In the coming weeks it will become more and more obvious that our biggest problem with Putin in Ukraine is that he will refuse to lose early and small, and the only other outcome is that he will lose big and late. But because this is solely his war and he cannot admit defeat, he could keep doubling down in Ukraine until ... until he contemplates using a nuclear weapon.

Why do I say that defeat in Ukraine is Putin’s only option, that only the timing and size is in question? Because the easy, low-cost invasion he envisioned and the welcome party from Ukrainians he imagined were total fantasies — and everything flows from that.

Putin completely underestimated Ukraine’s will to be independent and become part of the West. He completely underestimated the will of many Ukrainians to fight, even if it meant dying, for those two goals. He completely overestimated his own armed forces. He completely underestimated President Biden’s ability to galvanize a global economic and military coalition to enable Ukrainians to stand and fight and to devastate Russia at home — the most effective U.S. coalition-building effort since George H.W. Bush made Saddam Hussein pay for his folly of seizing Kuwait. And he completely underestimated the ability of companies and individuals all

over the world to participate in, and amplify, economic sanctions on Russia — far beyond anything governments initiated or mandated.

When you get that many things wrong as a leader, your best option is to lose early and small. In Putin's case that would mean withdrawing his forces from Ukraine immediately; offering a face-saving lie to justify his "special military operation," like claiming it successfully protected Russians living in Ukraine; and promising to help Russians' brethren rebuild. But the inescapable humiliation would surely be intolerable for this man obsessed with restoring the dignity and unity of what he sees as the Russian motherland.

Incidentally, the way things are going on the ground in Ukraine right now, it is not out of the realm of possibility that Putin could actually lose early and big. I would not bet on it, but with every passing day that more and more Russian soldiers are killed in Ukraine, who knows what happens to the fighting spirit of the conscripts in the Russian Army being asked to fight a deadly urban war against fellow Slavs for a cause that was never really explained to them.

Given the resistance of Ukrainians everywhere to the Russian occupation, for Putin to "win" militarily on the ground his army will need to subdue every major city in Ukraine. That includes the capital, Kyiv — after probably weeks of urban warfare and massive civilian casualties. In short, it can be done only by Putin and his generals perpetrating war crimes not seen in Europe since Hitler. It will make Putin's Russia a permanent international pariah.

Moreover, how would Putin maintain control of another country — Ukraine — that has roughly one-third the population of Russia, with many residents hostile to Moscow? He would probably need to maintain every one of the 150,000-plus soldiers he has deployed there — if not more — forever.

There is simply no pathway that I see for Putin to win in Ukraine in any sustainable way because it simply is not the country he thought it was — a country just waiting for a quick decapitation of its "Nazi" leadership so that it could gently fall back into the bosom of Mother Russia.

So either he cuts his losses now and eats crow — and hopefully for him escapes enough sanctions to revive the Russian economy and hold onto power — or faces a forever war against Ukraine and much of the world, which will slowly sap Russia's strength and collapse its infrastructure.

As he seems hellbent on the latter, I am terrified. Because there is only one thing worse than a strong Russia under Putin — and that's a weak, humiliated, disorderly Russia that could fracture or be in a prolonged internal leadership turmoil, with different factions wrestling for power and with all of those nuclear warheads, cybercriminals and oil and gas wells lying around.

Putin's Russia is not too big to fail. It is, however, too big to fail in a way that won't shake the whole rest of the world.

### **35. The curious case of Russia's missing air force**

The Economist, 8 Mar 22

More than 60 new planes would be delivered to the Russian air force by the end of the year, boasted Lieutenant General Sergei Dronov, its deputy commander, last summer. These would include Su-30, Su-35 and Su-57 fighter jets and Su-34 bombers—as advanced as anything the rest of Europe has to offer. All had been “tested in combat conditions” in Syria, he assured the discerning readers of *Krasnaya Zvezda*, the official newspaper of Russia’s defense ministry.

Billions of dollars have been poured into Russia’s warplanes over the past decade. Between 2009 and 2020 the air force gained around 440 new fixed-wing aircraft, as well as thousands of drones. At the outset of war, it was widely assumed by defense analysts and officials that Russia would quickly destroy its enemy’s air force and roam freely over the country, using its air superiority to pick off Ukrainian forces at will.

Yet in the first two weeks of combat, Russia’s air force has played a minimal role. Air activity is difficult to track and Russian air strikes may have increased in both number and complexity in recent days. It is clear, though, that the Russian air force has held back its full capabilities. “Fast jets have conducted only limited sorties in Ukrainian airspace, in singles or pairs, always at low altitudes and mostly at night,” notes Justin Bronk of the Royal United Services Institute, a think-tank in London.

When hostilities began, Russia sent a volley of cruise and ballistic missiles towards Ukraine’s air bases in an attempt to ground its planes and air-defense systems, and to hobble its radars and anti-aircraft missiles. That effort failed. Ukraine had wisely dispersed its air-defense systems, making them harder to find. American defense officials say that Ukrainian air and missile defenses consequently “remain effective and in use” a claim that can be corroborated with open-source intelligence.

A recent example comes from Kharkiv, which sits 30km from the Russian border. Russian forces failed to take the city with a raid in the first days of the war. Since then, they have surrounded and bombarded it with air, artillery and missile strikes. But Ukraine is not defenseless.

Thomas Withington, an air-defense expert, says that the first missile seems to miss the target, its fuse detonating. The second, though, is a direct hit.

The interception was probably the work of a medium-range surface-to-air missile like the Buk, a mobile system that can shoot and scoot, emerging to fire and then hiding away again. Because these sort of systems use radar to find their targets, and radar cannot see over the curvature of the Earth, one countermeasure is for pilots to fly low. That is what Russian forces seem to have been doing.

But it solves one problem by creating another. In recent weeks, America, Latvia and Lithuania have sent Ukraine smaller, shoulder-fired Stinger anti-aircraft missiles, which home in on the hot engines of aircraft flying below roughly 3,500m. The weapon rose to prominence during the Soviet-Afghan war in the 1980s, when CIA-supplied Stingers were used by the Afghan mujahideen to take down more than 300 Soviet helicopters and 100 jets. Video footage posted by

Ukraine's defense ministry shows a Stinger-type missile streaking into a helicopter flying low over a field supposedly near Kyiv.

There is another reason why Russian pilots may be forced closer to the ground, and thus within range of shoulder-fired missiles. In its war with Georgia in 2008, Russia's air force was almost entirely limited to firing unguided or "dumb" bombs. Now it has precision-guided munitions, which can hit targets using satellite-navigation and other means. But it is still using the older weapons, too.

Images which appear to show the wreckage of a Su-34 attack jet shot down over Chernihiv suggest it was armed with unguided bombs. This is telling, says Mr Bronk, because Russia's Su-34 regiments are "the most proficient and regular users" of precision munitions in the air force when available. Images released by Russian state media show other Su-34s parked on a runway armed with more unguided weapons; others reportedly from Chernihiv and Kharkiv show exploded unguided bombs littering urban areas, including one that landed in a house.

One theory is that Russia's stock of precision-guided munitions is running low. More likely, argues Michael Kofman of CNA, an American think-tank, is that Russia is holding some in reserve, either for later in this war or in anticipation of a bigger one. Either way, the use of dumb bombs creates a dilemma. As Tim Robinson of Britain's Royal Aeronautical Society notes, pilots can either fly low to see targets and risk getting shot down or bomb from high or medium altitude with less accuracy.

The result is that Russia has lost substantial numbers of aircraft. Stijn Mitzer, an Amsterdam-based analyst and his colleagues at Oryx, a blog, have studied imagery available on social-media sites to establish the number of proven Russian losses. These currently run to 11 fixed-wing aircraft, 11 helicopters and two drones. Ukraine's government claims to have destroyed at least 39 planes and 40 helicopters, though these figures are unverified. By way of comparison, America lost 40 or so fixed-wing aircraft during the entire five-week air war with Iraq in 1991.

Russia's failure to take out Ukrainian air defenses "is becoming a serious hindrance", says Rob Lee of King's College London. It will probably be regarded as one of the "key mistakes" of this war, he reckons. It means that Russian planes cannot freely patrol the skies to ward off Ukrainian ones, and that attack aircraft cannot provide proper air support to troops on the ground. Ground-surveillance and airborne early-warning aircraft must stay back from the battlefield, reducing the flow of intelligence.

There may be a lesson for NATO. Russia's initial failure to gain air superiority could be explained away by the Kremlin's secrecy over the decision to go to war and a lack of planning time, says Mr Bronk. But in his view, the air force's passivity could also reflect inexperience or incompetence. Russia's air force, with less flying time per pilot and lacking in the advanced simulators and extensive training ranges available to Western air forces, "lacks the institutional capacity to plan, brief and fly complex air operations at scale". The coming weeks will clarify whether that is so.

### 36. New rules for a new world

New York Times, 8 Mar 22, Bret Stephens

Russia's invasion of Ukraine is being described as the end of the post-Cold War era. This isn't quite accurate. Since the Soviet Union collapsed in 1991, we've seen three different eras. Each of them lasted about a decade.

There were the End of History years of the 1990s, when Washington thought the main task of foreign policy was to usher the world into a more democratic, free-market, rules-based order. Those priorities faded after 9/11, when no international issue mattered more to policymakers than the fight against militant Islamism. A decade later, after Osama bin Laden was killed in 2011, Barack Obama effectively called an end to the war on terror, saying it was time to "focus on nation building here at home."

This was a decade whose animating instincts were typified by two telling reactions by two presidents to two crises — both involving Ukraine.

The first was Obama's tepid response to Russia's 2014 seizure of Crimea, after which he refused to provide Kyiv with lethal military aid on the theory that Ukraine's future was a core Russian interest but not an American one. The second was Donald Trump's attempted shakedown of Volodymyr Zelensky in 2019, in which he tried to hold up security assistance to Ukraine in exchange for dirt on the Biden family.

In other words, Obama looked at Ukraine and asked, "What's in it for us?" Trump looked at Ukraine and asked, "What's in it for me?" For neither president was the question of staving off another Russian invasion, much less of encouraging Ukraine's democratic development, a particular priority.

Meanwhile, Vladimir Putin looked at Ukraine and concluded: "It's all for me."

The Russian president may have had various motives for invading Ukraine. But it would be foolish to suppose that he wasn't also enticed — by our seeming indifference to Ukraine's fate; by the willingness of successive American presidents to continue to do business with him even as he invaded neighbors, poisoned dissidents, hacked our networks and meddled in our elections; by Europe's military weakness and growing reliance on Russian energy; by the coalescing of an Axis of Autocracy bent on overthrowing the American-led liberal order.

All of this made Putin's Ukraine gambit seem like a good bet — except for his failure to reckon with the courage of the Ukrainian people, their magnificent president, and his own military's ineptitude. That courage has given the West time to regroup to help save Ukraine. It should also be an opportunity to rethink the way in which we look at foreign affairs for the next decade. We need new rules for a new world.

What should they be? A few ideas:

**Free trade for the free world.** Economic nationalism never works. De-linking the Russian economy from the rest of the world is already painful. And the only long-term hope for

decoupling from China is through deeper economic integration of free and allied nations. That means the revival of the Trans-Pacific Partnership, and a free-trade agreement with the European Union and another one with Britain.

**Help those who help themselves.** If a lesson of the past 20 years is that we cannot fight for the freedom of those who won't fight for it themselves, the lesson of Ukraine is that we can at least give those who will fight the tools so they can finish the job. One model is the deal for nuclear-powered submarines that the U.S. and Britain signed last year with Australia, which the administration needs to accelerate if it's going to be a deterrent to China. Another model is Israel, which we arm with American jets so that we never need defend it with American troops.

**Parallel global institutions.** China has trashed the World Trade Organization by refusing to meet its commitments. Russia trashed Interpol by using the agency to persecute political dissidents. The Biden administration may not want to exit those legacy organizations, but it can downgrade their relevance by investing in new or nascent organizations in which democracy buys membership.

**Be honest about energy.** The world will need carbon-based fuels for decades to come. And we are better off extracting more of it in North America — including on U.S. federal land — than by asking Saudi Arabia to ramp up production or hoping to get more from Venezuela and Iran with sanctions relief. The alternative to increasing domestic oil and gas production isn't only clean alternative energy. It's also filthy petrostate energy.

**Get serious about defense.** The dumbest debate in foreign-policy circles is whether China or Russia is the graver threat. The real answer is that we don't have the luxury of choosing. But we do have the luxury of spending more on defense, which, at less than 4 percent of gross domestic product, is about half of what we spent in the prosperous 1980s. A 500-ship Navy — an increase of 200 ships — should be a national priority.

**Play to win.** “Here's my strategy on the Cold War,” Ronald Reagan once told his adviser Richard Allen: “We win, they lose.” He said that in 1977, when it seemed like a pipe dream. Twelve years later, it was a fact. Let's aim for a world unhaunted by the likes of Vladimir Putin.

### **37. The Information War isn't over yet**

The Atlantic, 8 Mar 22, Charlie Warzel

Russia's invasion of Ukraine is not yet two weeks old and yet a dozen headlines from major media outlets now suggest that Ukraine is “winning the information war” across much of the world (Russia and China may be notable exceptions). A primary reason for Ukraine's success, they argue, is Ukrainian President Volodymyr Zelensky, a former actor whose leadership style, media savvy, and earnest, emotional appeals have helped channel sympathy and aid for his country. He is, as one headline put it, “a respected war hero and a cultural icon.”

Zelensky's performance of wartime leadership has been remarkable for the way it has made use of a new media environment and shaped public opinion. Still, we should be wary of declaring

winner and loser of the information war so soon. Like the war on the ground, its scale is dizzying and dynamic: Momentary success in online conflict is not necessarily indicative of future success. I've been struck by how the conflict's digital footprint has both confirmed and upended some long-held understandings and expectations of information warfare. Over the past half decade, activists, journalists, and academics around the world have studied and documented how information flows across the internet and how it is manipulated. Over the past two weeks, some have learned that their conclusions are of less use in wartime.

The first surprise is that, despite a lot of noise, a strong signal has been coming from the front lines. On an internet where propaganda and conspiracy theorizing flourish, you'd expect a land war involving Russia to result in a bewildering barrage of online garbage and falsehoods that render the current state of the conflict truly unknowable. But documentation of the actual military action has emerged with clarity throughout the West. We've seen plenty of examples of misinformation, disinformation, and media manipulation: Opportunists are attempting to pass off historical clips, or even video gameplay, as fresh war footage, for example. Yet digital fakes are also being debunked in real time, while real footage is verified by a cohort of trained investigators from newsrooms and volunteer organizations. Across apps such as Telegram, there are channels with thousands of people—an "army of hackers," as a *Forbes* article calls them—attempting to report and take down information from Russian state media and coordinate cyberattacks against Russia.

"There've been moments at this early juncture where it's felt like the first time the information war was won by the disinformation fighters," Eliot Higgins, one of the founders of the Bellingcat project, told me this week. Higgins, who got his start covering global conflicts online in 2012 during the Syrian war, helped pioneer the field of open-source investigation, which uses public footage and imagery posted on social media to find and organize evidence of fighting and atrocities. Higgins and Bellingcat have focused much of their attention on Russia and Ukraine since 2014, when they began looking into the downing of Malaysia Airlines Flight 17 in Donetsk Oblast. "There is a preexisting network in this region that stretches back to 2014 and that has not gone away," he said. "Journalists are following this network; policy makers are following it. And so you have videos rapidly geolocated and preserved for war-crimes evidence, and it makes it extremely hard for false Russian narratives to take hold." Higgins believes that Bellingcat's work has influenced others too. Many newsrooms now incorporate open-source investigation into their war reporting. (The *New York Times*' visual-investigations team is one notable example.)

Jane Lytvynenko, a senior research fellow at the Harvard Kennedy School's Shorenstein Center on Media, Politics and Public Policy, argues that online audiences, especially those who monitor breaking news, are a bit more skeptical than they used to be, and better able to spot influence attempts. She told me that open-source investigators like those working at and alongside Bellingcat "have made Russia's motivations much clearer" than Vladimir Putin would like. "Not only can we untangle their false-flag operations and disinformation, but we can show how poorly executed these propaganda attempts really are," she said.

That's the second surprise: Russia's online propaganda and influence apparatus is not nearly as sophisticated or effective with non-Russian audiences as many thought (at least to this point). Russia's early attempts to falsely portray Ukraine as a nation of neo-Nazis have been lazy,

recycling old material, Higgins told me. “There’s been so much talk of how amazing Russia is at disinformation. But we see it’s not that they were good, but that the rest of us weren’t prepared for it. We weren’t good at verifying or debunking, and we confused our own incompetence for Russian genius.” Still, some Kremlin fake-news campaigns have been successful, and it’s certainly possible that Russia’s propaganda apparatus was merely caught flat-footed by the invasion, and hasn’t yet revved up.

And then there’s the opposite side to all of this: the information war Russia is waging on its own citizens—both the information it broadcasts and the outside information it blocks from its public. Of all the elements of this crisis, this may be the most difficult for outsiders to evaluate effectively. It is also a reminder to be humble in our predictions—what might appear to our eyes as ineffective propaganda may read differently to audiences at home. Despite the remarkable footage of Russians protesting the war, reporting also suggests that Kremlin messaging has deceived some Russians into denying the very existence of the conflict.

We may be seeing just how hard it is to wage a successful information war when you are very clearly the villain. Russia’s invasion and the harrowing images of destruction of Ukrainian cities have created a global crisis and a moral consensus that is unusual in the internet era. Lytvynenko said that Ukrainians have also excelled at telling the world what’s happening to them. Their message of resilience, she argued, has been amplified by a large Ukrainian diaspora across the web. “Right now, during a shooting war, you would expect to see Russia attempting to create chaos and confusion and to demoralize the people in the war zone,” Renée DiResta, a computational-propaganda expert, told me this week. “And there is both a leader who is very adeptly keeping up morale and maintaining trust, and a cadre of volunteers working against that.”

Universally accepted narratives can be fleeting, though, especially when media scrutiny fades. The world is tuning in to the hourly news from Ukraine right now, says Mike Caulfield, a researcher at the University of Washington’s Center for an Informed Public, but attention is always fickle. “I do worry, when the attention isn’t so intense, there could be more attempts to muddle the narrative,” he told me. Caulfield pointed to the events of January 6, and argued that the constant airing of footage initially led to a widespread condemnation of the insurgency, but that, with some distance from that intense coverage, many participants and Republicans tried to rewrite the story.

Ukraine, of course, has its own propaganda aims. Official government accounts have helped amplify stories of questionable veracity, such as a debunked anecdote about the reported deaths of the soldiers stationed at Snake Island. Some of these stories have been amplified uncritically by those affected by the scenes coming from Ukraine, leading to what The New York Times has called a “blend” of fact and mythmaking. One Russia and Ukraine expert suggested that large chunks of the information we are seeing across our feeds at any given moment are “unverified or just flat out false.” Errors in our understanding of what is happening on the ground may, at times, be less a product of malice or incompetence than of the size of the conflict and the magnitude of our biases. For example, a recent video allegedly showing a Ukrainian man smoking a cigarette and calmly carrying an unexploded land mine to safety quickly made the rounds on Twitter.

While some observers delighted in the man's bravery and nonchalance, others saw evidence of impending doom.

Obsessing over winners in an information war can be fraught, even dangerous. Peter Pomerantsev, a senior fellow at John Hopkins University's SNF Agora Institute and a scholar of Russian propaganda, argued in 2019 that the information-war lens risks "reinforcing a world view the Kremlin wants — that all information is just manipulation." On Twitter, Pomerantsev speculated that too much focus on information warfare could flatten what he sees as a crucial difference between Russian and Ukrainian approaches to information. "Collaborative communication is when you engage people, treat them as equals," he wrote. "Sure the Ukrainian army do all sort of psyops to survive. But Ze[lensky] is treating people as equals, trying to engage and inspire them — that's not 'information war'. It's the opposite."

Brandon Silverman, the creator of the digital-transparency tool CrowdTangle, has been studying and tracking the way that information moves around the internet's biggest platforms. He's learned to be extremely cautious in making any broad judgments about what he's seeing online, he told me. When I asked for his early observations on the conflict's digital side, he demurred without having the hindsight of a more forensic examination. "I'm not going to feel like I have an epistemically confident understanding of what has happened for probably about six to nine months," he said.

Silverman is focused on the nuances of the information war from the platform side, where social networks have begun to shut out Russian state-media channels such as RT. He's less concerned about the content and far more worried about process and transparency. Social-media platforms have been taking down and fully deleting Russian state media channels, he warned, instead of archiving them to study later. "If you are looking back a year from now, researchers and historians and those investigating war crimes will want to know, what were these channels doing leading up to this invasion?" he said. "How can we learn how effective a piece of propaganda was if we can't go back and study it?"

Speaking with these experts convinced me that we may well have more real-time access to accurate information about conditions on the ground than we have had for any other conflict, but that the status of an information war is much larger than defining the aggressors and the victims. We should not adopt a dangerous post-truth mindset, but we must remember that what is verifiable is likely still surpassed by what we don't yet know or cannot see. In the middle of a so-called information war, as in the middle of a ground war, it is easy to make confident judgments too early and be seduced by simple narratives. What seems to make sense now may not make sense tomorrow. And the footage we see, no matter how indelible, could be interpreted quite differently through another's eyes.

**38. The suffering of Afghan women is the suffering of Afghanistan itself**  
The Globe and Mail (Canada), 8 Mar 22, Khorshied Nusratty and Lauryn Oates

The Israeli attack targeted the outskirts of Damascus on Monday, killing IRGC colonels Ehsan Karbalaipour and Morteza Saednejad, the IRGC said in a statement carried by state media.

“Undoubtedly, the Zionist regime will pay for this crime,” the statement said.

Iran rarely acknowledges deaths of its forces in Syria by Israel, which carries out airstrikes targeting Iranian and Iranian-backed forces in Syria regularly. Tehran typically attributes deaths of its forces in the war-torn country to fighting against extremist groups, such as ISIS.

Syrian state news agency SANA had reported on Monday that Israeli missile strikes killed at least two civilians near Damascus.

### **44. US, Iraq discuss rising oil prices and war in Ukraine**

Kurdistan 24, 8 Mar 22

A US diplomatic delegation on Monday met with Iraqi Foreign Minister Fuad Hussein in Baghdad and discussed the economic and security ramifications of the ongoing Russia-Ukraine war on the Middle East and the world.

The US Deputy Assistant Secretary of State for Iraq and Iran Jennifer Gavito attended the meeting along with Ambassador to Iraq Matthew Tueller and White House National Security Council Director for Iraq and Syria Zehra Bell, according to a statement from the Iraqi Foreign Ministry.

They also discussed the ongoing Iran nuclear talks in Vienna that aim to revive the JCPOA, also known as the Iran nuclear deal, that the US pulled out of in 2018 under then-President Donald Trump.

Hussein said he hopes the parties reach an agreement soon, according to the statement.

Iraq is also expected to host the next round of negotiations between Saudi Arabia and Iran in Baghdad soon, the country’s national security advisor said in late February.

Iraq has hosted a series of talks between the two regional rivals in an effort to reduce tensions in the region.

### **Rising oil prices**

The Russia-Ukraine crisis has also driven up the price of oil. On Monday, a barrel of Brent crude oil traded for nearly \$140.

American and Iraqi officials discussed the results of the increase in prices and how they affect hydrocarbons-reliant and non-oil economies alike, the statement added.

An estimated 75 percent of global sunflower oil exports come from warring Russia and Ukraine. The closure of ports since the Russian invasion began on Feb. 24 has resulted in a dramatic increase in the cost of cooking oil globally.

#### **45. US-led coalition highlights contributions of female Kurdish soldiers**

Kurdistan24, 8 Mar 22, Wladimir van Wilgenburg

The Peshmerga reflects the breadth and diversity of the Kurdish people, Col. Todd Burroughs, Deputy Director of the coalition's Military Advisor Group North, said on Tuesday in light of International Women's Day 2022.

“Today we celebrate and highlight the contributions of women and their enduring commitment on this International Women’s Day,” he said in a tweet.

The Twitter account of the Combined Joint Task Force – Operation Inherent Resolve (CJTF-OIR), the official name for the US-led coalition, also paid tribute to Kurdish, Iraqi, and Syrian women fighters on Tuesday.

“We applaud the women in Iraq & Syria who stood resolute in the face of adversity & appreciate their contribution to the strengthening of the regional security & stability,” read the coalition’s tweet.

Also, on Mar. 6, coalition advisors met with an all-female unit of the Peshmerga forces, and discussed recent operations and training.

Last March, a female Kurdish Peshmerga officer, was the first from the Kurdistan Region, to graduate from a course at the British Royal Military Academy Sandhurst along with other female officers.

#### **46. At Russia request: Shabih begins recruiting members to fight in Ukraine**

Syrian Observer, 8 Mar 22

Russia asked the National Defense Militia to provide it with fighters for its war on Ukraine, according to Baladi News.

The leader of the National Defense Militia in the town of al-Suqaylabiyah in the Hama countryside, Nabel al-Abdullah, announced his support for Russia in the invasion of Ukraine, appreciating what he described as the friendship between Bashar al-Assad and Vladimir Putin.

In a statement carried out by pro-government media, he said the Assad regime was one of the first supporters of the independence of two regions from Ukraine.

Abdullah praised the Russian military's fighting capability, and what he called the Russian president's statesmanship in political and economic issues, and that he was able to change the world's dominant unipolar policy.

According to sources for Baladi News, the Russian base Of Hemeimeem asked Abdullah to register the names of members wishing to go to Russia to fight in its ranks in Ukraine. The members would go under semi-annual contracts providing for the dispatch of the mercenary to guard public and military facilities, with a monthly salary of \$1,500.

The sources added that Abdullah and other mediators started a campaign to convince young people to go and fight in Ukraine alongside the Russians. However, there is a lack in the willingness to register and fight alongside the Russians in Ukraine after they implicated soldiers to fight in Libya and returned without giving them the amounts agreed upon in their contracts.

On Monday, the National Defense Militia in Suqaylabiyah and Mhardeh organized a ceremony in front of the Church of Hagia Sophia in Suqaylabiyah. Celebrations came in support of Russia's invasion of Ukraine, where Christian clerics participated in the celebration which was covered dramatically by Russian television.

Last Friday, activists circulated a picture showing the leaders of the National Defense Militia in Suqaylabiyah and a pig with the name Zelensky written on its body.

### **47. Afghan, Iranian forces clash in Nimroz**

TOLOnews, 8 Mar 22

Residents and local officials said that a clash erupted between the Islamic Emirate's border forces and Iranian border guards in Kang district of Nimroz province on Monday evening.

Local officials confirmed the clash and said it started due to a misunderstanding between the forces of the two sides.

However, sources said that the clash began when the Iranian border forces entered Kang district to interfere with local Afghan farmers who were working on a canal at the Kamal Khan dam.

According to the sources, Iranian forces crossed onto the Afghan side in Kang district where they faced Afghan border forces and two Iranian force members were killed as a result of the clash. Their vehicle was left behind.

"Yesterday evening (Monday), a clash occurred between Afghan and Iranian border forces in Kang district of Nimroz," said Hussain Khpalwak, a farmer in Nimroz province.

Local officials have not yet commented over the casualties of the clash.

balances is neither potent nor functional. Our power elites do not like public officials exhibiting autonomy and independence.”

Finally, Pakistan would have to adopt a policy of non-interference in neighboring countries' internal matters, and boost intraregional trade and connectivity. In this regard, Pakistan should first secure its economic interest before meddling into non-consequential regional conflicts. Of course, Kashmir is necessary; however, restoring trade ties with India is equally important to open new avenues for bilateral engagement. Recently, the Special Assistant to the Prime Minister on Commerce and Investment Dawood Razak suggested restoring trade ties with India to improve Pakistan's dismally low trade figures.

If followed in letter and spirit, the new strategic shift can help Pakistan recast its image as a peace-loving nation and make it a valuable member of the international community. But the million-dollar question is: Are we ready to address the core issues at home?

*Durdana Najam is an op-ed writer based in Lahore. She writes on security and policy issues.*

### **57. Syria and Russia see eye to eye**

Al Ahram Weekly, 9 Mar 22, Bassel Oudat

Syria was one of five countries that opposed last week's UN General Assembly Resolution condemning Russia's military operation in Ukraine. The resolution urged Moscow to immediately halt the use of force against Kyiv and immediately withdraw all its military forces from Ukraine. By opposing the resolution, the regime led by Syrian President Bashar Al-Assad took a contrary position to 141 other UN countries.

Syria believes the West provoked Russia and forced it to resort to military action in Ukraine. It has pledged to support Russian President Vladimir Putin, with Al-Assad declaring his support for the Russian military operation in Ukraine and describing actions by the West towards Russia as “hysteria”.

Al-Assad said that Russia “is not only defending itself, but the entire world, and the principles of justice and humanity,” according to a read-out of a telephone conversation between the Syrian president and Putin. He claimed that what is occurring is “a correction of history and a restoring of the balance after it tipped when the Soviet Union was dismantled.”

“The enemy that the Syrian and Russian armies are fighting is one. In Syria, it is extremism, and in Ukraine it is Nazism,” Al-Assad said.

The statements were preceded by recognition by the Syrian regime of the secession of the Luhansk and Donetsk regions in eastern Ukraine as independent republics. Syrian Foreign Minister Faisal Miqdad said Syria “supports President Putin's decision to recognise the republics of Luhansk and Donetsk and will cooperate with them.”

The Syrian regime also recognized the independence of the two republics of Abkhazia and South Ossetia that seceded from Georgia after a Russian military operation in 2008. It recognized the independence of Crimea, which Russia annexed from Ukraine in 2014.

The relationship between Syria and Russia is strategic, though it evolved into more than that after Russia began its direct military intervention in Syria in 2015. Russia has gained much influence in Syria as a result, and Syria's leadership is always seeking to repay Russia for the decades of support it has extended to the country since the days of former Syrian president Hafez Al-Assad, Bashar's father.

Russia's military intervention in Syria in 2015 restored Al-Assad's power after he was close to losing areas under his control and weakened the armed Syrian opposition. According to statements by senior Russian military officials, Russia also took advantage of the Syrian conflict as a testing ground for weapons and tactics it is now using in Ukraine.

Many observers have drawn parallels between what Russia is doing in Ukraine and its actions in Syria. The comparisons have prompted Ukrainian Foreign Minister Dmytro Kuleba to ask NATO to prevent Putin from transforming his country into another Syria. Addressing the NATO countries, Kuleba said, "act now before it is too late. Do not let Putin turn Ukraine into Syria."

French Foreign Minister Jean-Yves Le Drian has also expressed concern that "the worst is yet to come" in the Russian-Ukrainian war. "We should fear a siege, which the Russians are accustomed to doing. Remember Aleppo and Grozny," Le Drian said, referring to cities in Syria and Chechnya, respectively, bombed by Russia.

Syria's opposition has sided with Ukraine and criticized the West, led by the US, for its relative inaction in Syria. "There is a great difference between the position of the international community towards Ukraine and its position on Syria," said Salem Al-Meslet, head of the Syrian Opposition Coalition.

"The international community must bear responsibility in Syria and in Ukraine," he said, with the Syrian Network for Human Rights criticizing what it described as "the West's double standards towards Russia in Syria and Ukraine."

Meanwhile, the Syrian regime has begun to feel the impact of its support for Moscow, especially after the start of the sanctions against Russia. Within days, the Syrian lira dropped sharply on the international exchanges, and Syrian officials hinted at an imminent crisis in supplies of oil and wheat.

Syria's support for Russia has also been manifested on the political plane. Coinciding with the 11th anniversary of the start of the Syrian conflict, the US Embassy in Damascus has announced that March will be a "month of accountability" for the Syrian regime and that the "impunity will end" in Syria.

The US called a meeting in Washington of the Friends of Syria group on 3 March, which included the US, Turkey, France, Germany, Norway, the UK, Iraq, Jordan, Qatar and Saudi

Arabia. The attendees reiterated their commitment to seeking a political solution to the Syrian crisis in accordance with UN Security Council Resolution 2254.

Commenting on Washington's new interest in Syria, Syrian opposition member Radwan Ziadeh said that "I expect the Biden administration is working on developing a political and military strategy for Syria after what happened in Ukraine. It could include prioritizing a push for a political transition and removing Al-Assad."

"Neither the Security Council nor the UN can do a thing because Russia is a permanent member [of the Security Council]. On the Syrian issue, Russia used its veto 13 times to paralyse the work of the Security Council, blocking the condemnation of the Syrian regime and preventing the International Criminal Court from investigating war crimes or crimes against humanity committed in Syria," Ziadeh said.

The Syrian regime sent its National Security Chief Ali Mamlouk to Tehran, where he met with Iranian President Ebrahim Raisi. Al-Assad also received Ali Asghar Khaji, a senior adviser to Iran's foreign minister, to discuss boosting cooperation between the two countries.

This sent a message that Russia is not the only ally of the Syrian regime, and that Iran is also its stalwart ally. It shows that Tehran is ready to "fill the vacuum" in Syria if Russia is distracted by a long war in Ukraine, especially since Iran is likely to sign a nuclear deal with the international community soon.

For ordinary Syrians, the war in Ukraine has made their lives worse. Amid opposite positions by the Syrian regime and the opposition on the war in Ukraine, there have been reports that the war has become a destination for Syrian young people looking for a "new battle" where warlords are looking to profiter.

Recruiters are active in Damascus and areas under regime control, signing up young people to fight alongside the Russian army in Ukraine. They include 23,000 combatants who have fought alongside the Syrian regime as part of militias affiliated with the Syrian president's cousin and National Defense Forces.

The young people are said to be being paid \$7,000 over seven months to "defend facilities" in Ukraine, which suggests that the Russian Hmeimim Base in Syria, the main hub of recruitment, anticipates the Ukraine war will last for months, not days.

Other reports say that Syrians have decided to volunteer to fight alongside Ukrainian forces, especially after Ukrainian President Volodymyr Zelensky opened the door for volunteers from around the world to join his army's fight. It is believed that some have already arrived in Ukraine from Turkey and camps in northern Syria.

Syrian political analyst Saeed Moqbel said that "the Syrian situation has become more complicated with the outbreak of the Russian-Ukrainian war. Syria's future is not clear because its fate depends on the volition of countries battling and interfering in the country. Syria has become a weapon in the hands of players in global wars."

### COVERAGE HIGHLIGHTS

---

- 1) The Wall Street Journal led global media reporting on a missile strike in Erbil that allegedly targeted a new U.S. Consulate building that was soon to be opened. No injuries to U.S. military personnel or civilians were reported. Media quoted various U.S. and Kurdish officials who said the missiles were likely launched from Iran, following threats of Iranian retaliation for the Israeli strike in Syria Tuesday that killed two IRGC colonels.
- 2) The New York Times was one of several media outlets stating the war in Ukraine has prompted a U.S. reassessment of its foreign policy, the largest since the same undertaking took place following the 9-11 attacks. The article notes the Russian invasion has bonded America to Europe more tightly than at any time since the Cold War and deepened U.S. ties with Asian allies, while forcing a reassessment of rivals like China, Iran and Venezuela. Despite concerns a renewed focus on Europe could divert attention from Asia, several White House officials said the U.S. can capitalize on how the war has convinced some Asian governments that they need to work more closely with the West to build up a global ideological front to defend democracy.
- 3) The Los Angeles Times published the latest news from Ukraine late Saturday night, emphasizing Russian forces intensified their bombing in cities including Mariupol, Mykolaiv, Kharkiv and Chernihiv, while also positioning for a possible siege of Kyiv. Earlier Moscow warned the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

**1. Missiles from Iran struck in vicinity of U.S. Consulate in Northern Iraq, officials say**  
Wall Street Journal, 12 Mar 22, Gordon Lubold and Michael R. Gordon

A missile strike early Sunday that landed in the vicinity of a new American consulate under construction in northern Iraq originated from Iran, according to U.S. officials. The attack comes as the U.S. is edging closer to cementing a deal to revive the 2015 agreement with Tehran that constrains Iran’s nuclear program.

## 2. Ukraine War ushers in ‘new era’ for U.S. abroad

New York Times, 12 Mar 22, Michael Crowley and Edward Wong

The war in Ukraine has prompted the biggest rethinking of American foreign policy since the Sept. 11, 2001, attacks, infusing the United States with a new sense of mission and changing its strategic calculus with allies and adversaries alike.

## 3. Russia intensifies assault, warns U.S. weapons sent to Ukraine are ‘legitimate targets’

Los Angeles Times, 12 Mar 22, Nabih Bulos and Jenny Jarvie

Russian forces kept up their bombardment of cities across Ukraine on Saturday, capturing the eastern outskirts of a key southern port and waging an increasingly violent campaign with an eye to encircling the capital even as they sought to bring a political veneer to their occupation in cities they have captured. Moscow also signaled it could soon expand the war to embroil Kyiv’s allies, warning the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

### **13. 'Rest now, while we can.' At Estonian NATO base, troops prepare for Putin's next move**

Politico, 13 Mar 22, Charlie Duxbury

At NATO's Tapa military base in central Estonia, Russia's invasion of Ukraine has sparked a heightened sense of purpose among the troops. On a recent weekday, and despite heavy snow, there were plenty of signs of activity in and around the frontline camp — just 160 kilometers from the Russian border — as soldiers wondered what Russian President Vladimir Putin's future plans might be.

### **14. Military briefing: fear of deployment of chemical weapons in Ukraine**

Financial Times, 12 Mar 22, Daniel Dombey, John Paul Rathbone and Erika Solomon

As the west steps up its warnings that Russia could use chemical weapons in Ukraine, a broader fear lurks beneath the surface: the same poison gases that killed thousands on the front lines of the first world war could become an ever more familiar part of 21st century conflict.

### **15. What to know about Javelin antitank missiles could play in Ukraine's fight against Russia**

Washington Post, 12 Mar 22, Claire Parker, Alex Horton and William Neff

The United States and allies have surged weapons to Ukraine in recent weeks in the face of the Russian invasion. Images of destroyed Russian tanks on social media have drawn attention to one particular weapon: the Javelin missile. The U.S. and other NATO countries sent more than 17,000 antitank weapons, including Javelin missiles, overland to Ukraine via Poland and Romania in the span of less than a week this month, the New York Times reported.

## **16. Moon battle: New Space Force plans raise fears over militarizing the lunar surface**

Politico, 12 Mar 22, Bryan Bender

The battle is on for the moon. The U.S. military is investing in new technologies to build large structures on the lunar surface. It's designing a spy satellite to orbit the moon. And it just announced plans for a surveillance network — what it calls a “highway patrol” — for the vast domain between Earth's orbit and the moon, known as cislunar space. Top military strategists and documents, meanwhile, now consistently refer to this region as a new realm of operations.

## **17. The new legion of foreign fighters: who are they and where do they come from?**

Sunday Times (UK), 12 Mar 22, Peter Conradi and Hugo Daniel

In happier times, Anton Bondarenko, 22, gave online English lessons. Now he is an unlikely but vital cog in Ukraine's war machine. From the bedroom of the modest flat in central Kyiv that he shares with his mother, Bondarenko and 100 or so of his colleagues elsewhere in the capital form a virtual call center. Their task? Fielding inquiries from people across the world who have answered an appeal by President Zelensky to join a new Ukrainian foreign legion to help repel the invaders.

## **18. U.S. commission urges Biden to designate Ukraine, Georgia as major non-NATO allies**

Foreign Policy, 12 Mar 22, Amy Mackinnon

The Helsinki Commission, an independent U.S. government agency tasked with promoting human rights and security in Europe, has called on the Biden administration to upgrade the United States' defense relationship with Ukraine. The commission seeks to help facilitate military and economic assistance to Kyiv as Russian forces move to encircle the Ukrainian capital.

## **19. Nerves on edge in Poland as war next door in Ukraine revives fears of Russia**

Los Angeles Times, 12 Mar 22, Patrick J. McDonnell and Rima Marrouch

Military enlistments are spiking, demands for passports are surging, and memories of the bad old days of the Cold War are fraying the collective nerves of the Polish people.

## **20. Tiny kingdom in Nigeria celebrates as threat from Boko Haram fades**

Sunday Times (UK), 13 Mar 22, Richard Assheton

The king rose early on the biggest day for his people in years. By 9am the walled center of the village was abuzz with the chatter of thousands who had come from the hills around. The celebrations that greeted the king were the first of their kind in nearly a decade. For much of that time the people of Sukur, a little-known, UNESCO-listed kingdom 3,000 feet up in the highlands of northeast Nigeria, lived in fear.

### **21. Any new Iran deal would likely only be temporary**

National Review, 12 Mar 22, Carine Hajjar

There was speculation that earlier this week, the eleven months of negotiations in Vienna would finally end in a completed Iran deal. Indeed, EU foreign minister, Josep Borrell Fontelles, tweeted that the final text of the agreement is “essentially ready and on the table.” As of Thursday, however, the deal has stalled – most notably due to Russian demands for protection from sanctions on its trade with Tehran.

### **22. Don't embrace Saudi Arabia and the UAE because of the Ukraine crisis**

The Hill, 12 Mar 22, William D. Hartung

The Biden administration is reportedly reaching out to Saudi Arabia and the United Arab Emirates (UAE) to urge them to increase their oil output to counterbalance disruptions in the global market sparked by sanctions on Russia. In doing so, it is crucial that the administration doesn't excuse their crimes in Yemen or bolster their militaries with additional arms sales or other military support.

### **23. 'A serious failure': scale of Russia's military blunders becomes clear**

Financial Times (UK), 12 Mar 22, Sam Jones, John Paul Rathbone and Demetri Sevastopulo

The outcome of Russian president Vladimir Putin's war is still far from certain: little information exists on Ukrainian forces' rates of attrition, while Russia's military still outmans and outguns that of its neighbor. The chances of escalation have meanwhile increased as the Russian leadership looks to regain the front foot. But in the first phase of its offensive, the Kremlin's military story is one of failure.

### **24. For the sake of our national security, Congress must end its budget battles**

The Hill, 12 Mar 22, Mike Rogers

On Tuesday, the Office of the Director of National Intelligence issued its Annual Worldwide Threats report. If you weren't already unsettled by the state of the world, reading this sobering report will certainly leave you concerned. From Russia to China, health security to transnational threats like drugs and terrorism, and more, the ODNI report shows just how unsettled the world is today and what it's anticipated to be over the course of the next year.

### **25. Nostalgia and Kalashnikovs: Why Russia wins some sympathy in Africa and the Middle East**

Economist, 12 Mar 22

In 2019 Vladimir Putin welcomed 43 African leaders to the inaugural Russia-Africa summit, a higher turnout than Britain or France attracted to similar shindigs. At the bash in Sochi the Russian president lambasted the West for how it imposed “political or other conditions” on African countries, a reference to chiding about human rights. “We have a lot to offer to our African friends,” said Mr Putin.

**26. Will China offer Russia financial help? A bit. But it will mostly seek to learn from Russia's mistakes**

Economist, 12 Mar 22

If you believe China's diplomats, relations with Russia are "rock solid" and the friendship between Xi Jinping and Vladimir Putin has "no limits". Western sanctions are about to put those warm words to the test. Russia needs an economic and financial lifeline. It would like to use China as a conduit through which to continue trading with the rest of the world. China, however, must strike a delicate balance between helping Mr Putin stand up to their joint rival, America, and retaining its own access to the global financial system. No doubt to Mr Putin's regret, its financial aid to Russia is likely to be qualified at best.

#### **1. Missiles from Iran struck in vicinity of U.S. Consulate in Northern Iraq, officials say**

Wall Street Journal, 12 Mar 22, Gordon Lubold and Michael R. Gordon

A missile strike early Sunday that landed in the vicinity of a new American consulate under construction in northern Iraq originated from Iran, according to U.S. officials.

The attack comes as the U.S. is edging closer to cementing a deal to revive the 2015 agreement with Tehran that constrains Iran's nuclear program.

The compound wasn't hit and no U.S. personnel were hurt, said U.S. officials. They added that they weren't sure what was being targeted and that the attack was still under investigation.

The attack involved as many as a half-dozen missiles, and at least one landed more than two kilometers—1.2 miles—from the new compound, according to U.S. officials familiar with the preliminary reports.

While a series of attacks by Iranian-backed militias in Iraq have been carried out in recent years using drones and rockets, it is rare for such strikes to emanate from Iranian territory. Iran's mission to the United Nations didn't immediately respond to a request for comment.

U.S. officials said that the missile attack may have been in retaliation for an Israeli airstrike in Syria on Monday that killed two members of Iran's Islamic Revolutionary Guard Corps. Iran's

foreign ministry spokesman said after the Israeli strike that Iran would take steps to hold Israel accountable.

Israel has been carrying out airstrikes against Iranian-backed militias and Iranian personnel in Syria as it seeks to prevent Iran from transferring weapons to Hezbollah, the Lebanese militia group. The campaign includes placing mines on ships carrying oil and other goods that are bound for Syria.

The Iranians have previously sought to pressure the U.S. to constrain its Israeli ally.

In October, Iran directed five drones at the al-Tanf garrison in southern Syria, which is defended by a small contingent of U.S. forces and American-trained Syrian fighters. The Iranians said in a confidential message to the U.S. at that time that the attack was in response to an Israeli airstrike that killed two Iranian officers in Syria, U.S. officials said.

In January, the massive U.S. Embassy complex in Baghdad was struck by four rocket attacks that injured at least two individuals but no U.S. personnel were hurt. That attack originated from inside Baghdad and was believed to have been carried out by an Iranian-backed militia group.

A State Department spokesman didn't provide details of the new rocket attack, its origins or say what the targets may have been.

"The incident is being investigated by the government of Iraq and the Kurdish Regional Government," according to a State Department statement. "We condemn this outrageous attack and display of violence."

The U.S. has a consulate inside Erbil, the capital of the semiautonomous Kurdish region in Iraq, and is building a new one 8 miles from the center of the city.

The strikes come as Washington has been rushing to complete talks to revive the 2015 nuclear agreement with Tehran. That agreement, which could also lead to the release of U.S. detainees, was close to being completed until Russia raised a fresh demand that its trade with Iran be exempted from Ukraine-related sanctions, Western officials say.

In January 2020, Iran fired ballistic missiles at the Al Asad base in western Iraq where U.S. troops were deployed. That was meant to avenge President Trump's decision to order a drone strike that killed Maj. Gen. Qassem Soleimani, the commander of Iran's paramilitary Quds Force.

[Return to top](#)

## **2. Ukraine War ushers in 'new era' for U.S. abroad**

New York Times, 12 Mar 22, Michael Crowley and Edward Wong

The war in Ukraine has prompted the biggest rethinking of American foreign policy since the Sept. 11, 2001, attacks, infusing the United States with a new sense of mission and changing its strategic calculus with allies and adversaries alike.

The Russian invasion has bonded America to Europe more tightly than at any time since the Cold War and deepened U.S. ties with Asian allies, while forcing a reassessment of rivals like China, Iran and Venezuela.

And it has re-energized Washington's leadership role in the democratic world just months after the chaotic U.S. withdrawal from Afghanistan ended 20 years of conflict on a dismal note.

But the new focus on Russia will come with hard choices and internal contradictions, similar to ones that defined U.S. diplomacy during the Cold War, when America sometimes overlooked human rights abuses and propped up dictators in the name of the struggle against communism.

"It feels like we're definitively in a new era," said Benjamin J. Rhodes, a former deputy national security adviser in the Obama White House. "The post-9/11 war on terror period of American hubris, and decline, is now behind us. And we're not sure what's next."

The attack by President Vladimir V. Putin of Russia on his neighbor has become a prism through which nearly all American foreign policy decisions will be cast for the foreseeable future, experts and officials said.

In recent weeks, Western officials have spoken in terms that often echo the grand declarations that followed the 2001 terrorist attacks. On Friday, President Biden said that "the free world is coming together" to stand up to Mr. Putin — a phrase reminiscent of President George W. Bush's talk of how "the entire free world" was at war against terrorism.

In the near term, Russia's aggression is sure to invigorate Mr. Biden's global fight for democracy against autocracies like Moscow, making vivid the threats to fledgling democracies like Ukraine. Yet three increasingly authoritarian NATO nations — Poland, Hungary and Turkey — play key roles in the coalition aiding Kyiv. And the United States is grappling with internal assaults to its own democracy.

The war lends urgency to Mr. Biden's climate change agenda, reinforcing the need for more reliance on renewable clean energy over the fossil fuels that fill Russian coffers. Yet it has already generated new pressure to increase the short-term supply of oil from the likes of Venezuela's isolated dictatorship and Saudi Arabia's authoritarian monarchy.

And it creates a powerful new incentive for the United States to find ways of prying President Xi Jinping of China away from Mr. Putin, who is likely counting on diplomatic and economic lifelines from Mr. Xi amid crushing Western sanctions. But some administration officials see China as a lost cause and prefer to treat China and Russia as committed partners, hoping that might galvanize policies among Asian and European allies to contain them both.

While some experts warn that a renewed focus on Europe will inevitably divert attention from Asia, several top White House officials say the United States can capitalize on how the war has convinced some Asian governments that they need to work more closely with the West to build up a global ideological front to defend democracy.

“What we are seeing now is an unprecedented level of Asian interest and focus,” Kurt M. Campbell, the top White House official on Asia policy, said at a talk hosted by the German Marshall Fund of the United States.

“And I believe one of the outcomes of this tragedy will be a kind of new thinking around how to solidify institutional connections beyond what we’ve already seen between Europe and the Pacific,” he said.

America’s approach to the world was already undergoing a major shift, with the U.S. wars in Afghanistan and Iraq concluded, and conversations over Islamist terrorism no longer at the fore. Many war-weary Americans welcomed calls for a reduced military footprint overseas by President Donald J. Trump, who questioned NATO’s relevance and even flirted with withdrawing from the alliance.

Mr. Biden sought to rebuild American alliances, but did so largely in the name of confronting China. The Russian invasion has expanded his mission dramatically and urgently, setting the stage for a seismic geopolitical shift that would pit the United States and its allies against China and Russia at once if they form an entrenched anti-Western bloc.

But it also gives Washington a new and nobler sense of purpose, Mr. Rhodes said. “We’ve been trying to get to a new era for a long time,” he said. “And now I think Putin’s invasion has necessitated an American return to the moral high ground.”

Early signs of how the new American priorities are creating diplomatic quakes have already emerged.

On Friday, the United States and its European allies agreed to pause talks with Iran that just days earlier seemed on the verge of clinching a return to the 2015 deal that limited Iran’s nuclear program. Western nations are refusing a demand by Moscow, which is a party to the Obama-era agreement from which Mr. Trump withdrew, for guarantees that its future transactions with Iran be exempted from the sanctions imposed on Russia in recent weeks.

“It’s been clear since last weekend that negotiations to revive the Iran deal could not be walled off from the Ukraine war,” Dalia Dassa Kaye, an Iran expert at the RAND Corporation, said on Friday.

Last year, Mr. Biden made a new agreement a core goal of his foreign policy. It is unclear whether one can be struck without Russia, which is a member of the commission that both supervises compliance with the deal and would take control of Iran’s excess enriched uranium.

The United States is also looking at Venezuela from a new angle. Senior Biden administration officials traveled to Venezuela two weeks after the Russian invasion, becoming the first to visit the country in years. Venezuela, a partner of Russia, is under heavy U.S. sanctions imposed years ago to weaken the repressive government of President Nicolás Maduro. In 2019, the Trump administration imposed additional sanctions on the state oil company, central bank and senior officials to pressure Mr. Maduro to step down.

Now, with Mr. Biden looking to increase global oil supplies to bring down prices, U.S. officials are talking to Mr. Maduro's government about buying his oil again. The idea has drawn some sharp criticism in Congress, however, where Senator Bob Menendez, Democrat of New Jersey and the chairman of the Senate Foreign Relations Committee, fumed that "efforts to unify the entire world against a murderous tyrant in Moscow should not be undercut by propping up a dictator under investigation for crimes against humanity in Caracas."

The same imperative on oil is reshaping U.S. diplomacy with Saudi Arabia and the United Arab Emirates, two Persian Gulf nations that some Biden administration officials view with suspicion or hostility because of their autocratic systems and leading roles in a war in Yemen that has resulted in a humanitarian catastrophe. Brett McGurk and Amos J. Hochstein, two senior administration officials, traveled to the Gulf days before the Russian invasion to discuss security and energy issues.

However, Saudi Arabia has declined so far to increase oil production, while the United Arab Emirates waited until Wednesday to ask the OPEC nations to do so. American officials were also furious with the U.A.E. for declining to vote on a United Nations Security Council resolution to condemn Russia, though it did support a similar resolution later in the U.N. General Assembly.

The unreliability of the two nations and Russia's place in the oil economy have increased momentum within the Biden administration to enact policies that would help the United States more quickly wean itself off fossil fuels and confront the climate crisis. This could lead future administrations to devote fewer diplomatic and military resources to the Gulf nations in the long term, even if U.S. officials want them to help on oil now.

"We may see more fundamental questioning about the value of these partnerships," Ms. Kaye said. "These states already believe the U.S. has checked out of the region, but their stance on Russia may only strengthen voices calling for a further reduction of U.S. forces in the region."

Israel, the closest U.S. ally in the Middle East, has also staked out a neutral position on the Ukraine war, largely because of Russia's presence in the region. But American officials have been more forgiving of Israel's stance as Prime Minister Naftali Bennett conducts shuttle diplomacy. He met with Mr. Putin for three hours in Moscow on March 5 and then spoke with Volodymyr Zelensky, the president of Ukraine, by phone before returning home. U.S. officials say Mr. Bennett consulted with them about the talks, and Secretary of State Antony J. Blinken said this past week that they "appreciate the efforts."

Mr. Zelensky told reporters on Saturday that Jerusalem could be a site for peace talks between the leaders of Ukraine and Russia.

### **Juggling Allies in Europe and Asia**

In Europe, Russia's invasion has supercharged the Biden administration's efforts to restore the morale of a NATO alliance that Mr. Trump undermined.

But the alliance includes three nations — Poland, Hungary and Turkey — whose democratic backsliding has troubled the Biden administration. Hungary and Turkey were pointedly excluded

from Mr. Biden's global democracy summit in December, and the European Union has cut billions of euros of funding to Poland and Hungary for what it sees as erosions of legal and democratic principles. Now all three countries are participating in the coalition against Russia.

"In times of crisis, there is sometimes a tension between our values and our interests," said Andrea Kendall-Taylor, a senior fellow at the Center for a New American Security. "In the short term, we're going to have to prioritize pushing back against Russia, at the risk of taking our foot off the gas on the democracy and human rights concerns that had been at the front and center of the Biden administration's agenda."

In the Asia-Pacific region, several important U.S. partners and allies are working with Washington on sanctions and export controls on technology against Russia. These include Japan, South Korea, Taiwan, Singapore and Australia. Some Asian nations have agreed to long-term gas swaps with Europe to help relieve a potential Russian shut-off of energy exports. And Australia has committed to spending \$50 million to send weapons to Ukraine, including missiles and ammunition.

However, India — the most populous U.S. partner in the so-called Quad coalition of democracies in Asia — has refrained from condemning Russia's invasion because of decades-old security ties with Moscow. That stance undermines Mr. Biden's insistence that democratic nations band together against autocracies.

But it is the other Asian behemoth, China, that presents the biggest diplomatic challenge for the United States. China is Russia's most powerful partner, and their bond has strengthened in recent years.

Even as the Russian military decimates Ukrainian cities and kills hundreds or thousands of civilians, China has signaled that it stands by Moscow by issuing anti-U.S. declarations and amplifying the Kremlin's propaganda and conspiracy theories.

Mr. Xi's persistent support of Mr. Putin, with whom he shares a drive to dilute American power, has made administration officials wonder whether there is any way to pull them apart on Ukraine.

On Thursday, William J. Burns, the C.I.A. director, told U.S. senators he believed that Mr. Xi was "unsettled" by the war. Some China analysts say that if Beijing wants to salvage its reputation with Western nations, particularly in Europe, it might agree to take steps to help Ukraine without directly breaking from Russia.

Ryan Hass, a China director on the National Security Council in the Obama White House, proposed testing Beijing with specific requests, such as asking them to provide more humanitarian aid and refrain from recognizing Russian-installed governments in Ukraine or shielding Russia from war crimes investigations.

"If China's leaders take concrete actions to relieve suffering," he said, "then lives would be saved and there would be less centrifugal pressure toward cleaving the world into rival blocs."

### **3. Russia intensifies assault, warns U.S. weapons sent to Ukraine are ‘legitimate targets’**

Los Angeles Times, 12 Mar 22, Nabih Bulos and Jenny Jarvie

Russian forces kept up their bombardment of cities across Ukraine on Saturday, capturing the eastern outskirts of a key southern port and waging an increasingly violent campaign with an eye to encircling the capital even as they sought to bring a political veneer to their occupation in cities they have captured.

Moscow also signaled it could soon expand the war to embroil Kyiv’s allies, warning the U.S. that it would consider convoys carrying weapons to Ukraine to be “legitimate targets.” A few hours later, the White House announced it would send an additional \$200 million in arms and equipment for Ukraine.

While wide-scale Russian bombing campaigns intensified in cities including Mariupol, Mykolaiv, Kharkiv and Chernihiv, Russian forces planned to conduct a referendum that would turn the city of Kherson — the first major city captured by Russian forces earlier this month into a vassal breakaway republic, said Ukrainian Foreign Minister Dmytro Kuleba.

“Given zero popular support, it will be fully staged,” he wrote on Twitter, warning that it was a repeat of Russia’s

“Severe sanctions against Russia must follow if they proceed. Kherson is & will always be Ukraine.”

Sergey Khlan, a deputy in the Kherson Regional Council, said in a post on Facebook on Saturday that Russian authorities were contacting deputies and asking for their cooperation in holding the referendum to create a putative Kherson People’s Republic.

If the last few years have taught us anything, it’s that affordability is at the top of most people’s wish lists.

“The creation of Kherson People’s Republic will turn our region into a hopeless hole without life and future,” Khlan wrote.

“Do not give them a single vote! Do not give them any opportunity to legitimize [the Kherson People’s Republic]... Enter the history of Ukraine not as traitors whom nobody wants, but truly as citizens whose names will be remembered by the next generations.”

Meanwhile, in Moscow, Deputy Foreign Minister Sergei Ryabkov said Saturday that shipments of Western weapons to Ukraine could be attacked by Russian forces, according to Russia’s Itar-Tass news agency. Western nations’ “thoughtless transfer” of portable air defense and antitank missile systems to Kyiv, Ryabkov said, demonstrated “the escalatory component of Washington’s policy.”

The White House announced Saturday it had approved an additional \$200 million in arms and equipment for Ukraine, on top of \$350 million President Biden approved last month.

“We have warned the U.S. that the U.S.-orchestrated inundation of Ukraine with weapons from some countries is not just a dangerous move, but also an action that makes these convoys legitimate targets,” Ryabkov said. The Russian diplomat did not say whether Russian forces would target such convoys in Poland or Romania, NATO countries that border Ukraine.

The tough talk came on a day that Russian forces sustained “heavy losses in manpower and equipment” in areas northeast of Kyiv and were prevented from regaining a foothold on previously captured frontiers, according to the Ukrainian military.

Northwest of the capital, the bulk of Russian ground forces were gathered Saturday about 15 miles from the city center, according to the U.K.’s Ministry of Defense. Parts of the large Russian column north of Kyiv had dispersed, the ministry said, either in an effort to encircle the city or limit its risk of Ukrainian counterattacks.

Ukrainian President Volodymyr Zelensky said more than 12,700 people evacuated Saturday, taking advantage of humanitarian corridors. But not everyone was allowed safe passage.

Ukraine’s Ministry of Defense claimed Russian troops shot at a group of women and children who were trying to evacuate Friday from the small village of Peremoga, 18 miles northeast of Kyiv, along a previously-agreed “green” corridor.

“The result of this brutal act was seven dead,” the ministry wrote in a tweet. “One of them is a child.”

Early in the morning, loud explosions reverberated near the capital. Rumbles — louder and closer than the booms of previous days — could be heard throughout the day and well into the night in Kyiv. They served as the calling card of the Russian pincers stretching toward the capital from its northeastern and northwestern flanks.

Despite holding off enemy forces from the capital, Ukrainian officials admitted a bitter defeat, acknowledging that Russia had seized the eastern suburban fringes of Mariupol, a strategic city in the southeastern Donetsk region that could allow it to build a land corridor from pro-Moscow enclaves in the east to Russian-annexed Crimea in the south.

Russian shelling of the city hit a mosque sheltering more than 80 people, including children, according to the Ukrainian government, and repeated efforts to evacuate 430,000 residents have failed as their convoys have come under artillery fire. Dozens of buses loaded with humanitarian supplies were reported to be attempting to reach the city.

“Let’s see whether this one gets here or not,” Mariupol Deputy Mayor Sergei Orlov said in an interview with the BBC, noting that six previous attempts to bring food, water and medicine to his beleaguered city were unsuccessful.

“The convoys were not let through,” he said. “They were bombed, the road was mined, there was shelling in the town.”

“I think we can say we’re in the disaster phase now,” Alex Wade, an emergency coordinator for Doctors Without Borders told CNN, noting that residents had gone a week without access to clean drinking water and were using snow and rain water and breaking into heating systems to extract the water inside.

“The next phase we will see people who potentially could die from dehydration and hunger or ... fleeing from the city trying to find food and water and dying from the violence outside the city,” he said.

Some residents, he said, had taken their neighbors’ bodies and buried them in their yards to ensure they were not left to languish on the street.

In Mykolaiv, another major Black Sea port and shipbuilding center about 300 miles west of Mariupol, Mayor Olexandr Senkevitch claimed in a video posted Saturday on Instagram that eight civilians were injured and more than 160 houses, three hospitals and 11 educational institutions were damaged overnight.

“We will definitely repair and restore everything,” he said. “We heal the wounded. And defeat these damn orcs,” referring to the Ukrainian nickname for Russian forces.

With those forces assembled about 15 miles outside Kyiv, Zelensky struck a confident tone from inside the capital, where citizen militias are armed with missiles, machine guns and Molotov cocktails.

“We know 100% there will be a victory,” he said in a news conference.

Since the beginning of the Russian invasion, Zelensky said, about 1,300 soldiers of the Armed Forces of Ukraine had died — a fraction of the 12,000 Russians that he claimed had died. The numbers could not be independently verified.

“One in 10,” he said.

Asked if Russian troops could enter Kyiv, Zelensky said it was theoretically possible.

“If they carry out a carpet bombing and simply decide to erase the historical memory of the whole region, the history of Kyivan Rus’, the history of Europe, they will enter Kyiv,” he added. “If they destroy all of us, they will enter Kyiv. If this is the goal, they will enter and will have to live on this land alone, without us. They will not find friends among us here.”

Zelensky urged Ukrainians to keep fighting.

“The resistance of the entire Ukrainian people against these invaders has already gone down in history,” Zelensky said. “But we have no right to reduce the intensity of defense. No matter how difficult it is. We have no right to reduce the energy of resistance.”

In Melitopol, 120 miles west of Mariupol, hundreds gathered on the streets Saturday to demand the release of the southern city's mayor, Ivan Fedorov, who the Ukrainian government has said was kidnapped from a government office Friday by Russian forces.

"Fedorov!" the crowd chanted. "Free the mayor!"

After accusing Russia on Saturday of "switching to a new stage of terror" in trying to "physically eliminate" elected officials, Zelensky praised the protesters for their open resistance.

"The invaders must see that they are strangers on our land, on all our land of Ukraine, and they will never be accepted," he said in a video broadcast.

In telephone conversations with German Chancellor Olaf Scholz and French President Emmanuel Macron, Zelensky said he urged them to push for Fedorov's release.

"The demand is simple: to release him from captivity immediately," he said. "We expect them, the world leaders, to show how they can influence the situation. How they can do a simple thing: free one person. A person who represents the entire Melitopol community, Ukrainians who do not give up."

Russia's intensified assault on the cities and villages of Ukraine came as the United States continued to insist that diplomacy still had a role in the conflict.

But prospects of a resolution looked dim after Scholz and Macron unsuccessfully tried in a lengthy telephone call Saturday to persuade Russian President Vladimir Putin to agree to an immediate cease-fire or diplomatic talks.

Russia's Itar-Tass news agency also reported Saturday that Ryabkov, Russia's deputy foreign minister, said in an interview that Moscow and Washington were not negotiating or consulting on Ukraine.

Meanwhile, in the disputed Donbas region, the self-appointed head of the Luhansk People's Republic, Leonid Pasechnik, issued a decree Saturday saying the borders of the state would correspond to those declared in May 2014. (Ukrainian forces had clawed back two-thirds of the Donbas before a cease-fire later in 2014.)

The move aims to formalize gains in recent days after Russian forces — backed by separatists advanced into government-held areas of Luhansk province. A day earlier, Pasechnik issued another decree restoring names of streets that had been changed after the Ukrainian government's so-called de-communization drive.

## **12. Iraq to host another round of Iran-Saudi Arabia talks**

Reuters, 12 Mar 22

Iraq will host another round of talks between regional foes Iran and Saudi Arabia on Wednesday, the foreign ministry in Baghdad said on Saturday, without giving further details.

