, when he was serving as deputy chief cabinet secretary, that it was "not necessarily unconstitutional" for Japan to use small tactical nuclear weapons to defend itself. In 2014, when he was the then Japanese prime minister, Japan was caught in a serious scandal over 640 kilograms of plutonium that it "failed to report." Furthermore, Ichiro Ozawa, then leader of Japan's opposition Liberal Party, also claimed that Japan could make a large number of nuclear weapons "overnight" to curb China.

It is not only ironic, but also a huge real risk, that a group of people in the only country in the world that was bombed by atomic bombs would call for an invitation to the culprit to deploy nuclear weapons in their own territory. Japanese right-wing politicians are more fanatical about nuclear weapons than in any other country in the world, and today, they have evolved into a perverted psychology that borders on distortion. The shame of the defeated country and the desire for revenge, though always suppressed, have constantly lurked in their blood, eager to break free from the shackles.

What's even more alarming is the fact that Japan has some manufacturing capability for nuclear weapons. Japan is a highly industrialized country with one of the world's top large-scale computer systems and the ability to simulate nuclear tests. As previously reported in Japanese media, Japan holds 47 tons of plutonium at home and abroad, which, in terms of quantity alone, could produce about 6,000 nuclear bombs. Moreover, Japan has considerable capabilities in nuclear carrier development, not only in developing the solid-fuel rockets that could be used to carry a

warhead, but its F-15 and other warplanes can also carry nuclear bombs after modifications, which are all open secrets. When serving as US vice president, Joe Biden said in 2016 that "Japan has the capability to acquire nuclear weapons virtually overnight" and as a US nuclear expert once said, Japan was "little more than a screwdriver away from a nuclear weapon."

As soon as Japanese right-wing's madness is combined with its national capabilities, the consequences will be devastating. This would, to a large extent, mean a total change in the nature of Japan as a nation, a complete release of its military capabilities, and perhaps an escape of militarism from the cage that has trapped it for nearly 80 years. Then, the fear of nuclear terrorism would be emerging in East Asia. At that moment, the nuclear balance in Asia will be completely broken, and the geopolitical situation will face a major alteration. No Asia-Pacific country will be able to make itself better.

This is a major loophole in the world's nuclear non-proliferation regime and it has not been fixed because of Washington's connivance and even complaisance. The US is aware of the right-wing movement in Japan but it sees the country as the most important lever to counterbalance China in East Asia. As a result, using Japan to contain China is gradually becoming a priority for Washington. This has allowed Japanese right-wing politicians to see an opening and make the best of it to loosen the strategic strings that have tied them up for nearly 80 years, with nuclear capability likely to be their ultimate goal. At that point, Japan's nuclear warheads could be aimed at East Asian countries like China, the US or any other country.

Therefore, Abe's relevant statement must not be treated as "personal remarks" and let off easily. It should be something that everyone in the international community condemns and opposes whenever it comes to light. This is a major issue of right and wrong to maintain the international system and security pattern and it cannot be watered down in any way.

[RETURN TO TOP](#)

"Documentation was received from employees of Ukrainian biological laboratories on the urgent destruction of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases on Feb. 24."

DoD Comment: we cannot confirm whether or not Ukraine destroyed their own disease/pathogen collections, but if the order is true, it makes sense - given Russia's demonstrated irresponsible and dangerous behavior in Ukraine, specifically with regard to the Nuclear Power Plant at Zaporizhzhia. An intentional or accidental strike by Russia directed at Ukraine's laboratories could result in the release of disease samples, putting both Ukrainians and Russians at risk.

"The defence ministry said the work had been commissioned by the Pentagon's Defense Threat Reduction Agency and involved collecting strains of dangerous microorganisms and exporting them to the United States, as well as studying potential pathogens specific to a given region to use as biological weapons."

DoD Comment: Sadly, the Russians continue to try and justify their illegal invasion of Ukraine by falsely claiming the US is developing biological weapons in Ukraine. This is pure Russian disinformation. The DoD CTR program does NOT: collect strains of micro-organisms; export them to the United States, or develop biological weapons. Almost all countries have collections of disease samples and pathogens, including Russia and China, which they study for public health and disease diagnostic purposes. The DoD CTR program enables partner countries to conduct safe and peaceful public health and disease diagnostic efforts to identify disease burdens at the source - before they become pandemics. Russia was once a DoD CTR partner, and fully cooperated with the DoD CTR program, to ensure biosecurity and biosafety protocols were implemented in Russia. In 2014, Russia terminated this cooperative effort and have thus tried to turn a peaceful and cooperative effort into something falsely nefarious. Since 2005, the DoD CTR program has assisted the Ukrainian government in converting former Soviet biological weapons (BW) research facilities to support peaceful and safe biological detection and diagnostic capabilities and reduce the threats posed by dangerous pathogens, whether they are naturally-occurring, accidental, or intentional. Unlike other countries, the DoD CTR program works in a responsible and transparent way to ensure our foreign partners have the tools necessary to prevent a COVID-19 like pandemic.

### **Russian Allegations of BW Use in Ukraine**

#### ***Has the United States planned biological weapons attacks in the Donbas?***

- No. This is exactly the kind of disinformation operation we've seen repeatedly from the Russians. As we have noted, Russia for weeks has been trying to create a pre-text for their invasion of Ukraine, which is now underway Russian officials, Russian state media, and their proxies plant false stories through numerous vectors. Any one of these could be elevated as Russia flails to try to justify its premeditated, unprovoked, and unjustified attack on Ukraine.
- Russia is using statements from high-level officials as well as disinformation and propaganda outlets to intentionally spread outright falsehoods to attempt to create a pretext for military action.
- The United States assesses that Russia maintains an offensive biological weapons program and is in violation of its obligations to the Biological Weapons Convention. Russia inherited an offensive biological weapons program from the Soviet Union and has never fully acknowledged whether all items were destroyed or diverted for peaceful purposes.
- The United States completed disposal of its biological and toxin weapons before the December 1975 deadline and continues to submit extremely comprehensive and transparent Confidence Building Measure reports to the Biological Weapons Convention each year.

#### ***Russian Maj. Gen. Koranshenko claims that Russia uncovered a biological weapons program in Ukraine funded by the United States that was destroyed on February 24. Is this true?***

- This is Russian propaganda and total nonsense. This is not the first time or the first country Russia has invented this type of false claim against, and they have been debunked conclusively and repeatedly over many years.
- As we've said all along, Russia will invent false pretexts to justify their horrific actions in Ukraine.

#### ***Does Ukraine have military biological laboratories?***

- Russia's accusations about peaceful Ukrainian military biological laboratories and activities near Russia's borders are absolutely false. Ukraine is in full compliance with the Biological Weapons Convention (BWC).
- The Ukrainian Ministry of Defense runs ten biodefense laboratories throughout the country to counter biological threats throughout the country.
- Ukraine owns and operates their own laboratory infrastructure, with help from the United States, the World Health Organization, the European Union, and other countries and international organizations who provide biosafety and biosecurity training to detect and diagnose disease burdens endemic to the country of Ukraine.
- It is Russia, not Ukraine, that has an active biological weapons program and is in violation of the BWC.

***IF RAISED: Why does the Department of Defense fund laboratories in Ukraine?***

- DoD does not own or operate biological laboratories in Ukraine. Ukraine owns and operates their own labs and associated infrastructure. DoD's Cooperative Threat Reduction (CTR) program provides training and equipment for Ukrainian owned and operated biological facilities to reduce biological threats of all types to reduce the risk of disease out-breaks that may cause pandemics.
- CTR worked cooperatively and peacefully with the government of Ukraine to increase biosecurity and biosafety at many sites to ensure diseases do not pose a risk to the people of Ukraine or the region.
- Historically, the CTR program was a Congressionally-mandated program designed to secure and clean up the mess of legacy Soviet biological weapons programs. This included work in Russia. This peaceful work continues today and has evolved to ensure our foreign partners have the tools available to detect and diagnose disease burdens early on to prevent pandemics.
- These efforts also support broader public and veterinary health goals, such as monitoring the spread of COVID-19.

***IF RAISED: What did the United States do with the material from the former Soviet BW program?***

- At the request of many former Soviet Union countries, to include Ukraine and Russia, the United States eliminated or secured stockpiles of dangerous pathogens from the legacy Soviet biological weapons research and development enterprise.
- Russia accepted CTR support for many years. Their cooperation ended in 2014, and their disinformation campaigns against CTR started only after these projects ended.

***IF RAISED: Why do the laboratories in Ukraine contain samples of anthrax, plague, and other dangerous agents?***

- These and other pathogens are studied in veterinary and public health research laboratories around the world to improve early detection and diagnostic capabilities to contain and prevent outbreaks of diseases.
- These pathogens are readily found in the environment of Ukraine.
- DoD encourages Ukraine and all partners not to store any biological materials beyond what is required to perform diagnostics.

***IF RAISED: How much did the United States invest in these facilities in Ukraine?***

- The United States, through DoD's Cooperative Threat Reduction program, invested approximately \$200 million in Ukraine since 2005.

***IF RAISED: In Cases of Biological Weapons Use or Threat of Biological Weapons Use***

- The United States is aware of reports of alleged use of biological weapons and is seeking additional information.
- The use of any biological weapon is totally unacceptable. The United States is continuously reviewing and assessing this situation closely and will respond to circumstances, as appropriate.
- The United States has been clear through our words and our actions that we will seek to deter and prevent the development and use of biological weapons.

***IF RAISED: If Biological Weapons use is confirmed***

- The international community must speak with one voice in condemning the use of biological weapons. The United States is reviewing this matter and

will respond appropriately. The United States has a number of tools at our disposal, and we are reviewing our options.

## **BACKGROUND**

Russia has been engaging in a disinformation campaign alleging that Ukraine is planning on using biological weapons (BW) provided by the United States. There are concerns that Russia may make public accusations of BW use as a pretext to escalate military activity in Ukraine. In late December 2021 and early January 2022, Russian-controlled separatists and the Russian Defense Ministry claimed that Ukraine is planning to use botulinum toxin provided by the United States. Additionally, Russia continues to engage in a disinformation campaign against U.S. supported biological laboratories. On March 6, 2022, Russian Major General Konashenko claimed that Russia uncovered a biological weapons program in Ukraine funded by the United States that was destroyed on February 24, 2022 when Russia launched its invasion in Ukraine. The Department of Defense's Cooperative Threat Reduction (CTR) program has assisted the Ukrainian government since 2005 in converting former Soviet biological weapons (BW) research facilities to support peaceful and safe biological detection and diagnostic capabilities and reduce the threats posed by dangerous pathogens, whether they are naturally-occurring, accidental, or intentional. CTR has worked with 46 facilities in Ukraine.

All,

(U) Russia, China, and their proxies are all aggressively pushing a disinformation message that the DoD CTR program built U.S. offensive biological weapons labs in Ukraine and elsewhere, and Russia is using this false allegation as one of their justifications for their invasion of Ukraine.

(U) As you know, the CTR program does not build WMD programs. Rather we dismantle those programs and we help our partners build their capability to secure dangerous materials and to detect and interdict WMD trafficking and outbreaks of dangerous diseases.

(CUI) DTRA CT is monitoring the daily flow of Russian disinformation and we are working with DTRA SI-PA and DTRA OI's Information Operations Fusion Cell (IOFC) to provide factual information on CTR activities and to help dispel the disinformation.

(U) If you find yourself in a situation where you are asked to comment on CTR activities in Ukraine, you are welcome to direct those queries to PA and CT. If that is not an option in the situation, we offer the attached messaging products -- one from DoD and one from the State Department -- to help you respond or help inform your customers or partners.

(U) If you have five minutes, we also offer the video linked below, in which a State Department representative to a recent Biological Weapons Convention meeting made a good statement in response to the disinformation.

<https://www.dvidshub.net/video/828150/us-government-responds-false-allegations-targeted-dod-ctr-program>

(CUI) Please let us know if you have any questions. CT's lead for messaging and countering this disinformation is (b)(6)

Subject: [Non-DoD Source] Ukraine

Hi, (b)(6)

I am wondering if you could please provide any information you can right now on what CTR funds are being used for to assist Ukraine. In particular, are we sending over atropine?! (my question) Thanks, I realize a more robust accounting will have to wait for later. I would just like to add in the CTR/DTRA role into our summaries of security assistance if possible.

Thanks,

(b)(6)

ALCON,

I just spoke with CRS to obtain some clarity, as their inquiry below was admittedly informal/broad. They are refining their request to be more specific and will send it over to us ASAP. Leg Affairs will push their revised request back out as soon as we receive it.

Best,

Subject: RE: CRS RFI: Ukraine / CTR funds

Thanks (b)(6)

The question from CRS wasn't limited to BTRP. Do we have any other insight into the scope of the request - e.g. time frame or if this should be limited to Bio? Atropine doesn't really have any BTRP-related application; this is more associated with treatments against nerve agents and pesticide poisoning.

v/r,

+ BTRP

(b)(6) we can answer this pretty easy.

BTRP, please get rolling on this one. 21 March is the suspense. TMT tasker forthcoming.

Thanks (b)(6)

(b)(6)

We received the below RFI from the Congressional Research Service re: CTR funds in Ukraine. Will get this plugged into TMT later today, but wanted to make sure you could get chopping on it. She's flexible on response time, but I'll put in a suspense of 21 March.

Thanks (b)(6)

**Subject:** RE: Poisoning Article  
**Attachments:** smime.p7s

Thanks for sharing this (b)(6)

It underscores the fears that many have about whether Russia will employ larger scale CW or BW attacks on the Ukrainian population. I personally doubt they will do a large scale attack, but they'll take advantage of the war to do trial and test runs consisting of smaller scale assassination attempts, using novel pathogens or chemical agents.

And speaking of Bioweapons, as you all know Russia has gone to great lengths to spread misinformation about DTRA-funded CTR programs helping other countries improve biosecurity and biosafety at their laboratories. What you may not know is that they've been doing this for a long time (as far back as the fifties, though primarily in the last decade); Ukraine is just the latest iteration.

If you don't know much about biological weapons, I recommend reading [this article](#) for a primer. It's not long, and covers the history, current affairs, regulations, technical limitations, and identification. Ditto [this article](#), if you want to get smart on Chemical Weapons, especially vis-à-vis Russia.

And ironically, while Russia denies it and many debate whether it's true, the State Department last year changed their unclassified assessment of Russia's bioweapons capabilities, stating for the first time that "The United States assesses that the Russian Federation (Russia) maintains an offensive BW program and is in violation of its obligation under Articles I and II of the BWC." State Dept. Spokesman Ned Price reaffirmed this in a [March 9th press release](#) when addressing Russian claims about Ukrainian bioweapons.

The U.S. recently [sanctioned three entities](#) within Russia that are allegedly tied to this bioweapons program.

Don't count China out of this disinformation campaign either: in addition to hundreds of [unilateral accusations](#), China issued a [joint statement with Russia](#) late last year and [again](#) in February claiming the U.S. DoD maintains "... over 200 US biological laboratories are deployed outside its national territory, which function in opaque and non-transparent manner, ... caus[ing] serious concerns and questions among the international community over its compliance with the BWC." China continues this behavior, with [statements such as this](#) from their Ministry of Foreign Affairs Spokesman: "The US has 336 labs in 30 countries under its control, including 26 in Ukraine alone. It should give a full account of its biological military activities at home and abroad and subject itself to multilateral verification."

The frustrating part of all of this, purely from an international law and norms perspective, is that their activities on all fronts (I didn't even get into nuclear- that's a whole separate novel) are [undermining treaties on weapons of mass destruction](#).

In lighter biological security news, an Ebola-esque virus Crimean-Congo Hemorrhagic fever was detected in a traveler who just arrived in the U.K.. Luckily it was detected and they are isolated, and nobody has figured out how to weaponized CCHF just yet.

In not-so-light nuclear news, it appears that North Korea may be preparing to test another weapon...

Subject: [Non-DoD Source] Ukraine

Hi, (b)(6)

I am wondering if you could please provide any information you can right now on what CTR funds are being used for to assist Ukraine. In particular, are we sending over atropine?! (my question)

Thanks, I realize a more robust accounting will have to wait for later. I would just like to add in the CTR/DTRA role into our summaries of security assistance if possible.

Thanks,

Good afternoon,

I am covering down for (b)(6) while she's in class, and received this inquiry below. Thought is maybe DTRA has lines on this issue, but I don't have DTRA POCs and since this is a biological weapons discussion thought maybe you could assist?

Query: The Russian foreign ministry said today (and their defense ministry earlier this week) that Ukraine has been developing biological weapons at 30 different sites in a programme financed by the United States (specifically DoD). Want to make sure we send over DoD comment on it to our colleagues, I assume rejecting the assertion like before.

This is the main line from Foreign ministry spokesperson Maria Zakharova: "Documentation was received from employees of Ukrainian biological laboratories on the urgent destruction of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases on Feb. 24."

The defence ministry said the work had been commissioned by the Pentagon's Defense Threat Reduction Agency and involved collecting strains of dangerous microorganisms and exporting them to the United States, as well as studying potential pathogens specific to a given region to use as biological weapons.

Think you could help me with this?

Thank you.

in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact

we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(5)

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight. As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the

United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for

the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's

something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is

in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact

we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight. As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me. like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here. I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in

those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from

all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an

outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in

these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to

create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these

sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to

gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

t. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this

could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me. like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here. I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in

those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

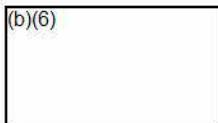

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from

all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an

outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in

these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to

create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these

sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? Subject: RE: INFO: Ukraine Current Events and CWMD Posture Hearing Prep

(b)(6)

et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this

could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing

from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically

the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons

that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the

material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should

give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've

talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

Subject: INFO: Ukraine Current Events and CWMD Posture Hearing Prep

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio

Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you

know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers

and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information

space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

(b)(6) et al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight. As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I

hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these

reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is

losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know. Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't

think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the IIASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6)

et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing

from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically

the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons

that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the

material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should

give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've

talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio

Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you

know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers

and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information

space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves. against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I

hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these

reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is

losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you, Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't

think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. Subject: RE: INFO: Ukraine Current Events and CWMD Posture Hearing Prep

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there

are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I

think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that

there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you, Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous

because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been

involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

Subject: INFO: Ukraine Current Events and CWMD Posture Hearing Prep

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6)

**Transcript: Wall Street Journal Engagement- Sharon Weinberger interviews Dr. Robert Pope**

**Q: There have been some outrageous allegations in recent days regarding the Ukraine Invasion. I thought it would be a good time to talk about the BTRP program in Ukraine, the history and where the program is now. Could you talk about the current state of work in Ukraine up until the state of the war?**

- A. We have worked with Ukraine in this mission area since 2005, fundamentally trying to make their public health network and vet health network of laboratories and epidemiology more successful at what they do. The work CTR was doing at the time, leading up to the invasion was all about that, we were continuing to help provide upgrades to various public and animal health laboratories so the scientists had the equipment and training and facility they needed to be able to do the same diseases diagnosis and reporting that any other country does.

**Q: What are the numbers of biological sites in Ukraine...the number that DTRA and the pentagon is doing work with?**

- A. You see a lot of different numbers because it depends on what you count. A lot of the work we've done are at the small diagnostic sites. Where all you have are samples coming in and safely packaged and transferred to the diagnostic labs. If you start counting things like that, the numbers get pretty big. If you don't count those, looking at my list here, 8 major disease diagnostic labs. We've done work at the regional level and pathogen collection at the diagnostic sites.

**Q: Can you describe what the ongoing work of DTRA is with these diagnostic sites, things you are working on with the Ukrainians and what the overall goal is?**

- A. The goal is like I said, the ability for Ukraine to have a public health laboratory network that meets international health regulations and standards set by the WHO to be able to detect outbreaks and dangerous diseases so the world can react and respond before we have a global pandemic. And we work similarly on the vet side because so many animal diseases (inaudible) like ebola or covid can jump from animal to human. Being able to work on both side of that one health spectrum gives that complete early detection and reporting that the whole world benefits from. We most recently were finishing up construction and renovation at the laboratories and continuing to training personnel and sponsor biosurveillance studies to better characterize the kinds of diseases that are endemic to Ukraine.

**Q: What was the status of the construction and renovation....where were these?**

- A: For the safety of the Ukrainians working in those labs, I don't want to say specifically which ones these are right now. Russian propaganda comes back to target them. Can we side step that one? (yes)

**Q: Is there an annual conference in Ukraine sponsored by DTRA/CTR for researchers?**

A: There are a number of conferences that CTR sponsors around the world, I don't remember which one we held most recently in Ukraine. Typically if we are sponsoring a conference, it's bringing researchers together who work in bio-surveillance studies to share what they have learned together. By bringing them together in that region, you are able to share the data and results across international boundaries. Diseases don't respect those boundaries and those technicians need to understand what's going on on the other side of the border as well.

**Q: How much of a concern do you have with the security of the lab in the state of the war?**

A. Generally we work with our partners like Ukraine to build these labs and train the people who work in them to to work in a very safe way. The samples they are collecting for this work stay safely in the lab don't infect the technicians or get out into the community. I would say when a conflict starts, electrical power isn't stable, buildings may be damaged, then the risk of accidental releases is present. Last week the Who made the statement that THEY had reached out to Ukraine and suggested they neutralize their pathogen strain collection and destroy everything so it won't accidentally leak out as part of this conflict.

**Q: Has that been done or is DTRA advising that?**

A: I can't say it has been done, I hope the government of Ukraine followed that recommendation.

**Q: Are DTRA personnel still in touch with counterparts in Ukraine?**

A: We are in touch with people who have a working relationship with DTRA. For example, we still have some personnel that work for us at the embassy and we check on them every day for safety, most days we are able to reach them. There are some contract support on the ground, we aren't talking directly to them but are talking to their contract heads and understanding their situation. We've got minimal contact with the gov of Ukraine due to bigger issues they are dealing with right now.

**Q: What do you make of the outrageous claims?**

A: They are absolutely that, they are outrageous claims. It's absolutely not what the CTR program does. We were created 30 years ago to eliminate WMD, and Russia knows that. We sanitized and dismantled their facilities at Stepnagorsk and Voz island to destroy weaponized anthrax and we destroy programs like that. Worked with them on a number of other programs with them directly up to 2014, destroying missiles, bombers, submarines, chemical weapons arsenals...They know what they do, we destroy WMD. If you look anywhere else in the world where we are active, you see the work we are doing for the health and safety of the people. I'm in Cameroon right now, one of the places I went today was the public health emergency operation center we built a couple years ago and commissioned just in time to use it for COVID. They have a single point to monitor what's now 6 outbreaks of COVID and a number of other diseases. This is the work we do in the world and Russia knows that, so the claims remain preposterous.

**Q: What milestones can you share from DTRA over the past 5 years?**

A: What we've done in the past 4 to 5 years has been an extension of what we started there since the beginning of 2005. We were able to work with ministries of health and agriculture, to take a decrepit and unsafe soviet system they inherited and make it meet world class international health standards for their laboratorians to safely do the work they do diagnosing disease in Ukraine. Every time we finished a lab that got them on that step, shut down an unsafe lab, those were considered milestones for us.

**Q: Why did this work take more than 15 years? Why can it not be done in 2-3 years?**

A: A few reasons...one is the physical speed of construction and renovation takes time. Putting a building on contract, going through the construction process and all the certifications required and transferring to the host nation for use can take 3-4 years for just that one project. As we work with any partner nation, we are looking at a baseline assessment of their health system, talking to them what are mutual goals are, U.S. goals, host nation goals, and as we work in that area, we train people, we have success in projects, we go off and find the next project in line that makes sense for both us and the partner to do together, so that's why you see it taking so long.

**Q: What is the annual expenditure of the work in Ukraine?**

A: don't have that.

**Q: In terms of the release of pathogens you worried about with the conflict in Ukraine, which ones worry you the most? Is anthrax a concern?**

A: There are a number of diseases that circulate in Ukraine, anthrax is one of them, African swine fever is another, these circulate in the country so as the field epidemiologists are collecting samples and sending up through the laboratory networks for diagnosis those are the kind of things that end of stored in the labs. Since they are Ukraine labs and not U.S. labs, I can't say specifically what pathogens are there but they will be collections of the diseases that are endemic to the country.

**Q: It must be bizarre for you knowing the work DTRA has done and seeing the claims...I mean how do you react?**

A: Sadly we've seen this in a slow simmer since Russia invaded Crimean peninsula in 2014 and ramping it up since then and only recently largely played in the local, regional press close to Russia. Since Russia ceased being a cooperative partner with the CTR program and started taking their aggressive actions in Ukraine, they have also decided to create this narrative and has recently exploded. I'm not happy at all.

**Q: It's surprising to me that it's had traction in each parts of the U.S. Has it made the U.S. rounds in media before?**

A: I haven't seen it in U.S. sites until recently, but recognizing that Russia comes from the soviet lineage of 70 years of honed expertise in propaganda and disinformation. They understand the psychology of their audiences they understand the kinds of outrageous claims that resonate. They have found a claim that activates some audiences here in the U.S. that believe bad things about their government.

**Q: Anything else you'd like to mention?**

A: Not at this time, Sharon, it sounds like you've talked to the right people that know our work well and you are building an accurate and positive picture of our work.

Subject: RE: INFO: Ukraine Current Events and CWMD Posture Hearing Prep

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you. Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight As you're all aware where Russia has been laying out this argument for the for a number of months now about how there

are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I

think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that

there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you, Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous

because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. I do want to ask you and particular director Burns because you have been

involved with Russia issues for a very long time.

So I think as much as anyone involved today in this issue, you've had an opportunity to watch Putin through the years I suppose, and does it this whole thing about we're gonna they're having negotiations or parent negotiations today in Turkey with the foreign ministers. It's my view that this is negotiation. So it's just another tool in his toolbox. What is your view of why he continues to agree to these talks and put these talks forward?

We know they're not resulting in anything. In fact, he's violating whatever they even nominally agreed to.

William Burns

But I mean, I think Senator years is a fair assumption that this these sometimes just use tactically as well. You know, I think the the core issue here is that President Putin does not have a sustainable endgame in Ukraine right now. So the question is, is he simply going to continue to double down and grind down Ukrainian military and the Ukrainian population or at some point, does he recognize that reality? That he doesn't have a sustainable end game?

All,

Thank you very much for taking the time to speak today. As mentioned, please find attached the transcript from U/S Nuland's SFRC testimony this week. Her answer to Sen Rubio's question on Ukraine having CBW has gotten a lot of media attention.

//

MARCO RUBIO: I only have a minute left. Let me ask you, does Ukraine have chemical or biological weapons?

VICTORIA NULAND: Ukraine has biological research facilities, which in fact we are now quite concerned Russian troops, Russian forces may be seeking to gain control of. So, we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces, should they approach.

MARCO RUBIO: I'm sure you're aware that the Russian propaganda groups are already putting out there all kinds of information about how they've uncovered a plot by the Ukrainians to release biological weapons in the country, and with NATO's coordination. If there is a biological or chemical weapon incident or -- or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

//

By COB I should be able to share NSC-cleared press points and fact sheet on DoD CTR Program biological threat reduction activities in Ukraine (the current hot topic for Russian and Chinese disinformation). I'll also look out for the transcript from Mr. Kirby's background briefing today.

Finally, confirming that the HASC EUCOM Posture Hearing will take place on 16 MAR. I will push the transcript out to the group as soon as it's available!

Sincerely,

(b)(6) et. al.,

I wanted to share the relevant CB exchanges during the Senate IC hearing from last week:

From Senate Intelligence Committee's Annual Threat Briefing on 03/10

Sen. Marco Rubio (R-Fla.)

Thank you all for being here. I'll direct this to you, Director Haines, but anybody who wants to answer it can do so as I think we've learned from from all this. The best way to combat this information is to transparency.

So I want to walk through some component pieces of a particular topic involving labs and Ukraine and then allow you to expand or anyone to expand that could provide greater insight. As you're all aware where Russia has been laying out this argument for the for a number of months now about how there are these labs in Ukraine that are developing chemical and biological weapons that the US is involved that they've discovered it. And they've been making that argument for a period of time and it's the argument they usually make before they use that kind of stuff themselves, against someone. So let me just start with a question the component pieces and then sort of allow you to expand more on on the important part of it.

There is a difference between a biological research facility and a biological weapons research facility. Correct?

Avril Haines

Correct.

Sen. Marco Rubio (R-Fla.)

Okay. Does Ukraine have any biological weapons research facilities?

Avril Haines

No, let me be clear, we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons which have been some of the basically the the propaganda that Russia is putting out.

Sen. Marco Rubio (R-Fla.)

Okay. So they do have the biological research facilities, what is our government's role in their biological research programs?

Avril Haines

So as I understand it, Ukraine operates about over a dozen essentially Bio Labs and what they are involved in is Ukraine's bio defense in their public health response, and that's essentially what they're intended to do. And I think that the US government provides assistance and or at least has in the past provide assistance, really, in the context of bio safety, which is something that we've done globally with a variety of different countries.

Sen. Marco Rubio (R-Fla.)

I guess that's the important component. Well, how do we define bio safety or bio defense? Is it the ability to have antidotes or responses if someone were to use an agent against you? Have you ever had an outbreak?

Well, what exactly is that?

Avril Haines

Yeah, I mean, I, I will quickly get out of my area of expertise, but I'll give you sort of a generic answer that I understand. So it is essentially for bio defense you and think about things like medical countermeasures, for example, things that that will help you to address a pandemic, that is an outbreak in your country, things along those lines, things that prevent spreading of pandemics and other health issues, things along those lines and the kinds of biosafety pieces that you would be providing assistance for things like making sure that as you're producing medical countermeasures, that you're taking appropriate precautions that you're letting the medical community international know notifying, when appropriate. So that's the kind of assistance but I again just, you know, want to be absolutely clear that we do not believe that Ukraine is pursuing biological or nuclear weapons that we've seen no evidence of that. And frankly, this influence campaign is completely consistent with long standing Russian efforts to accuse the United States of sponsoring bio weapons work in former Soviet Union.

So this is a classic move by the Russians.

Sen. Marco Rubio (R-Fla.)

So I think the one thing that's piqued a lot of people's interest, and I hope we can address is a secretary Assistant Secretary Nuland said a couple of days ago in response to my question and another hearing. This is a quote the US government is concerned about preventing any of these research materials from falling into the hands of Russian forces, should they approach and quote, so people will hear that and say, well, that means that there must be something in these labs, it's very dangerous, they possess pathogens or something that must be very dangerous. Look, we're all coming off the trauma of COVID-19 the possibility that there might have been an accident or a leak out of a lab there that that we still don't know the answer to. And so it's in that context that people read that statement or hear it and say, Okay, sounds to me, like they have labs.

These labs are working on dangerous things, and the Russian and we're worried that it's going to get out of the laboratory. How should people assess that statement? Why are we so concerned? And again, I mean, I'm, I know maybe I'm asking you some questions that regard, medicine and biology and research and so forth.

But it's really important for this effort to understand what exactly is in these labs that were so worried about them? getting their hands on?

Avril Haines

Sure. I mean, I think medical facilities that I've certainly been in even as a child, done research, you know, in high school type of thing in college, I all have equipment or, you know, sort of pathogens or other things, that you have to have restrictions around because you want to make sure that they're being treated and handled appropriately. And I think that's the kind of thing that probably, Victoria Nuland was describing and thinking about in the context of that we have to be, you know, concerned in the same way that we have to be concerned about, Enerhodar, the nuclear power plant or, you know, other facilities that when they're seized, and if they're seized, that there may be damaged on or theft, and they may in fact, misuse some of the material that's there. That's not intended for weapons purposes, but nevertheless can be used in dangerous ways or that can create challenges for the local populations.

Thanks.

Sen. Mark Warner (D-Va.)

Senator Rubio, thank you for raising this. I think we've seen some of these reports that this may be another area where Russia is trying to offer a false flag. Signal and really appreciate your your your line of questioning.

Later in the hearing

Sen. Susan Collins (R-Maine)

Thank you. Director Haines following up on the chairman's leadership here. Before I begin my questioning, I just want to personally thank you for working with the Chairman and me and other members of this Committee on the cybersecurity field. We very much valued and appreciated your support, which was critical.

Director Burns, you have always shown extraordinary insight into Putin's thinking. We all read about the Russian Defense Ministry publicly accused saying Ukraine of possibly planning a false flag chemical weapon attack. What do you make of that? Does that signal that Putin intends to launch a chemical or biological weapon attack on the Ukrainians?

William Burns

Well, thanks very much, Senator. I mean, I think it underscores the concern that all of us need to focus on those kinds of issues whether it's the potential for a use of chemical weapons either as a false flag operation or against Ukrainians. This is something as all of you know very well is very much a part of Russia's playbook. They've used those weapons against their own citizens.

They've at least encouraged the use in Syria and elsewhere. So it's something we take very seriously. And it's one of the reasons as as director Haines said earlier, that I am convinced that our efforts at selective declassification, to preempt those kinds of false flag efforts in the creation of false narratives have been so important. In all the years I spent as a career diplomat I saw too many instances in which we lost information wars with the Russians.

In this case, I think we have had a great deal of effect in disrupting their tactics and their calculations and demonstrating to the entire world that this is a premeditated and unprovoked aggression, built on a body of lies and false narratives. So this is one information where that I think Putin is losing.

Later in the hearing

Sen. Mark Warner (D-Va.)

I know we're going to close session but I think a couple members want at least ask one more question. I want to on my one point is simply reemphasize what Senator Rubio's line of questioning would be about things that are already floating in the internet, around the possibilities of bio tools being used, and I think Director Haines did most of this effort, but I do think in the public session, you know, Director Burns, if if you could address this and clearly there is a difference between bio research centers and bio weapons centers, anything you can do to help clarify some of the things that are already floating because I'm a fear I'm fearful that this could be the new direction of a Russian false flag operation.

William Burns

Or the first thing I'd say Senator is, you know, unlike Russia, which does have chemical and weapons and has used them and does do biological weapons research and has for years, Ukraine has neither and second as director Haines said, you know, in any public health system around the world, there's going to be, you know, worked in the interests of wider public health to you know, ensure that we have a grip on issues like that, but that's in no way threatening, you know, that's not something that can be weaponized in the way that the Russians have clearly demonstrated by their own actions against, you know, their citizens and people outside their country, their willingness to use, and when you couple that with their, you know, demonstrated willingness to create false flag operations and try to create the impression that somehow Ukrainians are responsible for this, that should give us all, you know, pretty serious reason for concern about their propaganda.

Sen. Mark Warner (D-Va.)

Thank you. Senator Rubio.

Sen. Marco Rubio (R-Fla.)

Just to follow up on kind of trying to put it in perspective so people are saying, you know, Secretary, new Assistant Secretary noon said there's these facilities there. And there's something in those facilities that's dangerous because we're afraid that Russians will get a hold of it. Now, I understand that there's a difference between a bio weapons facility and one that's doing research. A bio research facility is a totally different thing than a bio weapon facility.

Because you could have samples of a deadly or you no serious pathogen, but that doesn't mean you could weaponize it or that you're working on weaponizing it but people ask themselves, if there's these facilities there and there's a lot that play here, I mean, there was a lot we should and this is none of you but a long time ago, this should have been acknowledged like there are yes, there are these labs. This is what they do. Because a lot of these fact checkers just don't even mention labs because it's they don't even exist. They do they exist all over the world.

There's city there's labs like that right here. So the what I think got some people fired up is when she said we're worried that the Russians will get a hold of these facilities because that implies that there's something in those facilities that's very dangerous. So I don't know if you could shed some light on how it can how there can be things in the lab that are dangerous, but they not be weapons labs.

William Burns

Yeah, all I would all I would say, Senator, is that you know that the danger here it seems to me is the capacity the Russians have developed and that they've used in the past and they're, you know, interest in crying trying to create false narratives here as well. To the best of my knowledge, well, you have to be careful about you know, any of those substances you've you've talked about what you see in public health or research systems around the world for civilian purposes, why you have to be careful about that. That is in no way akin to the kind of threats that would be posed by you know, weapons research and development or weapons facilities.

Sen. Marco Rubio (R-Fla.)

Yeah, I just think that the answer is what picked a lot of people's and look they're they're latching on to it is my point. This is what the I think there's been such a good job done at defeating them in the information space, but this is one where they seem to have latched on. I don't I don't think anyone believes per se that there's some very serious attack or even a fake one that they've that that we're gonna they're gonna convince American public that the Ukrainians are behind it, but it's the confusion around it that I worry about debilitating the debate and allowing them to deflect it. **Question for the Record Submitted by  
U.S. Senate Committee on Foreign Relations  
March 1, 2022**

**Question 1:**

Does the U.S. have threat reduction sites (labs, etc.) in Ukraine? If so, what measures is the State Department taking to counter possible Russian disinformation about those sites?

**Answer 1:**

No, the United States does not own or operate any threat reduction sites within Ukraine. The Ukrainians own and operate their own laboratories and associated infrastructure. We have, however, supported Ukraine through our Cooperative Threat Reduction work. Specifically, the Department of Defense's Cooperative Threat Reduction Program, via its implementers within the Defense Threat Reduction Agency's Biological Threat Reduction Program (BTRP), has worked with 44 facilities in Ukraine to help elevate the ability of their domestic public health and research laboratories to prevent, detect, and mitigate the spread of infectious disease threats whether naturally occurring, accidental, or deliberate in origin. The work of such facilities is part of the normal efforts of any country to protect its citizens from the threat of infectious disease.

False Russian allegations about these activities are not new. To help counter ongoing Russian disinformation about them, the United States issued a working paper at the Biological Weapons Convention (BWC) Meeting of States Parties in November 2021 that reiterated our commitment to, and explained how BTRP's work is consistent with, Article X of the BWC "to facilitate ... the fullest possible exchange of equipment, materials, and scientific and technological information for the use of bacteriological (biological) agents and toxins for peaceful purposes." Additionally, the Department of State's Cooperative Threat Reduction Program has engaged numerous laboratory stakeholders in Ukraine to help them counter malign Russian influence and activities seeking to disrupt the operations, attack the credibility, and politicize the activities of these critical health facilities.

**Question for the Record Submitted by  
U.S. Senate Committee on Foreign Relations

- There is nothing secretive about DoD's capacity building efforts with foreign partners. BTRP's priorities in Ukraine are to help them consolidate and secure pathogens and to continue to ensure Ukraine can detect and report disease outbreaks before they pose security or stability threats.
- Proper disposition of samples during a war reflects responsible conduct on the part of the Ukrainians to protect the Ukrainian people and the international community from potential accidental exposure due irresponsible Russian actions.
  - After Russia launched its unlawful invasion of Ukraine, the Ukrainian Ministry of Health responsibly ordered the safe and secure disposal of pathogen collections. These actions limit the danger of an accidental release of pathogens should Russia's military attack laboratories, a real concern since they have attacked Ukraine's nuclear power plants and research facilities.
- On a daily basis, Russia propagates disinformation aimed at BTRP's laboratory and capacity building efforts in former Soviet Union countries—falsely claiming that the U.S. Department of Defense support is used to develop biological weapons. The DoD CTR Program is not in any way involved in the creation of weapons of mass destruction anywhere in the world, including in Ukraine.

Dr. Williams,

FYSA, our media monitors are seeing a substantial uptick in disinformation on DTRA CTR BTRP's projects in Ukraine -- from an average of 50 articles per day to over a thousand in the last 24 hours. Russia is blaming DTRA for a number of outbreaks in the region, as well as for crafting an offensive BW program in Ukraine.

We have also seen reporting from China's Foreign Ministry spokesman echoing Russian charges, which has received extensive coverage in both the Chinese and Russian news and social media circles.

State AVC has a press statement they plan to put out today that OSD provided us an opportunity to review. It hits the right points and draws from the "Break Glass" book DTRA provided to OSD PA and State last week.

We heard today from journalist Matt Field at the Bulletin of the Atomic Scientists. Working with DTRA PA, we answered some questions for him last Friday and he stated his intent to submit an article to his editor today. We will watch for it.

Finally, if you have four minutes, here's a briefing on DTRA's activities in Ukraine from the Russian Ministry of Defense, with English subtitles:  
[https://www.youtube.com/watch?v=3\\_q0qqqClK0](https://www.youtube.com/watch?v=3_q0qqqClK0)

## **Background Paper / Fact Sheet on DoD's Cooperative Threat Reduction Program (Biological Threat Reduction Program) - Ukraine**

Background: The Biological Threat Reduction Program (BTRP), part of the Department of Defense's Cooperative Threat Reduction (CTR) program, is implemented by the Defense Threat Reduction Agency (DTRA). Since 2005, the program assisted the Ukrainian government in converting former Soviet biological weapons (BW) research facilities to support peaceful and safe biological detection and diagnostic capabilities and reduce the threats posed by dangerous pathogens, whether they are naturally-occurring, accidental, or intentional.

### Key Facts:

- BTRP's priorities in Ukraine are to help them consolidate and secure pathogens and to continue to ensure Ukraine can detect and report disease outbreaks before they pose security or stability threats. All of BTRP's efforts are peaceful in nature and subject to rigorous export-control measures and vetting processes. BTRP sponsors no gain of function research or "human experimentation."
- Ukraine is a State Party to Biological and Toxin Weapons Convention (BWC). In accordance with an August 2005 CTR agreement, the DoD has been funding security upgrades at Ukrainian biological laboratories where collections of pathogens are kept.
- BTRP has supported 46 laboratories, facilities and diagnostic sites for the Ministry of Health and Ministry of Agriculture. BTRP has also provided the Ministry of Defense with 3 mobile diagnostic laboratories, with the goal of enhancing the system of disease surveillance and emergency preparedness in the Armed Forces of Ukraine. All of this assistance improved Ukraine's COVID-19 response.
- All of these are Ukrainian facilities owned and operated by the government of Ukraine, which aims to improve human and animal health capacity for the people of Ukraine.
- On a daily basis, Russia propagates, either directly through state-run media outlets or through the use of surrogates, disinformation aimed at BTRP's laboratory and capacity building efforts in former Soviet Union countries. The Lugar Center in Georgia and the Central Reference Laboratory in Kazakhstan are the primary targets, but more recent disinformation efforts have targeted laboratories in Ukraine. Through these disinformation campaigns, Russia falsely claims the United States, and specifically DTRA, is developing biological weapons in laboratories in these countries, as well as killing local populations with purposeful releases of biological agents.
- Russia illegally took possession of two Ukrainian-owned labs that BTRP upgraded in 2014 and continues to deny Ukrainian access to these facilities. To date, we are unaware of any attempts to use these facilities for disinformation purposes.
- BTRP is just one of many organizations providing equipment and training to these facilities. Other supporters include, among others, the European Union, World Health Organization, international universities and research institutions, as well as other U.S. interagency partners.
- Even though BTRP has had an active biological engagement with the government of Ukraine since 2005, there are many Ministry of Health and Ministry of Defense facilities that have not asked for, or received equipment or training from the United States.

**DRAFT MEDIA QUESTIONS AND ANSWERS****1. Why are there DoD labs in Ukraine?**

*DoD does not own or operate labs in Ukraine. All the facilities receiving BTRP assistance are Ukrainian owned and operated, and these facilities receive training and equipment from a large array of partners to include the European Union and its individual members, the World Health Organization, Food and Agriculture Organization, the World Organization for Animal Health, the US Department of State, US Department of Agriculture, the US Centers for Disease Control and Prevention, USAID, and the US Department of Defense. During the Soviet era, certain select laboratories in Ukraine held the most dangerous pathogens in various collection sites. These materials were held under antiquated and inadequate safety and security conditions. The fall of the Soviet Union only exacerbated these vulnerabilities and exposed significant proliferation threats. DoD's Cooperative Threat Reduction (CTR) program was created to reduce the threat of WMD material, including biological threats. CTR worked cooperatively and peacefully with the government of Ukraine to increase biosecurity and biosafety at these sites to ensure these dangerous pathogens did not pose a risk to the people of Ukraine or the region. This relationship with Ukraine continues today and Ukraine uses the laboratory improvements provided by the United States to support broader public and veterinary health goals, such as monitoring the spread of COVID-19, preparing for and controlling African Swine Fever, which helped Ukrainian farmers protect their herds from infectious diseases, and protecting the food supply in Ukraine - just to mention a few of the many benefits that accrued from this partnership.*

**2. How can you prove that you weren't doing offensive biological weapons work?**

*The United States is a States Party and depository for the 1972 Biological Weapons Convention and maintains scrupulous compliance with its obligations under that treaty. The United States does not develop biological weapons, and any assistance we provide to foreign partners has strict protocols, to include a rigorous vetting process, that ensures all activities are peaceful in nature. As the U.S. has pointed out many times, injecting maximum transparency into ALL BWC member state initiatives within the convention is paramount.*

**3. What did you do with the material from the former Soviet BW program?**

*At the request of many former Soviet Union countries, to include Ukraine, Kazakhstan, Georgia, Armenia, Uzbekistan, and Azerbaijan, the United States (through the Congressionally-funded and mandated Cooperation Threat Reduction program) eliminated or secured stockpiles of dangerous pathogens from the legacy Soviet biological weapons research and development enterprise. For example, in Uzbekistan, the United States eliminated nearly 12 tons of weaponized Anthrax from an island in the Aral Sea. This work was a cooperative effort with the government of Uzbekistan and demonstrates a true partnership in reducing the threat of dangerous pathogens – either from an intentional act or accidental release.*

**4. If these efforts in Ukraine are peaceful, why do these labs still contain samples of anthrax, plague, and other dangerous agents?**

*All of these pathogens are common in agricultural and natural settings and readily found in the environment of Ukraine. These and other pathogens are studied in veterinary and public health research labs around the world to improve early detection and diagnostic capabilities to contain*

*and prevent outbreaks of diseases – such as COVID-19. Ukraine's capability to understand endemic pathogens is an essential step of disease surveillance, as required by the WHO and other international health organizations. Furthermore, BTRP encourages Ukraine and all partners not to store any biological materials beyond what is required to perform diagnostics. Moreover, BTRP has provided to Ukraine molecular diagnostic equipment, supplies, and know-how to avoid the typical, Soviet-era style of diagnostics, which involves growing viruses and bacteria—a clear proliferation risk. By employing PCR and sequencing technologies, BTRP enables Ukraine to detect viruses and bacteria without propagating infectious diseases.*

**5. Is it true you performed human experimentation?**

*DoD's Cooperative Threat Reduction Program (BTRP) does not conduct any human experimentation - period. All BTRP projects are focused on enhancing peaceful foreign partner biosecurity, biosafety, and detection activities – to detect disease outbreaks and stop a pandemic before it happens. As an example, BTRP does fund disease investigations where Ukrainian partners collect clinical samples from humans and/or animals to conduct diagnostic testing and epidemiological analysis. BTRP insists that foreign partners, like Ukraine, establish internal review board processes guided by national regulatory frameworks before any diagnostic or epidemiological study is conducted—whether with human or animal samples.*

**6. Other than DoD, who else provides funding to these labs?**

*DoD's CTR Program does not provide US taxpayer funding directly to the laboratories. Furthermore, the laboratories in Ukraine are owned and operated by the host country. DoD provides equipment and training that is in compliance with BWC protocols and International Health Regulations. However, the DoD CTR program does competitively award grants to foreign partners for biosurveillance studies aimed at detecting and diagnosing disease outbreaks. At their request, we partner with them because they value our expertise and experience – especially in terms of our biosafety and biosecurity protocols. While we know that some governments receive funding, capacity, and training from the European Union and other academic, governmental, and commercial sponsors, you will have to ask the countries that own the laboratories to confirm other funding sources.*

**7. How do you know that these labs are not performing illegal activities without your knowledge?**

*Ukraine is a responsible steward and owns and operates these facilities. The facilities are much more open and transparent than during the Soviet era. Scientists are encouraged to publish their research results, partner with international colleagues, and widely distribute their research findings. They operate in a capacity similar to university labs on campuses around the world. Furthermore, all DoD provided equipment and training with foreign partners is subject to US export control processes, DoD audits, and US acquisition laws and regulations to ensure transparency and compliance with both US and International Health Regulations.*

**8. If nothing illegal is going on, why all of the secrecy?**

*There is nothing secretive about DoD's capacity building efforts with foreign partners. In fact, we urge you to view BTRP promotional videos to see how the United States is transparent with all its biological engagement activities. In sum, DoD's peaceful efforts are designed to prevent*

UNCLASSIFIED

*the proliferation of disease-causing pathogens, and prevent outbreaks of diseases that impact everyone. DoD's efforts with foreign partners are designed to be as transparent as possible, while at the same time protecting intellectual property and intellectual rights. DoD's efforts with foreign partners also comply with US acquisition rules and regulations, ensuring maximum competition with US and foreign contractors who perform the work on behalf of the government. The US government must preserve a competitive playing field to ensure US taxpayer dollars are being spent wisely. While this may appear to be secretive, the actual work performed is not and information is publicly available.*

*BTRP 101 (ENG) <https://www.youtube.com/watch?v=HEE4-WuJYRA>*

*BTRP 101 (UA) <https://www.youtube.com/watch?v=aZ9cCqChMLs>*

*Research Culture <https://www.youtube.com/watch?v=03tPlwJ9UTo>*

*International Outreach <https://www.youtube.com/watch?v=djA1bfB2c-Q>*

*Lugar Center: [https://www.youtube.com/watch?v=PkiUlv\\_WYnE](https://www.youtube.com/watch?v=PkiUlv_WYnE)*

**9. How much did the U.S. invest in these facilities in Ukraine?**

*The United States, through DoD's Cooperative Threat Reduction program, invested in approximately \$200 million in Ukraine since 2005. These activities have included building or renovating laboratories and providing laboratory equipment and training to help Ukraine's Ministry of Health and Ministry of Agriculture to conduct safer and more effective disease detection, to help Ukraine's Ministry of Defense to protect the health of the Ukrainian Armed forces, and help Ukraine conduct peer-reviewed biosurveillance studies to understand pathogens that are endemic in Ukraine and spot indicators of an outbreak.*

**DRAFT PRESS RELEASE – CTR ACTIVITIES AND BIOLOGICAL THREAT REDUCTION PARTNERSHIP WITH UKRAINE**

The Department of Defense's Cooperative Threat Reduction (CTR) Program is a Congressionally-founded and directed program created to rectify the WMD security gap left after the collapse of the Soviet Union. In Ukraine, CTR facilitated the removal of Ukraine's 1,800 nuclear warheads and helped return them to Russia. CTR also worked with the government of Ukraine to eliminate WMD delivery systems and infrastructure such as missiles and missile silos. CTR has worked with the government of Ukraine to identify legacy Soviet Biological Weapons (BW) sites and help eliminate and secure dangerous pathogens from that era. Over the years, this partnership expanded into helping Ukraine's government upgrade its public and animal health detection, diagnostic, safety, and security capacity. This investment in Ukrainian public health capability undoubtedly saved innumerable Ukrainian lives during the ongoing pandemic as a result of enhanced diagnostic and response to SARS COV-2. It also helped the Ukrainian government detect and respond to multiple outbreaks of African Swine Fever, a disease that is highly contagious and lethal to pigs and can cause severe economic disruption.

The United States has made a full and comprehensive declaration of our past biological weapons program, which ended in 1972. Our country is a State Party and depository of the 1972 Biological Weapons Convention and maintains scrupulous compliance with all of its provisions. The United States does not develop biological weapons, nor does the United States enable partner countries to do the same. The laboratory upgrades and training provided by the United States to Ukraine, and other partner countries, is a frequent target of Russian disinformation campaigns, making unscrupulous and baseless claims that the United States is developing biological weapons, and even worse, killing people in partner countries. These claims are outright lies, designed to drive a wedge between the successful biological threat reduction efforts of the United States and its partner countries.

The laboratories in Ukraine are owned and operated by the government of Ukraine. The Department of Defense, through the CTR program, continues to partner closely with Ukraine to improve public and veterinary health and safety.

M'am,

FYSA – During the President's press conference earlier this afternoon, he said that the US and NATO would respond "in-kind" if Russia uses CW. I spoke with someone on the NSC staff who heard the same thing. They are going to engage with the NSC press team and offered that they will forward along any TPs if they develop them (not sure if they will).

<https://www.cnbc.com/2022/03/24/biden-says-us-would-respond-to-russia-if-putin-uses-chemical-or-biological-weapons.html>.

Dr. Pope,  
I've locked in 1:30pm EST for the WSJ interview with (b)(6). She says that they've already interviewed James Tegnalia, Andrew Weber, Daniel Gerstein and Darrell Galloway. They are also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA for input. I now have the call in phone number and (b)(6) is setting up the group call so that the normal CTR "media team" (b)(6), etc) can listen in and get notes. Finally, for your awareness, the Strat team at NCB has been notified of the engagement.

Hi (b)(6)

1 pm or later is great; just let me know what time works for Dr. Pope.

So far, I've interviewed James Tegnalia, Andrew Weber, Daniel Gerstein and Darrell Galloway. One of our science reporters is also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA.

Please let me know if there's anything else you need from my side, and thanks for helping make this happen on short notice.

Best,

(b)(6)

Thank you for reaching out to me via LinkedIn yesterday. I spoke with Dr. Robert Pope, our expert here at DTRA and he will be happy to conduct an interview with you regarding the current situation in Ukraine, the false information that's circulating and the overall history of the Cooperative Threat Reduction program. He is traveling today, but has time to talk after 1pm EST. Dr. Pope is happy to contribute to the story and if you are still interested in an interview, we can make it happen.

I have a couple of quick questions for us on our end to prep is this by phone, Skype or Zoom? A phoner would be the best option due to his travel. Also, could you possibly let us know about the other interviewees for our awareness?

Looking forward to the discussion and I'm standing by to hear back from you. Thanks.

Good morning (b)(6)

Thank you for reaching out to me via LinkedIn yesterday. I spoke with Dr. Robert Pope, our expert here at DTRA and he will be happy to conduct an interview with you regarding the current situation in Ukraine, the false information that's circulating and the overall history of the Cooperative Threat Reduction program. He is traveling today, but has time to talk after 1pm EST. Dr. Pope is happy to contribute to the story and if you are still interested in an interview, we can make it happen.

I have a couple of quick questions for us on our end to prep is this by phone, Skype or Zoom? A phoner would be the best option due to his travel. Also, could you possibly let us know about the other interviewees for our awareness?

Looking forward to the discussion and I'm standing by to hear back from you. Thanks.

Dr. Pope,  
I've locked in 1:30pm EST for the WSJ interview with (b)(6). She says that they've already interviewed James Tegnalia, Andrew Weber, Daniel Gerstein and Darrell Galloway. They are also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA for input. I now have the call in phone number and Andi is setting up the group call so that the normal CTR "media team" (b)(6) etc) can listen in and get notes. Finally, for your awareness, the Strat team at NCB has been notified of the engagement.

1 pm or later is great; just let me know what time works for Dr. Pope.

So far, I've interviewed James Tegnelia, Andrew Weber, Daniel Gerstein and Darrell Galloway. One of our science reporters is also reaching out to some of the Ukrainians who have participated in the International Biothreat symposia sponsored by DTRA.

Please let me know if there's anything else you need from my side, and thanks for helping make this happen on short notice.

Best,

(b)(6)

For your awareness, this morning we are coordinating a media interview with a Wall Street Journal Editor, Sharon Weinberger. The WSJ is preparing an article on the history of the Biological Threat Reduction Program and they'd like an interview with Dr. Pope about weapons work in Ukraine. Dr. Pope has agreed to engage and we are working the interview details (time, length) as we speak.

(b)(6) reached out to me for the interview and says the WSJ has interviewed others for the story already.

I will provide a follow-up read out to you after the interview. Please let me know if you have any questions or concerns.

Thanks.

Dr. Williams and DTRA Leaders,  
Please find attached for your awareness the latest "OSD Public Affairs Guidance (PAG) on DOD Support to Allies and Partners in Europe." OSD PA has reiterated to the field PAOs that the attached PAG should be followed when engaging in all messaging activities.  
Of note, on page 14, in the Q&A section on BTRP, DTRA is referenced and a downloadable link to our fact sheet is included.  
The next DOD PA PAG is anticipated for next week and I will continue to provide all updates.

Subject: 21 MAR UPDATED PAG V21: Support to Ukraine

Greetings PA Leaders,

Please find attached updated guidance (21 March V21) based on latest events regarding Ukraine and announcements of security assistance in support to the interagency response to conditions in eastern Europe.

Updates/New in V21:

-security assistance package information announce March 12 and 16, with specifics

-updated number of troops in Europe (approx. 100,000)

-Q+A on omnibus, National Guard support, KC-46As, hypersonics, chemical/biological events

With regards to Russia/Ukraine, please continue to share questions and updates, as your coordination makes it possible for the Department to maintain the necessary tone and posture in this dynamic environment.

Thank you for your support.

# OSD PUBLIC AFFAIRS GUIDANCE: DOD SUPPORT TO ALLIES AND PARTNERS IN EUROPE

\*As of 1430 March 21, 2022

**Background:** Since late 2021, the White House and U.S. National Security Council have been focused on Russia's unprovoked and unjustified invasion of Ukraine. The U.S. Department of Defense (DoD) remains in support of the U.S. whole-of-government effort.

On Jan. 22, the Secretary of Defense approved a heightened state of readiness for a range of U.S. military forces in Europe and in the U.S. The Secretary placed a planned U.S. Force contribution to the NATO Response Force on heightened alert.

As announced on Feb. 2, approximately 1,700 service members of the 82nd Airborne Division and key enablers from Fort Bragg, North Carolina deployed to Poland, and approximately 300 service members of the 18th Airborne Corps deployed from Fort Bragg to Germany. All of these forces are separate and in addition to the 8,500 personnel in the United States on heightened alert posture that were announced Jan. 22.

On Feb. 11, at the direction of the President, Secretary Austin ordered to Poland the remaining 3,000 soldiers of the 82nd Airborne Infantry Brigade Combat Team. This second tranche of Airborne soldiers joined in Poland the first tranche of 1,700 soldiers and key enablers that Secretary Austin ordered there on Feb. 2.

On Feb. 12, Secretary Austin ordered the temporary repositioning of the 160 members of the Florida National Guard who had been deployed to Ukraine since late November. These troops, assigned to the 53rd Infantry Brigade Combat Team, were advising and mentoring Ukrainian forces as part of Joint Multinational Training Group-Ukraine. They are repositioned elsewhere in Europe.

On Feb. 17, Secretary Austin, in conjunction with the government of Bulgaria, announced a U.S. Army Stryker troop of approximately 125 soldiers would take part in a training mission in Bulgaria. On Feb. 18, U.S. Army Europe-Africa, in conjunction with the government of Hungary, announced a U.S. Army Stryker troop of approximately 125 soldiers would take part in a training mission in Hungary.

On Feb. 22, Secretary Austin ordered the additional movement of U.S. forces currently stationed in Europe to continue our support for NATO Allies and the defense of the eastern flank. These forces -- comprised of aviation elements and ground forces -- will move within the EUCOM AOR to NATO's northeastern and southeastern flanks. These force movements comprise:

- An infantry battalion task force of approximately 800 personnel, from Italy to the Baltic region

- Movement of up to eight F-35 Strike Fighters, from Germany to several operating locations along NATO's eastern flank
- A battalion of attack aviation – 20 AH-64 helicopters – from Germany to the Baltic region
- An attack aviation task force – 12 AH-64 helicopters – will move from Greece to Poland.

On Feb. 24, Russia invaded Ukraine. Secretary Austin ordered the deployment from the United States of an additional approximately 7,000 U.S. military personnel to locations across Europe. These forces will augment existing U.S. forces in the European theater, which are trained and equipped for a variety of missions to reinforce U.S. European Command posture on NATO's eastern flank. These forces are comprised of the 1st Armored Brigade Combat Team (ABCT) and key enablers.

On Feb. 25, following the NATO Heads of State and Government approval of defense plans, NATO Supreme Allied Commander Europe, Gen. Wolters released a statement on the activation of the NATO Response Force (NRF). This activation serves as a warning order for the Allies who contribute to the NRF.

Also on Feb. 25, the President authorized an additional \$350 million of military assistance from Department of Defense inventories, including anti-armor, small arms and various munitions, body armor, and related equipment in support of Ukraine's front-line defenders facing down Russia's unprovoked attack. This brings the total security assistance we've approved for Ukraine to \$1 billion over the past year.

On March 5, Secretary Austin ordered the deployment from the United States of an additional approximately 500 U.S. military personnel to locations across Europe. These forces will augment and provide additional support to existing U.S. forces in the European theater, which are trained and equipped for a variety of missions to reinforce U.S. European Command posture on NATO's Eastern Flank. These forces are comprised of:

- KC-135 refueling aircraft with approximately 150 personnel, which will deploy to Spangdahlem, Germany.
- An Air Support Operations Center (ASOC) with approximately 40 personnel to deploy to Poland and Romania.
- An Ordnance Company and a Maintenance Company with approximately 300 personnel to Germany, to provide additional logistics support to the 1st Armored Brigade Combat Team, 3rd Infantry Division already deployed there.

With these additional deployments, the United States will have approximately 100,000 military personnel either permanently stationed or deployed to Europe and its waters. This represents our longstanding commitment to European security. We will continue to work closely with our European Allies on these deployments, and we appreciate their support.

On March 12, President Biden approved an additional \$200 million security assistance package for immediate support to Ukraine's defense. This package will include additional capabilities to address airborne and armored threats to Ukraine and its people, which the Department of Defense will continue to deliver on an expeditious timeline.