Iraqi Foreign Minister Fuad Hussein revealed the development during remarks at a diplomatic forum in Antalya on Turkey's southern coast cited by local media. A foreign ministry spokesman confirmed the comments to Reuters.

The talks will be the fourth round hosted by Baghdad between officials from its two neighbours and mutual adversaries, according to local media.

The Saudi foreign ministry did not respond to request for comment.

Diplomats hope the opening of direct channels between Iran and Saudi Arabia will signal an easing of tensions across the Middle East after years of hostilities that have brought the region close to a full-scale conflict.

Talks to revive the 2015 Iran nuclear deal on Friday faced the prospect of collapse after a last-minute Russian demand forced world powers to pause negotiations for an undetermined time despite having a largely completed text. [read more](#)

Negotiators have reached the final stages of 11 months of discussions to restore the deal, which lifted sanctions on Iran in return for curbs on its nuclear program, long seen by the West as a cover for developing atomic bombs.

## **13. 'Rest now, while we can.' At Estonian NATO base, troops prepare for Putin's next move**

Politico, 13 Mar 22, Charlie Duxbury

At NATO's Tapa military base in central Estonia, Russia's invasion of Ukraine has sparked a heightened sense of purpose among the troops.

On a recent weekday, and despite heavy snow, there were plenty of signs of activity in and around the frontline camp just 160 kilometers from the Russian border as soldiers wondered what Russian President Vladimir Putin's future plans might be.

In the town of Tapa, north of the base, armed Estonian conscripts practiced street patrols, methodically checking side roads for would-be invaders. Closer to the main camp, a civilian police vehicle skidded to a halt to block oncoming traffic before a convoy of eight hulking military trucks came barreling along on a training exercise. Armored vehicles could also be seen tracking the edge of a forest further off-road.

Inside the camp, Colonel Andrus Merilo, who as head of Estonia's first infantry brigade functions as base commander, said Moscow's decision to launch a full-scale invasion of one of its neighbors had focused people's minds on the task at hand here: national defense and the potential threat Russia could pose toward Estonia.

"Vigilance is the key thing," he said. "We must exercise it now, so we don't miss any indications that the threat will be directed towards Estonia."

He said his troops had long prepared for such a scenario based on lessons from Estonia's history — it was occupied by the Soviet Union for 48 years — and Russia's aggression against its neighbors over recent years.

"Our system is built so that we have already foreseen this situation," Merilo said. "Ukraine is currently under the Russian invasion, but we have prepared for Estonia, Latvia, Lithuania and all the Baltic Sea region to face the same kind of military incursion."

Indeed, Baltic leaders have been flagging the risk of Russian aggression in the region since at least 2008, when Russia invaded Georgia.

Former Latvian Prime Minister Valdis Dombrovskis, now a European commissioner, said this week that Putin would likely target the Baltic states to expand his country's access to the Baltic Sea, if he achieves his military aims in Ukraine.

Baltic leaders have called for NATO troops to be stationed at bases such as Tapa on a permanent basis, but for now they remain on a system of permanent rotation.

Outside Merilo's office, on the edge of the parade ground, British troops could be seen shouldering what looked like a batch of new rocket launchers, testing the sights and getting the feel of the kit.

The flags of NATO, Estonia, the U.K., the EU, France and Denmark — all of which have troops here — flapped atop poles above their heads.

### **Sense of mission**

Across the parade ground, at the camp headquarters of the British Royal Tank Regiment Battlegroup, Lieutenant Colonel Simon Worth, the commanding officer, suggested that if his troops had ever wondered why they had been posted to rural Estonia, Russia's renewed attack on Ukraine had definitively answered that question.

“Right now, the strategic context and the continuous news feed that they see means that there is no explanation necessary about why this is so important,” he said. “A sense of purpose is an amazing thing.”

In a storage facility down a rutted road from Worth’s office, a motor roared and a crane lifted an engine into an armored vehicle while engineers called instructions to each other.

A British Challenger 2 tank parked outside stood ready for its next training exercise. The tank commander in charge of it said he felt his soldiers had put their months in Estonia — his battlegroup arrived in Tapa last September — to good use learning how to operate the vehicle in soggy, more densely forested and colder conditions than they had been used to.

Temperatures here fell to minus 26 degrees in December, forcing the battlegroup to quickly adapt its approach, commanding officer Worth said.

“Just living in that [environment] is challenging, so fighting in it is even harder,” he said.

A precursor to the Tapa base was built by the Soviet Red Army during its occupation of Estonia, which lasted between 1940 and 1941 and again between 1944 and 1991, when the Soviet Union collapsed.

The departure of the Soviet forces took several years and camp commander Merilo — who enlisted in 1992 — said that his first job as a conscript was to guard an Estonian base in case the Russians decided to attack rather than withdraw.

Along with the other two Baltic states, Estonia joined the EU and NATO in 2004, cementing its position among Western nations.

Since then, bases like Tapa and Adazi in Latvia have been modernized and expanded, but Baltic concerns that Russian forces could return have never gone away.

After Russia invaded Georgia in 2008 and Ukraine in 2014, the Baltics called on NATO to deploy troops across its eastern edges. In 2016, at a summit in Warsaw, NATO leaders decided to rotate troops permanently through Estonia, Latvia, Lithuania and Poland.

Now, Baltic leaders say NATO troops should be stationed here permanently with more and better equipment as they fear Putin’s ultimate goal lies beyond seizing power in Ukraine.

Merilo said he believes taking Ukraine is only “an intermediate goal” for Putin and that NATO needs to be prepared for him to go further.

Merilo said he sleeps well, but not because he believes trouble isn’t coming.

“What we prepared for for decades is now happening, there is nothing more to wonder about,” he said. “We should get our rest now, while we can.”

#### **14. Military briefing: fear of deployment of chemical weapons in Ukraine**

Financial Times, 12 Mar 22, Daniel Dombey, John Paul Rathbone and Erika Solomon

As the west steps up its warnings that Russia could use chemical weapons in Ukraine, a broader fear lurks beneath the surface: the same poison gases that killed thousands on the front lines of the first world war could become an ever more familiar part of 21st century conflict.

Friday's declaration by US President Joe Biden that "Russia would pay a severe price if they use chemical weapons" came after the White House said "we should all be on the lookout for Russia to possibly use chemical or biological weapons in Ukraine, or to create a false-flag operation using them".

Those statements contrast starkly with the post-cold war hope that such weapons could soon be consigned to history, an aspiration encapsulated by the 1993 Chemical Weapons Convention.

"Maybe worldwide there are fewer chemical weapons than there were during the cold war, but there is greater capacity and a willingness to use them," said Filippa Lentzos, joint director of the Centre for Science and Security Studies at King's College London.

She said Russia has an extensive range of chemical weapons – from sophisticated nerve agents to barrels of chlorine gas, the poison that inaugurated the age of chemical warfare in the first world war.

As well as Biden's declaration this week, European officials have referred more privately to the Kremlin's previous use of the nerve agent novichok to try to kill its foes.

One notorious case was the attempted murder in Salisbury in 2018 of Sergei Skripal, a former Russian spy who had defected to the UK. Another was the attempt against Alexei Navalny, the Russian opposition leader, in 2020.

"The history is there, with the Navalny and Skripal poisonings, and in Syria," said one official, also referring to chemical weapons used by the regime of Bashar al-Assad, Russia's ally. "So we cannot rule out the use of chemical weapons in an escalation scenario."

Russia, which entered the Syrian conflict in 2015 to help Assad fend off rebel forces, did not directly use chemical weapons against opposition areas itself. However, it provided diplomatic cover, backing Assad's assertion that it was rebels who had set off chemical attacks.

In Ukraine, Russia has said Kyiv, backed by western allies, plans to use chemical weapons. The UN security council on Friday convened at Russia's request to discuss Moscow's claims, presented without evidence, of US "biological activities" in Ukraine.

"Allegedly, we are preparing a chemical attack," Ukrainian president Volodymyr Zelensky said ahead of the meeting. "This makes me really worried because . . . if you want to know Russia's plans, look at what Russia accuses others of."

Analysts said any Russian use of chemical weapons in Ukraine would be very different from the more targeted novichok attacks on Navalny and Skripal, and would mark an alarming shift towards the “normalization” of internationally banned substances.

“We think chemical weapons could be used,” said one western official, while cautioning: “There’s nothing to suggest they would use it [chemical weapons], at this point, in a major escalation of the current conflict.”

Defense officials have said they believe the Russian FSB and GRU intelligence agencies, whose operatives are active in Ukraine, have a relationship with the research institutions that produce chemical weapons.

One of the most prominent is Gosniiookht, the unit that developed novichok, which dates back to the early days of the Soviet era. It was sanctioned by the EU and the UK in 2020 in connection with the Navalny case and by the US the following year.

“What we are looking at is probably not the assassination weapons we have already seen . . . The concern is that there would be similar use of these indiscriminate chemical weapons, as in Syria, to target people who go below ground to their basement to hide from missile bombardment,” said Lentzos.

“You put chemical weapons in and people either die or they come up for air and get bombarded,” she added. “It’s a really horrific scenario, that is why there is so much effort, and extreme transparency on intelligence to call it out.”

She and other analysts see 2013 as being a turning point for chemical weapons. Despite previously claiming the use of chemical weapons by Syria would be a “red line”, the Obama administration that year opted against military action after the Assad regime killed hundreds of people with rockets containing sarin.

Despite a Russia-brokered deal to eliminate Syrian chemical weapons, the UN’s Organization for the Prohibition of Chemical Weapons subsequently found that the Assad regime used sarin and chlorine gas in 2017 and 2018.

“The international norm against chemical weapons use is under siege, most prominently by Syria and Russia,” wrote Kenneth Ward, a former US ambassador to the OPCW, last year. “The world is now precariously perched on the knife’s edge of a new era of chemical weapons use.”

## **15. What to know about Javelin antitank missiles could play in Ukraine’s fight against Russia**

Washington Post, 12 Mar 22, Claire Parker, Alex Horton and William Neff

The United States and allies have surged weapons to Ukraine in recent weeks in the face of the Russian invasion. Images of destroyed Russian tanks on social media have drawn attention to one particular weapon: the Javelin missile.

The U.S. and other NATO countries sent more than 17,000 antitank weapons, including Javelin missiles, overland to Ukraine via Poland and Romania in the span of less than a week this month, the New York Times reported.

The Javelin has taken on a symbolic valence in pro-Ukraine online chatter. Former reporter Christian Borys created an image of a saint clutching a Javelin and its launch unit. The image on stickers and other gear has raised more than \$1 million, Borys said on Twitter, which he said will go to a humanitarian aid charity focused on Ukraine.

As a convoy of Russian military vehicles creeping toward Kyiv captures global attention, the antitank missiles are in the spotlight. Weapons experts say the Javelin could prove particularly effective against Russian tanks, though they caution that the missile systems alone are unlikely to change the trajectory of the war.

Here's what to know about how they work and the role they could play.

### **What is a Javelin?**

The Javelin is an antitank missile system that locks onto a target's thermal picture. The soldier peers through a command launch unit and selects different targets and attack types.

When fired, the missile's launch motor thrusts it out of the tube before its primary motor turns on and sends the rocket flying. The gentler start reduces debris and smoke, making it harder for the enemy to see where it was launched. It makes use of what is known as a "fire and forget" system, which allows the soldier to take cover or load a new missile while the other one is tracking to its target.

While the Javelin can target any kind of vehicle that emits heat, it is most potent against tanks because it can strike from the top. This is why it's called a Javelin, like the spear thrown in track and field events that falls to the earth at a steep angle.

Javelins can also fire directly at a target if there is protection above it, and can be used against low-flying helicopters.

### **How could they help Ukraine fight Russian forces?**

The Javelin is "probably the most sophisticated and most powerful" antitank weapon, said Mark Cancian, senior adviser for the international security program at the Center for Strategic and International Studies.

The Ukrainian military shared images of soldiers carrying the Javelin on Twitter on Friday, along with photos of destroyed tanks.

"The very information about the presence of Javelins in the weaponry of the Ukrainian Armed Forces causes panic among the [Russian flag] occupiers," the tweet said.

Ukraine claims that Russia has lost 335 tanks and just over 1,100 armored combat vehicles in the fighting.

But there isn't reliable data on how many Javelin missiles Ukraine has used in battle and to what effect, said Arael Kotlarski, a senior analyst at Janes, an open-source defense intelligence agency.

The Ukrainian defense ministry asked Ukrainians in a Facebook post Wednesday not to share information on the purchase of weapons from foreign partners.

Experts say the Javelin is a powerful addition to Ukraine's existing arsenal of domestically produced antitank missiles.

It's easy to train fighters to use them, Cancian said, which is advantageous in Ukraine, where civilians have signed up for battle. The United States has trained Ukrainian forces in the past on how to operate the weapons.

Javelins are "particularly useful because the Russians seem to be road-bound," Cancian added, which makes it easier for Ukrainian forces to set up ambush sites or strong launch points.

### **What have Russians done to curb Javelins?**

There are few things even the most well-equipped militaries can do about Javelins. Modern tanks are covered with reactive armor, which in some cases is packed with small amounts of explosives that will detonate an incoming warhead.

The Javelin is designed to get past that armor. It uses a tandem warhead, which first either creates a channel into the reactive armor or blows it up, allowing the main warhead to slice right through and explode.

Russian tanks are particularly vulnerable to the weapon, Kotlarski said, because they were designed to be "very small, squat and compact." A Javelin missile hitting the top of the tank usually means "instant destruction," he said.

There is some evidence the Russian military is wary of Javelins, including photos showing metal canopies jury-rigged on top of tanks. There are two theories about what these are intended to do. The first is to shield a commander or the turret itself from drones that can either drop munitions or crash into them, kamikaze style. But there is also speculation the canopies are meant to blunt the Javelin's top-down attack, giving the tank and its crew a slightly better chance of survival.

The design concept is similar to that of slat armor, which U.S. and other militaries have used to surround vehicles in steel cages, to detonate rocket-propelled grenades prematurely.

Social media has been littered with photos of destroyed Russian tanks with cages. The images have acquired a symbolic resonance so quickly that Internet users have coined the term "cope cage," earning a page on the Internet's primary meme directory.

Others have suggested thermal attachments to the tank may be an attempt to complicate the missile's ability to focus on the target.

A Telegram channel associated with pro-Russian forces also published instructions for Russian soldiers on how to use Javelin systems that they capture in Ukraine.

### **What are the Javelin's limitations?**

The Javelin is "not a silver bullet," said Kotlarski, from Janes.

"There is a prevailing narrative in the public mind to sort of lionize certain weapons systems as having a defining impact on certain conflicts," he said, but "the reality is often more complex."

Though potent, particularly in open areas where Russian military vehicles are lumbering toward Ukrainian cities, the Javelin does have some drawbacks.

"It has the disadvantage of all these kinds of antitank weapons, which is that they [the tanks] can shoot back at you and you just have people hiding behind a hill or a bush," Cancian said. "It's not like an armored vehicle where you have some protection."

The weapons systems are also expensive and complicated to produce, with estimates of production costs ranging between \$80,000 and \$200,000 per missile, according to Kotlarski. U.S. weapons makers have the capacity to produce a maximum of 6,500 Javelin missiles per year, according to the Army's estimates, though the existing contract caps production at 2,100.

If the conflict drags on and Ukraine burns through existing Javelin supplies, the U.S. and European countries may worry that handing over more weapons could leave them vulnerable, Kotlarski said.

As its ground forces struggle to make progress amid fierce Ukrainian resistance, Russia is relying on shelling besieged cities and launching unguided bombs from the sky.

After more than two weeks of war, the Russian military grinds forward at a heavy cost.

And with battles expected to play out increasingly in cities, the Javelin — which is tricky to fire safely out of building windows — may not prove especially useful, Kotlarski said.

"A Javelin in itself is not going to be able to allow the Ukrainians to defeat the entire Russian army," he said.

Ukrainian President Volodymyr Zelensky has said weapons provided by the West so far are insufficient and called for fighter jets, setting off a fierce debate among U.S. politicians about whether to supply the aircraft. The Biden administration has so far shut down the idea.

"We believe the most effective way to support the Ukrainian military in their fight against Russia is to provide increased amounts of anti-tank weapons and air defense systems," the commander of U.S. European Command, Gen. Tod D. Wolters, said in a statement.

In the meantime, the Space Force is preparing for its moon portfolio to substantially grow.

“I envision lots of other technology development projects focused on this over the next 10 to 15 years if the Space Force decides this is an operational capability they need and we start to flesh that out,” Felt said.

For example, his lab is carrying out a study with the Space Force Warfighting Analysis Center on the additional capabilities that would be needed if the military plans to operate on and around the moon.

“What can be done from the Earth? What needs to be done from a space-based asset?” he asked. “It can’t all be done from the Earth. How do you know where you are? How do you communicate? How do you navigate? How do you autonomously operate up there? What kind of sensors do you need? What kind of logistics support do you need?”

He added: “There are hard problems that need to be solved to make sure we can operate up there.”

## ADJACENT AORs

---

### **17. The new legion of foreign fighters: who are they and where do they come from?**

Sunday Times (UK), 12 Mar 22, Peter Conradi and Hugo Daniel

In happier times, Anton Bondarenko, 22, gave online English lessons. Now he is an unlikely but vital cog in Ukraine’s war machine.

From the bedroom of the modest flat in central Kyiv that he shares with his mother, Bondarenko and 100 or so of his colleagues elsewhere in the capital form a virtual call center. Their task? Fielding inquiries from people across the world who have answered an appeal by President Zelensky to join a new Ukrainian foreign legion to help repel the invaders.

“We get people from all over,” said Bondarenko, who for now, at least, still ignores the air raid sirens that sound five or six times a day. “Probably the largest number are from America. But also from Australia, Turkey, France. Everywhere.”

In an echo of the International Brigades that drew fighters from across the world to fight on the Republican side in the Spanish Civil War, nearly 20,000 men from 52 countries had volunteered to fight in Ukraine by last weekend, Dmytro Kuleba, the foreign minister said.

Thousands more are thought to have enlisted in the days since, their determination intensified by the growing brutality of the war unleashed by Putin.

The arrival of the volunteers provides a much-needed boost for Ukrainian morale: especially welcome are military veterans from the British or other western armies with experience of recent conflicts in the Middle East or Afghanistan.

One of the highest profile arrivals is “Wali”, a computer scientist from Montreal who was been dubbed the world’s deadliest sniper after his service with the Royal Canadian 22nd Regiment in Afghanistan, Syria and Iraq, where he reportedly killed as many as 40 people a day in one case from a record 3,540 meters.

Also in action is Irakli Okruashvili, a former Georgian defense minister, who within days of his arrival in Ukraine reportedly helped his unit capture a powerful Russian BMP-2 infantry fighting vehicle, and Juris Jurašs, a member of the Latvian parliament and former policeman.

Yet there are concerns the conflict also risks attracting young adventure seekers whose only experience of battle is on a computer screen in their bedroom. “War is a great recruiting sergeant,” said General Sir Richard Barrons, Britain’s former commander of Joint Forces Command. “If people have solid military experience and some personal equipment and only need arming, then they can become an asset to the Ukrainians. But if they’re only turning up because they fancy it and are really good at Call of Duty, then they will be a burden.”

For those enlisting, the road to war begins at the Ukrainian embassy in their home country, to which those who contact Bondarenko’s call center or get in touch online are asked to report.

After their details are taken, they are interviewed by the defense attaché to judge their suitability to join the new formation, known formally as the International Legion of Territorial Defense of the Ukraine. If accepted, they are advised to travel to one of five Polish cities, from where volunteers will help them reach the border.

Among eight would-be recruits encountered last Thursday by The Sunday Times outside Ukraine’s white stucco-fronted mission in Holland Park, west London, was John, 61, a former Royal Engineer spurred into signing up by Russia’s bombing the previous day of a maternity hospital in Mariupol. With 18 years in the army, including stints in the first Gulf War and in the Balkans, he sees defending Ukraine against Russia as a cause “worth fighting for” — just as fighting Fascism was for those who went to Spain in the 1930s.

“The maternity hospital in Mariupol really had a big impact,” he said. “All these stories of people’s lives being destroyed.” He feared he may be barred from joining because he is too old, “but I’ll find out”.

Alan, 52, a former Para who works in Southampton mooring boats on the Solent, had also packed his kitbag. “I can’t sit at home and watch these evil people do this,” he said. “If it’s down to the people of every other country to go in there and push Russia back, then so be it.”

Among those helping the arrivals when they reach Ukraine is Chris Garrett, 38, a former British army soldier based near the western Ukrainian city of Lviv. Nicknamed “Swampy” because of his work as a tree surgeon in civilian life, he went to fight the pro-Russian separatists in the Donbas region of eastern Ukraine in September 2014 and stayed there for three years on and off before returning to his native Isle of Man.

“When Zelensky said he would accept foreigners with military experience, my phone kind of exploded with hundreds of messages from people wanting to join,” he said. “And it got to the

stage where I realized that if I was going to help bring people into the country, then I should be on the ground myself. My phone hasn't stopped ringing for 12 days."

Garrett, who works with another British army veteran who gave his name only as Tony, has based himself alongside the Georgian National Legion, which was founded in 2014 in the Donbas by ethnic Georgians to fight the separatists and has since been incorporated into the 62nd brigade of the Ukrainian territorial defense force.

Over the past week he has personally welcomed 50 or so Britons, a few of whom have gone on to join the new international force, which is still in the process of being set up. Most have opted instead to go with the Georgians, whose legion has always been open to foreign fighters.

Before potential recruits who contact him set off from Britain, Garrett vets them to make sure that they are not serving soldiers or barred for other reasons from fighting for Ukraine. He also establishes whether they have useful military skills.

"It doesn't take long to pick out the people that have come here because they play too many computer games," he said. "And we then ask them to leave because they become more of a hindrance to us and a threat to the other people they are working with."

"People have got to think what they can offer," chipped in Tony. "It's not enough thinking 'I'm a strong lad'. If you don't have any military or battlefield experience then you can become a liability and you can't then turn round and say 'I want to go home now'. It doesn't work like that."

Both men insisted that anyone coming should also be in no doubt about the heavy fighting they are likely to face, which is more reminiscent of Second World War battles than more recent military campaigns. "Even those who have served in the British army have never seen a conflict like this," said Garrett. "There are cruise missiles being thrown at us; air strikes. This isn't Afghanistan or Iraq. It is very different."

Ultimately, the main value of foreign fighters may be the symbolism: the Spanish Civil War is celebrated for the involvement of writers such as George Orwell, who wrote *Homage to Catalonia* about his experiences fighting the Fascists, and Ernest Hemingway, who penned *For Whom the Bell Tolls*. Less well known is that the casualty rates among members of the International Brigades were considerably higher than for Spanish fighters, blamed on a lack of training, poor leadership and their use as shock troops.

The presence on Ukrainian soil of such large numbers of foreign fighters "shows solidarity", said Barrons. "It also has a narrative value than can be greater than the military value. We shouldn't underestimate that."

Yet there are already signs the volunteers' presence is being exploited by the Kremlin to justify creating a rival foreign legion of its own: Putin on Friday gave orders that more than 16,000 "volunteers" from Syria loyal to President Bashar al-Assad and elsewhere in the Middle East be brought to fight in Ukraine.

“Even merely rumors that British citizens have joined Ukrainian armed forces can be manipulated by the Russians into claims that British Special Forces are involved and that NATO’s escalating the conflict,” Barrons added. “It doesn’t even have to be true. Just a shred of truth provides enough meat for a propaganda machine to move the narrative to a place they want it to be.”

### **18. U.S. commission urges Biden to designate Ukraine, Georgia as major non-NATO allies** Foreign Policy, 12 Mar 22, Amy Mackinnon

The Helsinki Commission, an independent U.S. government agency tasked with promoting human rights and security in Europe, has called on the Biden administration to upgrade the United States’ defense relationship with Ukraine. The commission seeks to help facilitate military and economic assistance to Kyiv as Russian forces move to encircle the Ukrainian capital.

In a letter to U.S. President Joe Biden obtained by Foreign Policy, the commission urged the administration to designate Ukraine and Georgia, which was invaded by Russia in 2008, as major non-NATO allies (MNNA) and to reinvigorate U.S. support for the NATO accession of both countries.

“Although the United States has consistently supported Ukraine’s and Georgia’s NATO membership, Russia’s occupations and ongoing invasion expose the tragedy of long-stalled Euro-Atlantic enlargement,” wrote the commission, which is led by Democratic Sen. Ben Cardin and Democratic Rep. Steve Cohen.

“Absent strong and proactive U.S. backing for Ukrainian and Georgian NATO membership, [Russian President Vladimir] Putin will continue to take ample advantage in his aspirations to upend security and cooperation in Europe and his neocolonial agenda,” the letter said.

Both Ukraine and Georgia were promised membership to the defense alliance during the NATO summit in Bucharest, Romania, in 2008. But despite extensive reform efforts, neither country has been offered a timetable for accession.

The United States has provided billions of dollars of military assistance to Ukraine since it was first invaded by Russia in 2014, with more than \$1.2 billion approved over the past year. “This designation is a fair reflection of our current bilateral defense relationships and does not commit the United States to military action,” the commission letter said, which also recommended that the administration consider extending the status to other non-NATO members along Europe’s eastern flank: Finland, Moldova, and Sweden.

Much of U.S. military aid for Ukraine has been approved through a range of ad hoc government funding mechanisms. Granting the country MNNA status would open a variety of established channels to facilitate arms transfers, financial assistance, and information sharing, smoothing the way for further cooperation. It would also send a powerful signal of support for both Kyiv and

Tbilisi. Unlike NATO membership, MNNA status does not entail any mutual security and defense obligations.

On Thursday, the White House announced it would designate Colombia and Qatar as major non-NATO allies, bringing the total number of countries to receive the title up to 19.

The title has usually been reserved for countries with no ambitions or prospects of joining NATO, which prompted the Ukrainian ambassador to the United States, Oksana Markarova, to express wariness about the designation last year. “MNNA is a status for countries that do not plan/can not force political or geographical reasons to join NATO. This is definitely not about us,” she wrote in a Facebook post.

NATO accession is decided between the 30 members of the alliance, and an MNNA designation by the United States would not necessarily impede Ukraine’s membership prospects.

The Helsinki Commission, formally known as the Commission on Security and Cooperation in Europe, was founded in 1976 as an independent government agency to monitor compliance with the Helsinki Accords, a major Cold War-era diplomatic agreement that sought to reduce tensions between the Soviet Union and the West as well as establish human rights and security norms. The commission is made up of 18 members of U.S. Congress drawn from both parties and representatives from the U.S. departments of State, Defense, and Commerce.

### **19. Nerves on edge in Poland as war next door in Ukraine revives fears of Russia**

Los Angeles Times, 12 Mar 22, Patrick J. McDonnell and Rima Marrouch

Military enlistments are spiking, demands for passports are surging, and memories of the bad old days of the Cold War are fraying the collective nerves of the Polish people.

The Russian invasion of neighboring Ukraine has reverberated in Poland well beyond the influx of more than 1.4 million refugees, a wave of mostly women and children that threatens to overwhelm the country’s infrastructure for providing assistance.

Poland’s historical adversary Russia appears to many here to be on an expansionist path that could end up dragging Warsaw into a broader conflict with potentially catastrophic consequences — threatening the post-Cold War order that has seen the nation prosper and develop into a European success story.

A sense of disquiet is plainly evident, even as life appears to proceed at its normal, if hectic, pace in cities such as Warsaw and Krakow.

“Yes, Polish society is terrified,” said Slawomir Debski, a foreign policy expert in Poland who has advised several governments in Warsaw. “The whole society is aware of how awful, how terrible, and dramatic, any kinetic confrontation with Russia can be.”

The fact that Poland is an established member of both the European Union and the U.S.-led North Atlantic Treaty Organization tempers fears that Moscow's perceived push for a "Greater Russia" could eventually spill into Poland — which was a Soviet satellite state until the fall of Eastern Bloc communism in 1989, the year the Berlin Wall came down.

Poland shares a 144-mile border with Russia — along with centuries of contentious coexistence and profound mutual suspicion. And to some, especially those who lived through the Cold War, the NATO shield seems not all that persuasive.

NATO "is just a name," said Dorota Karpinska, 61, who runs one of the many street stands offering obwarzanki, chewy, bagel-like breads widely consumed here. "Who knows what they're doing?"

Poles born in the post-communist era appear less likely to fear that the conflict will envelop their country. There is a clear generational split, even if the Russian attack was a kind of wake-up call for the young as well.

"It's the old people like my parents who feel that Russia can attack anytime," said Andrzej Piszczek, 24, a student seated in a cafe thick with cigarette smoke and incense. "They say, 'You never know. We need to prepare ourselves, we need to buy flour, petrol.'"

The current situation, many note, differs greatly from the days of the Cold War, when it was widely believed that neither Russia nor the West would resort to the use of nuclear weapons capable of obliterating much of the planet. With Russian President Vladimir Putin's invasion of Ukraine, and his nuclear threats, no such sense of security exists these days.

"Nuclear blackmail is [now] on the agenda almost every day," said Włodzimierz Marciniak, a political scientist and former Polish ambassador to the Russian Federation. "Right now the war is hot and it is next door."

The streets here in the ancient city Krakow have lately seen a new phenomenon: U.S. soldiers, unarmed but in military fatigues, strolling through downtown, window shopping, visiting tourist sites, stopping for a coffee. Longtime residents say the groups of uniformed GIs have emerged from their bases only in recent days, after the Russian invasion of Ukraine and a buildup in U.S. forces based in Poland.

On a recent afternoon, Magda, 39, a restaurant worker, requested a selfie with a group of U.S. soldiers. She said she wanted the photo for her son, 15. The soldiers quickly complied. Their presence, she said, offered both a sense of reassurance — that America has Poland's back, so to speak — and a feeling that a broader geopolitical conflict could indeed be on the horizon.

"It's confusing," Magda, who asked that her surname be withheld for privacy reasons, said after the soldiers had moved on. "I want to live through this, to see the world."

The Pentagon did not respond immediately to an inquiry about the soldiers' heightened public profile in Krakow and in the southeastern Polish city of Przemyśl, close to the Ukrainian border and a key transit point for war refugees.

As the war next door rages, some Poles are taking precautionary measures.

The Polish press has reported a run on demands for passports from those who want to be able to leave the country expeditiously if necessary.

Authorities have also seen rising numbers of new recruits for the Territorial Defense Forces, a kind of reserve arm of the military. Demand for slots has increased sevenfold since the Russian invasion, a military spokesman told Radio Krakow.

In a national poll taken just after the Russian invasion of Ukraine, Poles were asked how they felt. The most common response: “I am afraid,” the choice of 78% of participants, according to the newspaper *Rzeczpospolita*. An additional 15.5% described themselves as worried; only 6.5% identified “calm” as their state of mind.

The conflict and its potential consequences for Poland are the prevalent topics of everyday conversation — at shops, on public transport, in parks and households. TV screens in bars, restaurants and homes relay the latest developments to edgy viewers.

“So what is the news today?” a man in line at a grocery store in Warsaw asked a fellow shopper the other day, without even having to mention Russia or Ukraine. “What happened?”

Ukrainian flags and lapel pins are everywhere, as are declarations stenciled on walls affirming “Solidarity” with Ukraine.

“We can say that every single one of us is at war now, and fighting by doing whatever we can to help,” said Mikolaj Szlachta, 19, one of many volunteers in green vests assisting crowds of exhausted Ukrainian refugees at the central rail station in Krakow. “This is how we fight.”

The volunteers seen at train and bus depots throughout the country are part of an extraordinary outpouring of support for the massive influx of refugees who have fled into Poland since Russia invaded Ukraine on Feb. 24. In the capital, Warsaw, the surge has approached a breaking point, with the mayor on Friday asking for international help. Many see the disastrous scenario unfolding in neighboring Ukraine as something that could also happen in Poland, which has for centuries been caught up in Great Power intrigues involving Russia, Germany and the former Austro-Hungarian empire.

“We still, as a nation, recall the history from World War II, when we were in this situation, when we were asking for help and we were asking for shelter and food,” said Karolina Micolajczyk, who manages a hotel in Krakow’s Kazimierz district.

A Ukrainian flag hangs outside the hotel. Ukrainians filled all 28 rooms on a recent evening, she said.

Traces of the last global conflagration are never far off in Poland. Both Nazi Germany and the Soviet Union invaded at the outset of World War II, at a staggering cost in human life. The Kazimierz neighborhood was long the heart of Krakow’s Jewish community, which represented about one-quarter of the city’s prewar population before the Nazi mass murder campaign.

The former Jewish quarter is now a shabby-chic haven featuring hip bars, trendy cafes and boutique hotels. Signs in downtown Krakow feature bus tours to the infamous Nazi death camp at Auschwitz, an hour's drive to the west.

The post-invasion fear of Russia has also hit the cultural sphere. A Warsaw orchestra recently decided to dedicate its performance to Ukraine and dropped a planned performance of a piano concerto by Sergei Rachmaninoff, the Russian composer. The orchestra substituted a concerto by Frederic Chopin, the Polish virtuoso.

There have also been scattered reports of harassment and vandalism. Ukrainians working for a Russian restaurant owner in Warsaw received threatening phone calls urging them to quit, according to reports widely circulated on social media. Meanwhile, Polish police were investigating the destruction of a Red Army monument in the northwestern city of Koszalin.

However, many Poles interviewed were quick to distinguish between the Russian people and its government.

"I don't identify every Russian person with what's happening in Ukraine," said Szlachta, the student volunteering in the Krakow train station.

He, too, was skeptical that the invasion would escalate into Poland.

"I don't think Russia's leaders are dumb enough to attack a NATO country — that would mean a global conflict and World War III," he said. "I hope it won't get to that. But, then, anything can happen. You never know."

## **20. Tiny kingdom in Nigeria celebrates as threat from Boko Haram fades**

Sunday Times (UK), 13 Mar 22, Richard Assheton

The king rose early on the biggest day for his people in years. By 9am the walled center of the village was abuzz with the chatter of thousands who had come from the hills around.

The celebrations that greeted the king were the first of their kind in nearly a decade. For much of that time the people of Sukur, a little-known, UNESCO-listed kingdom 3,000 feet up in the highlands of northeast Nigeria, lived in fear. Their unique culture, with its own language, calendar and distinctive dry stone walls, was under threat from Boko Haram, the Islamist group that has terrorized the region since 2009. In 2014 militants climbed the steep track to the settlement, razing houses and burning crops. People scattered, abandoning the terraced agriculture that along with a tradition of iron smelting had in 1999 helped win Sukur Africa's first world heritage recognition for a cultural landscape.

Now, though, Boko Haram is weaker, allowing the Sukur Yawal festival to mark the coming rainy season for the first time since 2014. At last, Sukur folk are focusing again on the question that preoccupies them: how do they cling on to their culture?

breakout capability; the deal would only push that up to under six months (well before a new president takes office).

Most crucially, it will gain up to \$130.5 billion in sanctions relief. Iran needs money now. According to Rubin, the country's leaders have "driven their economy into the ground even before sanctions, and the cash infusion really will allow them to snatch victory from the jaws of defeat." This is especially true for Iran's proxies. Rubin, who visited Hezbollah territory in Lebanon last year, reported that "Residents there — including former Hezbollah members said the group was losing its members in droves as the money dried up." Rubin believes that a new deal would "throw a lifeline to Hezbollah."

Given a likely impending red wave, the current deal on the table would likely be scrapped. But that probably doesn't matter to Iran, which gets plenty of goodies in the meantime.

Return to top

## **22. Don't embrace Saudi Arabia and the UAE because of the Ukraine crisis**

The Hill, 12 Mar 22, William D. Hartung

The Biden administration is reportedly reaching out to Saudi Arabia and the United Arab Emirates (UAE) to urge them to increase their oil output to counterbalance disruptions in the global market sparked by sanctions on Russia. In doing so, it is crucial that the administration doesn't excuse their crimes in Yemen or bolster their militaries with additional arms sales or other military support.

As the Wall Street Journal has noted, the de facto rulers of Saudi Arabia and the UAE, Mohammed bin Salman and Mohammed bin Zayed, appear to be pressuring the Biden administration over the oil issue to get more support for their devastating war in Yemen. Both men have declined to speak by phone with President Biden in an attempt to draw U.S. attention to the quid pro quo they are seeking — more oil output for more arms and assistance in fighting the Houthi movement in Yemen.

The UAE announced on Wednesday that it would increase its oil output, but it is unclear whether the Biden administration offered anything to the UAE in return. Giving in to the Saudi and UAE demands on Yemen would be a disastrous mistake, both for U.S. interests in the Middle East and, most tragically, for the people of Yemen. There are other ways to get more oil onto the international market, including lifting sanctions on Iran as a revived nuclear deal under the Joint Comprehensive Program of Action (JCPOA) moves closer to fruition.

As the humanitarian suffering caused by the Russian invasion of Ukraine has come front and center, it has been all too easy to forget the devastation caused by the U.S.-backed Saudi war in Yemen. The United Nations estimates that there have been at least 377,000 direct and indirect deaths as a result of the war, which was initiated by a Saudi-led coalition seven years ago this month. Saudi air strikes are at their highest levels since April 2018, and the Saudi blockade of Yemen has choked off imports of fuel that are essential for powering hospitals and fulfilling the

needs of daily life, causing further suffering and unnecessary deaths of innocent civilians. This is no time to be stepping up U.S. military support for Saudi Arabia and the UAE.

The Biden administration has ample leverage to pressure Saudi Arabia to end indiscriminate air strikes and lift its naval and air blockade on Yemen. Nearly two-thirds of Saudi combat aircraft are of U.S. origin, and they could not operate for long without U.S. spare parts and maintenance. Cutting off this support and holding off on new arms sales would be an effective tool to change Saudi conduct in Yemen and persuade the regime to participate in comprehensive peace talks to end the war.

Closer U.S. military relations with Saudi Arabia and the UAE pose serious human rights issues, which should be reason enough to cut off U.S. military support. But cozying up to these regimes also undermines U.S. security interests in the Middle East and beyond. The war in Yemen has stoked anti-U.S. sentiment there and destabilized that country in ways that may create an opening for a resurgence of al Qaeda in the Arabian Peninsula (AQAP). The UAE has supplied weapons to the forces of Gen. Khalifa Haftar in Libya in violation of a United Nations arms embargo, and has launched drone strikes there that have killed scores of civilians. This reckless behavior by U.S.-armed allies not only diminishes the United States' reputation and influence in the greater Middle East, but it also threatens to pull us into more conflicts there at a time when we should be reassessing our military footprint in the region.

If the Biden administration decides to continue or increase military support for Saudi Arabia and the UAE in exchange for an upsurge in oil production, Congress should push back. It could do so by passing resolutions under the War Powers Act that would end U.S. support for the Saudi and UAE militaries, a move that would get the attention of both regimes and help end their brutal war in Yemen. Last month, Reps. Pramila Jayapal (D-Wash.) and Peter DeFazio (D-Ore.) announced that they will be introducing a new Yemen War Powers Resolution.

These efforts should move forward. Embracing Saudi Arabia and the UAE at this moment is the wrong thing to do. Doing it with the excuse that it might cushion the impacts of sanctions on Russia on the U.S. economy is not justified given the damage they are doing, both to U.S. interests and to the people of the Middle East.

*William D. Hartung is a senior research fellow at the Quincy Institute for Responsible Statecraft.*

### **23. 'A serious failure': scale of Russia's military blunders becomes clear**

Financial Times (UK), 12 Mar 22, Sam Jones, John Paul Rathbone and Demetri Sevastopulo

Three weeks into its invasion of Ukraine, the scale of Russia's military blunders is becoming clear.

The outcome of Russian president Vladimir Putin's war is still far from certain: little information exists on Ukrainian forces' rates of attrition, while Russia's military still outmans and outguns that of its neighbor. The chances of escalation have meanwhile increased as the Russian leadership looks to regain the front foot.

But in the first phase of its offensive, the Kremlin's military story is one of failure.

Western defense officials have estimated Russian casualties at between 2,000 and 6,000. Based on ratios in similar conflicts, that implies three to four times as many captured and wounded. At its midpoint, such an estimate is more, in three weeks, than the losses of US and UK servicemen combined during 20 years in Afghanistan.

Russia's losses in materiel are also significant. The Oryx blog has recorded 1,034 Russian vehicles, artillery pieces and aircraft destroyed, damaged, abandoned or captured. These include 173 tanks, 261 armored and infantry fighting vehicles, and 28 surface-to-air missile systems.

Justin Bronk, research fellow at the UK's Royal United Services Institute, who co-wrote a book on Russia's military modernization under Putin, said the losses "are massively more than in any other recent conflict" including Georgia, Chechnya or Afghanistan in the 1980s.

Analysts and western military officials agree on the primary cause of the flaws in Russia's military offensive: a failure of intelligence that skewed military planning.

Flowing from this were failures linked to rash decision-making, logistical unpreparedness, poor maintenance of equipment and the use of young, inexperienced troops that together have culminated in a collapse of front-line Russian morale.

General Sir Richard Barrons, former head of the UK's Joint Forces Command, said: "There is something here that is systemically wrong . . . somewhere in the Russian intelligence architecture, facts on the ground are being converted into an analysis, but that analysis is actually a narrative to support the preconceptions of the senior [Kremlin] leadership."

As a result, Russia's intended campaign — an assault strike predicated on speed and Ukrainian political weakness — has tipped into a joint combat operation requiring logistical and communications planning that does not seem to have been in place, say analysts.

Russia's first failures occurred within the opening 24 hours of the war, when pre-positioned covert spetsnaz troops, whose job it was to cripple the Ukrainian political leadership, were stopped. Airborne forces of the elite VDV, known for their sky-blue berets, that were supposed to secure key sites such as Hostomel airport just north of the capital, were, after initial success, repelled by strong Ukrainian resistance. Two transport aircraft were downed above Hostomel by Ukrainian forces.

"The Ukrainian military as a whole have been expecting this kind of invasion to come since 2014," said Barrons. "And then they were handed the gift of these light forces coming in piecemeal, underestimating them, which they were able to pick off."

The second component of the initial assault — the rapid advance of Russian forces, avoiding cities and intended to quickly encircle regional Ukrainian military units they believed would be paralyzed because of a leaderless central government — further extended Russian vulnerability.

“It is as if they were treating this as a military policing mission, not an actual invasion against a modern military,” said one western military official. Videos on social media even show troops from Rosguardia, Russia’s domestic militia, advancing into towns, unsupported, as the frontline force.

When, several days in, Russian commanders realized they needed to pivot to using more serious firepower, they did so chaotically: huge columns of tanks and artillery moved forward, but the Ukrainians blew up bridges, causing advances to stall. Russian planners appear to have failed to anticipate this basic response, another western military official said, pointing out that engineering units and bridge builders were not even near the front of the advance in some columns.

“What we have seen on the ground is an extremely bad plan coupled with absolutely no warning to operational commanders they were about to throw their troops into operational combat which has created an enormous number of problems for them,” said Rusi’s Bronk. It is, he added, a “serious failure” of “TTPs” — tactics, techniques and procedures.

Even Russia’s feared anti-aircraft systems were left vulnerable to cheap Turkish Bayraktar TB2 drones operated by the Ukrainians. Footage on Twitter, for example, shows Ukrainian TB2’s picking off Buk launchers, the same missile system used to shoot down the MH17 commercial aircraft in 2014.

On the ground, meanwhile, the thousands of anti-tank missiles western powers have been supplying to Ukraine for weeks have proved effective, with mobile foot soldiers able to ambush and attack isolated advanced clusters of Russian light vehicles and stationary heavy units stuck in columns with unprotected flanks.

Open-source intelligence suggests that Russia’s military communications infrastructure has performed poorly: the cutting-edge encrypted Azart and Akveduk radios that supposedly began to be rolled out to Russian units in 2017 appear to be in short supply or have inadequate range, noted a Rusi report.

On social media, pictures have been posted of Russians using cheap, unencrypted Chinese radios, and their own mobile phones to contact commanders. As a result even amateur radio enthusiasts hundreds of miles away have been able to tune into real-time Russian military communications, as Twitter threads with dozens of recorded Russian messages show.

Inadequate equipment has been the cause of other failings: images have been shared by Ukrainians of Russian vehicles with shredded tires stuck in mud. Experts say the tires are almost certainly cheap, civilian-grade versions of those the Russian military need, suggesting, as in the case of the radios, endemic corruption in Russia’s defense procurement.

“The Russians are very good at military parades. They spend weeks getting everything shiny. But it’s a facade,” said one European defense official.

The biggest question that continues to perplex analysts, though, is why Russia has still not made use of its vastly superior air power to better protect its forces, and reverse the debacle on the ground.

A senior US defense official said that Ukraine had been “very creative” in how it used its air defenses, making highly effective use of cheap drones, and the country’s forces were staging a much fiercer resistance than Russian intelligence expected. “They are putting resources where they’re most needed [and] they’re doing it quickly. They are being adaptive and nimble . . . in almost a sort of a hit-and-run kind of style,” he said.

Russia’s military has no experience fighting such an extensive joint ground-and-air war, the official said. “This is an operation that they have never conducted before, never meaning since World War two.”

The official said Russia was also having trouble integrating its ground and air forces into a “joint” force. He said that while the Russia had upgraded its military and acquired sophisticated systems, “it doesn’t appear . . . that they have developed the proper operational concepts to use these modern capabilities”.

The failures have resulted in a widespread, if perhaps temporary, collapse in morale, according to the Pentagon and British defense intelligence. There is even evidence of Russian soldiers sabotaging their own equipment, officials have said.

The average age of Russian soldiers in Ukraine is 20-25 years old, according to one western military official, compared with 30-35 for the Ukrainians, who are better-supplied and have a cause on their side.

Many of the young Russian soldiers deployed meanwhile did not even know they were being sent into Ukraine, let alone that they would have to fire on fellow Russian-speakers.

“It has become clear that a lot of Russian infantry are simply not willing to go into the attack,” said Chris Donnelly, an adviser on the Soviet military to four Nato secretaries-general. “Once morale really starts to collapse like this, you don’t have an army any more.”

The Russians have used conscripts and poorly trained junior troops, Donnelly said, in an apparently knee-jerk reversion by operational commanders to the textbook Soviet tactic of sending in expendable forces first to “soak up firepower”.

The question is how Russia will adapt. In recent days, Russian forces have stepped up the use of long-range fire, and have launched more than 800 missiles in total. There were also signs that columns of forces to the north and east of Kyiv were preparing to try a new approach.

Some of the tanks and other vehicles in a long convoy that at its closest point is 15km from Kyiv have also gone off the main road. It is unclear whether they are being sent in a different direction or taking cover under trees.

Elsewhere, Russia’s objectives seem to be to surround and besiege a sufficient number of Ukrainian cities, seize Kyiv and oust the Zelensky government. While Russian forces have struggled in the north, in the south they have had far more success, and can still apply considerable force.

Questions remain about Ukrainian forces' ability to continue to fight and how much in anti-aircraft munitions they have remaining.

Within the Ukrainian military there is also growing dismay over western flip-flopping over additional military support, such as gifting MiG jets or heavier, vehicle-mounted long-range anti-aircraft weaponry.

Russia's use of crude artillery and dumb bombs is meanwhile wreaking a heavy civilian toll. And most signs point towards a further escalation by the Kremlin.

The danger, said one retired senior British intelligence officer, is that in seeking to extricate itself from its tactical disasters in Ukraine, Moscow "blunders into a strategic dead-end with even worse consequences" for Ukraine, and possibly the world.

#### **24. For the sake of our national security, Congress must end its budget battles**

The Hill, 12 Mar 22, Mike Rogers

On Tuesday, the Office of the Director of National Intelligence issued its Annual Worldwide Threats report.

If you weren't already unsettled by the state of the world, reading this sobering report will certainly leave you concerned. From Russia to China, health security to transnational threats like drugs and terrorism, and more, the ODNI report shows just how unsettled the world is today and what it's anticipated to be over the course of the next year.

Dealing with threats like these means putting and keeping our budgetary house in order, but too often, we're operating on temporary funding, and we can't keep doing so.

We often talk about how we are a global leader, a guarantor of international security, yet Congress continues to fail to provide regular annual funding for the military. Until Thursday night, as Russia invaded its neighbor — a country slightly smaller than the state of Texas — our military was operating under previous funding levels at a time when it needed to be investing in the future while meeting the threats of today.

For the fourth time since October of last year and for the 12th year out of 13, Congress risked financial catastrophe if it failed to approve an annual funding measure. To make matters worse, if Congress hadn't passed a funding bill (or yet another continuing resolution) by today, the government would have shut down, again.

There are few times more perilous for the government to play chicken with a budget shutdown than when Moscow is marching towards Kyiv and our NATO allies are looking to Washington for leadership. We're rightly sending weapons and humanitarian aid to Ukraine and deploying troops to reassure our allies in NATO, but at home, we were relying on continuing resolutions rather than passing a budget. It's the sheer entanglement of bad politics.

This is no way to run a government and no way to manage our military and security affairs and shouldn't be a partisan issue. The administration controls all three branches of government and struggled to get a budget finalized. There simply isn't any excuse for this political failure. Our country has the need and there is a clear sense of urgency, yet they seemed uninterested or incapable of getting the basic business of government done.

Relying on continuing resolutions is sophomoric and leaves our servicemen and women in the lurch while Congress plays politics. The services cannot plan for long-term acquisition or events, they cannot invest in next-generation systems and they cannot re-arm and re-equip stores that are being rapidly depleted due to foreign support. Failing to manage our fiscal house leaves our adversaries emboldened and allies questioning our seriousness.

And you should be certain that our adversaries are watching our every move. As the ODNI writes, "Beijing, Moscow, Tehran, and Pyongyang have demonstrated the capability and intent to advance their interests at the expense of the United States and its allies." China, Russia, Iran and North Korea are looking for weaknesses to exploit, and our failure to budget for potential conflict with each is just the kind of opportunity they would seize upon.

What does this look like in practice? "Major adversaries and competitors are enhancing and exercising their military, cyber and other capabilities, raising the risks to U.S. and allied forces, weakening our conventional deterrence, and worsening the longstanding threat from weapons of mass destruction." Just last year, Beijing tested an advanced hypersonic missile over the South China Sea. Defending against that kind of threat and preparing our own capabilities is not cheap, and requires long-term planning. China doesn't need to worry about the budget cycle, but we do and we must get our house in order.

Providing our military with budgetary stability and predictability in an unpredictable world is Congress' first duty and responsibility and too often it is found wanting. It is difficult, if not impossible, to provide and execute strategic guidance when the legislative branch cannot agree on basic funding. We need our eyes and attention on strategic competition, not partisan budget fights. This means passing a budget, not just now, but regularly in the future, and this needs bipartisan leadership.

*Mike Rogers served as the Republican representative in Congress for the 8th District of Michigan from 2000 until 2015, including as chairman of the House Intelligence Committee from 2011-2015.*

## **25. Nostalgia and Kalashnikovs: Why Russia wins some sympathy in Africa and the Middle East**

Economist, 12 Mar 22

In 2019 Vladimir Putin welcomed 43 African leaders to the inaugural Russia-Africa summit, a higher turnout than Britain or France attracted to similar shindigs. At the bash in Sochi the Russian president lambasted the West for how it imposed "political or other conditions" on

African countries, a reference to chiding about human rights. “We have a lot to offer to our African friends,” said Mr Putin.

The summit stressed Russia’s increasingly muscular approach to Africa. After Russia annexed Crimea in 2014 and the West imposed sanctions, it boosted efforts to sell arms, extract resources and prop up shaky regimes. Now that Russia is suffering far more sweeping sanctions, it may wish to redouble its activities on the continent. But do African governments think it still has enough to offer?

The vote on March 2nd at the un General Assembly to condemn Russia’s invasion of Ukraine suggests many are hedging their bets. Of the 54 African countries, 28 backed the motion but 17 abstained and eight were no-shows. Eritrea, a gulag state, joined Russia, Belarus, North Korea and Syria in voting against.

Whether these votes reflect ordinary Africans’ views is unclear. Mobile-phone surveys carried out last week in six African states for The Economist by Premise, an American research firm, suggest that governments’ ambivalence is reflected in public attitudes (see chart 1). In Kenya, Nigeria, South Africa and Uganda pluralities held Russia most responsible for the war. But in Mali and the Ivory Coast, NATO was most often cited as the guilty party.

The votes at the un partly reflect historical ties between Russia and ruling parties, especially in southern Africa. Many of the region’s elite studied in the Soviet Union; some have fond memories of their time there. The liberation parties that still run Angola, Mozambique (whose flag features a Kalashnikov), Namibia, South Africa and Zimbabwe saw the Soviet Union as an ally in their fight to end white rule, and consider Russia to be its successor. All abstained, even though Ukraine was part of the Soviet Union, too.

This nostalgia goes hand-in-hand with latent anti-Western views. Murithi Mutiga of International Crisis Group, a Brussels-based think-tank, notes “resentment” in the Horn at “the way the us behaved in its unipolar moment”. NATO’s intervention in Libya in 2011, which ignored the African Union, angered leaders like Yoweri Museveni of Uganda (another abstainer). The subsequent chaos, which spilled over into the Sahel, alienated governments there.

But Africa’s relations with Russia are mainly about self-interest, not history or ideology. This is acutely so for countries that rely on mercenaries from the Wagner Group, which is backed by Yevgeny Prigozhin, a chum of Mr Putin. There are an estimated 2,000 Wagner troops in the Central African Republic (car) keeping rebels from toppling President Faustin-Archange Touadéra, reportedly in exchange for gold and diamonds. He is too dependent on them to change tack.

The junta in charge of Mali since a coup last year has also turned to Wagner. About 800 guns-for-hire operate there, says Emmanuel Macron, France’s president, who is withdrawing French forces partly because of the Russian arrivistes. European attention to the Sahel will further diminish because of the war in Ukraine, reckons Paul Stronski of the Carnegie Endowment for International Peace, another think-tank, leaving a “relatively open door” for Wagner. He adds

that Russia will see the battle for influence in the Sahel as part of a wider contest against Western enemies – an echo of proxy conflicts during the Cold War.

Guinea is another African country unusually dependent on Russia. It is already a “collateral victim” of the war, laments Amadou Bah of Action Mines Guinée, an NGO. Rusal, a huge Russian aluminum producer with three mines in Guinea, has stopped operations at its refinery in Ukraine, which processes bauxite mined in Guinea. Its junta recently suspended an honorary consul from Ukraine, presumably to keep Mr Putin sweet.

On February 24th, as Russian tanks were rolling into Ukraine, Mohamed Hamdan Dagalo, a powerful Sudanese general known as Hemedti, was hobnobbing with Russian officials. Russia has long sought a military presence at Port Sudan on the Red Sea and reportedly buys smuggled gold from the country. But in the coming months Sudanese angry at high bread prices (see earlier article) may renew protests against their Russian-backed junta.

Russia has tried to extend its reach beyond a few rickety states. It is the biggest arms exporter to Africa. Its trade with the continent has increased since 2014, though it still accounts for just 2% of Africa’s trade in goods with the rest of the world. Kremlin-linked firms have formed an Africa-focused trade association. A subsidiary of VEB (a bank under sanctions) has shares in Afreximbank, a development bank.

For most countries Russia is but one player among many. Like many African leaders, João Lourenço, Angola’s president since 2017, has tried to build a “portfolio of foreign-policy interests”, notes Ricardo Soares de Oliveira of Oxford University. Angola sells its oil to China, has an IMF program and digs for diamonds with Alrosa, a Russian miner. “Historically we have relations with all these countries. I don’t see it as a major issue,” says an Angolan cabinet minister.

Ethiopia, which did not vote at the un, is in a similar spot. Russia is its largest arms supplier. At the un Russia has stymied efforts to constrain Ethiopia’s government in a civil war against rebels from its northern region of Tigray. Gazprom bank has shown interest in a project in Ethiopia’s eastern Somali region. However, “I’m not convinced we need [Russia] more than the West,” says an Ethiopian official.

### **The newly fickle Gulf**

Self-interest and fence-sitting prevail in the Middle East, too. The United Arab Emirates (UAE) shocked America by abstaining in the un Security Council on February 25th. The Arab League’s statement on the war three days later did not even mention Russia. Though their governments voted in favor of the General Assembly motion, officials in Egypt and other Gulf states argue that this is not their war: they have no formal alliances with either side.

Oil is one reason. Saudi Arabia is keen to preserve OPEC+, an alliance of big producers of which it and Russia are the biggest. Weapons are another factor. Egypt is the region’s second-biggest recipient of American military aid. But President Abdel-Fattah al-Sisi has sought to diversify, including by buying Russian fighter jets.

Gulf states have relied on America for protection. But they now think its security umbrella has holes. Diplomats hope staying neutral on Ukraine will send a message to America. “If we can’t count on you, you can’t count on us,” as one puts it.

Western governments are less likely to chastise African countries for abstaining. They know that all states have interests. “It’s very unlikely that African countries will be forced to choose a side,” says Folashadé Soulé, an academic also at Oxford.

But if Russian firms struggle to find dollars they will be less attractive to Africans. “I don’t think the government of Sudan wants rubles,” says a sanctions lawyer. Big energy or mining deals often involve ancillary Western firms, which may not want Russians involved, if only for reputational risk. If the West stops buying Russian hydrocarbons, that too could have knock-on effects on African buyers.

The next Russia-Africa summit is due later this year in Ethiopia. Its VIP list will show how many “African friends” Mr Putin still has. It may well be less than 43.

## **26. Will China offer Russia financial help? A bit. But it will mostly seek to learn from Russia’s mistakes**

Economist, 12 Mar 22

If you believe China’s diplomats, relations with Russia are “rock solid” and the friendship between Xi Jinping and Vladimir Putin has “no limits”. Western sanctions are about to put those warm words to the test. Russia needs an economic and financial lifeline. It would like to use China as a conduit through which to continue trading with the rest of the world. China, however, must strike a delicate balance between helping Mr Putin stand up to their joint rival, America, and retaining its own access to the global financial system. No doubt to Mr Putin’s regret, its financial aid to Russia is likely to be qualified at best.

Although China abstained in un votes condemning Russia for invading Ukraine, its rhetorical support has been more fulsome. On March 7th, as civilian casualties mounted, Wang Yi, the foreign minister, called Russia his country’s “most important strategic partner”. It is just a month since Mr Xi and Mr Putin heralded a new era for their countries. As well as preserving relations, China probably wants to undermine the legitimacy of sanctions as a tool of Western policy, given they have been used against it over Hong Kong and Xinjiang. Chinese firms may spot an opening in Russia as Western ones, such as McDonald’s and Shell, close their doors. Bloomberg News says that some are eyeing cheap energy assets.

Yet this embargo-busting brotherhood faces several problems. China’s technical abilities are no substitute for the West’s. CIPS, its payments network, has a small global footprint and low volumes and relies on sending messages through swift, a European body from which some Russian banks are now barred. Another difficulty is that Chinese multinationals with a legal presence in Western-allied countries may fall foul of the existing sanctions regime. China’s international banks are wary. Volvo (based in Sweden but owned by a Chinese firm) and TikTok

(run from Singapore but Chinese-owned) have suspended some operations in Russia. Even Chinese firms without a legal presence in the West could be hit by “secondary sanctions”, which take aim at third countries that help the subject of primary ones. America has not yet used this weapon over Russia, but it might. Chinese banks that dealt with Iran and North Korea were penalized by America.

Given all this, China’s help to Russia is likely to be half-hearted. It may stick to its existing Russian trade arrangements, hoping that America will tolerate them. Chief among these is energy. China received 32% of all Russian crude exports in 2020 and 17% of its exports of liquefied natural gas. China may also conduct trade and financial transactions through smaller banks that do not have a legal presence in the West, using rubles and yuan rather than the dollar. It may also grant Russia’s central bank access to its yuan holdings. Last, China will probably try to limit the overall scale of trade volumes and payment flows so as to avoid provoking a direct confrontation with America.

Chinese officials must juggle several priorities. China wants to see Russia survive these sanctions, to teach America and allies that they are not a magic weapon, but is anxious to limit collateral damage to Chinese interests. In the process, it plans to learn from Russia’s mistakes. If it comes to blows with America, China wants its financial system to be shielded. Its aims will include improving its payments system and diversifying its \$3.2trn of reserve holdings out of Western currencies and accounts by, for example, investing in commodities. It could get foreign firms and governments to issue more securities in China’s own capital markets, creating a new pool of assets for China to buy. Russia may hope for a Chinese bail-out; China’s priority will be to learn from a case study of failure.

#### **27. Saudi Arabia executes 81 people in a single day**

Al Jazeera, 12 Mar 22

Saudi Arabia has executed 81 men over the past 24 hours, including seven Yemenis and one Syrian national, on charges including “allegiance to foreign terrorist organizations” and holding “deviant beliefs”, state news agency Saudi Press Agency said, in the largest known mass execution carried out in the kingdom in its modern history.

The number dwarfed the 67 executions reported in the kingdom in 2021 and the 27 in 2020.

“These individuals ... were convicted of various crimes including murdering innocent men, women and children,” SPA said on Saturday, citing a statement from the interior ministry.

“Crimes committed by these individuals also include pledging allegiance to foreign terrorist organizations, such as ISIS [ISIL], al-Qaeda and the Houthis,” it added.

# DEFENSE MORNING CLIPS

As of 0430 Hours, April 15

## OVERVIEW

National Security Advisor Jake Sullivan called the sinking of the Moskva, Russia's premier warship, a "setback" for Russia, while Pentagon spokesperson John Kirby added the incident would be a "major morale boost for Ukrainian forces," the *Washington Post* reported. Separately, CIA Director William Burns warned that while the U.S. has not seen any "practical evidence" of nuclear posturing by Russian President Vladimir Putin, the risk of low-yield nuclear weapons usage by the Russian military cannot be dismissed, according to the *New York Times*. Also of note, in an interview, South Korean President-Elect Yoon Suk-yeol told the *Washington Post* that his country's alliance with the U.S. was the "foundation" which would fuel a more active South Korean foreign policy, including more assertive stances towards North Korea and China, while improving relations with Japan.

## TOP STORIES

### 1. Blast sinks Russian warship

*Washington Post, Apr. 15 (0115), Pg. A1 | Joanna Slater, Dan Lamothe, Emily Rauhala and Karen DeYoung*

Russia's premier warship in the Black Sea sustained severe damage and sank on its way back to port early Thursday, a major symbolic blow to Moscow as the invasion of Ukraine entered its eighth week and both sides prepare for a potentially devastating battle over the eastern Donbas region. The cause of the explosion on the missile cruiser Moskva remains contested.

### 2. Putin May Be Tempted to Use Small Nuclear Weapon, C.I.A. Chief Says

*New York Times, Apr. 15 (0300), Pg. A8 | David E. Sanger and Julian E. Barnes*

The director of the C.I.A. said on Thursday that "potential desperation" to extract the semblance of a victory in Ukraine could tempt President Vladimir V. Putin of Russia to order the use of a tactical or low-yield nuclear weapon, publicly discussing for the first time a concern that has coursed through the White House during seven weeks of conflict.

### 3. South Korea's president-elect unveils foreign policy goals

*Washington Post, Apr. 15 (0115), Pg. A7 | Michelle Ye Hee Lee*

South Korea in recent years has been a passive player on the global stage even as its economic and cultural influence ballooned, remaining wary of aggressive neighbors North Korea and China. The country's conservative president-elect vows to change that. South Korea must step up its foreign policy commensurate with its economic and cultural status and become a stronger ally to the United States, he told The Washington Post in his first interview as president-elect.

## **DEFENSE DEPARTMENT**

### **4. U.S. Support Shifts to Offensive Weapons**

*Wall Street Journal, Apr. 15 (0200), Pg. A7 | Courtney McBride*

As Ukraine prepares to resist a new Russian military assault in the east, it likely will be doing so with weapons and equipment the U.S. once considered too risky to provide to Kyiv, highlighting how the line between offensive and defensive assistance has blurred in recent weeks.

### **5. Pentagon: Ukrainian troops will need training for some U.S. weapons being shipped**

*Washington Times Online, Apr. 14 (1359) | Mike Glenn*

U.S. officials in Europe are setting up training programs to show Ukrainian soldiers how to operate some of the military supplies being sent to them as part of the just approved \$800 million security assistance package as Kyiv gears up for an expected major new push by invading Russian forces. On Thursday, a senior defense official said Ukrainian troops will likely require instruction to use the artillery and radar systems included on the list. Ukraine will receive 18 towed howitzers along with 40,000 artillery rounds, 10 AN/TPQ-36 counter-artillery radars and two AN/MPQ-64 Sentinel air surveillance radars. U.S. and allied supplies are credited with aiding the surprisingly tough resistance the Ukrainians have put up to date against a larger and better-armed Russian invading force.

### **6. Air Force and Space Force Will Now Allow Troops Up to 35 Days Off for Fertility Treatments**

*Military.com, Apr. 14 (1448) | Thomas Novelty*

Airmen and Guardians who undergo fertility treatments to start families can take up to 35 days off from their duty station under a new policy unveiled by the Department of the Air Force, which also oversees the Space Force. The directive, announced Wednesday, would grant the time off -- which doesn't count against a service member's earned number of leave days -- if they undergo treatment at one of six military medical facilities. Secretary of the Air Force Frank Kendall praised the policy update and said it hits close to home for him.

## **EXECUTIVE/LEGISLATIVE**

### **7. Republican lawmakers call for reopening U.S. Embassy in Ukraine's capital**

*Stars and Stripes Online, Apr. 14 (1213) | Svetlana Shkolnikova*

Republican lawmakers are calling for the U.S. to resume its diplomatic presence in Ukraine and reopen its embassy in the capital Kyiv now that Russia's invading forces have withdrawn from the city's surrounding areas. Pentagon spokesman John Kirby said Thursday that resuming operations at the embassy would require consultation with the Defense Department. The Marine Corps Embassy Security Group, a brigade-sized organization of the Marine Corps, provides security for U.S. diplomatic missions worldwide. About 2,500 Marines are stationed at more than 150 embassies and consulates, according to the State Department.

### **8. Pressure on U.S. to Give Ukraine More Intelligence on Russia**

*Associated Press, Apr. 14 (1435) | Nomaan Merchant and James LaPorta*

President Joe Biden has called Russia's war on Ukraine a genocide and accused Vladimir Putin of committing war crimes. But his administration has struggled with how much intelligence it is willing to give the Ukrainian forces that are trying to stop the Russian leader.

**9. Lawmakers Demand the Army Come Up with a Better Plan for Alaska-based Soldiers After String of Suicides**

*Military.com, Apr. 14 (1346) | Steve Beynon*

A bipartisan group of lawmakers is raising the alarm over an ongoing suicide crisis among troops in Alaska, saying the Army needs to rapidly pour more resources into those rural bases. Alaska Republican Sens. Dan Sullivan and Lisa Murkowski, along with Rep. Jackie Speier, D-Calif., sent a letter to Secretary of the Army Christine Wormuth outlining troubling findings of delayed mental health care and poor economic situations isolating junior enlisted troops as key points the service needs to fix.

## **EUROPE**

**10. EU closes loophole allowing multimillion-euro arms sales to Russia**

*Reuters, Apr. 14 (0515) | Francesco Guarascio*

The European Union has closed a loophole that allowed EU governments to export weapons worth tens of millions of euros to Russia last year alone despite an embargo which took effect in 2014 after Russia annexed Ukraine's Crimea region.

**11. Soviet-Era Missiles Now Guard Ukraine's Skies**

*New York Times, Apr. 15 (0300), Pg. A1 | Andrew Higgins*

Driving back to his village near the Ukrainian border last Thursday, the mayor had to stop to let a train pass, and assumed he wouldn't have to wait long. But the flatbed wagons, stacked high with military equipment, just kept coming. He waited for nearly half an hour. The train that delayed Mr. Csoma's drive home was not only unusually long but also signaled a singular escalation in Western efforts to help Ukraine defend itself. It carried an air defense system made up of 48 surface-to-air missiles, four launchers and radars to guide the rockets to their targets, which in Ukraine means Russian warplanes and missiles.

## **RUSSIA**

**12. CIA head calls Bucha killings 'crimes,' takes aim at Putin**

*Washington Post, Apr. 15 (0115), Pg. A11 | Shane Harris*

In his first public speech as director of the CIA, William J. Burns on Thursday called the killings of Ukrainian civilians in Bucha "crimes" and said Russia had "inflicted massive material and reputational damage on itself"

following the invasion ordered by Russian President Vladimir Putin. “While we’ve seen some rhetorical posturing on the part of the Kremlin about moving to higher nuclear alert levels, so far we haven’t see a lot of practical evidence of the kind of deployments or, you know, military dispositions that would reinforce that concern,” Burns said. “But we watch for that very intently. It’s one of our most important responsibilities at CIA.”

**13. Russia warns of nuclear, hypersonic deployment if Sweden and Finland join NATO**

*Reuters, Apr. 14 (1622) | Guy Faulconbridge*

One of Russian President Vladimir Putin’s closest allies warned NATO on Thursday that if Sweden and Finland joined the U.S.-led military alliance then Russia would deploy nuclear weapons and hypersonic missiles in a European exclave. Medvedev also explicitly raised the nuclear threat by saying that there could be no more talk of a “nuclear free” Baltic - where Russia has its Kaliningrad exclave sandwiched between Poland and Lithuania.

**14. Russia accuses Ukraine of helicopter strike on border town**

*Agence France-Presse, Apr. 14 (1155) | Not Attributed*

Russian officials on Thursday accused Ukraine of sending helicopters to bomb a town in the southern Bryansk region about 10 kilometres (six miles) from the border, after reporting eight injured in shelling.

**15. Russia’s Sunken Warship Dents Both Its Pride and Capabilities**

*Bloomberg News, Apr. 15 (0225) | Marc Champion*

The loss of the flagship vessel of Russia’s Black Sea Fleet goes beyond wounded pride, robbing the military of important protection and capabilities as the war in Ukraine enters a crucial phase for Moscow.

**16. Russians planted thousands of land mines and booby-traps to ‘kill or maim’ civilians, Ukrainians say**

*New York Times, Apr. 15 (0300), Pg. A9 | Cora Engelbrecht*

As ordinary Ukrainians emerge from basements and bunkers into the ruins of their hometowns, many are being confronted with a new horror: thousands of mines and unexploded bombs left behind by retreating Russian troops.

**17. Developing World Quiet on Putin**

*Wall Street Journal, Apr. 15 (0200), Pg. A8 | Joe Parkinson, David Luhnow and Juan Forero*

Western leaders seeking to build a global coalition to isolate Russia over its war on Ukraine are facing pushback from the world’s largest developing nations, including the democracies of India, Brazil and South Africa. The resistance, much of it from economic self-interest, limits the pressure on President Vladimir Putin and spotlights factions in the global community that recall the Cold War, when many countries tried to steer clear of the rivalry between the U.S. and Soviet Union.

## CHINA

### **18. China holds drills around Taiwan as U.S. lawmakers visit**

*Reuters, Apr. 15 (0259) | Ben Blanchard and Yew Lun Tian*

China said it conducted military drills around Taiwan on Friday as a U.S. Congressional delegation visited the island in a show of support to a fellow democracy, with Beijing blaming the lawmakers for raising tensions with their “provocative” trip.

## INDO-PACIFIC

### **19. Document reveals \$14 billion backlog of U.S. defense transfers to Taiwan**

*Defense News Online, Apr. 14 (1058) | Bryant Harris*

Pandemic-related acquisition issues have sparked a backlog in the U.S. delivering \$14.2 billion worth of military equipment to Taiwan that the island has purchased since 2019. With much of Washington’s attention focused on how to rapidly deploy a steady stream of military aid to Ukraine, some lawmakers are concerned the Taiwan delay is undermining its ability to deter a potential Chinese invasion.

### **20. Australia, US grapple with Solomon Islands tilt to China**

*BreakingDefense.com, Apr. 14 (1045) | Colin Clark*

It’s symbolic. The American embassy in Honiara, capital of the Solomon Islands, has been shuttered since 1993. Now, the US is scrambling to reopen as quickly as it can in the face of China’s increasingly successful campaign to tighten relations with the tiny but incredibly strategic island state.

## MIDDLE EAST

### **21. UN Envoy Sees Light At ‘End of the Tunnel’ in Yemen’s War**

*Associated Press, Apr. 14 (1259) | Edith M. Lederer*

The U.N. special envoy for Yemen told the Security Council on Thursday that he believes there is “a light at the end of the tunnel” in the more than seven-year war in the Arab world’s poorest country. But Hans Grundberg also warned that the two-month cease-fire underway in Yemen is fragile and that reports of military operations around the oil-rich central province of Marib should be addressed urgently.

## AFRICA

### **22. ‘Down With France’: Africa Wants Influence Of an Old Power Gone**

*New York Times, Apr. 15 (0300), Pg. A5 | Ruth Maclean*

Over the past few years there has been a sharp rise in criticism of France across its former colonies in Africa, rooted in a feeling that colonialist practices and paternalistic attitudes never really ended, and propelled by a tide

of social media posts, radio shows, demonstrations and conversations on the street. This is a stark turnaround from a decade ago. When jihadists took over its northern cities in 2012, Mali appealed to France for military help. And when French soldiers arrived, Malians greeted them as liberating heroes.

**23. U.S. State Dept. approves \$1 billion sale to Nigeria, delayed over human rights concerns**

*Defense News Online, Apr. 14 (1637) | Joe Gould and Bryant Harris*

The U.S. State Department has cleared the sale of 12 AH-1Z Cobra attack helicopters to Nigeria worth nearly \$1 billion, apparently after U.S. lawmakers lifted objections over human rights concerns.

## **AIR FORCE**

**24. Air Force's nuclear modernization bill is cramping fighter jet procurement**

*BreakingDefense.com, Apr. 14 (1443) | Valerie Insinna*

With two major nuclear programs ramping up, the Air Force had to make hard choices on fighter procurement in fiscal 2023, the Air Force's top officer said. After three budgets where Air Force fighter buying soared to heights of more than 60 aircraft per year, the service requested 33 Lockheed Martin F-35As and 24 Boeing F-15EXs in FY23, for a total of 57 jets. Asked about the decision during a Tuesday roundtable with reporters, Air Force Chief of Staff Gen. CQ Brown said the service had to prioritize keeping the B-21 Raider bomber and newly christened LGM-35A Sentinel intercontinental ballistic missile on track.

**25. Air Force Academy expels 22 cadets for 2020 cheating scandal**

*Military Times Online, Apr. 14 (1852) | Rachel S. Cohen*

The U.S. Air Force Academy in Colorado has expelled 22 students and put hundreds more on probation for cheating and plagiarism while learning from home in 2020, the school's top officer said Wednesday.

## **ARMY**

**26. New data transport paths are making the Army more resilient and flexible**

*FedScoop.com, Apr. 14 (1259) | Mark Pomerleau*

The Army is looking to make the flow of its data more resilient in the face of complex adversaries seeking to deny it, the service's top IT official said Thursday. CIO Raj Iyer noted that a key pillar of the Army's multi-cloud strategy is getting cloud capabilities to the tactical edge.

## **NAVY**

**27. U.S. Secretary of the Navy visits Fincantieri Marinette Marine**

*FOX News 11 (Green Bay, WI), Apr. 14 (1808) | Charlee Rubesky*

The U.S. Secretary of the Navy was in Marinette on Thursday. He was checking in on several classes of ships being built for the Navy. “Many of those ships are already beyond their extended service life as well too. There are some ships such as the LCS class, they’re below their extended service life. Unfortunately because of the challenges that we’ve had specifically related to the ASW module on them, it does need for them to be replaced earlier than expected,” U.S. Secretary of the Navy Carlos Del Toro said.

## **NOTABLE COMMENTARY**

### **28. Arming for the Next Fight in Ukraine**

*Wall Street Journal, Apr. 15 (0200), Pg. A14 | Editorial*

Ukraine won the battle of Kyiv in heroic fashion, but the war is set to enter a bloody new phase as Vladimir Putin prepares an offensive in the east. The question is whether President Biden will summon the mettle to make sure America’s friends win.

### **29. Ukraine Is Draining America’s Arsenal of Democracy**

*Bloomberg Opinion, Apr. 14 (0900) | Hal Brands*

America is following an “arsenal of democracy” strategy in Ukraine: It has avoided direct intervention against the Russian invaders, while working with allies and partners to provide the Kyiv government with money and guns. That strategy, reminiscent of U.S. support for Britain in 1940-41, has worked wonders. Yet as the war reaches a critical stage, with the Russians preparing to consolidate their grip on eastern Ukraine, the arsenal of democracy is being depleted.

### **30. Seize Russian yachts, jets and Picassos. Then use the money to help Ukraine**

*USA Today Online, Apr. 14 (1922) | Sen. Sheldon Whitehouse (D-RI) and Rep. Tom Malinowski (D-NJ)*

The split screen is stomach-turning: In Ukraine, Vladimir Putin’s rockets fall on fleeing refugees, missiles gash occupied apartment buildings and hospitals, and civilians huddle in metro stations as bombs fall above. Putin’s enablers – and even members of his family – live abroad in laundered luxury off the wealth they stole with his permission. Now imagine those mega-yachts commandeered, the private jets grounded and requisitioned, and the high-priced art whisked off to auction from the seized villas – with the proceeds used to aid the Ukrainian people. That would be a fitting use of the money that built the army besieging their nation.

### **31. With the West distracted, China expands**

*Washington Post, Apr. 15 (0115), Pg. A21 | Josh Rogin*

Over the past few weeks, the world has been understandably transfixed by Russian President Vladimir Putin’s horrific invasion of Ukraine. Meanwhile, though, his close ally Chinese President Xi Jinping has been quietly taking advantage of the West’s distraction by expanding China’s sphere of influence in the South Pacific. If

Washington doesn't wake up to this threat, China's efforts to dominate the region will gain dangerous and perhaps irreversible momentum.

**32. The battle against ISIS, yesterday's war, still smolders**

*Washington Post, Apr. 15 (0115), Pg. A19 | David Ignatius*

The Islamic State, which seemed to be extinguished three years ago when its caliphate was crushed, is still smoldering red hot at a refugee camp here and a prison nearby. And the Syrian Kurdish militia that's guarding the facilities says it badly needs help before there's a new eruption. The battle against ISIS, as the Islamic State is also known, is yesterday's war, and it gets little public attention. But the danger of a resurgence was evident Wednesday when Gen. Michael "Erik" Kurilla, the new head of the U.S. Central Command, toured the two facilities in northeast Syria. He's the first senior military official to inspect either place.

**33. As Silicon Valley Tries to Enlist, the Pentagon Strangles Innovation**

*WarOnTheRocks.com, Apr. 15 (0345) | Steve Blank*

America's national security is inexorably intertwined with commercial technology, such as drones, AI, machine learning, autonomy, biotech, cyber, quantum, high-performance computing, and commercial access to space. Given that the Defense Innovation Unit is the Department of Defense's most successful organization in developing and acquiring advanced dual-use technology, one would expect the department to scale the Defense Innovation Unit. The threats are too imminent and stakes too high not to. So what happened?

**34. The Cyber-Escalation Fallacy**

*Foreign Affairs Online, Apr. 15 (0107) | Erica D. Lonergan*

In fact, the negligible role of cyberattacks in the Ukraine conflict should come as no surprise. Through war simulations, statistical analyses, and other kinds of studies, scholars have found little evidence that cyber-operations provide effective forms of coercion or that they cause escalation to actual military conflict. That is because for all its potential to disrupt companies, hospitals, and utility grids during peacetime, cyberpower is much harder to use against targets of strategic significance or to achieve outcomes with decisive impacts, either on the battlefield or during crises short of war. In failing to recognize this, U.S. officials and policymakers are approaching the use of cyberpower in a way that may be doing more harm than good—treating cyber-operations like any other weapon of war rather than as a nonlethal instrument of statecraft and, in the process, overlooking the considerable opportunities as well as risks they present.

## TOP STORIES

### 1. **Blast sinks Russian warship**

Washington Post, Apr. 15 (0115), Pg. A1 | Joanna Slater, Dan Lamothe, Emily Rauhala and Karen DeYoung

Russia's premier warship in the Black Sea sustained severe damage and sank on its way back to port early Thursday, a major symbolic blow to Moscow as the invasion of Ukraine entered its eighth week and both sides prepare for a potentially devastating battle over the eastern Donbas region.

The cause of the explosion on the missile cruiser Moskva remains contested, with Russia saying a fire detonated ammunition onboard and forced the crew to evacuate. Ukraine said it struck the Russian vessel with a missile, and a senior U.S. official told The Washington Post on Thursday evening that the ship sank as a result of a Ukrainian attack, but did not confirm what weapon was used.

Earlier in the day, U.S. national security adviser Jake Sullivan called the damage to the ship a setback for Russia regardless of how it was disabled. Either it was "just incompetence" or "they came under attack," he said at a breakfast. "Neither is a particularly good outcome for them."

The war in Ukraine, which President Biden this week described as genocide, has killed thousands of civilians, forced more than 4.7 million Ukrainians to flee the country and reordered the geopolitical landscape in Europe.

Smaller European nations that also feel threatened by Russia have rushed weapons to Ukraine, while Finland and Sweden signaled Wednesday that they would consider joining NATO, ending their nonaligned status. On Thursday, Russia warned the two countries that if they join the alliance, Moscow will strengthen its military forces in the Baltic Sea, including though the deployment of nuclear weapons.

The Biden administration, meanwhile, has vastly expanded the types of weapons it will provide to the Ukrainian military, with the next phase of the conflict expected to include large clashes in the open fields of the Donbas region. An additional \$800 million in security assistance will for the first time include anti-personnel mines, long-range artillery, armored vehicles and radar defense equipment. And the top U.S. commander in Europe and his staff are developing training for Ukrainian forces that will take place on the continent and teach the soldiers about weapons new to the country's arsenal, a senior U.S. defense official said Thursday.

The training will focus on using 155mm howitzer cannons, counter-artillery radar and Sentinel air defense radars, and will last a few days each, the official said, speaking on the condition of anonymity under ground rules set by the Pentagon.

Russia this week sent a formal diplomatic note to the United States warning that U.S. and NATO shipments of the “most sensitive” weapons systems to Ukraine was “adding fuel” to the conflict there and could bring “unpredictable consequences.”

A copy of the diplomatic démarche - the first known high-level communication to the United States from Russia since the invasion began - was seen by The Washington Post. The State Department declined to comment on whether any response had been sent. Top Russian military officials have declined attempts by their U.S. counterparts to speak with them during the conflict.

The Russian Embassy did not respond to requests for comment on Thursday.

Among the “most sensitive” items mentioned in the note are “multiple launch rocket systems” - which Russian forces have deployed in territory they control, but which are not believed to have come from the United States or its NATO allies. Russia accused the allies of violating “rigorous principles” governing the use of arms transfers to conflict zones and of being oblivious to “the threat of high-precision weapons falling into the hands of radical nationalists, extremists and bandit forces in Ukraine.”

It accused NATO of trying to pressure Ukraine to “abandon” sputtering and so far unsuccessful negotiations with Russia, “in order to continue the bloodshed.” Washington, it said, was pressuring countries with military and technical cooperation with Russia to “immediately curtail it,” and those with Soviet-era weapons to transfer them to Ukraine.

“We call on the United States and its allies to stop the irresponsible militarization of Ukraine, which implies unpredictable consequences for regional and international security,” the note said.

Sullivan said the weaponry that is headed to Ukraine represented “everything we could muster in a reasonable time frame” so it could be “ready to use for the coming battle in the east.” He stressed that the United States was “not operating inside the territory of Ukraine” - a red line that could provoke a response from Moscow - and is making sure there are “resilient and diverse” ways to continue delivering military aid into the country.

Biden told reporters his administration is also considering whether to send a senior U.S. government official to Ukraine in a gesture of solidarity, following visits this week by top European leaders. “We’re making that decision now,” the president said.

The death toll from an April 8 Russian airstrike on a train station in Kramatorsk rose to 59 after two children injured in the attack died, Ukraine’s Defense Ministry said Thursday. Seven of the fatalities were children, the ministry said.

“A bloody children’s toy will be sent by [Ukraine’s national police] to the U.N. as proof of this barbaric crime,” the ministry said in a post on Twitter, including an image of a blood-soaked toy horse apparently left at the scene.

Another turning point in the war may be imminent in the embattled port city of Mariupol. The Russian Defense Ministry said 134 Ukrainian soldiers had surrendered there overnight. A day earlier, the ministry asserted that Mariupol was “completely liberated” from the Azov Battalion - a Ukrainian paramilitary unit with a history of far-right nationalism - and said the remaining Ukrainian forces in the city were trapped.

But a local Ukrainian official said Thursday on Telegram that Ukrainian and Russian forces continue to clash, particularly near the harbor. The city’s mayor, Vadym Boychenko, recently estimated that over 10,000 civilians have died in the Russian siege.

In its daily assessment for April 13, the Institute for the Study of War reported that Russian forces could “capture Mariupol in the coming week,” adding that the city’s defenders wouldn’t be able to hold out indefinitely.

Russian forces, it reported, continued to take ground in the city - including driving Ukrainian troops to abandon a metal plant in the north, “further constricting the two remaining pockets of Ukrainian defenders.”

Ukrainian officials have described Mariupol as a crucial battlefield. “Mariupol is the heart of this war today,” Ukrainian President Volodymyr Zelensky told the Associated Press on Sunday. “It beats, we fight, we are strong. If it stops beating, we will have weaker positions.”

Austrian Chancellor Karl Nehammer, who recently held separate meetings with Russian President Vladimir Putin and Zelensky, told Germany’s DPA news agency that the two are entrenched in a “wartime state of mind.”

“Both sides are preparing for a very intense and, from a humane perspective, devastating battle” in the Donbas region, he said.

The sinking of the Moskva warship will be a major morale boost for Ukrainian forces, experts said. Late Thursday, the Russian defense ministry said that the Moskva sunk as it was being towed to port. Pentagon spokesman John Kirby said the impact of the loss of the ship on the broader war effort was not immediately clear. “The naval component of the war has been fairly limited to two things: One, cruise missile strikes into Ukraine and, two, replenishment and resupply of their efforts in the south,” Kirby said.

The Pentagon also disclosed Thursday for the first time that a small group of Ukrainian soldiers who had been in the United States for training when Russia invaded Ukraine on Feb. 24 received coaching on armed, unmanned Switchblade aircraft, as well as on coastal defense surface drones that Biden just approved Wednesday. Those troops have returned to Ukraine, said a senior defense official, who spoke on the condition of anonymity under rules set by the Pentagon.

It is clear that some of the earlier self-imposed limitations on U.S. military aid to Ukraine have changed, said Elias Yousif, a research analyst at the Stimson Center in Washington. But there are some steps that the Biden

administration still deems too risky in terms of provoking conflict with Russia, Yousif said, including facilitating the transfer of fighter jets to Ukraine.

The administration is “walking a tightrope, where it doesn’t know the amount of tension it has to work with,” Yousif said.

Meanwhile, Finland and Sweden are reconsidering their status as militarily nonaligned nations in the aftermath of Russia’s invasion of Ukraine, leading to escalated warnings from Russia.

Dmitry Medvedev, an ally of Putin who serves as deputy chairman of Russia’s Security Council, said Thursday that NATO expansion would lead Moscow to strengthen air, land and naval forces to “balance” military capability in the region.

“If Sweden and Finland join NATO, the length of the land borders of the alliance with the Russian Federation will more than double. Naturally, these boundaries will have to be strengthened,” he wrote on Telegram.

“There can be no more talk of any nuclear-free status for the Baltic,” Medvedev said.

Russia also accused Ukraine’s military of striking residential buildings in a Russian village near the border, leaving seven people injured.

Two Ukrainian combat helicopters entered Russian airspace and carried out “at least six strikes” in the village of Klimovo, Russia’s Investigative Committee said. The federal agency said six houses were damaged but provided few other details. Ukrainian authorities had no immediate response to the accusations.

Russia has accused Ukraine of several strikes on its territory since the war began. In early April, Moscow claimed Ukraine attacked a fuel depot in Belgorod, another border region. Ukrainian officials would not confirm or deny the attack at the time.

## **2. Putin May Be Tempted to Use Small Nuclear Weapon, C.I.A. Chief Says**

*William J. Burns, the director of the Central Intelligence Agency, cautioned that he had seen no 'practical evidence' that would suggest such a move was imminent*

New York Times, Apr. 15 (0300), Pg. A8 | David E. Sanger and Julian E. Barnes

WASHINGTON -- The director of the C.I.A. said on Thursday that “potential desperation” to extract the semblance of a victory in Ukraine could tempt President Vladimir V. Putin of Russia to order the use of a tactical or low-yield nuclear weapon, publicly discussing for the first time a concern that has coursed through the White House during seven weeks of conflict.

The director, William J. Burns, who served as American ambassador to Russia and is the member of the administration who has dealt most often with Mr. Putin, said the potential detonation of such a weapon -- even as a warning shot -- was a possibility that the United States remained “very concerned” about. But he quickly cautioned that so far, despite Mr. Putin’s frequent invocation of nuclear threats, he had seen no “practical evidence” of the kinds of military deployments or movement of weapons that would suggest such a move was imminent.

“Given the potential desperation of President Putin and the Russian leadership, given the setbacks that they’ve faced so far, militarily, none of us can take lightly the threat posed by a potential resort to tactical nuclear weapons or low-yield nuclear weapons,” Mr. Burns said during a question-and-answer session following a speech he delivered at the Georgia Institute of Technology.

He spoke in response to a question from former Senator Sam Nunn, of Georgia, who helped create the program that brought nuclear weapons out of Ukraine and other former Soviet states 30 years ago.

Tactical weapons are sometimes called “battlefield nukes,” smaller weapons that can be shot out of a mortar or even exploded like a mine, as opposed to “strategic” weapons that are put on intercontinental ballistic missiles. Russia has a large arsenal of tactical weapons; the United States keeps comparatively few. Low-yield nuclear weapons have been designed to produce a fairly small explosion, which sometimes blurs the difference between conventional and nuclear weapons.

Mr. Burns also argued that the disclosure of Mr. Putin’s intentions by U.S. intelligence officials before the outbreak of the war had made it harder for Mr. Putin to hide the “raw brutality” his forces have used in Ukraine, reminiscent of the damage Russian forces inflicted in Chechnya in the 1990s.

“I have watched over the years as Putin has stewed in a combustible combination of grievance and ambition and insecurity,” Mr. Burns said. He said the Russian president has nursed grievances against the West for decades, convinced the United States took advantage of Russia’s weakness after the breakup of the Soviet Union.

President Biden and his national security adviser, Jake Sullivan, both acknowledged Thursday that the White House was debating sending a high-level official to Kyiv, the capital of Ukraine, in a show of support for the government of President Volodymyr Zelensky. Prime Minister Boris Johnson of Britain recently took a secret trip to Kyiv by train.

Mr. Sullivan said that the White House had briefly considered having Mr. Biden go into Ukraine, but as soon as it became clear “what kind of footprint that would require, what kind of assets that would take from the Ukrainians as well as the U.S.” to keep him safe, the idea was rejected.

When pressed on reports that he, Secretary of State Antony J. Blinken or Defense Secretary Lloyd J. Austin III might go to Kyiv, Mr. Sullivan declined to discuss it, saying that “if and when that happens, we want to make sure it’s done in a very secure way.” Mr. Biden told reporters no decision had been made to send an envoy.

Mr. Sullivan also said that in coming days the United States would announce a crackdown on countries and companies violating the Western sanctions on Moscow, imposed since the invasion began in late February.

The Commerce Department on Thursday identified 10 aircraft that were flying into or operated by Belarus, with the apparent intention of registering them in Russia. The sanctions would prevent servicing or fueling the aircraft internationally, effectively grounding them.

Mr. Sullivan had made a similar vow to crack down on violators just ahead of Mr. Biden’s trip to Brussels and Warsaw last month. But on Thursday, speaking at the Economic Club of Washington, he said he believed that some of the sanctions -- particularly export controls on defense technology -- were beginning to hurt Russia’s military readiness.

“Russia’s ability to retool and replenish,” he said, was being set back because many of its systems “rely on Western microchips and components.”

“They are exhausting the stock of some of the high-end weapons,” Mr. Sullivan added, though he acknowledged that the continuing purchase of natural gas from Russia was helping to fund the war.

“I’m not sitting here suggesting we have so starved them of those resources they literally can’t field an army and continue to try to make progress on the battlefield,” Mr. Sullivan said. But he said Washington was stepping up the effort to help Europe wean itself off Russian gas by delivering supplies of liquefied natural gas from the United States.

But Mr. Sullivan also indicated that so far he had seen no evidence that China was stepping in to help Mr. Putin with either military or financial aid. His statement was notable because Mr. Biden, in a call with President Xi Jinping of China four weeks ago, had warned about American penalties should China aid the war effort. But the

evidence since then has suggested that despite Mr. Putin and Mr. Xi's declaration in February that their relationship has "no limits," China in fact appears to be of mixed views on how much to support the war.

Mr. Burns and Mr. Sullivan both acknowledged that the war was moving to a new phase now that Russia appears to have narrowed its objective to taking the Donbas region in eastern Ukraine, where pro-Russia separatists have been fighting since 2014.

Gen. Philip Breedlove, the former supreme allied commander in Europe, who is now retired, said Thursday that while Mr. Putin may be able to paint his narrower operation as a win, the war will be a loss for Russia in the long term.

"Ukraine is still going to try to fight what I call the American Revolutionary War again, skirmishing and counterattacking and ambushing," General Breedlove said. "It is just going to be a lot harder for them."

By moving his forces to the east, Mr. Putin is looking to move the war to more favorable territory, trying to make it more difficult for the Ukrainian forces to stick with those tactics. "They are now prepared to fight the war that they really want," General Breedlove said. "They want to meet force on force in open fields."

### **3. South Korea's president-elect unveils foreign policy goals**

Washington Post, Apr. 15 (0115), Pg. A7 | Michelle Ye Hee Lee

SEOUL -- South Korea in recent years has been a passive player on the global stage even as its economic and cultural influence ballooned, remaining wary of aggressive neighbors North Korea and China.

The country's conservative president-elect vows to change that. South Korea must step up its foreign policy commensurate with its economic and cultural status and become a stronger ally to the United States, he told The Washington Post in his first interview as president-elect.

"We should not only focus on relations with North Korea, but rather expand the breadth of diplomacy in the E.U. and throughout Asia with the South Korea-U.S. relationship as our foundation," Yoon Suk-yeol said Thursday. "We should take on a greater role in fulfilling our responsibility as one of the top 10 economies in the world."

Yoon joins a growing cadre of leaders in the Asia-Pacific region who are abandoning conciliatory stances in defense of their countries and tightening alliances to counter China. He aspires to make South Korea a critical player in addressing global challenges - including supply chain management, climate change and vaccine production - moving away from a singular focus on North Korea and calibrating policy around it.

The question is how effective he can be in this goal. On May 10, Yoon is set to become the president of the world's 10th-largest economy, although he has no policy or governing experience and was elected last month

with the narrowest margin in the nation's democratic history. He faces the test of rallying the opposition-controlled parliament and a divided nation weary of income inequality, soaring housing prices and empty promises of hope.

Central to Yoon's foreign policy is "rebuilding" South Korea's alliance with the United States, a nod to Washington's frustrations with the outgoing government of President Moon Jae-in, whose foreign policy ambition of brokering peace with North Korea made him wary of jeopardizing relations with China and Russia, North Korea's allies.

Yoon's promises have been welcomed by Washington, U.S. analysts say, noting that the United States wants a stronger South Korea that is a reliable ally to help bolster democratic unity in the region.

Yoon, 61, is a first-time politician and former prosecutor general. The son of academics, Yoon graduated from prestigious Seoul National University and became a prosecutor in 1994 after passing the bar exam on his ninth try. He took on some of South Korea's most powerful individuals - notably helping convict President Park Geun-hye in her impeachment trial.

Yoon lights up when talking about eating and cooking. On South Korean talk shows, he has showed off his culinary skills, deftly testing the heat of a stainless-steel pan with a drop of water and plating dishes with precision. Among his favorite dishes to cook are kimchi jjigae (kimchi stew), bulgogi (marinated beef), spaghetti and mushroom soup, he said.

"I believe it is very important and meaningful in life to spend quality time over meals with friends, family and other people close to us," he said.

Yoon married for the first time at 51 and has four dogs and three cats. He has no children.

When asked about his role models as president, he said he admires Abraham Lincoln's legacy as the defender of federalism and John F. Kennedy's charm and civil rights legacy. He said footage of Kennedy taking sole responsibility for the failed 1961 Bay of Pigs invasion in a black-and-white documentary he watched in high school left a lasting impression.

### *Seoul as a 'global pivotal state'*

Yoon envisions South Korea as a "global pivotal state," his take on a long-held vision among South Korean conservatives to define the country's foreign policy on its own terms rather than as a response to North Korea.

That means South Korea needs to take on more responsibilities, including providing more developmental aid overseas, he said.

He cited as an example that South Korea has committed \$10 million in aid to Ukraine - which equals roughly 20 cents per Ukrainian, an amount he thinks is insufficient.

“We should take part in the international pressure campaign on Russia, which the current government is doing to a certain extent,” Yoon said. “When we are asked by the international community to participate more, we need to firmly demonstrate our attitude of respect for the international rules-based order.”

Yoon said that South Korea should lean on its military alliance with the United States to take a stronger political position on China, and that he does not view South Korea’s economic dependence on China as a one-way street. China remains South Korea’s biggest trading partner, but he said Seoul must recognize that Beijing also depends on it.

Before deciding whether to seek entry into the “Quad,” a grouping of the United States, Japan, Australia and India designed to counter China’s rise, Yoon said South Korea will support and cooperate with its working groups in tackling global issues such as vaccine distribution and climate change.

Yoon labeled North Korea as Seoul’s “main enemy,” a stance that marks a departure from that of his predecessor, who leaves a legacy of brokering nuclear negotiations between North Korean ruler Kim Jong Un and President Donald Trump. Yoon expressed concern about North Korea’s lifting of its self-imposed moratorium on long-range missile and nuclear tests, but he said he would maintain a two-track response to pursue dialogue and offer humanitarian aid.

#### *Cooperation with U.S. and Japan*

Relations between Japan and South Korea are once again at one of their lowest points in decades, a concern for the Biden administration as it seeks to work with its two major Asian allies to counter China’s supply chain dominance and North Korea’s nuclear capabilities.

Yoon said dismal Seoul-Tokyo relations have backfired on South Korean companies and ordinary South Koreans who love traveling to Japan, and have hampered Seoul’s ability to coordinate with Tokyo and Washington.

Yoon said South Korea should work to rebuild confidence by having frequent conversations and visits with Japanese officials. Japanese officials have welcomed Yoon’s stance with caution.

“Our weakened relationship with Japan is the Achilles’ heel of South Korea-U.S.-Japan cooperation,” he said. “When I am president, South Korea-Japan relations will go well. I am sure of it.”

#### *Closing the gender gap*

One of the defining issues during the presidential campaign was gender, with Yoon's campaign and party appealing to disaffected young men who are frustrated with the Moon administration's policies of encouraging women to enter and stay in the workforce.

Yoon has proposed to abolish the Ministry of Gender Equality and Family, which has become a flash point in the gender war. For now, that decision appears to be on hold, as Yoon has named a new head of the agency.

Yoon acknowledged South Korea's poor rankings on gender, regularly placing last or second to last among developed countries in an array of metrics on women's economic and political empowerment, and he said South Korea needs to improve.

But he said there has been progress over the decades. When asked what role his administration will play in closing the gender gap, he said the government must guarantee legal rights for both sexes in unfair and criminal circumstances.

"I have a clear principle that we must conform to global standards for social and government activities," he said. "Guaranteeing women's opportunities must also go in line with global standards."

## **DEFENSE DEPARTMENT**

### **4. U.S. Support Shifts to Offensive Weapons**

*A new military assistance package is intended to help Kyiv repel Russia's forces*

Wall Street Journal, Apr. 15 (0200), Pg. A7 | Courtney McBride

As Ukraine prepares to resist a new Russian military assault in the east, it likely will be doing so with weapons and equipment the U.S. once considered too risky to provide to Kyiv, highlighting how the line between offensive and defensive assistance has blurred in recent weeks.

The shift in weaponry comes as Kyiv has made increasing pleas for military assistance in recent days, warning of potential Russian escalation and the potential for mass civilian casualties amid Russia's expected offensive in the Donbas area. It also follows President Biden's allegation that Russia was conducting "genocide" in Ukraine.

Mr. Biden on Wednesday announced \$800 million in additional security assistance for Ukraine, including artillery, armored personnel carriers, and Humvees, bringing total military aid committed to Ukraine since he took office to more than \$3 billion. The new package includes heavier weaponry than the U.S. previously had provided and -- for the first time -- American-made artillery pieces.

While U.S. officials in the past have debated whether the U.S. government should limit itself to providing Kyiv with weapons designed to defend the country from attack, that distinction appears to have grown fuzzier as Russia moved its forces deeper into Ukraine. Any weapons designed to push Moscow's forces out of the country arguably could be considered defensive, so long as it doesn't involve hitting targets inside Russia, say U.S. officials and outside experts.

William Taylor, vice president for Russia and Europe at the United States Institute of Peace, said that given the current state of conflict in Ukraine, "there's no distinction to be made between offensive and defensive weapons."

After failing to take Kyiv, Russian forces in recent days have pulled back from the Ukrainian capital and other northern cities and begun redeploying to southern and eastern Ukraine, where Moscow made early gains in the first weeks of the invasion. The latest arms package, which comes in parallel with greater intelligence sharing, is meant to help Ukrainian forces in the expected battle there.

Mr. Taylor, a former U.S. ambassador to Ukraine, welcomed the decision to send additional weapons to Ukraine. While the anti-armor and anti-aircraft missiles provided to date have proved effective at repelling Russian forces near Kyiv, Mr. Taylor said "the big battle that's coming in the east is on different terrain" and will require longer-range systems.

As with weapons, when it comes to intelligence, the distinction between "offensive" and "defensive" intelligence is an artificial one, says Jeffrey Edmonds, a Russia specialist who served at the Central Intelligence Agency and the National Security Council. He argues it would make little sense to withhold detailed information -- such as the position of Russian artillery -- as the U.S. is shipping hundreds of millions of dollars in advanced weaponry to the Ukrainian government.

"That's no different in my mind from providing Javelins," he said, referring to anti-tank missiles the U.S. has sent to Ukraine.

Mr. Edmonds, who was in government during Russia's 2014 annexation of Crimea and is now at CNA, a Virginia-based nonprofit research group, said there is little risk that wider intelligence-sharing would escalate the conflict. "The Russians assume we're providing all the intelligence we can," he said.

The argument about the lack of distinction between offensive and defensive assistance amid an invasion is one Ukrainian officials have been making since the invasion started. Speaking last week in Brussels, Ukrainian Foreign Minister Dmytro Kuleba blasted what he called the hypocrisy of those countries that would provide only what they labeled defensive weapons.

"When it comes to Ukraine, there should be no such difference as between defensive weapons and offensive weapons," he said. "Because every weapon used in the territory of Ukraine, by the Ukrainian army, against a foreign aggressor is defensive by definition."

That said, the administration still appears to be drawing the line at certain types of support, such as a no-fly zone, which could draw the North Atlantic Treaty Organization directly into an armed conflict with Russia. Fears of escalation into a full-scale war between Russia and NATO members were key to U.S. rejection of a plan to provide Polish MiG-29 jet fighters to Ukraine.

It isn't just conventional weapons that still face limits. While the Biden administration has been open about the kind of defensive cybersecurity assistance it has provided Kyiv -- deploying technical teams to Ukraine to help identify and patch vulnerabilities Russian hackers could exploit, for example -- it continues to draw lines on the kind of cyber operations against Moscow it is willing to engage in, officials and experts have said.

Some of those hesitations are rooted in a longstanding policy doctrine in Washington to not engage in destructive hacking that could prompt escalatory retaliation from an adversary, especially because the U.S. is highly digitized and therefore vulnerable to counterattack.

Pentagon press secretary John Kirby on Wednesday challenged the notion that Washington's provision of new equipment and plans to train Ukrainian forces on their use amount to escalatory moves, though he declined to speculate how Moscow might interpret them.

"We committed from the very beginning, even before the invasion, to helping Ukraine be able to defend itself," he said. "This is a piece of that, and this is representative of the kinds of capabilities that the Ukrainians themselves have asked for and said they need as this fighting now gets focused on the eastern part of the country."

The United Kingdom also has taken the position that providing an increasingly sophisticated complement of weapons to Ukraine isn't escalatory, because those weapons are being deployed in defense of the country.

James Cleverly, U.K. minister of state for European and North America, said Monday that from his government's perspective, providing Ukraine with the means to defend itself against Russia isn't escalatory.

"I totally understand the concerns about escalation, and they are meaningful and we need to be conscious of those," he said, but the Ukrainians should have the equipment required "to fight effectively."

"We need to give them the tools to finish the job," he added.

## **5. Pentagon: Ukrainian troops will need training for some U.S. weapons being shipped**

*Ukrainians say home-made missile cripples Russian flagship cruiser in Black Sea*

Washington Times Online, Apr. 14 (1359) | Mike Glenn

U.S. officials in Europe are setting up training programs to show Ukrainian soldiers how to operate some of the military supplies being sent to them as part of the just approved \$800 million security assistance package as Kyiv gears up for an expected major new push by invading Russian forces.

On Thursday, a senior defense official said Ukrainian troops will likely require instruction to use the artillery and radar systems included on the list. Ukraine will receive 18 towed howitzers along with 40,000 artillery rounds, 10 AN/TPQ-36 counter-artillery radars and two AN/MPQ-64 Sentinel air surveillance radars. U.S. and allied supplies are credited with aiding the surprisingly tough resistance the Ukrainians have put up to date against a larger and better-armed Russian invading force.

“We do not assess that it’s going to take longer than a few days, max, to get them trained up on those systems,” the senior defense official told reporters.

Air Force Gen. Tod D. Wolters — who wears two hats as both head of U.S. European Command and NATO’s Supreme Allied Commander — is in charge of the training requirements. They will likely choose Ukrainian soldiers who already have some level of experience with artillery and radar to receive the training on the specifics of the American systems in the package, Pentagon officials said.

“It’s a ‘train the trainers’ approach. We’re not pulling out of Ukraine an exorbitant number of fighters. They don’t think this training is going to take very long to conduct,” the senior defense official said at a Pentagon background briefing.

The government of Ukrainian President Volodymyr Zelenskyy has repeatedly pressed for more weapons to continue their fight against Russia, which launched a massive ground invasion on Feb. 24. President Biden and other NATO leaders have already ruled out contributing troops to the fight or establishing a no-fly zone over the former Soviet republic, for fear of sparking a direct shooting war with Moscow.

The training operation is being planned even as U.S. officials continue to locate the items on the latest list, which also includes aircraft such as 11 Mi-17 helicopters, 200 M113 armored personnel carriers, 500 Javeline missiles and thousands of other anti-armor systems.

“Every single item is not going to have to come from the United States. Some could come from prepositioned stocks that are elsewhere,” the senior defense official said.

The first weapons and tactical equipment on the list could be in the hands of Ukrainian soldiers in about a week, officials said.

The briefing came on a day when U.S. and European officials both said that Kyiv's claims to have hit a flagship Russian vessel with a missile strike appeared credible, although it was not clear how much damage the Russian Moskva had suffered. Ukraine's southern military command said a Ukrainian-made Neptune missile fired by its forces has scored a direct hit on the cruiser and it had begun sinking.

Russian defense officials acknowledged the ship had been hit in the Black Sea and caught fire, but said the crew had been rescued and the ship towed away from the war zone for repairs.

U.S. officials said they were still trying to get information, but said it appeared that Russian sailors were still struggling to control the fires aboard the vessel.

"We don't have the capacity at this point to independently verify that but certainly, the way this unfolded, it's a big blow to Russia," White House National Security Advisor Jake Sullivan said Thursday morning.

## **6. Air Force and Space Force Will Now Allow Troops Up to 35 Days Off for Fertility Treatments**

Military.com, Apr. 14 (1448) | Thomas Novelty

Airmen and Guardians who undergo fertility treatments to start families can take up to 35 days off from their duty station under a new policy unveiled by the Department of the Air Force, which also oversees the Space Force.

The directive, announced Wednesday, would grant the time off -- which doesn't count against a service member's earned number of leave days -- if they undergo treatment at one of six military medical facilities. Secretary of the Air Force Frank Kendall praised the policy update and said it hits close to home for him.

"My wife and I have had our own struggles with starting a family, so I recognize what a strain this can be on our Airmen and Guardians, personally and financially," Kendall said in a press release. "I wholeheartedly support this program, and I hope our teammates take full advantage of it."

The 35 days are considered Permissive Temporary Duty, which means service members must cover the costs for travel, food and lodging while receiving treatment, but their time off won't go against their leave days.

Air Force Master Sgt. Kristy Negron, a member of the department's Women's Initiative Team that crafted the policy, said the change means service members will not have to choose between taking leave and getting treatment they need.

"This change is significant for everyone struggling with infertility, just as I have the last 10 years of serving," Negron said in a press release. "Infertility takes a huge toll, not only physically and emotionally, but financially.

Being able to go PTDY for treatments will help ease some of the stress associated with the process by allowing time off work to focus on our life goals.”

Airmen and Guardians can receive treatment at six facilities: Walter Reed National Military Medical Center in Bethesda, Maryland; Tripler Army Medical Center in Honolulu, Hawaii; Womack Army Medical Center in Fayetteville, North Carolina; Madigan Army Medical Center in Tacoma, Washington; San Antonio Military Medical Center in San Antonio, Texas; and Naval Medical Center San Diego in San Diego, California.

The policy update allowing leave for infertility treatment is the latest Department of the Air Force directive aimed at more progressive changes accommodating women and families in service.

Last month, the department released a policy that gave active-duty dual-military couples in the Air Force and Space Force extra time to decide whether they want to separate from the service after having a child.

In the past two years alone, airmen have seen once unlikely changes, many focused on the comfort of women -- such as longer hairstyles, the development of a maternity flight suit and a wrap-style dress for pregnant airmen. The Space Force is also making elements of its new dress uniforms unisex.

## **EXECUTIVE/LEGISLATIVE**

### **7. Republican lawmakers call for reopening U.S. Embassy in Ukraine’s capital**

Stars and Stripes Online, Apr. 14 (1213) | Svetlana Shkolnikova

WASHINGTON – Republican lawmakers are calling for the U.S. to resume its diplomatic presence in Ukraine and reopen its embassy in the capital Kyiv now that Russia’s invading forces have withdrawn from the city’s surrounding areas.

Multiple countries recently announced plans to reopen embassies in Kyiv, including Italy, Portugal, Belgium, Austria and Turkey. The embassies of Slovenia, the Czech Republic and Lithuania have already opened their doors, as has the diplomatic office of the European Union. The U.S. needs to quickly follow suit, Republicans said.

“It’s time,” said Sen. Joni Ernst, R-Iowa, an Army veteran. “We have numerous American [non-governmental organizations] operating in Ukraine, thousands of Americans who never left, and American news operations in the country. It’s time to return – and show Ukraine, and the world, our enduring commitment to their freedom.”

The U.S. Embassy moved its consular operations to the western Ukrainian city of Lviv, near the Polish border, days before Russia's invasion and shuttered its Kyiv office entirely on Feb. 28. Diplomats and staff have been working from Poland ever since.

White House Press Secretary Jen Psaki on Monday declined to set a timetable for a return. Jake Sullivan, the national security adviser, said Sunday that U.S. officials are "working through" when to send diplomats back to Kyiv. The State Department said it is constantly evaluating safety in Kyiv and does not have specifics on when the U.S. Embassy there could reopen.

Pentagon spokesman John Kirby said Thursday that resuming operations at the embassy would require consultation with the Defense Department. The Marine Corps Embassy Security Group, a brigade-sized organization of the Marine Corps, provides security for U.S. diplomatic missions worldwide. About 2,500 Marines are stationed at more than 150 embassies and consulates, according to the State Department.

At least some of the security detachment that worked in Kyiv is likely guarding personnel and sensitive U.S. government information in Poland, Kirby said. The State Department would not confirm how many Marines were assigned to the U.S. Embassy in Kyiv.

"In the meantime, we continue to stay in close touch with the government of Ukraine and its leadership at all levels and engage in conversations with our Ukrainian counterparts every day," a State Department spokesperson said Thursday.

Ernst criticized the administration of President Joe Biden for being "far too risk-averse" about restoring a diplomatic presence in Ukraine and said a U.S. diplomat she met in Poland last month "tearfully told me she wanted to return."

Ukrainian President Volodymyr Zelenskyy has urged governments to send back their embassy staff, saying the return of foreign missions would signal to Russia "that Kyiv is ours." Russian forces retreated from the northern part of the country earlier this month after failing to seize the capital.

"We need your support, even at the level of symbols and diplomatic gestures," Zelenskyy said last week in a video address. "Please come back, everybody who is brave, please come back to our capital and continue working."

Sen. Jim Inhofe, R-Okla., and Rep. Rob Wittman, R-Va., praised foreign governments for heeding that call and said the U.S. must now back up its commitment to Ukraine and diplomacy with on-the-ground action.

"We must safely reopen the U.S. Embassy in Kyiv as quickly as possible," Wittman said. "To do so will send a clear message of our support for Ukraine, emphasize the country's unquestioned sovereignty, and support and facilitate critical diplomatic channels between the U.S. and Ukrainian governments at various levels."

Sen. Jacky Rosen, D-Nev., cautioned that a diplomatic return to Kyiv would need to be carefully vetted for security. Embassy personnel in Poland have continued to perform their “important work” even outside the country, she said.

“While it is valuable to have a diplomatic presence on the ground in Ukraine, the State Department will have to determine when our diplomats are able to safely carry out their mission in Kyiv,” she said.

Top politicians, as well as envoys, have poured into the city in recent days.

The presidents of Poland, Lithuania, Latvia and Estonia traveled by train into Kyiv to meet with Zelenskyy on Wednesday. Last week, European Commission President Ursula von der Leyen toured the nearby town of Bucha, where Russians are accused of committing mass atrocities. The United Kingdom’s prime minister, Boris Johnson, walked the streets of Kyiv with Zelenskyy in a surprise visit on Saturday.

Rep. Stephanie Bice, R-Okla., described Johnson’s visit as a “powerful demonstration of support for the people of Ukraine.” There are no plans for President Joe Biden to make a similar trip, White House officials have said, though there are reportedly discussions of sending another high-level official to the Ukraine capital.

On Thursday, Rep. Victoria Spartz, the first Ukrainian-born member of Congress, and Sen. Steve Daines, R-Mont., became the first U.S. officials to travel to Kyiv since the start of the war. Spartz asked Secretary of State Antony Blinken on Tuesday to consider redeploying diplomats to Lviv, a city largely untouched by Russian shelling that has served as a hub for people displaced by the war.

“As the single largest provider of military and humanitarian assistance to Ukraine, it is past time that the United States follow our European allies in kind,” Spartz, R-Ind., wrote in a letter to Blinken.

## **8. Pressure on U.S. to Give Ukraine More Intelligence on Russia**

Associated Press, Apr. 14 (1435) | Nomaan Merchant and James LaPorta

WASHINGTON -- President Joe Biden has called Russia’s war on Ukraine a genocide and accused Vladimir Putin of committing war crimes. But his administration has struggled with how much intelligence it is willing to give the Ukrainian forces that are trying to stop the Russian leader.

Since the war began in late February, the Biden administration has made multiple changes to a classified directive that governs what U.S. agencies are supposed to share with Ukraine. Much of what the United States collects is shared; some is not. Where the line is drawn depends on protecting the sources and methods of the intelligence, but also trying to limit the risk of escalation with a nuclear-armed Russia.

The latest changes occurred last week when U.S. intelligence officials lifted some geographic limits on the transfer of actionable information — the kind of information used in minute-by-minute decisions on the battlefield. According to several people familiar with the issue who spoke on condition of anonymity to discuss classified matters, officials removed language that had limited the specific locations of potential targets in parts of eastern Ukraine.

The shifts in the intelligence rules reflect the administration's changing calculations of what Putin might consider escalatory. The U.S. is also trying to step up support to Ukrainian forces that have surprised much of the world in how they have held back Russia but remain undermanned and outgunned. The Pentagon this week also announced \$800 million in new military assistance that could include more powerful weapons and defensive equipment.

Some people familiar with the directive say there is ambiguity about the new limits. One question is whether the U.S. would delay or limit information about a possible Russian target in areas internationally recognized as Ukrainian territory but that Moscow or its proxies controlled before the war, including the Crimean Peninsula and parts of the Donbas. U.S. personnel have at times limited intelligence that they believed Ukrainian forces could use to retake previously lost territory.

The directive still limits information given to Ukrainians about forces in Russia or neighboring Belarus, where Russian forces have staged and previously attacked from Ukraine's north.

"We are intensely sharing timely intelligence with the Ukrainians to help them defend themselves throughout their country, including in areas held by Russia before the 2022 invasion," said one U.S. intelligence official who spoke on condition of anonymity to describe the classified directive. The Wall Street Journal first reported the directive had been changed.

Another U.S. official who spoke on condition of anonymity to discuss intelligence matters said the administration was "providing detailed, timely intelligence to the Ukrainians on a range of fronts."

A letter sent Monday by Republicans on the Senate Intelligence Committee — after the new guidance — urges Avril Haines, the director of national intelligence, to "proactively share intelligence with the Ukrainians to help them protect, defend, and retake every inch of Ukraine's sovereign territory, which includes Crimea and the Donbas."

The senators said they "remain deeply concerned that not enough is being done to share critical intelligence that would assist the Ukrainians as Russian forces move to secure territory in the southern and eastern parts of the country."

Unlike a Feb. 9 letter to Biden urging intelligence sharing "to the fullest extent possible," Democrats on the committee did not join this week's letter, reflecting apparent divisions in how members view the administration's current guidance.

The White House insists it is providing information in line with Ukraine's current goals. Analysts say the war is shifting from a conflict fought across the country to a stronger focus on the southern and eastern parts of Ukraine that Russia has seized or attacked recently. One expected point of focus is the strategic port city of Mariupol, whose mayor says more than 10,000 civilians have been killed in the Russian siege.

In addition to its own intelligence capabilities, Ukraine relies on U.S. and Western support to help it plan and repel attacks. Before and during the war, the U.S. has publicly and privately shared intelligence about what it believes are Putin's battle plans in the hopes of undercutting Russia and building support for a forceful Western response.

Lawmakers from both parties have spoken broadly about the limits since the Russian invasion.

Rep. Adam Smith, chairman of the House Armed Services Committee, said in a television interview in March that the White House was holding back some real-time intelligence "because that steps over the line to making us participating in the war." A spokesperson for Smith, D-Wash., declined an interview request Wednesday.

Sen. Ben Sasse, R-Neb., on March 1 accused the White House of delaying intelligence due to "overly-lawyered processes," adding that "information about where an invading Russian tank was 12 hours ago does squat to prevent civilian bloodshed."

The directive has been changed to limit delays, officials said. The latest update, according to one intelligence official, is intended to give U.S. officers "added clarity" allowing for faster and more fulsome cooperation with Ukraine.

Sen. Tom Cotton, R-Ark., asked Defense Secretary Lloyd Austin last week if the U.S. was giving Ukraine intelligence to carry out operations in Crimea or parts of the Donbas previously controlled by Russian proxies.

"We want to make sure that's clear to our force, and so updated guidance that goes out today will make sure that's clear," Austin said, adding: "Certainly the current guidance was not clear in that regard, so we'll make sure it's clear."

Ohio Rep. Mike Turner, the top Republican on the House Intelligence Committee, late last month asked Gen. Tod Wolters, the supreme NATO commander for Europe, whether he was satisfied with the speed of information getting to Ukraine.

"Congressman, I'm comfortable, but I want it to speed up," Wolters said. "And I always will say that even if it occurs in one second, I want it tomorrow to be in a half a second."

*--LaPorta reported from Wilmington, North Carolina*

## **9. Lawmakers Demand the Army Come Up with a Better Plan for Alaska-based Soldiers After String of Suicides**

Military.com, Apr. 14 (1346) | Steve Beynon

A bipartisan group of lawmakers is raising the alarm over an ongoing suicide crisis among troops in Alaska, saying the Army needs to rapidly pour more resources into those rural bases.

Alaska Republican Sens. Dan Sullivan and Lisa Murkowski, along with Rep. Jackie Speier, D-Calif., sent a letter to Secretary of the Army Christine Wormuth outlining troubling findings of delayed mental health care and poor economic situations isolating junior enlisted troops as key points the service needs to fix.

“Service members stationed in Alaska are under an outsized level of stress from several angles, including behavioral health specialist shortages, financial challenges, infrastructure and transportation limitations, and the adjustment to living in a remote location with extreme cold weather,” the lawmakers wrote in their joint letter.

Leaders in Alaska have been scrambling for resources after at least 11 soldiers died by suicide last year, with another six deaths still under investigation. That’s an increase from 2020, when seven soldiers committed suicide, and eight in 2019.

One of the key issues, those lawmakers found, was extensive wait times for a first appointment with a mental health care provider -- often taking more than two weeks. Compounding that issue is a lack of providers. Right now, Fort Wainwright has 11 unfilled mental health care positions.

“This has put unbearable pressure on the uniformed and civilian providers who are filling those billets, increasing the likelihood that they quit and further exacerbate the problem,” the lawmakers said.

Another major concern is the inherent isolation in Alaska and the major time difference from where most of the U.S. population lives, making it difficult for troops to stay connected to their friends and family at home. Lawmakers also noted economic concerns, mostly among junior enlisted soldiers finding it difficult to afford flights to the lower 48 states, and requested Army leaders to provide solutions to ease soldiers’ financial burdens. One idea, the lawmakers suggested, was an extra \$300 pay per month to troops based in Alaska.

“Furthermore, soldiers told us that they cannot always get leave approved for trips outside of block leave periods which usually only occur around the major holidays,” they added.

In March, Military.com spent more than a week in Alaska, interviewing senior leaders and rank-and-file soldiers. Most troops were concerned about the lack of consistency with seeking care; some had anecdotes of appointments taking up to a month. In other cases, some said there’s still a stigma tied to seeking care, with soldiers afraid

they'll not be allowed to do their jobs, which often includes handling weapons. In other cases, service members were afraid that seeking care made it appear they were being disciplined, given troops are forced into similar care after drinking incidents or other disciplinary cases.

Maj. Gen. Brian Eifler, commander of U.S. Army Alaska, told Military.com he is mandating all troops have at least one mental health care appointment this year. While that mandate is likely contributing to the backlog, Eifler says those appointments are catching soldiers who were having problems but weren't seeking care.

Eifler said the biggest issue is recruiting mental health care workers to relocate to rural Alaska, as well as other personnel for the Army's civilian workforce -- including people to operate the gym and dining facilities. Some of those amenities not being fully staffed is likely contributing to quality-of-life issues among the 20,000 troops, half of whom are soldiers, across Joint Base Elmendorf-Richardson, Fort Greely and Fort Wainwright.

Senior Army leaders are hoping to morph Alaska into a mostly volunteer assignment. Right now, new enlistees can be guaranteed to be stationed there if they elect to.

But Speier, Sullivan and Murkowski want the Army to develop a plan so that the ranks in Alaska aren't being filled ad hoc, like most other duty stations. In their letter to Wormuth, they said this could include screening new recruits ahead of time to see whether they're a good fit. They also suggested additional incentives.

Alaska represents a relatively small part of a growing suicide crisis within the ranks. Data from the Defense Department shows 176 active-duty soldiers died by suicide in 2021. In the same year, 74 Army reservists and 101 National Guardsmen died by suicide, respectively.

Data shows the bulk of those suicides were not immediately tied to combat trauma, with most deaths occurring among troops with no past combat deployments. Army leaders and lawmakers on Capitol Hill have struggled to come up with solutions to counter the crisis, which is also being seen among civilians. For now, the service's main tactic is training junior noncommissioned officers to identify red flags early among the soldiers they lead, which in many cases involves rocky romantic relationships and financial trouble.

## EUROPE

### **10. EU closes loophole allowing multimillion-euro arms sales to Russia**

Reuters, Apr. 14 (0515) | Francesco Guarascio

BRUSSELS -- The European Union has closed a loophole that allowed EU governments to export weapons worth tens of millions of euros to Russia last year alone despite an embargo which took effect in 2014 after Russia annexed Ukraine's Crimea region.

EU countries last year sold to Russia weapons and ammunition worth 39 million euros (\$42.3 million), according to the latest data made available by the EU Commission - up more than 50% from 2020, when sales were worth 25 million euros, a volume in line with previous years.

The EU had banned the export of arms to Moscow in July 2014 in reaction to Russia's annexation of Crimea, but a clause in the sanctions permitted sales under contracts signed before August 2014.

Countries with large defence industries, such as France and Germany, were among the largest exporters.

The loophole has come under fire from some EU governments since the start of Russia's invasion of Ukraine on Feb. 24, which the Kremlin calls "a special military operation".

In a bid to weaken the Kremlin's war efforts in Ukraine, the EU has imposed five rounds of sweeping sanctions banning exports to Russia of a large variety of technology that could be used by the defence industry.

But EU governments failed to immediately agree to scrap the exemption on arms sales until last week, when the loophole was closed as part of the fifth package of EU sanctions, EU diplomats and officials told Reuters.

A legal text published on April 8 in the EU official journal deletes that exemption.

The EU Commission did not mention the closure of the loophole in its public communication about the fifth package of sanctions.

A spokesperson for the Lithuanian diplomatic mission to the EU said the exemption had been eliminated, but EU countries will be able to continue moving Russia-made weapons to Russia for repairs before they are returned to the EU.

The EU Commission, which is responsible for preparing sanctions, did not propose the amendment on closing the loophole as it was not clear whether it had the unanimous political backing of the 27 EU states, diplomats said.

But at a meeting last week, envoys agreed to amend the text after fresh criticism from some governments, including Poland and Lithuania, diplomats who attended the meeting said.

## **11. Soviet-Era Missiles Now Guard Ukraine's Skies**

*Encouraged by the United States, Slovakia 'donated' a bulky but effective S-300, hoping to challenge Russian domination of the skies in the war next door*

New York Times, Apr. 15 (0300), Pg. A1 | Andrew Higgins

DOBRA, Slovakia -- Driving back to his village near the Ukrainian border last Thursday, the mayor had to stop to let a train pass, and assumed he wouldn't have to wait long. But the flatbed wagons, stacked high with military equipment, just kept coming. He waited for nearly half an hour.

"It was a very long train, much longer than usual," recalled Mikolas Csoma, the mayor of Dobra, a previously sleepy village in eastern Slovakia that, over the past month, has become a key artery funneling weapons and ammunition into Ukraine by rail from the West.

The train that delayed Mr. Csoma's drive home was not only unusually long but also signaled a singular escalation in Western efforts to help Ukraine defend itself. It carried an air defense system made up of 48 surface-to-air missiles, four launchers and radars to guide the rockets to their targets, which in Ukraine means Russian warplanes and missiles.

As President Vladimir V. Putin of Russia vows to fight the war to its "full completion" and his forces regroup for an expected push in Ukraine's east, NATO countries, including the United States, are scrambling to keep the weapons flowing and bulk up the country's defenses.

Bolstering Ukraine's long-range air defense capabilities is seen as especially critical. Ukraine already had its own S-300 and other air defense systems, but some of these have been destroyed, leaving Russia with a large degree of freedom to hit Ukrainian targets from the air with warplanes and cruise missiles.

Increasingly desperate to reverse this imbalance, President Volodymyr Zelensky of Ukraine has repeatedly pleaded with NATO to "close the sky over Ukraine" by imposing a no-fly zone. But NATO has been unwilling to send its own warplanes into Ukraine.

Instead, the United States offered Slovakia, a fellow NATO member, a substitute battery of American-made Patriot missiles if it would "donate" its aging S-300 system to Ukraine.

Jaroslav Nad, Slovakia's defense minister and a gung-ho supporter of Ukraine, said it would have been unthinkable before Russia's invasion for his country to send large quantities of even basic weapons across its eastern border free of charge, never mind an old but still powerful Soviet-made antiaircraft system.

"But this is the world's new reality," he said in an interview in Bratislava, the Slovak capital. "We are a frontline state. We have war on our border and more than 330,000 Ukrainians coming to our country. The paradigm is completely different now."

Mr. Putin, he said, "is equal to Hitler" and must be stopped in Ukraine before he can move further West. "Ukraine is literally fighting for our future," he said.

Like Slovakia, other countries are also steadily expanding the scope of their military aid. The No. 2 Pentagon official met in Washington on Wednesday with America's largest military contractors to discuss how ready they are to restock supplies and what new capabilities to send to Ukraine.

The meeting and a new package of weapons, including artillery and ammunition, is intended in part by the Biden administration to blunt criticism that it is not doing enough for Ukraine and is too hesitant to send long-range weapon systems.

Other NATO members are already sending Ukraine bigger and better weaponry than before, including T-72 tanks and short-range air defense systems from the Czech Republic.

The S-300 system from Slovakia is the biggest item a NATO country has sent so far. It was previously deployed in Nitra, a city east of Bratislava at the other end of the country.

From there, it was hauled by truck and train to Dobra, where the state-controlled rail yard has Soviet gauge tracks, wider than the standard in Europe, which means it can run trains to and from Ukraine, which also has Soviet tracks.

Other big items now under discussion for transport to Ukraine via Slovakia include aging MIG-29 warplanes and sophisticated, self-propelled Howitzers called Zuzana 2. Also under review is a plan for Ukraine to send hundreds of damaged tanks, some of them captured from Russian forces, across the border for repair in Slovakia, the Czech Republic and Poland, all of which have experience fixing Soviet-made equipment.