On March 16, President Biden announced an additional \$800 million in security assistance to Ukraine, bringing the total U.S. security assistance committed to Ukraine to \$1 billion in just the past week, and a total of \$2 billion since the start of the Biden Administration. The assistance

will take the form of direct transfers of equipment from the Department of Defense to the Ukrainian military to help them defend their country against Russia's unprovoked and unjustified invasion.

**Public Affairs Posture:** Active limited, as specified below. OSD(PA) retains release authority for announcements of DoD support activities and force posture changes related to this subject.

Components directly supporting announced activities are authorized to amplify DoD messages included in this PAG. Components should collect imagery of these activities and submit imagery for release approval to OSD(PA); photo release procedure appears below. Components must coordinate with OSD(PA) regarding media access to deployment departures, and with U.S. European Command Public Affairs regarding deployment arrivals and mission activities. Embeds remain paused; components should direct interested media outlets to OSD(PA).

Components on PTDO in support of potential future requirements are authorized to confirm their affiliation after OSD announces units, as Joint Staff sourcing deliberations are pre-decisional. Components may provide information about units and capabilities, but should not speculate about timelines, locations, and missions.

Components not directly supporting announced activities are not authorized to amplify DoD messages, to maintain overall White House lead of ongoing Interagency actions.

All components with pre-planned activities (i.e. exercises) in the USEUCOM theater will coordinate with USEUCOM PA on PA posture prior to execution, to accommodate emerging developments and avoid provocation. All components with pre-planned activities related to USEUCOM interests but scheduled to occur in other geographic theaters will coordinate with OSD(PA) on PA posture prior to execution.

#### *Imagery Release Procedure*

DoD components directly participating in the effort to reassure Allies and support Ukraine are encouraged to capture still and video imagery of activities. OSD(PA) retains release authority for imagery.

- Components send assets to OSD for review. For images, send either DoD Safe files or documents showing the images/captions. For video, continue to send via DoD safe. Send all material to [osd.pentagon.pa.mbx.digital-media-mailbox@mail.mil](mailto:osd.pentagon.pa.mbx.digital-media-mailbox@mail.mil). To reduce volume of submission, please send the component's best selections, not several versions of the same image.
- OSD(PA) will contact the sender with approval or disapproval, and comments.
- Once OSD approves, components are to upload approved imagery and video to a central DVIDS folder. Please use the tag "europeansupport2022" in addition to any other tags you would normally use.

#### **Communication Objectives:**

- Provide factual baseline of DoD activities in support of U.S. approach

- Reinforce commitment to the NATO Alliance and European security
- Reduce risk that Russia misinterprets U.S. force activities as escalatory or provocative

### **Topline Messages:**

- The Department of Defense is in support of a whole-of-government approach to Russian aggressive actions toward Ukraine.
- The United States continues to uphold the principles of democracy, territorial integrity, sovereignty, and respect for the international rules-based order. Russia's unprovoked and unjustified invasion is in direct contrast to these principles.
- The United States continues to reaffirm its unwavering support for Ukraine's sovereignty and territorial integrity.
- In light of Russia's invasion of Ukraine, the United States is taking prudent steps to heighten the readiness of its forces at home and abroad so they are prepared to respond to a range of contingencies. As the forces we have in theater grow in number, it's prudent that we provide the necessary logistics and enablers to support them.
- The United States maintains significant numbers of combat-capable forces in Europe. They exist to deter aggression and if deterrence fails, stand shoulder to shoulder with our Allies against that aggression.

### **Talking Points:**

#### **Invasion / Russian Actions:**

- Russia chose to launch a premeditated war of choice that is bringing catastrophic loss of life and human suffering.
- Russia alone is responsible for the death and destruction this war brings, and the United States and its Allies and partners will hold Russia accountable.

#### **NATO Response Force:**

- As a member of the Alliance, the United States makes a commitment to provide forces to the NATO Response Force in the event that NATO activates that construct.
- The NATO Response Force is a multinational force made up of land, air, maritime, and Special Operations Forces components that the Alliance can deploy on short notice, wherever needed. Altogether, the NRF comprises around 40,000 multinational troops.
- Within the NRF is the Very High Readiness Joint Task Force (VJTF). This NRF element – about 20,000 strong – includes a multinational land brigade of around 5,000 troops and air, maritime, and SOF components.

- The Secretary will continue to consult with the President, and the United States will maintain close coordination with Allies and partners, as we continuously review our force posture and make decisions regarding movement of forces into and within Europe.

### **Prepare to Deploy Orders (PTDO):**

- Identified forces are on heightened preparedness to deploy, but have not yet been activated.
- The U.S. has placed no added restrictions on day-to-day activities or long-planned exercises and operations in Europe.
- Normal unit rotations and replacements are continuing.

### **Force Posture Announcements:**

- In the face of Russian aggression, the United States deployed an additional 15,000 forces in recent weeks and now has approximately 100,000 U.S. service members in Europe. We have repositioned other forces within Europe to assure our Allies and deter Russian aggression against NATO.
- Starting in late January, the 2nd Cavalry Regiment, a Stryker Squadron, consisting of approximately 1,000 U.S. service members moved from Germany to Romania.
- We deployed approximately 5,000 multi-mission forces from the United States to Europe.
- These forces include approximately 4,700 service members of the 82nd Airborne Division and key enablers deployed to Germany. The 82nd Airborne Division deployed components of an Infantry Brigade Combat Team and key enablers to Poland.
- A 300-person element of the 18th Airborne Corps moved from the U.S. to Germany to establish a Joint Task Force-capable headquarters.
- We have temporary repositioned 160 members of the Florida National Guard who have been deployed to Ukraine in support of Joint Multinational Training Group-Ukraine.
- The governments of Bulgaria and Hungary recently announced each country are hosting 125 service members assigned to Stryker units for training missions.
- On Feb. 22, Secretary Austin ordered the additional movement of U.S. forces currently stationed in Europe to continue our support for NATO Allies and the defense of the eastern flank. These forces include:
  - An infantry battalion task force of approximately 800 personnel, from Italy to the Baltic region.
  - Movement of up to eight F-35 Strike Fighters, from Germany to several operating locations along NATO's eastern flank.

- A battalion of attack aviation – 20 AH-64 helicopters – from Germany to the Baltic region.
  - And an attack aviation task force – 12 AH-64 helicopters – will move from Greece to Poland.
- On Feb. 24, at the direction of the President, Secretary Austin ordered the deployment to Europe of approximately 7,000 additional Service Members. This includes an armored brigade combat team with associated capabilities and enablers. They will deploy to Germany to reassure NATO Allies, deter Russian aggression and be prepared to support a range of requirements in the region.
  - On March 5, Secretary Austin ordered the deployment from the United States of an additional approximately 500 U.S. military personnel to locations across Europe. These forces will augment and provide additional support to existing U.S. forces in the European theater, which are trained and equipped for a variety of missions to reinforce U.S. European Command posture on NATO's Eastern Flank. These forces are comprised of:
    - KC-135 refueling aircraft with approximately 150 personnel, which will deploy to Spangdahlem, Germany.
    - An Air Support Operations Center (ASOC) with approximately 40 personnel to deploy to Poland and Romania.
    - An Ordnance Company and a Maintenance Company with approximately 300 personnel to Germany, to provide additional logistics support to the 1st Armored Brigade Combat Team, 3rd Infantry Division already deployed there.

### **Broader Russia/Ukraine Background Points:**

#### **NATO**

- NATO is a defensive alliance and we don't have aggressive intent towards Russia.
- Every step we take is to ensure protective measures needed to defend our Allies.
- The United States' commitment to defending NATO territory is ironclad and the United States will continue to bolster our posture to better defend our NATO Allies.
- We support Ukraine's right – every country's right - to decide its own future foreign policy course free from outside interference. No third country has a veto over NATO membership decisions.

#### **Ukraine**

- We are in close coordination with the Ukrainian government at high levels. The President has been very clear of his support for Ukraine's sovereignty and territorial integrity.
- We stand with Ukraine. The President, Secretary Austin, and this administration have underscored our commitment to Ukraine's sovereignty and territorial integrity. As President Biden says, "Nothing about you without you."

## Security Assistance

- We continue to work closely with our Ukrainian partners and Allies to evaluate the specific requirements of Ukraine's forces.
- The U.S. will provide security assistance to help Ukraine address the armored, airborne, and other threats it is now facing.
- The U.S. will continue to deliver equipment and supplies to Ukraine, including through the Ukraine Security Assistance Initiative.
- The U.S. is not supporting Ukraine alone. Our NATO Allies have also redoubled their commitments and resolve to defend the Alliance and our common values.
- As our Allies and partners make announcements regarding their own contributions, we are committed to working closely with them to ensure that our assistance is coordinated and meets Ukraine's highest priority needs.
- On March 16, President Biden announced an additional \$800 million in security assistance to Ukraine, bringing the total U.S. security assistance committed to Ukraine to \$1 billion in just the past week, and a total of \$2 billion since the start of the Biden Administration. The assistance will take the form of direct transfers of equipment from the Department of Defense to the Ukrainian military to help them defend their country against Russia's unprovoked and unjustified invasion. The new \$800 million assistance package includes:
  - 800 Stinger anti-aircraft systems;
  - 2,000 Javelin, 1,000 light anti-armor weapons, and 6,000 AT-4 anti-armor systems;
  - 100 Tactical Unmanned Aerial Systems;
  - 100 grenade launchers, 5,000 rifles, 1,000 pistols, 400 machine guns, and 400 shotguns;
  - Over 20 million rounds of small arms ammunition and grenade launcher and mortar rounds;
  - 25,000 sets of body armor; and
  - 25,000 helmets.

In addition to the weapons listed above, previous United States assistance committed to Ukraine includes:

- Over 600 Stinger anti-aircraft systems;
- Approximately 2,600 Javelin anti-armor systems;
- Five Mi-17 helicopters;
- Three patrol boats;
- Four counter-artillery and counter-unmanned aerial system tracking radars;
- Four counter-mortar radar systems;
- 200 grenade launchers and ammunition;
- 200 shotguns and 200 machine guns;
- Nearly 40 million rounds of small arms ammunition and over 1 million grenade, mortar, and artillery rounds;

- 70 High Mobility Multipurpose Wheeled Vehicles (HMMWVs) and other vehicles;
- Secure communications, electronic warfare detection systems, body armor, helmets, and other tactical gear;
- Military medical equipment to support treatment and combat evacuation;
- Explosive ordnance disposal and demining equipment; and
- Satellite imagery and analysis capability.

## **Exercises**

- We routinely operate with our NATO Allies and partners in order to maintain peace, prosperity, and stability in the region. This will continue.
- These types of operations enhance interoperability and seamless integration between our Allies and partners. Any accusations from Russia to the contrary are disingenuous.
- *(In response to exercises by other nations)* Generally speaking, we do not have an issue with exercises. That's a normal function of a military organization. However, all countries need to be transparent and communicate their military exercises via the appropriate international channels to avoid misunderstanding and miscalculation. This is even more important now when the situation in the region calls for de-escalation.

## **Posture of Strategic Forces**

- Russia and the United States have long agreed that nuclear use would have devastating consequences, and have stated many times, including earlier this year, that a nuclear war cannot be won, and must never be fought.
- We think provocative rhetoric regarding nuclear weapons is dangerous, adds to the risk of miscalculation, should be avoided, and we will not indulge in it.
- Throughout this crisis, Russia has falsely alleged that it is under threat – including from Ukraine and from NATO.
- Neither the United States nor NATO has any desire or intention for conflict with Russia. We are unwavering in our commitment to extended deterrence and confident in our ability to defend ourselves and our allies.

## **Q+A on NATO Response Forces-Related PTDOs**

### **Q1: Is it true that U.S. forces are being put under NATO control?**

A1: NATO, as an organization, does not have veto power over U.S. troop deployments. Media reports to the contrary were a mischaracterization.

Separate from the deployments currently underway to the Eastern Flank, President Biden has authorized 8,500 troops being put on heightened readiness status, who could be deployed from the United States for a range of contingencies, including to support the NATO Response Force (NRF).

These forces were pledged to the NRF in September 2021 as part of the U.S. annual contribution and can be deployed if the North Atlantic Council decides to activate elements of the NRF. They supplement pledges from other Allies to the NATO Response Force.

Nothing precludes the United States from making its own decision on troop movements outside the NRF context. Movements of U.S. forces forward deployed in Europe outside the NATO context involve consultation with the host nation.

**Q2: Where are these forces being sourced from?**

A2: The forces being deployed will be sourced from a variety of military installations throughout the United States.

**Q3: Are these troops being forward-deployed to assist with possible massive refugee outflows?**

A3: These forces are trained and equipped for a variety of missions to deter aggression and to reassure and defend Allies.

**Q+A on Deployment to Eastern Flank**

**Q4: Will this deployment occur under a NATO flag?**

A4: These deployments follow consultations with the host nation and are intended to reassure our NATO Allies, but they are not being conducted under NATO command and control. Our deployment will be coordinated with NATO military authorities and are taken in consultation with all Allies.

**Q5: Are these service members some of those put on PTDO in January?**

A5: The Stryker squadron to Romania is a repositioning of forces already in Europe. It is separate from the 8,500 personnel placed on heightened readiness in the U.S. in late January to meet potential NATO Response Force or other requirements.

This Tranche 2 are some of the forces that were put on PTDO on Feb. 2, but this movement is separate from the 8,500 U.S.-based personnel placed on heightened readiness on Jan. 22 to meet potential NATO Response Force or other requirements.

**Q6: Will Russia see this as an aggressive move by NATO?**

A6: NATO is a defensive alliance and we don't have aggressive intent towards any country, including Russia, and we do not seek confrontation. These measures are non-escalatory and taken to reinforce our NATO Eastern Flank Allies. Russia will use any pretext to divert attention from its aggressive behavior, exemplified through the massing of Russian forces in Crimea and on Ukraine's borders. The United States has engaged with Russia bilaterally and multilaterally in multiple diplomatic tracks to reduce tensions and to invite Russia to de-escalate.

**Q7: Will U.S. forces fall under another nation's command and control?**

A7: These forces will fall under U.S. command and control. Our deployments will be coordinated with NATO military authorities.

**Q8: Are these forces, announced March 5, being deployed as part of the NATO Response Force (NRF)?**

A8: These forces are being deployed by the United States, in consultation with our allies. Some of these capabilities, such as the Maintenance and Ammunition Ordnance Companies, have been identified as part of the U.S. contribution to the NATO Response Force (NRF) placed on heightened readiness back on Jan. 24. Although not currently under NRF or NATO command, these forces are available to support the NRF if and when they are needed.

**Q9: How long will these forces stay in Romania [or the other locations]?**

A9: There is no definite pre-determined timeline for this deployment. As noted, we will continue to monitor the situation and consult with Romania [or other country] and other Allies as we consider any additional adjustments to our force posture.

**Q10: Has the deployment of US F-15s in Estonia been extended?**

A10: Nothing has changed to our support for the NATO eAP mission in Estonia. This short-term employment is being executed as planned. For additional information, contact NATO Air Command.

**Q11: What do you say to Russian claims that the Aegis Ashore site in Poland (and Romania) threaten Russia?**

A11: U.S. missile defenses do not pose a threat to Russia. The United States relies on its strategic nuclear forces, not its missile defenses, to deter potential threats to the homeland from Russia's and China's nuclear-armed ICBMs.

We are committed to completing the European Phased Adaptive Approach, which defends Europe from threats outside of the Euro-Atlantic region. The Aegis Ashore sites in Romania and Poland are not directed at Russia and are not physically capable of intercepting Russian ICBMs.

The Aegis Ashore missile defense system does not have an offensive ground-launched ballistic or cruise missile capability. Specifically, the system lacks software, fire control hardware, support equipment, and other infrastructure needed to launch offensive ballistic or cruise missiles such as the Tomahawk. Moreover, the defensive nature of the Aegis Ashore sites is codified in basing agreements with the host nations of Romania and Poland.

Bottom line: Our Aegis Ashore sites cannot prevent a major Russian strategic missile strike on the United States, do not undermine Russia's strategic deterrent, and are incapable of firing offensive missiles.

**Q+A on Repositioning National Guard Troops**

**Q12: When do you expect the Florida National Guard to return to Ukraine?**

A12: I do not have any more details beyond what has been previously announced.

**Q13: What forces are staying in Ukraine and will they fight Russian forces if attacked?**

A13: The President has been clear: we will not be sending U.S. troops to fight in Ukraine.

**Q+A on Support to Ukraine**

**Q14: Where can American citizens donate to Ukraine?**

A14: USAID is the lead U.S. federal agency for coordinating humanitarian aid and providing the best information about how to help Ukrainians during the current crisis. USAID's Center for International Disaster information has up-to-date information on their web page for anyone interested in donating: [www.cidl.org](http://www.cidl.org).

**Q15: Comment on U.S. military veterans joining President Zelensky's International Legion of the Territorial Defense of Ukraine? Support U.S. citizens traveling to Ukraine to fight against Russia forces?**

A15: Ukrainians have shown their courage and they are calling on every resource and lever they have to defend themselves. We applaud their bravery. However, the State Department Travel Advisory remains: U.S. citizens should not travel to Ukraine, and those in Ukraine should depart immediately if it is safe to do so using commercial or other privately available ground transportation options.

**Q18: What should Americans desiring to leave Ukraine do?**

A18: We strongly reiterate our recommendation to U.S. citizens to depart Ukraine immediately.

We've repeatedly urged American citizens to leave Ukraine and have been clear for many weeks that we will not be in a position to evacuate Americans from Ukraine.

The State Department is providing travel information to help people depart Ukraine and can provide financial assistance as needed. U.S. citizens seeking to depart Ukraine can call 1-833-741-2777 (in the U.S.) or 1-606-260-4379 (from overseas). See the State Department website for more information.

**Q19: Will you enforce no-fly zone over Ukraine?**

A19: We are continuing to provide security assistance to Ukraine, but to be clear: deploying the U.S. military to enforce a no-fly zone would risk direct conflict and the U.S. military going to war with Russia. That's something the President has been clear will not happen.

**Q20: In the \$6.3B omnibus for Ukraine, what will that \$6.3B buy?**

A20: The \$6.5 billion budget includes operations mission support, the deployment of personnel, and intelligence support in the U.S. European Command area of responsibility. Of the \$6.5 billion, \$3.5 billion is for replenishment of U.S. stocks for equipment sent to Ukraine through drawdown. While the types and quantities of specific equipment provided to Ukraine through security assistance might vary based on Ukraine's evolving requirements, Allied commitments, and the availability of DoD stocks, DoD would consider the following capabilities:

- Anti-air capability
- Anti-armor capability
- Small arms and ammunition
- Tactical gear
- Meals Ready to Eat
- Military medical (e.g., first aid kits)

**Q21: Are National Guard Units providing assistance to Ukraine?**

A21: The National Guard is maintaining communications with EUCOM and monitoring efforts across the 54 states and territories to help provide relevant federal agency points of contacts and applicable legal requirements.

### **Q+A on Media Embeds**

#### **Q22: Can you explain why the DoD is not providing access or embeds with service members forward deployed to the EUCOM AOR?**

A22: The decision to provide media access to our troops, whether it's in an operational environment or training environment, is one we take seriously and there are several factors that contribute to it. We continuously review media posture.

### **Q+A on Naval and Air Force Support**

#### **Q23: What U.S. Navy assets are supporting EUCOM?**

A23: The U.S. Navy destroyers USS The Sullivans (DDG 68), USS Gonzalez (DDG 66), USS Donald Cook (DDG 75) and USS Mitscher (DDG 57) are operating in the European theater of operations. Throughout their deployment, they will participate in a range of maritime activities in support of the U.S. Sixth Fleet and our NATO allies.

The Harry S. Truman Carrier Strike Group is currently operating in the U.S. Sixth Fleet area of operations.

The U.S. Navy destroyer USS Jason Dunham (DDG 109) returned to the European theater of operations after operating in the U.S. Fifth Fleet. Dunham deployed in December 2021 as part of the USS Harry S. Truman (CVN 75) Carrier Strike Group.

Military deployments are dynamic in nature and due to our operational security policy, we will not discuss the details of their future operations.

#### **Q24: Can you comment on the situation in the Black Sea/Kerch Strait/Sea of Azov?**

A24: There is no change to our operational capability or deterrence posture. We operate in the Black Sea and many other areas across region on a regular basis, which is all part of our ongoing commitment and reassurance to our NATO Allies and partners.

Any accusations from Russia that we are doing something different or escalating our actions is disingenuous.

Russia has a history of taking aggressive actions against vessels and impeding access to ports in the Sea of Azov in its ongoing campaign to undermine and destabilize Ukraine.

Though we don't speak to future operations, our maritime forces will continue to make announcements, as they always do, throughout operations.

#### **Q25: Why have F-35s and KC-135s deployed to Germany and F-15s to Poland?**

A25: The deployment of these forces is evidence of the strong commitment to our NATO Allies and to a whole, free and peaceful Europe. We are ready and postured and well prepared to integrate with our host nations, Allies and partners to respond to aggression if needed. These

are moves designed to respond to the current security environment and reinforce the deterrent and defensive posture on NATO's eastern flank.

**Q26: How long will these aircraft stay in their deployed locations?**

A26: There is no definite pre-determined timeline for this deployment. As noted, we will continue to monitor the situation and consult with [country name] and other Allies as we consider any additional adjustments to our force posture.

**Q27: Will aircraft deploy to elsewhere in Europe?**

A27: All operations and deployments are done in full coordination with our Allies and partners. The strong and strategic relationships between our Allied and partner countries ensure a collective defense posture that is ready and prepared to respond and support global operations.

IF PRESSED: Due to operational security, we cannot disclose information on future operations and where else aircraft could deploy.

**Q28: Is the KC-46A going to Spain related to real-world events or in response to Russian aggression in Ukraine?**

A28: Air Mobility Command's KC-46A Employment Concept Exercises (ECE) are designed to enhance operational fielding and sustainment of the KC-46A and are unrelated to real-world events. Europe was selected as the first ECE location because it offers a suitable operational environment in which to validate learning objectives while gaining proficiency with its approved missions. While at Moron Air Base, Spain, the KC-46As and support personnel will remain under AMC authorities as they validate learning objectives, and will be prepared to support real-world, theater operational missions as necessary. The employment of the KC-46A to Europe represents another step in the aircraft achieving full operational capability.

**Q+A on Cyber Attacks**

**Q29: What can you tell us about Russian cyber attacks?**

A29: We are closely monitoring reports of further DDOS attacks targeting government websites in Ukraine. We are in communication with Ukraine regarding their cyber related needs.

We will not preview U.S. responses to individual incidents. U.S. responses will reflect the totality and severity of the rapidly evolving circumstances. As we have said, if Russia is engaging in destructive cyber activity against Ukraine in the period ahead, we will work with allies and partners on an appropriate response.

The President made clear what he has said over and over publicly and privately: if Russia attacks the United States or our Allies through asymmetric means, like disruptive cyberattacks against our companies or critical infrastructure, we are prepared to respond.

**Q+A on Russian Actions**

**Q30: Comment on Putin's change to nuclear posture?**

A30: We have no reason to doubt the validity of these reports. We believe that this is not only an unnecessary step for him to take but an escalatory one, unnecessary because Russia has not ever been under threat by the west or by NATO and certainly wasn't under any threat by

Ukraine. And escalatory because it is clearly potentially putting at play forces that could that if there's a miscalculation could make things much, much more dangerous.

**Q31: Has the U.S. changed our strategic deterrent posture in response?**

A31: We do not talk about the specifics of our strategic deterrent posture, so I'm not going to qualify that further. We remain confident in our ability to defend ourselves and our Allies, and our partners, and that includes in the strategic deterrent realm.

Both the United States and Russia have long agreed that nuclear employment could have devastating consequences, and we both agreed, most recently this year in the context of the P5 statement, that a nuclear war cannot be won and must never be fought.

**Q32: Is it true that Russia is using cluster bombs?**

A32: We've seen those reports and, if true, they raise significant concerns about the impact on civilians.

**Q33: Does the Pentagon believe cluster bombs and thermobarics are banned under Geneva Convention?**

A33: Under the law of war applicable to the United States, including the 1949 Geneva Conventions and other law of war treaties that the United States has accepted, cluster munitions and thermobaric munitions are not banned as such. The law of war prohibits using any weapon, including cluster munitions and thermobaric munitions, to target civilians.

**Q34: Russia is also saying that it used a hypersonic missile at least twice in Ukraine so far. So this is a missile that travels what more than a mile a minute. It's very difficult to intercept. Is this weaponry game changer?**

A34: I refer you to Secretary Austin's comments on CBS's *Face the Nation* on March 20, 2022: "I would not see it as a game changer. I think again, the reason that he's resorting to using these types of weapons is because he's trying to reestablish some momentum. And we've seen, again, we've seen him attack towns and cities and civilians outright. We expect to see that continue. But I don't think that this in and of itself will be a game changer. You kind of question why he would- would do this. Is he running low on precision- precision guided munitions? Does he have like complete confidence in his ability to- the ability of his troops to reestablish momentum? But- but I don't see this in and of itself a game changer. I cannot confirm or dispute whether or not he's used those weapons."

**Q+A on Chemical/Biological**

**Q35: Does the U.S. have a history of sending scientists to assist in labs like the chemical/biological labs in Ukraine?**

A35: The Biological Threat Reduction Program (BTRP), part of the Department of Defense's Cooperative Threat Reduction (CTR) Program, is implemented by the Defense Threat Reduction Agency (DTRA). Since 2005, BTRP has partnered with the Government of Ukraine to support peaceful and safe biological detection and diagnostic capabilities and to reduce the threats posed by pathogens. Through this program, DoD trains partner nation laboratory technicians to safely diagnose diseases and that training can include interaction with U.S. scientists. The Cooperative Threat Reduction Program has never supported the permanent presence of any personnel in an overseas laboratory. For more information about BTRP, visit

<https://media.defense.gov/2022/Mar/11/2002954612/-1/-1/0/FACT-SHEET-THE-DEPARTMENT-OF-DEFENSE-S-COOPERATIVE-THREAT-REDUCTION-PROGRAM-BIOLOGICAL-THREAT-REDUCTION-PROGRAM-ACTIVITIES-IN-UKRAINE.PDF>.

**Q36: Is a CBW attack a red line?**

A36: We are not going to speculate about hypotheticals. When Putin has escalated, we have responded. Russia has a long track record of using chemical weapons. They run a large chemical and biological weapons program— we don't and neither does Ukraine. Russia has a history of inventing outright lies like this. They've been raising the specter of using chemical weapons as a pretext for war with Ukraine for months. We have rallied our Allies and partners to impose swift and severe consequences on Russia for its unprovoked attack on Ukraine—and we are continuing to raise the costs on Putin for his war of choice. We are in close consultation with our partners and Allies about what the consequences would look like. The use of chemical or biological weapons would prompt a significant response from not just the United States, but the global community.

Subject: Disinformation Update

Dr. Williams,

FYSA, our media monitors are seeing a substantial uptick in disinformation on DTRA CTR BTRP's projects in Ukraine -- from an average of 50 articles per day to over a thousand in the last 24 hours. Russia is blaming DTRA for a number of outbreaks in the region, as well as for crafting an offensive BW program in Ukraine.

We have also seen reporting from China's Foreign Ministry spokesman echoing Russian charges, which has received extensive coverage in both the Chinese and Russian news and social media circles.

State AVC has a press statement they plan to put out today that OSD provided us an opportunity to review. It hits the right points and draws from the "Break Glass" book DTRA provided to OSD PA and State last week.

We heard today from journalist Matt Field at the Bulletin of the Atomic Scientists. Working with DTRA PA, we answered some questions for him last Friday and he stated his intent to submit an article to his editor today. We will watch for it.

Finally, if you have four minutes, here's a briefing on DTRA's activities in Ukraine from the Russian Ministry of Defense, with English subtitles:  
[https://www.youtube.com/watch?v=3\\_q0qgqCLK0](https://www.youtube.com/watch?v=3_q0qgqCLK0)

Subject: The Official Russian MOD Statement of "Proof" of DoD Bioweapons Labs in Ukraine

Dr. Williams,

FYSA, Russian MOD's Telegram channel media is reporting that they have "evidence" of U.S. bioweapons activities in Ukraine (see below and attached). Our media monitor is looking for any additional reporting on the subject.

Wall Street Journal is asking for comment on the following: "Russian military spokesman Maj. Gen. Igor Konashenkov claimed, without providing evidence, that Russia has uncovered a biological weapons program in Ukraine funded by the U.S. defense ministry that was destroyed on February 24, when Moscow launched its assault."

DASD Johnson and DASD Rcif are tracking (DASD Johnson received tip-off of the reporting from another OSD office and alerted us). DASD Johnson and OSD PA have DTRA's "Break Glass" book for this. No action for DTRA at this time.

-----Original Message-----

In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

We have received documentation from employees of Ukrainian biolaboratories on the emergency destruction on February 24 of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases. Now the documents are being analyzed by Russian specialists from the troops of radiation, chemical and biological protection.

Obviously, with the start of a special military operation, the Pentagon had serious concerns about disclosing the conduct of secret biological experiments on the territory of Ukraine.

The received documents confirm that in the Ukrainian biological laboratories, in the immediate vicinity of the territory of Russia, the development of biological weapons components was carried out.

In order to prevent disclosure of the facts of violation by the United States and Ukraine of Article 1 of the UN Convention on the Prohibition of Bacteriological (Biological) and Toxin Weapons, the Ukrainian Ministry of Health sent an instruction to all biological laboratories to urgently eliminate stored stocks of dangerous pathogens.

In the near future we will present the results of the analysis of the received documents. Some of them, in particular, the

instructions of the Ministry of Health of Ukraine on the destruction of pathogens and the acts of destruction in the Poltava and

Kharkiv biological laboratories, we are publishing right now: <https://disk.yandex.ru/d/dyWUEF3tDZGauw>

Subject: The Official Russian MOD Statement of "Proof" of DoD Bioweapons Labs in Ukraine

Dr. Williams,

FYSA, Russian MOD's Telegram channel media is reporting that they have "evidence" of U.S. bioweapons activities in Ukraine (see below and attached). Our media monitor is looking for any additional reporting on the subject.

Wall Street Journal is asking for comment on the following: "Russian military spokesman Maj. Gen. Igor Konashenkov claimed, without providing evidence, that Russia has uncovered a biological weapons program in Ukraine funded by the U.S. defense ministry that was destroyed on February 24, when Moscow launched its assault."

DASD Johnson and DASD Reif are tracking (DASD Johnson received tip-off of the reporting from another OSD office and alerted us). DASD Johnson and OSD PA have DTRA's "Break Glass" book for this. No action for DTRA at this time.