Slovakia "is not going to send tanks because we don't have any spare tanks," Mr. Nad said, underscoring an issue confronting even Ukraine's most eager backers. "We have to keep enough capabilities for our own armed forces."

But Slovakia is transporting not only weapons from its own stocks into Ukraine. It is also sending military aid from many other countries, including the Czech Republic, Australia and what Mr. Nad described as "countries that claim that they are not sending military material to Ukraine."

Hungary, Slovakia's southern neighbor, for example, has declared itself neutral in the conflict and barred weapons from passing through its own territory to Ukraine -- largely to avoid upsetting deliveries of cheap Russian gas -- but it is believed to have quietly provided weapons through other countries.

Asked about this, a Hungarian government spokesman in Budapest declined to confirm or deny that his country is providing military material, saying only that "Hungary's standpoint is well known, and it has remained unchanged."

Alarmed by the flood of weapons flowing across the borders of Slovakia, Poland and Romania, Russia has sought to stop or at least slow it by declaring all foreign arms destined for Ukraine a "legitimate target." Russia's foreign minister vowed last month that Moscow "will not allow" the transfer of Slovakia's S-300 air defense system.

It is too late for that now, and after failing to thwart the delivery, the defense ministry in Moscow claimed on Sunday that Russia had already destroyed the Slovak missile system when sea-launched cruise missiles hit a hangar near the eastern Ukrainian city of Dnipro.

Mr. Nad, the Slovak defense minister, dismissed this as a "fake news," apparently aimed at saving Russia's face and calming the nerves of Russian pilots sent on missions to bomb Ukraine. Mr. Nad said he had spoken with Ukraine's defense minister on Monday and been assured that "this system is working and is working well" and was not in Dnipro.

Previous military cargo sent into Ukraine by rail through Dobra and the nearby town of Cierna nad Tisou contained mostly ammunition and basic military hardware.

A separate weapons conduit through Poland, the main route for American arms, has involved weapons like Javelin, NLAW and Stinger missiles, which are light, portable, high-tech and relatively easy to hide in trucks passing through Polish border crossings into western Ukraine.

An air-defense battery, however, is too big to hide, particularly when it travels on trains with more than 120 wagons in full view of drivers blocked by their passage. The cargo was so bulky it took two days to deliver it just a few miles from Dobra into Ukraine in two separate trains.

"Everyone knows what is going on," said Jakub Zsolt, a steel factory maintenance worker who lives across the road from the rail yard. He said his grandchildren were scared by all the commotion, but added that he had himself grown accustomed to the clatter of military helicopters and the rumble of trucks carrying weapons to the loading yard.

All the same, he said, he worries that Slovakia, a small country of just 5.4 million people, is now wading too deeply into Ukraine's war with Russia.

“The Russians might attack us,” he said, adding that he did not understand why Ukrainians needed so much help when “they come here driving much nicer cars -- Porsches and Mercedes -- than we drive in Slovakia.”

Most refugees fleeing the war, nearly all women and children, don't drive anything, but cross on foot carrying just a change of clothes.

Mr. Zsolt's jaundiced view of Ukraine highlights the success of opponents of the pro-Western Slovak prime minister, Eduard Heger, who in an interview last week said, “We need to help Ukraine in every possible way to win this war.” His foes, playing to a substantial segment of the population traditionally favorable to Moscow, have sought to turn public opinion against support for Ukraine and seized on the war as a political opportunity.

Robert Fico, a scandal-tainted former Slovak prime minister, upended the government's efforts to keep the delivery of the S-300 battery secret until it had safely arrived in Ukraine when he posted a video on his Facebook page last Thursday that showed a train carrying the disassembled air-defense system on its way to Ukraine.

He denounced Mr. Heger as “a freak in American hands who will do whatever the Americans tell him to do” and demanded that the public immediately be told where the S-300 system was going.

Mr. Nad, the defense minister, said the delivery had been kept secret for security reasons. The opposition, he added, is playing “political games” against the interests of their own country and also Ukraine.

“Russia is killing thousands of people in Ukraine and I am not going to count the votes that I would lose -- or gain -- based on the decisions of the government to help. The only thing that I am counting is the lives we can save in Ukraine,” he said.

Pavel Macko, a retired Slovak general who served with NATO in Afghanistan and Germany, said the S-300 system delivered to Ukraine dated from the 1980s, when Slovakia was a member of the Warsaw Pact as part of Czechoslovakia, and was inferior to American-made Patriot missiles. But, he added, Ukrainians know how to use it and will be able to reduce Russia's mastery of the skies.

“This is not just symbolic but an important addition that could help make Russia change their plans,” he said.

The mayor in Dobra, Mr. Csoma, said he supported helping Ukraine, but was noncommittal when asked about the wisdom of sending a powerful weapon system like the S-300.

Miffed not to be informed in advance about the disruption to traffic caused by the S-300 trains, he said: “They don't tell me anything. They should at least let me know about this kind of thing.”

Nobody really worried much about the war spreading into Slovakia, he said, but the authorities have nonetheless dusted off old civil defense plans, with police taking an inventory of potential bomb shelters. In the event of conflict, the mayor said, he had been assured that district authorities would send buses to evacuate his village's 520 people.

"If something bad happens, we will all leave," he said. "So there is no panic yet."

## **RUSSIA**

### **12. CIA head calls Bucha killings 'crimes,' takes aim at Putin**

Washington Post, Apr. 15 (0115), Pg. A11 | Shane Harris

In his first public speech as director of the CIA, William J. Burns on Thursday called the killings of Ukrainian civilians in Bucha "crimes" and said Russia had "inflicted massive material and reputational damage on itself" following the invasion ordered by Russian President Vladimir Putin.

Burns, who engaged with Putin as U.S. ambassador to Russia, gave a blistering indictment of the leader and harked back to earlier Russian atrocities.

"I have no doubt about the cruel pain and damage that Putin can continue to inflict on Ukraine, or the raw brutality with which Russian force is being applied," Burns said during prepared remarks at the Georgia Institute of Technology in Atlanta. "The crimes in Bucha are horrific. The scenes of devastation in Mariupol and Kharkiv are sadly reminiscent of the images I saw in Grozny, in Chechnya, as a young diplomat in the winter of 1994-95: Forty square blocks in the center of the city flattened by Russian shelling and bombing, leaving thousands of civilian deaths."

Burns's comments were in line with earlier assessments by senior Biden administration officials, including President Biden, that Putin is responsible for war crimes in Ukraine. On Wednesday, Victoria Nuland, the undersecretary of state for political affairs, said the United States is likely to determine that genocide has been committed.

Speaking in Iowa on Tuesday, Biden called Russia's attack on Ukraine a "genocide." He later told reporters he intentionally used the word and that he would "let the lawyers decide internationally whether it qualifies."

"It sure seems that way to me," Biden added.

Burns recounted his interactions in Moscow with Putin and his advisers in early November as the U.S. intelligence community was tracking the buildup of forces on Ukraine's border in apparent preparation for invasion. Burns said Biden sent him to Russia to convey "the depth of our concern of [Putin's] planning for war and the consequences for Russia of attempting to execute that plan. I was troubled by what I heard."

While it didn't seem then that Putin had irreversibly made up his mind to attack, Burns said, he "was defiantly leaning in that direction, apparently convinced that this window was closing for shaping Ukraine's orientation."

Putin seemed to think the winter offered a "favorable landscape" for invasion and that Ukraine's president, Volodymyr Zelensky, and his fellow citizens weren't likely to mount an "effective resistance." Putin also judged that the Russian military was "capable of a quick, decisive victory at minimal cost" and that he had made the Russian economy "sanctions-proofed by a war chest of foreign currency reserves," Burns said.

Those assumptions proved profoundly flawed. The Russian military quickly became bogged down following the Feb. 24 invasion and was beset by logistical challenges and a ferocious response from Ukraine's military, which has killed thousands of Russian soldiers. The United States and European countries promptly sanctioned the Russian central bank and froze hundreds of billions of dollars in reserves that Putin had left exposed overseas.

Putin also misjudged Ukraine and its people, Burns said. "Ukraine, he had argued for years, was not a real country. But real countries fight back. And that's what Ukrainians have done with such remarkable bravery, led with such courage and resolve by President Zelensky."

Burns aimed several remarks at Putin personally, describing him as a grievance-fueled "apostle of payback," who remains "firmly convinced that the West - especially the United States - took advantage of Russia's moment of historical weakness in the 1990s."

"His risk appetite has grown as his grip on Russia has tightened," Burns said. "His circle of advisers has narrowed, and in that small circle it has never been career-enhancing to question his judgment or his stubborn, almost mystical belief that his destiny is to restore Russia's sphere of influence. Every day, Putin demonstrates that declining powers can be at least as disruptive as rising ones."

A few days after invading Ukraine, Putin ordered Russia's nuclear forces to a higher level of alert, alarming world leaders and raising the prospect that the war could witness a heretofore unthinkable use of nuclear weapons.

But it's not clear that Putin's order led to any change in Russian position, Burns said during a question-and-answer session.

“While we’ve seen some rhetorical posturing on the part of the Kremlin about moving to higher nuclear alert levels, so far we haven’t see a lot of practical evidence of the kind of deployments or, you know, military dispositions that would reinforce that concern,” Burns said. “But we watch for that very intently. It’s one of our most important responsibilities at CIA.”

Burns, who was confirmed as CIA director in March 2021, had given congressional testimony, but his remarks in Atlanta were the most extensive in an unofficial forum. He also noted “the longer-term problem posed by China’s ambitious leadership ... the single most important geopolitical challenge as far out as I can see into the 21st century.”

“A silent partner in Putin’s aggression, Xi Jinping’s China is our greatest challenge, in many ways the most profound test that CIA has ever faced,” Burns added.

### **13. Russia warns of nuclear, hypersonic deployment if Sweden and Finland join NATO**

Reuters, Apr. 14 (1622) | Guy Faulconbridge

LONDON -- One of Russian President Vladimir Putin’s closest allies warned NATO on Thursday that if Sweden and Finland joined the U.S.-led military alliance then Russia would deploy nuclear weapons and hypersonic missiles in a European exclave.

Finland, which shares a 1,300-km (810-mile) border with Russia, and Sweden are considering joining the NATO alliance. Finland will decide in the next few weeks, Prime Minister Sanna Marin said on Wednesday.

Dmitry Medvedev, deputy chairman of Russia’s Security Council, said that should Sweden and Finland join NATO then Russia would have to strengthen its land, naval and air forces in the Baltic Sea.

Medvedev also explicitly raised the nuclear threat by saying that there could be no more talk of a “nuclear free” Baltic - where Russia has its Kaliningrad exclave sandwiched between Poland and Lithuania.

“There can be no more talk of any nuclear free status for the Baltic - the balance must be restored,” said Medvedev, who was Russian president from 2008 to 2012.

Medvedev said he hoped Finland and Sweden would see sense. If not, he said, they would have to live with nuclear weapons and hypersonic missiles close to home.

When asked how Washington views the potential addition of Sweden and Finland to NATO in light of Russia’s warning, the U.S. State Department said there was no change in Washington’s position and repeated that “NATO’s open door is an open door.”

“Without speaking to any countries in particular, we would not be concerned that the expansion of a defensive alliance would do anything other than promote stability on the European continent,” Department spokesperson Ned Price said in a briefing.

Russia has the world’s biggest arsenal of nuclear warheads and along with China and the United States is one of the global leaders in hypersonic missile technology.

Lithuania said Russia’s threats were nothing new and that Moscow had deployed nuclear weapons to Kaliningrad long before the war in Ukraine. NATO did not immediately respond to Russia’s warning.

Still, the possible accession of Finland and Sweden into NATO - founded in 1949 to provide Western security against the Soviet Union - would be one of the biggest strategic consequences of the war in Ukraine.

Finland gained independence from Russia in 1917 and fought two wars against it during World War Two during which it lost some territory. On Thursday, Finland announced a military exercise in western Finland with the participation of Britain, the United States, Latvia and Estonia.

Sweden has not fought a war for 200 years. Foreign policy has focused on supporting democracy and nuclear disarmament.

## KALININGRAD

Kaliningrad, formerly the port of Koenigsberg, capital of East Prussia, lies less than 1,400 km from London and Paris and 500 km from Berlin.

Russia said in 2018 it had deployed Iskander missiles to Kaliningrad, which was captured by the Red Army in April 1945 and ceded to the Soviet Union at the Potsdam conference.

The Iskander, known as SS-26 Stone by NATO, is a short-range tactical ballistic missile system that can carry nuclear warheads. Its official range is 500 km but some Western military sources suspect it may be much greater.

“No sane person wants higher prices and higher taxes, increased tensions along borders, Iskanders, hypersonics and ships with nuclear weapons literally at arm’s length from their own home,” Medvedev said.

“Let’s hope that the common sense of our northern neighbours will win.”

While Putin is Russia’s paramount leader, Medvedev’s comments reflect Kremlin thinking and he is a senior member of the security council - one of Putin’s main chambers for decision making on strategic issues.

Lithuanian Defence Minister Arvydas Anusauskas said Russia had deployed nuclear weapons in Kaliningrad even before the war.

“Nuclear weapons have always been kept in Kaliningrad ... the international community, the countries in the region, are perfectly aware of this,” Anusauskas was quoted as saying by BNS. “They use it as a threat.”

Russia’s Feb. 24 invasion of Ukraine has killed thousands of people, displaced millions and raised fears of a wider confrontation between Russia and the United States - by far the world’s two biggest nuclear powers.

Putin says the “special military operation” in Ukraine is necessary because the United States was using Ukraine to threaten Russia and Moscow had to defend against the persecution of Russian-speaking people.

Ukraine says it is fighting an imperial-style land grab and that Putin’s claims of genocide are nonsense. U.S. President Joe Biden says Putin is a war criminal and a dictator.

Putin says the conflict in Ukraine as part of a much broader confrontation with the United States which he says is trying to enforce its hegemony even as its dominance over the international order declines.

#### **14. Russia accuses Ukraine of helicopter strike on border town**

Agence France-Presse, Apr. 14 (1155) | Not Attributed

Russian officials on Thursday accused Ukraine of sending helicopters to bomb a town in the southern Bryansk region about 10 kilometres (six miles) from the border, after reporting eight injured in shelling.

“Using two military helicopters carrying heavy weaponry, Ukrainian armed forces illegally entered Russian air space,” Russia’s Investigative Committee -- which probes major crimes -- said in a statement.

“Flying low, acting deliberately, they carried out at least six air strikes on residential buildings in the settlement of Klimovo,” investigators said.

As a result, they said, “at least six residential buildings were damaged... and seven people received injuries of varying severity including one small child born in 2020.”

A Russian health ministry official, Alexei Kuznetsov, later told the Interfax news agency that eight people were injured, six of them admitted to hospital.

Two patients -- the young child and a woman born in 1948 -- were in serious condition, he added.

This appeared to be the first time that Moscow has officially accused Ukrainian armed forces of flying helicopters into Russia to carry out an attack.

Previously the governor of Belgorod region in southern Russia, Vyacheslav Gladkov, said two Ukrainian military helicopters had carried out a strike on a fuel depot on April 1, while this was not directly confirmed by Ukraine or Moscow.

Thursday's shelling was announced earlier by governor Alexander Bogomaz, who said on Telegram that "two residential buildings were damaged and some of the residents were injured".

The governor of Russia's Belgorod region, Gladkov, later said on Telegram that the village of Spodaryushino close to the border "came under shelling from the Ukrainian side" and residents from this and a nearby village had been evacuated as a precaution.

Separately, Russian investigators said they were probing a Wednesday attack on a border checkpoint in Kursk region, also allegedly carried out by Ukraine.

There were no injured or damaged caused, investigators said.

Also on Thursday, Russia's security agency the FSB told TASS news agency that Ukraine fired at border checkpoint where over 30 Ukrainian refugees were crossing into Russia.

It added that there were no injuries.

AFP could not independently verify the claims.

## **15. Russia's Sunken Warship Dents Both Its Pride and Capabilities**

Bloomberg News, Apr. 15 (0225) | Marc Champion

The loss of the flagship vessel of Russia's Black Sea Fleet goes beyond wounded pride, robbing the military of important protection and capabilities as the war in Ukraine enters a crucial phase for Moscow.

Ukraine said the ship was struck by two Neptune missiles, a new domestically developed anti-ship system of which just one battery exists. Russia's Defense Ministry said a blaze caused the warship's ammunition store to explode, without saying what started the fire.

The ship sank in rough water while being towed back to port, Russian news agencies reported late Thursday, citing the Defense Ministry.

The outcome is an embarrassment for Russia and a win for Ukraine. The ship gained notoriety at the start of the war for a confrontation with a small contingent of Ukrainian guards on Snake Island in the Black Sea who, in colorful terms, reportedly told the Moskva to get lost.

It will also cost Russia militarily. While old -- it was commissioned in 1982 -- the Slava (Glory) class Moskva was refitted in 2010. It provided a mobile bubble of long-range air defense for the rest of the fleet, as well as command and control systems. Those abilities cannot be easily substituted.

“It is the only class of ship the Russian navy currently has that fields a long-range air defense system,” said Sidharth Kaushal, research fellow for sea power at the Royal United Services Institute, a London-based think tank. “That matters because for the sort of operation the Black Sea Fleet is designed to do, the Moskva has the capability to sit back and create an air defense for the rest of the fleet, and at the same time provide command and control.”

A western official described the Ukrainian claim of a missile strike on the Moskva as credible, and its loss as a significant blow.

Although the Moskva had two sister ships, neither is in the Black Sea. They cannot enter it, because under the rules of the 1936 Montreux convention, Turkey is limiting access through the Bosphorus strait for Russian naval vessels.

“This incident means Russia has now suffered damage to two key naval assets since invading Ukraine, the first being Russia’s Alligator-class landing ship Saratov on 24 March,” the U.K. Ministry of Defence said in an intelligence update Friday.

“Both events will likely lead Russia to review its maritime posture in the Black Sea.”

Russia’s navy has played a relatively minor role in the war so far, used primarily as an additional source of cruise missile launchers to attack targets across Ukraine. The Moskva didn’t have those, but it did carry anti-ship missiles that made it a spearhead for use against U.S. carrier fleets during the Cold War.

“These ships would completely neutralize the American carrier fleet,” Russian historian and opposition politician Andrei Zubov wrote on Thursday, in a Facebook post headed “The Inglorious End of the Glory.” He was recalling the words of his late father, who oversaw construction of the Moskva among other major naval and civilian vessels.

Zubov said his father, who was an admiral, saw the heavy cruiser as a deterrent that should never be used in anger. “Thank God, he did not see how the current Russian strategists used his pride,” he said. “It is a big military mistake in itself to use an anti-aircraft deterrent as a ship to provide fire support for an amphibious landing.”

That's especially the case given the ship's defense systems and analog radar were outdated. The Moskva had a crew of about 500, and Moscow says they were evacuated from the ship.

Although the Black Sea Fleet has set out as if to attack Odesa multiple times since the war began on Feb. 24, it has not followed through. That's in large part, according to Kaushal, because with a capacity to land 3,000 troops, the amphibious force the fleet can deploy is too small to act without a larger land assault.

That land assault hasn't yet come, because Russian forces have consistently been blocked at Mykolayiv, the gateway to Odesa and Ukraine's largest Black Sea ports. Had they broken through, the Moskva could have thrown a protective bubble around an amphibious attack, much as it did during the Russia-Georgia war of 2008.

A person close to Russia's defense ministry said it would be very difficult with or without the Moskva to attack Odesa from the sea, and cast it as more of a symbolic loss. Still, Russia only had a small number of that class of vessel and lacked the shipbuilding capabilities of the Soviet era, the person said.

Mykolayiv helps explain why the Moskva is unlikely to be replaced for the medium term. Not only does the city have the only shipyard in the former Soviet Union with the capacity to build an aircraft carrier, it also hosts Zorya-Mashproekt, a producer of gas turbine engines for large ships such as the Moskva.

The loss of access to both the shipyard and engine maker after Russian President Vladimir Putin's annexation in 2014 of nearby Crimea has complicated his efforts to modernize the navy and would make it harder to produce another Moskva today. A project to build destroyers of a similar size to the Slava class cruisers has been postponed.

Designs for a next generation aircraft carrier called Storm also remain on paper, in part because without access to the Mykolayiv shipyard, Russia would have to retool one of its own.

Gas turbine engines matter because they have a better power-to-weight ratio, generating not only the extra power thrust that's needed to propel an 11,490 ton ship such as the Moskva forward, but the electricity that's increasingly important for complex systems on modern warships, according to Kaushal.

New generation directed-energy weapons and rail guns, in particular, would rely on large amounts of electrical power that only a gas turbine or nuclear powered engine can provide. Russia says it has programs to develop both.

The sanctions imposed on Russia for its actions in Ukraine are another complicating factor. Its naval vessels rely on significant quantities of imported parts and technologies from nations that have enacted bans on technology exports.

“Russian glory burns off the coast of Ukraine,” Zubov wrote in his post. “I do not know how many sailors were killed and maimed.”

**16. Russians planted thousands of land mines and booby-traps to ‘kill or maim’ civilians, Ukrainians say**  
*Departing Russian soldiers have laced large swaths of the country with buried mines and jury-rigged bombs, some hidden inside homes, to terrorize returning civilians*

New York Times, Apr. 15 (0300), Pg. A9 | Cora Engelbrecht

In the days after the Russian withdrawal from the outskirts of Kyiv, a driver named Oleg Naumenko opened the trunk of an abandoned car and it exploded, killing him instantly.

The car had been booby-trapped, and his family and local authorities blamed Russian soldiers. “I died with him in that moment,” Mr. Naumenko’s wife, Valeria, said between sobs.

As ordinary Ukrainians emerge from basements and bunkers into the ruins of their hometowns, many are being confronted with a new horror: thousands of mines and unexploded bombs left behind by retreating Russian troops.

Residents and authorities say that departing Russian soldiers have laced large swaths of the country with buried land mines and jury-rigged bombs -- some hidden as booby traps inside homes. The explosives now must be found and neutralized before residents can resume a semblance of normal life.

Some of the explosives have been attached to washing machines, doorways, car windows, and other places where they can kill or injure civilians returning to their homes, according to residents and Ukrainian officials. Some were even hidden under hospital stretchers and corpses.

President Volodymyr Zelensky of Ukraine this week called his country “one of the most contaminated by mines in the world,” and said that authorities were working to clear thousands in the areas from which Russian armies had retreated in recent weeks. He accused Russian soldiers of leaving the explosives in their wake “to kill or maim as many of our people as possible.”

He said that the tactic was a war crime and that Russian soldiers must have been acting on instructions from top officials, adding: “Without the appropriate orders, they would not have done it.”

Human Rights Watch and The New York Times have reported that Russian forces in Ukraine appear to be using advanced land mines in the eastern city of Kharkiv. Several local officials have also said that bomb squads in their districts have found explosive devices left behind in homes.

Anti-personnel mines, which are designed to kill people, are banned by an international treaty signed by nearly every country in the world, including Ukraine; Russia and the United States have declined to join.

Ukraine's emergency services agency has deployed a small army of about 550 mine specialists to clear the areas recently occupied by Russian forces. The teams have been working to remove about 6,000 explosives per day, and since the start of Russia's invasion on Feb. 24, they have found more than 54,000 explosive devices, the agency reported on Tuesday.

"Wherever the occupiers stayed overnight, they would set up tripwires," Ukraine's interior minister, Denys Monastyrsky, said during a televised interview on Sunday. "Explosives have been found under helmets, attached to doors, in the washing machine, and in cars."

The placement of explosives in Ukrainian homes could not be independently verified.

Mr. Naumenko, who was killed on April 4, worked as a driver in the village of Hoholiv, about 40 miles outside of Kyiv. But his talent lay in repairing cars. After Russian forces retreated from a nearby village, neighbors found an abandoned vehicle and turned it over to him.

His wife learned of his death the next day in Poland, where she had fled with their 7-year-old son and her mother at the start of the war. She returned to their village as soon as she got the news. "What was left was the car, with the door still open and a pool of blood," Ms. Naumenko, 28, said, "and a big emptiness."

Her account was confirmed through photos and by the Kyiv regional police, who posted a report about the incident on their Facebook page, cautioning returning residents to "not touch objects and things that are not previously tested by experts."

Other local officials are urging residents to call emergency services before entering their homes.

Retreating armies often bury land mines in order to slow the advance of enemy armies. But experts say Russian forces have a well-earned reputation for booby-trapping areas they have vacated in order to kill and maim returning civilians.

Human Rights Watch has documented Russia's use of antipersonnel mines in more than 30 countries where Moscow's forces were involved, including conflicts in Syria and Libya. In Palmyra, during the Syrian war, booby traps surfaced after the Russians vacated the town.

"Leaving behind little presents for the civilians when they return -- like hand grenades, trip wires, unexploded shells, pressure plates -- it's in the Russian military tradition to do that," said Mark Hiznay, the senior arms researcher at Human Rights Watch.

“We’ve seen it before and we’ll see it again,” he said.

Mr. Hiznay said “putting a land mine in someone’s freezer” was a tactic that has no utility other than to terrorize civilians. Ukraine will be dealing with the consequences of land mines “one civilian leg at a time,” he added, explaining that it can often take years, and possibly decades, to clear all the ordnance.

“The presence of these devices denies civilians their terrain and forces them to make hard choices: take the sheep out to graze or risk stepping on a mine in the pasture,” he said.

RETURN TO TOP

## **17. Developing World Quiet on Putin**

### *Nations fearful of repercussions decline to join sanctions or voice their criticism*

Wall Street Journal, Apr. 15 (0200), Pg. A8 | Joe Parkinson, David Luhnnow and Juan Forero

Western leaders seeking to build a global coalition to isolate Russia over its war on Ukraine are facing pushback from the world’s largest developing nations, including the democracies of India, Brazil and South Africa.

The resistance, much of it from economic self-interest, limits the pressure on President Vladimir Putin and spotlights factions in the global community that recall the Cold War, when many countries tried to steer clear of the rivalry between the U.S. and Soviet Union.

The U.S. and its allies in Europe and elsewhere have imposed economic sanctions against Russia and provided billions of dollars in military aid to Ukraine since the Feb. 24 invasion. The united front was praised for rejuvenating a flagging Western alliance.

Yet even after the massacre of civilians in Bucha, Ukraine, 24 countries of the 141 United Nations member states voted last week against removing Russia from the United Nations Human Rights Council; 58 member states abstained, including India, Brazil, Mexico, Indonesia and South Africa.

While U.S. and European leaders have accused Mr. Putin of war crimes in Ukraine, leaders in the developing world, from Mexico’s Andres Manuel Lopez Obrador to India’s Narendra Modi, have refused to criticize the Russian leader.

The bulk of the economic sanctions on Russia are being shouldered by members of the North Atlantic Treaty Organization and other close U.S. allies such as Australia, Japan and South Korea.

“One of the consequences of this is the Biden administration is going to come back to a recognition that our real buddies, our real fellow travelers, are in Europe and northern Asia,” said John Feeley, a former U.S. ambassador and diplomat. “It will be to the detriment of perhaps Africa and Latin America where this was an opportunity for

those regions and India, especially, to say, 'Look we may have our differences ... but we stand for some very clear democratic, sovereignty-based, international rules-based principles.' "

The split opens avenues for Russia to circumvent Western sanctions and allows Moscow to say it retains the support of nations around the world. Saudi Arabia, which has a historic security partnership with the U.S., has refrained from condemning Russia's invasion and rebuffed Washington's call to pump more oil to both tame surging prices.

A day before President Biden landed in Europe last month to shore up international support for Ukraine, ambassadors from what are known as the Brics economies -- Brazil, India, China and South Africa -- smiled for photos with Russian Foreign Minister Sergei Lavrov and then met for talks on enhancing mutual cooperation. In the hourlong meeting, covered by Russian state TV, Mr. Lavrov told the ambassadors that Moscow was a victim of an "unprecedented economic war." None criticized the Russian invasion or Mr. Putin.

"Our position is not that this is not our problem. Our position is that we are for peace," said India Foreign Minister Subrahmanyam Jaishankar on the day his country abstained from the U.N. vote against Russia. "Indian foreign-policy decisions are made in Indian national interest, and we are guided by our thinking, our views, our interests."

India, a longtime Russia ally, doesn't want to alienate Moscow and drive it closer to Beijing, a regional rival.

New Delhi hosted top U.S. and U.K. officials for talks on Ukraine this month and meantime held separate meetings with Mr. Lavrov on a proposal to pay for Russian oil in rubles instead of dollars, a way for Moscow to evade sanctions. India in recent days bought millions of barrels of Russian crude at a hefty discount, Indian officials said, and could buy more.

"Now is the time to stand on the right side of history," said U.S. Commerce Secretary Gina Raimondo, "not funding and fueling and aiding President Putin's war."

Chinese leaders have positioned themselves as speaking for developing nations about Russia's invasion of Ukraine. After meeting with African and Asian foreign ministers, China's foreign minister, Wang Yi, spoke of a disquiet among developing nations at being pressured to take moral positions on complex international questions.

China sees Russia as an ally in countering the U.S. and its Western allies. The two neighbors seek to dismantle the U.S.-led world order and allow Beijing and Moscow to hold sway over their regions.

The past two decades have seen a shift in how the developing world views the U.S., Russia and China. Moscow has spent billions on expanding trade, diplomatic ties and military ties, from selling weapons to Venezuela and India to delivering wheat exports to much of Africa. Beijing has been flexing its economic muscle with the building of dams, roads, bridges, pipelines and railways in dozens of countries world-wide through its Belt and Road Initiative.

The U.S.-led invasion of Iraq in 2003, and the subsequent images of Iraqi prisoners tortured at Abu Ghraib prison, fed perceptions in some countries that the U.S. was guilty of the same violations of sovereignty it claimed to oppose. “This is part of the legacy of the 2000s and the war on terror,” said Odd Arne Westad, a professor of history at Yale University.

Officials in emerging economies trying to recover from the Covid-19 pandemic fear Western sanctions will make things worse. In Sudan, which imports around 80% of its wheat from Russia and Ukraine, the price of bread has nearly doubled over import disruptions. Reliance on Russian and Ukrainian crops stretches from Turkey to North Africa. Agricultural producers depend on Russian fertilizers.

Egypt, a military ally of the U.S., condemned Russia’s invasion at the U.N., and then criticized the Western sanctions. Analysts said the mixed response reflected worries that Washington could ease its decadeslong security ties in the Middle East and force greater reliance on Moscow as an arms supplier.

For some nations, refusal to criticize Russia reflects a desire to please China. Demand for such goods as Brazilian iron-ore and Argentine soybeans boosted China past the U.S. as the top trading partner in most South American countries. Beijing’s bilateral trade with Africa rose 35% last year to a record \$254 billion, far higher than the continent’s trade with the U.S.

New Delhi, meantime, seeks help from Moscow to defend its nearly 2,200-mile border with China, where Indian and Chinese troops have skirmished in the past. Russia provides half of India’s weapon imports, according to the Stockholm International Peace Research Institute, as well as a majority of the component parts to repair existing equipment.

Indian officials in December signed a deal to buy Russian S-400 surface-to-air missile systems. The two countries also signed a contract for a joint venture to manufacture more than 600,000 Russian-designed AK-203 assault rifles in India.

Some developing countries view the war in Ukraine as Europe’s problem. Others don’t want to be used as proxies in a fight between great powers. During the Cold War, as many as 120 countries formed a nonaligned movement to navigate the U.S.-Soviet rivalry.

“There is a feeling of anxiety that this situation may become a permanent one, where you would have permanent divisions between, on the one side, the West, the U.S. and its allies, and on the other side Russia and China,” said Rubens Ricupero, a former Brazilian ambassador to the U.S. and Italy.

With a few exceptions, governments in Latin America voted in favor of the U.N. resolution condemning the invasion but refused to join in sanctions.

The nonaligned approach is rooted in the sentiment that it wouldn't be beneficial to pick sides if the war were to spill over into the battle over global influence being waged by the U.S. and China, said Brian Winter, editor of *Americas Quarterly*, a nonpartisan journal about Latin America.

"If we're entering a new era of great power conflict, most Latin American governments would prefer to sit this one out," Mr. Winter said. "These governments remember that the Cold War had terrible consequences for them, that the region was used as a chess board."

In Africa, nearly half the governments either abstained or didn't cast a vote last month to condemn Russia for the invasion of Ukraine. Many countries on the continent are ruled by parties that had been supported by Moscow during national struggles for independence from colonial or white-minority rule. Party leaders in South Africa, Zimbabwe, Angola and Mozambique remember how Soviet weapons, cash and advisers helped win freedom in the 1960s through 1980s

Russia dispatched senior diplomats to lobby for support from defense and foreign ministries in Uganda, South Sudan and Ethiopia. The delegations pledged investment and infrastructure aid in return for backing -- or at least not voting to condemn -- Russia at the U.N.

Uganda's longtime leader and a key U.S. security partner Yoweri Museveni said Russia should be viewed as the center of gravity in Eastern Europe. His son and heir apparent, Lt. Gen. Muhoozi Kainerugaba, went further.

"The majority of mankind (that are nonwhite) support Russia's stand in Ukraine," he wrote on Twitter.

### **18. China holds drills around Taiwan as U.S. lawmakers visit**

Reuters, Apr. 15 (0259) | Ben Blanchard and Yew Lun Tian

TAIPEI/BEIJING -- China said it conducted military drills around Taiwan on Friday as a U.S. Congressional delegation visited the island in a show of support to a fellow democracy, with Beijing blaming the lawmakers for raising tensions with their "provocative" trip.

China's military sent frigates, bombers and fighter planes to the East China Sea and the area around Taiwan, the People's Liberation Army Eastern Theatre Command said, in a statement released as the lawmakers were holding a news conference in Taipei.

“This operation is in response to the recent frequent release of wrong signals by the United States on the Taiwan issue,” it said, without mentioning the visiting U.S. delegation.

“The U.S. bad actions and tricks are completely futile and very dangerous. Those who play with fire will burn themselves,” it said.

China’s Defence Ministry, in a separate statement, said the U.S. visit was “deliberately provocative” and had “led to further escalation of tension in the Taiwan Strait”.

Taiwan is a frequent source of tension between Beijing and Washington.

Republican U.S. Senator Lindsey Graham told Taiwan President Tsai Ing-wen during the delegation’s meeting with her that the war in Ukraine and provocative behaviour by China have united U.S. opinion in a way not seen before.

“To abandon Taiwan would be to abandon democracy and freedom,” he said. “There’s a backlash growing in the world to thuggery - to the bad guys.”

Senator Bob Menendez, chairman of the Senate Foreign Relations Committee, said the technology hub is a “country of global significance” and its security has implications for the world.

The bipartisan group of six lawmakers arrived for their two-day visit on Thursday, in a previously unannounced trip.

Such visits, and a reference to Taiwan as a “country”, always anger Beijing, which dismisses any suggestion that Taiwan is a country. China regards the island as one of its provinces.

The United States has no formal relations with Chinese-claimed Taiwan but is its most important international backer and arms supplier.

Menendez acknowledged the Chinese government was “very unhappy” with the delegation’s visit but said that would not dissuade the group from supporting Taiwan.

“With Taiwan producing 90% of the world’s high-end semiconductor products, it is a country of global significance, consequence and impact, and therefore it should be understood the security of Taiwan has a global impact,” Menendez told Tsai.

Taiwan has been heartened by the U.S. support offered by the Biden administration, which has repeatedly talked of its “rock-solid” commitment to the democratically governed island.

That has added to strains in Sino-U.S. relations.

Russia's invasion of Ukraine has also put Taipei on alert for any possible moves by Beijing to use the Ukraine crisis to make a move on the island. The government though has reported no sign that China is about to invade.

Taiwan has complained for the past two years or so of stepped-up Chinese military activity, including almost daily air force flights into Taiwan's air defence zone, but not close to the island itself.

## **INDO-PACIFIC**

### **19. Document reveals \$14 billion backlog of U.S. defense transfers to Taiwan**

Defense News Online, Apr. 14 (1058) | Bryant Harris

WASHINGTON -- Pandemic-related acquisition issues have sparked a backlog in the U.S. delivering \$14.2 billion worth of military equipment to Taiwan that the island has purchased since 2019.

With much of Washington's attention focused on how to rapidly deploy a steady stream of military aid to Ukraine, some lawmakers are concerned the Taiwan delay is undermining its ability to deter a potential Chinese invasion.

Rep. Steve Chabot, the top Republican on the House's Asia and Pacific panel, told Defense News that the Foreign Affairs Committee held a meeting to discuss the backlog last week.

"We need to make sure that we provide Taiwan with the assistance that they need as well so that they're not vulnerable to the [People's Republic of China]," the lawmaker from Ohio said. "Obviously Ukraine is in the limelight right now and rightfully so but we best not forget about Taiwan because China's actions have been more and more provocative."

Defense News has obtained a spreadsheet detailing the backlogged equipment, which includes Taiwan's \$8 billion purchase of 66 F-16 fighter jets as well as \$620 million to replace expiring components of its Patriot missile system.

The delayed deliveries also consist of smaller, asymmetric weapons systems Washington believes would be useful in deterring and thwarting a potential Chinese invasion. China considers the self-governing island a rogue province and has promised to bring it back under Beijing's control, by force if necessary.

Those asymmetric weapons include Stinger missiles, heavyweight torpedoes, high-mobility artillery rocket systems, Paladin howitzers, MS-110 reconnaissance pods and a field information communications system. They

also include \$2.37 billion in Harpoon Block II surface-launched missiles and \$1 billion in air-launched SLAM-ER missiles.

The \$14.2 billion backlog of sales accounts for the vast majority of the approximately \$17 billion in military equipment Taiwan agreed to purchase from the United States since July 2019. The U.S. State Department notified Congress of another \$95 million sale to provide contracting support for Taiwan's Patriot missile system just last week. (Foreign Military Sales notification figures represent potential arms sales that the State Department internally clears. They must then clear a congressional review period, during which costs and quantities can change.)

Neither the Defense Department nor Taiwan's diplomatic office in Washington replied to Defense News' request for comment about the backlog.

But Taiwan's envoy to the United States, Hsiao Bi-khim, raised the alarm bells on Capitol Hill last week in a bid to urge Washington to address the backlog.

Hsiao addressed it during a breakfast with Rep. Mike McCaul, R-Texas, the ranking member of the House Foreign Affairs Committee, and pushed for Taiwan's inclusion alongside the U.S. and more than two dozen other participants in the biennial Rim of the Pacific naval exercises off the coast of Hawaii.

"Her biggest complaint to us is that while we have notified and signed off on these systems, they have yet to be delivered to Taiwan," McCaul told the State Department's No. 2 diplomat, Wendy Sherman, during a hearing last week on the Indo-Pacific region.

He likened Taiwan's position vis-a-vis China to that of Ukraine in the lead-up to the Russian invasion.

"Is Taiwan able to defend herself?" McCaul asked. "I think the answer is 'no' right now, and I'm worried about that. I don't want to make the same mistake of waiting until after an invasion because that's going to be too late."

However, it remains unclear what if anything the United States can do to address the pandemic-related acquisition issues that prompted the backlog.

"Our primary issue and we see this playing out in Ukraine also is that the industry has been delayed in the development of these systems," a Republican staffer on the House Foreign Affairs Committee told Defense News.

The staffer also noted the U.S. defense industry has attributed supply chain issues, staff shortages and shipping delays to COVID-19 problems that have cascaded into broader production troubles.

"Honestly, the bottom line is there is very little that the government can do at this juncture to address supply chain issues," Rupert Hammond-Chambers, the president of the US-Taiwan Business Council, told Defense News.

Hammond-Chambers pointed to the federal government's inability to address semiconductor supply chain issues that contributed to higher car prices around the globe.

"There's a great deal of political and international pressure to sort it out, but it's having almost negligible impact on the ability of the companies to produce the chip that is necessary for the auto industry," he said.

Prior to the backlog, Congress had largely remained focused on incentivizing Taiwan to make cheaper purchases consisting of large quantities of asymmetric munitions versus the more expensive, state-of-the-art weapons that China may quickly incapacitate during an invasion.

And while much of Taiwan's U.S. defense purchases bolster its asymmetric capabilities — including many of the backlogged articles — some in Washington raised their eyebrows in 2019 when Taipei opted to move ahead with a \$2 billion purchase of Abrams tanks.

"The United States encourages Taiwan to purchase weapons that will enable [it] to adopt a strategy of denial that will prevent China from being able to seize and control Taiwan, so that it will not have the confidence to do so and therefore will not be tempted to do so," Bonnie Glaser, the Asia Program director at the German Marshall Fund, told Defense News.

For instance, Chabot introduced a bill last year with Rep. Ami Bera, D-Calif., calling on Taiwan to further invest in asymmetric defense capabilities.

Sen. James Risch, R-Idaho, the ranking member on the Senate Foreign Relations Committee, has also introduced a bill to authorize \$2 billion a year in Taiwanese military aid, but only if Taipei produces long-term plans for joint capability development with the United States.

Another bill, introduced by Sen. Josh Hawley, R-Mo., would authorize \$3 billion in Taiwanese military aid annually. The bill would place more explicit requirements stipulating the funding go toward developing Taipei's asymmetric defense capabilities against China.

The Biden administration has also encouraged Taiwan to invest more in its asymmetric capabilities, even as many of those munitions remain backlogged.

"We are also encouraging Taiwan to focus on capabilities that would deter the [People's Republic of China] from taking Taiwan by force," Sherman said during her testimony before Congress last week. "This means a focus on capabilities that are cost-efficient, mobile, lethal, resilient and capable of operating and surviving a contested environment."

## **20. Australia, US grapple with Solomon Islands tilt to China**

*A re-alignment of alliances for the Solomon Islands would change the military calculus of the southern Pacific. Should Chinese defense forces regularly visit, that would give them a base of operations about 1,200 miles from the eastern coast of Australia and smack in the middle of thousands of Pacific islands*

BreakingDefense.com, Apr. 14 (1045) | Colin Clark

SYDNEY -- It's symbolic. The American embassy in Honiara, capital of the Solomon Islands, has been shuttered since 1993. Now, the US is scrambling to reopen as quickly as it can in the face of China's increasingly successful campaign to tighten relations with the tiny but incredibly strategic island state.

The latest sign of closer security relations with China came on April Fool's Day when a draft security agreement between the two countries was leaked. The pattern since the US Embassy closed in 1993 seems pretty clear: The Solomons decided to break relations with Taiwan in favor of the Peoples Republic of China in 2019. And now the prime minister — whose actions have sparked riots that threatened his government's stability — appears ready to sign a broadly worded agreement with China that would appear to grant China the right for its military ships to call, repair and resupply there and to send troops and police in the event of instability.

Ironically, Australia, New Zealand and Fiji did just that when Prime Minister Manasseh Sogavare's hold on power appeared unsteady in November last year and he asked Australia for help under a treaty the two nations signed in 2017. Australia sent troops and members of its highly trained Australian Federal Police to patrol and tamp down the disturbances. New Zealand also sent troops and police; about a dozen Kiwis remain in the Solomons.

This wasn't Australia's first Solomon rodeo. The bilateral, Australian-led Regional Assistance Mission to the Solomon Islands (RAMSI) started in 2003 in response to "prevailing atmosphere of lawlessness, widespread extortion, and ineffective police" and lasted 14 years. At its end the two countries inked the security treaty that underpins the most recent deployment. Ironically, a small group of Chinese police are already on the islands, training Solomon Islands police.

As soon as the draft agreement with China was leaked online it sparked a furor as its terms became clear, especially here. Since World War II, Australia has been arguably the principal economic and security partner of the Solomon Islands.

To get some idea of just what a shock the proposed agreement was, the defense minister of New Zealand, Peeni Henare, admitted he and his Australian counterpart, Peter Dutton, were "caught off guard."

"We were both surprised, because the intelligence we were getting didn't exactly match that," Henare said in a March 29 interview with the Kiwi website "stuff." He was in Australia meeting with Dutton. "We knew that there were some challenges there, with respect to China, but the leaked draft agreement ... it did catch me as a surprise, and even Minister Dutton."

Aside from the diplomatic shifts that are happening under Sogavare, what does all this mean for defense of the region?

First, there's the simple geography. Should Chinese defense forces regularly visit the Solomons, it would give them a base of operations about 1,200 miles from the eastern coast of Australia. If you look at the map of Oceania above, the implications should become instantly clear. China would have access to a crucial location from which to broaden its ambit throughout the entire Pacific island archipelago. As a reminder, the capital, Honiara, is on an island called Guadalcanal.

"A lot of things change in warfare. Not geography. Where ... Solomon Islands are matters. It did then and it does now," US Marine Commandant Gen. David Berger said Wednesday in an appearance at the Australian Strategic Policy Institute in Canberra.

A top Australian commander said the agreement would "change the calculus" of operations in the Pacific.

"We would change our patrolling patterns and our maritime awareness activities," the chief of Joint Operations, Lt. Gen. Greg Bilton, told reporters on March 31. "They're in much closer to the Australian mainland obviously, and that would change the way we would undertake day-to-day operations, particularly in the air and in the sea."

A host of senior Australian leaders, including the minister for the Pacific, have asked or urged Sogavare to drop the agreement with China. The president of Melanesia, David Panuelo, raised the specter in a letter to the prime minister of a terrible war in the Pacific like the one that swept the islands during World War II. Senior US officials have cautioned the Solomon's leader against the agreement.

Attempting to rectifying the long period of diplomatic neglect, US Secretary of State Antony Blinken announced the reopening of a US embassy in Honiara during a Feb. 12 visit to Fiji. There is a consulate there already.

Chinese officials have reacted with indignity to calls for scrapping the deal, saying that the Solomons are a sovereign country, no one should treat them like a colony and they have the right to decide their own relations.

Perhaps the best argument they've offered is this, from Chinese Foreign Ministry spokesperson Wang Wenbin on April 1 when the agreement was exposed: "China-Solomon Islands cooperation does not target any third party and is not in conflict with Solomon Islands' cooperation with other countries. Instead, it complements the existing regional cooperation mechanisms in a positive way."

All this is not an abstract exercise for Australia. Long history and interests have tied the Solomons and Australia together. And the Aussies have one special, more personal reason for their interest in the island's future: an AFP officer was shot and killed there in 2004 during a patrol, trying to help bring order to the Solomon Islands.

## MIDDLE EAST

### **21. UN Envoy Sees Light At ‘End of the Tunnel’ in Yemen’s War**

Associated Press, Apr. 14 (1259) | Edith M. Lederer

UNITED NATIONS -- The U.N. special envoy for Yemen told the Security Council on Thursday that he believes there is “a light at the end of the tunnel” in the more than seven-year war in the Arab world’s poorest country.

But Hans Grundberg also warned that the two-month cease-fire underway in Yemen is fragile and that reports of military operations around the oil-rich central province of Marib should be addressed urgently.

Grundberg also said that during his first visit this week to Yemen's capital of Sanaa — held by Iranian-backed Houthi rebels — he received “reaffirmed commitment to all aspects of implementing the truce” and held “constructive conversations” on next steps to strengthen and expand it.

The two-month truce is the first nationwide cease-fire in six years in Yemen’s civil war, which erupted in 2014. That year, the Houthis seized Sanaa and forced the internationally recognized government into exile. The Saudi-led coalition entered the war in early 2015 to try to restore the government to power.

The conflict has in recent years become a regional proxy war that has killed more than 150,000 people, including over 14,500 civilians. It has also created one of the worst humanitarian crises in the world.

In his speech, Grundberg also welcomed the Yemeni government's newly formed presidential council, established last week when the country’s exiled President Abed Rabbo Mansour Hadi stepped aside, saying it “reflects a broader array of political actors.”

He echoed a Security Council statement expressing the expectation that the presidential council “will form an important step towards stability and an inclusive Yemeni-led and owned political settlement under U.N. auspices.”

The truce is “broadly holding,” despite the reported military operations around Marib, he said in a video briefing. “There has been a significant reduction in violence and civilian casualties. There have been no confirmed airstrikes inside Yemen or cross-border attacks emanating from Yemen.”

A number of ships have already entered Yemen's main port of Hodeida, some carrying badly needed fuel, he said, and the U.N. and its partners are working to quickly resume commercial flights in and out of Sanaa airport.

Another priority, Grundberg added, is reopening roads in southern Taiz and other areas, to allow civilians on both sides of the front lines to go to work and school.

The truce is a rare opportunity “to pivot toward a peaceful future” in Yemen, he said, and the coming weeks will test the commitments by the government and the Houthis to de-escalate and uphold their agreement.

“This is a time to build trust and confidence,” Grundberg said. “Yemen will need the international community’s support as much as ever to maintain the momentum, and move toward finding an inclusive, peaceful and sustainable end to the conflict.”

U.N. humanitarian chief Martin Griffiths, the former U.N. envoy for Yemen, described the cease-fire as “incredibly important” and said it was already having a positive impact on the humanitarian situation though “millions of people in Yemen still urgently need humanitarian assistance to stay alive.”

Despite reports of limited clashes in a few areas, mainly in Marib and Taiz, “hostilities have dropped sharply across the country,” he said. “Civilian casualties have fallen to their lowest level in months, a major improvement after weeks of escalating conflict earlier this year.”

Griffiths said a \$3 billion economic support package from Saudi Arabia and the United Arab Emirates, announced at a recent meeting of the regional Gulf Cooperation Council, “is extraordinarily welcomed.” He said it includes fuel support, development assistance, “and crucially a new \$2 billion deposit in Yemen’s central bank,” which will help stabilize the country.

Since the announcement of the truce, Griffiths said the value of Yemen’s currency, the rial, has recovered 25% of its value which means that food and other essential goods, nearly all of which must be imported, “should soon become more affordable for the people of Yemen.”

Griffiths said he’s often been accused of being too hopeful about Yemen, “but it’s true in this case.” This is “an extraordinary moment” to try to restore peace and “we must now seize” it, he said.

## **AFRICA**

### **22. ‘Down With France’: Africa Wants Influence Of an Old Power Gone**

*Decades after independence, many African countries are increasingly troubled by the ongoing influence of their former colonial power*

New York Times, Apr. 15 (0300), Pg. A5 | Ruth Maclean

BAMAKO, Mali -- Many French guests came through the guesthouse where El Bachir Thiam worked as a security guard, a small oasis of greenery in busy Bamako, the capital of the West African country of Mali. They were friendly, usually, and he liked them.

But after he had welcomed them in, shown them to their rooms and reassured them that Bamako was safe, not the hotbed of terrorist activity it might seem from outside, he went back to his phone, where his activist WhatsApp groups were focused on one thing. Getting the French -- their businesses, diplomats and thousands of troops -- out of Mali.

Over the past few years there has been a sharp rise in criticism of France across its former colonies in Africa, rooted in a feeling that colonialist practices and paternalistic attitudes never really ended, and propelled by a tide of social media posts, radio shows, demonstrations and conversations on the street.

In Senegal, young people attending protests last year accused the president of being a puppet of the French president, Emmanuel Macron, who is currently vying for a second term. They smashed the windows of French gas stations and set fire to French supermarkets.

In Burkina Faso, as a coup d'état unfolded in January, tailors tore up French flags and pieced the tricolors back together horizontally to make Russian ones.

In Niger last November, after protesters shouting "Down with France!" tried to block a French military convoy, the soldiers opened fire. They killed two people, the Nigerien government said.

Nearly half of the countries in Africa were at one time French colonies or protectorates. Six decades after most of them gained independence, young people like Mr. Thiam -- born long after the colonial French departed -- are driving this uprising, tapping into a wealth of online information that older generations, often less educated and literate, never had access to, and trying to use it to promote change. And their elders are paying attention.

"There's a new awakening in sub-Saharan Africa that the world should know about," said El Hadj Djitteye, a Malian analyst who recently founded a think tank, the Timbuktu Center for Strategic Studies on the Sahel. "If a foreign minister makes a speech today, there's a group of young analysts that can look at it and say this paragraph is paternalist, that one is aggressive, this isn't diplomacy."

Though the tide of information they consume and share sometimes veers into misinformation, including unfounded rumors about France working with jihadists or stealing gold, much of the criticism in countries with ties to France is aimed at the perceived arrogance of the former colonial master. There have always been critiques of France, particularly in more educated, urban circles in West Africa, but now that almost everyone either owns a cellphone or knows somebody who does, these ideas have spread.

In Mali, where for almost a decade French soldiers who initially came at the invitation of the Malian government have tried and failed to stop the spread of armed Islamist groups, France stands accused of disrespecting Malians not just by activists like Mr. Thiam, but by the country's highest officials, including the prime minister.

“They want to humiliate us,” said Prime Minister Choguel Maiga in a recent speech which drifted into unfounded conspiracy theory. This kind of rhetoric has helped the military junta that seized power in 2020 retain huge popular support. “We’re not a people that submits.”

This is a stark turnaround from a decade ago. When jihadists took over its northern cities in 2012, Mali appealed to France for military help. And when French soldiers arrived, Malians greeted them as liberating heroes.

Now they are effectively being chased from the country. They are blamed for sanctions imposed by the Economic Community of West African States, or ECOWAS, aimed at trying to get the junta to commit to handing over power -- France is assumed to be the group’s puppet master.

The French are blamed for their failure to stop an insurgency that metastasized and spilled over Mali’s borders, destabilizing a vast stretch of arid territory known as the Sahel -- even though troops from Mali have also been fighting the insurgents and now stand accused of massacring hundreds of people together with their new partners, Russian mercenaries. The French are blamed, too, for their support of former rebel groups from the north considered by many in Mali’s powerful south to be no different than the jihadists.

The deteriorating security situation was one of the main things Mr. Thiam posted about on social media during his night shifts at the guesthouse. He built up a following of more than 35,000 friends and followers on Facebook at one point.

But he wasn’t just an online warrior: He co-founded an activist group, On A Tout Compris -- French for “We’ve Got it All Figured Out” -- which organized demonstrations outside the French embassy and targeted French-owned businesses like the petroleum company Total. Soon, he found he was having to duck out of his activist meetings early to get to work on time. Then he left the guesthouse job for full time activism.

His favorite trick was to post videos of himself burning the French flag on Facebook -- something that eventually got him banned from the social network, he said. (Facebook said that the burning of flags does not violate their policies, but he could have been banned for another reason). He said he posted pictures of dead French soldiers, labeling them “other terrorists,” just for shock value.

“We knew that was mean, but it was part of our battle plan,” he said.

French soldiers are now packing up in their bases, preparing to leave, while their leaders focus on their relationships with other, friendlier countries like Niger and Ivory Coast, where this month they will hold a training session with local troops, as they have done for years.

For years after African nations got independence, France maintained a web of political and business ties with its former colonies, often in effect propping up corrupt governments or dictators for its own benefit, a system widely known as Françafrique.

When Mr. Macron became president, it initially seemed that things would change. He promised to declassify secret files related to the assassination of Thomas Sankara, Burkina Faso's revolutionary leader, killed in a putsch in which many suspect France played a role. He asked Rwanda for forgiveness over France's role in the genocide.

"I am from a generation that doesn't come to tell Africans what to do," he told students in Ouagadougou, Burkina Faso's capital, in 2017.

But this rang hollow in January 2020 when he summoned five African leaders to a summit, partly to disavow rising anti-French sentiment in their countries. To many of their citizens back home, Mr. Macron came across as insufferably arrogant.

And in Mali -- often, of late, the harbinger for the region, whether in terms of coups or destabilizing Islamist groups -- people felt that the arrogance just kept coming -- notably, in French ministers' condemnations of the military junta that overthrew the president, France's erstwhile ally, Ibrahim Boubacar Keita.

The relationship between the two countries broke down fast.

After France's foreign minister, Jean-Yves Le Drian, called the junta "illegitimate" and "out of control" in January, its ambassador in Bamako was instructed to leave.

On a recent afternoon at the embassy, the ambassador's spacious office was hushed, the only sign of him a photograph atop his office chair, where he jokingly propped it on his way out.

Many Malians still bristle at that "illegitimate" label: of course, they say, the junta was not elected. But many feel they have been failed by democracy as France conceives it, and that the junta speaks for them.

"Stop thinking we are inferior," said Pierre Togo, a former soldier, addressing France as he nursed a mango juice at a Bamako bar on a recent evening. "France is plotting, playing games, and Africans understand that now."

Across town, at a busy roundabout where vendors sold Malian flags, Lassina Keita, a mechanic, wiped oil-stained hands on his shirt, to which was clipped the source of all his information, a small yellow radio. "It's better to say thank you, and let them go," he said of the French.

But while these sentiments are common in the capital, some Malians from the north and center, where the insurgency is raging, see things differently.

In a quiet suburb of Bamako, Ami Walet Idrissa and Bintou Walet Abdou, both 22, chatted in Ami's house, its rough cinder block walls heating in the sun. They reminisced about their lives back home in Timbuktu, which

was taken by Islamist militants, after arms and men flooded into the country in the wake of Libya's descent into chaos.

"France helped Mali a lot," said Bintou.

"They're the ones who chased the jihadists out," Ami said.

When jihadists took over Timbuktu in 2012, Ami was 13. Her parents had fled, but she stayed behind with her siblings. One day, walking home after bathing in the river, armed men stopped Ami and her brother. Males and females were forbidden from walking together, they said -- siblings or not. They whipped them both, she said.

Both women worried about what would happen if the French left, but they never said so in public, even when people equated the French with jihadists, as they often did. Their opinions could invite trouble in Bamako.

Were France's harshest critics living in areas threatened by extremists or abusive military forces, rather than safely in Bamako, things could be different.

At the leafy guesthouse, one of Mr. Thiam's former co-workers was amused to hear what his old colleague was up to.

"Send him to Dogon country, let him hear a bit of gunfire," he said with a smile, referring to an area often attacked by the armed groups that France fought. "He'll run back yelling 'Vive la France!'"

*--Mamadou Tapily, Mohamed Ag Hamaleck and Mady Camara contributed reporting*

### **23. U.S. State Dept. approves \$1 billion sale to Nigeria, delayed over human rights concerns**

Defense News Online, Apr. 14 (1637) | Joe Gould and Bryant Harris

WASHINGTON -- The U.S. State Department has cleared the sale of 12 AH-1Z Cobra attack helicopters to Nigeria worth nearly \$1 billion, apparently after U.S. lawmakers lifted objections over human rights concerns.

The Defense Security Cooperation Agency on Thursday announced the sale of the helicopters and related defense systems to the Nigerian military. The package includes \$25 million for human rights-related training.

The sale includes the Bell-made Cobras; 28 General Electric-made T700-401C engines; 2,000 Advanced Precision Kill Weapon Systems used to convert unguided missiles into precision-guided missiles; and night vision, targeting and navigation systems.

The case highlights the Biden administration's attempts to balance human rights concerns in the arms sale process.

Foreign Policy reported in July that the top Democrat and Republican on the Senate Foreign Relations Committee delayed the sale amid concerns Nigerian President Muhammadu Buhari was drifting toward authoritarianism. The country is facing multiple security challenges, including terrorism.

“Nigeria requires a fundamental rethink of the framework of our overall engagement,” committee Chairman Bob Menendez, D-N.J., told Secretary of State Antony Blinken during the diplomat’s testimony before the panel last year.

Menendez also tweeted that “the Nigerian government must get serious about security” after the militant group Boko Haram kidnapped more than 300 schoolboys in December 2020. The Nigerian government also ran afoul of the New Jersey Democrat in 2019 after arresting one of his constituents, Nigerian-American journalist Omoyele Sowore.

According to the announcement, \$25 million in the package will be dedicated to “institutional and technical assistance” to Nigeria’s military to continue its Air-to-Ground Integration program, which concerns targeting processes that are consistent with international humanitarian law and the laws of armed conflict.

“The proposed sale will better equip Nigeria to contribute to shared security objectives, promote regional stability and build interoperability with the U.S. and other Western partners,” the announcement read. “This sale will be a major contribution to U.S. and Nigerian security goals.”

## **AIR FORCE**

### **24. Air Force’s nuclear modernization bill is cramping fighter jet procurement**

*‘Ideally, I’d like to get to higher [fighter procurement rates],’ Air Force Chief of Staff Gen. CQ Brown said. ‘If I had a big blank check, I’d actually take care of it all’*

BreakingDefense.com, Apr. 14 (1443) | Valerie Insinna

WASHINGTON -- With two major nuclear programs ramping up, the Air Force had to make hard choices on fighter procurement in fiscal 2023, the Air Force’s top officer said.

After three budgets where Air Force fighter buying soared to heights of more than 60 aircraft per year, the service requested 33 Lockheed Martin F-35As and 24 Boeing F-15EXs in FY23, for a total of 57 jets.

Asked about the decision during a Tuesday roundtable with reporters, Air Force Chief of Staff Gen. CQ Brown said the service had to prioritize keeping the B-21 Raider bomber and newly christened LGM-35A Sentinel intercontinental ballistic missile on track.

“We’re doing something we’re doing once in a generation, and that’s recapitalizing our nuclear portfolio. The United States Air Force has two thirds of the nuclear triad, and 75% of the nuclear command and control and communications,” he said.

Brown acknowledged that the administration’s budget request was “pretty generous,” with a \$234 billion topline for the Department of the Air Force — more than the Army and Navy’s share of the pie. However, he said, the Air Force needs to balance its spending for new aircraft procurement with the demands of future modernization programs — both conventional and nuclear — as well as ensuring that current forces remain ready to meet combatant commander demands.

“Ideally, I’d like to get to higher [fighter procurement rates],” Brown said. “If I had a big blank check, I’d actually take care of it all.”

The Air Force wants to pare down to four combat aircraft types: the F-35, which will act as the “cornerstone” of the fighter fleet; the F-15EX, which can take on a role as a weapons truck and launch large hypersonic missiles; the F-22, which will eventually be replaced by the sixth-generation Next Generation Air Dominance; and the F-16, which will be continued to be modernized, Brown said.

However, questions remain about the ultimate makeup of the fighter fleet, when old combat aircraft will be retired and how quickly new airplanes will be purchased to make up for losses.

If Congress permits the Air Force to move forward with its divestment plans, the service will retire more legacy fighters in FY23 than the number of new fighters its getting. It plans to send 26 F-16C/Ds and 67 F-16C/Ds to the boneyard in FY23, a total of 93 aircraft.

Meanwhile, if the FY23 budget request is enacted at current levels, the Air Force’s fighter procurement number will be at its lowest point since FY19, the year before the service began buying the F-15EX.

When the service announced plans to begin buying the F-15EX in FY20, then-Air Force Secretary Heather Wilson said that the Air Force needed to ramp fighter procurement up to 72 aircraft per year. The Air Force reached that mark in the FY21 budget before dropping to 60 fighters in FY22.

In its unfunded requirements list, the Air Force includes \$921 million to restore 7 F-35A models, which would bring the F-35 buy up to 40 jets in FY23. These aircraft would be Block 4 aircraft, purchased during Lot 17, the list notes.

That would be enough to push Air Force fighter procurement to 64 planes in the upcoming fiscal year. However, Brown noted that funding for readiness is a currently bigger priority for the service, topping the unfunded requirements list with a \$579 million sum for weapon system sustainment.

The worst case scenario, however, is if lawmakers decide to take funding from modernization and readiness accounts to pour into retaining old platforms like the old F-15s and F-16s the service is trying to mothball, he said.

“What I don’t want to necessarily do is take that money and put it back into buying and keeping platforms that we’re trying to retire, he said. “It doesn’t make move us forward, and it actually eats into our weapons systems sustainment and flying hour aircraft availability.”

## **25. Air Force Academy expels 22 cadets for 2020 cheating scandal**

Military Times Online, Apr. 14 (1852) | Rachel S. Cohen

The U.S. Air Force Academy in Colorado has expelled 22 students and put hundreds more on probation for cheating and plagiarism while learning from home in 2020, the school’s top officer said Wednesday.

In the early days of the coronavirus pandemic, the Colorado Springs college decided to send all freshmen, sophomores and juniors home for the final months of the spring 2020 semester while seniors finished out their last year on campus.

The sudden switch to distance learning invited one of the most widespread spates of academic misconduct in the academy’s history. Away from campus, students sought help on unauthorized websites, plagiarized papers and collaborated on tests.

The vast majority of cadets who were suspected of cheating — 231 of the 245 students — admitted to their actions, according to a presentation given by USAFA Superintendent Lt. Gen. Richard Clark at an academy board meeting. That’s about 10% of the more than 4,000 cadets who attend the academy each year.

In total, 210 cadets were put on probation, which typically lasts six months, and 22 were kicked out. Probation typically involves suspending a student’s ability to leave campus, wear civilian clothes, participate in sports or other clubs and hold jobs, and requires journal entries and meetings for honor code-related discussions.

Seven were also found not to have violated academy rules. Three had their cases dropped, and two are awaiting a final decision.

This is the academy’s most complete accounting of the cheating’s fallout so far. The student-run process of meting out punishments was still underway when the school went public with the incident in January 2021. At the time,

one cadet had been expelled and one had resigned because of their misconduct, USAFA spokesperson Mike Slater said.

It became a wake-up call that the academy's honor code needed a fresh look for the first time in several years.

"We needed to ... step back and look at how we're developing our cadets and how we're helping to instill that 'living honorably' [piece]," Clark said.

Members of the USAFA community, including cadets, alumni and other constituencies, spent a few days fleshing out the main problems at hand and how to address them.

They settled on three priorities: emphasizing why living honorably is important at the academy and beyond; rebuilding trust in USAFA and each other; and rethinking how much and when to instill the school's core values throughout a student's four years there.

The group worried cadets weren't seeing the honor code consistently enforced, or that they didn't have enough positive role models on campus. Faculty and staff can play a bigger role in that regard, Clark said.

And, he added, the school has to give students time and space for personal growth. Lessons on honesty, integrity and hard work can start even earlier than when a cadet steps foot on campus, and are particularly important for setting freshmen up for success.

"We realize that everybody doesn't come from the same background. They don't have the same focus or view of living honorably, and we have to meet them where they are," Clark said. "Now, that doesn't mean that we have to accept where they are. But we have to ... help them to get where we need them to be."

USAFA has expanded its curriculum and staffing related to the honor code and updated its definition of tolerated behavior at the school, among other changes.

Clark hopes the updates are working: Honor code violations have dropped from 311 in the 2020-2021 school year to 44 in 2021-2022 — respectively the highest and lowest points since at least 2009.

But it's too soon to tell whether good behavior is a result of more obedient cadets or if people are being extra cautious following the latest crackdown.

"One positive thing is that our freshman class ... which normally has a pretty significant number of the honor cases, were much lower," Clark said. "In fact, they were lower than the upper class and usually it's the opposite. So that's one indicator that maybe we're making a difference."

## ARMY

### **26. New data transport paths are making the Army more resilient and flexible**

FedScoop.com, Apr. 14 (1259) | Mark Pomerleau

The Army is looking to make the flow of its data more resilient in the face of complex adversaries seeking to deny it, the service's top IT official said Thursday.

CIO Raj Iyer noted that a key pillar of the Army's multi-cloud strategy is getting cloud capabilities to the tactical edge.

"We can't really solve this cloud problem, this multi-cloud problem, unless we also address the [data] transport issues," he said during a presentation at the Public Sector Innovation Summit, hosted by VMware and FedScoop. "One of the things that we have to acknowledge right up front is we're going to be in a highly contested environment. We're not going to have the bandwidth that we need. It's going to be interrupted [and] intermittent. It's going to be contested, and when that happens, your transport now becomes a problem."

Iyer indicated the importance of partnering with commercial satellite providers and cloud service providers to take advantage of Low-Earth Orbit (LEO) and Medium-Earth Orbit (MEO) satcom capabilities for a more resilient data transport architecture.

"We always thought, hey, what we build and what we own and what we deploy, is far more superior when it comes to supporting the warfighter than what's commercially available, when honestly, that's not true anymore," he said. "That integration of that transport and that backhaul back to more reliable transport using satellite communications is a game changer."

Leveraging these capabilities make U.S. military forces much more mobile and expeditionary than having to take a lot of tactical server infrastructure or cables with them when they deploy.

"One of the struggles that we've had when we deploy to the tactical edge is taking a bunch of hardware with us when we go. That is not making us expeditionary," Iyer said.

He pointed out that when the 82nd Airborne Division deployed to Poland at the onset of the recent Russian invasion of Ukraine, it had to do so at a moment's notice.

"If you're going to be carrying around a whole bunch of infrastructure with you and server stacks and miles and miles of cabling, you can just imagine how cumbersome that is. It hurts our maneuverability when we are stuck to tactical server infrastructure that we need to take with us," he said. "This is where, again, getting to that low form factor devices that's connected back to the cloud, being able to establish connectivity through LEO and

MEO in minutes rather than hours and days, is a huge game changer. We've been able to validate that, like I said, most recently here in Europe."

Iyer noted that the Army has been able to demonstrate the ability to transition battlefield applications and tools to the cloud, such as the Advanced Field Artillery Tactical Data System, which is a fires command and control tool, and the Command Post Commuting Environment, a web-enabled system that consolidates current mission systems and programs into a single-user interface.

Just a couple of years ago, some observers of the Army might have thought "you'll never move any tactical application to the cloud, it's got to be like your traditional business systems and financial systems [and] HR systems," Iyer said. "Well guess what, we've already shown that we can now move these tactical applications to the cloud in forward deployed locations in the hands of the warfighter now, today. That's real, and so that's a huge game changer."

Getting the right data to the right entity at the right time is going to be crucial in future conflicts. Enabling cloud technologies, especially at the edge, is an important aspect to this.

Iyer referenced cloud as a warfighting platform and described the data flowing through it as ammunition.

"What we'll come to recognize is that our strategic advantage is truly by connecting data across all of these weapons system platforms, getting that as fast as we can to the tactical edge and in the hands of the commander and the soldier for decision making," Iyer said. "If we can do that, that's how we're going to achieve that strategic digital overmatch."

## NAVY

### **27. U.S. Secretary of the Navy visits Fincantieri Marinette Marine**

FOX News 11 (Green Bay, WI), Apr. 14 (1808) | Charlee Rubesky

MARINETTE -- The U.S. Secretary of the Navy was in Marinette on Thursday.

He was checking in on several classes of ships being built for the Navy.

This comes after the Navy announced it wants to decommission 24 ships.

Nine of those are Freedom Class Littoral Combat Ships, all built by Fincantieri Marinette Marine.

“Many of those ships are already beyond their extended service life as well too. There are some ships such as the LCS class, they’re below their extended service life. Unfortunately because of the challenges that we’ve had specifically related to the ASW module on them, it does need for them to be replaced earlier than expected,” U.S. Secretary of the Navy Carlos Del Toro said.

ASW stands for Anti-Submarine Warfare.

That capability was canceled in the new budget.

The Freedom-class ships also suffer from a defect that would be costly to repair.

“We make major investments in modernization. Those investments are important. But just like every new piece of technology, sometimes things work out, sometimes they don’t work out,” Del Toro said.

Fincantieri Marinette Marine CEO Mark Vandroff says the Navy is his customer, and it has the right to employ the ships as it sees fit.

“It’s our job as a shipbuilder when the Navy gives us a contract to build the ship that’s in the contract. And we have to stay focused on that,” Vandroff said.

The Navy is still planning to use the remaining LCS’ being built at Marinette Marine.

“So my plan is to continue to very aggressively use those ships throughout the entire globe, wherever they’re needed,” Del Toro said.

Fincantieri Marinette Marine says the company is executing three programs, the remaining Littoral Combat Ships, four ships for the Royal Saudi Navy, and the Constellation Class Frigates.

## **NOTABLE COMMENTARY**

### **28. Arming for the Next Fight in Ukraine**

Wall Street Journal, Apr. 15 (0200), Pg. A14 | Editorial

Ukraine won the battle of Kyiv in heroic fashion, but the war is set to enter a bloody new phase as Vladimir Putin prepares an offensive in the east. The question is whether President Biden will summon the mettle to make sure America’s friends win.

The Biden Administration on Wednesday announced \$800 million more in weapons, ammunition and other security assistance for Ukraine, calling it “tailored to the wider assault we expect Russia to launch in eastern Ukraine.” The awful images coming out of Mariupol are a sign of what is to come, and the miracle is that the city’s defenders have managed to hold out as long as they have. Mr. Putin said this week that peace talks have reached a dead end.

The terrain in the eastern part of the country is a “bit like Kansas,” as the Pentagon put it, more open and less amenable to, say, the supply ambushes the Ukrainians have been running in the north. The Russians are reinforcing their combat power, and they can concentrate it in a smaller area. The Russian supply and morale problems won’t disappear overnight, but Mr. Putin has appointed a single commander with experience in Syria. Expect him to organize a ruthless campaign.

This means tougher fighting, long on artillery and missiles, and the Ukrainians will need heavier weapons and equipment. Wednesday’s package includes 18 155mm Howitzers and 40,000 rounds, and this artillery will be put to productive use. Ditto for 10 counter-artillery radars, two air surveillance radars and 200 armored personnel carriers.

One bad sign is that the Biden Team wobbled before deciding to send 11 Mi-17 helicopters, though the U.S. has provided this type of aircraft before. Ukraine also wants and needs multiple-launch rocket systems, which don’t appear on the U.S. list. This suggests U.S. decisions are still governed to a puzzling extent by fear of crossing Mr. Putin.

Ukrainian antiship capabilities need upgrading, but the latest Biden package includes only unmanned coastal defense vessels. The Ukrainians claim to have hit the Russian cruiser Moskva, though the Russians blame a fire aboard the ship. The smoking ship is a humiliation to the Russian navy, and Ukraine is doing the U.S. and NATO a great favor by offering to sink these Black Sea assets.

The Ukrainians still need long-range air defenses, and these deals need to move faster than the weeks it took to deliver Slovakia’s S-300. There is a question of urgency and will about U.S. deliveries. The White House announced the U.S. would send 100 Switchblade loitering munitions on March 16. The Pentagon said on Wednesday -- April 13 -- that the last of these would enter Ukraine “over the course of the next day.”

The Biden package this week promises more Switchblades, which may be helpful in the east because they can strike targets from a distance. But they’ll be less useful if they arrive in a month. And it’ll take much more effort to get heavier stuff like artillery to the front fast.

More broadly, the U.S. and NATO need to shift from sending Ukraine whatever is on the shelf to a more coordinated effort to train and equip a Ukrainian military that may be fighting for years. This means training the Ukrainians on more complex NATO weapons, such as Patriot missile defenses and fighter aircraft.

The Ukrainians need to prevent Russian domination of the skies. The American military trains plenty of foreign military pilots, and starting now means the Ukrainian pilots could fly NATO aircraft as the war drags on.

Western training since Russia's seizure of Crimea in 2014 has been crucial in helping the Ukrainians mount the impressive defense they have so far, and this is no time to slow down. That ought to include setting up maintenance and repair shops in NATO countries, as facilities in Ukraine are Russian targets.

The paradox of President Biden's response in Ukraine is that he has been too casual with words like "genocide," as he was again this week, while he's also too hesitant to offer the lethal weapons Ukrainians need to win.

Mr. Putin could still succeed in swallowing parts of Ukraine, and he'll use his gains to keep threatening the country's existence. The fastest end to the human suffering is to confront the Russian dictator with the gradual destruction of his military if he continues this war of conquest. Mr. Putin cares more about that than he does moral denunciations.

## **29. Ukraine Is Draining America's Arsenal of Democracy**

Bloomberg Opinion, Apr. 14 (0900) | Hal Brands

America is following an "arsenal of democracy" strategy in Ukraine: It has avoided direct intervention against the Russian invaders, while working with allies and partners to provide the Kyiv government with money and guns.

That strategy, reminiscent of U.S. support for Britain in 1940-41, has worked wonders. Yet as the war reaches a critical stage, with the Russians preparing to consolidate their grip on eastern Ukraine, the arsenal of democracy is being depleted.

That could cause a fatal shortfall for Ukrainian forces in this conflict, and it is revealing American weaknesses that could be laid bare in the next great-power fight.

Of all the support the U.S. and its friends have provided Ukraine, arms have mattered the most. Deliveries of drones, antitank and anti-aircraft weapons, ammunition and other capabilities have helped Ukraine wreak havoc on Russian forces even as Moscow has pummeled the country's industrial base.

General Mark Milley, the chairman of the U.S. Joint Chiefs of Staff, told Congress that the West has delivered 60,000 antitank weapons and 25,000 anti-aircraft weapons to Kyiv. The Pentagon is now laying plans to rush additional artillery, coastal defense drones and other materiel to Ukraine. The White House on Wednesday announced a new \$800 million package including helicopters and armored personnel carriers.

But President Joe Biden never planned for a war like this. The assumption was that Russia would quickly conquer much of the country, so the U.S. would be supporting a simmering, low-intensity Ukrainian insurgency. Instead, Ukraine's successful resistance has led to an ongoing, high-intensity conventional fight, with prodigious consumption of munitions and intense attrition of key military assets.

Pentagon officials say that Kyiv is blowing through a week's worth of deliveries of antitank munitions every day. It is also running short of usable aircraft as Russian airstrikes and combat losses take their toll. Ammunition has become scarce in Mariupol and other areas.

This is presenting Western countries with a stark choice between pouring more supplies into Ukraine or husbanding finite capabilities they may need for their own defense.

Germany has declined to transfer tanks to Ukraine on grounds that it simply cannot spare them. Canada quickly ran short on rocket launchers and other equipment that the Ukrainians desperately need. The U.S. has provided one-third of its overall stockpile of Javelin anti-tank missiles. It cannot easily deliver more without leaving its own armories badly depleted — and it may take months or years to significantly ramp up production.

Before the U.S. entered World War II, President Franklin Roosevelt and his military advisers engaged in intense debates about whether the U.S. should rush weapons to a beleaguered Britain or hang onto them in case America had to defend itself. Biden's arsenal-of-democracy strategy is reaching a similar inflection point in Ukraine.

Kyiv will require far more Western support to beat back Russian forces gathering in the east, where relatively open terrain is less favorable to the defense. It will also need more sophisticated weapons, such as tanks and aircraft, to deny Russia a decisive advantage — and perhaps take the offensive if Moscow's eastern offensive falters. Stout Ukrainian resistance has given Kyiv a reasonable chance of winning this war, but the cost of any victory, in equipment no less than lives, will be astounding.

For the same reason, the war in Ukraine is a sobering preview of the problems the U.S. itself would face in a conflict against Russia or China. If forced to go to war in Eastern Europe or the Western Pacific, Washington would spend down its stockpiles of missiles, precision-guided munitions and other critical capabilities in days or weeks. It would probably suffer severe losses of tanks, planes, ships and other assets that are sophisticated, costly and hard to replace.

During World War I, the offensives of 1914 led to "shell famine" as the European combatants exhausted their arsenals. Get ready for "missile famine" if there is a great-power war.

In the world wars of the last century, America's unmatched manufacturing base ultimately powered it to victory. But today, replenishing the free world's arsenal might not be so easy.

American economic leadership is no longer based primarily on manufacturing. Shortages of machine tools, skilled labor and spare production capacity could slow a wartime rearmament effort. The U.S. can't quickly scale up production of Stinger missiles for Ukraine, for example, because the workforce needed to do so no longer exists.

American stockpiles of key weapons are smaller than one might imagine, partly because of production constraints and partly because most of the Pentagon's roughly \$750 billion budget goes to manpower, health care and things other than bullets and bombs.

Don't bet against the world's leading economy — and all of its democratic allies — in a long war. But don't think that America would effortlessly produce what it needs to win.

The problem isn't insoluble. Greater investments in the defense industrial base and more aggressive purchasing and stockpiling of key munitions can help. The creation of a reserve industrial corps (civilians who have basic peacetime training so they can contribute to wartime production) is worth exploring. Key allies, such as Japan, may be able to help the U.S. surge production in shipbuilding and other areas.

Small wars typically preview what is to come in bigger wars. The Ukraine conflict is showing what it will take to keep the arsenal of democracy equal to the task.

### **30. Seize Russian yachts, jets and Picassos. Then use the money to help Ukraine**

***We've introduced legislation that would give President Joe Biden the authority to seize Russian assets and give increased support to Ukraine***

USA Today Online, Apr. 14 (1922) | Sen. Sheldon Whitehouse (D-RI) and Rep. Tom Malinowski (D-NJ)

The split screen is stomach-turning: In Ukraine, Vladimir Putin's rockets fall on fleeing refugees, missiles gash occupied apartment buildings and hospitals, and civilians huddle in metro stations as bombs fall above.

Outside Ukraine, mega-yachts ferry Russian oligarchs between tropical islands, private jets shuttle them to ski vacations and priceless art adorns the walls of their villas.

Putin's enablers — and even members of his family — live abroad in laundered luxury off the wealth they stole with his permission.

Now imagine those mega-yachts commandeered, the private jets grounded and requisitioned, and the high-priced art whisked off to auction from the seized villas – with the proceeds used to aid the Ukrainian people. That would be a fitting use of the money that built the army besieging their nation.

### *Freeze and seize*

Some nations have already started this work:

Under current law, the United States and our allies can generally “block” or freeze such assets – temporarily denying sanctioned oligarchs and companies their use – but not seize them outright.

We believe an exception should be made for Russia following Putin’s murderous invasion of Ukraine, given the clear evidence that sanctioned oligarchs made their billions thanks to corrupt relationships with the Russian government and the likely massive cost of reconstructing Ukraine when Russia’s armies are beaten back.

It is hard to imagine giving Putin’s cronies their stolen assets back after the harm they helped him cause. And a half-billion-dollar yacht could rebuild a lot of schools, hospitals and apartment buildings in Ukraine.

So with bipartisan support, we have introduced legislation in the House and Senate to give the Biden administration the authority, limited to two years, to seize sanctioned Russians’ assets and to use them to support humanitarian, military and reconstruction aid to Ukraine.

This would give the United States a powerful new tool to punish – or leverage cooperation from – the wealthy and powerful Russians who have supported Putin’s regime while giving Ukrainians a small measure of justice. There are even signs that the European Union and European allies are exploring options to confiscate assets of sanctioned Russian kleptocrats.

Putin and his cronies are nothing special – they just happen to run a big, oil-rich country with a military at their command. We’ve long known, as Sen. John McCain often used to say, that “Putin is a gangster, with an army, running a gas station.”

Yet for far too long, the United States and our European allies have been complicit in the kleptocracy that Putin built. We’ve allowed his cronies the best of both worlds: They steal money at home, where there is no rule of law, and then shelter it in jurisdictions like New York, Paris and London behind rule-of-law protections.

In those wealthy enclaves, kleptocrat money has enriched lawyers, trust fund managers, real estate brokers and art dealers, while driving up costs for everyone else.

### *Congress must act*

That strengthens the moral case for taking the extraordinary measures we propose. Those efforts will be complicated and must be well funded: We should fully fund, for example, the Treasury Department’s Financial Crimes Enforcement Network, which tracks the movement of dirty money around the world. We passed a limited boost in the Ukraine funding package, but FinCEN needs more.

We will also need to coordinate closely with allies to close off sanctuaries for oligarchs and collect the evidence needed to justify asset seizures. The Biden administration has announced a transatlantic, interagency task force to help find and crack down on ill-gotten assets stowed in the West by Russian oligarchs, their families and their stooges. That is a good start and something Congress will need to oversee and expand.

Putin’s Ukraine invasion must result in a decisive, strategic defeat for his regime, its enablers and what they stand for. As Ukraine battles the onslaught, ordinary Ukrainians – and Russians – should see oligarchs’ yachts, jets and Picassos auctioned off. They should see police tape around oligarch villas and penthouse apartments.

These goods and properties should not automatically be returned to their corrupt owners when the crisis is over. The wealth that supported Putin’s regime should be used to rebuild the country he is destroying.

*--Sheldon Whitehouse is a U.S. senator from Rhode Island. U.S. Rep. Tom Malinowski represents New Jersey’s 7th District in the House of Representatives*

RETURN TO TOP

### **31. With the West distracted, China expands**

Washington Post, Apr. 15 (0115), Pg. A21 | Josh Rogin

Over the past few weeks, the world has been understandably transfixed by Russian President Vladimir Putin’s horrific invasion of Ukraine. Meanwhile, though, his close ally Chinese President Xi Jinping has been quietly taking advantage of the West’s distraction by expanding China’s sphere of influence in the South Pacific. If Washington doesn’t wake up to this threat, China’s efforts to dominate the region will gain dangerous and perhaps irreversible momentum.

Officials and experts throughout Asia expressed shock last month when a leaked document emerged showing a draft of a “security cooperation” agreement between China and the Solomon Islands, a small former British colony in the South Pacific that has been independent since 1978. The draft agreement would enable Beijing to send armed police or military personnel, at the request of the Solomon Islands, for a variety of purposes, including to “assist in maintaining social order.” Marked confidential, the agreement would also expand the Chinese military’s ability to send ships and troops to protect Chinese people and projects on the islands.

If you haven’t been paying attention to the Solomon Islands government, led by Beijing-friendly Prime Minister Manasseh Sogavare, you’re like most policymakers in Washington. But if you doubt the islands’ strategic

significance, just look at the map. A Chinese military presence there would put People's Liberation Army troops less than a five-hour flight from the eastern coast of Australia and far closer to U.S. territories than ever before.

China surely hasn't forgotten the role played by the Solomon Islands in World War II, especially during the 1942-43 Battle of Guadalcanal.

"Ensuring that these islands, within striking distance of Australia and occupying critical strategic geography, remain free from Chinese coercion and military presence is a massive strategic imperative for the U.S. and Australia," Alex Gray, director for Oceania and Indo-Pacific Security at the National Security Council during the Trump administration, told me.

Predictably, Beijing says that the agreement is no big deal and is "beyond reproach." But the U.S. and Australian governments have been scrambling to try to stop its completion. Australian officials are engaged in frantic shuttle diplomacy with the Sogavare government. President Biden's top NSC official for Asia, Kurt Campbell, will become the administration's first senior official to visit the Solomon Islands next week, in a regional tour that will include several other stops.

It was Campbell who predicted in January that China would unveil a "strategic surprise" in the Pacific this year. Clearly, the U.S. and Australian governments had some indication that this was coming. Yet neither seems to have done much to try to prevent the Chinese move. Now, experts say, both governments are struggling to catch up to Beijing.

"Reversing momentum, rather than stopping it in the first place, is risky and expensive," said former Australian national security official John Lee, now with the Hudson Institute. "The failure to do more to prevent the deal from even being contemplated means the U.S. and allies will need to spend more resources and regional political capital than they would like."

Biden administration officials maintain that they are, in fact, heavily engaged in the Pacific Islands. Biden spoke to Pacific Island leaders in August, via Zoom. Secretary of State Antony Blinken visited Fiji in February. Last month, Biden appointed Ambassador Joseph Yun as a special envoy to work on completing negotiations to renew U.S. compacts with three other Pacific Island nations. State Department climate envoy John F. Kerry attended a conference in Palau this week.

A senior Biden administration official told me that covid restrictions hampered face-to-face diplomacy until recently, but the official assured me that the Biden team is determined to step up the United States' game in this region. Nevertheless, details of exactly how the Biden administration plans to try to persuade Sogavare to turn away from China are scarce.

"This did not come as a surprise, and this is not the only place in the Pacific or globally where China is extraordinarily active," the official said. "This is but a recent manifestation, and it's probably one of the boldest."

To be sure, the Solomon Islands is only one of many places in the Pacific Islands where China is expanding its influence. Beijing has persuaded two Pacific island countries to drop diplomatic recognition of Taiwan in recent years, including the Solomon Islands. China offers tempting packages of economic, diplomatic and military aid while bribing any and all corrupt leaders in these countries. Rather than reacting case by case, the United States and allied governments need to come to the table with substantive, long-term offers of aid and investment to reassure these Pacific Island nations that they have another option besides betting their future on partnership with Beijing.

Russia is an urgent threat, but China is the more serious long-term competitor, only too happy to exploit our distraction. Xi has global ambitions, which means we must confront his aggression in many places at once. If the Pacific Islands become China's outposts, the region and the world will be a much more dangerous place.

### **32. The battle against ISIS, yesterday's war, still smolders**

Washington Post, Apr. 15 (0115), Pg. A19 | David Ignatius

AL-HOL, Syria -- The Islamic State, which seemed to be extinguished three years ago when its caliphate was crushed, is still smoldering red hot at a refugee camp here and a prison nearby. And the Syrian Kurdish militia that's guarding the facilities says it badly needs help before there's a new eruption.

The battle against ISIS, as the Islamic State is also known, is yesterday's war, and it gets little public attention. But the danger of a resurgence was evident Wednesday when Gen. Michael "Erik" Kurilla, the new head of the U.S. Central Command, toured the two facilities in northeast Syria. He's the first senior military official to inspect either place.

Kurilla traveled to Syria as the final stop on his first trip to the Middle East since becoming commander of U.S. military forces in the region on April 1, and he invited me to come along. He wanted to assess the risks here to U.S. interests, and he came away with a vivid firsthand picture of the continuing problem of containing what's left of ISIS.

Kani Ahmed, the local commander of the Syrian Democratic Forces militia that's securing the al-Hol refugee camp, described to Kurilla a March 28 uprising by Islamic State supporters inside the fences. Fighters attacked with rocket-propelled grenades, AK-47s and pistols that had been smuggled into the facility. As the fighting raged, four people were killed and 10 wounded, according to local news reports.

"This camp is like a time bomb," Ahmed told the visiting Americans. "We don't know when it's going to explode."

The al-Hol camp is a miserable sight: acres of dirty, ragged tents and primitive water and sewage facilities. It currently houses about 56,000 people, roughly 70 percent of them under age 18. Many are families of Islamic State fighters who were killed or captured in the war, and judging by their angry faces inside the wire, they live on rage and dreams of revenge. One threw a rock at Kurilla's armored vehicle as it drove past.

If you wanted to design a breeding ground for future Islamist militants, it would be al-Hol. Nearly 8,000 of the residents came from countries other than Syria or Iraq, but those nations have mostly ignored repatriation requests. "The countries don't want them back, and they're not doing anything to help," said the SDF official who oversees the foreigners, who identified herself only as Amara.

"The world needs to know what's going on here," Kurilla told me after we left the camp. He said the U.S. military is already working to improve security at the camp. He also wants to help the State Department organize an international response that would return families of Islamic State foreign fighters to their home countries - and take some of the burden from the SDF militia.

Kurilla next flew by helicopter to the Hasakah prison, about 40 miles away, where he heard a chilling account of a violent escape there four months ago by several thousand captives, assisted by fighters outside, that left hundreds dead. The eyewitness description was provided by local SDF commanders and U.S. Special Operations advisers who fought in the bloody battle.

The Centcom commander heard the narrative as he gazed from a rooftop at the prison blocks below. The U.S. and Syrian officers explained that on Jan. 20, about 10 ISIS fighters entered the compound in a carefully planned attack, blowing through the walls with two truck bombs and raiding the SDF's armory. They then distributed weapons to some of the roughly 5,000 captives, and about 3,700 escaped.

American troops rushed to help the SDF stop the fleeing detainees. The battle raged for 10 days, as the United States called in Bradley armored vehicles, fighter jets and Apache helicopters to contain the escape. About 3,000 prisoners finally surrendered on Jan. 30, but 421 Islamic State supporters were killed, along with 125 SDF troops, 25 of whom were beheaded, according to one of the American military advisers. About 100 Islamic State fighters got away, whereabouts unknown.

"That's an ISIS army in detention," Kurilla said as he gazed at the prison complex 100 yards away. The spasm of violence by the escapees, including the beheadings and what a U.S. Special Operations adviser here said were other horrific mutilations, is a reminder of what Islamic State fighters might do outside captivity.

The SDF is carrying the burden of running a total of 28 prisons, of which Hasakah is the largest, that house about 12,000 captured Islamic State fighters and supporters. "What's needed is repatriation en masse," the Special Operations adviser told me. But as with the Islamic State families at al-Hol, other nations have mostly shrugged their shoulders at repatriation requests.

“The SDF needs very big help,” Mazlum Adli, the Syrian Kurdish group’s top leader, told me in a brief interview later, after he had met with Kurilla. The commander said he needed more training and equipment, and that the support he was getting now was only about 20 percent of what he needed.

Kurilla saw another threat to U.S. forces in Syria during a separate visit Monday to a joint American-SDF base called Green Village, near Deir El-Zoor. The base was hit the night of April 7 by two explosions, and four U.S. soldiers were wounded. The U.S. military initially described the strike as a rocket attack, and analysts suspected it came from an Iranian-backed militia, posing a question for Biden administration officials back in Washington of whether and how to retaliate.

But U.S. commanders at Green Village told Kurilla on Monday that after examining video recordings, they now believed that the blasts were caused by explosive devices planted by someone - affiliation, so far, unknown - who entered the base.

Iran and its proxies remain a threat. So does the Islamic State. As much as we would like to imagine otherwise, wars in the Middle East aren’t over even when they’re over.

### **33. As Silicon Valley Tries to Enlist, the Pentagon Strangles Innovation**

WarOnTheRocks.com, Apr. 15 (0345) | Steve Blank

Looking at a satellite image of Ukraine online, I realized it was from Capella Space — one of our Hacking for Defense student teams who now have seven satellites in orbit. Hacking for Defense is a university course I and others created to connect students interested in learning lean innovation methods to solve the toughest national-security challenges.

They’re not the only startup in this fight. An entire wave of new startups and scaleups are providing satellite imagery and analysis, satellite communications, and unmanned aerial vehicles supporting Ukraine’s struggle.

For decades, satellites that took detailed pictures of Earth were only available to governments and the high-resolution images were classified. Today, commercial companies have their own satellites providing unclassified imagery. The government buys and distributes commercial images from startups to supplement their own and shares them with Ukraine as part of a broader intelligence-sharing arrangement that the head of Defense Intelligence Agency described as “revolutionary.”

At the onset of the war in Ukraine, Russia launched a cyber attack on Viasat’s KA-SAT satellite, which supplies internet across Europe, including to Ukraine. In response to a (tweeted) request from Ukraine’s vice prime minister, Elon Musk’s Starlink satellite company shipped thousands of its satellite dishes and got Ukraine back on the internet. Other startups are providing portable cell towers — both “backpackable” and fixed. When these connect via satellite link, they can provide phone service and Wi-Fi.

Drone technology was initially only available to national governments and militaries. In Ukraine, drones from startups are being used as automated delivery vehicles for resupply, and for tactical reconnaissance to discover where threats are.

Equipment from large military contractors and other countries are also part of the effort. However, the equipment listed above is available commercially at dramatically cheaper prices than what's offered by the large existing defense contractors, and developed and delivered in a fraction of the time.

While we should celebrate the organizations that have created and fielded these systems, they illustrate much larger issues in the Department of Defense.

America's national security is inexorably intertwined with commercial technology, such as drones, AI, machine learning, autonomy, biotech, cyber, quantum, high-performance computing, and commercial access to space.

Most of these companies were founded or funded by the Defense Department's orphan-child — the Defense Innovation Unit. Established in Silicon Valley in 2015 by then-Secretary of Defense Ash Carter, the organization has offices in Austin, Boston, Chicago, and Washington, D.C. This is the one defense organization with the staffing and mandate to go head-to-head with any startup or scaleup. The Defense Innovation Unit is America's most promising effort to bridge the divide between pressing national security requirements and the commercial technology needed to address them with speed and urgency. This capability is exactly what the Department of Defense needs. It accelerates the connection of commercial technology to the military. Just as importantly, the Defense Innovation Unit helps the department learn to innovate at the same speed as tech-driven companies.

China views combining its military-civilian sectors as a national effort to develop a "world-class" military and become a world leader in science and technology. A key part of Beijing's strategy includes developing and acquiring advanced dual-use technology.

Given that the Defense Innovation Unit is the Department of Defense's most successful organization in developing and acquiring advanced dual-use technology, one would expect the department to scale the Defense Innovation Unit. The threats are too imminent and stakes too high not to. So what happened?

Congress cut the budget by 20 percent.

Why? The defense ecosystem is at a turning point. Defense innovation threatens entrenched interests. Given that the Pentagon budget is essentially fixed, creating new vendors and new national champions of the next generation of defense technologies becomes a zero-sum game.

The traditional suppliers of defense tools, technologies, and weapons — the prime contractors and federal labs — are no longer the leaders in next-generation technologies such as drones, AI, machine learning, autonomy, biotech,

cyber, quantum, high-performance computing, and commercial access to space. They know this and know that weapons that can be built at a fraction of the cost and upgraded via software will destroy their existing business models.

Venture capital and startups have spent 50 years institutionalizing the rapid delivery of disruptive innovation. In the United States, private investors spend \$300 billion a year to fund new ventures that can move with the speed and urgency that the Department of Defense now requires. The Pentagon's relationship with startups and commercial companies, already an arms-length one, is hindered by a profound lack of understanding about how the commercial innovation ecosystem works and its failure of imagination about what it could do.

The department has world-class people and organization for a world that no longer exists.

A radical reinvention of America's civil-military innovation relationship is necessary if it wants to keep abreast of its adversaries. This would use Department of Defense funding, private capital, dual-use startups, existing prime contractors and federal labs in a new configuration along the following lines.

Create a new defense ecosystem encompassing startups and mid-sized companies at the bleeding edge, prime contractors as integrators of advanced technology, federally funded research-and-development centers refocused on areas not covered by commercial tech (nuclear and hypersonics come to mind). Make it permanent by creating innovation doctrine and policy.

Create new national champions in dual-use commercial tech areas such as AI, machine learning, quantum, space, drones, autonomy, biotech, underwater vehicles, shipyards, etc., that are not the traditional vendors. Do this by picking winners. Don't give out door prizes. Contracts should be larger than \$100 million so high-quality venture-funded companies will play.

Integrate and create incentives for the venture-capital and private-equity ecosystem to invest at scale. Ask them what it would take to invest at scale — one example might be to create massive tax holidays and incentives — to get investment dollars in technology areas of national interest.

Recruit and develop leaders across the Defense Department prepared to meet contemporary threats and reorganize around this new innovation ecosystem. The threats, speed of change, and technologies the United States faces in this century will require radically different mindsets and approaches than those it faced in the 20th century. Today's Department of Defense leaders of consequential organizations must think and act differently than their predecessors, even their predecessors from only a decade ago. Leaders at every level now need to understand the commercial ecosystem and how to move with the speed and urgency that China is setting.

Buy where you can; build where you must. Congress mandated that the Department of Defense should use commercial off-the-shelf technology wherever possible, but the department fails to do this. (See this industry letter to the Department of Defense for more details.)

Acquire at speed. Today, the average Department of Defense major acquisition program takes anywhere from nine to 26 years to get a weapon in the hands of a warfighter. The department needs a requirements, budgeting, and acquisition process that operates at commercial speed (18 months or less), which is 10 times faster than its current procurement cycles. Instead of writing requirements, the department should rapidly assess solutions and engage warfighters in assessing and prototyping commercial solutions.

Coordinate with allies. Expand the National Security Innovation Base to an Allied Security Innovation Base. Source commercial technology from allies.

Change is hard — especially on the people and organizations inside the Department of Defense who've spent years operating with one mindset only to be asked to pivot to a new one. But America's adversaries have exploited the boundaries and borders between its defense and commercial and economic interests. Current approaches both in the past and under the current administration to innovation across the government are piecemeal, incremental, increasingly less relevant, and insufficient. It's a politically impossible problem for the Defense Department to solve alone. Changes at this scale will require congressional action: hard to imagine in the polarized political environment. But not impossible.

These are not problems of technology. It takes imagination, vision, and the willingness to confront the status quo. So far, all are currently lacking. But if more can be found, we may see more successes like those seen in Ukraine.

### **34. The Cyber-Escalation Fallacy**

#### ***What the War in Ukraine Reveals About State-Backed Hacking***

Foreign Affairs Online, Apr. 15 (0107) | Erica D. Lonergan

During a Senate Intelligence Committee hearing in March, Senator Angus King, an independent from Maine, pressed General Paul Nakasone, the head of U.S. Cyber Command and director of the National Security Agency, about the lack of significant cyber-operations in Russia's war in Ukraine. After all, Russia has long been known for targeting Western countries, as well as Ukraine itself, with cyberattacks. Echoing the surprise of many Western observers, King said, "I expected to see the grid go down, communications too, and that hasn't happened." Indeed, although President Joe Biden and members of his administration have also warned of potential Russian cyberattacks against the United States, there were remarkably few signs of such activity during the first six weeks of the war.

That is not to say that cyber-activity has been entirely absent. Proxy cyber-groups and hackers have mobilized on both sides, ranging from Ukraine's 400,000-strong "IT Army" to Russia's Conti ransomware group. Sandworm, an outfit linked to Russian military intelligence, also has a long record of cyberattacks against Ukraine.

Yet since the war began, such operations have mostly been limited to low-cost, disruptive incidents rather than large-scale attacks against critical civilian and military infrastructure. Two potential exceptions only underscore the relatively limited role of cyber-operations. There is some evidence that at the start of the war Russian-linked actors conducted a cyberattack against Viasat, a U.S.-based Internet company that provides satellite Internet to the Ukrainian military and to customers in Europe. But the impact was temporary and, more important, did not meaningfully affect the Ukrainian military's ability to communicate. Additionally, Ukrainian officials recently announced that, in early April, the Sandworm group attempted, but failed, to carry out a cyberattack against Ukraine's power grid. While the hackers appeared to have gained access to a company that delivers power to two million Ukrainians, they were thwarted by effective defenses before being able to cause any damage or disruption.

In fact, the negligible role of cyberattacks in the Ukraine conflict should come as no surprise. Through war simulations, statistical analyses, and other kinds of studies, scholars have found little evidence that cyber-operations provide effective forms of coercion or that they cause escalation to actual military conflict. That is because for all its potential to disrupt companies, hospitals, and utility grids during peacetime, cyberpower is much harder to use against targets of strategic significance or to achieve outcomes with decisive impacts, either on the battlefield or during crises short of war. In failing to recognize this, U.S. officials and policymakers are approaching the use of cyberpower in a way that may be doing more harm than good—treating cyber-operations like any other weapon of war rather than as a nonlethal instrument of statecraft and, in the process, overlooking the considerable opportunities as well as risks they present.

## THE MYTH OF CYBER-ESCALATION

Much of the current understanding in Washington about the role of cyber-operations in conflict is built on long-standing but false assumptions about cyberspace. Many scholars have asserted that cyber-operations could easily lead to military escalation, up to and including the use of nuclear weapons. Jason Healey and Robert Jervis, for example, expressing a widely held view, have argued that an incident that takes place in cyberspace, "might cross the threshold into armed conflict either through a sense of impunity or through miscalculation or mistake." Policymakers have also long believed that cyberspace poses grave perils. In 2012, Secretary of Defense Leon Panetta warned of an impending "cyber-Pearl Harbor," in which adversaries could take down critical U.S. infrastructure through cyberattacks. Nearly a decade later, FBI Director Christopher Wray compared the threat from ransomware—when actors hold a target hostage by encrypting data and demanding a ransom payment in return for decrypting it—to the 9/11 attacks. And as recently as December 2021, Secretary of Defense Lloyd Austin noted that in cyberspace, "norms of behavior aren't well-established and the risks of escalation and miscalculation are high."

Seemingly buttressing these claims has been a long record of cyber-operations by hostile governments. In recent years, states ranging from Russia and China to Iran and North Korea have used cyberspace to conduct large-scale espionage, inflict significant economic damage, and undermine democratic institutions. In January 2021, for example, attackers linked to the Chinese government were able to breach Microsoft's Exchange email servers, giving them access to communications and other private information from companies and governments, and may have allowed other malicious actors to conduct ransomware attacks. That breach followed on the heels of a Russian intrusion against the software vendor SolarWinds, in which hackers were able to access a huge quantity of sensitive government and corporate data—an espionage treasure trove. Cyberattacks have also inflicted significant economic costs. The NotPetya attack affected critical infrastructure around the world—ranging from logistics and energy to finance and government—causing upward of \$10 billion in damage.

But the assumption that cyber-operations play a central role in either provoking or extending war is wrong. Hundreds of cyber-incidents have occurred between rivals with long histories of tension or even conflict, but none has ever triggered an escalation to war. North Korea, for example, has conducted major cyberattacks against South Korea on at least four different occasions, including the “Ten Days of Rain” denial of service attack in which a network is flooded with an overwhelming number of requests, becoming temporarily inaccessible to users against South Korean government websites, financial institutions, and critical infrastructure in 2011 and the “Dark Seoul” attack in 2013, which disrupted service across the country's financial and media sectors.

It would be reasonable to expect that these operations might escalate the situation on the Korean Peninsula, especially because North Korea's war plans against South Korea reportedly involve cyber-operations. Yet that is not what happened. Instead, in each case, the South Korean response was minimal and limited to either direct, official attribution to North Korea by government officials or more indirect public suggestions that Pyongyang was likely behind the attacks.

Similarly, although the United States reserves the right to respond to cyberattacks in any way it sees fit, including with military force, it has until now relied on economic sanctions, indictments, diplomatic actions, and some reported instances of tit-for-tat cyber-responses. For example, following Russia's interference in the 2016 U.S. presidential election, the Obama administration expelled 35 Russian diplomats and shuttered two facilities said to be hubs for Russian espionage. The Treasury Department also levied economic sanctions against Russian officials. Yet according to media reports, the administration ultimately rejected plans to conduct retaliatory cyber-operations against Russia. And although the United States did use its own cyber-operations to respond to Russian attacks during the 2018 midterm elections, it limited itself to temporarily disrupting the Internet Research Agency, a Russian troll farm.

These measured responses are not unusual. Despite decades of malicious behavior in cyberspace and no matter the level of destruction cyberattacks have always been contained below the level of armed conflict. Indeed, researchers have found that major adversarial powers across the world have routinely observed a “firebreak” between cyberattacks and conventional military operations: a mutually understood line that distinguishes strategic interactions above and below it, similar to the threshold that exists for the employment of nuclear weapons.

But it is not just that cyber-operations do not lead to conflict. Cyberattacks can also be useful ways to project power in situations in which armed conflict is expressly being avoided. This is why Iran, for example, might find cyberattacks against the United States, including the 2012–13 denial of service attacks it conducted against U.S. financial institutions, appealing. Since Iran likely prefers to avoid a direct military confrontation with the United States, cyberattacks provide a way to retaliate for perceived grievances, such as U.S. economic sanctions in response to Iran’s nuclear program, without triggering the kind of escalation that would put the two countries on a path to war.

## THE ADVANTAGE OF AMBIGUITY

In addition to the ways they are used, cyber-operations also have two general qualities that tend to distinguish them from conventional military operations. First, they typically have limited, transient impact—especially when compared with conventional military action. As the Hoover Institute fellow Jacquelyn Schneider recently told *The New Yorker*, “If you’re already at a stage in a conflict where you’re willing to drop bombs, you’re going to drop bombs.” Unlike traditional military hardware, cyberweapons are virtual: even at their most destructive, they rarely have effects in the physical world. In the extraordinary instances when they do—such as the Stuxnet cyberattack, which caused the centrifuges used to enrich uranium in Natanz, Iran, to speed up or slow down—cyber-operations do not inflict the kind of damage that can occur in even a minor precision missile strike. And when states have launched cyberattacks against civilian infrastructure, such as Russia’s 2015 hit on Ukraine’s power grid, the impact has been short-lived. To date, cyberattacks have never caused direct physical harm; the only known indirect death associated with a cyberattack occurred in 2020, when a German patient with a life-threatening condition died as a result of a treatment interruption caused by a ransomware attack on a hospital’s servers.

In practice, governments themselves have also recognized the contrasting impacts of cyberattacks and conventional military attacks. Consider the incident between Iran and the United States that occurred in the summer of 2019: according to reports in the U.S. media, when Iran attacked oil tankers in the region and downed a U.S. drone, the Trump administration chose to respond in cyberspace, allegedly by hacking Iranian computer systems to degrade their ability to conduct further attacks against oil tankers. What stands out about this case is that there was a credible military option on the table that was subsequently revoked: President Donald Trump called off plans to conduct military strikes against Iranian targets. At the time, Trump tweeted that he changed his mind after learning of the potential for civilian casualties. By implication, a cyber-operation may have been seen as less risky precisely because it was unlikely to cause loss of life or even major destruction.

Second, in contrast to most military strikes, cyber-operations tend to be shrouded in secrecy and come with plausible deniability. Analysts have argued that uncertainty about responsibility makes interactions in cyberspace perilous and undermines deterrence. Cloaked in anonymity, so the logic goes, malicious actors can provoke conflict while remaining in the shadows. It is true that false-flag cyberattacks are common. For example, when a group linked to the Chinese government conducted cyber-operations against Israel in 2019 and 2020, it

masqueraded as Iranian, presumably to confuse Israeli attribution efforts. Yet secrecy need not have negative implications: it can provide opportunities for states to maneuver in crises without the drawbacks that more conventional uses of hard power might have, such as exacerbating domestic political tensions. It can also offer a way to explore the extent to which the other side is willing to negotiate or resolve the crisis: ambiguity creates breathing space.

For example, when the United States withdrew from the Iran nuclear deal in 2018, experts worried that Iran might retaliate, perhaps by attacking U.S. personnel or U.S. interests in the Middle East. Instead, Iran appeared to respond with increased cyber-activity that was ambiguous and not escalatory. Although the Iranian cyber-operations were noted within a day of the U.S. announcement, they were not the kind of massive attack that many commentators had anticipated; they mostly appeared to be attempts to conduct reconnaissance and probe for vulnerabilities. If Iran intended for this activity to be uncovered, it would largely serve symbolic purposes—communicating Iran’s presence to the United States.

Put simply, cyber-operations by their very nature are designed to avoid war. They can act as a less costly alternative to conflict because they are ambiguous, rarely break things, and don’t kill people. By continuing to depict cyberspace as an escalatory form of warfare itself, policymakers risk overstating the role of cyber-operations in armed conflict and missing their true importance.

## TOOLS NOT WEAPONS

The recognition that cyber-operations are unlikely to lead to military escalation—and that they play at most a supporting rather than decisive role in actual armed conflicts—has direct consequences for U.S. policy and strategy. For one thing, it means that the United States may have greater room to use cyberspace to achieve objectives without precipitating new crises or exacerbating existing ones. Since 2018, for example, the U.S. Defense Department has treated cyberspace as an arena in which the military can operate more routinely and proactively rather than wait to respond to an adversary’s activity. According to the Pentagon, Washington needs to “defend forward to disrupt or halt malicious cyber activity at its source.” This approach encompasses maneuvering on networks controlled by U.S. adversaries or third parties and even conducting offensive cyber-operations.

At the time that the 2018 cyber strategy was released, many experts expressed alarm that it could provoke military escalation. Adding to the concerns, in the 2019 National Defense Authorization Act, Congress authorized the secretary of defense to conduct cyber-operations as a traditional military activity, which meant that cyber-operations would no longer be treated as a form of covert action requiring a presidential finding to be approved. Yet in the four years since the defend forward concept was implemented, the escalation that many feared has not materialized. This should give some assurances to policymakers that the United States can continue to conduct offensive cyber-operations without risking a wider conflict.

In 2021, for example, U.S. Cyber Command, working with a partner government, conducted a cyber-operation to limit the ability of the Russian-linked criminal group REvil to conduct ransomware attacks. Several months later, U.S. officials acknowledged that the military had “imposed costs” against ransomware groups. There is also some evidence that efforts to counter Russian cyber-activity during the current Ukraine crisis may have blunted a more effective Russian cyberoffensive, with Nakasone alluding to work done by the Ukrainians and others to hinder Moscow’s plans.

But just because the Pentagon’s plan has not led to escalation does not mean it is tool the U.S. can use to solve all of the cyber challenges it faces. For the very same reasons that offensive cyber-operations have not led to escalation, their constraints should cast doubt on the notion that the United States can use them to coerce adversaries into changing their behavior or punish them by inflicting high costs.

Second, the reality that cyber-operations are used by states in many different ways means that policymakers need to develop a more nuanced approach for responding to cyberthreats. Because cyber-operations are consistently seen as representing an existential threat to the United States, Washington has tended to deal with cyber-incidents of contrasting scope and scale with the same policy tools. For instance, senior U.S. officials described both Russia’s 2016 election interference and 2021 SolarWinds operation as acts of war. But the first was a cyber-enabled information operation and the second was in fact a large-scale cyber-espionage campaign and neither resembled open war in any conventional sense. Moreover, the policy responses in both of these cases (as in many other cyber-incidents) were similar: a combination of public attribution, indictments, and sanctions. Instead of responding with inflammatory language and standard forms of retaliation, policymakers should consider how to employ cybertools and non-cybertools in ways that are tailored to specific incidents, taking into account the extent and gravity of a given operation. Responses can also be proportionate without being symmetrical. Rather than responding in kind, the United States should apply varying and more creative approaches that reflect differences in adversaries’ centers of gravity. What is important to Beijing and therefore what may motivate its behavior is different from what is important to Moscow, Tehran, and so on.

A one-size-fits-all approach to adversary cyber-operations may raise particular problems in the Ukraine conflict. Anticipating potential Russian cyberattacks against member states, NATO leaders have reaffirmed that Article 5, the treaty’s collective defense clause, applies to cyberspace, but they have also expressed ambiguity about what specific operations might trigger it. A lack of clarity about how thresholds and responses are defined risks undermining the credibility of this pledge and the effectiveness of NATO’s overall cyberstrategy.

A third lesson of cyber-operations over the past decade is that U.S. officials should adopt a more flexible mindset in their response to them. Rather than focusing on retaliatory action, the United States should devote more resources to enhancing resilience the ability to absorb and rapidly recover from disruptive occurrences. Embracing this type of approach means accepting that cyberattacks are likely to take place and, more important, that the overwhelming majority of them will not have cataclysmic effects. Over the past several years, the United States has improved its resilience to such attacks, expanding the agencies responsible for working with and maintaining critical infrastructure, such as the Cybersecurity and Infrastructure Security Agency. The U.S.

government has also created the Office of the National Cyber Director to harmonize its cybersecurity efforts and collaborate with the private sector. But these entities are still relatively new, and efforts to implement meaningful regulation of the private sector to promote resilience still have a long way to go.

#### A CYBER ESCAPE VALVE?

Just because cyber-operations have not yet caused escalation does not mean that they will never do so. If conflicts such as the war in Ukraine lead to greater instability in the international system and increased great-power competition, the risks of cyber-escalation may grow. The opposite is also possible, however: in a more unstable world, cyber-operations may provide an important outlet for recurring tensions, given their lack of physical violence and relatively limited effects. As international politics become more dangerous, cyberspace can offer a way for states to respond to perceived aggressions without causing physical destruction or loss of life, thus providing a kind of stability in itself.

Ultimately, escalation is in the eye of the beholder—it depends as much on the target’s perception of an event as on the perpetrator’s intent or the reality of the strategic context. Therefore, a further priority of U.S. policymakers should be to improve their understanding of how adversaries interpret Washington’s activities in cyberspace and leverage that knowledge to conduct cyber-operations that minimize the risk of escalation. During a crisis, for instance, the United States may want to avoid conducting cyber-operations in a manner that an adversary might perceive as a precursor to conflict or to a military strike, especially if that is not the intent. If there is a pressing strategic or military imperative to conduct these types of operations, they should occur in tandem with efforts to communicate their purpose to avoid misunderstandings.

For too long, policymakers have drawn the wrong lessons from cyber-operations. The absence of escalation across decades of strategic interaction in cyberspace—a record that has only been reinforced in the conflict in Ukraine—should cause policymakers to reevaluate long-standing assumptions about the cyber-domain. In doing so, they may be able to see how cyber-actions are but one of a number of strategic tools that, properly understood, can limit the risk of conflict as much as increase it. Of course, the potential for cyberattacks to temporarily paralyze large information networks or even whole sectors of an economy should not be discounted. But in a world in which armed conflict continues to destroy entire cities and wreak terrible human costs, both civilian and military, cyber-operations should be regarded less as another form of hard power than as a way for states to pursue strategic goals by other means.

## SUMMARY

CIA Director William Burns said that Russian President Vladimir Putin's "desperation" to achieve a semblance of victory in Ukraine might tempt him to order the use of "tactical nuclear weapons or low-yield nuclear weapons," while cautioning that he had seen no "practical evidence" that would suggest such a move was imminent, according to the *New York Times*. Separately, the People's Liberation Army Eastern Theatre Command on Friday said that it sent frigates, bombers and fighter jets to the East China Sea and the area around Taiwan for military drills as a U.S. Congressional delegation visited Taipei, *Reuters* reported. Also of note, Japan's Maritime Self-Defense Force announced on Friday that U.S. and Japanese destroyers equipped with the Aegis Ballistic Missile Defense System conducted a joint exercise earlier this week in the Sea of Japan aimed at enhancing cooperation in shooting down ballistic missiles, according to *Kyodo News*.

## TWEETS

"North Korean soldiers continued parade training at a military base in Pyongyang on Friday, satellite imagery shows, suggesting the DPRK did not hold an overnight military parade. It is unclear when the expected parade will take place," according to a tweet from *NK News*. Separately, *BBC News* tweeted: "Russian warship *Moskva* has sunk, state media says, a day after it was reported damaged by fire or a Ukrainian missile strike." And Under Secretary of the Air Force Gina Ortiz Jones wrote: "There is no integrated deterrence without strategic deterrence, and the #Strikers at @TeamBarksdale are getting it done. With modernization efforts like the B-21 & Sentinel coming online, it's an exciting time to be at @AFGlobalStrike."

## Table of Contents

### TOP STORIES

#### **1. Putin May Be Tempted to Use Small Nuclear Weapon, C.I.A. Chief Says**

*New York Times*, Apr. 15, Pg. A8 | David E. Sanger and Julian E. Barnes

The director of the C.I.A. said on Thursday that "potential desperation" to extract the semblance of a victory in Ukraine could tempt President Vladimir V. Putin of Russia to order the use of a tactical or low-yield nuclear weapon, publicly discussing for the first time a concern that has coursed through the White House during seven weeks of conflict.

#### **2. China holds drills around Taiwan as U.S. lawmakers visit**

*Reuters*, Apr. 15 | Ben Blanchard, Yimou Lee, Yew Lun Tian and Tony Munroe

China said it conducted military drills around Taiwan on Friday as a U.S. Congressional delegation visited the island in a show of support to a fellow democracy, with Beijing blaming the lawmakers for raising tensions with their "provocative" trip.

**3. Japan, U.S. conduct joint Aegis destroyer drill amid North Korea threat**

*Kyodo News (Japan), Apr. 15 | Not Attributed*

Japanese and U.S. destroyers equipped with the Aegis missile interceptor system conducted a joint exercise earlier this week in the Sea of Japan, the Maritime Self-Defense Force said Friday, in a fresh show of force as North Korea's nuclear and missile threat grows.

**RUSSIA**

**4. Russian Flagship Sinks in Black Sea; E.U. Could Ban Oil**

*New York Times, Apr. 15, Pg. A1 | Matina Stevis-Gridneff and Richard Pérez-Peña*

Russia's faltering war against Ukraine suffered a pair of setbacks Thursday when the flagship of Russia's Black Sea fleet sank after a catastrophic explosion and fire, as the European Union moved closer to an embargo on Russian oil imports.

**5. Moskva's loss is a major, if symbolic, setback for Russia**

*Washington Post, Apr. 15, Pg. A12 | Dan Lamothe, Claire Parker, Andrew Jeong, Reis Thebault and Maite Fernández Simon*

The flagship of Russia's Black Sea fleet sank after an attack from Ukrainian forces triggered a "significant explosion" as the vessel floated off the coast of Ukraine, U.S. officials said Thursday, with Moscow offering a competing claim about the cause of the destruction.

**6. Russia warns U.S. to stop arming Ukraine**

*Washington Post Online, Apr. 14 | Karen DeYoung*

Russia this week sent a formal diplomatic note to the United States warning that U.S. and NATO shipments of the "most sensitive" weapons systems to Ukraine were "adding fuel" to the conflict there and could bring "unpredictable consequences."

**7. Soviet-Era Missiles Now Guard Ukraine's Skies**

*New York Times, Apr. 15, Pg. A1 | Andrew Higgins*

Driving back to his village near the Ukrainian border last Thursday, the mayor had to stop to let a train pass, and assumed he wouldn't have to wait long. But the flatbed wagons, stacked high with military equipment, just kept coming. He waited for nearly half an hour. "It was a very long train, much longer than usual," recalled Mikolas Csoma, the mayor of Dobra, a previously sleepy village in eastern Slovakia that, over the past month, has become a key artery funneling weapons and ammunition into Ukraine by rail from the West. The train that delayed Mr. Csoma's drive home was not only unusually long but also signaled a singular escalation in Western efforts to help Ukraine defend itself. It carried an air defense system made up of 48 surface-to-air missiles, four launchers and radars to guide the rockets to their targets, which in Ukraine means Russian warplanes and missiles.

**8. Russia Warns It Could Station Nuclear Forces in Europe if Finland, Sweden Join NATO**

*Wall Street Journal Online, Apr. 14 | Bojan Pancevski and Georgi Kantchev*

Russia warned on Thursday that it could station nuclear forces in and around a Russian exclave in Northern Europe and bolster its military presence there if Finland and Sweden join the NATO alliance. Dmitry Medvedev, deputy chairman of Russia's Security Council, said Thursday that Russia would have to bolster its defenses in Kaliningrad—a Russian exclave wedged between Lithuania and Poland—as well as in the Baltic Sea, if the two countries joined the alliance. Mr. Medvedev's comments were echoed by the Kremlin on Thursday.

**9. Russia's latest nuclear threat rings hollow in Baltic states**

*Washington Examiner Online, Apr. 14 | Joel Gehrke*

Russia threatened to deploy nuclear weapons near the Baltic Sea if Finland and Sweden apply to join NATO, but eastern flank allies regard the threat as a laughable effort to intimidate the Nordic states. "It's just rhetoric, because they have nukes in Kaliningrad already," a senior European official said. "It's just meant for the public, actually, to frighten the public and parliamentarians in Sweden and Finland as well. But they shouldn't be stupid."

**10. The World's Most Powerful Nuclear Missile Is a Russian ICBM Nicknamed 'Satan'**

*Military.com, Apr. 14 | Blake Stilwell*

In the late 1960s, the Soviet Union jumped ahead of the United States' first strike capability in a big way. The latest version of the R-36 intercontinental ballistic missile (called SS-18 by NATO) could hit anywhere in the U.S. with at least 10 18-25 megaton nuclear warheads.

## EUROPE

**11. Gibraltar port call offers British a glimpse of U.S. submarine**

*Stars and Stripes Online, Apr. 14 | Alison Bath*

The USS Georgia, an Ohio-class ballistic missile submarine, docked at port in Gibraltar this week as part of an ongoing effort to enhance relations with the United Kingdom, Navy officials said.

## CHINA

**12. Panel: China Planning a 'Go Big, Go Early' Strategy Against Taiwan**

*U.S. Naval Institute News, Apr. 14 | John Grady*

While it's unclear what lessons Chinese military planners are learning from Russia's invasion of Ukraine, they learned to "go big and go early" from America's quick victory in the first Gulf War, a panel of defense analysts agreed Thursday. It's a strategy the Chinese could use against Taiwan.

**13. China must 'pay price' for Russia backing, says US senator in Taiwan**

*Agence France-Presse, Apr. 15 | Not Attributed*

China must pay a greater price for backing Russia's invasion of Ukraine, a senior United States senator said Friday, during a trip to Taiwan in which American lawmakers vowed that Washington would not abandon the island.

**14. Pentagon warns China-Solomons security pact could be destabilizing**

*Kyodo News (Japan), Apr. 14 | Not Attributed*

The U.S. Defense Department on Thursday expressed concern over a possible security pact between China and the Solomon Islands, saying it leaves the door open for deployment of Chinese military forces to the Pacific nation.

## KOREAN PENINSULA

**15. North Korea to Celebrate Its Biggest Holiday, Though It Might Not Bring Out the Big Guns**

*Wall Street Journal Online, Apr. 15 | Dasl Yoon*

North Korea is preparing for major celebrations tied to its biggest national holiday on Friday, with Kim Jong Un looking to boost morale during a time of economic hardship and project outward strength following a spree of missile tests.

**16. South Korea's president-elect unveils foreign policy goals**

*Washington Post, Apr. 15, Pg. A7 | Michelle Ye Hee Lee*

South Korea in recent years has been a passive player on the global stage even as its economic and cultural influence ballooned, remaining wary of aggressive neighbors North Korea and China. The country's conservative president-elect vows to change that. South Korea must step up its foreign policy commensurate with its economic and cultural status and become a stronger ally to the United States, he told The Washington Post in his first interview as president-elect.

**17. North Korean provocations likely to continue for months – Jake Sullivan**

*Yonhap News Agency (South Korea), Apr. 14 | Byun Duk-kun*

North Korea is currently in a provocation cycle that may last for weeks or even months, U.S. National Security Advisor Jake Sullivan said Thursday.

**18. U.S. special representative for North Korea to visit Seoul to discuss missile launches**

*Reuters, Apr. 15 | Josh Smith*

The U.S. envoy for North Korea will visit Seoul next week for meetings with South Korean counterparts to discuss the international response to the North's recent intercontinental ballistic missiles (ICBM) launches, the State Department said.

## IRAN

**19. Iran starts production at centrifuge component workshop**

*Agence France-Presse, Apr. 14 | Not Attributed*

Iran has started making components for machines used to enrich uranium at a new workshop in Natanz, the country's main nuclear site, the UN atomic watchdog said Thursday.

## MIDEAST

**20. Israel Successfully Tests New Laser Missile Defense System**

*Associated Press, Apr. 14 | Laurie Kellman*

Israel's new laser missile-defense system has successfully intercepted mortars, rockets and anti-tank missiles in recent tests, Israeli leaders said Thursday. The Israeli-made laser system, known as the "Iron Beam," is designed to complement a series of aerial defense systems, including the more costly rocket-intercepting Iron Dome.

## AIR FORCE

**21. Air Force's nuclear modernization bill is cramping fighter jet procurement**

*BreakingDefense.com, Apr. 14 | Valerie Insinna*

With two major nuclear programs ramping up, the Air Force had to make hard choices on fighter procurement in fiscal 2023, the Air Force's top officer said.

**22. Simulator will ease training of 'Doomsday' planes' crews**

*Omaha World-Herald, Apr. 15, Pg. A1 | Steve Liewer*

An Air Force pilot accelerates the E-4B Nightwatch jumbo jet down Offutt Air Force Base's single runway, following the bend in the Missouri River as it soars into a blue Midwest sky. Once at altitude, the pilot lines up with the boom of a KC-135 aerial tanker, slurping up thousands of gallons of fuel to power a long training mission.

**23. 914th Maintenance group wins AFRC 2021 Maintenance Effectiveness Award**

*914th Air Refueling Wing, Apr. 14 | Peter Borys*

The Air Force Reserve Command Maintenance Effectiveness Award Category 1 – Small Aircraft Maintenance (25 to 300 authorized personnel) was awarded to the 914th Maintenance Group recently for the most successfully managed maintenance resources to provide safe and serviceable equipment for sustained use in peacetime and wartime.

**NAVY**

**24. In electric-powered laser test, Navy shoots down cruise missile analog**

*BreakingDefense.com, Apr. 14 | Justin Katz*

The Navy's primary research and development agency successfully tested an all-electric, high-energy laser, shooting down "a target representing a subsonic cruise missile in flight," the Pentagon announced Wednesday.

**COMMENTARY**

**25. Obsession on nuclear weapons and casually thinking the unthinkable?**

*Washington Times Online, Apr. 14 | Victor Davis Hanson*

Americans, like the planet's other 7.5 billion people, are not prone to talk or think much about nuclear weapons. Of course, some of us are old enough to remember how "mutually assured destruction," or MAD, was supposed to ensure the general peace.

**26. Arming for the Next Fight in Ukraine**

*Wall Street Journal, Apr. 15, Pg. A14 | Editorial*

Ukraine won the battle of Kyiv in heroic fashion, but the war is set to enter a bloody new phase as Vladimir Putin prepares an offensive in the east. The question is whether President Biden will summon the mettle to make sure America's friends win.

**27. Will the Russo-Ukrainian War Provoke Nuclear Proliferation in Asia?**

*National Interest Online, Apr. 14 | Andy Cichon*

Following Beijing's announcement that Chinese-Russian relations had "no limits," China's backing of Russia's 2022 invasion of Ukraine has subsequently created an existential threat to Japan, South Korea, and Taiwan. The invasion violated an agreement that exchanged Ukraine's nuclear weapons for security assurances and undermined U.S. policy and credibility with other nations with similar formal or informal U.S. assurances. As a result, Japan, South Korea, and Taiwan now question the wisdom of relying on U.S. security assurances instead of their own nuclear deterrent.

**28. With the West distracted, China expands**

*Washington Post, Apr. 15, Pg. A21 | Josh Rogin*

Over the past few weeks, the world has been understandably transfixed by Russian President Vladimir Putin's horrific invasion of Ukraine. Meanwhile, though, his close ally Chinese President Xi Jinping has been quietly taking advantage of the West's distraction by expanding China's sphere of influence in the South Pacific. If Washington doesn't wake up to this threat, China's efforts to dominate the region will gain dangerous and perhaps irreversible momentum.

**29. The Dangers of China's Decline**

*Foreign Policy, Spring 2022 | Hal Brands*

Decline is a tricky concept. The term makes us think of a country that is falling like a rock—one whose power and capabilities are dropping across the board. But a country can be in relative decline vis-à-vis a fast-growing adversary even if its own power is still increasing. It can be surging forward in some areas, such as military might, even as its underlying economic strength starts to wither. And decline doesn't always lead a country to scale back its objectives—the sense of urgency it creates can cause ambitious powers to grab what they can before the clock runs out.

**30. Punggye-ri Nuclear Test Site: Work Continues Around South Portal**

*38North.org, Apr. 14 | Olli Heinonen, Peter Makowsky, Jack Liu and Jenny Town*

Recent commercial satellite imagery of North Korea's Punggye-ri Nuclear Test Sites indicates work to restore Tunnel No. 3 (South Portal) to operational status continues. Two new support buildings have been constructed between April 6 and 14 in the southern support area. A total of four new structures have been added since January, and roof repairs are ongoing at some of the older support buildings, including an old greenhouse, although at a seemingly slower pace than work in the area around the tunnel complex. This investment in support infrastructure suggests long-term plans for site operations, not simply ad hoc actions to support a single test.