V/r,

Rob

Robert S. Pope, Ph.D., SES

Director

Cooperative Threat Reduction

-----Original Message-----

In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

We have received documentation from employees of Ukrainian biolaboratories on the emergency destruction on February 24 of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases. Now the documents are being analyzed by Russian specialists from the troops of radiation, chemical and biological protection.

Obviously, with the start of a special military operation, the Pentagon had serious concerns about disclosing the conduct of secret biological experiments on the territory of Ukraine.

The received documents confirm that in the Ukrainian biological laboratories, in the immediate vicinity of the territory of Russia, the development of biological weapons components was carried out.

In order to prevent disclosure of the facts of violation by the United States and Ukraine of Article 1 of the UN Convention on the Prohibition of Bacteriological (Biological) and Toxin Weapons, the Ukrainian Ministry of Health sent an instruction to all biological laboratories to urgently eliminate stored stocks of dangerous pathogens.

In the near future we will present the results of the analysis of the received documents. Some of them, in particular, the

instructions of the Ministry of Health of Ukraine on the destruction of pathogens and the acts of destruction in the Poltava and

Kharkiv biological laboratories, we are publishing right now: <https://disk.yandex.ru/d/dyWUEF3tDZGauw>

Sirs, FYI below per Dr. Williams.

BLUF: due to the recent RUS "Note Verbale" presented 2 days ago at the BWC in Geneva (PDF file attached), and RUS presentation this morning (Word doc attached) at the UN Security Council claiming the US is developing bio weapons in UKR, the NSC (b)(6) has reached out directly to DTRA (specifically Dr. Pope) for a quick conversation on this issue for preparation of an upcoming sub-IPC. This conversation will take place at 1600 today.

OSD-P and NCB/TRAC have both been looped in and Policy is leading the discussion for DoD. I have been asked to participate; I invited CT's rep to the CORT so he can back-brief them; and the IOFC (Ana) is welcome to attend as well. Note, Policy wants to keep this discussion limited. Will keep everyone informed as to the outcome of the discussion. (b)(6) will not participate; it will be her staff on the NSC.

Unless Policy wants DTRA representation, we will likely not be invited to the

IPC on Monday, as Policy has been attending those on this topic and is the gatekeeper.

Sir, FYI - NSC (Beth Cameron) reached out to Rob. NSC wants to help with disinformation, given the RUS Note Verbale they presented at the BWC 2 days ago, and now RUS apparently did the same at the UN Security Council this morning. Attached is what was presented at the BWC, and we are trying to find out what RUS presented this morning. It is likely the same product.

I looped in my Policy comrades for the discussion the NSC wants to have with

us this afternoon at 1600. Not sure if we (DTRA) will be invited to the sub/IPC on Monday. Will keep you posted.

Frankly, the NSC is way behind here. But we will support them as needed/required, unless you have other guidance.

-(b)(6) (don't want to clobber them with administrative chatter)

Hi (b)(6) happy to talk with you at 4pm. If we can include our Policy comrades on that discussion, that would be great. They have been attending the series of sub/PCs on this topic.

Attached is what the Russians presented at the BWC, translated into English. It is very weak argument, frankly, and I expected better. If they present the same material at the UNSC this morning, we certainly can work together to debunk this nonsense.

(b)(6) any thoughts?

Thanks (b)(6)

Hi, (b)(6)

Russia is convening the UNSC again this morning to launder its disinformation and to malign U.S. support for biological facilities and laboratories in Ukraine.

It's not going away anytime soon in the media or in international fora (BWC, UNSC, etc.), so we'd like explore with you some fresh, creative approaches to turning Russian disinformation upside down. As a starting point, I'm going to get the "evidence" that Russia furnished for the UNSC convening this morning.

NSC Democracy is hosting a subIPC on Monday @ 1:00 PM on countering disinformation regarding the U.S., Ukraine, and CBW (for example: <https://tass.com/politics/1423129>). I'll make sure you get that invite, and would welcome the opportunity to talk to you beforehand - either 4:00 PM today or Monday morning 9:30 or 10?

Many thanks!

Best,

Good afternoon,

I am covering down for (b)(6) while she's in class, and received this inquiry below. Thought is maybe DTRA has lines on this issue, but I don't have DTRA POCs and since this is a biological weapons discussion thought maybe you could assist?

Query: The Russian foreign ministry said today (and their defense ministry earlier this week) that Ukraine has been developing biological weapons at 30 different sites in a programme financed by the United States (specifically DoD). Want to make sure we send over DoD comment on it to our colleagues, I assume rejecting the assertion like before.

This is the main line from Foreign ministry spokesperson Maria Zakharova: "Documentation was received from employees of Ukrainian biological laboratories on the urgent destruction of especially dangerous pathogens of plague, anthrax, tularemia, cholera and other deadly diseases on Feb. 24."

The defence ministry said the work had been commissioned by the Pentagon's Defense Threat Reduction Agency and involved collecting strains of dangerous microorganisms and exporting them to the United States, as well as studying potential pathogens specific to a given region to use as biological weapons.

Think you could help me with this?

Thank you.

16:20Z 6Mar2022

Группировки войск Луганской и Донецкой народных республик, при огневой поддержке российских Вооруженных Сил, продолжают наступательные действия.

Подразделения народной милиции Донецкой республики успешно развивают наступление в городской черте Мариуполя с северо-западного и восточного направления.

Вооруженные Силы Российской Федерации наносят удары по объектам военной инфраструктуры Украины.

6 марта высокоточным оружием большой дальности выведен из строя аэродром военно-воздушных сил Украины в ВИННИЦЕ.

Истребительной авиацией и ПВО ВКС Россиибито в воздухе ещё три украинских истребителя Су 27 и три беспилотных летательных аппарата.

Всего за вчерашний и неполный сегодняшний день военно-воздушные силы Украины потеряли 11 боевых самолетов и 2 вертолета.

Практически вся боеспособная авиация киевского режима уничтожена.

Вместе с тем, нам достоверно известно об украинских боевых самолетах, ранее перелетевших в Румынию и другие приграничные страны.

Обращаем внимание, что использование аэродромной сети этих стран для базирования украинской боевой авиации с последующим применением против российских вооруженных сил, может рассматриваться как вовлечение данных государств в вооруженный конфликт.

Российскими высокоточными средствами большой дальности выводятся из строя вооружение и военная техника Украины.

Киевский режим националистов заставляет сотрудников предприятий оборонно-промышленного комплекса Украины восстанавливать поврежденную военную технику для последующего направления в районы боевых действий.

В рамках выполнения задачи по демилитаризации Украины российские вооруженные сил

Groupings of troops of the Luhansk and Donetsk People's Republics, with the fire support of the Russian Armed Forces, continue offensive operations.

The units of the people's militia of the Donetsk Republic are successfully developing an offensive in the city of Mariupol from the north-western and eastern directions.

The Armed Forces of the Russian Federation are striking at the military infrastructure of Ukraine.

March 6 high precision long range weapons put out of action the airfield of the air force of Ukraine in VINNITSA.

Fighter aircraft and air defense of the Russian Aerospace Forces shot down three more Ukrainian Su 27 fighters and three unmanned aerial vehicles in the air.

In total, yesterday and incomplete today, the Ukrainian Air Force lost 11 combat aircraft and 2 helicopters.

Almost all combat ready aviation of the Kiev regime has been destroyed.

At the same time, we know for certain about Ukrainian combat aircraft that had previously flown to Romania and other border countries.

Please note that the use of the airfield network of these countries for basing Ukrainian military aviation with subsequent use against the Russian armed forces can be regarded as the involvement of these states in an armed conflict.

Russian high-precision long-range weapons and military equipment of Ukraine are disabled.

The Kyiv regime of nationalists forces employees of enterprises of the military-industrial complex of Ukraine to restore damaged military equipment for subsequent deployment to the areas of hostilities.

As part of the task of demilitarizing Ukraine, the Russian armed for

ы будут наносить высокоточным оружием поражение украинским предприятиям оборонно-промышленного комплекса. Во избежание угрозы жизни работникам предприятий украинского ОПК заблаговременно предупреждаем о планируемых ударах по таким объектам. Призываем персонал украинских заводов ОПК не идти на поводу у киевского режима националистов и покинуть территории своих предприятий. В ходе проведения специальной военной операции вскрыты факты экстренной зачистки Киевом режимом следов реализуемой на Украине военно-биологической программы, финансируемой Минобороны США. Нами получена от сотрудников украинских биологических лабораторий документация об экстренном уничтожении 24 февраля особо опасных патогенов возбудителей чумы, сибирской язвы, туляремии, холеры и других смертельных болезней. Связанные документы анализируются российскими специалистами войск радиационной, химической и биологической защиты. Очевидно, что с началом специальной военной операции, у Пентагона возникли серьезные опасения в раскрытии ведения секретных биологических экспериментов на территории Украины. Полученные документы подтверждают, что в украинских биологических лабораториях, в непосредственной близости от территории России, осуществлялась разработка компонентов биологического оружия. Для недопущения вскрытия фактов нарушения США и Украиной статьи I Конвенции ООН о запрещении бактериологического (биологического) и токсинного оружия, украинским Минздравом во все биологические лаборатории было направлено указание об экстренной ликвидации хранящихся запасов опасных патогенов. В ближайшее время мы представим результаты анализа полученных документов

ces will inflict high-precision weapons on Ukrainian enterprises of the military-industrial complex. In order to avoid a threat to the lives of employees of enterprises of the Ukrainian defense industry, we warn in advance of planned strikes against such facilities. We call on the personnel of the Ukrainian defense industry plants not to be led by the nationalist regime in Kiev and to leave the territories of their enterprises. In the course of a special military operation, the facts of an emergency cleansing by the Kiev regime of traces of a military biological program being implemented in Ukraine, funded by the US Department of Defense, were uncovered.

**Q: There have been some outrageous allegations in recent days regarding the Ukraine Invasion. I thought it would be a good time to talk about the BTRP program in Ukraine, the history and where the program is now. Could you talk about the current state of work in Ukraine up until the state of the war?**

- A. We have worked with Ukraine in this mission area since 2005, fundamentally trying to make their public health network and vet health network of laboratories and epidemiology more successful at what they do. The work CTR was doing at the time, leading up to the invasion was all about that, we were continuing to help provide upgrades to various public and animal health laboratories so the scientists had the equipment and training and facility they needed to be able to do the same diseases diagnosis and reporting that any other country does.

**Q: What are the numbers of biological sites in Ukraine...the number that DTRA and the pentagon is doing work with?**

- A. You see a lot of different numbers because it depends on what you count. A lot of the work we've done are at the small diagnostic sites. Where all you have are samples coming in and safely packaged and transferred to the diagnostic labs. If you start counting things like that, the numbers get pretty big. If you don't count those, looking at my list here, 8 major disease diagnostic labs. We've done work at the regional level and pathogen collection at the diagnostic sites.

**Q: Can you describe what the ongoing work of DTRA is with these diagnostic sites, things you are working on with the Ukrainians and what the overall goal is?**

- A. The goal is like I said, the ability for Ukraine to have a public health laboratory network that meets international health regulations and standards set by the WHO to be able to detect outbreaks and dangerous diseases so the world can react and respond before we have a global pandemic. And we work similarly on the vet side because so many animal diseases (inaudible) like ebola or covid can jump from animal to human. Being able to work on both side of that one health spectrum gives that complete early detection and reporting that the whole world benefits from. We most recently were finishing up construction and renovation at the laboratories and continuing to training personnel and sponsor biosurveillance studies to better characterize the kinds of diseases that are endemic to Ukraine.

**Q: What was the status of the construction and renovation....where were these?**

- A: For the safety of the Ukrainians working in those labs, I don't want to say specifically which ones these are right now. Russian propaganda comes back to target them. Can we side step that one? (yes)

**Q: Is there an annual conference in Ukraine sponsored by DTRA/CTR for researchers?**

A: There are a number of conferences that CTR sponsors around the world, I don't remember which one we held most recently in Ukraine. Typically if we are sponsoring a conference, it's bringing researchers together who work in bio-surveillance studies to share what they have learned together. By bringing them together in that region, you are able to share the data and results across international boundaries. Diseases don't respect those boundaries and those technicians need to understand what's going on on the other side of the border as well.

**Q: How much of a concern do you have with the security of the lab in the state of the war?**

A. Generally we work with our partners like Ukraine to build these labs and train the people who work in them to to work in a very safe way. The samples they are collecting for this work stay safely in the lab don't infect the technicians or get out into the community. I would say when a conflict starts, electrical power isn't stable, buildings may be damaged, then the risk of accidental releases is present. Last week the Who made the statement that THEY had reached out to Ukraine and suggested they neutralize their pathogen strain collection and destroy everything so it won't accidentally leak out as part of this conflict.

**Q: Has that been done or is DTRA advising that?**

A: I can't say it has been done, I hope the government of Ukraine followed that recommendation.

**Q: Are DTRA personnel still in touch with counterparts in Ukraine?**

A: We are in touch with people who have a working relationship with DTRA. For example, we still have some personnel that work for us at the embassy and we check on them every day for safety, most days we are able to reach them. There are some contract support on the ground, we aren't talking directly to them but are talking to their contract heads and understanding their situation. We've got minimal contact with the gov of Ukraine due to bigger issues they are dealing with right now.

**Q: What do you make of the outrageous claims?**

A: They are absolutely that, they are outrageous claims. It's absolutely not what the CTR program does. We were created 30 years ago to eliminate WMD, and Russia knows that. We sanitized and dismantled their facilities at Stepnagorsk and Voz island to destroy weaponized anthrax and we destroy programs like that. Worked with them on a number of other programs with them directly up to 2014, destroying missiles, bombers, submarines, chemical weapons arsenals...They know what they do, we destroy WMD. If you look anywhere else in the world where we are active, you see the work we are doing for the health and safety of the people. I'm in Cameroon right now, one of the places I went today was the public health emergency operation center we built a couple years ago and commissioned just in time to use it for COVID. They have a single point to monitor what's now 6 outbreaks of COVID and a number of other diseases. This is the work we do in the world and Russia knows that, so the claims remain preposterous.

**Q: What milestones can you share from DTRA over the past 5 years?**

A: What we've done in the past 4 to 5 years has been an extension of what we started there since the beginning of 2005. We were able to work with ministries of health and agriculture, to take a decrepit and unsafe soviet system they inherited and make it meet world class international health standards for their laboratorians to safely do the work they do diagnosing disease in Ukraine. Every time we finished a lab that got them on that step, shut down an unsafe lab, those were considered milestones for us.

**Q: Why did this work take more than 15 years? Why can it not be done in 2-3 years?**

A: A few reasons...one is the physical speed of construction and renovation takes time. Putting a building on contract, going through the construction process and all the certifications required and transferring to the host nation for use can take 3-4 years for just that one project. As we work with any partner nation, we are looking at a baseline assessment of their health system, talking to them what are mutual goals are, U.S. goals, host nation goals, and as we work in that area, we train people, we have success in projects, we go off and find the next project in line that makes sense for both us and the partner to do together, so that's why you see it taking so long.

**Q: What is the annual expenditure of the work in Ukraine?**

A: don't have that.

**Q: In terms of the release of pathogens you worried about with the conflict in Ukraine, which ones worry you the most? Is anthrax a concern?**

A: There are a number of diseases that circulate in Ukraine, anthrax is one of them, African swine fever is another, these circulate in the country so as the field epidemiologists are collecting samples and sending up through the laboratory networks for diagnosis those are the kind of things that end of stored in the labs. Since they are Ukraine labs and not U.S. labs, I can't say specifically what pathogens are there but they will be collections of the diseases that are endemic to the country.

**Q: It must be bizarre for you knowing the work DTRA has done and seeing the claims...I mean how do you react?**

A: Sadly we've seen this in a slow simmer since Russia invaded Crimean peninsula in 2014 and ramping it up since then and only recently largely played in the local, regional press close to Russia. Since Russia ceased being a cooperative partner with the CTR program and started taking their aggressive actions in Ukraine, they have also decided to create this narrative and has recently exploded. I'm not happy at all.

**Q: It's surprising to me that it's had traction in each parts of the U.S. Has it made the U.S. rounds in media before?**

A: I haven't seen it in U.S. sites until recently, but recognizing that Russia comes from the soviet lineage of 70 years of honed expertise in propaganda and disinformation. They understand the psychology of their audiences they understand the kinds of outrageous claims that resonate. They have found a claim that activates some audiences here in the U.S. that believe bad things about their government.

**Q: Anything else you'd like to mention?**

A: Not at this time, Sharon, it sounds like you've talked to the right people that know our work well and you are building an accurate and positive picture of our work.

- DTRA's Crisis Operations Response Team (CORT) is coordinating the cross-Agency responses and providing input into discussions between Ms. Rosenblum and OSD Leadership. The CORT also leans forward to understand potential eventualities and what DTRA can do to support any response.
- CTR, in coordination with Public Affairs, is working with the DOS and the NSC to ensure an accurate US response to the Russian disinformation campaign on CTR-funded laboratories in Ukraine.
- DTRA is in communication with U.S. European Command and U.S. Special Operations Command to provide expertise on potential WMD employment by Russia; although DTRA personnel have been evacuated from the immediate crisis area, the Agency retains its EUCOM (and associated teams) in theater, and has sent (on request) additional support for EUCOM planning efforts.
- Our Technical Reachback team have received 91 requests for information on the potential release of WMD from various facilities across Ukraine. Our Intel analyst team have received 97 requests for support on various topics regarding Ukraine.
- The Information Operations Support Cell is working with CCMD J39s to support strategic planning to counter disinformation in CWMD and related emerging threats mission areas.

## Moscow falsely accuses U.S. of funding biowarfare in Ukraine despite Kremlin once benefiting from Pentagon program

The Pentagon denies Russia's accusations of funding weapons work in Ukraine's biological laboratories.

*By Sharon Weinberger*

March 20, 2022 5:30 am ET

On his first official visit abroad, the new senator from Illinois, Barack Obama, was taken to a facility in Ukraine where the U.S. helped scientists working with dangerous biological materials. But rather than produce biological weapons, U.S. officials in that ramshackle building were trying to prevent lethal pathogens from falling into the hands of terrorists.

"I removed a tray of glass vials containing *Bacillus anthracis*, which is the bacterium that causes the anthrax," recalls Andrew Weber, the Pentagon official who was in charge of the U.S.-funded program that worked with the Ukrainian government. Mr. Weber said he showed the tray "to a very concerned-looking young senator."

Mr. Obama himself recalled seeing in his 2005 trip to Ukraine "test tubes filled with anthrax and the plague lying virtually unlocked and unguarded."

A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union and to build trust between Washington and Moscow after the Cold War has instead become a new flashpoint in an information war between the two countries in the wake of Russia's invasion of Ukraine.

Moscow has accused the Pentagon of funding weapons work in Ukraine's biological laboratories. "These were not peaceful experiments," Russian Foreign Minister Sergei Lavrov said earlier this month.

China, whose leader Xi Jinping has cultivated a close relationship with Russian President Vladimir Putin, has echoed those allegations. "Russia has found during its military operations that the U.S. uses these facilities to conduct bio-military plans," the Chinese Foreign Ministry spokesman told reporters.

U.S. officials have flatly denied those claims and warned that Moscow could use its allegations to justify its own use of weapons of mass destruction in Ukraine.

“We believe that Moscow may be setting the stage to use a chemical weapon and then falsely blame Ukraine to justify escalating its attacks on the Ukrainian people,” Secretary of State Antony Blinken said last week. “Manufacturing events and creating false narratives of genocide to justify greater use of military force is a tactic that Russia has used before.”

The allegations have shocked those who are most familiar with the Pentagon’s post-Cold War initiative, called the Cooperative Threat Reduction program. That is because not only has Russia been aware of the Pentagon’s work securing chemical, biological and nuclear facilities across the former Soviet Union, but it had also been its beneficiary for many years.

“They’re outrageous claims,” said Robert Pope, the head of the Defense Threat Reduction Agency, or DTRA, the arm of the Pentagon in charge of running the program. “We were created 30 years ago to eliminate weapons of mass destruction, and Russia knows well we eliminate weapons of mass destruction.”

The program, which dates back to 1991 and continues today, stretches across the former Soviet Union. Since the program started, the Pentagon has spent approximately \$12 billion on securing material used in weapons of mass destruction in post-Soviet republics, according to a DTRA spokeswoman. Of those funds, about \$200 million has been spent on the biological work in Ukraine since 2005. The funds have supported dozens of labs, health facilities and diagnostic sites around the country, the DTRA spokeswoman said.

Mr. Weber, who was in charge of negotiating the initial agreement with Kyiv to work on securing the country’s biological materials and facilities, said that work expanded to Ukraine after the 9/11 attacks, when al Qaeda terrorists hijacked aircraft and crashed them into the World Trade Center towers and the Pentagon. U.S. policy makers grew worried about the potential for terrorists to steal biological materials – fears that were heightened after letters containing anthrax were sent in the U.S. mail to congressional offices and media outlets. The FBI eventually concluded that an American scientist employed at a military lab sent the letters.

The president of Ukraine at the time, Leonid Kuchma, concerned about the threat of terrorism in his own country, asked the U.S. for help. Since the collapse of the Soviet Union a decade earlier, Ukraine had been starved of the funds needed to secure its biological facilities.

Mr. Weber put together a team that visited Ukraine's biological and chemical facilities, which ranged from large laboratories to small veterinary research centers. "We found that a number of them had dangerous pathogen collections left over from Soviet days," he said. "They were in pretty bad shape."

Ukraine's laboratories—unlike some in other former Soviet republics—weren't directly involved in the Cold War biological-weapons program, but they did have pathogens that fed into offensive work, according to Mr. Weber.

Those pathogens, like anthrax, could pose a threat if released, whether accidentally or on purpose. The focus of U.S. work in Ukraine was to consolidate that biological material, much of it related to agriculture, into secure facilities, which the U.S. would pay to build or upgrade.

Paul McNelly, who from 1995 to 2003 directed the Defense Department's chemical and biological elimination programs in Russia, Kazakhstan and Uzbekistan, said he was stunned with what he saw inside the former Soviet facilities.

"You would walk into these places and the refrigerators that stored these dangerous pathogens, they had no locks on them at all," Mr. McNelly said. "There would be vials that were labeled tularemia, plague, different things like that. And these people, most of them, weren't masked. Their gowns were antiquated." He added: "It was horrible."

As part of the program, the Pentagon spent \$1 billion to build the Russians a facility in Shchuchye, Siberia, to demilitarize some two million chemical weapons. By the time it was done in 2009, ties with Moscow were growing tense. The price of oil was going up, giving Russia more revenue to wean itself off foreign assistance. At the same time, Mr. Putin was consolidating power.

As a result, the Russian government became a less-willing partner to the Pentagon's drive to secure the deadly materials, according to James Tegnalia, who served as the head of DTRA from 2005 to 2009. "They wanted our money, but they didn't want to admit that we built the facility," Mr. Tegnalia said. "You could see that they were getting ready to pull back."

Russia's Foreign Ministry had in the past praised the program. But by 2012, Moscow declined to renew cooperation, saying it could pay for the work on its own.

In 2014, the year Moscow illegally annexed Crimea and began backing separatists in Ukraine's Donbas region, the program in Russia drew to a close.

A spokesman for the Russian Embassy in Washington, D.C., didn't respond to a request for comment on the Pentagon program.

Yet even with that chapter of its cooperation over, the Russian claims about the Pentagon conducting secret weapons work in Ukraine came as a surprise not only to those who have worked on the program but also to other Western officials. The Kremlin has in the past used such charges as cover for its own actions, they say.

"We are concerned that Moscow could stage a false-flag operation, possibly including chemical weapons," North Atlantic Treaty Organization Secretary-General Jens Stoltenberg said last week.

U.S. officials have declined to discuss what specific intelligence, if any, they have to indicate Russia might be preparing to deploy chemical or other unconventional weapons to Ukraine. But they say Russia has a history of using chemical weapons, including against Mr. Putin's domestic political opponents, and it has encouraged their use in Syria by President Bashar al-Assad's government.

The Russian government shot back against the U.S. allegations, denying plans to use chemical weapons. In a post last week on its official Telegram channel, the Russian Defense Ministry said the units fighting in Ukraine "do not have chemical munitions."

Mr. Tegnalia, the former DTRA director, views Russia's allegations as a path to an even more dangerous escalation. "If you see them using chemical weapons in Ukraine, watch out," he said, "because they're only one step away from nuclear weapons."

Directors,

We are pulling the final pieces of the Testimony together. We want to be topical and address our support to Ukraine - over the past few weeks/months but also over the lifetime. We also want to add a TP on the CORT - it's relevance and function for the Agency.

By noon on Tuesday, please provide curated (strategic), unclassified talking points that we can slide into the testimony for ADIR review. Each TP should

be no more than 2 sentences.

Thanks,

(b)(6)

## ADIR Testimony Ukraine Support TPs - CTR Input

1. DTRA CTR removed 1,800 former Soviet nuclear warheads from Ukraine and eliminated 60 strategic bombers, 483 cruise missiles, 184 ballistic missiles, and their silos.
2. DTRA CTR improved the ability of Ukrainian border guard units to detect and interdict WMD smuggling and provided emergency assistance to the Border Guard Forces in the wake of Russia's 2014 annexation of Crimea and support of separatists in the Donbas.
3. Since 2005, DTRA CTR has invested more than \$200 million in infrastructure, equipment, and training to improve Ukraine's biological detection, diagnostic, and safety capabilities. This investment has improved that overall human and animal health infrastructure in Ukraine prior to the invasion.
4. Since the onset of the COVID-19 pandemic, DTRA CTR has provided \$1 million of COVID-19 assistance to Ukraine in the form of lab supplies, training, equipment, and expert support to help mitigate the health crisis in Ukraine.

# Biological Security Engagement in Ukraine: U.S. Cooperation and Threat Reduction Programs

March 11, 2022

During its invasion of Ukraine, the Russian government has accused Ukraine of possessing a clandestine biological weapons program with support from the United States. To the contrary, the United States has cooperated with Ukraine on biological security programs ranging from laboratory security to disease surveillance and pandemic response, as documented by the U.S. embassy website, annual budget requests, and congressional oversight hearings. These programs are rooted in the U.S. Cooperative Threat Reduction Program (CTR). The United States and Ukraine are both members of the Biological Weapons Convention (BWC), which prohibits such weapons, and the United States has stated that both are in full compliance with their obligations. The State Department assesses that the Russian government “maintains an offensive biological weapons program” in violation of the BWC.

Congress has raised questions about this issue in recent hearings. U.S. Director of National Intelligence (DNI) Avril Haines testified on March 10 that “we do not assess that Ukraine is pursuing either biological weapons or nuclear weapons.” State Department Spokesman Ned Price said on March 9, “Russia is inventing false pretexts in an attempt to justify its own horrific actions in Ukraine.” The allegation has led to concern that Russia may be planning a “false flag” operation in which it plants evidence or uses a biological weapon against Ukraine but blames another party.

In addition, combat operations may put sensitive biological laboratories at risk. A Department of Defense (DOD) press release says, “There are five biological research laboratories in Kyiv. Their work focuses on diagnostics, therapeutics, treatments, prevention and vaccines, not on military use as the Russians and Chinese accuse.” U.S. officials and outside experts have expressed concerns that Ukraine’s laboratories holding pathogen collections may come under attack or Russian military control. The World Health Organization reportedly urged Ukrainian authorities to destroy research samples of disease pathogens to avoid accidental release should the facilities be damaged in the war. An emergency meeting of the UN Security Council, requested by Russia, discussed the issue on March 11. The United Nations High Representative for Disarmament Affairs Izumi Nakamitsu said that “certain public health facilities are in areas impacted by armed conflict putting the safety of those facilities at risk,” and that the United Nations is “not aware” of any biological weapons program in Ukraine. U.S. Ambassador to the United

**Congressional Research Service**

<https://crsreports.congress.gov>

IN11886

Nations Linda Thomas-Greenfield told the Council: “Ukraine does not have a biological weapons program, and there are no Ukrainian biological weapons laboratories supported by the United States.” She also said, “Ukraine owns and operates its own public health laboratory infrastructure. These facilities make it possible to detect and diagnose diseases like COVID-19, which benefit us all. The United States has assisted Ukraine to do this safely and securely.”

In the past, the Russian and Chinese governments have repeatedly alleged that U.S. ongoing biological security cooperation programs in Ukraine, Georgia, and Kazakhstan were military in nature. Several U.S. federal agencies, such as the State Department and the Centers for Disease Control and Prevention (CDC), cooperate with Ukraine to meet international biosafety and global health security standards. The Department of Defense Cooperation Threat Reduction (CTR) program also works with partner countries to destroy or secure high-priority biological pathogens (“Select Agents”) at their source and to develop the partner’s capacity to detect, diagnose, and report a disease outbreak. The Defense Threat Reduction Agency (DTRA) strongly denies any weapons-related aspects. Congress oversees implementation of these programs.

CTR’s biological engagement began as a program focused on dismantling the vast biological weapons complex inherited from the Soviet Union. Ukraine and other non-Russian states of the former Soviet Union have been willing partners in dismantling the Soviet biological weapons legacy and securing pathogen collections and laboratories. Facilities in these countries were abandoned by the Russian military when the republics became independent states, and in many cases local governments were not aware of their existence or the dangers they housed. Over time, the United States learned of dangerous pathogen collections dispersed throughout the region. A decade after the dissolution of the Soviet Union, these facilities lacked security and safety measures, had lost expert staff due to economic conditions, and many were in a state of disrepair. The United States, accordingly, accelerated its assistance to these facilities starting in the late 1990s.

Congress first added funds to the DOD’s CTR budget for biological threat reduction (BTR) in the late 1990s. The DOD CTR FY2022 Budget Estimate says the BTR “program seeks to facilitate detection and reporting of diseases caused by especially dangerous pathogens (EDPs), including zoonotic diseases, which could affect the armed forces of the United States or its allies and partners.” DOD assistance has focused on improving biosafety and security (BS&S) at laboratories housing pathogen collections, including equipment upgrades and training, as well as disease detection, diagnosis, and reporting enhancements (BSV). The BTR program has built secure Central Reference Laboratories (CRL) for pathogen collections in Azerbaijan, Ukraine, and Kazakhstan, and completed upgrades at 39 “Secured Labs” in Armenia, Georgia, Kazakhstan, and Ukraine. In addition, the program has provided Ukraine with Coronavirus Disease 2019 (COVID-19) technical and material assistance, including biosafety equipment, diagnostic supplies, and subject matter expertise.

In light of Russia’s apparent persistent dissemination of disinformation regarding biological security cooperation with Ukraine, Congress may examine how the federal government is countering these claims, to include examining how effective the U.S. government has been in presenting information of its own. Congress may also conduct oversight regarding the safety and security of pathogen collections and biological research laboratories during the ongoing Russian invasion of Ukraine. Additional potential oversight topics include whether personnel at those facilities are able to maintain operations and how to leverage CTR funds in the context of security assistance to Ukraine.