**31. America's new multibillion-dollar nuclear warhead is a great deal for the British**

*Bulletin of the Atomic Scientists, Apr. 14 | Shane Ward*

According to the US Stockpile Stewardship and Management Plan released last month, the development of the United States' first new nuclear warhead since the Cold War appears to be proceeding. Collective sighs of relief are emanating from Washington and London. But they may be louder in the United Kingdom.

**STATE-RUN MEDIA**

**32. Nuclear weapons deployment in Baltic on hold before Defense Ministry's plan – Kremlin**

*TASS (Russia), Apr. 14 | Not Attributed*

Russian Presidential Spokesman Dmitry Peskov advised to wait until the Russian Defense Ministry comes up with a plan regarding the enhancement of the country's western borders before speaking about a possible deployment of nuclear weapons in the Baltic area.

**33. Russia to take defense measures if Sweden, Finland join NATO, senior diplomat warns**

*TASS (Russia), Apr. 14 | Not Attributed*

Moscow will take required security and defense measures if Sweden and Finland join NATO, Russian Deputy Foreign Minister Alexander Grushko told TASS on Thursday. "It is clear that our border with Finland is 1,300 km long. This will mean a radical change in the military and political situation and it is understandable that we will be forced to take security and defense measures that we will deem necessary. This is the essence of military development," the senior Russian diplomat said, responding to a question about the possibility of Russia deploying nuclear weapons in the Baltic region.

**34. Visit of US delegation to Taiwan undermines China-US relations, Chinese top brass says**

*TASS (Russia), Apr. 15 | Not Attributed*

A recent visit of US congressmen to Taiwan undermines the political foundation of Chinese-US relations, the Friday statement by Chinese Defense Ministry Spokesman Wu Qian said.

**35. PLA conducts destroyer-bomber joint patrol around Taiwan where US congressmen visit**

*Global Times Online (China), Apr. 15 | Not Attributed*

The PLA Eastern Theater Command on Friday conducted a patrol of multi-services and arms with jet fighters, destroyers and bombers around the island of Taiwan, where a US congressional delegation is visiting.

**36. US provocations before North Korea's vital event 'would worsen situation'**

*Global Times (China), Apr. 15, Pg. 3 | Leng Shumei, Zhang Changyue and Wan Hengyi*

Despite North Korea's vital festivals in the coming days, the US and NATO, instead of making encouraging gestures to ease the situation on the Korean Peninsula, have intensified threats, including sending an aircraft carrier group near South Korea and urging the UN to slap new sanctions to provoke the country citing so-called nuclear and missile threats. However, Chinese experts warned that the moves would only worsen tensions on the Peninsula.

**37. Russian ambassador in Pyongyang denies reports about Shoigu's visit to North Korea**

*Interfax (Russia), Apr. 14 | Not Attributed*

Information that Russian Defense Minister Sergei Shoigu visited North Korea and asked Pyongyang to help Russia with missiles is not true, Russian Ambassador to North Korea Alexander Matsegora said.

**38. Ukraine crisis a risk to nuclear security**

*China Daily (China), Apr. 15, Pg. 9 | Li Zhe*

The risks to nuclear security have increased with the continuation of the Russia-Ukraine conflict. The geopolitical game involving Russia and Ukraine but also the United States and some European countries poses a big threat to nuclear nonproliferation and nuclear deterrence. Perhaps a bigger threat is that the nuclear risks will carry with them the hidden dangers to nuclear security in the post-conflict era.

**TOP STORIES**

**1. Putin May Be Tempted to Use Small Nuclear Weapon, C.I.A. Chief Says**

New York Times, Apr. 15, Pg. A8 | David E. Sanger and Julian E. Barnes

WASHINGTON -- The director of the C.I.A. said on Thursday that "potential desperation" to extract the semblance of a victory in Ukraine could tempt President Vladimir V. Putin of Russia to order the use of a tactical or low-yield nuclear weapon, publicly discussing for the first time a concern that has coursed through the White House during seven weeks of conflict.

The director, William J. Burns, who served as American ambassador to Russia and is the member of the administration who has dealt most often with Mr. Putin, said the potential detonation of such a weapon -- even as a warning shot -- was a possibility that the United States remained "very concerned" about. But he quickly cautioned that so far, despite Mr. Putin's frequent invocation of nuclear threats, he had seen no "practical evidence" of the kinds of military deployments or movement of weapons that would suggest such a move was imminent.

"Given the potential desperation of President Putin and the Russian leadership, given the setbacks that they've faced so far, militarily, none of us can take lightly the threat posed by a potential resort to tactical nuclear weapons or low-

yield nuclear weapons," Mr. Burns said during a question-and-answer session following a speech he delivered at the Georgia Institute of Technology.

He spoke in response to a question from former Senator Sam Nunn, of Georgia, who helped create the program that brought nuclear weapons out of Ukraine and other former Soviet states 30 years ago.

Tactical weapons are sometimes called "battlefield nukes," smaller weapons that can be shot out of a mortar or even exploded like a mine, as opposed to "strategic" weapons that are put on intercontinental ballistic missiles. Russia has a large arsenal of tactical weapons; the United States keeps comparatively few. Low-yield nuclear weapons have been designed to produce a fairly small explosion, which sometimes blurs the difference between conventional and nuclear weapons.

Mr. Burns also argued that the disclosure of Mr. Putin's intentions by U.S. intelligence officials before the outbreak of the war had made it harder for Mr. Putin to hide the "raw brutality" his forces have used in Ukraine, reminiscent of the damage Russian forces inflicted in Chechnya in the 1990s.

"I have watched over the years as Putin has stewed in a combustible combination of grievance and ambition and insecurity," Mr. Burns said. He said the Russian president has nursed grievances against the West for decades, convinced the United States took advantage of Russia's weakness after the breakup of the Soviet Union.

President Biden and his national security adviser, Jake Sullivan, both acknowledged Thursday that the White House was debating sending a high-level official to Kyiv, the capital of Ukraine, in a show of support for the government of President Volodymyr Zelensky. Prime Minister Boris Johnson of Britain recently took a secret trip to Kyiv by train.

Mr. Sullivan said that the White House had briefly considered having Mr. Biden go into Ukraine, but as soon as it became clear "what kind of footprint that would require, what kind of assets that would take from the Ukrainians as well as the U.S." to keep him safe, the idea was rejected.

When pressed on reports that he, Secretary of State Antony J. Blinken or Defense Secretary Lloyd J. Austin III might go to Kyiv, Mr. Sullivan declined to discuss it, saying that "if and when that happens, we want to make sure it's done in a very secure way." Mr. Biden told reporters no decision had been made to send an envoy.

Mr. Sullivan also said that in coming days the United States would announce a crackdown on countries and companies violating the Western sanctions on Moscow, imposed since the invasion began in late February.

The Commerce Department on Thursday identified 10 aircraft that were flying into or operated by Belarus, with the apparent intention of registering them in Russia. The sanctions would prevent servicing or fueling the aircraft internationally, effectively grounding them.

Mr. Sullivan had made a similar vow to crack down on violators just ahead of Mr. Biden's trip to Brussels and Warsaw last month. But on Thursday, speaking at the Economic Club of Washington, he said he believed that some of the sanctions -- particularly export controls on defense technology -- were beginning to hurt Russia's military readiness.

"Russia's ability to retool and replenish," he said, was being set back because many of its systems "rely on Western microchips and components."

"They are exhausting the stock of some of the high-end weapons," Mr. Sullivan added, though he acknowledged that the continuing purchase of natural gas from Russia was helping to fund the war.

"I'm not sitting here suggesting we have so starved them of those resources they literally can't field an army and continue to try to make progress on the battlefield," Mr. Sullivan said. But he said Washington was stepping up the effort to help Europe wean itself off Russian gas by delivering supplies of liquefied natural gas from the United States.

But Mr. Sullivan also indicated that so far he had seen no evidence that China was stepping in to help Mr. Putin with either military or financial aid. His statement was notable because Mr. Biden, in a call with President Xi Jinping of China four weeks ago, had warned about American penalties should China aid the war effort. But the evidence since then has suggested that despite Mr. Putin and Mr. Xi's declaration in February that their relationship has "no limits," China in fact appears to be of mixed views on how much to support the war.

Mr. Burns and Mr. Sullivan both acknowledged that the war was moving to a new phase now that Russia appears to have narrowed its objective to taking the Donbas region in eastern Ukraine, where pro-Russia separatists have been fighting since 2014.

Gen. Philip Breedlove, the former supreme allied commander in Europe, who is now retired, said Thursday that while Mr. Putin may be able to paint his narrower operation as a win, the war will be a loss for Russia in the long term.

"Ukraine is still going to try to fight what I call the American Revolutionary War again, skirmishing and counterattacking and ambushing," General Breedlove said. "It is just going to be a lot harder for them."

By moving his forces to the east, Mr. Putin is looking to move the war to more favorable territory, trying to make it more difficult for the Ukrainian forces to stick with those tactics. "They are now prepared to fight the war that they really want," General Breedlove said. "They want to meet force on force in open fields."

## **2. China holds drills around Taiwan as U.S. lawmakers visit**

Reuters, Apr. 15 | Ben Blanchard, Yimou Lee, Yew Lun Tian and Tony Munroe

TAIPEI/BEIJING -- China said it conducted military drills around Taiwan on Friday as a U.S. Congressional delegation visited the island in a show of support to a fellow democracy, with Beijing blaming the lawmakers for raising tensions with their "provocative" trip.

China's military sent frigates, bombers and fighter planes to the East China Sea and the area around Taiwan, the People's Liberation Army Eastern Theatre Command said, in a statement released as the lawmakers were holding a news conference in Taipei.

"This operation is in response to the recent frequent release of wrong signals by the United States on the Taiwan issue," it said, without mentioning the visiting U.S. delegation.

"The U.S. bad actions and tricks are completely futile and very dangerous. Those who play with fire will burn themselves," it said.

China's Defence Ministry, in a separate statement, said the U.S. visit was "deliberately provocative" and had "led to further escalation of tension in the Taiwan Strait".

Taiwan is a frequent source of tension between Beijing and Washington.

Republican U.S. Senator Lindsey Graham told Taiwan President Tsai Ing-wen during the delegation's meeting with her that the war in Ukraine and provocative behaviour by China have united U.S. opinion in a way not seen before.

"To abandon Taiwan would be to abandon democracy and freedom," he said. "There's a backlash growing in the world to thuggery - to the bad guys."

Senator Bob Menendez, chairman of the Senate Foreign Relations Committee, said the technology hub is a "country of global significance" and its security has implications for the world.

The bipartisan group of six lawmakers arrived for their two-day visit on Thursday, in a previously unannounced trip.

Such visits, and a reference to Taiwan as a "country", always anger Beijing, which dismisses any suggestion that Taiwan is a country. China regards the island as one of its provinces.

The United States has no formal relations with Chinese-claimed Taiwan but is its most important international backer and arms supplier.

Menendez acknowledged the Chinese government was "very unhappy" with the delegation's visit but said that would not dissuade the group from supporting Taiwan.

"With Taiwan producing 90% of the world's high-end semiconductor products, it is a country of global significance, consequence and impact, and therefore it should be understood the security of Taiwan has a global impact," Menendez told Tsai.

Taiwan has been heartened by the U.S. support offered by the Biden administration, which has repeatedly talked of its "rock-solid" commitment to the democratically governed island.

That has added to strains in Sino-U.S. relations.

Russia's invasion of Ukraine has also put Taipei on alert for any possible moves by Beijing to use the Ukraine crisis to make a move on the island. The government though has reported no sign that China is about to invade.

Taiwan has complained for the past two years or so of stepped-up Chinese military activity, including almost daily air force flights into Taiwan's air defence zone, but not close to the island itself.

### **3. Japan, U.S. conduct joint Aegis destroyer drill amid North Korea threat**

Kyodo News (Japan), Apr. 15 | Not Attributed

TOKYO -- Japanese and U.S. destroyers equipped with the Aegis missile interceptor system conducted a joint exercise earlier this week in the Sea of Japan, the Maritime Self-Defense Force said Friday, in a fresh show of force as North Korea's nuclear and missile threat grows.

The two-day information sharing drill through Thursday aimed at enhancing cooperation in shooting down ballistic missiles involved the U.S. destroyers Mobile Bay and Spruance, which both belong to the strike group headed by the nuclear-powered aircraft carrier Abraham Lincoln, and Japan's Kongou, according to the MSDF.

The U.S. strike group started the exercise in the Sea of Japan on April 8 with MSDF vessels, according to the U.S. 7th Fleet, ahead of the 110th anniversary on Friday of the birth of Kim Il Sung, North Korea's founder and the grandfather of current leader Kim Jong Un.

In connection with the North Korean anniversary, speculation has been growing that Pyongyang will conduct a nuclear test or fire an intercontinental ballistic missile over Japan into the Pacific Ocean.

During the exercise, the Japanese and U.S. vessels coordinated their response to an incoming missile, sharing radar information and simulating interception procedures, according to the MSDF.

MSDF Aegis destroyers are equipped with Standard Missile-3 interceptors and tasked with hitting incoming missiles in the outer atmosphere. If they fail, the Air Self-Defense Force's ground-based Patriot Advanced Capability-3 interceptors will counter the attack in the lower tier.

North Korea on March 24 made the first launch of an ICBM since November 2017, marking an end to its self-imposed moratorium on ICBM tests since April 2018.

## **RUSSIA**

### **4. Russian Flagship Sinks in Black Sea; E.U. Could Ban Oil**

New York Times, Apr. 15, Pg. A1 | Matina Stevis-Gridneff and Richard Pérez-Peña

BRUSSELS -- Russia's faltering war against Ukraine suffered a pair of setbacks Thursday when the flagship of Russia's Black Sea fleet sank after a catastrophic explosion and fire, as the European Union moved closer to an embargo on Russian oil imports.

Ukraine claimed to have struck the vessel, the guided missile cruiser Moskva, with two of its own Neptune missiles, while Russia said the blast was caused by ammunition aboard the ship. If confirmed, the missile attack would be a serious blow to Russia, both militarily and symbolically -- proof that its ships can no longer operate with impunity, and another damaging blow to morale.

It would also give a lift to Ukrainian hopes, while demonstrating the defenders' homegrown technological capacity and exposing an embarrassing weakness in the Russian navy's antimissile defenses.

Moscow also faces the possible loss of European markets in fossil fuels, which are providing billions of dollars a month to support its war effort. The European Union has long resisted calls to reduce its energy dependency on Russia, but officials revealed on Thursday that an oil embargo is in the works and is likely to be adopted in the coming weeks.

That comes on top of a previously announced ban on imports of Russian coal. Taken together, the steps are bound to raise fuel and electricity prices in Europe, potentially disrupting the economy and provoking a political backlash.

Ukraine continues to brace for a Russian offensive in the eastern Donbas region -- where Moscow has said it will focus its war efforts after its failure to capture the capital, Kyiv -- while Russian forces squeeze the shrinking pocket of resistance in the ruined southern port of Mariupol. The devastation rained there has offered a dire warning of what may befall other cities in the event of a prolonged Russian siege, prompting a mass exodus of civilians from the Donbas.

Its international isolation deepening, the Kremlin reacted ominously to the growing indications that Finland and Sweden would join the NATO alliance in response to Russia's invasion of Ukraine. On Thursday, the government warned that any such expansion of NATO would prompt an increased Russian military presence, including nuclear weapons, in the region.

The C.I.A. director, William J. Burns, warned on Thursday of the possibility that Mr. Putin, facing a debacle in Ukraine, might use a tactical or low-yield nuclear weapon, though he stressed that he had seen no "practical evidence" that

such a step was pending. It was the first time he discussed publicly a concern that has been much debated in the White House.

"Given the potential desperation of President Putin and the Russian leadership, given the setbacks that they've faced so far, militarily, none of us can take lightly the threat posed by a potential resort to tactical nuclear weapons or low-yield nuclear weapons," Mr. Burns said, in answering questions after a speech in Atlanta.

Prominent voices in Russian state media have made increasingly incendiary statements recently, calling for more brutality in battles that have already sparked calls for war-crimes investigations of the Russian forces.

Much remained unclear about Russia's setback in the western Black Sea, where a blast on Thursday morning -- Wednesday night in the United States -- and subsequent fire forced many of the Moskva's roughly 500 crew members to abandon ship. There was no word on casualties. Ukraine said it had struck the vessel with two Neptune missiles and sunk it.

Russia's Defense Ministry initially said its sailors had managed to put out the fire and the Moskva, commissioned in 1983, remained afloat. But hours later, it said, the ship sank while being towed to port in a storm.

Western defense officials said they could not be sure what caused the explosion aboard the 12,000-ton ship. Three American officials briefed on the incident said all indications were that it had been hit by missiles. The officials cautioned that early battlefield reports can sometimes change, but expressed deep skepticism over the Russian account of an accidental fire.

Ukraine has been stressing the need for coastal defense weapons, and the U.S. announced this week that it would send more of them. Pentagon officials said that other Russian ships had moved farther from the Ukrainian shoreline, lending credence to the claim of missile strikes.

"It's going to have an impact on their naval capabilities, certainly in the near term," but the long-term picture is unclear, said the Pentagon spokesman, John F. Kirby, a former Navy rear admiral.

Until now, Russian ships have been able to fire missiles at will against coastal cities. They have blockaded Ukraine's south coast and threatened an amphibious landing in the southwestern region. The presence of an effective Ukrainian anti-ship weapon -- Ukraine says the Neptune has a range of about 190 miles -- could change those calculations, though Ukraine's commercial shipping is unlikely to resume anytime soon.

Current and former American naval commanders said a successful missile attack would represent a shocking lack of Russian combat readiness.

"This is not supposed to happen to a modern warship," said Adm. James G. Foggo III, a former commander of the United States Sixth Fleet, whose area of operations includes Europe. "If this was a Neptune missile strike, it's indicative of complacency and lack of an effective integrated air and missile defense capability."

Ukraine has endured most of the suffering in the war that began on Feb. 24, with untold thousands of casualties, widespread destruction and millions of people displaced, but the blowback on Russia has also been severe. Moscow's vaunted military has often seemed hapless, absorbing unexpectedly heavy losses of men and equipment, while unprecedented sanctions imposed by the United States and its allies have shaken the Russian economy.

President Vladimir V. Putin acknowledged some of that cost on Thursday in a videoconference with top government officials and oil and gas executives, referring to "the disruption of export logistics" in that industry and "setbacks in payments for Russian energy exports."

Fossil fuels are Russia's biggest export product, a huge part of the Russian economy that employs millions of people and supplies the government with much of the revenue needed to support its war-making machinery.

Now E.U. officials and European diplomats say the bloc is moving toward barring oil imports from Russia, a ban that would be phased in over months to allow countries to arrange alternative supplies. They said European leaders will not make a final decision until after April 24, when France will hold its presidential runoff; a rise in fuel prices could hurt the prospects of President Emmanuel Macron and boost his right-wing opponent, Marine Le Pen, who has praised Mr. Putin.

The government of Germany, the most influential country in the European Union, has been particularly reluctant to cut off Russian fuel, which would come at a steep cost and could lead to shortages. But pressure from allies and mounting evidence of Russian atrocities in Ukraine have, step by step, overcome that resistance. Germany refused to allow the virtually completed, \$10 billion Nord Stream 2 gas pipeline to go into service, supported the coal ban and now appears to be on board with an oil embargo.

The shifting stance of the neutral Scandinavian states is another unintended consequence for Mr. Putin. In waging a war that he said was intended to keep Ukraine out of NATO -- a distant prospect at best -- he may have succeeded in driving two countries that had been steadfastly nonaligned for generations into the arms of the alliance.

Dmitri A. Medvedev, a senior Russian security official, said on Thursday that if Sweden and Finland joined NATO, there would be "no more talk of a nuclear-free Baltics" region. Moscow would be compelled to "seriously strengthen" its air and ground forces in the area, said Mr. Medvedev, a former president and prime minister, and could deploy nuclear-armed warships "at arm's length" from Finnish and Swedish shores.

Vladimir Solovyov, a television host who is considered a leading voice of Kremlin propaganda, said on Wednesday that Russia should destroy all Ukrainian infrastructure, including basic utilities.

Russia "must bring these terrorists to their senses in the cruelest way," he said on his show on the state-owned Russia-1 channel. "We need to talk differently with terrorists," he added. "There shouldn't be any illusions that they can win."

Russia has forced independent news outlets to shut down or leave the country, and has criminalized disputing the Kremlin's account of the war. Yet Margarita Simonyan, the head of the state-owned RT news organization, said earlier this week that the government should restrict information even more.

No major power can exist "without having information under its control," she said, adding, "we are all waiting for this."

## **5. Moskva's loss is a major, if symbolic, setback for Russia**

Washington Post, Apr. 15, Pg. A12 | Dan Lamothe, Claire Parker, Andrew Jeong, Reis Thebault and Maite Fernández Simon

The flagship of Russia's Black Sea fleet sank after an attack from Ukrainian forces triggered a "significant explosion" as the vessel floated off the coast of Ukraine, U.S. officials said Thursday, with Moscow offering a competing claim about the cause of the destruction.

Russia's Defense Ministry acknowledged the sinking but said its missile cruiser - the Moskva - had been damaged after a fire. Earlier that day, the hobbled warship was moving under its own power, heading to the Crimean port city

of Sevastopol for repairs, Pentagon spokesman John Kirby said. The episode buoys the morale of Ukrainian forces, who have repelled the Russian invasion for 50 days and are girding for a new phase of fierce fighting in the country's east.

The explosion occurred Wednesday, when the ship was roughly 75 miles from Odessa, a seaside hub in Ukraine's south, a senior U.S. defense official said, speaking on the condition of anonymity under ground rules set by the Pentagon. Odessa's governor said the Moskva was hit by a Ukrainian anti-ship missile, an assertion backed by another American official familiar with the matter, who confirmed the strike but could not verify the specific weapons system used.

Russia, meanwhile, said the fire on board caused ammunition stocks to detonate, forcing the evacuation of at least some of the 500-person crew. As the Moskva was being towed to port, it sank due to a "heavy storm," the Russian Defense Ministry said. It was not clear whether any crew members died in the incident. After the explosion, several other Russian warships in the northern part of the Black Sea repositioned farther from shore, the U.S. defense official said.

Experts and analysts said Ukraine's claim of a successful strike was more credible than the explanations emerging from Moscow. But regardless of the cause, the ship's loss is a major, if symbolic, setback for Russia, said Artyom Lukin, an international relations professor at the Far Eastern Federal University in Vladivostok, Russia.

The Moskva is named after Russia's capital and was at the center of a widely reported attack against Ukrainian border guards on Snake Island in the Black Sea. The guards drew global attention for insulting Russian troops during the early days of the invasion.

"The loss of not just a principal surface combatant in the Russian navy, but also the fleet flagship, would amount to more of a psychological blow to the Russians," said Collin Koh, an expert on maritime security at Singapore's Nanyang Technological University.

Ukraine's military said its forces had fired a Neptune anti-ship missile at the Moskva, and the U.S. defense official said the claim was plausible, adding that artillery rounds and missiles aboard the ship could also have been involved in an explosion, or that the ship could have struck a mine.

One Moscow-based think tank, the Center for Analysis of Strategies and Technologies, said on its Telegram channel earlier Thursday that it believed the ship had been sunk in a missile attack. The source of the think tank's claims was unclear. Mark Cancian, senior adviser for the international security program at the Center for Strategic and International Studies, said it was "more likely" that the explosion was caused by Ukraine's anti-ship cruise missiles than by some sort of accident.

"Given that there's a war going on and the Ukrainians have this anti-ship capability, it's more likely that it was caused by these cruise missiles," Cancian said.

Ukraine began developing the Neptune missile in 2013 as a deterrent against Russian sea power off its southeastern coast. It is based on an older Russian model, the KH-35, which Ukraine was also involved in producing. Fired from a truck-mounted launcher, the missile has a maximum range of 173 to 186 miles.

At roughly 600 feet long, the Moskva presented a large target. It was armed with 16 anti-ship missiles and originally built to destroy U.S. aircraft carriers. Its destruction could reduce Russia's capabilities against NATO, Cancian said.

"The flagship is literally the ship on which the admiral's flag flies," he said. "It's typically the largest and most important ship in a fleet or squadron, and that's the case here - this is a large and very powerful ship."

The damage to the Moskva is more significant because of previous Russian naval losses, said James Black, an expert on the Russian military at the Rand Corp. Last month, Ukraine's navy said it hit a Russian amphibious landing ship in Berdyansk, a Ukrainian port that Russian forces have occupied.

No matter what caused the damage to the Moskva, Black said, "it will likely be seen as poetic justice by Ukrainians and their supporters."

## **6. Russia warns U.S. to stop arming Ukraine**

Washington Post Online, Apr. 14 | Karen DeYoung

Russia this week sent a formal diplomatic note to the United States warning that U.S. and NATO shipments of the "most sensitive" weapons systems to Ukraine were "adding fuel" to the conflict there and could bring "unpredictable consequences."

The diplomatic *démarche*, a copy of which was reviewed by The Washington Post, came as President Biden approved a dramatic expansion in the scope of weapons being provided to Ukraine, an \$800 million package including 155 mm Howitzers — a serious upgrade in long-range artillery to match Russian systems — coastal defense drones and armored vehicles, as well as additional portable anti-air and antitank weapons and millions of rounds of ammunition.

The United States has also facilitated the shipment to Ukraine of long-range air defense systems, including Slovakia's shipment of Russian-manufactured Soviet-era S-300 launchers on which Ukrainian forces have already been trained. In exchange, the administration announced last week, the United States is deploying a Patriot missile system to Slovakia and consulting with Slovakia on a long-term replacement.

Shipment of the weapons, the first wave of which U.S. officials said would arrive in Ukraine within days, follows an urgent appeal to Biden from Ukrainian President Volodymyr Zelensky, as Russian forces were said to be mobilizing for a major assault on eastern Ukraine's Donbas region and along the coastal strip connecting it with Russian-occupied Crimea in the south. Russian troops have largely withdrawn from much of the northern part of the country, including around the capital, Kyiv, following humiliating defeats by the Ukrainian military and local resistance forces.

"What the Russians are telling us privately is precisely what we've been telling the world publicly — that the massive amount of assistance that we've been providing our Ukrainian partners is proving extraordinarily effective," said a senior administration official, who spoke on the condition of anonymity about the sensitive diplomatic document.

The State Department declined to comment on the contents of the two-page diplomatic note or any U.S. response.

Russia experts suggested Moscow, which has labeled weapons convoys coming into the country as legitimate military targets but has not thus far attacked them, may be preparing to do so.

"They have targeted supply depots in Ukraine itself, where some of these supplies have been stored," said George Beebe, former director of Russia analysis at the CIA and Russia adviser to former vice president Dick Cheney. "The real question is do they go beyond attempting to target [the weapons] on Ukrainian territory, try to hit the supply convoys themselves and perhaps the NATO countries on the Ukrainian periphery" that serve as transfer points for the U.S. supplies.

If Russian forces stumble in the next phase of the war as they did in the first, "then I think the chances that Russia targets NATO supplies on NATO territory go up considerably," Beebe said. "There has been an assumption on the

part of a lot of us in the West that we could supply the Ukrainians really without limits and not bear significant risk of retaliation from Russia," he said. "I think the Russians want to send a message here that that's not true."

The diplomatic note was dated Tuesday, as word first leaked of the new arms package that brought the total amount of U.S. military aid provided to Ukraine since the Feb. 24 invasion to \$3.2 billion, according to Pentagon spokesman John Kirby. In a public announcement Wednesday, Biden said it would include "new capabilities tailored to the wider assault we expect Russia to launch in eastern Ukraine."

The document, titled "On Russia's concerns in the context of massive supplies of weapons and military equipment to the Kiev regime," written in Russian with a translation provided, was forwarded to the State Department by the Russian Embassy in Washington.

The Russian embassy did not respond to requests for comment.

Among the items Russia identified as "most sensitive" were "multiple launch rocket systems," although the United States and its NATO allies are not believed to have supplied those weapons to Ukraine. Russia accused the allies of violating "rigorous principles" governing the transfer of weapons to conflict zones, and of being oblivious to "the threat of high-precision weapons falling into the hands of radical nationalists, extremists and bandit forces in Ukraine."

It accused NATO of trying to pressure Ukraine to "abandon" sputtering, and so far unsuccessful, negotiations with Russia "in order to continue the bloodshed." Washington, it said, was pressuring other countries to stop any military and technical cooperation with Russia, and those with Soviet-era weapons to transfer them to Ukraine.

"We call on the United States and its allies to stop the irresponsible militarization of Ukraine, which implies unpredictable consequences for regional and international security," the note said.

Andrew Weiss, a former National Security Council director for Russian, Ukrainian and Eurasian affairs, and now vice president for studies at the Carnegie Endowment for International Peace, recalled that Russian President Vladimir Putin, in a speech on the February morning the invasion began, warned that Western nations would face "consequences greater than any you have faced in history" if they became involved in the conflict.

Attention at the time focused on Putin's reminder that Russia possesses a powerful nuclear arsenal, Weiss said, but it was also "a very explicit warning about not sending weapons into a conflict zone." Having drawn a red line, he asked, are the Russians "now inclined to back that up?"

Such an attack would be "a very important escalatory move, first and foremost because it represents a threat to the West if they aren't able to keep supplies flowing into Ukraine, which by extension might diminish Ukraine's capacity for self-defense." That risk "shouldn't be downplayed," he said, noting the added risk that an attempt to strike a convoy inside Ukraine could go awry over the border into NATO territory.

Senior U.S. defense officials remain concerned about the possibility of such attacks. "We don't take any movement of weapons and systems going into Ukraine for granted," Kirby said Thursday. "Not on any given day."

Kirby said Ukrainian troops bring the weapons into Ukraine after the United States brings them into the region, and "the less we say about that, the better."

## **7. Soviet-Era Missiles Now Guard Ukraine's Skies**

New York Times, Apr. 15, Pg. A1 | Andrew Higgins

DOBRA, Slovakia -- Driving back to his village near the Ukrainian border last Thursday, the mayor had to stop to let a train pass, and assumed he wouldn't have to wait long. But the flatbed wagons, stacked high with military equipment, just kept coming. He waited for nearly half an hour.

"It was a very long train, much longer than usual," recalled Mikolas Csoma, the mayor of Dobra, a previously sleepy village in eastern Slovakia that, over the past month, has become a key artery funneling weapons and ammunition into Ukraine by rail from the West.

The train that delayed Mr. Csoma's drive home was not only unusually long but also signaled a singular escalation in Western efforts to help Ukraine defend itself. It carried an air defense system made up of 48 surface-to-air missiles, four launchers and radars to guide the rockets to their targets, which in Ukraine means Russian warplanes and missiles.

As President Vladimir V. Putin of Russia vows to fight the war to its "full completion" and his forces regroup for an expected push in Ukraine's east, NATO countries, including the United States, are scrambling to keep the weapons flowing and bulk up the country's defenses.

Bolstering Ukraine's long-range air defense capabilities is seen as especially critical. Ukraine already had its own S-300 and other air defense systems, but some of these have been destroyed, leaving Russia with a large degree of freedom to hit Ukrainian targets from the air with warplanes and cruise missiles.

Increasingly desperate to reverse this imbalance, President Volodymyr Zelensky of Ukraine has repeatedly pleaded with NATO to "close the sky over Ukraine" by imposing a no-fly zone. But NATO has been unwilling to send its own warplanes into Ukraine.

Instead, the United States offered Slovakia, a fellow NATO member, a substitute battery of American-made Patriot missiles if it would "donate" its aging S-300 system to Ukraine.

Jaroslav Nad, Slovakia's defense minister and a gung-ho supporter of Ukraine, said it would have been unthinkable before Russia's invasion for his country to send large quantities of even basic weapons across its eastern border free of charge, never mind an old but still powerful Soviet-made anti-aircraft system.

"But this is the world's new reality," he said in an interview in Bratislava, the Slovak capital. "We are a frontline state. We have war on our border and more than 330,000 Ukrainians coming to our country. The paradigm is completely different now."

Mr. Putin, he said, "is equal to Hitler" and must be stopped in Ukraine before he can move further West. "Ukraine is literally fighting for our future," he said.

Like Slovakia, other countries are also steadily expanding the scope of their military aid. The No. 2 Pentagon official met in Washington on Wednesday with America's largest military contractors to discuss how ready they are to restock supplies and what new capabilities to send to Ukraine.

The meeting and a new package of weapons, including artillery and ammunition, is intended in part by the Biden administration to blunt criticism that it is not doing enough for Ukraine and is too hesitant to send long-range weapon systems.

Other NATO members are already sending Ukraine bigger and better weaponry than before, including T-72 tanks and short-range air defense systems from the Czech Republic.

The S-300 system from Slovakia is the biggest item a NATO country has sent so far. It was previously deployed in Nitra, a city east of Bratislava at the other end of the country.

From there, it was hauled by truck and train to Dobra, where the state-controlled rail yard has Soviet gauge tracks, wider than the standard in Europe, which means it can run trains to and from Ukraine, which also has Soviet tracks.

Other big items now under discussion for transport to Ukraine via Slovakia include aging MIG-29 warplanes and sophisticated, self-propelled Howitzers called Zuzana 2. Also under review is a plan for Ukraine to send hundreds of damaged tanks, some of them captured from Russian forces, across the border for repair in Slovakia, the Czech Republic and Poland, all of which have experience fixing Soviet-made equipment.

Slovakia "is not going to send tanks because we don't have any spare tanks," Mr. Nad said, underscoring an issue confronting even Ukraine's most eager backers. "We have to keep enough capabilities for our own armed forces."

But Slovakia is transporting not only weapons from its own stocks into Ukraine. It is also sending military aid from many other countries, including the Czech Republic, Australia and what Mr. Nad described as "countries that claim that they are not sending military material to Ukraine."

Hungary, Slovakia's southern neighbor, for example, has declared itself neutral in the conflict and barred weapons from passing through its own territory to Ukraine -- largely to avoid upsetting deliveries of cheap Russian gas -- but it is believed to have quietly provided weapons through other countries.

Asked about this, a Hungarian government spokesman in Budapest declined to confirm or deny that his country is providing military material, saying only that "Hungary's standpoint is well known, and it has remained unchanged."

Alarmed by the flood of weapons flowing across the borders of Slovakia, Poland and Romania, Russia has sought to stop or at least slow it by declaring all foreign arms destined for Ukraine a "legitimate target." Russia's foreign minister vowed last month that Moscow "will not allow" the transfer of Slovakia's S-300 air defense system.

It is too late for that now, and after failing to thwart the delivery, the defense ministry in Moscow claimed on Sunday that Russia had already destroyed the Slovak missile system when sea-launched cruise missiles hit a hangar near the eastern Ukrainian city of Dnipro.

Mr. Nad, the Slovak defense minister, dismissed this as a "fake news," apparently aimed at saving Russia's face and calming the nerves of Russian pilots sent on missions to bomb Ukraine. Mr. Nad said he had spoken with Ukraine's defense minister on Monday and been assured that "this system is working and is working well" and was not in Dnipro.

Previous military cargo sent into Ukraine by rail through Dobra and the nearby town of Cierna nad Tisou contained mostly ammunition and basic military hardware.

A separate weapons conduit through Poland, the main route for American arms, has involved weapons like Javelin, NLAW and Stinger missiles, which are light, portable, high-tech and relatively easy to hide in trucks passing through Polish border crossings into western Ukraine.

An air-defense battery, however, is too big to hide, particularly when it travels on trains with more than 120 wagons in full view of drivers blocked by their passage. The cargo was so bulky it took two days to deliver it just a few miles from Dobra into Ukraine in two separate trains.

"Everyone knows what is going on," said Jakub Zsolt, a steel factory maintenance worker who lives across the road from the rail yard. He said his grandchildren were scared by all the commotion, but added that he had himself grown accustomed to the clatter of military helicopters and the rumble of trucks carrying weapons to the loading yard.

All the same, he said, he worries that Slovakia, a small country of just 5.4 million people, is now wading too deeply into Ukraine's war with Russia.

"The Russians might attack us," he said, adding that he did not understand why Ukrainians needed so much help when "they come here driving much nicer cars -- Porsches and Mercedes -- than we drive in Slovakia."

Most refugees fleeing the war, nearly all women and children, don't drive anything, but cross on foot carrying just a change of clothes.

Mr. Zsolt's jaundiced view of Ukraine highlights the success of opponents of the pro-Western Slovak prime minister, Eduard Heger, who in an interview last week said, "We need to help Ukraine in every possible way to win this war." His foes, playing to a substantial segment of the population traditionally favorable to Moscow, have sought to turn public opinion against support for Ukraine and seized on the war as a political opportunity.

Robert Fico, a scandal-tainted former Slovak prime minister, upended the government's efforts to keep the delivery of the S-300 battery secret until it had safely arrived in Ukraine when he posted a video on his Facebook page last Thursday that showed a train carrying the disassembled air-defense system on its way to Ukraine.

He denounced Mr. Heger as "a freak in American hands who will do whatever the Americans tell him to do" and demanded that the public immediately be told where the S-300 system was going.

Mr. Nad, the defense minister, said the delivery had been kept secret for security reasons. The opposition, he added, is playing "political games" against the interests of their own country and also Ukraine.

"Russia is killing thousands of people in Ukraine and I am not going to count the votes that I would lose -- or gain -- based on the decisions of the government to help. The only thing that I am counting is the lives we can save in Ukraine," he said.

Pavel Macko, a retired Slovak general who served with NATO in Afghanistan and Germany, said the S-300 system delivered to Ukraine dated from the 1980s, when Slovakia was a member of the Warsaw Pact as part of Czechoslovakia, and was inferior to American-made Patriot missiles. But, he added, Ukrainians know how to use it and will be able to reduce Russia's mastery of the skies.

"This is not just symbolic but an important addition that could help make Russia change their plans," he said.

The mayor in Dobra, Mr. Csoma, said he supported helping Ukraine, but was noncommittal when asked about the wisdom of sending a powerful weapon system like the S-300.

Miffed not to be informed in advance about the disruption to traffic caused by the S-300 trains, he said: "They don't tell me anything. They should at least let me know about this kind of thing."

Nobody really worried much about the war spreading into Slovakia, he said, but the authorities have nonetheless dusted off old civil defense plans, with police taking an inventory of potential bomb shelters. In the event of conflict, the mayor said, he had been assured that district authorities would send buses to evacuate his village's 520 people.

"If something bad happens, we will all leave," he said. "So there is no panic yet."

## **8. Russia Warns It Could Station Nuclear Forces in Europe if Finland, Sweden Join NATO**

## ***The invasion of Ukraine has tilted public opinion in Finland and Sweden toward seeking membership in the U.S.-led alliance***

Wall Street Journal Online, Apr. 14 | Bojan Pancevski and Georgi Kantchev

Russia warned on Thursday that it could station nuclear forces in and around a Russian exclave in Northern Europe and bolster its military presence there if Finland and Sweden join the NATO alliance.

Finland and Sweden are considering joining the North Atlantic Treaty Organization and will make a decision in the coming weeks. Both countries have a long tradition of military neutrality, but the Russian invasion of Ukraine has tilted public opinion and the political consensus in both countries toward seeking membership in the U.S.-led alliance.

Dmitry Medvedev, deputy chairman of Russia's Security Council, said Thursday that Russia would have to bolster its defenses in Kaliningrad—a Russian exclave wedged between Lithuania and Poland—as well as in the Baltic Sea, if the two countries joined the alliance.

"In this case, it will no longer be possible to talk about any nonnuclear status of the Baltic—the balance must be restored," said Mr. Medvedev, who served as Russia's president from 2008 to 2012. "Until now, Russia has not taken such measures and was not going to take them."

Mr. Medvedev said Russia would need to enhance its ground forces and air defenses in the region and deploy significant naval forces in the waters of the Baltic Sea.

Mr. Medvedev's comments were echoed by the Kremlin on Thursday.

Spokesman Dmitry Peskov said that Russian President Vladimir Putin had already instructed the Defense Ministry to submit proposals for strengthening Russia's "western flank against the backdrop of building up the potential of NATO near our western borders."

Mr. Peskov said that there was no timeline yet for when such plans would be presented.

Finland could apply to join NATO within weeks, Prime Minister Sanna Marin said Wednesday after a government report concluded that joining the alliance would boost security in the region.

Until becoming a sovereign country in 1917, Finland was part of the Russian empire for over a century. The country, which successfully fought off a Soviet invasion during World War II and has since been neutral, has long refused to join NATO amid a lack of popular support for the move.

Since Russia invaded Ukraine, however, polls have shown that support for membership had surged to well over 60% from below 20%. Most political parties in Helsinki now also agree Finland should become a member to boost its security.

"We have to be prepared for all kinds of actions from Russia...There is no other way to have security guarantees than under NATO's deterrence and common defense as guaranteed by NATO's Article 5," Ms. Marin told reporters in Stockholm, referring to the alliance's article that says an attack on one member is to be considered an attack on all.

Ms. Marin, who stood alongside her Swedish counterpart, Magdalena Andersson, said the decision would be made within weeks. "Everything changed when Russia invaded Ukraine," said Ms. Marin. "I think people's mind-sets in Finland, also in Sweden, changed and shifted very dramatically because of Russia's actions."

Finland shares a border of more than 800 miles with Russia, which would become NATO's most exposed eastern flank if the country becomes a member.

Sweden, which has been militarily neutral since the Napoleonic Wars over 200 years ago, is considering the same move.

Both countries are members of the European Union, which has its own security and defense arrangements.

"There is a before and after 24 February," Ms. Andersson said in reference to the day of Russia's attack on Ukraine. "The security landscape has completely changed."

A security policy review commissioned by Ms. Andersson that will assess NATO membership as an option is set to be completed before parliamentary elections in September. NATO membership is expected to be a key issue in the election.

While NATO officials have signaled that both countries would be immediately welcomed into the alliance, any membership application must be approved by all 30 member states, a process that could take up to a year.

## **9. Russia's latest nuclear threat rings hollow in Baltic states**

Washington Examiner Online, Apr. 14 | Joel Gehrke

RZESZOW, Poland -- Russia threatened to deploy nuclear weapons near the Baltic Sea if Finland and Sweden apply to join NATO, but eastern flank allies regard the threat as a laughable effort to intimidate the Nordic states.

"It's just rhetoric, because they have nukes in Kaliningrad already," a senior European official said. "It's just meant for the public, actually, to frighten the public and parliamentarians in Sweden and Finland as well. But they shouldn't be stupid."

That scornful response suggests that Russian President Vladimir Putin's reputation for bad-faith threats and aggression is undermining Moscow's ability to shape the balance of power in the region. A senior Russian Foreign Ministry official warned that Finland and Sweden's entry into the alliance "will seriously worsen the military situation and bring about the most undesirable consequences," but a former Russian president attempted to send a more ominous signal.

"There can be no more talk of any nuclear-free status for the Baltic — the balance must be restored," Russian Security Council Deputy Chairman Dmitry Medvedev, whose term as president from 2008 to 2012 helped Putin navigate a constitutional term limit, said earlier Thursday. "Until today, Russia has not taken such measures and was not going to."

That's not true, according to Baltic officials. "Russia's current threats seem rather strange in particular as we know that, leaving the current security situation aside, they keep those weapons 100 kilometers (62 miles) away from the Lithuanian border," Lithuanian Defense Minister Arvydas Anusauskas told local media. "Nuclear weapons have always been kept in the Kaliningrad region."

The region has been subject to Moscow since the end of the Second World War, giving the Kremlin a port on the Baltic Sea and territorial holdings that put pressure on NATO. Kaliningrad is separated from Belarus, which is ruled by a Putin client dictator, by a short stretch of territory where the borders of Poland and Lithuania meet. This area, known as the Suwalki Gap, has long been regarded as one of NATO's most vulnerable points.

"They keep nuclear weapons, delivery vehicles, and have warehouses [in Kaliningrad]," said Anusauskas. "The international community and countries in the region are perfectly aware of that."

The Russian military's presence in Kaliningrad is one of the factors that makes Finland and Sweden such attractive potential members of NATO, according to the senior European official. As the alliance stands, the main route to deliver supplies to the Baltic states — Lithuania, Latvia, and Estonia — without leaving NATO territory runs through the Suwalki Gap, which Russia could threaten from Belarus and Kaliningrad in a crisis. If Finland and Sweden join the alliance, then the Baltic Sea would be ringed by NATO members, easing seaborne deliveries to the Baltic states.

"They try to use this threatening rhetoric and use the nukes as threatening rhetoric because it seemed that it worked a little bit in the beginning of this big Ukraine war," the senior European official said. "So, now they try to use the same card, to mention in a sentence the word 'nuclear' and [hope] everybody will pull back. In the West, we should say, 'Hey, we know you are there already. We have nukes as well. NATO has nukes.'"

## **10. The World's Most Powerful Nuclear Missile Is a Russian ICBM Nicknamed 'Satan'**

Military.com, Apr. 14 | Blake Stilwell

In the late 1960s, the Soviet Union jumped ahead of the United States' first strike capability in a big way. The latest version of the R-36 intercontinental ballistic missile (called SS-18 by NATO) could hit anywhere in the U.S. with at least 10 18-25 megaton nuclear warheads.

The new missile could destroy the Americans' LGM-30 Minuteman III missiles before they ever left their silos. As time went on, more advanced designs only increased its nuclear payload. Eventually, it carried more power than anything in the U.S. arsenal. From the moment its existence was uncovered, NATO forces nicknamed the weapon the "Satan" missile.

The R-36 is a family of missiles. The original, designated SS-9 by NATO, was the USSR's second intercontinental ballistic missile. Its 1966 design allowed it to be shot into space and stay in orbit around the Earth for an indefinite period of time. This development led to Article IV of the 1967 Outer Space Treaty, which prohibits nuclear missiles and other weapons of mass destruction from remaining in Earth's orbit.

Although the Outer Space Treaty's stipulations calmed some of the panic around the R-36 missile, the USSR's second version of the weapon wasn't going to make anyone feel better for long. The first model featured only one 20-megaton warhead. The second version, the R-36M, featured multiple reentry vehicles (the actual nuclear warheads), which could hit more than one target with one missile launch.

By the mid-1970s, Multiple Independently-targetable Reentry Vehicles, or MIRV, became the standard for ICBMs. MIRV systems could not only hit multiple targets, but required the defender to fire three to 10 defensive missiles in response. On top of overwhelming missile defenses, it provided greater first strike firepower.

This was the age of mutually assured destruction, the military doctrine that both sides of a nuclear war would be destroyed in a nuclear exchange. If a nuclear war broke out, both sides would fire all their missiles. MIRV technology allowed for more targets and increased the odds of a first strike effectively wiping out the other side before it could retaliate.

The United States first developed MIRV-based missiles with the three-warhead Minuteman III in 1968, but the SS-18 "Satan" could carry eight to 10 more powerful warheads, with the explosive power to destroy American missiles inside protected silos. When the "Satan" system became fully operational in 1975, the U.S. worried it would no longer survive a Soviet first strike and began working on missiles with more and more warheads.

Inside the USSR, Soviet engineers and scientists kept making modifications for future iterations of the "Satan" ICBM. By the time the Soviet Union fell, it had gone through six different versions, each more powerful than the last. The sixth version of the SS-18 missile would be the most powerful nuclear weapon ever fielded by the Soviet Union.

By the time the USSR fell in 1991, Soviet-built SS-18 missiles could strike anywhere in the world.

It wasn't until the development of ballistic missile submarines that the United States could reasonably guarantee it would be able to retaliate in the event of a Soviet first strike. This third part of the nuclear triad -- the others are land-based ICBMs and nuclear-equipped bomber aircraft -- continues today. American ballistic missile submarines can carry up to 24 Trident II missiles, each with 14 reentry vehicles.

Land-based MIRV missiles like the Satan missile were banned by the 1993 United States-Russia START II agreement, but Russia withdrew from that accord in 2002 after President George W. Bush's administration withdrew the U.S. from the 1972 Anti-Ballistic Missile Treaty, which limited the number of defensive missiles each country could maintain.

As of March 2022, Russia still fields 46 SS-18 missiles, each with 10 warheads, on top of its other deployed ICBMs, an estimated 320 in all, according to the Arms Control Association. While it plans to dismantle its Satan missile stockpile under the terms of the 2012 New START agreement, it is still building new ICBM technology.

Russia's newest weapon is the RS-28 Sarmat "Satan-2" missile, with 10 heavy reentry vehicles, each with enough payload to wipe out an area the size of Texas or France. It also features hypersonic glide vehicles to make it less detectable by U.S. or space-based sensor systems and could be immune to American missile defense systems.

### **11. Gibraltar port call offers British a glimpse of U.S. submarine**

Stars and Stripes Online, Apr. 14 | Alison Bath

NAPLES, Italy -- The USS Georgia, an Ohio-class ballistic missile submarine, docked at port in Gibraltar this week as part of an ongoing effort to enhance relations with the United Kingdom, Navy officials said.

The scheduled visit, the third by a U.S. submarine within a year, includes office calls with local and military leadership and lets sailors experience the history of Gibraltar, while building relationships with a key partner in the Mediterranean Sea, said Cmdr. Richlyn Ivey, a spokeswoman for the Naples, Italy-based U.S. 6th Fleet.

The Wednesday arrival drew the attention of nearby ship watchers, who posted photos of the submarine online. The U.S. seldom announces the positions of its submarines.

In June 2021, USS Alaska, also an Ohio-class ballistic missile submarine, visited the navy base in Gibraltar, which is near Naval Station Rota in Spain. That visit was the first by an Ohio-class submarine to Gibraltar in more than 20 years, online news outlet The Drive reported last year, citing a 6th Fleet spokeswoman.

The USS Albany, a Los Angeles-class fast attack submarine, also visited the strategic port in December.

The visit coincides with heightened U.S. and NATO naval presence in the Mediterranean, including deployment of the USS Harry S. Truman carrier strike group, as the U.S. seeks to reassure allies amid Russia's full-scale invasion of Ukraine.

## **CHINA**

### **12. Panel: China Planning a 'Go Big, Go Early' Strategy Against Taiwan**

U.S. Naval Institute News, Apr. 14 | John Grady

Russian President Vladimir Putin has recently boasted of possibly using nukes against both Ukraine, and, more ominously, those NATO countries who aided Kyiv. In response, French President Emmanuel Macron reminded Russia that NATO itself has an ample nuclear deterrent.

In theory, should NATO and the U.S. supply Ukraine tanks, artillery and planes, the fierce Ukrainians could push the entire Russian army entirely out of their country. But would a nuclear Mr. Putin allow that?

Over the last few weeks, nuclear talk has arisen over a myriad of issues. If the war continues to go badly for Russia, at what point will a seemingly erratic Mr. Putin begin issuing nuclear redlines to Ukraine and its allies?

Would a crushing defeat push over the edge a nuclear trash-talking Mr. Putin — facing the possible end of his regime?

Ukraine nuke talk spins off into lots of other places. Nuclear North Korea is resuming its ballistic missile launches to intimidate nonnuclear South Korea and Japan. China is rapidly expanding its nuclear stockpiles and now talks openly of ending a free Taiwan, warning Taiwan's friends and allies to keep out — or else.

Iran promises to become nuclear soon. Nuclear Russia has assumed the role of interlocutor of all discussions to restart a new nuclear "Iran deal."

Russia controls Syrian airspace. In theory, Russian President Vladimir Putin could stop nuclear Israel either from replying to terrorist attacks emanating from Syria, or from staging a preemptive attack on Iran's nuclear bomb facilities.

Suddenly, newspapers and blogs seemed fixated on hyping the relative stockpiles and megatonnage of various nuclear states, as if they were just GDP or energy output data.

The world has become nuclear obsessed. Is there a danger in daily normalizing the abnormal and casually thinking the unthinkable?

Curbing loose nuke talk won't calm tensions or guarantee peace, but it wouldn't hurt either.

## **26. Arming for the Next Fight in Ukraine**

Wall Street Journal, Apr. 15, Pg. A14 | Editorial

Ukraine won the battle of Kyiv in heroic fashion, but the war is set to enter a bloody new phase as Vladimir Putin prepares an offensive in the east. The question is whether President Biden will summon the mettle to make sure America's friends win.

The Biden Administration on Wednesday announced \$800 million more in weapons, ammunition and other security assistance for Ukraine, calling it "tailored to the wider assault we expect Russia to launch in eastern Ukraine." The awful images coming out of Mariupol are a sign of what is to come, and the miracle is that the city's defenders have managed to hold out as long as they have. Mr. Putin said this week that peace talks have reached a dead end.

The terrain in the eastern part of the country is a "bit like Kansas," as the Pentagon put it, more open and less amenable to, say, the supply ambushes the Ukrainians have been running in the north. The Russians are reinforcing their combat power, and they can concentrate it in a smaller area. The Russian supply and morale problems won't

disappear overnight, but Mr. Putin has appointed a single commander with experience in Syria. Expect him to organize a ruthless campaign.

This means tougher fighting, long on artillery and missiles, and the Ukrainians will need heavier weapons and equipment. Wednesday's package includes 18 155mm Howitzers and 40,000 rounds, and this artillery will be put to productive use. Ditto for 10 counter-artillery radars, two air surveillance radars and 200 armored personnel carriers.

One bad sign is that the Biden Team wobbled before deciding to send 11 Mi-17 helicopters, though the U.S. has provided this type of aircraft before. Ukraine also wants and needs multiple-launch rocket systems, which don't appear on the U.S. list. This suggests U.S. decisions are still governed to a puzzling extent by fear of crossing Mr. Putin.

Ukrainian antiship capabilities need upgrading, but the latest Biden package includes only unmanned coastal defense vessels. The Ukrainians claim to have hit the Russian cruiser Moskva, though the Russians blame a fire aboard the ship. The smoking ship is a humiliation to the Russian navy, and Ukraine is doing the U.S. and NATO a great favor by offering to sink these Black Sea assets.

The Ukrainians still need long-range air defenses, and these deals need to move faster than the weeks it took to deliver Slovakia's S-300. There is a question of urgency and will about U.S. deliveries. The White House announced the U.S. would send 100 Switchblade loitering munitions on March 16. The Pentagon said on Wednesday -- April 13 -- that the last of these would enter Ukraine "over the course of the next day."

The Biden package this week promises more Switchblades, which may be helpful in the east because they can strike targets from a distance. But they'll be less useful if they arrive in a month. And it'll take much more effort to get heavier stuff like artillery to the front fast.

\*\*\*

More broadly, the U.S. and NATO need to shift from sending Ukraine whatever is on the shelf to a more coordinated effort to train and equip a Ukrainian military that may be fighting for years. This means training the Ukrainians on more complex NATO weapons, such as Patriot missile defenses and fighter aircraft.

The Ukrainians need to prevent Russian domination of the skies. The American military trains plenty of foreign military pilots, and starting now means the Ukrainian pilots could fly NATO aircraft as the war drags on.

Western training since Russia's seizure of Crimea in 2014 has been crucial in helping the Ukrainians mount the impressive defense they have so far, and this is no time to slow down. That ought to include setting up maintenance and repair shops in NATO countries, as facilities in Ukraine are Russian targets.

The paradox of President Biden's response in Ukraine is that he has been too casual with words like "genocide," as he was again this week, while he's also too hesitant to offer the lethal weapons Ukrainians need to win.

Mr. Putin could still succeed in swallowing parts of Ukraine, and he'll use his gains to keep threatening the country's existence. The fastest end to the human suffering is to confront the Russian dictator with the gradual destruction of his military if he continues this war of conquest. Mr. Putin cares more about that than he does moral denunciations.

## **27. Will the Russo-Ukrainian War Provoke Nuclear Proliferation in Asia?**

***Before Russia invaded Ukraine, U.S. security assurances to Japan, South Korea, and Taiwan were mostly unchallenged. Now, that has changed***

National Interest Online, Apr. 14 | Andy Cichon

Following Beijing's announcement that Chinese-Russian relations had "no limits," China's backing of Russia's 2022 invasion of Ukraine has subsequently created an existential threat to Japan, South Korea, and Taiwan. The invasion violated an agreement that exchanged Ukraine's nuclear weapons for security assurances and undermined U.S. policy and credibility with other nations with similar formal or informal U.S. assurances. As a result, Japan, South Korea, and Taiwan now question the wisdom of relying on U.S. security assurances instead of their own nuclear deterrent.

In Ukraine's case, Russia and the United States agreed to the 1994 Budapest Memorandum on Security Assurances, which included assurances for Ukraine's independence in exchange for turning over Soviet nuclear weapons that were left behind in Ukraine when the Soviet Union collapsed in 1991. However, while the memorandum was not a defense treaty that guaranteed U.S. protection or intervention, it was an example of the United States using its post-Cold War soft power and a combination of economic, diplomatic, and military power to negotiate Ukraine's nuclear disarmament and non-proliferation—just as it had with South Korea and Taiwan.

Having experienced the horrors of a nuclear attack in World War II, Japan gave up on the idea of having nuclear weapons without much convincing. However, the United States has repeatedly stopped South Korea's and Taiwan's nuclear weapons programs. Taiwan's first nuclear program started in 1967 following China's first atomic test in 1964. At the behest of the United States, Taiwan officially terminated its program in 1976. South Korea, too, acquired plutonium reprocessing equipment following the initial pullout of over 27,000 U.S. personnel in 1971. This effort only stopped after the United States and France refused to deliver the appropriate equipment, and South Korea ratified the Nuclear Non-Proliferation Treaty (NPT) in 1975.

Despite ratifying the NPT, South Korea and Taiwan's continued national security concerns, including frequent North Korean missile tests and Chinese threats of invasion, pushed both nations to pursue secret programs. Taiwan's secret program progressed to the point where it needed further miniaturization and a means of delivery, by either missile or plane, until Taipei conceded to U.S. pressure to end the program in 1987. South Korea's program did not progress very far, but the country can already develop intercontinental ballistic missiles capable of delivering a nuclear warhead to Beijing.

Furthermore, most South Koreans and Taiwanese favor acquiring nuclear weapons, particularly during a crisis. As late as 2017, following the 2017 North Korea crisis, most South Koreans supported building nuclear weapons and remained open to the possibility of requesting the return of U.S. tactical nuclear weapons to South Korea. During the 1996 Third Taiwan Strait crisis, Taiwan's president briefly proposed the reactivation of Taiwan's nuclear program before the United States intervened with the deployment of U.S. naval forces to the Taiwan Strait.

Whether South Korea or Taiwan renew their respective nuclear ambitions, both countries are already responding to Russia's invasion. Days after Russia's invasion, South Koreans elected Yoon Suk-yeol as president, a conservative candidate advocating closer ties with the United States to hedge against China. Now weeks into the invasion, Taiwan is studying the war to adjust its defensive approach against a Chinese attack. Even former Japanese prime minister Shinzo Abe commented on the need for the United States to deploy tactical nuclear weapons to Japan, citing similar deployments to NATO countries as justification.

While the United States labors to rally international support to oppose Russia's invasion, it is unlikely that China will help reassure South Korea and Taiwan. North Korea continues its nuclear weapons and long-range missile programs, and the Chinese Communist Party threatens to invade Taiwan. However, by backing Russia's invasion with public statements and refusing to financially sanction Russia, China has created a new existential crisis that undermines U.S. security assurances to South Korea and Taiwan in exchange for non-proliferation. This recent crisis has already resuscitated arguments for Taiwan, in particular, to acquire nuclear weapons. Now, the United States will have to reevaluate how it will maintain its security interests in the Indo-Pacific.

Before Russia invaded Ukraine, U.S. security assurances to Japan, South Korea, and Taiwan were mostly unchallenged. Additionally, China could afford to assume no responsibility and feign disinterest in non-proliferation,

relying on the United States to keep Japan, South Korea, and Taiwan from acquiring nuclear weapons. However, by backing Russia's invasion and discrediting U.S. security assurances to countries that relinquished or terminated their nuclear weapons programs, China has inadvertently created a more dangerous world. China must either assume more responsibility in promoting nuclear non-proliferation in the Indo-Pacific or accept the elevated risks associated with Japan, South Korea, and Taiwan pursuing nuclear deterrence.

## **28. With the West distracted, China expands**

Washington Post, Apr. 15, Pg. A21 | Josh Rogin

Over the past few weeks, the world has been understandably transfixed by Russian President Vladimir Putin's horrific invasion of Ukraine. Meanwhile, though, his close ally Chinese President Xi Jinping has been quietly taking advantage of the West's distraction by expanding China's sphere of influence in the South Pacific. If Washington doesn't wake up to this threat, China's efforts to dominate the region will gain dangerous and perhaps irreversible momentum.

Officials and experts throughout Asia expressed shock last month when a leaked document emerged showing a draft of a "security cooperation" agreement between China and the Solomon Islands, a small former British colony in the South Pacific that has been independent since 1978. The draft agreement would enable Beijing to send armed police or military personnel, at the request of the Solomon Islands, for a variety of purposes, including to "assist in maintaining social order." Marked confidential, the agreement would also expand the Chinese military's ability to send ships and troops to protect Chinese people and projects on the islands.

If you haven't been paying attention to the Solomon Islands government, led by Beijing-friendly Prime Minister Manasseh Sogavare, you're like most policymakers in Washington. But if you doubt the islands' strategic significance, just look at the map. A Chinese military presence there would put People's Liberation Army troops less than a five-hour flight from the eastern coast of Australia and far closer to U.S. territories than ever before.

China surely hasn't forgotten the role played by the Solomon Islands in World War II, especially during the 1942-43 Battle of Guadalcanal.

"Ensuring that these islands, within striking distance of Australia and occupying critical strategic geography, remain free from Chinese coercion and military presence is a massive strategic imperative for the U.S. and Australia," Alex Gray, director for Oceania and Indo-Pacific Security at the National Security Council during the Trump administration, told me.

Predictably, Beijing says that the agreement is no big deal and is "beyond reproach." But the U.S. and Australian governments have been scrambling to try to stop its completion. Australian officials are engaged in frantic shuttle diplomacy with the Sogavare government. President Biden's top NSC official for Asia, Kurt Campbell, will become the administration's first senior official to visit the Solomon Islands next week, in a regional tour that will include several other stops.

It was Campbell who predicted in January that China would unveil a "strategic surprise" in the Pacific this year. Clearly, the U.S. and Australian governments had some indication that this was coming. Yet neither seems to have done much to try to prevent the Chinese move. Now, experts say, both governments are struggling to catch up to Beijing.

"Reversing momentum, rather than stopping it in the first place, is risky and expensive," said former Australian national security official John Lee, now with the Hudson Institute. "The failure to do more to prevent the deal from even being contemplated means the U.S. and allies will need to spend more resources and regional political capital than they would like."

Biden administration officials maintain that they are, in fact, heavily engaged in the Pacific Islands. Biden spoke to Pacific Island leaders in August, via Zoom. Secretary of State Antony Blinken visited Fiji in February. Last month, Biden appointed Ambassador Joseph Yun as a special envoy to work on completing negotiations to renew U.S. compacts with three other Pacific Island nations. State Department climate envoy John F. Kerry attended a conference in Palau this week.

A senior Biden administration official told me that covid restrictions hampered face-to-face diplomacy until recently, but the official assured me that the Biden team is determined to step up the United States' game in this region. Nevertheless, details of exactly how the Biden administration plans to try to persuade Sogavare to turn away from China are scarce.

"This did not come as a surprise, and this is not the only place in the Pacific or globally where China is extraordinarily active," the official said. "This is but a recent manifestation, and it's probably one of the boldest."

To be sure, the Solomon Islands is only one of many places in the Pacific Islands where China is expanding its influence. Beijing has persuaded two Pacific island countries to drop diplomatic recognition of Taiwan in recent years, including the Solomon Islands. China offers tempting packages of economic, diplomatic and military aid while bribing any and all corrupt leaders in these countries. Rather than reacting case by case, the United States and allied governments need to come to the table with substantive, long-term offers of aid and investment to reassure these Pacific Island nations that they have another option besides betting their future on partnership with Beijing.

Russia is an urgent threat, but China is the more serious long-term competitor, only too happy to exploit our distraction. Xi has global ambitions, which means we must confront his aggression in many places at once. If the Pacific Islands become China's outposts, the region and the world will be a much more dangerous place.

## **29. The Dangers of China's Decline**

***As China's economic miracle fades, its leaders may become more inclined to take risks***

Foreign Policy, Spring 2022 | Hal Brands

Decline is a tricky concept. The term makes us think of a country that is falling like a rock—one whose power and capabilities are dropping across the board. But a country can be in relative decline vis-à-vis a fast-growing adversary even if its own power is still increasing. It can be surging forward in some areas, such as military might, even as its underlying economic strength starts to wither. And decline doesn't always lead a country to scale back its objectives—the sense of urgency it creates can cause ambitious powers to grab what they can before the clock runs out.