**Subject:** 18 Apr CTR-related Disinformation Summary  
**Attachments:** 20220417 CTR Media Clip Summary.docx, smime.p7s

Director Hersman,

FYSA, here's the summary of CTR-related disinformation since the last report on 15 Apr.

Russian state and fringe media continue to allege nefarious actions by the Science and Technology Center in Ukraine (STCU). The narrative about the U.S. testing drugs on psychiatric patients in Kharkiv is migrating across multiple media platforms in Russia. There is a newly concocted conspiracy running on multiple Russian media channels that the U.S. was trying to infect waterways in Ukraine and across the FSU with a range of pathogens.

V/r,  
Rob

Robert S. Pope, Ph.D., SES  
Director  
Cooperative Threat Reduction

## CTR Media Clip Summary

4/17/2022

**BLUF:** Russia and China message in tandem on STCU and relocation of bio labs to Mongolia. New narratives about the U.S. contaminating waterways with pathogens and experimenting on psychiatric patients metastasize.

**Russian Disinformation:** Russian media fixates on the Ukrainian Scientific and Technical Center (STCU), escalated reporting of U.S. experimentation on psychiatric patients, and introduced a narrative that the U.S. aimed to contaminate water systems in and near Russia.

- According to discred.ru, scientists took water samples from major rivers in Ukraine - the Dnieper, Danube, and Dniester - to find pathogens for cholera, typhoid fever, hepatitis A and E. Russia's MoD concluded U.S. aligned researchers wanted to infect Russia, the Black and Azov Seas, Belarus, Moldova, and Poland.
- Multiple outlets ran stories about the U.S. testing drugs on psychiatric patients in Kharkiv with support from STCU.
- Russian media continue to circulate the story that the U.S. is relocating bio labs to Mongolia from Ukraine.
- Conspiracies about the Azovstal steel plant in Mariupol housing "underground NATO bio labs" percolate Telegram.
- Discred.ru connects former Assistant Secretary Phil Dolliff to nefarious actions of the STCU.
- Politforms.ru suggests the U.S. is weaponizing camels in Kazakhstan and Tajikistan to destabilize Russia and China.
- On April 13, the Russian Embassy in Egypt shared a video claiming to show drones used by the Ukrainian forces to spray toxic chemicals on Russian troops and Ukrainian civilians. The drones are agricultural equipment, but disinformation persists through state and social media channels.
- Multiple state media sources detail German financing of bio labs through the Robert Koch Institute, German Society for International Cooperation, Friedrich Loeffler Institute for Animal Health, and the Institute for Microbiology of the German Armed Forces.
- Andrey Klimov, deputy head of the United Russia commission on international affairs, says that the "military phase will end" after Russia can safely examine bio materials within Ukraine's labs.

**Chinese Disinformation:** Chinese media amplifies disinformation about relocation of bio labs to Mongolia and publishes pieces questioning STCU's alleged funding of bio weapons research.

- In an interview with China Daily, Zhao Lijian continues to call for a multilateral investigation into U.S. bio labs around the world.
- Weibo users post that a "new Coronavirus" was created by Moderna in the U.S.
- Chinese media continue coverage of bio labs being relocated from Ukraine to Mongolia.
- Chinese media covers the STCU's allegedly nefarious financial support of bio labs.

Sir,

FYSA, as of this writing, DTRA has shared the Break Glass talking points with the following. Kudos to (b)(6) and his team for producing this, getting approved, and getting it to those who need it at the speed of relevance.

- DTRA senior leaders
- OSD-PA (currently working a media engagement)
- OSD NCB
- OSD Policy
- U.S. Delegation to OSCE (via OB)
- EUCOM Surgeon General
- DIIS
- CDC
- USAID
- State ISN (currently working TPs for Sec Blinken)
- State AVC
- DTROs and RCEOs
- USEMB PA shops where we have a DTRO or RCEO

U.S. biological attack in Ukraine, March 2022

Source: Politforums.ru  
Date of release: 02/15/2022 11:22  
Title: US biological attack in Ukraine, March 2022

U.S. biological attack in Ukraine, March 2022

Vasily Aksyonov

9 89 14:22 15.02.2022

Theme Rating: +2

On February 10, 2022, the US Department of Defense sent samples of the smallpox virus by a special military board to its military biological laboratory in Kharkiv.

The US State Department is preparing a provocation with the use of biological weapons in Kharkiv. According to Western sources, the White House ordered the military to transport and prepare the smallpox virus for its use in combat operations and crisis situations.

Thanks to the leak of information, it became known that the US military plans to unleash a regional war in Ukraine at the beginning of March 2022, where they will conduct a provocation with the use of biological weapons. The media will spread information that some Russian saboteurs destroyed a biological laboratory from where the active strain of the smallpox virus leaked.

Recall that in 2013, the US Department of Defense on the basis of the Institute of Experimental and Clinical Veterinary Medicine built a biological laboratory, where it began to bring dangerous strains of viruses. The laboratory itself is located at the address: Kharkiv, Pomerka district, Pushkin street, 83. The contractor was the American engineering company Black & Veatch, the same one that has already built

biological laboratories for the Pentagon in Georgia, Azerbaijan, Armenia, Kazakhstan and Uzbekistan since 2001.

Facilities are carried out by a special unit of the Pentagon, called the Defense Threat Reduction Agency (DTRA). In Ukraine, this activity is supervised by the U.S. Embassy in Kyiv.

Over the past two months , 7 special cargoes have been sent to the Kharkiv Biological Laboratory of the United States, under the guise of military assistance to Ukraine. It is noteworthy that the sender is the CENTER for biological research of the US Army "Fort Detrick" in Maryland. Local residents nicknamed this place "House of Death".

Not surprisingly, because on the territory of this military town, Pentagon microbiologists are modernizing deadly infections, including smallpox, bubonic plague, tropical fever, as well as anthrax, increasing their resistance to modern vaccines and drugs.

Dr. Williams and Dr. Pope,  
Gentlemen, I'm following up on the info submission/DTRA TP's input for OSD PA. We sent the "Break Glass" product up to OSD PA last week and we will now follow up again to stress the importance of using this specific messaging in some form.  
We also shared with them the CTR Fact Sheet and we shared the factsheet with the Press Operations Desk for their use.  
Also, I will bring Ms. Rosenblum's STRAT lead (b)(6) online with this. The A&S/NCB communications team(s) may not be fully aware of the NCB/Policy coordination that has already taken place and it appears they have limited purview at this point.

V/r,

(b)(6)  
Subject: Disinformation Towards DTRA CTR Labs

(b)(6)

We wanted to pass this document up to you for SA right now, but for potential use if the disinformation efforts by Russia/China grow bigger in the coming days.

BLUF: Through current, active, and robust disinformation campaigns, Russia might use the capture of one of the laboratories in Ukraine that receives DoD CTR support as "evidence" that the US maintains an offensive biological weapons program in the former territory of the Soviet Union.

This narrative has been circulating since 2015, and is nothing new. However, recently, Russian disinformation about the labs in UKR has reached an all-time high, and is one of several reasons the Russians have justified their invasion of UKR. Given the confluence of these events, we believed it is prudent to share this background and contingency Q&A (attached) for your preparation and review in anticipation of these disinformation storyline being raised in press conferences and/or through more official Russian media channels. US mainstream media is also starting to pick up the Russian narrative, albeit with a more skeptical lens.

You are aware of some of the articles circulating with Dr. Pope putting out DTRA's message on the topic and several foreign outlets are amplifying it but with their own spin on it. The PDF attached highlights some examples (it's a lot).

CTR is standing by to continue pushing out our factual statements as necessary, with the pause on publishing on our social media outlets until told to resume. CTR also offered a 30 minute deep dive on this subject if you or anyone else at OSD has the interest.

Let me know if you have any questions or want additional information.

Thanks!

## **Background Paper / Fact Sheet on DoD's Cooperative Threat Reduction Program (Biological Threat Reduction Program) - Ukraine**

Background: The Biological Threat Reduction Program (BTRP), part of the Department of Defense's Cooperative Threat Reduction (CTR) program, is implemented by the Defense Threat Reduction Agency (DTRA). Since 2005, the program assisted the Ukrainian government in converting former Soviet biological weapons (BW) research facilities to support peaceful and safe biological detection and diagnostic capabilities and reduce the threats posed by dangerous pathogens, whether they are naturally-occurring, accidental, or intentional.

### Key Facts:

- BTRP's priorities in Ukraine are to help them consolidate and secure pathogens and to continue to ensure Ukraine can detect and report disease outbreaks before they pose security or stability threats. All of BTRP's efforts are peaceful in nature and subject to rigorous export-control measures and vetting processes. BTRP sponsors no gain of function research or "human experimentation."
- Ukraine is a State Party to Biological and Toxin Weapons Convention (BWC). In accordance with an August 2005 CTR agreement, the DoD has been funding security upgrades at Ukrainian biological laboratories where collections of pathogens are kept.
- BTRP has supported 46 laboratories, facilities and diagnostic sites for the Ministry of Health and Ministry of Agriculture. BTRP has also provided the Ministry of Defense with 3 mobile diagnostic laboratories, with the goal of enhancing the system of disease surveillance and emergency preparedness in the Armed Forces of Ukraine. All of this assistance improved Ukraine's COVID-19 response.
- All of these are Ukrainian facilities owned and operated by the government of Ukraine, which aims to improve human and animal health capacity for the people of Ukraine.
- On a daily basis, Russia propagates, either directly through state-run media outlets or through the use of surrogates, disinformation aimed at BTRP's laboratory and capacity building efforts in former Soviet Union countries. The Lugar Center in Georgia and the Central Reference Laboratory in Kazakhstan are the primary targets, but more recent disinformation efforts have targeted laboratories in Ukraine. Through these disinformation campaigns, Russia falsely claims the United States, and specifically DTRA, is developing biological weapons in laboratories in these countries, as well as killing local populations with purposeful releases of biological agents.
- Russia illegally took possession of two Ukrainian-owned labs that BTRP upgraded in 2014 and continues to deny Ukrainian access to these facilities. To date, we are unaware of any attempts to use these facilities for disinformation purposes.
- BTRP is just one of many organizations providing equipment and training to these facilities. Other supporters include, among others, the European Union, World Health Organization, international universities and research institutions, as well as other U.S. interagency partners.
- Even though BTRP has had an active biological engagement with the government of Ukraine since 2005, there are many Ministry of Health and Ministry of Defense facilities that have not asked for, or received equipment or training from the United States.

**DRAFT MEDIA QUESTIONS AND ANSWERS****1. Why are there DoD labs in Ukraine?**

*DoD does not own or operate labs in Ukraine. All the facilities receiving BTRP assistance are Ukrainian owned and operated, and these facilities receive training and equipment from a large array of partners to include the European Union and its individual members, the World Health Organization, Food and Agriculture Organization, the World Organization for Animal Health, the US Department of State, US Department of Agriculture, the US Centers for Disease Control and Prevention, USAID, and the US Department of Defense. During the Soviet era, certain select laboratories in Ukraine held the most dangerous pathogens in various collection sites. These materials were held under antiquated and inadequate safety and security conditions. The fall of the Soviet Union only exacerbated these vulnerabilities and exposed significant proliferation threats. DoD's Cooperative Threat Reduction (CTR) program was created to reduce the threat of WMD material, including biological threats. CTR worked cooperatively and peacefully with the government of Ukraine to increase biosecurity and biosafety at these sites to ensure these dangerous pathogens did not pose a risk to the people of Ukraine or the region. This relationship with Ukraine continues today and Ukraine uses the laboratory improvements provided by the United States to support broader public and veterinary health goals, such as monitoring the spread of COVID-19, preparing for and controlling African Swine Fever, which helped Ukrainian farmers protect their herds from infectious diseases, and protecting the food supply in Ukraine - just to mention a few of the many benefits that accrued from this partnership.*

**2. How can you prove that you weren't doing offensive biological weapons work?**

*The United States is a States Party and depository for the 1972 Biological Weapons Convention and maintains scrupulous compliance with its obligations under that treaty. The United States does not develop biological weapons, and any assistance we provide to foreign partners has strict protocols, to include a rigorous vetting process, that ensures all activities are peaceful in nature. As the U.S. has pointed out many times, injecting maximum transparency into ALL BWC member state initiatives within the convention is paramount.*

**3. What did you do with the material from the former Soviet BW program?**

*At the request of many former Soviet Union countries, to include Ukraine, Kazakhstan, Georgia, Armenia, Uzbekistan, and Azerbaijan, the United States (through the Congressionally-funded and mandated Cooperation Threat Reduction program) eliminated or secured stockpiles of dangerous pathogens from the legacy Soviet biological weapons research and development enterprise. For example, in Uzbekistan, the United States eliminated nearly 12 tons of weaponized Anthrax from an island in the Aral Sea. This work was a cooperative effort with the government of Uzbekistan and demonstrates a true partnership in reducing the threat of dangerous pathogens – either from an intentional act or accidental release.*

**4. If these efforts in Ukraine are peaceful, why do these labs still contain samples of anthrax, plague, and other dangerous agents?**

*All of these pathogens are common in agricultural and natural settings and readily found in the environment of Ukraine. These and other pathogens are studied in veterinary and public health research labs around the world to improve early detection and diagnostic capabilities to contain*

*and prevent outbreaks of diseases – such as COVID-19. Ukraine's capability to understand endemic pathogens is an essential step of disease surveillance, as required by the WHO and other international health organizations. Furthermore, BTRP encourages Ukraine and all partners not to store any biological materials beyond what is required to perform diagnostics. Moreover, BTRP has provided to Ukraine molecular diagnostic equipment, supplies, and know-how to avoid the typical, Soviet-era style of diagnostics, which involves growing viruses and bacteria—a clear proliferation risk. By employing PCR and sequencing technologies, BTRP enables Ukraine to detect viruses and bacteria without propagating infectious diseases.*

**5. Is it true you performed human experimentation?**

*DoD's Cooperative Threat Reduction Program (BTRP) does not conduct any human experimentation - period. All BTRP projects are focused on enhancing peaceful foreign partner biosecurity, biosafety, and detection activities – to detect disease outbreaks and stop a pandemic before it happens. As an example, BTRP does fund disease investigations where Ukrainian partners collect clinical samples from humans and/or animals to conduct diagnostic testing and epidemiological analysis. BTRP insists that foreign partners, like Ukraine, establish internal review board processes guided by national regulatory frameworks before any diagnostic or epidemiological study is conducted—whether with human or animal samples.*

**6. Other than DoD, who else provides funding to these labs?**

*DoD's CTR Program does not provide US taxpayer funding directly to the laboratories. Furthermore, the laboratories in Ukraine are owned and operated by the host country. DoD provides equipment and training that is in compliance with BWC protocols and International Health Regulations. However, the DoD CTR program does competitively award grants to foreign partners for biosurveillance studies aimed at detecting and diagnosing disease outbreaks. At their request, we partner with them because they value our expertise and experience – especially in terms of our biosafety and biosecurity protocols. While we know that some governments receive funding, capacity, and training from the European Union and other academic, governmental, and commercial sponsors, you will have to ask the countries that own the laboratories to confirm other funding sources.*

**7. How do you know that these labs are not performing illegal activities without your knowledge?**

*Ukraine is a responsible steward and owns and operates these facilities. The facilities are much more open and transparent than during the Soviet era. Scientists are encouraged to publish their research results, partner with international colleagues, and widely distribute their research findings. They operate in a capacity similar to university labs on campuses around the world. Furthermore, all DoD provided equipment and training with foreign partners is subject to US export control processes, DoD audits, and US acquisition laws and regulations to ensure transparency and compliance with both US and International Health Regulations.*

**8. If nothing illegal is going on, why all of the secrecy?**

*There is nothing secretive about DoD's capacity building efforts with foreign partners. In fact, we urge you to view BTRP promotional videos to see how the United States is transparent with all its biological engagement activities. In sum, DoD's peaceful efforts are designed to prevent*

UNCLASSIFIED

*the proliferation of disease-causing pathogens, and prevent outbreaks of diseases that impact everyone. DoD's efforts with foreign partners are designed to be as transparent as possible, while at the same time protecting intellectual property and intellectual rights. DoD's efforts with foreign partners also comply with US acquisition rules and regulations, ensuring maximum competition with US and foreign contractors who perform the work on behalf of the government. The US government must preserve a competitive playing field to ensure US taxpayer dollars are being spent wisely. While this may appear to be secretive, the actual work performed is not and information is publicly available.*

*BTRP 101 (ENG) <https://www.youtube.com/watch?v=HEE4-WuJYRA>*

*BTRP 101 (UA) <https://www.youtube.com/watch?v=aZ9cCqChMLs>*

*Lugar Center: [https://www.youtube.com/watch?v=PkiUlv\\_WYnE](https://www.youtube.com/watch?v=PkiUlv_WYnE)*

**9. How much did the U.S. invest in these facilities in Ukraine?**

*The United States, through DoD's Cooperative Threat Reduction program, invested in approximately \$200 million in Ukraine since 2005. These activities have included building or renovating laboratories and providing laboratory equipment and training to help Ukraine's Ministry of Health and Ministry of Agriculture to conduct safer and more effective disease detection, to help Ukraine's Ministry of Defense to protect the health of the Ukrainian Armed forces, and help Ukraine conduct peer-reviewed biosurveillance studies to understand pathogens that are endemic in Ukraine and spot indicators of an outbreak.*

**DRAFT PRESS RELEASE – CTR ACTIVITIES AND BIOLOGICAL THREAT REDUCTION PARTNERSHIP WITH UKRAINE**

The Department of Defense's Cooperative Threat Reduction (CTR) Program is a Congressionally-founded and directed program created to rectify the WMD security gap left after the collapse of the Soviet Union. In Ukraine, CTR facilitated the removal of Ukraine's 1,800 nuclear warheads and helped return them to Russia. CTR also worked with the government of Ukraine to eliminate WMD delivery systems and infrastructure such as missiles and missile silos. CTR has worked with the government of Ukraine to identify legacy Soviet Biological Weapons (BW) sites and help eliminate and secure dangerous pathogens from that era. Over the years, this partnership expanded into helping Ukraine's government upgrade its public and animal health detection, diagnostic, safety, and security capacity. This investment in Ukrainian public health capability undoubtedly saved innumerable Ukrainian lives during the ongoing pandemic as a result of enhanced diagnostic and response to SARS COV-2. It also helped the Ukrainian government detect and respond to multiple outbreaks of African Swine Fever, a disease that is highly contagious and lethal to pigs and can cause severe economic disruption.

The United States has made a full and comprehensive declaration of our past biological weapons program, which ended in 1972. Our country is a State Party and depository of the 1972 Biological Weapons Convention and maintains scrupulous compliance with all of its provisions. The United States does not develop biological weapons, nor does the United States enable partner countries to do the same. The laboratory upgrades and training provided by the United States to Ukraine, and other partner countries, is a frequent target of Russian disinformation campaigns, making unscrupulous and baseless claims that the United States is developing biological weapons, and even worse, killing people in partner countries. These claims are outright lies, designed to drive a wedge between the successful biological threat reduction efforts of the United States and its partner countries.

The laboratories in Ukraine are owned and operated by the government of Ukraine. The Department of Defense, through the CTR program, continues to partner closely with Ukraine to improve public and veterinary health and safety.

## **FACT SHEET - CTR ACTIVITIES AND BIOLOGICAL THREAT REDUCTION PARTNERSHIP WITH UKRAINE**

The Department of Defense's Cooperative Threat Reduction (CTR) Program is a Congressionally-founded and directed program created to rectify the WMD security gap left after the collapse of the Soviet Union. In Ukraine, CTR facilitated the removal of Ukraine's 1,800 nuclear warheads and helped return them to Russia. CTR also worked with the government of Ukraine to eliminate WMD delivery systems and infrastructure such as missiles and missile silos. CTR has worked with the government of Ukraine to help identify legacy Soviet Biological Weapons (BW) sites and help eliminate and secure dangerous pathogens from that era. Over the years, this partnership expanded into helping their government upgrade its public and animal health detection, diagnostic, safety, and security capacity. This investment in Ukrainian public health capability demonstrated its worth during this ongoing pandemic, where this support resulted in enhanced diagnostic and response to SARS COV-2, which undoubtedly saved innumerable Ukrainian lives. It also helped the Ukrainian government detect and respond to multiple outbreaks of African Swine Fever, a disease that is highly contagious and lethal to pigs and can cause severe economic disruption.

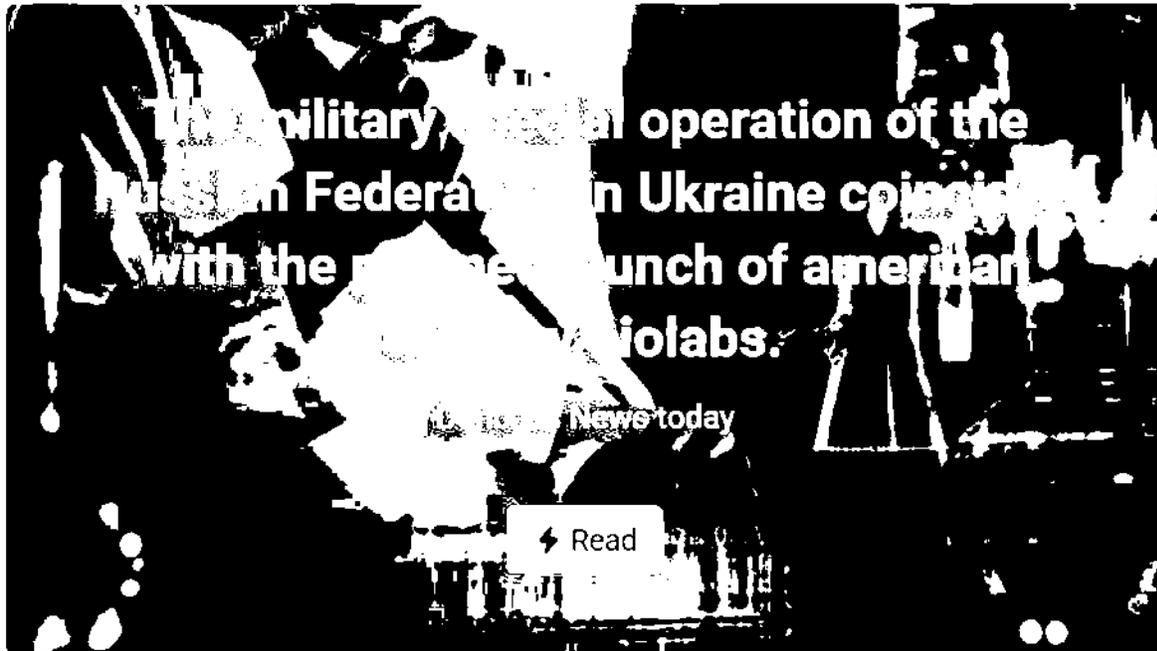

The United States has made a full and comprehensive declaration of our past biological weapons program, which ended in 1972. Our country is a State Party and depository of the 1972 Biological Weapons Convention and maintains scrupulous compliance with all of its provisions. The United States does not develop biological weapons, nor does the United States enable partner countries to do the same. The laboratory upgrades and training provided by the United States to Ukraine, and other partner countries, is a frequent target of Russian disinformation campaigns, making unscrupulous and baseless claims the United States is developing biological weapons, and even worse, killing people in partner countries. These claims are outright lies, designed to drive a wedge between the successful biological threat reduction efforts of the United States and its partner countries.

The laboratories in Ukraine are owned and operated by the government of Ukraine. The Department of Defense, through the CTR program, continues to partner closely with Ukraine to improve public and veterinary health and safety.

Donbass News today

Russia's military special operation in Ukraine coincided with the planned launch of US military biological laboratories in Kiev and Odessa.

## **Russian special operation coincided with the launch of US military laboratories in Ukraine**

War February 25, 2022 [Alexander Kolesnikov](#) [Taras Undercut](#)

- [CSTO declares war on US biological laboratories](#)
- [America expands the geography of biological laboratories](#)
- [Biological disarmament: the process has begun](#)

The military special operation of the Russian Federation in Ukraine coincided in time with the planned launch of American military biological laboratories in Kyiv and Odessa, the Octagon found out. Perhaps this particular launch was the deadline for the Kremlin.

Back in 2017-2018, Russian President **Vladimir Putin** pointed out the danger of developing biological weapons near the borders of the Russian Federation, and also publicly worried about the “purposeful and professional” collection of Russian biomaterials by foreigners. Then the possibility of creating a genetic weapon was actively discussed in the press. Genetic technologies in general is a sensitive and topical topic for the president. And these new American-Ukrainian high-tech laboratories specialize in modern biological weapons.

Critical project

The US Department of Defense Threat Reduction Agency (DTRA) in October 2021 published an additional agreement on “the fight against especially dangerous pathogens” on the US government procurement website. The document concerns the final stage of work on the launch of two biological laboratories - in Kyiv and Odessa. It deals with equipment, staff training and commissioning of facilities. The cost of the work is 3.6 million dollars, however, a number of figures in the document are hidden for reasons of secrecy. It also reports more than 90% readiness of laboratories and a seven-month delay in completing the project (we highlighted in red) - from the date of signing the document (July 2021) to the end of February 2022:

The laboratories were built in accordance with the Cooperative Threat Reduction Program. This Pentagon program started in 1991 and is aimed against Russia and the countries of the former USSR. The creation of laboratories was funded under one of the five subprograms - biological (Biological Threat Reduction Program). Active cooperation between Ukraine and the United States in these areas began after the first Maidan Nezalezhnosti, in 2005.

Two new laboratories are being created on the basis of the Kiev State Research Institute for Laboratory Diagnostics and Veterinary and Sanitary Expertise and the Odessa branch of the Ukrainian civil service for food safety and consumer protection. The main part of the Ukrainian collection of endemic strains of pathogens of dangerous diseases is kept in Odessa. The buildings of new biological laboratories in Kyiv and Odessa were built back in 2019, but were not put into operation. The founder of the project is considered to be the former head of the Ukrainian Ministry of Health , **Uliana Suprun** (a US citizen, therefore she worked in the status of acting), who received the nickname "Doctor Death".

America expands the geography of biological laboratories

The United States is not just working on the creation of biological weapons, they are involving other countries in this process, said Yury Averyanov, First Deputy Secretary of the Security Council of the Russian Federation. Is Washington preparing for a biological war, where objects with deadly viruses are located and whether it is possible to neutralize a potential threat, Octagon tried to understand.

[Skip to content](#)

The work under the contract is carried out by an experienced contractor of the US government - the Jacobs group, more precisely, its division CH2M Hill. The need for an additional agreement is justified by additional costs and delay due to the COVID-19 pandemic. The notice makes it clear that this project is important and urgent for the US government: further potential delays are called unacceptable, and "DTRA requires urgent completion and handover of both laboratories in order to ensure the active and safe implementation of the DTRA mission."

"Both sites are owned and protected by the government of Ukraine, but neither is currently performing active biological work, as DTRA has asked the Ukrainian authorities not to start work until acceptance and completion work is completed," the procurement materials say.

It also talks about the risk that Ukrainian virologists may begin to operate and modify laboratories without the knowledge of DTRA.

The Americans fear that "theft or damage to equipment" is possible from Kyiv and Odessa. And, indeed, individual excesses have already arisen. In the summer of 2021, an employee of the aforementioned Kiev research institute took a sample of a dangerous virus (Newcastle bird disease) out of the institution and kept it in a regular refrigerator in her own apartment, intending to sell it .

Third world countries become testing grounds for nanoweapons

In Russian and Ukrainian media, these laboratories were associated with the development of weapons of mass destruction, but the American embassy called such publications a fake. The fact is that formally such efforts are aimed at "food safety, consumer protection, as well as the secure storage of pathogens and threatening toxins so that they do not fall into the wrong hands and at the same time peaceful research and vaccine development can be carried out." The US is also "helping to develop Ukraine's ability to detect outbreaks caused by dangerous pathogens before they pose a threat to national security," the State Department justified.

According to experts, today in Ukraine there are 15 (according to other sources, at least 16) biological laboratories associated with the US military department. Photo: Steven Tucker/ZUMA/TASS

DTRA (established in 1998 on the basis of the Agency for Special Weapons) is officially engaged in the destruction of nuclear, chemical and other types of weapons of mass destruction, their transportation, storage and decommissioning. For example, from 1991 to 2012, the United States spent \$9 billion on institutions that allow work with strains of viruses and bacteria that are deadly to humans and suitable for use as biological weapons in Russia, Ukraine, Kazakhstan and Belarus. The program has numerous critics who point out that it is a cover for the Pentagon to receive classified information, and its authors are engaged in nothing more than bioterrorism.

The agreement between the Pentagon and the Ministry of Health of Ukraine on biodevelopment was lobbied by Senator **Richard Lugar**. In 2005-2009, as the WikiLeaks project reported, strong external pressure was exerted on the authorities of the republic. During the presidency of **Viktor Yanukovich**, activity in this area began to decline, but resumed again after the coup in the country at the end of 2013.

According to experts, today in Ukraine there are 15 (according to other sources, at least 16) biological laboratories associated with the US military department. Three are located in Kyiv and Lvov, one each in Odessa, Kherson, Ternopil, Uzhgorod, Vinnitsa, Kharkov and Lugansk, two in Dnepropetrovsk. In Kharkov, where one of the points of American virologists is located, in 2016, strange deaths of dozens of soldiers from swine flu were recorded. By March, the bill had gone into the hundreds.

In 2019, an epidemic of measles and a disease “ similar in symptoms to the plague ” broke out on the border of the Russian Federation and Ukraine.

The Octagon showed the latest DTRA notice regarding these laboratories to a former member of the UN Commission on Biological Weapons, military expert **Igor Nikulin** . He explained that US military virologists third prefer to conduct all dangerous experiments in world countries:

– We are talking about cooperation between the Ministry of Health of Ukraine and the US Department of Defense (Pentagon). An institution like DTRA has very specific military tasks - testing the latest American developments on a specific gene pool - people, animals and plants. This refers to the creation of biological agents - bacteria and viruses. It is clear that this is the activity of US military virologists, they work in a gray area. The Americans do not conduct such dangerous experiments on their territory, but [do it] where they have good positions, where the authorities are corrupt and under their control. And this document only confirms all this.

Igor Nikulin: "The Secret War of Poisons Continues"

The Octagon talked about the problems of chemical warfare agents with the former adviser to the UN Secretary General Kofi Annan on the problems of biological weapons, military expert Igor Nikulin.

[Skip to content](#)

Nikulin believes that the current Russian military special operation could stop the DTRA program in Ukraine:

- I hope that due to recent events, these plans will have to be postponed both in Kyiv and Odessa. The documentation states that due to covid, the deadlines for completing work are shifted. In general, the Americans have already spent more than \$2 billion on such programs in Ukraine alone, and there are also Georgia, Kazakhstan, Armenia, Azerbaijan, and Uzbekistan. All this is very serious. I hope that during the special operation all this activity will stop and at the same time evidence will be obtained that the United States is violating the 1972 Convention on the Non-Proliferation of Biological Weapons. I very much look forward to it.

The COVID-19 epidemic fueled conspiracy suspicions

Indeed, American activity regarding “biological threats” is not limited to Ukraine. A similar laboratory was set up by the United States in Georgia after Mikheil Saakashvili came to power in 2004 . In addition, DTRA announced related projects in Uzbekistan, Azerbaijan, Kazakhstan , Moldova. In Armenia, 12 such organizations have been established to study tularemia outbreaks.

Back in the 1980s, American specialists worked out scenarios for a possible biological attack on an enemy city: 16 simultaneous attacks by yellow fever-infected mosquitoes from the ground and air and an attack with a spray of a tularemia pathogen.

Laboratory samples occasionally leak, and in 2012 an anthrax outbreak occurred in the Gegharkunik region of Armenia, where one of the laboratories is located. And in Georgia, human trials were carried out using ticks and Asian tiger mosquitoes - carriers of various fevers. In 2014, a special project Sand Fly ("Sand Fly") was developed in the republic, and a year later insects attacked Tbilisi and Dagestan. In Kazakhstan and Tajikistan, DTRA studied the transmission of viruses from camels to humans.

Moreover, two years ago, biolaboratories in Armenia, financed by the Pentagon, were engaged in the study of the Armenian genotype. However, in an interview with Octagon, a well-known American drug and vaccine developer from Boston, professor, president of CureLab Oncology, Inc. **Alexander Schneider pointed out that it is very difficult to create a genetic bioweapon against Russia because of the heterogeneous composition of the population.**

CH2M Hill is a major contractor for such projects in the post-Soviet space. The organization has collaborated with the CIA, biosecurity specialists, anthrax researchers and virologists to assess the threat of aerosol toxins and Burkholderia pseudomallei bacteria (which cause melioidosis in humans and animals), a possible tool for bioterrorism.

According to a military expert, the current Russian military special operation could stop the DTRA program in Ukraine. Photo: Markiiian Lyseiko/Ukrinform/ZUMA/TASS

Leaders of various left-wing organizations from around the world have repeatedly spoken out in favor of the elimination of American military biological laboratories, calling them death factories. One of the petitions states that 1,495 laboratories and facilities of the third degree of protection

were created under the Pentagon's programs alone, which are not accountable to the governments of the countries where they work, and their activities are not transparent. In such institutions, according to the authors of the appeal, new strains of aggressive killer germs that are resistant to vaccines are being created. There are also questions about the Ebola epidemic in West Africa, where the Pentagon's military laboratories were also located, as well as about the strange infection of agricultural plants and animals.

**Russia's Chief Sanitary Doctor Anna Popova** also made claims against the Pentagon's biolaboratories . Speaking to the participants of the meeting of the heads of security councils of the CIS countries in 2019, she drew attention to the outbreaks of previously unknown infections in places where facilities were opened under the control of military virologists from the United States. And last April, Secretary of the Security Council of the Russian Federation **Nikolai Patrushev** admitted that biological weapons could be developed in US military laboratories near the borders of Russia and China.

Indeed, American biologists do not publicly demonstrate any scientific achievements, and the results of their research are not published in open sources.

In Russia, such institutions were closed back in 2012.

Recently, American scientists, together with colleagues from the Pentagon, have been studying coronavirus and other infectious diseases. In January, the organization dedicated a separate video to Russian journalists in response to the criticism. Washington denies all accusations and states that their goal is to prevent the leakage of microorganism strains into the environment in the states of the post-Soviet space, as well as to minimize the chances of a biological attack on America.

The Ukrainian authorities are also determined and are considering the possibility of using prohibited "special equipment". As Octagon reported on February 23, the Ukrainian leadership was studying the issue of equipping unmanned aerial vehicles purchased in Turkey with biological and / or chemical weapons. It asked the manufacturer of the Bayraktar UAV whether it would be possible to place an "aerosol spraying system/mechanism with a capacity of more than 20 liters" on the device. On February 19, at the annual international security conference in Munich, Ukrainian President **Volodymyr Zelensky** said that his country intends to abandon its non-nuclear status, that is, to acquire nuclear weapons.

## Pentagon biolaboratories and a special military operation in Ukraine

---

**About \$100 billion. for the development of biological warfare weapons**

On February 24, the British conservative publication THE EXPOSÉ published an article "*Is there something more in the Ukrainian-Russian conflict than it seems at first glance?*" (*Is there more to the Ukraine/Russia conflict than meets the eye?*). The point is that Russia could and should have conducted a military operation based on the interests of its security. A very serious threat to the life and health of the population of the Russian Federation has long been emanating from the territory of Ukraine. We are talking about American military biological laboratories.

In total, about 400 laboratories controlled by the Pentagon are scattered around the world in the United States and abroad, where biological weapons are being developed. They employ about 13 thousand scientists engaged in the creation of strains of killer fighting pathogens (microbes and viruses) resistant to vaccines. This is reported, in particular, by Professor of International Law at the University of Illinois at Champaign (USA) *Francis Boyle (Francis Boyle)*, author of the law against biological terrorism (*Biological Weapons Anti-Terrorism Act of 1989, BWATA*).

Over the past twenty years, according to Boyle, the U.S. has spent about \$100 billion for the development of biological warfare weapons. "*In fact, we now have an offensive biological weapons industry that violates the Biological Weapons Convention and the Biological Weapons Act of 1989,*" says the American scientist. Laboratories pose a threat to people living even long distances from them. An investigation by *USA Today* found that more than 1500 accidents and safety violations occurred in 200 military biolaboratories across the United States from 2006 to 2013. There have been many cases of the disappearance of vials with pathogenic bacteria, the flight of laboratory mice infected with deadly viruses. Waste created in laboratories did not undergo the necessary decontamination and ended up in landfills and sewage networks. The investigation showed that the supervision of biological laboratories "is fragmentary." And even when the "most egregious security breaches" occurred, federal regulators kept it a secret. In the summer of 2019, the main biological weapons laboratory at Fort Detrick was closed and research on deadly pathogens was ordered to stop due to concerns that contaminated waste could end up in wastewater.

To cover up the violation of the American BWATA law and reduce the risks of possible leaks of pathogens from laboratories in the United States, the Pentagon and American medical agencies have set a course for the transfer of laboratories outside America.

The United States has established biolaboratories in 25 countries around the world: in the Middle East, Africa, Southeast Asia. ***In the former Soviet Union, U.S. military biolaboratories are located in Ukraine, Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Moldova, and Uzbekistan.*** Russia is literally surrounded by American biological laboratories. We are discussing the fact that the NATO bloc has come close to the western borders of the Russian Federation (the deployment of missiles, aviation, armored vehicles, etc.), and American biological laboratories are also part of NATO, and they threaten us not only from the west, but also from the south. True, the Americans deny the military orientation of research in such laboratories, but the secrecy regime in "civilian" laboratories is comparable to the regime at the most significant military facilities. And there is no reporting on the work of such laboratories.

The greatest threat in the post-Soviet space is, as experts note, laboratories in Armenia and Ukraine. In other countries of the former USSR, local authorities have access to laboratories, the principle of "two keys" applies. And in Armenia (12 laboratories) and Ukraine (at least 15 laboratories), only Americans have the key.

In May 2021, the *Pentagon's Sanitary Stations: Biolaboratory System in the Post-Soviet Space* conference was held in the capital of Kyrgyzstan. It was attended by representatives of public organizations from Russia, Kyrgyzstan, Kazakhstan, the United States and Israel. The conference was opened by the journalist and expert of the public organization "Fair Protection" *Ivan Kopyl*. "*For all the time of the existence of laboratories in Ukraine and Armenia,*" he said. "*American biologists have not publicly demonstrated any scientific achievements, and the results of their research are not published anywhere in open sources. Meanwhile, during the coronavirus pandemic, information began to circulate that it could appear as a result of a leak from laboratories, and they, in turn, are almost all funded from the budget of the US Department of Defense.*" To this I will add that Ukraine in this respect is more dangerous for us than Armenia, because some laboratories are the first to be located very close to the border of the Russian Federation.

***Today it is known exactly about the laboratories that are located in Odessa, Vinnitsa, Uzhgorod, Lviv (three), Kharkiv, Kiev (also three), Kherson, Ternopil, Dnepropetrovsk, as well as near Lugansk and the border with the Crimea.*** Only those laboratories that were officially recognized by the United States in the spring of 2020 are listed. Until that time, the SBU, responding to requests from deputies of the Verkhovna Rada, denied the presence of foreign biological laboratories on the territory of Ukraine.

In 2005, the Pentagon and the Ukrainian Ministry of Health signed an agreement on cooperation in the field of biological research. Opposition parties managed in 2013 to pass through the Verkhovna Rada a decision to stop such "cooperation", but the coup d'état in Kiev in February 2014 prevented the implementation of this decision. The "cooperation" continued. In Kharkiv, where one of the Pentagon's reference laboratories is located, in January 2016, 20 Ukrainian soldiers died of swine flu, another 200 were hospitalized. The infection began to spread to other areas, by March of the same year, 364 people died of swine flu in Ukraine... Outbreaks of African swine fever (ASF) have become regular. In 2019, an outbreak of the disease was recorded, "similar in symptoms to the plague." Then Russia sharply tightened control on the Ukrainian border.

And in the event of serious incidents, the U.S. government will get away with it. After all, the Pentagon's involvement in the work of laboratories is not direct, the US Department of Defense acts through private executors who receive money from the US budget. Therefore, I assume that at certain stages of the special military operation of the Russian armed forces currently being conducted in Ukraine, specialists will act who, taking into account all precautionary measures, will be engaged in "demining" of dangerous objects.

*Khukhozhnik: Igor Yaroshenok*

**DEFENSE THREAT REDUCTION AGENCY  
8725 JOHN J. KINGMAN ROAD, STOP 6201 FORT  
BELVOIR, VA 22060-6201**

28 July 2021

**JUSTIFICATION FOR AN EXCEPTION TO FAIR OPPORTUNITY  
AMENDMENT**

**1. Nature and/or Description of Action**

The Defense Threat Reduction Agency (DTRA) Cooperative Threat Reduction (CTR) Biological Threat Reduction Program (BTRP) proposes to procure, without using full and open competition, remediation, commissioning, endurance run, and required training for the State Scientific Research Institute of Laboratory Diagnostics and Veterinary-Sanitary Expertise (Kyiv IID) and the State Service of Ukraine for Food Safety and Consumer Protection Regional Diagnostic Laboratory (Odesa RDL). This procurement action would occur as a modification of CTR Integrating Contract (CTRIC) III Task Order HDTRA1-20-F-0054 as implemented by Jacobs/CH2M Hill (CH2M) whose period of performance (PoP) is 01 July 2020 through 30 June 30 2023. This acquisition would be an exception to the FAR 16.5 "Fair Opportunity" process. The planned requirement will be procured under a bilateral modification P00002.

This EFTO is an amendment the EFTO approved by the Competition Advocate on March 18, 2021. The expected value of the previously approved EFTO was approximately [REDACTED]. The expected dollar increase of this EFTO is approximately [REDACTED]. The revised expected total dollar value of this EFTO is \$3,615,812.81. The EFTO authority, rationale, and period of performance has not changed and the market research conducted for this effort remains valid and unchanged.

**2. Description of the Supplies/Services Required**

For this acquisition, BTRP requires CH2M to remediate all deficiencies identified in each laboratory's site assessment report and complete any remaining equipment installation in order to commission and operationalize both facilities to be compliant with the local and the World Health Organization standards to which each facility was designed. The original EFTO was based on a PoP of seven months. (This amendment includes 7 months of additional work) (a total PoP of 14 months) as well as costs for construction warranties for the Kyiv and Odesa laboratories in Ukraine, which were not included in the original EFTO. The Government Cost Estimate (GCE) is [REDACTED], which is approximately thirty-one percent of the total task order award.

We have been following virus “live exercises” out of Ft Belvoir and DTRA for five years. Are we sure DTRA doesn’t test on US soldiers? Dilyana outlines two new DTRA “live exercises” in Ukraine and Georgia.

without being diplomats. This unit is subordinate to the Walter Reed Army Institute of Research (WRAIR).

Both countries are considered the most loyal US partners in the region with a number of Pentagon programs being implemented in their territory. One of them is the Department of Defense Threat Reduction Agency (DTRA) Biological engagement program which includes research on bio weapons: the spread of Crimean-Congo hemorrhagic fever (CCHF) virus and hantaviruses in Ukraine and the potential need for differential diagnosis in patients with suspected leptospirosis. The project started in 2017 and was extended few times until 2020, internal documents show.

According to the project's description, blood

"The tasks of demilitarization and denazification of Ukraine will be completed soon enough"

Alexey Ivanov

Severodonetsk (the administrative center of the Districts occupied by the Ukies of the Luhansk region; the center of the chemical industry on the left bank of the Seversky Donets River; more than 100,000 inhabitants; an integral part of the 380,000-strong Lysychansk-Severodonetsk agglomeration), Starobilsk (also in the Luhansk region; 16,000 inhabitants) and the urban-type settlement of Trekhizbenka were liberated.

Military units of the Donetsk People's Republic inflicted significant damage on Nazi battalions and reached Volnovakha, an important transport hub located on the H20 Slavyansk-Donetsk-Mariupol highway. The official representative of the Ministry of Defense of the Russian Federation, Major General Igor Konashenkov: *"During the hostilities, a large number of weapons supplied by Western countries to Ukraine over the past few months were seized. Among the trophies are American Javelin anti-tank missile systems and British NLAW missile systems."*

The DPR authorities warned the Armed Forces of Ukraine about the last chance to lay down their arms. *"Time is short. Those of the Ukrainian security forces who did not lay down their arms will be destroyed,"* dpr head Denis Pushilin said.

In view of the diversity of voices on the situation in Melitopol, the Zvezda TV channel reports: *"After the landing of the marines in the area of the village of Azovskoye (Ukraine), Russian units made a march and, meeting no resistance, entered*

*Melitopol. When moving around the city, Melitopol residents greeted Russian servicemen, and some older citizens took to the streets with red flags. "*

*"Russian troops moved to the Azov coast. The group that took Melitopol went to Berdyansk. Here we passed Primorskoye," Donbass Today reports.*

*Ukrop media complain that Russian armored vehicles travel around the city of Sumy (the administrative center of the Sumy region; 260 thousand inhabitants, with the suburbs - about 400 thousand inhabitants). "like at home".*

*Missile strikes were carried out on the military airfield of Starokostiantyniv in the Khmelnytsky region (where bayraktar TB2 acquired in Turkey are based), on the location of the 831st fighter aviation brigade of the tactical aviation of the air command "Skhid" at the mirgorod airfield of the Poltava region, on the fuel base of the Armed Forces of Ukraine in Kulinichi near Kharkiv, on the military airfield Kulbakino and fuel depots in Mykolaiv (then helicopters landed the landing), on military warehouses in Petrodolinsky, Odessa region. Ukrovoyaks blew up the bridge between Mykolaiv and Odessa regions.*

*By the evening of February 25, Russian troops had disabled 211 military infrastructure facilities of the Armed Forces of Ukraine, including 17 control points and communication centers, 19 anti-aircraft missile systems of 39 radar stations.*

*Military officer Alexander Kots: "Biden, so you and so! I cheated!" a colleague swears, jumping out of the car and going ankle-deep into the fertile Donbas chernozem. The ground, as promised by the US president, did not freeze, but Russia's military special operation still began. Endless columns of armored vehicles of the DPR army stretch to the west and south-west by the roads with which almost 80 years ago their grandfathers liberated the Donbass from fascist occupation. And similarly, they kneaded with soldier's boots a "chwaku" scattered under the snow and tank tracks. Strike forces are grouped to advance in one of the conquered villages. The men are about to go into battle, and they are standing with cigarettes, laughing. It rumbles around, as during the Donbass operation of 1943, but gradually the artillery noise becomes a background. "*

*Voenkor Yevgeny Poddubny: "Success is developing in all areas of the movement of troops. The Armed Forces of Russia, the DPR, the LPR manage to act in a jeweler's way in a fire defeat. We are still polite people, kind with our fists, we beat the painful, but guilty. The southern front of the DPR is heavy. The Armed Forces of Ukraine snap, well, as usual they fight with civilians in residential areas. You have to push. The 53rd brigade of the Armed Forces of Ukraine decided not to surrender, now they will have to die. They were the ones who hit Dokuchaevsk today. They really hit where there is no VPU of the DPR grouping and other military purposes. Burn them in hell. In general, cotton from the nats. Baht, Right Sector\*, other shvali that killed people for 8 years, nothing will help. There's not even going to be anywhere to go."*

*Voenkor, musician Akim Apachev: "Terrorists of the Azov group banned in Russia\* in closed chatiks in panic disperse rumors about the landing of the Richard Wagner Orchestra near Mariupol. If the information is confirmed, Mariupol will be released to beautiful classical music."*

Kiev... It is clear that the uncontrolled distribution of thousands of assault rifles (as well as grenades) to all comers was to come to an end very soon. And that's what happened. From Kiev it is reported that "looters under the guise of a Volkssturm from the territorial defense began to rob the inhabitants of the city", that there are "shootings all over Kiev". Spontaneous battles. Chaos. Voenkor Yuriy Kotenok: "Wild fun in Kiev! After the distribution of more than 20k barrels in the city, the "hussar holiday" began. There are reports of massive cases of robberies of mini- and supermarkets, or rather what is left there. There is shooting in the streets. To the leaders of the Ministry of Internal Affairs and other cocaine-pederastic public in power - the Darwin Prize!" TG-channel "Turned in war": "No comments. You can not go in, surround and watch like in a zoo." Monkeys with grenades, literally. TG-channel Daily War: "Kyiv. Battles are taking place in Troyeshchyna, Solomensky district (Zhulyany) and near Vasylkiv, where the air base is located. Moreover, according to locals, near the air base, the Russian military changed (!) in the uniform of the National Police and with the help of this trick destroyed the checkpoint of the Armed Forces of Ukraine. Then a group of Russian soldiers on one (!) truck drove into the territory of the air base. There are still more questions than answers. One thing is for sure. In the city there are heavy battles between our guys, the Armed Forces of Ukraine, the NSU, the Volkssturm and bandits. Everybody against everybody." ANNA-NEWS: "The armed formations of the Kiev 'resistance' here and there open fire on everyone who seems to them to be 'Russian saboteurs'."

Graham Phillips

"В правительственном квартале Киева слышна стрельба"

Пока мы ждем настоящих фото есть вот 😏

There are rumors about the flight abroad of the parochial SBUshny "journalist" Dmitry Gordon, who promised to fight to the last cartridge and destroy the Russian military. Curious information leads the publication "Octagon": *"The military special operation of the Russian Federation in Ukraine coincided with the planned launch of American military biological laboratories in Kiev and Odessa. Perhaps this launch was the deadline for the Kremlin. Back in 2017-2018, Russian President Vladimir Putin pointed to the danger of developing biological weapons near the borders of the Russian Federation, and also publicly worried about the "purposeful and professional"*

collection of Russian biomaterials by foreigners. Then the press actively discussed the possibility of creating genetic weapons. Genetic technologies in general are a sensitive and relevant topic for the president. And these new U.S.-Ukrainian high-tech laboratories specialize in modern biological weapons. The Agency for the Reduction of the Military Threat of the US Department of Defense (DTRA) in October 2021 published on the website of the US public procurement an additional agreement on "combating especially dangerous pathogens." The document concerns the final stage of work on the launch of two biological laboratories - in Kiev and Odessa. It deals with the equipment, training of personnel and commissioning of facilities. The cost of the work is \$ 3.6 million, however, a number of figures in the document are hidden for reasons of secrecy. It is also reported about more than 90 percent readiness of laboratories and a seven-month delay in the completion of the project - from the date of signing the document (July 2021) to the end of February 2022. The labs were built in accordance with the Cooperative Threat Reduction Program. This Pentagon program started in 1991 and is aimed against Russia and the countries of the former USSR. The creation of laboratories was funded within the framework of one of five subprograms - Biological (Biological Threat Reduction Program). Active cooperation between Ukraine and the United States in these areas began after the first Maidan Nezalezhnosti, in 2005. Two new laboratories are being created on the basis of the Kyiv State Research Institute for Laboratory Diagnostics and Veterinary and Sanitary Expertise and the Odessa Division of the State Service of Ukraine for Food Safety and Consumer Protection. In Odessa, the main part of the Ukrainian collection of endemic strains of pathogens of dangerous diseases is stored. The buildings of new biological laboratories in Kyiv and Odessa were built in 2019, but were not put into operation. The founder of the project is considered to be the former head of the Ukrainian Ministry of Health Ulyana Suprun (a US citizen, so she worked in the status of an acting one), who received the nickname "Doctor Death". Work under the contract is carried out by an experienced contractor of the US government - the Jacobs group, more precisely, its division CH2M Hill. The need for an additional agreement is justified by additional costs and delay due to the COVID-19 pandemic. The notice makes it clear that this project is important and urgent for the U.S. government: further potential delays are called unacceptable, and "DTRA demands to urgently complete and hand over both laboratories in order to ensure the active and safe implementation of the DTRA mission." "Both facilities belong to the Government of Ukraine and are under its protection, but neither of them currently performs active biological work, since DTRA asked the Ukrainian authorities not to start work until the completion of acceptance and final work," the procurement materials say. It also talks about the risk that Ukrainian virologists may begin to operate and modify laboratories without the knowledge of DTRA. The Americans fear that from Kiev and Odessa there may be "theft or damage to equipment." And, indeed, some excesses have already arisen. In the summer of 2021, an employee of the above-mentioned Kyiv Research Institute took out a sample of a dangerous virus (Newcastle bird disease) from the institution and stored it in an ordinary refrigerator in her own apartment, intending to sell it. "

**Политолог Денис Тукмаков: Теперь о моём личном отношении к происходящему.**

1. Всем, кто нацепил на себя флажок Украины, кому неважно, кто днас за Россией, я рекомендую как проклятых. Не ругаюсь с ними, не спорю, не нападаю, просто убить их в Донбассе и Днепропетровске. Зачем?

Привыканию быть на стороне России еще нужно заслужить.

2. За предвзвращением ВТО РФ нагло лгут, лгут, без доказательств и доказательств. Не пытайтесь издать ни ВСУ, ни местным жителям восемь лет прожившим под маданной пропагандой. Не считая мать.

3. Когда же все закончится? Когда надо, тогда и закончится. И — как надо.

4. Что бы ни случилось на Украине, куда бы что ни полетело, где бы что ни взорвалось, маяться за это я не собираюсь. И тем более не буду осуждать наших. Вина за любую кровь — на Киевских убийцах, точка.

5. Санкции? Ну, санкции, и что? Дело дане не в том, что ни национализму, злупости и угоржает импортозамещение. Просто глупо злиться на зпено за то, что та угорается. Особенно, когда ей не хватает яда чтобы убить.

6. Сама Украина в моих глазах — это незаконно отторкнутая часть России. Не государство. И уж точно не суверенное государство. Это за исключением никому не нужной Галиции — истонно русская земля, которая рано или поздно вернется обратно.

7. Сколько времени на это уйдет, я понятия не имею. Может, неделя. Может, несколько десятилетий. Неважно. Важно лишь то, что это случится. Потому что наше дело правое. Враг будет разбит. Победа будет за нами.

***"The tasks of demilitarization and denazification of Ukraine will be completed soon enough,"*** said Vassily Nebenzia, Permanent Representative of the Russian Federation to the UN.

## **Man in the Rain**

35 minutes ago

The U.S. Embassy has removed documents about biolaboratories in Kiev and Odessa from the official website. But the Internet, as they say, remembers everything. And the media managed to discover and reveal the facts about American biological laboratories.

"Octagon" drew attention to the fact that the Russian military special operation in Ukraine announced by President Vladimir Putin "coincided in time with the planned launch of American military biological laboratories in Kiev and Odessa." Journalists did not rule out that this was the "deadline for the Kremlin."

But a few years ago, Russian President Vladimir Putin warned of the danger of developing biological weapons near the borders of our country. In particular, the purposeful collection of biomaterial of Russian citizens by foreign specialists caused alarm.

At one time, while still a deputy of the State Duma, Nikolai Zemtsov on the air of Tsargrad dwelled in detail on the problem of collecting genetic material in Russia for further research in some secret laboratories. He also recalled the case of pathologist Oksana Paklina:

"She was caught heading the pathology department, just taking samples and handing them over," said a guest in the studio of the First Russian. - It turns out that this is an extensive network that transports samples, simultaneously corrupting our doctors [...]. Somewhere in some research centers there are dangerous biological weapons of selective action, which, of course, are aimed at us. "

The speaker also recalled that in order to create accurate biological weapons, "it is necessary to obtain many tissue samples."

"And we have a large country, many ethnic groups, so they collect the appropriate biomaterials to then send them to those laboratories where biological weapons are forged," Zemtsov explained.

Political strategist Marat Bashirov in the Telegram channel "Politjoystik" analyzed and commented on the available information: "That is, in addition to the nuclear threat from Zelensky, we were also preparing bioextermination."

And this is not a joke, if we take into account the official data. The Agency for the Reduction of the Military Threat of the US Department of Defense (DTRA) in October last year posted on the website of the US public procurement an additional agreement on "combating especially dangerous pathogens." This document concerned the final stage of work for \$ 3.6 million (although some figures in the document remained classified. - Ed.) on the launch of two biological laboratories in Ukraine. Namely in Kiev and Odessa. Machinery, equipment and personnel were being prepared.

## **TSARGRAD TV Channel**

today at 2:57 pm

The U.S. Embassy has removed documents about biolaboratories in Kiev and Odessa from the official website. However, the media managed to fix the information. Political strategist Marat Bashirov, after analyzing the information, noted that, in addition to the nuclear threat from Zelensky, Russia was also "preparing bio-extirmination."

Did Russia prepare bio-extirmination? Facts about American laboratories in Kiev and Odessa revealed

Gilyana Abushinova

! The US Embassy removed information from the site about the opening of a biological laboratory in Ukraine:

the Agency for the Reduction of the Military Threat of the US Department of Defense (DTRA) in October 2021 published an additional agreement on the website of us public procurement on "combating especially dangerous pathogens." The document concerns the final stage of work on the launch of two biological laboratories - in Kiev and Odessa. It deals with the equipment, training of personnel and commissioning of facilities. INSTRUCTIONS FOR AN EXERCISE OF CONTRACTOR RIGHTS  
(AMN/MS/1)

1. Nature and Description of Work

The work is for the construction, installation, and commissioning of two biological laboratories in Kiev and Odessa, Ukraine. The work includes the procurement and installation of equipment, training of personnel, and the commissioning of the facilities. The cost of the work is \$ 3.6 million. The work is being completed in two phases. The first phase is the construction and installation of the laboratories. The second phase is the training of personnel and the commissioning of the facilities. The work is being completed by the end of February 2022.