Xi Jinping's China is about to give the world an education in the nuances of decline. Since the onset of its economic reforms in the 1970s, China has long defied predictions that it would soon stumble or collapse. Its spectacular growth challenged prevailing views about the sources of national success in the modern world. In some ways, China is still soaring: Its military power grows more formidable every year. When Xi declares that "the East is rising and the West is declining," he gives voice to this sense that China is a country on the make.

Yet military power is often a lagging indicator of a country's trajectory: It takes time to turn money into military muscle, and massive buildups often persist even after a country's economic fortunes begin to flag. And today, for reasons including demographic disaster and the lingering effects of the COVID-19 pandemic, China is facing the end of the stunning economic growth that made it possible for Xi to assert that the "great rejuvenation of the Chinese nation"

As for London, the Ministry of Defence has built an equally unconvincing case and, perhaps worse for its security, one that exposes a deep reliance on an ally for its supposedly independent deterrent. The war in Ukraine and heightened tensions with Russia must not dictate unnecessary modernization spending.

## **STATE-RUN MEDIA**

### **32. Nuclear weapons deployment in Baltic on hold before Defense Ministry's plan – Kremlin**

TASS (Russia), Apr. 14 | Not Attributed

Russian Presidential Spokesman Dmitry Peskov advised to wait until the Russian Defense Ministry comes up with a plan regarding the enhancement of the country's western borders before speaking about a possible deployment of nuclear weapons in the Baltic area.

His statement came in response to a question about a possible deployment of the Russian nuclear weapons in the Baltic area in case Sweden and Finland join NATO.

"I can say nothing in this regard, because only after a plan of our enhancement of the western borders is drafted. It will contain a number of measures and all necessary steps to be taken," Peskov told journalists.

"It will be considered at a separate presidential session, just like [President] Putin said himself previously," Peskov added.

He reminded that the president issued earlier a special decree for the Defense Ministry regarding the enhancement of national troops' presence near the country's western frontiers and the Defense Ministry needed some time to come up with a detailed plan.

"It will take some time, this is serious work to be done," Peskov added.

Deputy Chairman of the Security Council of Russia Dmitry Medvedev announced earlier on Thursday that Russia would beef up security along its Western borders if Sweden and Finland join NATO and there would be no more talk of a nuclear-free Baltic.

In his statement posted on Telegram channel, Medvedev explained that it would be necessary to beef up the group of ground troops and the air defense system and deploy substantial naval forces in the Gulf of Finland. "If this is the case, there can no longer be talk about the Baltic's non-nuclear status - the balance must be restored," he stated.

### *Russia's special military operation in Ukraine*

On February 21, Russian President Vladimir Putin announced recognizing the sovereignty of the Donetsk and Lugansk People's Republics. Russia recognized the Donbass republics in accordance with the DPR and LPR constitutions within the boundaries of the Donetsk and Lugansk regions as of the beginning of 2014.

Russian President Putin said in a televised address on February 24 that in response to a request by the heads of the Donbass republics he had made a decision to carry out a special military operation in Ukraine in order to protect people "who have been suffering from abuse and genocide by the Kiev regime for eight years."

The Russian leader stressed that Moscow had no plans of occupying Ukrainian territories, noting that the operation was aimed at the denazification and demilitarization of Ukraine. The DPR and the LPR launched an operation to liberate their territories under Kiev's control.

[RETURN TO TOP](#)

### **33. Russia to take defense measures if Sweden, Finland join NATO, senior diplomat warns**

TASS (Russia), Apr. 14 | Not Attributed

Moscow will take required security and defense measures if Sweden and Finland join NATO, Russian Deputy Foreign Minister Alexander Grushko told TASS on Thursday.

"It is clear that our border with Finland is 1,300 km long. This will mean a radical change in the military and political situation and it is understandable that we will be forced to take security and defense measures that we will deem necessary. This is the essence of military development," the senior Russian diplomat said, responding to a question about the possibility of Russia deploying nuclear weapons in the Baltic region.

"In the current conditions, I am not ready to say whether this is real or not [the accession of Sweden and Finland to NATO]," the high-ranking Russian diplomat said, replying to a corresponding question.

"For decades, the neutral status of these states had ensured a very high level of their security and generally the security in that region that had been a region of peace and cooperation and, importantly, a very reliable platform for building good neighborly relations with us," Grushko said.

The neutral status of Sweden and Finland did not impede these states in any way whatsoever from developing closer ties with the European Union and eventually becoming its members, the senior Russian diplomat pointed out.

Based on rational considerations and vital interests of the peoples living in the north of Europe, the current situation must be preserved, Grushko stressed.

"Otherwise, this will seriously worsen the military situation and bring about the most undesirable consequences that need to be avoided," he cautioned.

Replying to a question about Moscow's contacts with Helsinki and Stockholm in the wake of ongoing discussions in these countries about their possible accession to NATO, Grushko pointed out that "diplomatic contacts are always maintained and there are embassies." "But Sweden and Finland have joined the sanctions and are participating in the anti-Russia campaign unleashed in the West. This is today's reality."

The Times newspaper earlier reported, citing sources that both countries might join NATO already in the summer of this year. According to the paper, Finland is expected to file its NATO membership bid in June to be followed by Sweden. Deputy Chairman of Russia's Security Council Dmitry Medvedev said on Thursday that Russia would bolster its western borders, if Sweden and Finland joined NATO and in this case "there can be no talk about the nuclear-free status of the Baltic region."

### **34. Visit of US delegation to Taiwan undermines China-US relations, Chinese top brass says**

TASS (Russia), Apr. 15 | Not Attributed

A recent visit of US congressmen to Taiwan undermines the political foundation of Chinese-US relations, the Friday statement by Chinese Defense Ministry Spokesman Wu Qian said.

"Such actions by the US grossly violate the 'One China' principle and the provisions of three Chinese-US joint communique, cause serious damage to the political foundation of the Chinese-American relations," he noted.

## CTR Media Clip Summary

April 8-11, 2022

**BLUF:** Though Russian and Chinese bio lab disinformation declined in volume, narratives evolved to include expansion of bio labs in Mongolia, coverage of anti-bio lab demonstrations in Armenia, and conspiracies of a secret underground bio laboratory in Mariupol.

**Russian Disinformation:** Russian state media consistently reported on relocation of U.S. biomaterials from Ukraine to Mongolia while a Telegram contingent honed in on a “secret underground NATO bio laboratory” beneath the Azovstal plant in Mariupol.

- Izvestia News, along with other state media outlets, reported heavily on alleged U.S. intentions to open bio labs in Mongolia.
- Izvestia listed the National Center for Zoonotic Diseases, Mongolian University of Natural Sciences, Mongolian Academy of Medical Sciences, and the Institute of Veterinary Medicine as vectors for U.S. bioactivity collaboration.
- Telegram user @Informburo\_sfd (daily reach to approximately 700k users) is central to the underground bio lab conspiracy in Mariupol. The user claimed that there is a secret subterranean NATO facility, PIT-404, housing bioweapons in Mariupol.
- Telegram users asserted there are NATO officers, French Foreign Legion members, and 3,000 Akhmetov financed guards in said secret NATO facility.
- Sputnik and other Russian state media channels covered protests in Yerevan where organizers demanded immediate closure of all U.S. bio labs in Armenia.
- Fringe site News Front claimed the U.S. engaged in psychotropic weapons research (a continuation of MK-ULTRA) in bio labs in Ukraine.
- Socialist Movement of Kazakhstan activists circulated a petition for the immediate elimination of U.S. bio lab facilities according to the fringe site Shnyagi.net.
- Several Russian state media outlets recirculated stories about a potential “mosquito attack” on Russia stemming from the Lugar Center in Georgia.
- Telegram and Twitter users continued the “Bio Biden” mantra as they posted about Hunter Biden’s supposed conspiratorial links through Rosemont Seneca to bio labs in Ukraine.
- An op-ed in Kenya’s second most read paper, The Standard, focused on U.S. bio labs in Ukraine but also raised concerns about DTRA’s suspected bio activities at the Kenya Medical Research Institute (KEMRI).

**Chinese Disinformation:** Chinese state media concentrated on the opening of U.S. bio labs in Mongolia as Weibo users repeated conspiracies about Fort Detrick and Covid-19 origins.

- At a press conference, Zhao Lijian leveraged the 50<sup>th</sup> anniversary of the BWC to call for a reinvigoration of verification protocols and compliance measures. Zhao stated that China will “play a bigger role” in ensuring responsible, cooperative biological research.
- Chinese state media asserted the U.S. will relocate biomaterials from Ukraine to Mongolia to continue bioweapons research on China’s frontier.
- Weibo users recycled claims that Covid-19 originated from Fort Detrick and that U.S. bio labs in Ukraine could bestow a new Coronavirus.

### **COVERAGE HIGHLIGHTS**

---

1. Reuters reported the International Atomic Energy Agency announced Wednesday that Iran has moved all its machines that make centrifuge parts from its mothballed workshop at Karaj to its sprawling Natanz site just six weeks after it set up another site at Isfahan to make the same parts. The announcement raises the question of whether Iran will increase output by using both Natanz and Isfahan.
2. Reuters led media reporting stating Yemen President Abd-Rabbu Mansour Hadi announced he dismissed his controversial vice president, Ali Mohsen al-Ahmar and delegated his own powers to a presidential council. The move was reportedly backed by Saudi Arabia and characterized by media as removing some obstacles to revive U.N. peace negotiations to end the nearly eight-year war. Additionally, Saudi Arabia announced \$3 billion in financial aid to Yemen's Riyadh-backed government.
3. NBC News highlighted the Biden Administration's use of declassified intelligence which has led to a new tactic in fighting the information war: the use of intelligence to inform the public and blunt the enemy's information campaign. Citing several examples including the release of declassified information stating Russia was prepping to use chemical weapons in Ukraine – analysts stated the intelligence releases have shown that intelligence information could be used as an instrument of state power.

## **U.S./WESTERN MEDIA COVERAGE**

- 1. Iran moves equipment for making centrifuge parts to Natanz, IAEA says**  
Reuters, 6 Apr 22, Francois Murphy

Iran has moved all its machines that make centrifuge parts from its mothballed workshop at Karaj to its sprawling Natanz site just six weeks after it set up another site at Isfahan to make the same parts, the UN nuclear watchdog said on Wednesday.

## **2. Yemen president cedes powers to council as Saudi Arabia pushes to end war**

Reuters, 7 Apr 22, Mohamed Ghobari and Ahmed Tolba

Yemen's president dismissed his controversial deputy on Thursday and delegated his own powers to a presidential council in a move backed by Saudi Arabia, removing some obstacles to U.N.-led efforts to revive negotiations to end the seven-year war.

## **3. In a break with the past, U.S. is using intel to fight an info war with Russia, even when the intel isn't rock solid**

NBC News, 6 Apr 22, Ken Dilanian, Courtney Kube, Carol E. Lee and Dan De Luce

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine. President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions.

### **10. Al-Qaida leader circulates video, dispels rumor of his death**

Associated Press, 6 Apr 22, Kathy Gannon

A rare video has appeared of al-Qaida's chief praising an Indian Muslim woman who in February defied a ban on wearing the traditional headscarf, or hijab. The footage is the first proof in months that the man who was once Osama bin Laden's No. 2 is still alive.

### **11. Iran condemns Afghan mosque attack after US, China, Russia, Pakistan talks**

Newsweek, 6 Apr 22, Tom O'Connor

Iran has voiced its condemnation of a recent grenade attack against Kabul's largest mosque just days after representatives of the United States, China, Russia and Pakistan met to discuss the situation in Afghanistan, a country beset by humanitarian crisis and militant threats.

### **12. University of Maryland to house Afghan refugees on campus**

Washington Examiner, 6 Apr 22

The University of Maryland announced it will provide temporary housing for refugee and evacuee families from Afghanistan as part of a partnership with the International Rescue Committee.

### **13. Afghan women rip down banners when Taliban refuse to talk about education**

Deutsche Welle (Germany), 6 Apr 22

They went to the meeting hoping to talk to the Taliban about Afghan women's right to education. Around 400 women and girls, many of them of high-school and university age, showed up on April 1 at a sports hall in the central city of Bamiyan for what they had been told would be a chance to discuss their right to get an education. But when it turned out to be a rally for the local Taliban – with not a word said about education – the women tore down a banner and demanded to be heard.

### **18. U.S. satellites spying on Russia's War tap commercial technology**

Bloomberg, 6 Apr 22, Tony Capaccio

U.S. surveillance of Russia's Ukraine invasion has been buttressed by two newer satellite systems built with commercial parts and on-board imagery processes, the head of the intelligence agency that manages the programs said in a rare public statement.

### **19. Financial warfare: will there be a backlash against the dollar?**

Financial Times, 7 Apr 22, Robin Wigglesworth, Polina Ivanova and Colby Smith

Two weeks after Russian tanks rolled into Ukraine, South African president Cyril Ramaphosa held a phone call with Russia's Vladimir Putin. On the same day, European leaders meeting in Versailles warned democracy itself was at stake. Yet Ramaphosa struck a very different tone.

#### **20. US disrupts global 'botnet' controlled by Russian military intelligence, DOJ says**

The Guardian, 6 Apr 22, David Smith

The US has disrupted a global "botnet" controlled by Russia's military intelligence agency, Attorney General Merrick Garland announced on Wednesday.

#### **21. U.S. government and energy firms close ranks, fearing Russian cyberattacks**

Washington Post, 6 Apr 22, Ellen Nakashima

In February, as Russian troops massed on Ukraine's border, executives with a major energy firm here worked with U.S. energy and homeland security officials to draw up a playbook and help prepare the electricity sector to deal with potential cyberattacks by Russia.

#### **22. Hypersonic-Missile delay puts U.S. further Behind Russia, China**

Bloomberg, 6 Apr 22, Tony Capaccio

The first U.S. hypersonic weapon will be delayed for as long as a year under a new schedule, even as lawmakers protest that the Pentagon is lagging behind in a new technology that Russia has already used in Ukraine and China has demonstrated in a space launch.

#### **23. USS Gerald R. Ford's captain on why the carrier's new island design works**

The War Zone, 6 Apr 22, Howard Altman

For Navy Capt. Paul "Paulie" Lanzilotta, 140 feet makes a world of difference. That's how far the island superstructure of the \$13 billion USS Gerald R. Ford has been moved to the aft on the 1,106-foot long vessel, which leads a new class of aircraft carriers, compared to what's found on the previous Nimitz class.

#### **24. NATO nations see differing paths as Ukraine War enters uncertain stage**

New York Times, Apr 6, 22, Steven Erlanger and Michael Crowley

Faced with the prospect that the war in Ukraine will be long and grinding, NATO countries are divided on how best to manage the next stage of the conflict and the uncertain period that promises to follow.

#### **25. US imposes 'severe' sanctions on Russian banks after Bucha atrocities**

Financial Times, 6 Apr 22, Courtney Weaver, James Politi, Colby Smith and Jasmine Cameron-Chileshe

The US has imposed its most severe level of sanctions on Sberbank, Russia's largest financial institution, and Alfa-Bank, the country's biggest private bank, escalating its economic punishment of Moscow in response to atrocities committed by Russian forces in Ukraine.

## **26. Eastern Ukraine braces for renewed assault as Russia regroup**

Washington Post, 6 Apr 22, David L. Stern, Joby Warrick, Louisa Loveluck and Max Bearak

MUKACHEVO, Ukraine — Ukrainian officials called Wednesday for evacuations in three provinces near the Russian border amid new signs that President Vladimir Putin's troops are escalating their assault on eastern and southern cities following a failed attempt to take the country's capital.

## **27. Ukraine's surprise strike on Russian fleet hobbles Putin's Donbas strategy**

Wall Street Journal, 6 Apr 22, Brett Forrest and Nancy A. Youssef

A surprise Ukrainian strike on a Russian ship at a southern port city last month could curb Moscow's plan to expand its hold on the Donbas region, eliminating a key military advantage in the Russian attack plan, Ukrainian military analysts and U.S. officials said.

## **28. Russia is recruiting mercenaries and Syrians to Ukraine, Western officials say**

New York Times, 6 Apr 22, Eric Schmitt, Julian E. Barnes and Helene Cooper

As Russian troops retreat from northern Ukraine and focus operations on the country's east and south, the Kremlin is struggling to scrape together enough combat-ready reinforcements to conduct a new phase of the war, according to American and other Western military and intelligence officials.

## **29. Pentagon: Russia has fully withdrawn from Kyiv, Chernihiv**

Washington Post, 6 Apr 22, Karoun Demirjian and Dan Lamothe

Russian forces have fully withdrawn from the Ukrainian capital, Kyiv, and the city of Chernihiv to its north, the Pentagon said Wednesday, as Moscow prepares to concentrate its invading forces in the eastern part of the country.

## **30. China's security deal with Solomons raises alarm in Pacific**

Associated Press, 6 Apr 22, Nick Perry and David Rising

A security alliance between China and the Solomon Islands has sent shudders throughout the South Pacific, with many worried it could set off a large-scale military buildup or that Western animosity to the deal could play into China's hands. What remains most unclear is the extent of China's ambitions.

## ANALYSIS/COMMENTARY

---

## **31. Finland may finally want in on NATO; Sweden is not far behind.**

Foreign Policy, 6 Apr 22, Robbie Gramer and Amy Mackinnon

Just over two months ago, the prospect of Finland joining NATO was virtually unthinkable to most in the northern European country. It had grown closer to the military alliance over the last three decades but resisted the idea of becoming a full-fledged member. That all changed when tens of thousands of Russian troops rolled across Ukraine's border in late February.

### **32. Don't let Putin win in Ukraine**

Wall Street Journal, 6 Apr 22, Daniel Henninger

In no sense now can Vladimir Putin be allowed to win in Ukraine. People shouldn't have to be shot in the back of the head with their hands tied behind them to make that clear, but such is history's record of humanity slow-walking counterattacks against mass slaughter.

### **33. Across South Asia, U.S. and India push back against China**

Foreign Policy, 6 Apr 22, C. Raja Mohan

When Indian Foreign Minister S. Jaishankar and Indian Defense Minister Rajnath Singh hold a so-called two-plus-two dialogue with U.S. Secretary of State Antony Blinken and U.S. Defense Secretary Lloyd Austin in Washington on Monday, managing the discord between their countries over Russia's war in Ukraine will be a priority. India, a major customer of Russian weapons, has so far refused to condemn the brutal invasion at the United Nations or join the West in sanctioning Russia. The Biden administration and the government of Indian Prime Minister Narendra Modi, however, are determined not to let their differences over Russia come in the way of strengthening the Indian-U.S. partnership in the Indo-Pacific.

### COVERAGE HIGHLIGHTS

---

- 1) Reuters reported the International Atomic Energy Agency announced Wednesday that Iran has moved all its machines that make centrifuge parts from its mothballed workshop at Karaj to its sprawling Natanz site just six weeks after it set up another site at Isfahan to make the same parts. The announcement raises the question of whether Iran will increase output by using both Natanz and Isfahan.
- 2) Reuters led media reporting stating Yemen President Abd-Rabbu Mansour Hadi announced he dismissed his controversial vice president, Ali Mohsen al-Ahmar and delegated his own powers to a presidential council. The move was reportedly backed by Saudi Arabia and characterized by media as removing some obstacles to revive U.N. peace negotiations to end the nearly eight-year war. Additionally, Saudi Arabia announced \$3 billion in financial aid to Yemen's Riyadh-backed government.
- 3) NBC News highlighted the Biden Administration's use of declassified intelligence which has led to a new tactic in fighting the information war: the use of intelligence to inform the public and blunt the enemy's information campaign. Citing several examples – including the release of declassified information stating Russia was prepping to use chemical weapons in Ukraine – analysts stated the intelligence releases have shown that intelligence information could be used as an instrument of state power.

#### **1. Iran moves equipment for making centrifuge parts to Natanz, IAEA says**

Reuters, 6 Apr 22, Francois Murphy

Iran has moved all its machines that make centrifuge parts from its mothballed workshop at Karaj to its sprawling Natanz site just six weeks after it set up another site at Isfahan to make the same parts, the UN nuclear watchdog said on Wednesday.

#### **2. Yemen president cedes powers to council as Saudi Arabia pushes to end war**

Reuters, 7 Apr 22, Mohamed Ghobari and Ahmed Tolba

Yemen's president dismissed his controversial deputy on Thursday and delegated his own powers to a presidential council in a move backed by Saudi Arabia, removing some obstacles to U.N.-led efforts to revive negotiations to end the seven-year war.

### **3. In a break with the past, U.S. is using intel to fight an info war with Russia, even when the intel isn't rock solid**

NBC News, 6 Apr 22, Ken Dilanian, Courtney Kube, Carol E. Lee and Dan De Luce

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine. President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions.

### NOTABLE TWEETS

---

**Iraq Ministry of Defense Security Media Cell; @SecMedCell (6 Apr):** (1) At a time when the Iraqi lands enjoy security and faith during the days of the holy month of Ramadan, outlaw groups are trying to disturb these blessed days. This evening, terrorist elements bombed Khabat district in Erbil governorate in the Kurdistan region of Iraq with three Katyusha rockets. (2) It fell in separate areas eliminated in empty and agricultural spaces near the Kurusk complex, the Great Zab River and the Kurokosk refinery, without recording human or material losses. It was found that these missiles were launched from the Hamdaniya crossing. (3) For their part, the competent security services have launched a search and search process for the terrorist elements that carried out this terrorist act. The security forces will work to bring those who tampered with security to justice, so that they may receive their just punishment.

**Yemen PM, Dr. Maeen Abdulmalek Saeed, @Yemen\_PM (6 Apr):** A meeting with the Vice President of the World Bank dealt with aspects of joint coordination to mobilize support and funds necessary for government programs to maintain food security, provide services, and help it carry out its duties and obligations in alleviating the humanitarian crisis.

**U.S. State Dept - Near Eastern Affairs; @StateDept\_NEA (6 Apr):** The U.S. supports @UN peace efforts for #Yemen, including the negotiated truce. But ultimately, deep-rooted divisions need to be resolved by Yemenis through dialogue & compromise," said #USEnvoyYemen in a mtg w/Secretary-General People's Congress Advisor Alalimi. @USEmbassyYemen

**Inherent Resolve; @CJTFOIR (6 Apr):** Hope for a better future. Daesh attempts to destroy people's spirit in NE Syria during its brutal rule has failed. The @Coalition remains partnered with the #SDF to ensure the lasting defeat of Daesh & help keep NE Syria safe & secure. #StrongerTogether

**President Biden; @POTUS (6 Apr):** I made clear that Russia would pay a severe and immediate price for its atrocities in Bucha. Today, along with our Allies and partners, we're announcing a new round of devastating sanctions.

**Secretary Antony Blinken; @SecBlinken (6 Apr):** We are implementing sanctions on two of the largest Russian financial institutions, designating the adult children of President Putin, the wife and adult child of Foreign Minister Lavrov, and 21 members of Russia's National Security Council, including former President Medvedev.

**Secretary Antony Blinken; @SecBlinken (6 Apr):** As the global security environment changes, @NATO adapts. Today, I met with Allied foreign ministers to continue work on the Strategic Concept, addressing new challenges while reaffirming core values. NATO will adopt the new Strategic Concept at the 2022 Madrid Summit in June.

### **3. In a break with the past, U.S. is using intel to fight an info war with Russia, even when the intel isn't rock solid**

NBC News, 6 Apr 22, Ken Dilanian, Courtney Kube, Carol E. Lee and Dan De Luce

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine.

President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions.

It's one of a string of examples of the Biden administration's breaking with recent precedent by deploying declassified intelligence as part of an information war against Russia. The administration has done so even when the intelligence wasn't rock solid, officials said, to keep Russian President Vladimir Putin off balance. Coordinated by the White House National Security Council, the unprecedented intelligence releases have been so frequent and voluminous, officials said, that intelligence agencies had to devote more staff members to work on the declassification process, scrubbing the information so it wouldn't betray sources and methods.

Observers of all stripes have called it a bold and so far successful strategy — although not one without risks.

“It's the most amazing display of intelligence as an instrument of state power that I have seen or that I've heard of since the Cuban Missile Crisis,” said Tim Weiner, the author of a 2006 history of the CIA and 2020's “The Folly and the Glory,” a look at the U.S.-Russia rivalry over decades. “It has certainly blunted and defused the disinformation weaponry of the Kremlin.”

Four days before the end of the Cuban Missile Crisis in 1962, the U.S. publicized spy plane photos to show the Soviet Union had deployed nuclear missiles not far from Florida's coast. The Biden administration began releasing reams of intelligence about what it said were Putin's plans and intentions even before the invasion of Ukraine began.

Just this week, national security adviser Jake Sullivan stood at the White House podium and read out what officials said was more declassified intelligence, asserting that Russia's pullout from areas around Kyiv wasn't a retreat but a strategic redeployment that signals a significant assault

on eastern and southern Ukraine, one that U.S. officials believe could be a protracted and bloody fight.

The idea is to pre-empt and disrupt the Kremlin's tactics, complicate its military campaign, "undermine Moscow's propaganda and prevent Russia from defining how the war is perceived in the world," said a Western government official familiar with the strategy.

Multiple U.S. officials acknowledged that the U.S. has used information as a weapon even when confidence in the accuracy of the information wasn't high. Sometimes it has used low-confidence intelligence for deterrent effect, as with chemical agents, and other times, as an official put it, the U.S. is just "trying to get inside Putin's head."

Some officials believe, however, that trying to get into Putin's head is a meaningless exercise, because he will do what he wants regardless.

After this story was published, a U.S. official told NBC News that "the U.S. government's effort to strategically downgrade intelligence to share with allies and the public is underpinned by a rigorous review process by the National Security Council and the Intelligence Community to validate the quality of the information and protect sources and methods." The official added that "we only approve the release of intelligence if we are confident those two requirements are met."

### **'Spot on'**

The biggest success of the U.S. information offensive may have been delaying the invasion itself by weeks or months, which officials believe they did with accurate predictions that Russia intended to attack, based on definitive intelligence. By the time Russia moved its troops in, the West presented a unified front.

Before the invasion, the U.S. asserted that Russia intended to stage a false flag attack against members of Ukraine's Russian-speaking population as a justification for war and that the plans included a video featuring fake corpses. The video never materialized; Russia has consistently claimed it was invading to protect ethnic Russians from "Nazis" in Ukraine.

The U.S. accurately predicted that Putin intended to go through with the attack, even as other Western countries, notably France, argued otherwise. The head of France's military intelligence agency stepped down last week over the wrong call.

A former U.S. official said administration officials believe the strategy delayed Putin's invasion from the first week of January to after the Olympics and that the delay bought the U.S. valuable time to get allies on the same page in terms of the level of the Russian threat and how to respond.

CIA Director William Burns, a former ambassador to Russia, told lawmakers at a congressional threats hearing last month that "in all the years I spent as a career diplomat, I saw too many instances in which we lost information wars with the Russians."

Now, he said, "by being careful about this we have stripped away the pretext that Putin, in particular, often uses."

“That has been a real benefit, I think, to Ukrainians,” he said.

The policy has drawn lavish praise even from some Republicans.

“You were spot on in your intelligence,” Rep. Brian Fitzpatrick, R-Pa., said at the House’s annual worldwide threats hearing last month, addressing Burns and other intelligence agency leaders. “Your decision to declassify, both the form and the fashion in which you did so, saved lives. Sleep well, and thank you for doing that.”

But the strategy has its dangers. One of them, the Western official said, is that getting something clearly wrong would be extremely damaging to U.S. credibility and play into Moscow’s hands.

### **Disclosure as a deterrent**

As the war has proceeded, the administration has used intelligence to warn of possible Russian actions and draw attention to Russian military failings.

At times, the Biden administration has released information in which it has less confidence or about things that are possible rather than truly likely.

Last week, U.S. officials told reporters they had intelligence suggesting Putin is being misled by his own advisers, who are afraid to tell him the truth.

But when Biden was asked about the disclosure later in the day — after it made headlines around the globe — he was less than definitive.

“That’s an open question. There’s a lot of speculation,” Biden told reporters. “But he seems to be I’m not saying this with a certainty he seems to be self-isolating.

The degree to which Putin is isolated or relying on flawed information can’t be verified, said Paul Pillar, a retired career U.S. intelligence officer. “There’s no way you can prove or disprove that stuff,” he said.

Two U.S. officials said the intelligence about whether Putin’s inner circle was lying to him wasn’t conclusive — based more on analysis than hard evidence. Other officials disputed that, saying the intelligence was very reliable and had been vetted at the highest levels.

In another disclosure, U.S. officials said one reason not to provide Ukraine with MiG fighter jets is that intelligence showed Russia would view the move as escalatory.

That was true, but it was also true of Stinger missiles, which the Biden administration did provide, two U.S. officials said, adding that the administration declassified the MiG information to bolster the argument not to provide them to Ukraine.

Likewise, a charge that Russia had turned to China for potential military help lacked hard evidence, a European official and two U.S. officials said.

The U.S. officials said there are no indications China is considering providing weapons to Russia. The Biden administration put that out as a warning to China not to do so, they said.

The European official described the disclosure as “a public game to prevent any military support from China.”

Game or not, U.S. intelligence officials say it has been successful. Intelligence is rarely definitive, and Biden officials have calculated in some cases that it’s better to pre-empt something that might not happen, rather than stay silent and watch it unfold.

“It doesn’t have to be solid intelligence when we talk about it,” a U.S. official said. “It’s more important to get out ahead of them — Putin specifically — before they do something. It’s preventative. We don’t always want to wait until the intelligence is 100 percent certainty that they are going to do something. We want to get out ahead to stop them.”

The official said there was an extensive discussion about whether to reveal that the Russians had a blacklist of Ukrainian enemies whom they intended to arrest and possibly kill once they seized control. Officials weighed the potential harm of divulging the intelligence. “That was a big decision,” the official said.

But the intelligence appears to have been borne out by witness accounts from towns Russian once occupied and has now left, where political assassinations have been documented.

### **Leaning forward**

Some U.S. officials have advocated a strategy of leaning further forward in declassifying and releasing intelligence for years, as U.S. adversaries became adept at using modern communications platforms to spread propaganda.

In 2020, nine of 11 U.S. military combatant commanders signed a memo urging the U.S. intelligence community to declassify more information to counter disinformation and propaganda from Moscow and Beijing.

The U.S. can bolster support from allies only by “waging the truth in the public domain against America’s 21st century challengers,” the officers wrote. But efforts to compete in the battle of ideas, they added, are hamstrung by overly stringent secrecy practices.

“We request this help to better enable the US, and by extension its allies and partners, to win without fighting, to fight now in so-called gray zones, and to supply ammunition in the ongoing war of narratives,” the four-star generals wrote to the acting director of national intelligence at the time, Joseph Maguire.

“Unfortunately, we continue to miss opportunities to clarify truth, counter distortions, puncture false narratives, and influence events in time to make a difference,” the generals said.

In the past, the U.S. had sat on its hands as Russia waged information war.

In 2014, days before Russia invaded Ukraine's Crimean peninsula, Russia released a recording of an apparent phone conversation between senior U.S. diplomat Victoria Nuland and the ambassador to Ukraine at the time, in which Nuland disparaged the European Union.

The move was part of a wave of disinformation and propaganda from Moscow surrounding the seizure of Crimea. But the Obama administration didn't react.

That's because the U.S. had opted out of the great power propaganda wars after the 9/11 attacks, Weiner said.

"So what was the United States' response to all of this?" Weiner asked. "Crickets, nothing, zip. They had no response."

The Biden strategy has been different.

Pillar said the Biden administration took a significant risk in predicting Russia would invade Ukraine, a bold move that was vindicated by Putin's actions.

"That suggests that there are some pretty strong bases for this information," Pillar said. "Not only did it turn out to be correct ... but evidently it had been presented to the president with enough confidence that he felt confident going out on the limb as far as he did."

Said Pillar, "Boy, if there wasn't an invasion, this would have a huge 'cry wolf' effect and make our president look pretty bad."

#### **4. Germany arrests Syrian accused of torturing captives with Daesh**

Associated Press, 6 Apr 22

German investigators on Wednesday arrested a Syrian man accused of war crimes for allegedly torturing captives while he was with Daesh group in Syria in 2014.

Federal prosecutors said the man, identified only as Raed E. in line with German privacy rules, was arrested in Berlin. He is suspected of membership in a foreign terrorist organization, crimes against humanity, war crimes and bodily harm.

The suspect joined Daesh in summer 2014 and participated in an attack that August on the Shueitat tribe in the Deir Ezzor region of eastern Syria, prosecutors said.

Activists reported death tolls ranging up to 700.

Raed E. is accused of abusing and torturing three captives after that attack. Prosecutors say that he had a man who was looking for a 13-year old brother kidnapped by Daesh arrested and then tortured him at various prisons run by the terrorist group.

That dilemma is particularly acute for China. With foreign currency reserves of \$3.2tn that need to be invested, it has no choice but to have extensive dollar holdings. Outside of Europe and potentially Japan, which have stood shoulder-to-shoulder with America in this case, there simply are not enough liquid financial assets in other currencies to meet that demand.

“We have very accommodative monetary policy, we are very open with our markets, things are easily convertible and we are safe as an economy. Until those things change, the rest of it ain’t changing,” says Brian O’Toole, a sanctions expert at the Atlantic Council and former senior official at the US Treasury. “If we’re acting with all of our partners and allies in this, where else are you going to go? There’s no place else that has anything approaching the level of liquidity and access that the US market has. It doesn’t exist anywhere.”

China also faces an intractable problem if it wants other countries to hold its currency in their reserves. Its capital controls are not as strict as they used to be, but the renminbi is still not a fully convertible currency. In the decade since it first started trying to internationalize the renminbi, the Chinese Communist party has come to realize it can have a global currency that might one day rival the dollar or it can retain tight control over its domestic financial system, but it cannot have both.

Prasad points out that despite the message that countries can no longer rely completely on “their carefully built up war chests at times of war” in light of the “quite dramatic moves by the western economies”, there is simply a paucity of viable alternatives. “The harsh reality though is that the renminbi at this stage is not a big enough player in international finance to be a viable alternative to the dollar,” he says.

Given the profound changes that have taken place in the global economy over the last four decades, it might seem an anachronism that the traditional western allies still dominate the financial world. But for the time being, there is little escape from the hold that their currencies enjoy.

Smith, the former Treasury official, points out that “the death knell of the US dollar in the international economy has been sounded every year” since roughly 2008, when Washington first blocked Iran from using the US dollar for its international energy transactions. But nothing tangible has ever come from it.

“There’s been a lot of hoopla ever since about the US dollar losing its status as the reserve currency and the currency of choice in the energy markets and in the international economy, [but] we have not seen that occur,” he says. “The US dollar has continued to remain strong as a source of stability in international financial transactions, and that is likely to continue even after the dust settles on the Ukraine war that Russia has unleashed.”

**20. US disrupts global ‘botnet’ controlled by Russian military intelligence, DOJ says**  
The Guardian, 6 Apr 22, David Smith

The US has disrupted a global “botnet” controlled by Russia’s military intelligence agency, Attorney General Merrick Garland announced on Wednesday.

A botnet is a network of hijacked computers used to carry out cyberattacks. “The Russian government has recently used similar infrastructure to attack Ukrainian targets,” Garland told reporters at the justice department.

“Fortunately, we were able to disrupt this botnet before it could be used. Thanks to our close work with international partners, we were able to detect the infection of thousands of network hardware devices.

“We were then able to disable the GRU’s [the military intelligence agency] control over those devices before the botnet could be weaponized.”

The attorney general also announced charges against Russian oligarch Konstantin Malofeyev for sanctions violations. He said the billionaire had been previously identified as a source of financing for Russians promoting separatism in Crimea and providing support for the so-called Donetsk People’s Republic in eastern Ukraine.

“After being sanctioned by the United States, Malofeyev attempted to evade the sanctions by using co-conspirators to surreptitiously acquire and run media outlets across Europe,” Garland said.

The indictment is the first of a Russian oligarch in the US since the Russian invasion of Ukraine.

In a related move, a federal court in the southern district of New York unsealed a criminal indictment against TV producer John Hanick, 71, a US citizen charged with violations of sanctions and false statements because of his work for Malofeyev over several years.

Matthew Olsen, assistant attorney general of the justice department’s national security division, said: “The defendant Hanick knowingly chose to help Malofeyev spread his destabilizing messages by establishing, or attempting to establish, TV networks in Russia, Bulgaria and Greece, in violation of those sanctions.”

Last month Garland, who is America’s top law enforcement official, announced the launch of Task Force KleptoCapture, an interagency law enforcement task force dedicated to enforcing the sweeping sanctions against Russia over its invasion of Ukraine.

He vowed on Wednesday: “Our message to those who continue to enable the Russian regime through their criminal conduct is this: it does not matter how far you sail your yacht, it does not matter how well you conceal your assets, it does not matter how cleverly you write your malware or hide your online activity.

“The justice department will use every available tool to find you, disrupt your plots and hold you accountable.”

Garland, whose grandparents fled antisemitism at the border of western Russia and eastern Europe more than a century ago, acknowledged horrific images that emerged from Bucha in Ukraine his week. “We have seen the dead bodies of civilians, some with bound hands, scattered in the streets. We have seen the mass graves. We have seen the bombed hospital, theatre and residential apartment buildings.

“The world sees what is happening in Ukraine. The justice department sees what is happening in Ukraine. This department has a long history of helping to hold accountable those who perpetrate war crimes.”

He noted that one of his predecessors, Attorney General Robert Jackson, later served as a chief American prosecutor at the Nuremberg trials after the second world war. “Today, we are assisting international efforts to identify and hold accountable those responsible for atrocities in Ukraine and we will continue to do so.”

## **21. U.S. government and energy firms close ranks, fearing Russian cyberattacks**

Washington Post, 6 Apr 22, Ellen Nakashima

In February, as Russian troops massed on Ukraine’s border, executives with a major energy firm here worked with U.S. energy and homeland security officials to draw up a playbook and help prepare the electricity sector to deal with potential cyberattacks by Russia.

Berkshire Hathaway Energy officers were among the small group that wrote the guidelines, which stressed the importance of quickly sharing cyberattack information between industry and government.

With President Biden warning last month of evolving intelligence that Russia is exploring possible cyberattacks against American critical industries, companies such as Berkshire Hathaway Energy and the U.S. government are on high alert. After years of what critics saw as lip service, cybersecurity collaboration between the federal government and some critical industries has taken root, officials and industry leaders say, and it could be put to the test as Russian government hackers probe the defenses of American power plants, banks and telecommunications networks.

“The collaboration between government and the private sector has seen exponential improvement over the last couple of years,” said Bill Fehrman, president and chief executive of Berkshire Hathaway Energy (BHE), which provides electricity generated by wind, solar, natural gas and coal to 12 million customers in the United States, Canada and Britain. “The main benefit,” he said, “is the more efficient transfer of information from the front line — the companies — to the government, and getting usable information back from the government in a timely manner.”

In particular, he said, the declassification of information from the government “has gone from months to in some cases hours.”

BHE is so large — one of the biggest electricity companies in North America by number of customers — that if its systems were disrupted by a Russian cyberattack, officials say, the impact on Americans' lives would be substantial. At the same time, they say, practices such as those adopted by BHE, whose CEO chairs the electricity sector group that coordinates with the federal government, can serve as a model for the industry.

As a chill wind whipped off the farm fields an hour northwest of Des Moines, the warmth from a 10,000-horsepower engine and the smell of oil filled a compressor room. The engine, chugging so loudly workers wear earplugs, powers pistons that compress natural gas. The compressor station in Ogden is one stop along the 13,000-mile-long Northern Natural Gas pipeline, which is part of BHE and studded with similar stations every 60 miles or so. The compressed gas is fed from one station to another in relay fashion, serving homes, hospitals and power plants from Bakersfield, Tex., to Michigan's Upper Peninsula.

There has never been a cyberattack on any industrial control system within BHE and its 11 subsidiaries. That is because of strict security measures imposed over the past eight years, said Chief Security Officer Michael Ball. No operational network is connected to the Internet, and third-party vendors coming in to do maintenance follow stringent rules, including a ban on plugging any outside hardware into the system.

But although its industrial control or operational technology (OT) systems are not connected to the Internet, the company still has to ensure that traffic flowing within its systems is not contaminated by malware.

In a campaign launched by the White House a year ago to boost the cyberdefenses of critical sectors, BHE deployed sensor software in its OT networks to look for malicious activity and vulnerabilities. The software it chose, developed by a company called Dragos, detects suspicious traffic from nation-state actors. It also anonymizes the data and makes it available to analysts at the National Security Agency, the Energy Department and the Department of Homeland Security's Cybersecurity and Infrastructure Security Agency (CISA).

"We have confirmed foreign states are active in their targeting of U.S. energy industrial control systems," said Robert M. Lee, CEO of Dragos, whose software allows the government to send queries to the companies to see whether they have detected the presence of certain adversaries.

By the end of the first 100-day campaign, which focused on electricity companies, almost 60 percent of electricity customers in the United States were covered by companies that had or pledged to have commercial cyberthreat sensors on their OT networks, said Fehrman, who coordinated the effort across the sector.

Work with the natural gas sector followed, and in January an effort for the water sector began.

"If power is disrupted, or if oil and gas is disrupted, or if clean water is disrupted, that really affects Americans' lives," said Anne Neuberger, deputy U.S. national security adviser for cyber and emerging technology. "The collaboration between companies and with the government, the

deployment of commercial sensors, the deepened information-sharing has been an important contribution to the sectors' resilience," she said.

Though Biden's warning last month was based on intelligence gathered by the U.S. government, the sensors were helpful for additional insight, U.S. officials said.

Five years ago, Russian government hackers penetrated the OT systems of some American electricity companies, but the intrusions were not detected immediately. It took some companies months to realize they had been infiltrated. The sensors should cut that time drastically, U.S. and company officials said.

Last year, Russian criminals carried off a ransomware attack on Colonial Pipeline, snarling up the company's administrative computer network. Out of fear that the malware might spread to the OT system, the company shut down its fuel pipeline for five days, prompting panic-buying at gas stations on the East Coast and raising concerns that Russia might target other critical companies.

The abundance of targets in American industry prompted CISA to issue a call in February to companies to harden their cyberdefenses in a campaign the agency dubbed "Shields Up."

On a recent day, a senior threat intelligence analyst at BHE's global security operations center pulled up a dashboard on a large screen on a wall, displaying some 3,000 Russian "indicators of compromise," or IP addresses and other digital clues that had been tied to cyberattacks on Ukraine government systems since January. The IOCs, as they are called, came from the DHS; the Canadian Center for Cyber Security, a government agency; and the Energy Department; as well as an industry information-sharing collective and private threat intelligence companies.

In years past, companies might get this sort of data, but by the time it got to them, "chances are really good I already knew about it," BHE's Ball said. "Now it's flipped, and we're seeing stuff faster, more of the stuff we haven't already heard about."

And, more importantly, company executives say, the quality of some of that information has improved.

"We have been getting 'actionable intelligence' — extremely helpful feedback that we can implement," Fehrman said. That is intelligence obtained through U.S. government penetration of adversaries' systems overseas and enhanced with more information that, for instance, tells companies what threat is really significant, what techniques the hackers are using, what machines they are targeting — sometimes down to make and model — and what defensive actions should be taken as a result.

A major milestone in facilitating some of the cooperation driven by the Ukraine crisis was a congressional mandate that CISA set up a 24/7 center for the real-time sharing of threat information that includes personnel from key industrial sectors as well as from the FBI, the DHS, the NSA and the Energy and Treasury departments. The result was the launch last summer of what CISA Director Jen Easterly named the Joint Cyber Defense Collaborative.

The JCDC has “created a beachhead,” said Tom Fanning, CEO of the energy giant Southern and a member of the Cyberspace Solarium Commission, which recommended the formation of the collaborative. “As we mature the process, it will get better and better and better.”

Michael Ball, vice president and chief security officer for Berkshire Hathaway Energy, at the company's global security operations center in Urbandale, Iowa. (KC McGinnis for The Washington Post)

A major spoke off the JCDC information-sharing hub is the Energy Department’s Energy Threat Analysis Center, created in January to enable companies and the government to jointly analyze threats and develop measures to deal with them.

It will also feed that information back to the JCDC. “If we’re seeing a threat to an energy industrial control system, we certainly want to make sure that information gets out to other sectors like water and chemical, [which] have similar systems,” said Puesh Kumar, director of the department’s Office of Cybersecurity, Energy Security and Emergency Response.

In February, the White House put CISA Executive Director Brandon Wales in charge of an effort to ensure the government can handle a cyberattack from the Russians, including any resulting physical consequences in the public or private sectors.

“On the whole we are more prepared now than ever before,” Wales said.

“Russian malicious cyber actors have posed a high threat to the U.S. government and the critical infrastructure since before the invasion of Ukraine,” he said, “and they will present a threat after this current crisis is resolved.”

## **22. Hypersonic-Missile delay puts U.S. further behind Russia, China**

Bloomberg, 6 Apr 22, Tony Capaccio

The first U.S. hypersonic weapon will be delayed for as long as a year under a new schedule, even as lawmakers protest that the Pentagon is lagging behind in a new technology that Russia has already used in Ukraine and China has demonstrated in a space launch.

The goal to declare an “early operational capability” for the Lockheed Martin Corp. missile by Sept. 30 has been moved back to sometime in the next fiscal year, according to an Air Force statement. The Pentagon has said the Air-Launched Rapid Response Weapon, or ARRW, is expected to be the “nation’s first operational hypersonic weapon.”

Hypersonic weapons are hard to track and destroy because they fly five times the speed of sound and can be maneuvered. Last month, Russia debuted a hypersonic air-to-ground missile in its attack on Ukraine, and in July China hit a demonstration target on Earth with a weapon in orbit. Adversaries don’t have to meet the rigorous standards set under the U.S. defense acquisition system or face public scrutiny over delays and failure.

That comes in handy, he added, when boaters try something stupid.

“Sometimes there are mariners out there that aren’t very smart, and they think it's smart to cross the bow of an aircraft carrier in tight quarters,” he said. “And I don't know how great his engineering plant is, you know, if you're on a small sport fisherman or something like that, if you lose your diesels right in front of me, I need to be able to stop and I know I can.”

For the world's largest warship, CVN-78 is surprisingly nimble, thanks largely in part to the massive amount of power at her crew's disposal thanks to her twin nuclear reactors.

Sometime later this year, Lanzilotta will finally get a better idea of just how well the new island design will work on the carrier’s first operational cruise, and what, if any, challenges it will create.

“I think so,” he said when asked about whether the new island design will prove more efficient. “But when we deploy later in the year we're going to learn more and improve more. And that's an important mindset.”

When asked what lessons he anticipates learning during that deployment, Lanzilotta waxed philosophical.

“The sailors are smarter than most of us old guys,” he said. “You know, I've been doing this for 28 years. So I have my own predisposed notions of how things are going. I've got sailors that are younger, super-intelligent, and always thinking like ‘hey, why don't we do it like this?’ Or ‘let's try something like that.’ So that I'm gonna stay open-minded on it. So I don't drive the solution too much.”

Still, that doesn’t mean he doesn’t have questions about how things will go.

“I think maybe just you know, how fast can I go?” he pondered., “Not speed to the water, but how quickly can I generate sorties? What is our limiting factor? Can we work on that?”

### **24. NATO nations see differing paths as Ukraine War enters uncertain stage**

New York Times, Apr 6, 22, Steven Erlanger and Michael Crowley

Faced with the prospect that the war in Ukraine will be long and grinding, NATO countries are divided on how best to manage the next stage of the conflict and the uncertain period that promises to follow.

Central European members like Poland and the Baltic states want a total break with Moscow and an effort to bring Russia to its knees, two senior Western officials said. They worry that anything that Russia can present as a victory will do serious damage to European security.

But other nations believe that Russia cannot be easily subdued and that the war's outcome is likely to be messy — more exhausting cease-fire than resounding victory. Countries like France, Germany and Turkey want to keep contacts with Russia's president, Vladimir V. Putin, regardless of the allegations of war crimes committed by his troops, the officials said.

NATO foreign ministers, meeting this week to discuss how to help Ukraine prosecute the war, do agree on one major point: The war is far from over and — as badly as Russia's forces have performed and despite their retreat from areas around Kyiv, the capital — they are making slow and brutal progress in Ukraine's east.

“Moscow is not giving up its ambitions in Ukraine,” Jens Stoltenberg, NATO's secretary general, said this week. “We now see a significant movement of troops away from Kyiv, to regroup, rearm and resupply. And they shift their focus to the east.”

That will take several weeks, officials believe, as Russian troops move back into Belarus to be resupplied and reorganized, and then must make their way with their equipment through Russia toward eastern Ukraine.

“In the coming weeks, we expect a further Russian push in the eastern and southern Ukraine to try to take the entire Donbas and to create a land bridge to occupied Crimea,” Mr. Stoltenberg said. “This is a crucial phase of the war.”

In response to the scenes of corpses in Bucha, the United States and the European Union are preparing more sanctions against Russia, but without much expectation that they will hasten the end of the war.

But at the NATO meetings, the talk will be of weapons and matériel, not sanctions.

There is a general agreement that Russia is no longer a strategic partner of the alliance, that the North Atlantic Treaty Organization is no longer bound by the troop limits of the 1997 NATO-Russia Founding Act, and that its military posture must be sharply enhanced to deter a confrontational Russia, so long as Mr. Putin and his allies retain power there.

There is also a commitment to continue aiding Ukraine — some two-thirds of NATO members have already provided lethal weaponry, including the Czechs' contribution of Soviet-era tanks and armored personnel carriers.

But some stocks are running low in the West — U.S.-made Javelin antitank missiles, for example. And Ukraine is also going to need different weapons for the next phase of the war in the east, officials suggest, including longer-range artillery and more sophisticated armed drones, if they hope to push the Russians back, let alone drive them out of Ukraine.

The amount of matériel arriving in Ukraine remains a secret, but officials say that the overall flow is very large and has made an enormous difference to the war. But what sort of weapons are most useful, and how to think through the possible conclusion to the war, is preoccupying alliance leaders.

“On a number of fronts, we obviously have some changing battlefield dynamics,” U.S. Secretary of State Antony J. Blinken, who is in Brussels for the NATO meetings, told reporters this week.

Mr. Blinken said the NATO meetings would focus on new ways to support Ukraine and to “put pressure on Russia,” and on Mr. Putin. More evidence of atrocities is likely to emerge, he said on Wednesday, as Russia pulls out of territories it controlled, “like a receding tide.”

On Tuesday, Mr. Blinken announced a further \$100 million worth of weapons and equipment from American stockpiles. Total U.S. military aid to Ukraine is worth some \$2.4 billion since President Biden took office and more than \$1.7 billion since the war began on Feb. 24, he said.

How the war might finally end is an important issue not just for Ukraine but for the entire alliance.

U.S. officials are skeptical that Russia is prepared to make real concessions in ongoing peace talks with Ukraine, although they do not rule out the possibility and want to ensure Kyiv’s leverage in the negotiations.

That is a key discussion. While Ukraine will decide for itself how and when to try to end the war and what it will negotiate with Moscow, President Volodymyr Zelensky and his government are in regular discussion with NATO country leaders, including the Americans.

“We believe that our job is to support the Ukrainians,” Jake Sullivan, the U.S. national security adviser, said this week. “We are not going to define the outcome of this for the Ukrainians.”

Some countries, especially in Central Europe and including Britain, are anxious that any sort of Russian expansion into Ukrainian territory, let alone a Russian victory, would embolden Mr. Putin, undermining overall European security and values such as the adherence to international law, respect for national sovereignty and territorial integrity. They want Russia to be seen as the loser.

Even if the war ends with a new line of contact between Russian and Ukrainian forces, NATO aims to work with Kyiv to make Ukraine indigestible to Russia, as another senior Western official said. The point is to arm and train the Ukrainians so well that Mr. Putin would not wish to try again.

The foreign ministers will also begin a deeper discussion of NATO’s new strategic concept, the first since 2010, now in early draft. It is much tougher on Russia, and foresees a longer period of confrontation and expensive deterrence.

Return to top

## **25. US imposes ‘severe’ sanctions on Russian banks after Bucha atrocities**

Financial Times (UK), 6 Apr 22, Courtney Weaver, James Politi, Colby Smith and Jasmine Cameron-Chileshe

The US has imposed its most severe level of sanctions on Sberbank, Russia's largest financial institution, and Alfa-Bank, the country's biggest private bank, escalating its economic punishment of Moscow in response to atrocities committed by Russian forces in Ukraine.

The announcement on Wednesday of "full blocking sanctions", which prevent the lenders from transacting with any US institutions or individuals, came after top officials including President Joe Biden warned this week that they were planning to impose harsher restrictions on Russia.

"There's nothing less happening than major war crimes," Biden said at an event in Washington on Wednesday, during which he listed some of the atrocities committed in Ukraine.

"Responsible nations have to come together to hold these perpetrators accountable. And together with our allies and our partners, we're going to keep raising economic costs and ratchet up the pain for [Vladimir] Putin," Biden added.

A senior US official said the latest measures were in response to "the sickening brutality in Bucha", a city near the Ukrainian capital of Kyiv where gruesome images of the bodies of civilians have emerged in recent days, indicating a possible massacre by Russian soldiers.

"Treasury is committed to holding Russia accountable for its actions so it cannot benefit from the international financial system," Janet Yellen, the US Treasury secretary, told Congress during a hearing on Wednesday.

The US also imposed sanctions on Putin's two adult daughters, Ekaterina Tikhonova and Maria Vorontsova; the wife and daughter of Sergei Lavrov, foreign minister; and members of Russia's Security Council, including Dmitry Medvedev, former president; and Mikhail Mishustin, prime minister.

In addition, the US said it would prohibit any new American investments in Russia, and announce new sanctions on large Russian state-owned enterprises on Thursday.

Immediately after the invasion, the US prohibited debt or equity transactions with Alfa and Sberbank, but its "full blocking sanctions" amount to much stricter curbs.

"This is the most severe action we can take in terms of financial measures," the US official said. "And in practice, the history of sanctions is when we impose full blocking sanctions . . . the rest of the world, even in other jurisdictions that have not yet imposed a full block, they respect the regime. So there tends to be a multiplier effect."

The official added that the US and EU had chosen to target Putin's daughters because they believed they were helping shield the Russian president's wealth.

The UK government on Wednesday also announced additional sanctions against Putin's regime, including full asset freezes against Sberbank.

The measures, which Liz Truss, UK foreign secretary, said marked “the toughest sanctions yet”, included a ban on imports of Russian iron and steel products alongside an outright ban on new investment in the country.

The UK also imposed sanctions on a further eight individuals linked to key Russian industries, including Andrey Akimov, chief executive of Gazprombank, and Leonid Mikhelson, founder and chief executive of Novatek.

The US and European allies had hoped that the initial burst of sanctions imposed after Russia’s invasion in late February, including cutting off Moscow’s access to its foreign reserves by banning transactions with its central bank, would isolate the country financially without causing excessive spillovers into the rest of the global economy.

But as the conflict has continued, they have been forced to consider additional targets, widening the net to include companies and individuals in third countries continuing to do business with Russian entities and sharpening enforcement of existing sanctions.

Edward Fishman, a former Russia and Europe sanctions lead at the state department, called Wednesday’s measures “the most significant sanctions taken since the [Russian] central bank sanctions” imposed in late February.

“We’re headed towards Iran-style sanctions,” he added, referring to the decades-long measures against Tehran beginning in 1979. “This is a conveyor belt and it only leads in one direction.”

Despite the new sanctions, some US legislators on Wednesday criticized the Biden administration for not doing enough, noting that the package stopped short of levying the harshest penalties on certain oligarchs and still included exemptions for Russian energy.

David Scott, a Democrat on the House financial services committee, told Yellen that the Treasury department’s decision to issue a special license for Alisher Usmanov — an oligarch he described as Putin’s “favorite” — which allowed him to continue doing business was becoming a “black mark” on the nation.

“Our reputation as the world leader is at stake when these types of things happen, and there’s no explanation for it,” Scott said.

Yellen said the US was prepared to wield further sanctions, including against China if it attacked Taiwan.

“We are concerned about Taiwan and will act as appropriate,” she said. “In the case of Russia, we’ve threatened significant consequences, we’ve imposed significant consequences, and I think that you should not doubt our ability and resolve to do the same in other situations.”

## **26. Eastern Ukraine braces for renewed assault as Russia regroups**

Washington Post, 6 Apr 22, David L. Stern, Joby Warrick, Louisa Loveluck and Max Bearak

MUKACHEVO, Ukraine — Ukrainian officials called Wednesday for evacuations in three provinces near the Russian border amid new signs that President Vladimir Putin’s troops are escalating their assault on eastern and southern cities following a failed attempt to take the country’s capital.

Local officials reported renewed Russian shelling in the eastern Donetsk region, killing at least five people, and as many as 10 high-rise apartment buildings on fire in Severodonetsk, in the neighboring Luhansk district. U.S. analysts said Moscow has begun gradually shifting the focus of its military operations to the eastern border provinces after withdrawing thousands of troops that previously encircled the capital, Kyiv.

The continued violence came amid fresh reports of human-rights atrocities in Ukrainian cities and towns that had been under Russian control. Accounts of rape and summary executions of civilians by Russian occupiers prompted the United States and several allies to announce new economic sanctions, including measures targeting two of Russia’s largest banks and Putin’s adult children.

“We’re going to further increase Russia’s economic isolation,” President Biden said in a speech announcing the sanctions at a meeting of North America’s Building Trades Unions. “The United States will continue to stand with the Ukrainian people in their fight for freedom.”

Biden again accused Russia of committing “major war crimes” and said the additional measures would further strain its economy. “Civilians executed in cold blood, bodies dumped into mass graves,” he said, ticking off a list of alleged war crimes. “A sense of brutality and inhumanity left for all the world to see unapologetically.”

The speech came as NATO and European Union leaders gathered to consider additional measures to punish Moscow and support Ukraine. A possible European ban on Russian coal is expected to be approved on Thursday, along with additional military aid for Kyiv from the NATO alliance.

Pentagon officials confirmed Wednesday that Russia had, in the past 24 hours, completed an evacuation of all forces from around Kyiv and Chernihiv, two cities it had tried unsuccessfully to capture in the opening days of the invasion, now in its sixth week.

While U.S. analysts have not observed a tangible increase in troops and tanks in the Donbas — the energy-rich region near the Russian border that includes Donetsk and Luhansk — the Pentagon believes that retreating units are regrouping for a concentrated assault on the eastern provinces. Some of the recently withdrawn troops are now in neighboring Belarus, where the pro-Moscow government is allowing Russia to resupply its exhausted battalions. Few, if any, have reentered Ukraine so far, a senior Defense Department official told reporters.

“Our assessment is that they won’t want to spend too much refitting and resupplying because they have made a very public show of saying that they’re going to prioritize their efforts on the Donbas region,” said the official, who spoke on the condition of anonymity according to rules set by the Pentagon.

For their part, Ukrainian forces are “absolutely adapting and adjusting in real time to Russian efforts now to increase their activities” in eastern Ukraine, the official said. “As they have beaten back the Russians or as the Russians have left, they are reoccupying that ground and making their own assessments about what their force posture ought to be going forward.”

Increased shelling in the eastern provinces claimed additional casualties on Wednesday, including the five people reportedly killed in Donetsk. Provincial Gov. Pavlo Kyrylenko said four people were killed by Russian artillery fire in the city of Vuhledar as they waited to receive humanitarian aid. The fifth victim, also a civilian, was killed during an attack on the town of Ocheretyn, he said, and six houses and a kindergarten facility were destroyed.

A regional military official in Luhansk reported “mass shelling” in Severodonetsk. The number of casualties was unclear. Video posted on Facebook and verified by The Washington Post shows townspeople scrambling for cover as shells explode in a residential street.

Ukrainian Deputy Prime Minister Iryna Vereshchuk, in broadcast remarks, urged residents of the Luhansk, Donetsk and Kharkiv regions to start preparing for the expected Russian onslaught. While the Kremlin has described the troop withdrawal from Kyiv as a “goodwill” gesture to facilitate peace talks, she said it was clear that more attacks were coming. Moscow has greater support in the east, where Ukrainian forces and Russian-backed separatists have been locked in a grinding conflict for many years.

“We need to evacuate,” she said. “We must do it because then people will be on fire, they will be shot ... and we will not be able to help them.”

Elsewhere in Ukraine, rescue workers looked for survivors in rubble-strewn neighborhoods newly freed of Russian troops. Washington Post reporters witnessed scenes of devastation in Borodyanka, a community northwest of Kyiv that had been pummeled by airstrikes that gouged huge chunks out of residential buildings.

In a schoolyard that was converted into a garrison while Borodyanka was occupied, the Russians had cut a trench through a playground and built a sandbag wall along the perimeter fence, with openings for gun emplacements.

In a ruined apartment a few blocks away, Katia Palivshenko, 34, said she feared that some of her neighbors were still trapped, and likely dead, in the basements of bombed-out buildings nearby. Cellphone service had faltered when the town came under attack, and she had not heard from some of her friends since then.

“They were below ground but then messages stopped coming,” she said. “We don’t know what happened to them.”

In Bucha, a town associated with some of the war’s most disturbing assaults on Ukrainian civilians, soldiers and police continued the gut-wrenching work of removing and burying bodies, dozens of which still lay in the streets and in open fields. Some bodies were booby-trapped by the departing Russians, officials said.

The city remained almost entirely deserted, as mine-clearing teams searched methodically for hidden bombs. On Vokzalna Street near the train station, the blackened hulks of Russian tanks, all destroyed in a fierce counterattack by Ukrainian forces, sat in an eerie silence that was punctuated only by the barking of stray dogs.

The images from Bucha have evoked shock and condemnation around the world, including at the United Nations, where dozens of countries have backed an effort to boot Moscow from the body's Human Rights Council — a move reserved for countries that have repeatedly violated human rights. A vote of the 193-nation body could come as early as Thursday morning at the U.N. headquarters in New York.

The U.S. sanctions announced on Wednesday targeted Sberbank and Alfa Bank — two of Russia's biggest financial institutions — and two daughters of the Russian president, Katerina Tikhonova and Mariya Putina. U.S. officials say much of the Putin family's enormous wealth is stashed away in accounts held by family members. The White House also is seeking new economic sanctions against state-owned Russian enterprises involved in shipbuilding and aircraft manufacturing, as well as relatives of Russian Foreign Minister Sergei Lavrov.

Members of the 27-nation European Union were preparing to decide Thursday on a measure banning all imports of Russian coal, a key revenue source for Moscow, even as NATO leaders discuss ways to further isolate Russia while bolstering Ukraine's ability to defend itself.

"Today, tomorrow, we'll continue to talk about not only how we can sustain these efforts but how we can build upon them," U.S. Secretary of State Antony Blinken told reporters. He was flanked by NATO Secretary General Jens Stoltenberg, who earlier in the day warned that the conflict could become protracted despite the surge of Western military support to Ukrainian forces.

"We have to be realistic and realize that this may last for a long time, for many months, for even years," Stoltenberg said. "And that's the reason why we need also to be prepared for the long haul."

Britain launched additional sanctions against eight Russian oligarchs and two Russian banks and vowed to end all dependency on Russian coal and oil by the end of 2022. "We are showing the Russian elite that they cannot wash their hands of the atrocities committed on Putin's orders," Foreign Secretary Liz Truss said.

In Washington, the Justice Department announced indictments against Russian oligarch Konstantin Malofeyev, who U.S. officials accused of illegally supporting pro-Russian separatists in Ukraine. Speaking at a news conference, Attorney General Merrick Garland also announced the successful disruption of a global "botnet" — or network of hacked computers — that he said was controlled by the Russian military intelligence agency known as the GRU. Moscow has used similar networks to attack Ukrainian targets, Garland said.

"It does not matter how far you sail your yacht. It does not matter how well you conceal your assets. It does not matter how cleverly you write your malware or hide your online activity,"

Garland said. “The Justice Department will use every available tool to find you, disrupt your plots and hold you accountable.”

## **27. Ukraine’s surprise strike on Russian fleet hobbles Putin’s Donbas strategy**

Wall Street Journal, 6 Apr 22, Brett Forrest and Nancy A. Youssef

A surprise Ukrainian strike on a Russian ship at a southern port city last month could curb Moscow’s plan to expand its hold on the Donbas region, eliminating a key military advantage in the Russian attack plan, Ukrainian military analysts and U.S. officials said.

The March 24 offensive against Russian navy ships docked at a captured port in Berdyansk on the Azov Sea was the first major strike on the Russian fleet, Ukrainian and U.S. officials said. The attack destroyed a ship laden with supplies, drove others back into the sea, and damaged the port facilities.

The strike ended the presumption that Russian ships could attack without the threat of a Ukrainian reply. And it has limited Russia’s ability to fire missiles and artillery as it pivots its assault toward Donbas in Ukraine’s east, said retired Adm. James Foggo, who commanded U.S. Naval Forces Europe-Africa.

Hours after the strike, Russia moved its ships in port out to sea, making it harder for them to attack Ukraine’s cities and preventing them from supporting ground forces.