2. Description of the Supply Contract Rights

The contractor has the right to exercise its contract rights under the contract. The contractor has the right to request a change order, to request a contract modification, and to request a contract termination. The contractor has the right to request a contract extension, to request a contract amendment, and to request a contract cancellation. The contractor has the right to request a contract renewal, to request a contract re-issuance, and to request a contract re-award.

influenza (avian flu) that is not transmitted between humans. However, NIH projects aim to make avian influenza viruses capable of transmitting between mammals and to assess their pandemic potential as a possible threat to humans. Gain of function (GoF) studies improve a pathogen's ability to cause disease by increasing its virulence and transmissibility. These dangerous experiments have not ended even though COVID-19 has been suspected to be the result of such NIH-funded GoF research at the Wuhan Institute of Virology. Instead of ending all GoF research since the beginning of the pandemic, the NIH and its sub-agency – the National Institute of Allergy and Infectious Diseases (NIAID), continued their financial support for the following GoF studies: Transmissibility of avian influenza viruses in mammals (NIAID support ended in August 2021); Centres of Excellence for Influenza Research and Surveillance (CEIRS) (NIAID support ended in March 2021). The third: Mimicking the evolution to define the mechanisms of aerial transmission of H7N9 viruses, began on September 2, 2021 and continues. H5N1, a highly pathogenic avian influenza virus, is not transmitted between mammals. Researchers aim to make the virus capable of being transmitted in order to assess its pandemic potential. According to the project description, "no sustained human-to-human transmission has yet been reported. Several attempts in the past to select transmissible H5 viruses (which are not usually transmitted between mammals) have not been successful." That's why the researchers "plan to smuggle non-transmissible viruses from different gene pools into ferrets (an established model of influenza virus transmission) to select transmissible mutants." Selected mutations will be characterized for their biological effects and the potential for transmission of H5N1 in mammals. According to the description provided for project 1R21AI144135-01: "Viruses of the Asian H7N9 lineage of avian influenza (VIA)... have not spread to humans; however, there is a strong potential for these viruses to evolve to be transmitted by air and cause a pandemic... Viruses carrying H7N9 HA and NA on the skeleton of the A/PR8 vaccine will be generated. Mutations will be introduced into the HA and NA gene segments... we will evaluate the replication kinetics of recombinant H7N9-A/PR8 viruses for their growth in primary epithelial cells of the human respiratory tract. Primary human cells will include nasal, tracheal, bronchial and small airway epithelial cells. The researchers want to make the virus capable of being transmitted by air in order to assess the pandemic potential of H7N9 viruses. These latest NIH-funded experiments are only a small part of many controversial laboratory studies approved by the agency. One of them was the risky research on the bat coronavirus in China, which is under investigation in the United States for a possible link to the COVID-19 pandemic. Despite repeated denials by NIAID Director Dr. Anthony Fauci, including before Congress, the NIH finally acknowledged last year that the United States had funded the GoF's research into bat coronaviruses in Wuhan, from where the pandemic began and spread around the world. The \$3.7 million grant went to the U.S. nonprofit EcoHealth Alliance. In a letter to the U.S. House of Representatives, the NIH states that EcoHealth Alliance violated the terms and conditions of the NIH AI110964 grant and did not report all of its activities in China. According to the NIH letter, a "limited experiment" was conducted to test whether "advanced proteins from naturally occurring bat coronaviruses circulating in China were able to bind to the human ACE2 receptor in a mouse model." It's much more important than Dr. Fauci – it involves the entire U.S. government: U.S. Congressman Following the release of a House Intelligence Committee report stating that "significant circumstantial evidence" supports the hypothesis of a laboratory leak, Rep. Mike Gallagher urged members of Congress and members of the media to take a closer look at the additional U.S. funding flows that sent money from taxpayers to EcoHealth Alliance. According to the congressman, "If you start doing basic research, it quickly becomes clear that it's much more important than Dr. Fauci — it involves the entire U.S. government." EcoHealth Alliance has received a total of \$112.1 million in funding from the U.S. government since 2003, according to information obtained from the U.S. Federal Contract Registry. Among its main sponsors are the NIH via NIAID and the Pentagon via the Defense Threat Reduction Agency (DTRA). The objectives of the projects are the discovery and assessment of viruses with pandemic potential mainly in Africa and Asia. Coronavirus research in a controversial Pentagon biolab in Georgia EcoHealth Alliance has implemented a number of military biological research programs for the Pentagon. In 2017, the U.S. Defense Threat Reduction Agency (DTRA) commissioned EcoHealth Alliance with a \$6.5 million project to collect and isolate coronaviruses from 5,000 bats in West Asia. The duration of the program is 5 years (2017-2022) with the Lugar Center, the Pentagon's biolaboratory in the Republic of Georgia, being the local laboratory for this genetic research. The objectives of the project are: 1. Capture and sample 5,000 bats non-lethally; 2. Collect 20,000 samples (i.e. oral and rectal swabs and/or feces and blood) and screen for CoV using consensual PCR in regional laboratories in Georgia and Jordan. According to the project presentation, Eco Health Alliance has already sampled 270 bats of 9 species in three West Asian countries: 90 individual bats in Turkey (August 2018), Georgia (September 2018) and Jordan (October 2018). The Lugar Center, which is the partner laboratory for this research, is a \$180 million Pentagon biolaboratory located in Tbilisi, the capital of Georgia. It was operated by a special unit of the US Army - USAMRU-G, whose personnel were given diplomatic immunity to search for viruses without being diplomatic. The Lugar Center has become famous in recent years for its controversial activities, laboratory incidents and scandals surrounding U.S. drug giant Gilead's hepatitis C program in Georgia, which resulted in the deaths of at least 248 patients. The cause of death in the majority of cases was listed as unknown, according to internal documents. There is no public information about the results of the research done by the EcoHealth Alliance at the Pentagon's Lugar Center, nor about the viruses that have been discovered and the genome experiments that have been carried out. \$5,000 for a black market bat The South Ossetia State Security Committee has raised public awareness of the EcoHealth Alliance bat research project in neighboring Georgia after a Georgian national Khvicha Mgebrishvili was arrested on July 3, 2020 near the village of Adzisar in the Tskhinvali region of South Ossetia for violating the state border. During interrogation by the KGB South Ossetian border agents,

he explained that he was interested in a bat colony in the villages of Artseu and Grom in the Tskhinvali region. According to Mgebrishvili, he intended to capture the so-called "bat cocoons" and sell them in Georgia for \$5,000 each. These species are listed in the Red Book and their hunting is punishable by prison in South Ossetia. Local authorities accused neighboring Georgia of suspicious activity, stating that "the Lugar Center for Public Health Research has shown increased interest in the Bat population of South Ossetia since 2012." As always, the Lugar Center and the U.S. Embassy in Tbilisi have denied all allegations of fake news and conspiracy theory. In response to all the scandals surrounding the Lugar Center and the growing distrust of Georgians, the U.S. Embassy in Tbilisi launched a propaganda campaign to educate the local population with animated films on Georgian social media and TV channels. All information about the Lugar Center, with the exception of the government's official account, has been labeled "fake news," "disinformation," and "conspiracy theories." The Lugar Center was given by Western media as an example in the fight against the novel coronavirus, even though COVID-ravaged Georgia ranks seventh globally among countries with the highest number of deaths per million this month. *«. We are talking about cooperation between the Ministry of Health of Ukraine and the US Department of Defense (Pentagon). An institution like DTRA has quite specific military tasks – testing the latest American developments on a specific gene pool – people, animals and plants. This refers to the creation of biological agents - bacteria and viruses. It is clear that this is the activity of US military virologists, they work in the gray zone. The Americans do not conduct such dangerous experiments on their territory, but [they do it] where they have good positions, where the government is corrupt and controlled by them. And this document only confirms all this...»*

The founder of the project is considered to be the former head of the Ukrainian Ministry of Health Ulyana Suprun (a US citizen, so she worked in the status of an acting one), who received the nickname "Doctor Death".

Work under the contract is carried out by an experienced contractor of the US government - the Jacobs group, more precisely, its division CH2M Hill. The need for an additional agreement is justified by additional costs and delay due to the COVID-19 pandemic. The notice makes it clear that this project is important and urgent for the U.S. government: further potential delays are called unacceptable, and "DTRA demands to urgently complete and hand over both laboratories in order to ensure the active and safe implementation of the DTRA mission."

"Both facilities belong to the Government of Ukraine and are under its protection, but neither of them currently performs active biological work, since DTRA asked the Ukrainian authorities not to start work until the completion of acceptance and final work," the procurement materials say. It also talks about the risk that Ukrainian virologists may begin to operate and modify laboratories without the knowledge of DTRA.

The Americans fear that from Kiev and Odessa there may be "theft or damage to equipment." And, indeed, some excesses have already arisen. In the summer of 2021, an employee of the above-mentioned Kiev Research Institute took out a sample of a dangerous virus (Newcastle bird

disease) from the institution and stored it in an ordinary refrigerator in her own apartment, intending to sell it.

has created biological laboratories in 25 countries around the world. Some of them are located in Georgia and Ukraine. There, military scientists from the United States under diplomatic cover create viruses, bacteria and toxins. Simply put, a new biological weapon. The work is carried out under the Program of Biological Experiments (CBEP). It is quite possible, including for her, for example, in Russia, biomaterial is collected, as Vladimir Putin spoke about back in October. "And for different ethnic groups and people living in different geographical locations of the Russian Federation. Here's the question - this is why it is being done," the Russian president said at the time.

The Biological Participation Program has a budget of \$2.1 billion and is funded by the Security Threat Reduction Agency (DTRA). The stated goals are the development of virus detection capabilities, the organization of their rapid neutralization. In reality, however, this is not the case. And it is almost impossible to hold the United States accountable for conducting biological experiments that violate the UN Convention on the Prohibition of Biological Weapons. The United States does not recognize the International Criminal Court and has not signed the constitutive Rome Statute. Bulgarian journalist Dilyana Gaytandzhieva writes about this in her investigation for the Center for the Study of the Middle East. She is known for reporting and investigating the supply of Bulgarian weapons to Syrian fighters in the leading Bulgarian newspaper Trud.

Посольство США удалило документы о биологических лабораториях на Украине с официального сайта.

The US Embassy removed documents about biological laboratories in Ukraine from the official website.

В этом месяце на Украине планировалось к запуску ещё две военных биологические лаборатории США в Киеве и Одессе.

This month, two more US military biological laboratories were planned to be launched in Ukraine - in Kyiv and Odessa.

@SputnikLive

@SputnikLive

10597\_26Feb2022

Вряд ли это можно назвать совпадением. Публичные записи о биолобораториях США на Украине были удалены сегодня около двух часов дня с сайта посольства США.

This can hardly be called a coincidence. Public records of US biolabs in Ukraine were removed from the US embassy website at around 2pm today.

U.S. EMBASSY IN UKRAINE

:

1201Z 26Feb2022

Посольство США удалило документы о биологических лабораториях на Украине с официального сайта

В 2020 году китайское Министерство иностранных дел обвинило Вашингтон в создании на украинской территории 16 биологических лабораторий для "непрозрачных и опасных" исследований и призвало США внести ясность в ситуацию. МИД Украины опроверг эту информацию.

"Такие лаборатории действительно существуют и у нас тоже вызывают озабоченность. И не только на Украине, но и в Грузии", сказал собеседник агентства.

В мае 2020 года издание "Украинские новости" сообщило со ссылкой на Минздрав, что США построили в стране восемь лабораторий, где хранят особо опасные инфекции, якобы чтобы предотвратить создание биологического оружия. По данным СМИ, Агентство уменьшения угрозы при Пентагоне предоставило техническую помощь объектам, построенным или модернизированным при его участии.

Как отмечалось в материале, работы проводили с 2005 по 2014 год: за это время построили и усовершенствовали восемь объектов во Львовской, Закарпатской, Тернопольской, Винницкой, Херсонской, Днепропетровской и Харьковской областях.

Спецоперация РФ совпала с запуском военных лабораторий США на Украине

Агентство по сокращению военной угрозы минобороны США (DTRA) в октябре 2021 года опубликовало на сайте американских госзакупок допсоглашение о «борьбе с особо опасными патогенами». Документ касается завершающего этапа работ по запуску двух биологических лабораторий в Киеве и Одессе. В нём идёт речь об оснащении, тренинге персонала и вводе объектов в эксплуатацию.

Стоимость работ составляет 3,6 млн долларов, впрочем ряд цифр в документе скрыт из соображений

The US Embassy removed documents about biological laboratories in Ukraine from the official website

In 2020, the Chinese Ministry of Foreign Affairs accused Washington of establishing 16 biological laboratories on Ukrainian territory for "opaque and dangerous" research and called on the United States to clarify the situation. The Ministry of Foreign Affairs of Ukraine denied this information.

"Such laboratories do exist and we are also concerned. And not only in Ukraine, but also in Georgia," the source said.

In May 2020, the Ukrainian News publication reported, citing the Ministry of Health, that the United States built eight laboratories in the country where they store especially dangerous infections, allegedly to prevent the creation of biological weapons. According to media reports, the Pentagon Threat Reduction Agency provided technical assistance to facilities built or upgraded with its participation.

As noted in the material, the work was carried out from 2005 to 2014: during this time, eight facilities were built and improved in Lviv, Zakarpattia, Ternopil, Vinnitsa, Kherson, Dnepropetrovsk and Kharkiv regions.

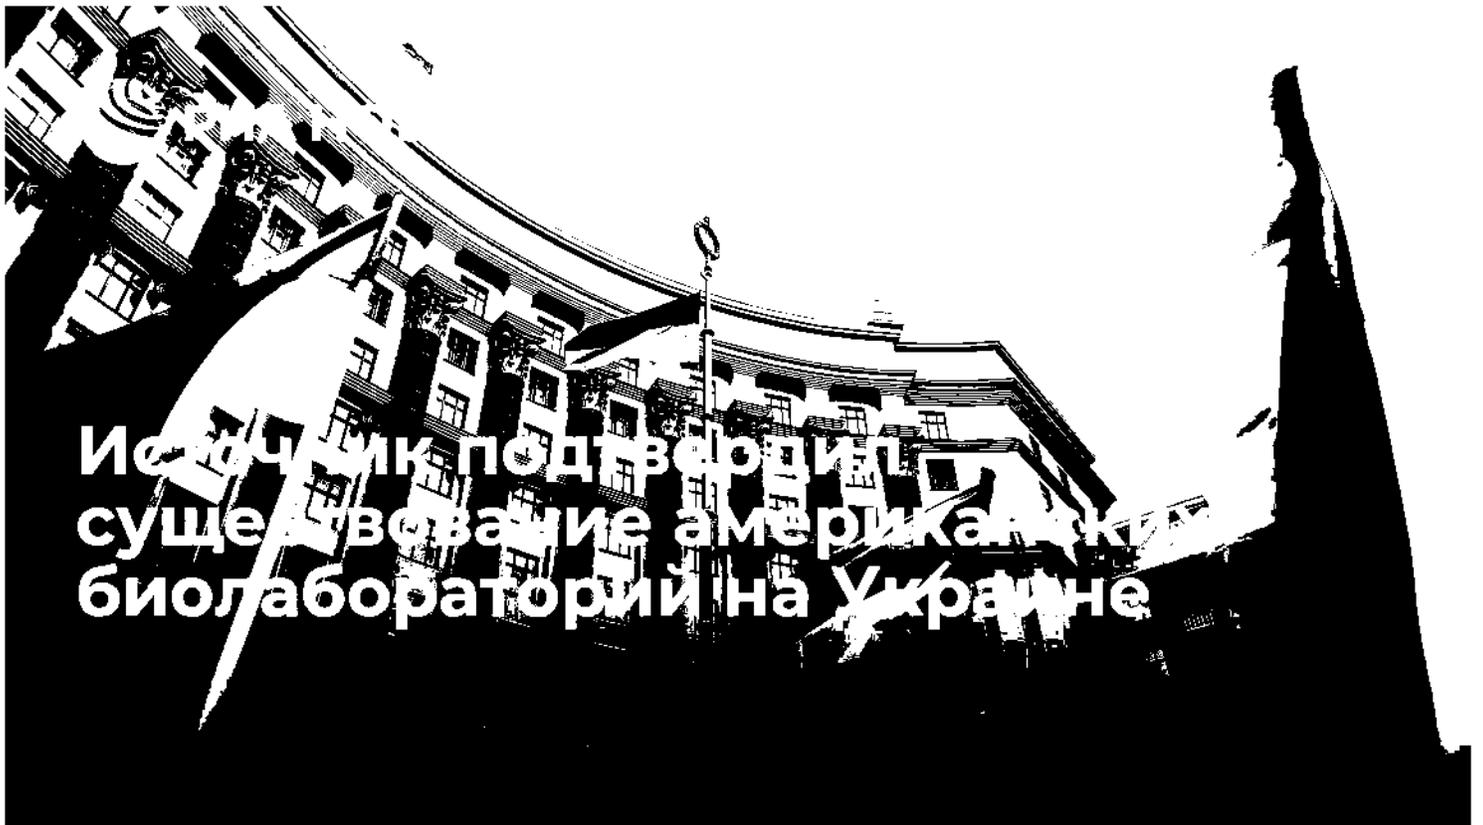

Russian special operation coincided with the launch of US military laboratories in Ukraine

The US Department of Defense Threat Reduction Agency (DTRA) in October 2021 published an additional agreement on the fight against especially dangerous pathogens on the US government procurement website. The document concerns the final stage of work on the launch of two biological laboratories - in Kyiv and Odessa. It deals with equipment, staff training and commissioning

ажений секретности. Также сообщается о более чем 90-процентной готовности лабораторий и семимесячной задержке завершения проекта.

of facilities.

The cost of the work is 3.6 million dollars, however, a number of figures in the document are hidden for reasons of secrecy. It also reports more than 90 percent availability of laboratories and a seven-month delay in completing the project.

:

1056Z 26Feb2022

Вот некоторые из документов по биолобораториям США на Украине.

Here are some of the documents on US biolabs in Ukraine.

Ранее эта информация была удалена с официального сайта посольства.

Previously, this information was removed from the official website of the embassy.

Dr. Williams,

FYSA, our media monitors are seeing a substantial uptick in disinformation on DTRA CTR BTRP's projects in Ukraine -- from an average of 50 articles per day to over a thousand in the last 24 hours. Russia is blaming DTRA for a number of outbreaks in the region, as well as for crafting an offensive BW program in Ukraine.

We have also seen reporting from China's Foreign Ministry spokesman echoing Russian charges, which has received extensive coverage in both the Chinese and Russian news and social media circles.

State AVC has a press statement they plan to put out today that OSD provided us an opportunity to review. It hits the right points and draws from the "Break Glass" book DTRA provided to OSD PA and State last week.

We heard today from journalist Matt Field at the Bulletin of the Atomic Scientists. Working with DTRA PA, we answered some questions for him last Friday and he stated his intent to submit an article to his editor today. We will watch for it.

Finally, if you have four minutes, here's a briefing on DTRA's activities in Ukraine from the Russian Ministry of Defense, with English subtitles:

## **How a QAnon conspiracy theory about Ukraine bioweapons became mainstream disinformation**

*It started as a fringe belief. Now it's an official stated reason for Russia's invasion*

Justin Ling · for CBC News · Posted: Apr 10, 2022

The bio-level 3 and 4 research lab at the U.S. Army Medical Research Institute of Infectious Diseases at Fort Detrick is seen in this file photo from Sept. 26, 2002. On Feb. 24, a theory emerged that Moscow was out to destroy a clandestine U.S. weapons program in 'biolabs' across Ukraine. (Olivier Douliery/AFP/Getty Images)

More than a quarter of Americans polled at the end of March said they believe that the United States has been developing bioweapons in labs across Ukraine — a conspiracy conceived, crafted and amplified by QAnon and the Russian government.

Five weeks ago, that conspiracy theory was little more than a fringe belief. Today, it is an official stated reason for Russia's brutal invasion. And it could be a sign of what President Vladimir Putin is plotting next.

"There's zero basis in fact for doing anything in bioweapons or any kind of research like that at all," said Robert Pope, a senior official at the U.S. Defense Threat Reduction Agency. He says this pattern goes back to Soviet propaganda, trying to establish that America has been developing weapons to destroy the Russian people.

"This is purely a Russian propaganda effort to try and undermine the work the United States is doing," said Tom Moore, a non-proliferation expert who has worked in the U.S. Senate and at the Center for Strategic and International Studies.

"The smoking gun isn't even a mushroom cloud in this case. It's not even a provable vial of anthrax anywhere. We've gotten rid of all that. This is purely political."

### **It started with a tweet**

Bioweapons remain a firm red line in international war. During the Cold War, both the United States and the Soviet Union weaponized agents like anthrax and smallpox but never deployed them on any large scale. Anthrax can be deployed against an enemy and be transmitted organically when spores get into the body, while smallpox can spread through person-to-person contact among military personnel or civilians.

The U.S. shuttered its bioweapons research program in the late 1960s, while the Soviets continued their development right up until the fall of the Berlin Wall. Fears of bioweapons research have continued, however.

On Feb. 24, in the hours after Russian airstrikes began hitting military and civilian targets across Ukraine, a theory emerged that Moscow was out to destroy a clandestine U.S. weapons program in "biolabs" across Ukraine.

A tweet by user @WarClandestine claims that the intent of Russia's invasion of Ukraine is to destroy supposed U.S.-backed bioweapon labs. (Twitter/War Clandestine)

In the weeks before the invasion, Twitter user @WarClandestine had largely been tweeting about the occupation taking place in Ottawa. In previous months, the account also promoted QAnon conspiracy theories, telling his followers to trust "the plan" to return former U.S. President Donald Trump to power.

Then the account, run by a user only just recently identified as Jacob Creech, a former member of the Virginia National Guard, shared a map plotting "biolabs" in Ukraine. He cited "speculation" that Russia may be targeting its airstrikes for those labs.

"China and Russia indirectly (and correctly) blamed the U.S. for the [COVID-19] outbreak, and are fearful that the U.S./allies have more viruses (bioweapons) to let out," he wrote.

@WarClandestine's tweets about U.S.-backed biolabs in Ukraine racked up thousands of re-tweets. (Twitter/War Clandestine)

The tweets racked up thousands of retweets. The claims were quickly run, verbatim, on conspiracy website Infowars hours later, with a blaring headline: "Russian Strikes Targeting U.S.-Run Bio-Labs in Ukraine?"

In the days that followed, this conspiracy theory would percolate through a string of anti-vaccine, QAnon, and pro-Russian social media networks. @WarClandestine was suspended by Twitter multiple times, but screengrabs of his tweets were shared widely.

Theories like this are fairly common among those who ascribe to QAnon — which holds that there is a corrupt "deep state" in the U.S., responsible for rigging elections, developing COVID-19, and trafficking children into sex slavery. Only Trump, they believe, has been able to effectively fight this corrupt shadow regime.

In particular, QAnon dogma has long believed that Ukraine is a refuge for deep state actors.

### **Russian propaganda**

The very tenets of @WarClandestine's theory relies on Russian propaganda. When he first launched the theory in late February, he pointed to comments made to a Russian newspaper in 2021 by a close Putin advisor that "more and more biological laboratories under U.S. control are growing considerably in the world and by a strange coincidence, mainly by the Russian and Chinese borders."

The comments echo a concerted effort made by Moscow and Beijing to suggest that the U.S. was responsible for the COVID-19 virus — a push that coincided with mounting domestic criticism of their governments' autocratic handling of the pandemic.

Russia and China have also used the United Nations to allege the U.S. is running a clandestine bioweapons program, in violation of the Biological Weapons Convention.

But experts say Russia and China are keen to deflect criticism of their own programs.

An example of one of many Russian website pushing the bioweapons theory, rusdozor.ru, features an image of Ukraine President Volodymyr Zelensky. (rusdozor.ru)

"They say, 'No, I know you are, but what am I?' That's what they've been doing, in this age of false equivalence, for some time now," said Moore.

All three countries are signatories to the largely non-binding Biological Weapons Convention, but only the United States publishes details about its efforts to comply with it. An independent global health review ranks the U.S. first in the world in terms of biosafety, biosecurity and transparency.

### **Russia makes it 'official'**

On Feb. 27, the Russian Embassy in Sarajevo posted an update to its Facebook page, writing that in addition to Moscow's stated reasons for invading Ukraine, the "demilitarization and denazification" of the

country, it was also because the U.S. was "filling Ukraine with biolabs, which were — very possibly — used to study methods for destroying the Russian people at the genetic level."

@WarClandestine picked up on the news with glee: "My hypothesis was correct!" he wrote on a freshly created Twitter account. The #biolabs hashtag began trending on Twitter and TikTok.

In the days that followed, a raft of Russian-language channels on Telegram, a platform popular in Russia and Ukraine, began sharing posts about these rumoured bioweapons labs. Sputnik News, a Kremlin-run propaganda agency, published a report accusing the government of deleting documents proving the labs' existence.

Russia Ambassador to the UN Vassily Nebenzia shows documents during a UN Security Council emergency meeting in New York on March 11, 2022. The Security Council held the meeting at the request of Moscow, after it accused the U.S. of funding research into the development of biological weapons in Ukraine. (Timothy A. Clary/AFP/Getty Images)

In early March, former Russian president Dmitry Medvedev gave an interview where he mused that Russia did not know who ran or managed Ukraine's biological facilities, and suggested they could lead to an infectious disease outbreak. On March 3, Foreign Minister Sergei Lavrov told a news conference that the U.S. had "developed pathogens" in those Ukrainian biolabs.

By March 11, the Russian Ministry of Defence was holding news conferences alleging that the U.S. bioweapons program involved deliberately infecting birds and dispatching them to fly into Russia.

"There's zero basis in fact" for those allegations, Pope said. No credible independent review has backed up these claims.

"There is no conspiracy," Moore said. "There is no man behind the curtain."

### ***WATCH | Robert Pope on how the Russian government spreads disinformation:***

(Robert Pope of the U.S. Defense Department's Defense Threat Reduction Agency describes how the Russian government exploits fear to help spread disinformation. 0:30)

### **'Tiny grains of truth'**

On March 12, the Russian Ministry of Foreign Affairs shared an infographic on Twitter: It connected two Ukrainians, Ulana and Marko Suprun, to a man in an SS uniform.

"Ukraine's biolabs were funded by the Pentagon to develop biological weapons," the ministry wrote. "These labs in Ukraine were subordinate to the Health Ministry. In the summer of 2016, Barack Obama's Democrat administration sent U.S. national Ulyana Suprun (born and raised in the U.S.) to Ukraine, where she became health minister of Ukraine."

When asked about the tweet in late March, Ulana Suprun laughed. The ministry correctly identified her as the former minister of health for Ukraine; her husband, as the founder of Stop Fake, an anti-disinformation agency; and her father, an American Ukrainian. But that's where the accuracy ends.

The tweet includes a line to Ulana's grandfather: A man in a Nazi SS uniform.

"That's not my grandfather!" she told CBC News from Kyiv.

"What was striking was how they put the story together. It's how disinformation works, right?" she said. "Tiny grains of truth. And then they mash them together."

That's exactly what's at the core of the biolabs conspiracy theory.

***WATCH | Justin Ling on how the conspiracy theory about biolabs in Ukraine went viral:***

Investigative reporter Justin Ling exposes how a conspiracy theory about biolabs in Ukraine started with a single tweet, went viral, exploded into the mainstream and eventually became part of the official Russian narrative to justify its invasion of Ukraine. 1:43

**U.S. biological research in Ukraine**

The U.S. does fund biological research in Ukraine through its Department of Defence — just as it does in dozens of countries around the world.

That program began in the 1990s, after the fall of the Soviet Union, which maintained an expansive bioweapons program. Two U.S. senators, Sam Nunn and Richard Lugar, began worrying about a network of those laboratories that were now the responsibility of newly independent governments with little expertise in biosafety.

Those efforts were eventually consolidated into the Defense Threat Reduction Agency.

"These programs represented a really, really, really forward step in an area where the United States and the Soviet Union never really achieved a whole lot of progress," Moore said. He worked for Sen. Lugar for a decade, starting in the early 2000s. "This is why we're doing it today."

A damaged gas mask lies on the pavement at a Russian position which was overran by Ukrainian forces, outside Kyiv, Ukraine, Thursday, March 31, 2022. (Vadim Ghirda/The Associated Press)

In its earliest form, the program sent American experts into labs throughout Europe to help local scientists identify dangerous pathogens, and either destroy or better secure them. New labs were built, security protocols were established and staff were trained.

Over time, as the bulk of the bioweapons program was dismantled — "we got rid of what we could co-operatively get rid of," Moore said — the program turned its attention to figuring out how to better monitor and prepare for infectious disease outbreaks.

That included helping those former Soviet states and satellites safely store viruses and bacteria collected from nature.

In 2018, then-Health Minister Suprun embarked on an effort to modernize Ukraine's biosafety and biosecurity system, working with Pope's agency. Those attempts were consistently maligned by Moscow as nefarious.

**Worry of a 'false flag' attack**

On March 8, as U.S. Undersecretary of State Victoria Nuland testified before the Senate Foreign Relations Committee about the escalating war in Ukraine, Sen. Marco Rubio, in an apparent attempt to rebut the emerging propaganda, asked Nuland: "Does Ukraine have chemical or biological weapons?"

"Ukraine has biological research facilities," Nuland said, stressing the word "research." What's more, she said, the U.S. government was "quite concerned Russian forces may be seeking to gain control of [them]."

This has been a long-standing concern. When Suprun was health minister, Russian forces seized control of two biological research facilities in the eastern city of Donetsk and an anti-plague research facility in Crimea.

"Every single strain of bacteria or virus has been genetically sequenced and it is identifiable," she said.

The fear was that, should Russia gain access to those samples, it could "release them somewhere in the world and blame Ukraine, because they can be identified as being Ukrainian," she said.

The United Nations says there's no evidence to prove Russia's claim that Ukraine ran biological warfare laboratories with U.S. support. Ukraine expressed concern that Russia's claim could be a 'false flag' tactic designed to allow the Kremlin to use its own biological weapons against Ukrainians. 2:03

The U.S. State Department has repeatedly warned that Russia may be plotting a "false flag" chemical or biological weapons attack. Rubio, at the committee hearing, noted that Russian disinformation outlets were already raising the spectre of a Ukrainian-directed biological weapons attack.

"If there's a biological or chemical weapon incident or attack inside of Ukraine, is there any doubt in your mind that it would be the Russians that would be behind it?" he asked.

"There is no doubt in my mind, senator," Nuland replied. "And it is a classic Russian technique to blame the other guy for what they're planning to do themselves."

### **'It's a joke'**

The conspiracy theory had gotten so well-established that Ukrainian President Volodymyr Zelensky himself addressed it, in an interview with independent Russian journalists at the end of March.

"It's a joke," he said in Russian. "There's nothing for me to explain. There's nothing here. We'd love to, but there's nothing here. No nuclear weapons, no chemical biolaboratories, no chemical weapons. These don't exist."

Zelensky, centre, walks in the town of Bucha, just northwest of the Ukrainian capital Kyiv on April 4, 2022. (Ronaldo Schemidt/AFP/Getty Images)

There is also no clear indication that Russia intends to use any kind of non-conventional weapons in Ukraine. Moore says the real utility of this biolabs conspiracy is in the information war.

"This is purely for the consumption of the masses," he said. "This is purely to flood the zone."

But weakening Western resolve has a real strategic benefit for Moscow.

Marko Suprun, who runs the anti-disinformation agency, said Moscow hopes to destroy the "congressional unity" that informs the U.S. response to the war. If even a few politicians take to the biolabs conspiracy theory, he said, "you suddenly slow everything down, and instead of getting more Javelins [anti-tank missiles], you get less Javelins."

"They call it a war of attrition," Marko said. "Disinformation is targeted politics of attrition."

### **Corrections**

- *An earlier version of this story said that anthrax, like smallpox, can be spread through person-to-person contact. In fact, anthrax can be transmitted organically when spores get into the body.*

## ABOUT THE AUTHOR – JUSTIN LING

Justin Ling is a freelance political journalist based in Ottawa. Justin Ling is a freelance journalist who specializes in covering stories untold, misunderstood, and often missed by the media. He got his start in community journalism in Nova Scotia, before working for a local online news start-up in Montreal. While there, he stumbled upon the existence of a Greek neo-Nazi party quietly fundraising within Quebec, covered civil unrest amid a province-wide student strike, and was even arrested by the city's riot cops. From there, he moved to Ottawa, joining the Parliamentary Press Gallery and joined VICE News as their Canadian political reporter, where he uncovered a massive surveillance effort by Canadian intelligence agencies on Indigenous protesters, revealed the existence of an ill-fated infiltration of a university communist group by Canadian spies, reported on major constitutional issues with federal legislation, and turned the government's treatment of the press into a national issue.

Since he arrived in Toronto, Ling has proved how a major cellphone manufacturer handed over its global decryption key to Canadian law enforcement, documented the existence of a previously-secret watchlist of travellers across the U.S-Canada border, and detailed an extensive lobbying effort in Washington, D.C. by the Trudeau government to preserve its most crucial trade deal. While there, Ling became one of the most effective users of Canada's Access to Information system, using it to consistently break major stories.

Today, Ling is investigating Russian meddling in Canadian politics, a project that has taken him from inside the headquarters of the Department of National Defence to a NATO training base in Latvia. His work has appeared in the Globe & Mail, National Post, Maclean's, VICE News, BuzzFeed News, and he has appeared on CBC, CTV, Global, CNN, the BBC, and a host of other outlets.

# UNFINISHED BUSINESS

*Thirty years ago, the deal which dissolved the Soviet Union rested on the untested idea that Russia and Ukraine could be neighbours and nothing more. If Russia had become a democracy it might have worked.*

**A**ROUND EIGHT in the evening of Sunday December 8th 1991, Mikhail Gorbachev, the president of the Soviet Union, picked up a phone call on a top-security line. The caller was Stanislav Shushkevich, a modest physics professor whom Mr Gorbachev's reforms had placed at the helm of the Soviet Republic of Belarus a few months before. Mr Shushkevich was phoning from a hunting lodge in the magnificent Belovezh forest to tell the great reformer that he was out of a job: the Soviet Union was over.

In retrospect, its last gasp had come in August, when the KGB, hardline Communists and the army had placed Mr Gorbachev under house arrest and mounted a coup. After three days of peaceful resistance led by Boris Yeltsin, president of the Russian Soviet Republic, they backed down. That ruled out any return to a Soviet past. But Mr Gorbachev still clung to hopes for some sort of post-Soviet liberal successor as a way to hold at least some of the republics together. Mr Shushkevich's call killed any such aspiration.

One of its triggers was Russia's economic collapse. As Yegor Gaidar, Yeltsin's top economic reformer, was later to write, it was an autumn of "grim food lines...pristinely empty stores...women rushing around in search of some food, any food...an average salary of seven dollars a month". To successfully enact the sweeping reforms Mr Gaidar was designing, Yeltsin needed a Russia which controlled its own currency. That meant leaving the USSR.

Mr Shushkevich, too, was motivated by the dreadful economy. He had invited Yeltsin to the retreat in the forest in the hope that by wining and dining him he would ensure that Russian gas and electricity would keep flowing to Belarus. It would have been a hard winter without them. The venue he chose was a lodge called Viskuli, where Leonid Brezhnev and Nikita Khrushchev had entertained themselves shooting bison and other game (hence its hard-wired connection to Moscow).

Yeltsin suggested that Leonid Kravchuk, the president of the Ukrainian republic, join them. The previous Sunday, Ukraine had voted overwhelmingly to ratify the declaration of independence from the Soviet Union which had been passed in its parliament, the Rada, immediately after the August coup.

Yeltsin did not just want what Mr Kravchuk had achieved in Ukraine for economic reasons. Independence would, he felt, be crucial to consolidating his power and pursuing liberal democracy. And Ukraine—never, until the 19th century, a well-defined territory, and home to various ethnic enclaves and deep cultural divides—becoming an independent unitary state within its Soviet borders set a precedent for Russia to define itself the same way, and refuse independence to restive territories such as Chechnya. That was why the Russian republic was one of the first three polities in the world to recognise it as an independent state.

But if a world in which Ukraine, Russia and indeed Belarus were completely independent from the Soviet Union was attractive, one in which they were not tied to each other in some other way was very troubling to a Russian like Yeltsin. It was not just that Ukraine was the second-most-populous and economically powerful of the remaining republics, its industries tightly integrated with Russia's. Nor was it the question of what was to happen to the nuclear forces stationed there but still notionally under the command of Soviet authorities in Moscow. It went deeper.

In "Rebuilding Russia", an essay published in the USSR's most widely circulated newspaper the year before, Alexander Solzhenitsyn had asked "What exactly is Russia? Today, now? And—more importantly—tomorrow?...Where do Russians themselves see the boundaries of their land?" The need to let the Baltic states go was clear—and when they left the Soviet Union in 1990, Solzhenitsyn,

Yeltsin and most of Russia rallied against revanchist attempts to keep them in. Much the same was true of Central Asia and the Caucasus; they were colonies. Belarus and Ukraine were part of the metropolitan core. The bonds which tied "Little Russians" (ie Ukrainians), "Great Russians" and Belarusians together, Solzhenitsyn argued, must be defended by all means short of war.

For centuries Ukraine had anchored Russia's identity. As the centre of the storied medieval confederation known as Kyivan Rus, which stretched from the White Sea in the north to the Black Sea in the south, Kyiv was seen as the cradle of Russian and Belarusian culture and the font of their Orthodox faith. Being united with Ukraine was fundamental to Russia's feeling of itself as European. In "Lost Kingdom" (2017) Serhii Plokhy, a Ukrainian historian, describes how "the Kyivan myth of origins...became the cornerstone of Muscovy's ideology as the polity evolved from a Mongol dependency to a sovereign state and then an empire." Russian empire required Ukraine; and Russia had no history other than one of empire. The idea of Kyiv as just the capital of a neighbouring country was unimaginable to Russians.

But not to Ukrainians. At the first dinner in Viskuli, with Yeltsin and Mr Kravchuk sitting opposite each other, a number of toasts were raised to friendship. The friendship Mr Kravchuk wanted, though, was of the cordial sort that comes with a decent alimony cheque, not the sort that goes with a fresh plighting of troths.

Mr Kravchuk was born in 1934 in the western Ukrainian province of Volhynia—then part of Poland, but ceded to the USSR as part of the infamous pact it made with Germany in 1939. A childhood surrounded by ethnic cleansing, repression and war had taught him, as he put it, "to walk between the raindrops". It was a skill that made him an ideal party apparatchik and then saw him turn himself into a champion of Ukrainian independence—not for any high-minded ideological reasons, but because he wanted the chance to be in charge of his own country.

The referendum had given it to him, with independence endorsed by majorities

in every part of the country, both those in the formerly Austro-Hungarian west, with its Baroque churches and coffee shops, and in the Sovietised and industrialised east, where most of Ukraine's ethnic Russians lived. There were practical things he needed from Russia, and Russian interests he recognised; he wanted a good relationship with Yeltsin and so had come to the forest meeting. But he was not interested in giving Russia an exit from the union that in any way compromised Ukrainian independence.

The agreement reached, in draft form, at 4am on Sunday morning achieved those aims with a rather neat piece of casuistry. For Russia simply to have followed Ukraine into independence would have left moot the question of the Soviet Union's residual powers. So instead they abolished the union itself.

The Soviet Union had been formed, in 1922, through a joint declaration by four Soviet republics—the Transcaucasian republic and the three represented at Viskuli. With the Transcaucasian republic long since dismembered, the presidents dissolved by fiat what their forebears had bound together. In its place they put a Commonwealth of Independent States (CIS)—Mr Kravchuk would not allow any use of the word "union"—with few clearly defined powers which any post-Soviet state would be welcome to join. There was to be no special relationship between the Slavic three.

That afternoon the three men signed the agreement, thereby proclaiming that "The USSR as a subject of international law and geopolitical reality has ceased to exist." It then fell to the most junior of the three—who was also the least enthusiastic about what

► they had done—to inform Moscow of what had happened.

Mr Gorbachev was furious. The importance of Ukraine was not an abstract matter to him. Like Solzhenitsyn, he was the child of a Ukrainian mother and a Russian father. He grew up singing Ukrainian songs and reading Gogol, who reimagined his native country's folk magic as rich poetry after moving to St Petersburg. The Soviet Union had meant that Mr Gorbachev and others like him, whatever their parentage, could partake in both identities.

More immediately, though the failed coup had made some such break-up more or less inevitable, disassembling a multi-ethnic empire of 250m people was still a subject of huge trepidation. As Solzhenitsyn had written in "Rebuilding Russia", "The clock of communism has stopped chiming. But its concrete edifice has not yet crumbled. And we must take care not to be crushed beneath its rubble instead of gaining liberty." The fact that in that rubble, if rubble there was to be, there would be the world's largest nuclear arsenal, spread between four separate countries (the three Slavic ones and Kazakhstan), frightened statesmen around the world. When, as the economy worsened, Mr Gorbachev went to President George Bush for \$10bn-15bn, Bush's top concern was the nuclear threat. The same worry had led him to oppose Ukraine's secession in a speech given just before the August coup. "Do you realise what you've done?" Mr Gorbachev demanded of Mr Shushkevich. "Once Bush finds out about this, what then?"

The question was being answered on one of the lodge's other phone lines. Andrei Kozyrev, Russia's first foreign minister, had had trouble getting through to Bush. A State Department receptionist—Mr Kozyrev did not have the White House number with him—told the man with a Russian accent demanding that she connect someone called Mr Yeltsin to the president that she was "not in the mood for prank calls". Nor could Mr Kozyrev be called back in a way that might prove his bona fides: he had no idea of the lodge's phone number. In the end, though, he got through, and was able to act as interpreter as Yeltsin explained to Bush that the world's largest nuclear arsenal was now in the hands of something called the CIS.

If Mr Gorbachev had been unclear how Bush would react, so was Bush himself. A voice memo he recorded the next day is a string of anxious questions: "I find myself on this Monday night, worrying about military action. Where was the [Soviet] army—they've been silent. What will happen? Can this get out of hand? Will Gorbachev resign? Will he try to fight back? Will Yeltsin have thought this out properly? It is tough—a very tough situation." Similar doubt assailed the three presidents in the forest. When Yeltsin and his entourage set off back to Moscow, they joked about their plane being shot down. The laughter was not entirely free from anxiety.

Instead the shooting down of planes, along with the violation of Ukrainian sovereignty, the seizure of Crimea, the reassertion that the legacy of Kyivian Rus meant the nations must be shackled together and the reversion of Belarus to dictatorship—that all came later, a sequence of events which led, 30 Decembers later, to 70,000 or more Russian troops on the border of Ukraine and, in a ghastly sideshow, thousands of Middle Eastern refugees stuck in the Belovezh forest itself. The once seemingly settled question of post-Soviet relations between the three nations has once again become an overriding geopolitical concern.

Back then, though, as he stood among the snow-capped pine trees after leaving the meeting, Yeltsin was overcome by a sense of lightness and freedom. "In signing this agreement," he later recalled, "Russia was choosing a different path, a path of internal de-

velopment rather than an imperial one...She was throwing off the traditional image of 'potentate of half the world', of armed conflict with Western civilisation, and the role of policeman in the resolution of ethnic conflicts. The last hour of the Soviet empire was chiming." Maybe the convoluted interdependency of Russia and Ukraine did not matter as much as people thought; maybe democratic nationhood was enough. Maybe the problem had been a failure of imagination.

**I**N 1994, AFTER three years of horrific economic contraction, two of the three men who had met at Viskuli fell from power. In Belarus Alexander Lukashenko, who had previously run a large collective piggery, won election over Mr Shushkevich. Mr Lukashenko told people he would sort out the economic mess by taking them back to the security they had had before. Reforms stopped—as would, at a later stage of Mr Lukashenko's now 27-year reign, competitive and fair elections. The flag, which had been changed to the red and white of the very short-lived Belarusian Republic of 1918, was turned back to one like that of the Soviet era.

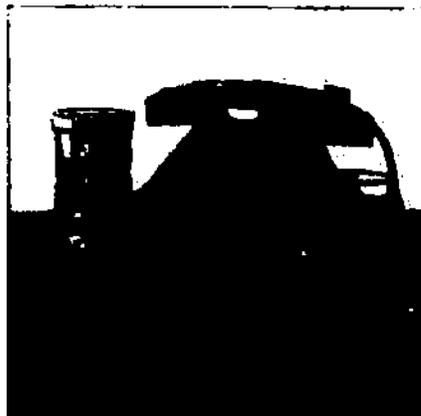

There was no such turnaround in Ukraine, where Mr Kravchuk lost the presidential election to Leonid Kuchma, a skilled Soviet-era industrial manager. Mr Kravchuk held the more nationalistic, Ukrainian-speaking west of the country; Mr Kuchma took the Russian-speaking and collectivist regions to the east. But unlike Mr Lukashenko, Mr Kuchma was not a reactionary, and he was to prove canny in wooing Ukrainians who had at first distrusted him.

Yeltsin was not required to stand for election that year. But a year earlier he and his reformists had faced down an insurgency by Communists and an assortment of anti-Western, anti-democratic factions led by the speaker of the parliament. One of their grievances was the loss of Crimea, a peninsula in the Black Sea reallocated from the Russian republic to the Ukrainian republic in 1954 but still seen as part of Russia by most Russians. A holidaying place for both the Soviet elite and for millions of ordinary people, it had been at the heart of the imperial project since the days of Catherine the Great.

The insurgency of 1993 was bloody; Yeltsin ordered the parliament building shelled by tanks. The public stood by him. A referendum held in the aftermath greatly increased the powers of the presidency. His foreign supporters stood by him too, and the following year a security agreement saw America, Britain and Russia guarantee respect for Ukraine's integrity within its existing borders—which is to say, including Crimea—in exchange for its giving up the nuclear weapons it had inherited from the Soviet Union. Ukraine was grateful; the West saw further evidence of a transition towards a liberal, democratic Russian state.

Some, though, thought this dangerously optimistic; one such was Zbigniew Brzezinski, a Polish-American diplomat and former national security adviser. In March 1994 Brzezinski took his own shot at Solzhenitsyn's question—the question he believed, rightly, to provoke "the greatest passion from the majority of [Russian] politicians as well as citizens, namely 'What is Russia?'" Rather than give a definitive answer, he gave an alternative one: "Russia can be either an empire or a democracy, but it cannot be both."

He was right. Yeltsin's unburdened moment among the trees had been that of a man who did not want to, and did not have to, rule an empire. He consciously rejected not just the Soviet Union's ideology and central planning, but also the tools of statecraft that had held it together—repression and lies. To him, the market ►►

economy was a condition for freedom, not a substitute for it. His successor, Vladimir Putin, also embraced capitalism. But he saw no need for it to bring freedom with it, and had no problem with a state run through repression and lies. He thus reversed Yeltsin's democratic project and, though not at first territorially imperialist himself, took the country down the other side of Brzezinski's fork. It is that which puts Russia and its Slavic neighbours in such a parlous position today.

One of Brzezinski's problems with Yeltsin's Russia was "that the emerging capitalist class in Russia is strikingly parasitic". By the time Mr Putin became president in 2000 Russia was run by an oligarchic elite which saw the state as a source of personal enrichment. But when pollsters asked people what they expected of their incoming president, reducing this corruption was not their highest priority. The standing of the state was. Russians wanted a strong state and one respected abroad. As Mr Putin's successful manifesto put it, "A strong state is not an anomaly to fight against. Society desires the restoration of the guiding, organising role of the state." When, shortly after his election, Mr Putin restored the Soviet anthem, it was not as a symbol of reverting to central planning or rebuilding an empire. It was a signal that the strong state was back. State power did not mean the rule of law or a climate of fairness. It did not have, or need, an ideology. But it did have to take on some of the "geopolitical reality" that the meeting in Viskuli had stripped from the Soviet Union.

The strong state which provided an effective cover for kleptocracy in Mr Putin's Russia was not an option for Mr Kuchma's similarly oligarchic Ukraine. It had no real history as a state, let alone a strong one. Its national myth was one of Cossacks riding free. So in Ukraine the stealing was instead dressed up in terms of growing into that distinctive national identity. The essence of the argument was simple. As Mr Kuchma put it in a book published in 2003, "Ukraine is not Russia".

This was not an attack on Russia. Ukrainians liked Russia. Polls showed that they admired Mr Putin more than they did Mr Kuchma. It was just a way of defining things that put the nation first. And Mr Putin had no problem with it. Ukraine might not be Russia, but it was not significantly different from Russia, let alone threateningly so. It was just a bit more corrupt and chaotic.

The degree to which Ukraine was not Russia became clearer, though, in 2004, when a rigged presidential election saw hundreds of thousands of Ukrainians protesting in the streets. Mr Kuchma could have used force against them; Mr Putin encouraged him to do so. But various considerations, including Western opprobrium, argued against it. Perhaps most fundamental was his sense that, as a Ukrainian president, he could not thus divide the Ukrainian nation. He stayed his hand and allowed a second vote. Viktor Yushchenko, pro-Western and Ukrainian-speaking, beat Viktor Yanukovich, a corrupt thug from Donbas (the easternmost part of the country and, save Crimea, the most ethnically Russian) who had claimed victory the first time round. The "Orange revolution", as the protest came to be known, was a serious setback for Mr Putin—all the more so when a similar uprising in Georgia, the Rose revolution, put another pro-Western state on his borders.

In 2008 Mr Putin took a constitutionally enforced break from the presidency, swapping jobs with Dmitri Medvedev, his prime minister. The shift did not stop him from overseeing a war against Georgia that summer. In 2010, though, the Orange revolution became, in retrospect, a somewhat Pyrrhic victory. Mr Yushchenko proved a sufficiently poor president that in 2010 Mr Yanukovich was able to beat him in a free and fair election.

Mr Putin's return to the presidency in 2012 came at a time when the global financial crisis had choked the Russian economy. The rigging of Russia's parliamentary elections the year before, and the prospect of Mr Putin's return, had seen tens of thousands take to the streets. And the West, spooked by the increased belligerence Russia had shown in Georgia, was taking a keen interest in Ukraine. The EU offered the country an association agreement which would allow Ukrainians to enjoy the benefits of a deep and comprehensive free-trade agreement and free travel across Europe.

A year earlier a group of economists had told Mr Putin that a customs union with Ukraine would be a smart move. What was more, such a deal would preclude Ukraine's association with the EU. Pursuing it was thus a way for Mr Putin to achieve three things at once: push back against the West; give Russia a victory that would prove its importance; and help the economy.

Time for some Slavic unity. When Mr Putin flew to Kyiv for a two-day visit in July 2013, his entourage contained both his chief economic adviser and the patriarch of Russia's Orthodox Church, whose jurisdiction covered both countries. The trip coincided with the 1,025th anniversary of the conversion to Christianity of Prince Vladimir of the Kyivan Rus, and subsequently of the people as a whole, in 988: the "Baptism of Rus". With Mr Yanukovich he visited the cathedral in Chersonesus, the site in Crimea where Prince Vladimir is said to have been baptised. He and the patriarch also visited Kyiv Pechersk Lavra, a monastery founded in caves a millennium ago.

The commitment he gave there to protecting "our common Fatherland, Great Rus" was not without irony. When in 1674 monks at the Lavra published the "Synopsis", the first demotic history of Russia, the city was under threat of attack by the Ottoman empire and desperately needed support from the Russian lands to the north. The "Synopsis" sought to encourage Slavic solidarity by stressing the importance of Vladimir and his virtuous Kyivan Rus to Kyiv and Muscovy alike—something historians like Mr Plokhly now see as expedient mythmaking. Mr Putin was cynically mining a mythos itself contrived for political ends.

Mr Yanukovich did not want to be Russia's vassal. Nor did he share western Europe's values—especially when applied to matters of anti-corruption. But eventually he had to choose a side. At a secret meeting in Moscow in November 2013, as European leaders were preparing to sign their agreement with Ukraine, he was promised a \$15bn credit line with \$3bn paid up front. He ditched the European deal. And at 4am on November 30th his goons bludgeoned a few dozen students protesting against his betrayal in Kyiv's Independence Square, known as Maidan.

By "turning into Lukashenko", as one journalist put it, Mr Yanukovich crystallised the choice facing Ukraine: dignity? Or subservience? Tents sprang up on Maidan. Volunteers distributed food and clothes. Oligarchs, afraid that a deal with Russia would see their ill-gotten gains stolen from them, tried to restrain Mr Yanukovich. Mr Putin pressed him to use force. Mr Yanukovich dithered until, on February 18th, Kyiv went up in flames. Nobody agrees on who fired the first shot. But by the third day of violence around 130 people were dead, mostly on the protesters' side, and Mr Yanukovich—to everyone's surprise—had fled Kyiv.

This was far worse, for Mr Putin, than the Orange revolution. Ukraine had made geopolitical reality, to coin a phrase, of the independence it had claimed two decades before. Its demands for dignity resonated with Russia's middle class and some of its elite, making it a genuinely dangerous example. So Mr Putin annexed Crimea and started a war in Donbas.

▶ According to Russian state media, Mr Putin was not undermining a revolution against a corrupt regime quite like his own; he was protecting the Russian people and language from extermination at the hands of western Ukrainian fascists. The relevance to Russia of the issues that had led to what was being called in Ukraine “the revolution of dignity” was thus obscured. At the same time the brutality in Donbas, relentlessly televised, showed Russians the disastrous consequences of rising up: civil war.

On March 18th Russia’s ruling elite watched Mr Putin enter the Kremlin’s gilded Hall of St George in triumph as he hailed the return of Crimea and, thereby, Russia; the annexation was supported by nearly 90% of the Russian population. A year later he had a stone from Chersonesus brought to Moscow to be built into the pedestal of a giant statue of Prince Vladimir outside the Kremlin gates. In “On the Historical Unity of Russians and Ukrainians”, a tract published in both Russian, Ukrainian and English in July 2021, Mr Putin described how the inheritors of “Ancient Rus” had been torn apart by hostile powers and treacherous elites, and how Ukraine had been turned from being “not Russia” into an anti-Russia, an entity fundamentally incompatible with Russia’s goals.

All baloney. Mr Putin did not attack Ukraine in order to honour or recreate an empire, whether Russian or Soviet. He attacked it to protect his own rule; the history is window-dressing. At the same time, following Brzezinski, for Russia to be something other than a democracy it has to at least be able to think of itself as an empire. And in Russia, empire requires Ukraine—now more deeply opposed to union with Russia than ever before.

**I**N NOVEMBER 2021 Vladislav Surkov, Mr Putin’s cynical, loyal ideologist, turned his attention to the question of empire. “The Russian state, with its severe and inflexible interior, survived exclusively because of its tireless expansion beyond its borders. It has long lost the knowledge [of]—how to survive otherwise.” The only way Russia can escape chaos, he argued, is to export it to a neighbouring country. What he did not say was that Mr Putin’s export of chaos, and violence, to that end has severed the ties between the Slavic nations and their peoples in a way which the collapse of the Soviet empire did not.

Mr Putin now talks of the collapse of the Soviet Union as “The collapse of historical Russia under the name of the Soviet Union.” But he has hardly restored its empire. Ukraine is not a province, or a colony; it is a beleaguered nation in a messy, perilous process of self-realisation. Belarus, for its part, is a grim illustration of how “severe and inflexible” things have to get in order to stop such aspirations welling up. Mr Lukashenko has met a nationalist resurgence with ever more brutal and well-orchestrated repression—a bloody irony given that he helped start it.

When Mr Putin annexed Crimea Mr Lukashenko feared his own fief might be next. So he decided to strengthen the Belarusian identity which he had previously worked to suppress. It was an opening he would regret. Social media quickly gave well-prepared liberal nationalists access to half of the country’s population. In 2018 the centenary of the Belarusian republic saw its red-and-white flag rise again.

In 2000 Svetlana Tikhonovskaya, previously apolitical, ran against Mr Lukashenko in the presidential election in place of her husband, who had been jailed, the red-and-white flag waving over her rallies. When Mr Lukashenko stole that election on August 9th it was in the same flag that protesters draped a vast statue of their motherland. Like Ukraine, Belarus had no real history of state-

hood; all that Mr Lukashenko had given it since 1994 was a rough approximation of its Soviet past, fascism with Stalinist trappings. But the idea of something better had taken hold.

Unlike the Ukrainians, though, the protesters in Belarus had no independence-friendly oligarchs to take their side. They had no equivalent to the radical fringe of western Ukrainians who had shown themselves ready to kill and ready to die on Maidan. And they were pitted against someone who would not stay his hand, as Mr Kuchma had, or cut and run, like Mr Yanukovich. Mr Lukashenko doubled down on repression, his brutality honed and guided by experts from Moscow.

For Mr Putin, the situation has become the reverse of that faced at Viskuli 30 years ago. Then a free and independent Ukraine—and, to a lesser extent, Belarus—were a necessary condition for what Russia sought to become. Now such freedom would constitute an intolerable affront to Russia staying as it is. At the same time, though, their struggles feed Mr Putin’s need for enemies. Russia’s great-power “geopolitical reality”, as sold to the people, has become that of a besieged fortress. America is the enemy-in-chief; Ukraine, and those within Belarus and Russia itself who have aspirations like those seen in the “revolution of dignity”, are its lackeys, all the more despicable for betraying their kin.

Russian propaganda outlets are baying for war. But that does not mean Mr Putin plans to take fresh territory. He has never laid claim to the western part of the country. He is probably aware that there are now enough Ukrainian patriots to fight Russian occupation in central and even eastern parts of Ukraine, and that the army he has massed on the border would prove less good at occupation than invasion. But he still needs conflict and subordination. Left unmolested a free Ukraine reopens the existential threat of an alternative to empire.

Ukraine’s struggles since 2014 have been slow, frustrating and messy. According to Evgeny Golovakha, a sociologist, this is in part because “Ukrainians love to experiment.” True to that assessment, in 2019 they elected Volodymyr Zelensky, who as a television comedian had played a history teacher accidentally elevated to the presidency, to tackle the role in real life. His biggest achievement, so far, has been to consolidate protest votes against the old elite across Ukraine, making the electoral map look more cohesive than it has ever looked in the past. That will not necessarily stop him getting voted out in two years’ time. “We find it easier to change [people in] power than to change ourselves,” says Yulia Mostovaya, the editor of *Zerkalo Nedeli*, an online news outlet.

But change is afoot; it can be seen in the way that demography increasingly trumps regional allegiance. Even in the east nearly 60% of those born since 1991 see their future as in the EU—countrywide, the figure is 75%. All told 90% want Ukraine to stay independent, and nearly 80% are optimistic about its future.

The same optimism is hard to find in Russia, let alone stricken Belarus. But the same yearnings are there, especially among the young. That is why Alexei Navalny was first poisoned and is now jailed. As the leader of the opposition to Mr Putin he has championed the idea of Russia not as an empire but as a civic nation: a state for the people. It is why Russia has recently become much more repressive. It is why Mr Putin cannot tolerate a true peace on his borders.

Unlike Ukrainians and Belarusians, Russians cannot separate themselves from Russia, so they have to change it from within. They cannot do that in a forest retreat, or with a few phone calls. But only through such change will they become truly independent of the Soviet Union. ■

Sir:

As discussed, see the link below to an article jointly authored by Dr. Gigi Gronvall. This does a very thoughtful job of countering the Russian propaganda.

Rob and Hunter:

I read with great interest the Wall Street Journal this past week and remember well the Russian disinformation efforts not only in Ukraine but in Georgia and Azerbaijan.

I wanted to share an article that one of our Senior Technical Advisor's contributed to that came out recently on the topic.

I thought it would be of interest to you guys. You might also remember that Gigi Gronvall served on the TRAC during my (our) time at DTRA.

Good afternoon (b)(6)

Was following the afternoon traffic and events surrounding Russian disinformation, and wanted to seek your help on the below taken question from (b)(6) background briefing this afternoon. He was not able to answer it, so we have to staff any taken questions to provide formal written response to the reporters.

QUESTION: Heather Mongilio, USNI News: Does the U.S. have a history of sending scientists to assist in labs like the chemical/biological labs in Ukraine?

Is this something that falls under HON Rosenblum's portfolio? If so, can you help me prepare a response?

Thank you!

v/r,

Subject: 3/10 Backgrounder Questions

**\*\*One taken question for the Senior Defense Official\*\***

10. Heather Mongilio, USNI News: Does the U.S. have a history of sending scientists to assist in labs like the chemical/biological labs in Ukraine?

This was a two-part brief, see below for the Senior Defense Official's topper and questions.

Part One

Guest briefer in attendance to talk about Russian charges that the U.S. is assisting Ukraine with a bio weapons lab: Megan Rovnak from Defense Intelligence Agency, credited on background as a Senior Intelligence Official

Senior Intelligence Official topper: The Biological Weapons Convention prohibits the development, transition, and use of biological weapons. There are 183 state parties to the convention and 4 signatories. Both the United States

and Russia have signed and ratified the treaties.

There are five biological laboratories in Kiev, focused largely on preventative medicine and vaccines that Ukraine had previously declared. The labs look at pathogens that are endemic to Ukraine.

Russia has not been transparent in its confidence-building measures in regard to this treaty. Ukraine has abided by all of the treaty's tenets. Ukraine has worked to eradicate all of the illegal Soviet biological weapons left there after the Soviet Union's collapse. There are no U.S. bio labs in Ukraine. We are working on a fact sheet and will get it to you as soon as possible.

1. Bob Burns, Associated Press: Does the U.S. have a physical presence at any of the five Ukrainian labs? Is there a written agreement describing the American presence or work at these labs?
2. Jack Detsch, Foreign Policy: Were you anticipating the Russians bringing up these false claims?
3. Luis Martinez, ABC: Are you seeing any false flag imagery on this chemical/biological front?
4. Luis Martinez, ABC: Are you seeing actual movement of some of these materials or equipment into Ukraine to indicate their potential use is on the horizon?
5. Tara Copp, Defense One: Why are you coming out with this now? What prompted you?
6. Idrees Ali, Reuters: Have these indications of a possible chemical/biological attack picked up in the last 24 hours? Is this part of the Russian order of battle?
7. Tom Bowman, NPR: You talked about eliminating remnants of the USSR program. Can you be more specific?
8. David Martin, CBS: Do you have indications of a false flag operation or indications that the Russians may use biological or chemical weapons?
9. Courtney Kube, NBC: Is there any sense that they would use these against the Russian military?

## Part Two

Senior Defense Official topper: We assess that northwest of Kyiv, Russian forces have been able to move forward closer to Kyiv by about 5 kilometers. East of Kyiv, we see Russians continue to advance. We assess that the northernmost of those two lines has reached 40 kilometers east of Kyiv. We now assess that Chernihiv is isolated. Some of the Russian lines approaching from the east including Sumy are still about 40 kilometers from the city. We continue to have reports of internet outages near Mariupol. 775 total missiles launched.

1. Bob Burns, Associated Press: Can you say whether the U.S. has continued to transfer arms in the last couple of days? Any sign of Russian effort to interfere? And if not, why not?
2. Jack Detsch, Foreign Policy: Is the advance 25 miles in the northeast of Kyiv?
3. Jack Detsch, Foreign Policy: Do you have a ballpark of when the Russians may encircle the city?

4. Matt Seyler, ABC: Why are the Ukrainians appealing to get these jets if it runs counter to their interests?
5. Joe Gould, Defense News: What are you seeing as far as Russian surface-to-air missile systems. Where are they being seen and how are they being used?
6. Joe Gould, Defense News: There is some talk about NATO avionics inside of those MIGs. Do you have some sense of what it would take to get those out?
7. Tara Copp, Defense News: Have you noticed any changes in tactics given some of the delays that Russian convoys have faced? Is there any discussion about providing Ukraine a Patriot system?
8. Idrees Ali, Reuters: The UK Defense Ministry said they've seen indications of use of a thermobaric weapon. Have you seen any use of a thermobaric weapon? Have you seen the movement of chemical or biological weapons closer to Ukraine?
9. Heather Mogilio, USNI News: Do you have a maritime update? Can you confirm a Russian patrol boat sunk in the Black Sea?
10. Heather Mongilio, USNI News: Does the U.S. have a history of sending scientists to assist in labs like the chemical/biological labs in Ukraine?
11. Dan Lamothe, Washington Post: Have you seen additional Russian troops heading to Ukraine from other parts of Russia?
12. Dan Lamothe, Washington Post: Would you still assess that Russia is at about 90 percent combat capability in Ukraine?
13. Mike Glenn, Washington Times: Have the Russians had any success combining aviation attacks with ground movement?
14. Tom Bowman, NPR: You said the Ukrainians do not have capabilities that the Russians do. Are you talking about air defense systems?
15. Jennifer Griffin, Fox News: Can you say what kind of weapons were used to take out that tank column that we've seen footage of? Can you rule out that drones were used?
16. Barbara Starr, CNN: On the bombing of the maternity hospital in Mariupol, have you been able to discern what type of weapon the Russians used? Are the Russians beginning to lay a groundwork for moving west?