“It’s a major logistical blow,” Adm. Foggo said. “It’s an ‘aha!’ moment for the Russians. Despite the damage they have done inside Ukraine, Ukrainian forces are still capable of conducting offensive strikes with precision.”

Residents in the Ukraine town of Borodyanka surveyed damage. Officials urged civilians to leave eastern regions as they braced for a major new Russian offensive. The West announced new sanctions on Russian banks and citizens, including on two daughters of Vladimir Putin.  
Photo: I-Images/Zuma Press

In the nearly two weeks since the strike, Russia’s navy hasn’t launched any major attacks on Ukrainian cities, although it has struck targets around a few of them. On Sunday, missiles from Russian ships struck the Ukrainian port city of Odessa, hitting infrastructure.

Russia’s military made port cities a priority during its assault into Ukraine. It seized the city of Berdyansk, a key foothold for its future attacks in strategically important cities such as Mariupol, just days into its invasion of Ukraine, soon boasting of the advantage the port would afford its war effort.

Quickly putting the port to use, Russia landed huge ships carrying as much as 2,000 tons of supplies each for its ground forces in the Ukrainian south. The Russians ejected Ukrainian cargo ships, dredgers and a tug, then berthed their own ships carrying multiple-launch rocket systems to provide cover for troops moving into the region.

The ships at Berdyansk were only lightly defended, as the nearest Ukrainian forces were about 60 miles away.

“The Russians thought Ukraine didn’t have any capability to reach them,” said Andrii Ryzhenko, a former Ukrainian navy captain now with the Center for Defense Strategies, a Kyiv think tank with close ties to the military. “But Ukraine had the capability.”

By the early weeks of the war, Russia had as many as 22 ships in the Black Sea and another dozen in the Azov Sea, U.S. officials said. At least half of those in the Azov Sea were docked at Berdyansk—“sitting ducks,” said Bryan Clark, a senior fellow at the Hudson Institute, a conservative think tank in Washington.

“It’s just an example of how cavalier Russia’s operations have been about keeping ships at shore,” Mr. Clark said.

Russia had major advantages over the Ukrainian navy for nearly a decade. It captured and destroyed much of the Ukrainian navy at the port of Sevastopol during Moscow’s 2014 seizure of Crimea, expanding its influence over the Black Sea. And in the run-up to the Feb. 24 invasion, Russia moved much of its navy from as far as the Baltic Sea toward Ukraine’s shores.

The Azov Sea, a small, shallow body of water bounded by Russia, Ukraine and the Crimean Peninsula, has been strategically important for centuries. Ships operating off the Azov Sea coast took part in the Russian assault on the southern city of Mariupol, military analysts said, firing artillery into Mariupol with little risk from Ukraine’s defenses. The ships also held supplies for nearby ground forces and provided another line of defense to troops and tanks entering Mariupol.

The Azov Sea is also the fastest supply route between Russia and Crimea, because Ukrainian forces destroyed the rail lines between the two in 2014. From the Russian port of Temryuk, it is faster for Moscow to deliver troops and supplies by sea to Berdyansk than to drive them over the bridge that spans the Kerch Strait, then north through Crimea and eastward over a strip of captured Ukrainian coastline.

On March 24, Ukraine fired a Tochka-U ballistic missile at the port, Mr. Ryzhenko said. The missile struck the Saratov, a Cold War-era landing vessel designed to ferry troops and equipment ashore through a ramp at the bow. As the Saratov foundered, other ships fled the Berdyansk port under a plume of smoke. The attack also damaged the port, according to satellite images.

U.S. defense officials warned that Russia could be making adjustments in the sea, much as it is doing around the Ukrainian capital. Russia said it was repositioning its forces around Kyiv, which U.S. officials described as a regrouping based on battlefield losses and logistical challenges.

Since the strike, Russia had withdrawn all but three ships from the Azov Sea as of last week, a U.S. senior defense official said, hindering Moscow’s ability to supply troops in the Ukrainian south.

Meanwhile, the Kremlin late last month said it was shifting its mission to Ukraine's east, aiming to consolidate control over Donbas, its initial plan to quickly take Kyiv fading under relentless Ukrainian resistance.

The Berdyansk strike could also have a wide-reaching impact on the ability of Russia's navy to support its army.

With the damaged Berdyansk port off limits to ships for weeks, Russia's capacity to land troops there and in the vicinity of Odessa has diminished, especially as nearby Mykolaiv remains in Ukrainian control, analysts said.

"After the attack on landing ships in Berdyansk, the Russian Federation will be forced to take several, possibly two or three, landing ships from the Black Sea to the Azov Sea," said Andrii Klymenko, a defense and maritime analyst with the Black Sea Institute of Strategic Studies, a Ukrainian think tank. "This will weaken landing capabilities."

## **28. Russia is recruiting mercenaries and Syrians to Ukraine, Western officials say**

New York Times, 6 Apr 22, Eric Schmitt, Julian E. Barnes and Helene Cooper

As Russian troops retreat from northern Ukraine and focus operations on the country's east and south, the Kremlin is struggling to scrape together enough combat-ready reinforcements to conduct a new phase of the war, according to American and other Western military and intelligence officials.

Moscow initially sent 75 percent of its main ground combat forces into the war in February, Pentagon officials said. But much of that army of more than 150,000 troops is now a spent force, after suffering logistics problems, flagging morale and devastating casualties inflicted by stiffer-than-expected Ukrainian resistance, military and intelligence officials say.

There are relatively few fresh Russian troops to fill the breach. Russia has withdrawn the forces — as many as 40,000 soldiers — it had arrayed around Kyiv and Chernihiv, two cities in the north, to rearm and resupply in Russia and neighboring Belarus before most likely repositioning them in eastern Ukraine in the next few weeks, U.S. officials say.

The Kremlin is also rushing to the east a mix of Russian mercenaries, Syrian fighters, new conscripts and regular Russian army troops from Georgia and easternmost Russia.

Whether this weakened but still very lethal Russian force can overcome its blunders of the first six weeks of combat and accomplish a narrower set of war aims in a smaller swath of the country remains an open question, senior U.S. officials and analysts said.

"Russia still has forces available to outnumber Ukraine's, and Russia is now concentrating its military power on fewer lines of attack, but this does not mean that Russia will succeed in the east," Jake Sullivan, President Biden's national security adviser, said on Monday.

“The next stage of this conflict may very well be protracted,” Mr. Sullivan said. He added that Russia would probably send “tens of thousands of soldiers to the front line in Ukraine’s east,” and continue to rain rockets, missiles and mortars on Kyiv, Odesa, Kharkiv, Lviv and other cities.

U.S. officials have based their assessments on satellite imagery, electronic intercepts, Ukrainian battlefield reports and other information, and those intelligence estimates have been backed up by independent analysts examining commercially available information.

Earlier U.S. intelligence assessments of the Russian government’s intent to attack Ukraine proved accurate, although some lawmakers said spy agencies overestimated the Russian military’s ability to advance quickly.

As the invasion faltered, U.S. and European officials have highlighted the Russian military’s errors and logistical problems, though they have cautioned that Moscow’s ability to regroup should not be underestimated.

The Ukrainian military has managed to reclaim territory around Kyiv and Chernihiv, attacking the Russians as they retreat; thwarted a ground attack against Odesa in the south and held on in Mariupol, the battered and besieged city on the Black Sea. Ukraine is now receiving T-72 battle tanks, infantry fighting vehicles and other heavy weapons — in addition to Javelin antitank and Stinger anti-aircraft missiles — from the West.

Anticipating this next major phase of the war in the east, the Pentagon announced late Tuesday that it was sending \$100 million worth of Javelin anti-tank missiles — roughly several hundred missiles from Pentagon stocks — to Ukraine, where the weapon has been very effective in destroying Russian tanks and other armored vehicles.

American and European officials believe that the Russian military’s shift in focus is aimed at correcting some of the mistakes that have led to its failure to overcome a Ukrainian army that is far stronger and savvier than Moscow initially assessed.

But the officials said it remained to be seen how effective Russia would be in building up its forces to renew its attack. And there are early signs that pulling Russian troops and mercenaries from Georgia, Syria and Libya could complicate the Kremlin’s priorities in those countries.

Some officials say Russia will try to go in with more heavy artillery. By focusing its forces in smaller geographic areas, and moving them closer to supply routes into Russia, Western intelligence officials said, Russia hopes to avoid the logistics problems its troops suffered in their failed attack on Kyiv.

Other European intelligence officials predicted it would take Russian forces one to two weeks to regroup and refocus before they could press a major offensive in eastern Ukraine, where Russian-backed separatists have been fighting for eight years. Western officials said that President Vladimir V. Putin of Russia was desperate for some kind of win by May 9, when Russia traditionally celebrates the end of World War II with a big Victory Day parade in Red Square.

“What we are seeing now is that the Kremlin is trying to achieve some kind of success on the ground to pretend there is a victory for its domestic audience by the 9th of May,” said Mikk Marran, the director general of the Estonian Foreign Intelligence Service.

Mr. Putin would like to consolidate control of the Donetsk and Luhansk regions of eastern Ukraine, and establish a land bridge to the Crimean Peninsula by early May, a senior Western intelligence official said.

Russia has already moved air assets to the east in preparation for the renewed attack on the heart of the Ukrainian military, and has increased aerial bombardment in that area in recent days, a European diplomat and other officials said.

“It’s a particularly dangerous scenario for the Ukrainians now, at least on paper,” said Alexander S. Vindman, an expert on Ukraine who became the chief witness in President Donald J. Trump’s first impeachment trial. “In reality, the Russians haven’t performed superbly well. Whether they could actually bring to bear their armor, their infantry, their artillery and air power in a concerted way to destroy larger Ukrainian formations is yet to be seen.”

Russian troops have been fighting in groups of a few hundred soldiers, rather than in the bigger and more effective formations of thousands of soldiers used in the past.

“We haven’t seen any indication that they have the ability to adapt,” said Mick Mulroy, a former senior Pentagon official and retired C.I.A. officer.

The number of Russian losses in the war so far remains unknown, though Western intelligence agencies estimate 7,000 to 10,000 killed and 20,000 to 30,000 wounded. Thousands more have been captured or are missing in action.

The Russian military, the Western and European officials said, has learned at least one major lesson from its failures: the need to concentrate forces, rather than spread them out.

But Moscow is trying to find additional forces, according to intelligence officials.

Russia’s best forces, its two airborne divisions and the First Guards Tank army, have suffered significant casualties and an erosion of combat power, and the military has scoured its army looking for reinforcements.

The British Defense Ministry and the Institute for the Study of War, a Washington think tank that analyzes the Ukraine war, both reported on Tuesday that the Russian troops withdrawing from Kyiv and Chernihiv would not be fit for redeployment soon.

“The Russians have no ability to rebuild their destroyed vehicles and weapon systems because of foreign components, which they can no longer get,” said Maj. Gen. Michael S. Repass, a former commander of U.S. Special Operations forces in Europe who has been involved with Ukrainian defense matters since 2016.

Russian forces arriving from Abkhazia and South Ossetia, two secessionist statelets that broke away from Georgia during the 1990s and then expanded in 2008, have been conducting peacekeeping duties and are not combat ready, General Repass said.

Russia's problems finding additional troops are in large measure why it has invited Syrian fighters, Chechens and Russian mercenaries to serve as reinforcements. But these additional forces number in the hundreds, not thousands, European intelligence officials said.

The Chechen force, one of the European intelligence officials said, is "clearly used to sow fear." The Chechen units are not better fighters and have suffered high losses. But they have been used in urban combat situations and for "the dirtiest kind of work," the official said.

Russian mercenaries with combat experience in Syria and Libya are gearing up to assume an increasingly active role in a phase of the war that Moscow now says is its top priority: fighting in the country's east.

The number of mercenaries deployed to Ukraine from the Wagner Group, a private military force with ties to Mr. Putin, is expected to more than triple to at least 1,000 from the early days of the invasion, a senior American official said.

Wagner is also relocating artillery, air defenses and radar that it had used in Libya to Ukraine, the official said.

Moving mercenaries will "backfire because these are units that can't be incorporated into the regular army, and we know that they are brutal violators of human rights which will only turn Ukrainian and world opinion further against Russia," said Evelyn N. Farkas, the top Pentagon official for Russia and Ukraine during the Obama administration.

Hundreds of Syrian fighters could also be heading to Ukraine, in what would effectively return a favor to Moscow for its helping President Bashar al-Assad crush rebels in an 11-year civil war.

A contingent of at least 300 Syrian soldiers has already arrived in Russia for regular training, but it was unclear if or when they would be sent to Ukraine, officials said.

"They are bringing in fighters known for brutality in the hopes of breaking the Ukrainian will to fight," said Kori Schake, the director of foreign and defense policy studies at the American Enterprise Institute. But, she added, any military gains there for Russia will depend on the willingness of the foreign fighters to fight.

"One of the difficult things about putting together a coalition of disparate interests is that it can be hard to make them an effective fighting force," she said.

Finally, Mr. Putin recently signed a decree calling up 134,000 conscripts. It will take months to train the recruits, though Moscow could opt to rush them straight to the front lines with little or no instruction, officials said.

“Russia is short on troops and is looking to get manpower where they can,” said Michael Kofman, the director of Russian studies at C.N.A., a research institute in Arlington, Va. “They are not well placed for a prolonged war against Ukraine.”

## **29. Pentagon: Russia has fully withdrawn from Kyiv, Chernihiv**

Washington Post, 6 Apr 22, Karoun Demirjian and Dan Lamothe

Russian forces have fully withdrawn from the Ukrainian capital, Kyiv, and the city of Chernihiv to its north, the Pentagon said Wednesday, as Moscow prepares to concentrate its invading forces in the eastern part of the country.

“We are assessing that all of the Russians have left,” said a senior U.S. defense official, speaking on the condition of anonymity under terms set by the Pentagon. Their full departure was confirmed only in the last 24 hours, this person said, cautioning that Russian forces may have left mines in their wake that would still need to be cleared.

U.S. and European intelligence officials have been tracking for days that Russia is in the midst of reorienting after encountering fierce resistance and suffering thousands of casualties in northern Ukraine. Moscow enjoys greater support in the east, where Ukrainian forces and Russian-backed separatists have been locked in a grinding conflict for many years.

But while Russia’s withdrawal from Ukraine’s capital region appears to be complete, with many units retreating through Belarus, the Pentagon has yet to see those personnel reenter eastern Ukraine, the senior defense official said Wednesday.

The United States announced Tuesday night the approval of an additional \$100 million in military assistance for Ukraine, a move made in part to ensure Ukrainian forces will have the weapons they need to fight for the Donbas region, the official said. There is a particularly “urgent” need for Javelin anti-armor systems, Pentagon spokesman John Kirby noted Wednesday.

Kirby said that earlier this week the United States also sent Ukraine 100 Switchblade drones, which can be loaded with explosives and flown into enemy targets, and that a “very small number” of Ukrainian soldiers receiving military education in the United States since the fall had been taught how to use them. The Switchblade — what some analysts have termed a “kamikaze” drone — is not a complex system, Kirby said, noting that personnel could be trained how to use them in about two days.

On average, it is taking the United States about four days to ship weapons to pass-off points outside Ukraine, and another day or two for those shipments to enter the country, Kirby said, adding that such transfers have “never been done that fast before.”

Kirby expressed some confidence Wednesday that Ukraine “can win this,” arguing that Russian President Vladimir Putin has achieved “exactly zero” of his strategic objectives thus far. But the

Pentagon continues to caution that even though the war's epicenter appears to be shifting, serious threats remain.

There are more than 30 Russian battalion tactical groups operating in the Donbas region, according to Pentagon estimates.

Earlier this week, national security adviser Jake Sullivan predicted that if Russia could successfully regroup in the Donbas region, it may seek to push out from there into other parts of Ukraine.

"It's not like Kyiv is somehow immune from further attack," the senior U.S. defense official said Wednesday.

More than 80 of the approximately 130 battalion tactical groups that Russia deployed into Ukraine continue to operate in the country, this official added, estimating that such groups each contain 800 to 1,000 troops.

### **30. China's security deal with Solomons raises alarm in Pacific**

Associated Press, 6 Apr 22, Nick Perry and David Rising

A security alliance between China and the Solomon Islands has sent shudders throughout the South Pacific, with many worried it could set off a large-scale military buildup or that Western animosity to the deal could play into China's hands.

What remains most unclear is the extent of China's ambitions.

A Chinese military presence in the Solomons would put it not only on the doorstep of Australia and New Zealand but also in close proximity to Guam, with its massive U.S. military bases.

China so far operates just one acknowledged foreign military base, in the impoverished but strategically important Horn of Africa nation of Djibouti. Many believe that China's People's Liberation Army is busy establishing an overseas military network, even if they don't use the term "base."

The Solomon Islands government says a draft of its agreement with China was initialed last week and will be "cleaned up" and signed soon.

The draft, which was leaked online, says that Chinese warships could stop in the Solomons for "logistical replenishment" and that China could send police, military personnel and other armed forces to the Solomons "to assist in maintaining social order."

The draft agreement specifies China must approve what information is disclosed about joint security arrangements, including at media briefings.

“They’re in much closer proximity to the Australian mainland, obviously, and that would change the way that we would undertake day-to-day operations, particularly in the air and at sea,” he told reporters.

But Jonathan Pryke, the director of the Pacific Islands Program at the Lowy Institute, an Australian think tank, said he thinks that leaders have overreacted to the agreement, perhaps in Australia's case because there is an election looming.

“It's clearly getting everyone very animated in the West and very alarmed,” Pryke said. “But I don't think it markedly changes things on the ground.”

He said the pact could be seen as the first step toward China establishing a base, but there would need to be many more steps taken before that could happen.

“I think the alarmism has strengthened China's hand by pushing the Solomon Islands into a corner,” Pryke said. “And they've reacted the way I imagine many countries would react from getting this outside pressure — by pushing back, and digging their heels in.”

## ANALYSIS/COMMENTARY

---

### **31. Finland may finally want in on NATO; Sweden is not far behind.**

Foreign Policy, 6 Apr 22, Robbie Gramer and Amy Mackinnon

Just over two months ago, the prospect of Finland joining NATO was virtually unthinkable to most in the northern European country. It had grown closer to the military alliance over the last three decades but resisted the idea of becoming a full-fledged member.

That all changed when tens of thousands of Russian troops rolled across Ukraine’s border in late February.

Now, top Finnish leaders are edging closer to joining NATO, buoyed by a drastic turnaround in Finnish public opinion that went from opposing the move to supporting it virtually overnight.

“It has been a major change,” said Pete Piirainen, a visiting senior fellow at the Finnish Institute of International Affairs. “We feel Russia broke the rules, broke the international system and security architecture.”

Finland’s sudden shift on NATO membership is a sea change in Europe’s security environment in the wake of Russia’s invasion of Ukraine, one that could drastically alter the map of the showdown between Russia and the West.

If Finland were to join the alliance, the total land border between NATO territory and Russia would more than double, from around 754 miles currently to nearly 1,600 miles. It would also extend NATO’s northern flank across the full length of the border with Russia’s strategically

important Murmansk region and Kola Peninsula, where a sizable chunk of Russia's navy is based.

A similar debate over NATO membership is playing out in neighboring Sweden, another longtime partner of the alliance that had spurned full membership for decades—until Russia's brazen invasion of Ukraine. Of the two countries, it is the Swedish public that has historically been more open to membership of the military alliance than their Finnish neighbors. That is no longer the case. "The biggest momentum is in Finland, and that has been a bit surprising actually," said Anna Wieslander, director of the Institute for Security and Development Policy, a Swedish think tank.

In the days after Russia's invasion of Ukraine in February, support for NATO membership in Finland surged into the majority for the first time, reaching 62 percent in a second survey conducted in mid-March by the Finnish public broadcaster. In Sweden, 51 percent now support NATO membership, according to a poll from early March, up from 42 percent in January.

Although Finland is edging closer to NATO membership than Sweden, most analysts and diplomats agree that the countries are a package deal. If one joins, the other is likely to follow suit. Given their shared geography on the Scandinavian Peninsula—along with NATO member Norway—the alliance would prefer if the two countries joined at the same time. "[With] that, you will have one new solution for the security arrangements," Wieslander said.

"Finland is on a path toward membership. I think now it's a question of when, not if," said Erik Brattberg, an expert on trans-Atlantic security with the Albright Stonebridge Group, a consulting firm. "I think Sweden is still adjusting to the new geopolitical reality. It has been slower in that adjustment, but they are also moving in the same direction."

NATO members seem universally ready to welcome Sweden and Finland with open arms. Diplomats from Germany, Britain, France, Canada, Lithuania, and Estonia all told Foreign Policy their governments would likely support Finland and Sweden's membership bid.

Julianne Smith, the U.S. ambassador to NATO, said Washington would "welcome" the two new members but stressed it was up to the governments in Helsinki and Stockholm to make the first move. "They bring very capable militaries. They are some of our closest allies in Europe, and so I can't imagine a situation where there would be tremendous resistance to this idea," she told reporters in a briefing on Tuesday. "Quite the contrary, I think NATO allies would be generally enthusiastic."

The Finnish government is working on a white paper on security due to be released this month, which will fuel conversation about NATO membership ahead of the security alliance's summit in Madrid in June. The white paper will "clearly influence the debate here in Sweden as well," Wieslander said.

Brattberg said the ruling party in Sweden, the center-left Swedish Social Democratic Party, appears to be starting to shift its foreign-policy platform in the wake of Russia's war, prodded in part by the center-right parties in opposition to renewing a push for NATO membership. "The

Social Democratic Party has traditionally, historically stood for Swedish neutrality ... and military nonalignment,” Brattberg said. “But even amongst leading Social Democrats in Sweden, that stance is increasingly being seen as less and less relevant in a new era marked by the Russian invasion of Ukraine.”

The question of NATO membership is likely to factor higher than ever before in debate ahead of the Swedish general election scheduled for September. The country’s Moderate Party has already announced that it would back membership of the military alliance.

The prospect of Finland and Sweden joining NATO is likely to further inflame tensions between Russia and the NATO alliance. The Kremlin has characterized the alliance, borne out of the Cold War rivalry between the Soviet Union and the West, as its top geopolitical foe and signaled that Ukraine’s prospective NATO membership played a major role in its decision to fully invade the country. A senior Russian diplomat warned last month that there would be “serious military and political consequences” if the two countries joined the alliance.

Finland’s ambassador to Washington, Mikko Hautala, told Foreign Policy in an interview that he expected a reaction from Moscow if Finland or Sweden were to move ahead with applying to NATO. “[At] a minimum, we will see information influencing ... those kind of activities,” he said. “But it’s hard to say what the reaction would be.”

During the Cold War, as Europe was carved up into spheres of influence, Finland opted for neutrality, serving as an important buffer between the East and the West. The collapse of the Soviet Union gave Finland more room to maneuver in its foreign policy, joining the European Union in 1995 and deepening its cooperation with NATO. “We are basically as close to NATO as you can get without being a member,” Hautala said.

Smith, the U.S. NATO ambassador, said the Kremlin’s fierce opposition to NATO enlargement wouldn’t deter allies from welcoming new members, even in the face of a full-scale Russian war in Ukraine. “Russia tried its very best in recent months to try and get NATO allies to revisit that policy,” she said. “It sent a treaty requesting that NATO basically turn off the process of NATO enlargement, and the answer that came back in stereo surround sound from all 30 allies was: absolutely not. NATO’s door will remain open—full stop.”

NATO diplomats say Finland brings more advantages to the alliance than just military hardware. Few countries know how Russia works better than Finland—at least as well as foreign countries can in the shadowy and opaque power structure that Russian President Vladimir Putin has built. They say adding Finland’s expertise and experience in balancing relations with its larger eastern neighbor would add significant value to the alliance.

Other experts on trans-Atlantic security said while Russia would likely condemn Finland and Sweden’s membership, it doesn’t view those countries in the same light as other prospective members that used to be in the Soviet Union and, at least in the eyes of Putin, should fall under Moscow’s orbit.

“Russia would be furious, but I don’t think it would react the same way if, say, Georgia or Ukraine were on a clear track to NATO membership now,” said Rachel Rizzo, a nonresident senior fellow at the Atlantic Council think tank.

### **32. Don’t let Putin win in Ukraine**

Wall Street Journal, 6 Apr 22, Daniel Henninger

In no sense now can Vladimir Putin be allowed to win in Ukraine. People shouldn’t have to be shot in the back of the head with their hands tied behind them to make that clear, but such is history’s record of humanity slow-walking counterattacks against mass slaughter.

Mr. Putin was going to defeat Ukraine quickly. Now he isn’t. But he can still win if the West’s commitments to Ukraine, however impressive, produce a frozen conflict, as Joint Chiefs of Staff Gen. Mark Milley predicted to Congress Tuesday when he said the conflict could last “years for sure.” Time like that is Mr. Putin’s friend because he has Stalin’s stomach for death, and eventually we won’t.

It is good in the wake of the Bucha atrocities that President Biden and Europe’s leaders are talking about holding Mr. Putin and his associates accountable for war crimes—once it is possible to collect evidence. Still, one doesn’t have to be Volodymyr Zelensky to notice that these good intentions have little to do with the reality that the current level of help from the North Atlantic Treaty Organization still leaves Ukraine in purgatory, with one foot in Mr. Putin’s hell and the other stretching toward deliverance by the West.

A stirring of moral sensibilities is always welcome, but Bucha, Mariupol and these events have surfaced new realities that the West’s political leadership can’t pretend away into some future when, as they hope, this is over.

A few weeks ago, it was possible at least to describe as an endgame talking point the possibility that Ukraine would be divided into western and eastern parts, ceding control to Russia of the Donetsk and Luhansk regions in eastern Donbas and possibly Crimea if the Putin army establishes a land bridge through Mariupol.

That result, however, assumed the war would default into a traditional military standoff between competing armies. That’s not what is happening in Ukraine. It is increasingly clear that after failing to secure a quick win, Mr. Putin’s Plan B is scorched earth.

Using crudely targeted long-range missiles, land mines and his army’s historic instinct to barbarity, he is simply destroying Ukraine—its people, its economy, whole cities and infrastructure. After the current “pause,” he’ll go back for more.

The consequences of this obviously unexpected scale of destruction are significant for the West’s calculations. At this point all the arguments, such as they are, for affirming a negotiated settlement that turns so much of Ukraine over to Mr. Putin have become impossible to credit.

It will take a decade and unimaginable amounts of capital to rebuild what Mr. Putin has destroyed. Who exactly is going to do that? Dividing Ukraine in two would effectively turn the eastern part into a Cold War East Germany, which would create the destabilizing post-Yalta imbalances that existed for decades between the wealthy West and those living in the Third World East.

To rebuild the Ukraine under his control, Mr. Putin would have to send vast amounts of his oil and gas revenue into the region. Fat chance of that on the scale needed.

Any serious rebuilding of Mariupol, Mykolaiv and other cities ceded to Russia will never happen without capital investments from Western banks and governments, making us the morally humiliated paymasters for Mr. Putin's demolition. Why is this man smiling?

Until the invasion, Ukraine's economy was growing, including a vital new technology sector, and leaning toward the West. Absent the Putin lunacy, Ukraine could have become an economic "land bridge" between the European Union nations to the west and the modern economy younger Russians were building to the east. Now much of Ukraine is rubble, and the Russian market will be a ruin for years.

Any notion Russians themselves may have entertained that somewhere at the bottom of all this was a rationale for uniting with the medieval political state known as the Kievan Rus is now exposed as a gross lie by their leader. Mr. Putin was willing to settle for nothing more than the dirt.

In the absence of anything but passing press contact with the U.S. president, a question often put to those who interpret for Mr. Biden at the White House, Pentagon and State Department is whether we want Ukraine to win. After this week, I think the better question is: Are we willing to make Mr. Putin lose?

Saying that he's experiencing a "strategic defeat" is a dodge. Every day—or year—that he is killing and wrecking, he's winning. Vladimir Putin has to lose in Ukraine, not only in the eyes of the aghast outside world. NATO's current military and political status quo—the arms flows and ratcheting sanctions—just isn't enough.

It's a terrible thing to say, but one suspects that for some in Washington, Berlin and Paris, the world's roaring moral outrage at these atrocities lets them kick the harder decisions about raising the military costs for Mr. Putin into another week. If the media is writing about Bucha, genocide and war crimes, the argument fades for sending Ukraine high-altitude missile defenses, counter-artillery radar and other "escalatory" military equipment.

Eventually, Putin wins. Don't let him.

### **33. Across South Asia, U.S. and India push back against China**

Foreign Policy, 6 Apr 22, C. Raja Mohan

"Israel is prepared to expand civilian measures during and after the month of Ramadan, in accordance with the security situation," Gantz added, according to AFP. The statement did not elaborate on the measures that would affect Palestinians.

He also expressed "appreciation" for Abbas' comments on an attack in the town of Bnei Brak near Tel Aviv late last month.

The Palestinian president had issued a rare condemnation of the March 29 attack in which five people were killed after a Palestinian opened fire at passers-by, saying that the killings "will only lead to further deterioration of the situation, while we are all striving for stability".

A total of 11 people have been killed in attacks in Israel since March 22, including some carried out by assailants linked to or inspired by ISIS.

Over the same period, eight Palestinians have been killed, according to an AFP tally, including two assailants in anti-Israeli attacks and six people the Israelis said had carried out attacks or were about to do so.

### **37. Arab League foreign ministers discuss possibility of 'ceasefire' with Russian, Ukrainian counterparts**

Kurdistan 24, 6 Apr 22

A number of the Arab League foreign ministers met with their Russian and Ukrainian counterparts to discuss the possibility of a ceasefire between the two warring states, Iraq's foreign ministry announced on Wednesday.

Arab League Secretary-General Ahmed Aboul Gheit and foreign ministers from Jordan, Iraq, Egypt, Algeria, and Sudan met with Ukrainian Foreign Minister Dmytro Kuleba in Warsaw and Russian Foreign Minister Sergey Lavrov in Moscow. The officials discussed ending the bloody conflict and resolving outstanding issues based on the United Nations Charter and international law.

Formed at the request of Egypt in March, the Arab Ministerial Communication Group aims to play a role in ending the Russia-Ukraine conflict that broke out in late February and displaced millions of Ukrainians.

The Middle Eastern ministers said they support any mediation initiatives to end the fighting.

the Arab Ministerial Communication Group poses for a group photo with Ukrainian Foreign Minister Dmytro Kuleba, April 4, 2022. (Photo: Iraqi Foreign Ministry)the Arab Ministerial

The ongoing war has had significant economic repercussions on Middle Eastern countries. Egypt imports nearly 80 percent of its wheat imports from Russian and Ukrainian suppliers.

The region's markets have also witnessed a surge in the price of cooking oil since 70 percent of the global supply comes from Russia and Ukraine.

Iraq previously announced that it supports dialogue and peaceful resolutions of the outstanding issues between the two sides.

### **38. Lebanon loses UN fuel support as government urged to find long-term solution**

The National, 6 Apr 22, Jamie Prentis

An UN-led emergency operation to supply health and water facilities in Lebanon with fuel has ended after six months, with the Lebanese government urged to find a long-lasting solution to the country's devastating energy crisis.

Additional severe fuel and electricity shortages struck import-dependent Lebanon last summer, with the UN warning that critical services would be impeded and additional hardships placed on a population facing a raft of problems.

The UN-led operation, initially intended to last for three months but later extended, was launched in September in a bid to stop vital services from collapsing.

The World Food Program, in co-ordination with other UN agencies and NGOs, delivered more than 10.4 million liters of fuel to 350 water facilities and 272 health facilities throughout Lebanon.

UN Resident and Humanitarian Coordinator Najat Rochdi described it as "one of the largest fuel service provision operations in the world".

She underlined her concern over basic services and people's welfare amid the energy crisis.

"I am appealing to the Lebanese government to find a sustainable solution to this issue, as the most vulnerable people need some form of assistance and protection," she said.

In September, the fuel deliveries were described by the UN as "exceptional emergency support for a maximum duration of three months".

Back then, Ms. Rochdi called on the government to "save no effort" in finding sustainable solutions to the energy crisis and to "protect the rights of families in Lebanon to access essential services".

Hospitals among those affected

Power cuts are a regular occurrence in Lebanon, with the embattled state-run power grid able to provide electricity for only a few hours a day at best. Many users, including hospitals, are forced to turn to private generators.

### COVERAGE HIGHLIGHTS

---

1. The Associated Press reported ISIS has expanded its activities from Afghanistan into Pakistan with moderate success. The article notes ISIS in Southwest Asia has evolved into a borderless terrorist group and continues to conduct costly attacks against Afghanistan and Pakistan targets.
2. Reuters led international reporting on the election of Shehbaz Sharif as Pakistan's new prime minister. Pakistan media generally reported Sharif's ascension as a reflection of Pakistan's adherence to its constitution and rule of law.
3. The Wall Street Journal cited a speech by Ukraine President Zelensky Monday in which he appealed for increased military aid -- especially heavy armor and tanks -- as Russian forces maneuvered towards the Donbas area of eastern Ukraine. Ukrainian authorities said they were also investigating a claim by its troops in the besieged coastal city of Mariupol that they came under a Russian chemical weapons attack Monday.
4. The Wall Street Journal said Gen. Christopher Cavoli, the current commander of U.S. Army Europe, is slated to lead U.S. European Command. In that position Cavoli would also serve as the Supreme Allied Commander Europe, responsible for NATO operations. The Journal also said Army Lt. Gen. Bryan Fenton is slated to lead U.S. Special Operations Command, overseeing special operations around the world. Both would replace commanders who are expected to retire this year as part of a normal rotation of commanders.

### **1. Islamic State morphs and grows in Pakistan, Afghanistan**

Associated Press, 11 Apr 22, Kathy Gannon

Since coming to power in Afghanistan eight months ago, the Taliban have touted their success in repressing the Islamic State group, but the militants have expanded into neighboring Pakistan, stepping up attacks there. Analysts say IS has morphed into a borderless terrorist group, one of the deadliest in a region that has spawned many violent, radical organizations. In northwest Pakistan, the impact is brutally clear.

### **2. Shehbaz Sharif elected as Pakistan's new prime minister**

Reuters, 11 Apr 22

Pakistan's parliament chose a more Western-friendly politician, Shehbaz Sharif, as prime minister on Monday, completing the ousting of predecessor Imran Khan in a political crisis that has sparked street protests and a mass resignation of lawmakers.

### **3. Ukraine's Zelensky calls for more military aid ahead of battles in eastern regions**

Wall Street Journal, 11 Apr 22, Matthew Dalton, Yaroslav Trofimov and Mauro Orru

Ukrainian President Volodymyr Zelensky on Monday launched a fresh appeal for military aid as the country prepared for some of the conflict's heaviest fighting so far, while France sent a police unit from its armed forces to Ukraine to investigate possible war crimes, the first disclosed deployment of military personnel in Ukraine from a North Atlantic Treaty Organization country. Meanwhile, Ukrainian authorities said they were investigating a claim by its troops in the besieged city of Mariupol that they came under a Russian chemical weapons attack Monday. The Russian government hasn't commented publicly about the alleged use of chemical weapons in Mariupol.

### **4. White House expected to name new commander to lead allied forces in Europe**

Wall Street Journal, 11 Apr 22, Nancy A. Youssef and Gordon Lubold

A top American Army general in Europe is expected to be elevated to lead all U.S. and allied forces on the continent, U.S. officials said, marking the biggest change to NATO military leadership since Russia invaded Ukraine in February. The Pentagon is also set to name a new general to lead Special Operation forces, the officials said. Both would replace commanders who are expected to retire this year as part of a normal rotation of commanders.

#### NOTABLE TWEETS

---

**Prime Minister of Pakistan, Shehbaz Sharif; @CMShehbaz (11 Apr):** I want to congratulate people of Pakistan on peaceful transition of power. It's matter of pride that today all our institutions respect Constitution as guiding principle. If stock market & strengthening currency is any indication, the journey towards our goals has already started. We also look forward to keep building relationships with other countries on the basis of mutual respect, equality & peace.

**Former Prime Minister of Pakistan, Imran Khan; @ImranKhanPTI (11 Apr):** We are demanding immediate elections as that is the only way forward -- to let the people decide,

through fair & free elections, whom they want as their prime minister. On Wednesday I will be holding a jalsa in Peshawar after Isha - my first jalsa after being removed through a foreign-instigated regime change. I want all our people to come, as Pakistan was created as an independent, sovereign state not as a puppet state of foreign powers.

**Prime Minister of India, Narendra Modi; @narendramodi (11 Apr):** Congratulations to H. E. Mian Muhammad Shehbaz Sharif on his election as the Prime Minister of Pakistan. India desires peace and stability in a region free of terror, so that we can focus on our development challenges and ensure the well-being and prosperity

**Minister of Defense of Israel, Benny Gantz; @gantzbe (11 Apr):** Regarding the Iranian challenge - I spoke about the critical need to expand operational and intelligence cooperation with the U.S. and regional partners, creating a united front in the face of common challenges and forces that seek to destabilize the Middle East.

**President Biden; @POTUS (11 Apr):** I spoke today with Prime Minister Modi of India. We committed to strengthening our defense, economic, and people-to-people relationship to together seek a peaceful and prosperous world.

**US Secretary [of State] Antony Blinken; @SecBlinken (11 Apr):** The United States is troubled by Russian authorities' detention today in Moscow of prominent civil society leader Vladimir Kara-Murza. We are monitoring this situation closely and urge his immediate release.

IRAN

---

### **6. Politics, not substance, seen guiding US and Iran on terror listing**

Reuters, 11 Apr 22, Arshad Mohammed and Parisa Hafezi

One of the last obstacles to reviving the 2015 Iran nuclear deal - Tehran's demand to remove its Revolutionary Guards from a US terrorism list - is more an issue of politics than substance, analysts said.

### **7. Iran seeks more security for diplomatic sites in Afghanistan**

Associated Press, 11 Apr 22

Iran on Monday urged the Taliban to provide better security at Iranian diplomatic sites in neighboring Afghanistan after angry Afghan protesters pelted the consulate in Herat with rocks, state media reported.

### **8. Iran says deal on prisoner release, foreign funds imminent**

Al Monitor, 11 Apr 22

Iran's Foreign Ministry spokesperson Saeed Khatibzadeh said that more of Iran's blocked money would be released very soon in a deal involving the release of dual nationals in Iran. The move is a sign that the nuclear negotiations, while appearing deadlocked, are still moving along.

---

## IRAQ

---

### **9. Iraq's farmers pushed off land as drought and heat cripple crops**

Reuters, 11 Apr 22

Until a few years ago, farming in southern Iraq was "as lucrative as oil," Qasim Abdul Wahad remembers, and his one-hectare farm plot in the governate of Basra produced enough to feed his family of eight. Now dust kicks up under his feet as he walks through his land, after worsening extreme heat and drought linked to climate change killed 90 percent of his winter crops, including all of his okra and eggplant.

## SYRIA

---

### **10. In north Syria, business hub hopes to drive recovery from war**

Reuters, 11 Apr 22, Khalil Ashawi

In an industrial zone in northern Syria's rebel-held city of Al-Bab, Abu Omar al-Shihabi's smelter churns out iron bars he says can compete with any produced in Syria and beyond.

---

## AFGHANISTAN

---

### **11. Afghans protest after videos allegedly show Iranians beating refugees**

Agence France-Presse, 11 Apr 22

Dozens of Afghans chanting "Death to Iran" protested Monday outside Tehran's consulate in the western city of Herat after videos allegedly showing Afghan refugees being beaten by Iranians went viral over the weekend.

### **12. 'This isn't a wise decision': Taliban reversal on girls' education met with condemnation**

NBC News, 11 Apr 22, Mushtaq Yusufzai and Rhoda Kwan

On March 23, the Taliban turned away teenage girls, who had arrived excited and carrying new textbooks, from school gates across Afghanistan. Classrooms would be closed to girls from the sixth grade on, the leaders said, until an appropriate dress code could be decided on for girls and female teachers. The flip-flop signals fundamental divisions within the Taliban between hard-liners and moderates over how to rule the country as the regime faces mounting international condemnation amid a spiraling humanitarian crisis.

### **19. Biden urges Modi not to increase India's reliance on Russian oil and gas**

New York Times, 11 Apr 22, Michael D. Shear and Mujib Mashal

President Biden on Monday urged Prime Minister Narendra Modi of India not to increase his country's reliance on Russian oil and gas, officials said, part of a global effort by the United States to maintain economic pressure on Russia for its invasion of Ukraine. Mr. Biden also emphasized growing defense cooperation with India in a virtual meeting with Mr. Modi — a line U.S. officials have increasingly highlighted in the hopes of convincing New Delhi to come off the fence over Russia's invasion.

### **20. U.S. aircraft carrier deploys off Korean peninsula amid tensions with North - official**

Reuters, 11 Apr 22, Idrees Ali and Josh Smith

The USS Abraham Lincoln strike group is operating in waters off the Korean peninsula, a U.S. official said, after South Korean media reported that the ships were deployed amid tensions over North Korea's missile tests.

### **21. British missile takes down Russian drone**

The Times (UK), 12 Apr 22, Charlie Parker and Larisa Brown

A state-of-the-art British missile has blown a Russian drone out of the sky in its first recorded use in Ukraine.

---

### **22. Putin's war moves Finland and Sweden closer to joining NATO**

Washington Post, 12 Apr 22, Ishaan Tharoor

If one accepts the rationale that Russia invaded Ukraine to thwart Kyiv's entry into NATO and check the Western military alliance's eastward march — and there are plenty of reasons, of course, not to accept that rationale — then on those grounds alone, President Vladimir Putin's gambit has been a disaster.

### **23. NATO's 'Achilles heel': alliance conducts war games in nervous Lithuania**

The Guardian (UK), 11 Apr 22, Philip Oltermann

About 30km west of the Belarusian border, the enemy's tanks were rolling through the pine forests of Lithuania at speed until a makeshift obstacle made of barbed wire blocked their path. Soldiers carrying bolt cutters jumped out of the armored vehicle at the front to clear the road.

### **24. Ukraine braces for new offensive as Russia reinforces military in east**

Washington Post, 11 Apr 22, By Dan Lamothe, Kim Bellware and Mary Ilyushina

Ukraine and its international partners are bracing for Russia to launch a new offensive, with the Pentagon on Monday saying there are signs that the Kremlin has begun reinforcing and resupplying its forces in the eastern Donbas region as a top official in Moscow vowed there would be no letup in hostilities before the next round of peace talks.

## **25. Western nations adapt their Ukraine help as war enters new phase**

Defense News, 11 Apr 22, Joe Gould

The U.S. and its allies are preparing to send heavier weapons to Ukraine in anticipation of Russia focusing its efforts on the eastern part of the country.

## **26. US orders consular staff to leave Shanghai amid COVID surge**

Associated Press, 11 Apr 22

The U.S. has ordered all non-emergency consular staff to leave Shanghai, which is under a tight lockdown to contain a COVID-19 surge.

## **27. The Chinese companies trying to buy strategic islands**

Financial Times (UK), 11 Apr 22, Kathrin Hille

Small businesses from China have scoured the globe for important strips of land. Are they trying to make money or are they a front for Beijing?

---

## ANALYSIS/COMMENTARY

---

## **28. Afghan Resistance Groups eye spring offensive but internal divisions and the Taliban get a vote, too.**

Foreign Policy, 11 Apr 22, Lynne O'Donnell

Armed resistance against the Taliban is picking up momentum across Afghanistan, with militias run by former political and military leaders of the collapsed republic recruiting and arming fighters, notably from the ranks of the former republic's U.S.-trained security forces. Some are trying to drum up international support for forcible regime change, according to sources among the groups, who have eyes on a spring offensive. But the lack of unity among leaders of the armed opposition groups, who regard each other more as rivals than comrades, could mean they are unlikely for now to make much progress in their shared ambition to overthrow the Taliban, a movement that has been galvanized by the extremists' repression of women, girls, and ethnic groups.

## **29. Is the ceasefire in Yemen a gain for Iran?**

Middle East Forum, 11 Apr 22, Clifford Smith

The international community is elated at the April 2 announcement of a U.N.-brokered two-month long ceasefire in Yemen between the Saudi Arabia- and the United Arab Emirates--led coalition, which backs the officially recognized Yemeni government, and the Iranian-supported Houthi movement. This optimism is unearned. The ceasefire likely gives Iran an achievement. What gives theocrats in Tehran an advantage is unlikely to lead to a meaningful peace.

## **30. What's behind the new wave of terrorism against Israel**

Wall Street Journal, 11 Apr 22, Jonathan Spyer

The attack in Tel Aviv last Thursday, in which a gunman opened fire on a bar, killing three, brought the number of Israelis murdered in terror incidents since March 22 to 13. It confirms the

suspicion, raised and then suppressed with dread by many Israelis over the same period, that their country faces a new wave of terror.

### **31. What the U.S. Military needs to learn from the Ukraine War**

TIME, 11 Apr 22, James Stavridis

As the brutal fighting continues in the Ukraine War, it seems likely to fundamentally upend the way we wage war in the 21st-century. From new tactics to equipment, the Russian invasion of Ukraine may presage fundamental changes in how war is conducted. What can Western militaries learn from the war thus far?

### **32. What is the U.S.'s long-term policy toward Russia now?**

Wall Street Journal, 11 Apr 22, Sabrina Siddiqui and William Mauldin

In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

### **33. Putin's War in Ukraine is a watershed. Time for America to get real.**

New York Times, 11 Apr 22, Dr. Charles A. Kupchan

During his recent speech in Warsaw, President Biden said that Vladimir Putin "cannot remain in power," only to clarify a few days later that he was merely expressing outrage, not announcing a new U.S. policy aimed at toppling Russia's leader. The episode, interpreted by many as a dangerous gaffe, underscored the tension in U.S. foreign policy between idealism and realism.

### **34. Could the Siloviki challenge Putin? What it would take for a coup by Kremlin insiders**

Foreign Affairs, 11 Apr 22 Andrei Soldatov and Irina Borogan

Among the many questions surrounding Russia's disastrous war in Ukraine, one of the most notable concerns the growing tensions between Russian President Vladimir Putin and his own security services and military.

### COVERAGE HIGHLIGHTS

---

- 1) The Associated Press reported ISIS has expanded its activities from Afghanistan into Pakistan with moderate success. The article notes ISIS in Southwest Asia has evolved into a borderless terrorist group and continues to conduct costly attacks against Afghanistan and Pakistan targets.
- 2) Reuters led international reporting on the election of Shehbaz Sharif as Pakistan's new prime minister. Pakistan media generally reported Sharif's ascension as a reflection of Pakistan's adherence to its constitution and rule of law.
- 3) The Wall Street Journal cited a speech by Ukraine President Zelensky Monday in which he appealed for increased military aid – especially heavy armor and tanks -- as Russian forces maneuvered towards the Donbas area of eastern Ukraine. Ukrainian authorities said they were also investigating a claim by its troops in the besieged coastal city of Mariupol that they came under a Russian chemical weapons attack Monday.
- 4) The Wall Street Journal said Gen. Christopher Cavoli, the current commander of U.S. Army Europe, is slated to lead U.S. European Command. In that position Cavoli would also serve as the Supreme Allied Commander Europe, responsible for NATO operations. The Journal also said Army Lt. Gen. Bryan Fenton is slated to lead U.S. Special Operations Command, overseeing special operations around the world. Both would replace commanders who are expected to retire this year as part of a normal rotation of commanders.

#### **1. Islamic State morphs and grows in Pakistan, Afghanistan**

Associated Press, 11 Apr 22, Kathy Gannon

Since coming to power in Afghanistan eight months ago, the Taliban have touted their success in repressing the Islamic State group, but the militants have expanded into neighboring Pakistan, stepping up attacks there. Analysts say IS has morphed into a borderless terrorist group, one of

the deadliest in a region that has spawned many violent, radical organizations. In northwest Pakistan, the impact is brutally clear.

## **2. Shehbaz Sharif elected as Pakistan's new prime minister**

Reuters, 11 Apr 22

Pakistan's parliament chose a more Western-friendly politician, Shehbaz Sharif, as prime minister on Monday, completing the ousting of predecessor Imran Khan in a political crisis that has sparked street protests and a mass resignation of lawmakers.

## **3. Ukraine's Zelensky calls for more military aid ahead of battles in eastern regions**

Wall Street Journal, 11 Apr 22, Matthew Dalton, Yaroslav Trofimov and Mauro Orru

Ukrainian President Volodymyr Zelensky on Monday launched a fresh appeal for military aid as the country prepared for some of the conflict's heaviest fighting so far, while France sent a police unit from its armed forces to Ukraine to investigate possible war crimes, the first disclosed deployment of military personnel in Ukraine from a North Atlantic Treaty Organization country. Meanwhile, Ukrainian authorities said they were investigating a claim by its troops in the besieged city of Mariupol that they came under a Russian chemical weapons attack Monday. The Russian government hasn't commented publicly about the alleged use of chemical weapons in Mariupol.

## **4. White House expected to name new commander to lead allied forces in Europe**

Wall Street Journal, 11 Apr 22, Nancy A. Youssef and Gordon Lubold

A top American Army general in Europe is expected to be elevated to lead all U.S. and allied forces on the continent, U.S. officials said, marking the biggest change to NATO military leadership since Russia invaded Ukraine in February. The Pentagon is also set to name a new general to lead Special Operation forces, the officials said. Both would replace commanders who are expected to retire this year as part of a normal rotation of commanders.

## **NOTABLE TWEETS**

---

**Prime Minister of Pakistan, Shehbaz Sharif; @CMShehbaz (11 Apr):** I want to congratulate people of Pakistan on peaceful transition of power. It's matter of pride that today all our institutions respect Constitution as guiding principle. If stock market & strengthening currency is any indication, the journey towards our goals has already started. We also look forward to keep building relationships with other countries on the basis of mutual respect, equality & peace.

**Former Prime Minister of Pakistan, Imran Khan; @ImranKhanPTI (11 Apr):** We are demanding immediate elections as that is the only way forward -- to let the people decide, through fair & free elections, whom they want as their prime minister. On Wednesday I will be holding a jalsa in Peshawar after Isha - my first jalsa after being removed through a foreign-instigated regime change. I want all our people to come, as Pakistan was created as an independent, sovereign state not as a puppet state of foreign powers.

**Prime Minister of India, Narendra Modi; @narendramodi (11 Apr):** Congratulations to H. E. Mian Muhammad Shehbaz Sharif on his election as the Prime Minister of Pakistan. India desires peace and stability in a region free of terror, so that we can focus on our development challenges and ensure the well-being and prosperity

**Minister of Defense of Israel, Benny Gantz; @gantzbe (11 Apr):** Regarding the Iranian challenge - I spoke about the critical need to expand operational and intelligence cooperation with the U.S. and regional partners, creating a united front in the face of common challenges and forces that seek to destabilize the Middle East.

**President Biden; @POTUS (11 Apr):** I spoke today with Prime Minister Modi of India. We committed to strengthening our defense, economic, and people-to-people relationship to together seek a peaceful and prosperous world.

**US Secretary [of State]Antony Blinken; @SecBlinken (11 Apr):** The United States is troubled by Russian authorities' detention today in Moscow of prominent civil society leader Vladimir Kara-Murza. We are monitoring this situation closely and urge his immediate release.

#### **28. Afghan Resistance Groups eye spring offensive but internal divisions and the Taliban get a vote, too.**

Foreign Policy, 11 Apr 22, Lynne O'Donnell

Armed resistance against the Taliban is picking up momentum across Afghanistan, with militias run by former political and military leaders of the collapsed republic recruiting and arming fighters, notably from the ranks of the former republic's U.S.-trained security forces. Some are trying to drum up international support for forcible regime change, according to sources among the groups, who have eyes on a spring offensive. But the lack of unity among leaders of the armed opposition groups, who regard each other more as rivals than comrades, could mean they are unlikely for now to make much progress in their shared ambition to overthrow the Taliban, a movement that has been galvanized by the extremists' repression of women, girls, and ethnic groups.

#### **29. Is the ceasefire in Yemen a gain for Iran?**

Middle East Forum, 11 Apr 22, Clifford Smith

The international community is elated at the April 2 announcement of a U.N.-brokered two-month long ceasefire in Yemen between the Saudi Arabia- and the United Arab Emirates--led coalition, which backs the officially recognized Yemeni government, and the Iranian-supported Houthi movement. This optimism is unearned. The ceasefire likely gives Iran an achievement. What gives theocrats in Tehran an advantage is unlikely to lead to a meaningful peace.

#### **30. What's behind the new wave of terrorism against Israel**

Wall Street Journal, 11 Apr 22, Jonathan Spyer

The attack in Tel Aviv last Thursday, in which a gunman opened fire on a bar, killing three, brought the number of Israelis murdered in terror incidents since March 22 to 13. It confirms the

suspicion, raised and then suppressed with dread by many Israelis over the same period, that their country faces a new wave of terror.

### **31. What the U.S. Military needs to learn from the Ukraine War**

TIME, 11 Apr 22, James Stavridis

As the brutal fighting continues in the Ukraine War, it seems likely to fundamentally upend the way we wage war in the 21st-century. From new tactics to equipment, the Russian invasion of Ukraine may presage fundamental changes in how war is conducted. What can Western militaries learn from the war thus far?

### **32. What is the U.S.'s long-term policy toward Russia now?**

Wall Street Journal, 11 Apr 22, Sabrina Siddiqui and William Mauldin

In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

### **33. Putin's War in Ukraine is a watershed. Time for America to get real.**

New York Times, 11 Apr 22, Dr. Charles A. Kupchan

During his recent speech in Warsaw, President Biden said that Vladimir Putin "cannot remain in power," only to clarify a few days later that he was merely expressing outrage, not announcing a new U.S. policy aimed at toppling Russia's leader. The episode, interpreted by many as a dangerous gaffe, underscored the tension in U.S. foreign policy between idealism and realism.

### **34. Could the Siloviki challenge Putin? What it would take for a coup by Kremlin insiders**

---

### IRAN

---

Sharif said in an interview last week good relations with the United States were critical for Pakistan for better or for worse, in stark contrast to Khan's prickly ties to Washington.

Nawaz Sharif was barred by the Supreme Court in 2017 from holding public office and subsequently went abroad for medical treatment after serving just a few months of a 10-year jail sentence for corruption charges.

“There can’t be any bigger insult to this country,” Khan, ousted in a no-confidence vote by the same assembly in the early hours of Sunday, told reporters on Monday on the prospect of Sharif being elected.

No elected prime minister has completed a full term in the nuclear-armed nation since it won independence from colonial power Great Britain in 1947, though Khan is the first to be removed by a no-confidence vote.

The military has ruled the country of 220 million people for almost half its nearly 75-year history. It viewed Khan and his conservative agenda favorably when he won election in 2018. But that support waned after a falling-out over the appointment of military intelligence chief and economic troubles that last week led to the largest interest rate rise in decades.

Khan remained defiant following his defeat in parliament.

Thousands of his supporters in several cities held protests against his ousting that went on until Monday's early hours.

### **3. Ukraine’s Zelensky calls for more military aid ahead of battles in eastern regions**

Wall Street Journal, 11 Apr 22, Matthew Dalton, Yaroslav Trofimov and Mauro Orru

Ukrainian President Volodymyr Zelensky on Monday launched a fresh appeal for military aid as the country prepared for some of the conflict’s heaviest fighting so far, while France sent a police unit from its armed forces to Ukraine to investigate possible war crimes, the first disclosed deployment of military personnel in Ukraine from a North Atlantic Treaty Organization country.

Meanwhile, Ukrainian authorities said they were investigating a claim by its troops in the besieged city of Mariupol that they came under a Russian chemical weapons attack Monday. The Russian government hasn’t commented publicly about the alleged use of chemical weapons in Mariupol.

In a virtual address to South Korean lawmakers Monday, Mr. Zelensky pressed Seoul to deliver more than the humanitarian assistance and nonlethal aid it has given so far, stating a need for heavier equipment to fight Russian tanks and missiles. “We thank South Korea for the help you have provided, but to survive from the war with Russia we need more help,” Mr. Zelensky said.

Ukraine has stepped up its pleas for heavy military equipment to fight the conventional tank and artillery battles that are expected in the Donbas area of eastern Ukraine. Having failed to capture

Kyiv, Russia has shifted its objective to seizing the parts of the eastern Donbas area it doesn't already control. Both Ukraine and Russia are moving troops and equipment into the region, with Ukraine redeploying combat units from northern areas that it recovered.

Skirmishes along the contact line in Donbas and nearby regions occur daily, and Russia has continued its long-range missile campaign on Ukrainian infrastructure. The Russian Defense Ministry said Monday that missiles destroyed a weapons and military equipment repair base of the Ukrainian air-defense forces overnight, as well as two ammunition depots. Those claims couldn't be independently verified.

The Ukrainian unit deployed in Mariupol, the Azov regiment, said Russian forces dropped an unknown chemical substance from a drone, causing respiratory and nervous-system symptoms among its defenders and civilians.

No independent evidence of the attack emerged Monday from Mariupol. Oleksiy Arestovych, a senior adviser to the Ukrainian president, said in a social-media post that the government is "checking the information about a possible chemical attack against the defenders of Mariupol."

The Azov regiment, a unit of the Ukrainian military formed from a far-right volunteer force that was created in 2014, has been resisting Russia's military in Mariupol alongside Ukrainian marines and other forces for more than a month, despite being surrounded and cut off from resupply.

Azov's commander Andriy Biletskiy said in a video recording that the chemical substance affected three people in the Azovstal industrial area of Mariupol, his unit's stronghold, but didn't cause "catastrophic consequences."

Western officials have warned for weeks that Russia could use chemical weapons in Ukraine, and Russian forces were supporting the regime of Syrian President Bashar al-Assad when its military was credibly accused of using chemical weapons.

Just hours before Monday's alleged attack, Eduard Basurin, military spokesman for the pro-Russian statelet in Donetsk, was quoted by Russia's RIA state news agency as calling for the use of "chemical troops, which will find a way how to smoke the moles out" in Mariupol.

In his nightly address, Mr. Zelensky said the government is preparing "for a new stage of terror against Ukraine," noting Mr. Basurin's comments. "We take this as seriously as possible," Mr. Zelensky said.

Mr. Basurin's Donetsk People's Republic, formed in 2014 and recognized by Moscow as an independent state in February, claims Mariupol as part of its territory and has sent its own fighters there alongside regular Russian troops.

Ukrainian authorities say as many as 10,000 people died in Mariupol in weeks of fighting that leveled much of the city. Some 400,000 people lived in Mariupol before the war.

Officials in the U.S. and U.K. said they were aware of the reports of a potential chemical munition used in Mariupol but hadn't confirmed their authenticity.

"These reports, if true, are deeply concerning and reflective of concerns that we have had about Russia's potential to use a variety of riot control agents, including tear gas mixed with chemical agents, in Ukraine," Pentagon press secretary John Kirby said in a statement.

Ukrainian and Western authorities separately pushed ahead with investigations into alleged war crimes committed in formerly Russian-held towns in northern Ukraine before Moscow's withdrawal at the end of March. The French government said its gendarmes, a police force that is part of the French army, would assist local authorities in probing any war crimes around the capital, Kyiv.

French prosecutors said last week they were probing whether war crimes had been committed in Ukraine following accounts of rape and killings of hundreds of civilians in Bucha and other formerly Russian-occupied towns.

Prosecutors also opened a separate probe March 16 following the killing two days earlier of a Franco-Irish journalist and his research consultant near Kyiv.

Russia has denied targeting civilians in its military assault on Ukraine and called the video and photos from Bucha staged.

In Moscow, Austrian Chancellor Karl Nehammer met with Russian President Vladimir Putin, in what was the first meeting between a European leader and Mr. Putin since the start of Russia's invasion.

Mr. Nehammer, who also met Saturday in Kyiv with Mr. Zelensky, asked the Russian leader for a cease-fire, for safe passage for civilians encircled by Russian forces and for supplies to occupied regions, the chancellor said in a statement. Ukrainian authorities have said Russia hasn't allowed civilians to flee along evacuation corridors toward central Ukraine.

He said he warned Mr. Putin that continuing the invasion would incur more sanctions and that those responsible for war crimes should be brought to justice.

"This is not a friendly visit," Mr. Nehammer said. "I have just returned from Ukraine and I have seen with my own eyes the immeasurable suffering caused by the Russian war of aggression."

Austria, which is heavily dependent on Russian natural gas, has been blocking sanctions against Russian energy imports to Europe together with Germany and other nations.

European Union foreign ministers discussed the bloc's efforts to pressure Russia's economy with sanctions at a meeting Monday, including the possibility of further energy sanctions. "Nothing is off the table, including sanctions on oil and gas," EU foreign-policy chief Josep Borrell said after the meeting, which was held in Luxembourg. "But today no decision was taken."

The EU approved a fifth package of sanctions Friday that included the first significant ban on imports of Russian energy – coal. However, the bloc remains deeply divided over whether to advance with further energy import bans, starting with oil.

A senior EU official briefed on Monday's discussions said there was little detailed discussion of the options Monday and no progress in narrowing the divide within the bloc. A group of countries, led by Germany, oppose a speedy cutoff of oil imports. Others, led by Poland, are urging the bloc to stop buying Russian energy.

U.S. officials say they have urged the Indian government not to increase imports of Russian energy. President Biden met virtually Monday with Indian Prime Minister Narendra Modi as Washington presses New Delhi to take a tougher stance against Russia. India has avoided publicly denouncing Moscow. Mr. Modi said during the meeting that he has spoken several times with both Mr. Putin and Mr. Zelensky and advised the two leaders to engage in direct talks.

Western and Ukrainian officials say the timing of Russia's next major campaign is up to Moscow, which may press the eastern offensive imminently with available forces, or wait a few weeks to reconstitute units that suffered losses in northern Ukraine.

The Russian Defense Ministry said that its missiles targeted a Ukrainian repair base near Velyka Novosilka in the Donetsk region, and that an ammunition depot it targeted near Mykolaiv, in southern Ukraine, was also destroyed.

More Western companies announced sales or suspensions of their Russian operations Monday following sanctions imposed by the European Union and the U.S. Further, French bank Société Générale SA said it would cease its banking and insurance activities in Russia, including selling Rosbank, while Swedish telecommunications company Ericsson AB said that it was suspending its business in Russia indefinitely.

Société Générale said it was selling its entire stake in Rosbank and its Russian insurance units to Interros, a conglomerate controlled by metals billionaire Vladimir Potanin. Mr. Potanin and Interros have eluded sanctions from the U.S., EU and the United Kingdom. He was included on Canada's list of sanctioned individuals last week. Société Générale has had investment banking operations in Canada since 1974.

## **21. British missile takes down Russian drone**

The Times (UK), 12 Apr 22, Charlie Parker and Larisa Brown

A state-of-the-art British missile has blown a Russian drone out of the sky in its first recorded use in Ukraine.

The Martlet, a laser-guided lightweight multirole missile (LMM), is understood to have been sent in secret to Ukraine by Britain but was filmed being launched by a soldier of the 95th Airborne Assault Brigade on Sunday.

Footage of the attack shows the soldier aiming a shoulder launcher at an Orlan-10 reconnaissance drone in the Kharkiv region before firing the 1,100mph missile. Cheers are heard moments later after the warhead hit the aircraft with a concentrated explosive charge and fragmentation blast.

An eight-mile convoy of military vehicles north of the eastern city of Izyum was “clear evidence” that Russia was following through with its goal of focusing on the east of Ukraine, according to the US military.

Until yesterday it was not known that Martlet missiles had been sent to Ukraine to help to secure the country's airspace against Russian jets, helicopters and surveillance drones. The weapon has not been named by officials who announced support shipments to the country. A senior defense source said LMMs had been delivered as part of Britain's “air defense package”.

It is understood that Martlets were deployed to Ukraine at the same time as Starstreak and have been in use since late March. The missiles have similar ranges and can be fired using the same platforms after minor adjustments. They are made in Belfast by Thales, an aerospace and defense company, which declined to comment.

A defense industry source said: “We are certain it's an LMM, not Starstreak. It's a much smaller, more compact, high-precision weapon designed to take out fast-moving targets. Starstreak is best against jets and helicopters, but LMMs can also be fired against boats and drones.”

The attack was the second of three successful strikes against high-altitude Russian Orlan drones in the past three days, according to the Ukrainian air assault forces. A member of the forces

praised the “British-made” weapon used in the second attack and suggested Starstreak had been used in the first strike on Saturday. Yesterday the unit confirmed that a third Orlan had been taken out of the sky by paratroopers in Mykolaiv, southern Ukraine.

Footage of a Russian helicopter chopped in half by a Starstreak missile emerged this month. Other countries are understood to have supplies of LMMs and may have given some to Ukraine.

Ukrainian soldiers released a video of a captured Orlan drone being dissected by a technician at the weekend. He discovered that it had been using a cheap digital camera to spy on Ukrainian troops and that a plastic water bottle had been used as a fuel tank.

The battle for airspace is considered the most important front in the war by the Ukrainian air force. Slovakia is considering providing Soviet-made MiG-29 fighter jets to Ukraine if alternative protection of its own airspace can be arranged, the country’s prime minister, Eduard Heger, said yesterday.

Western nations have supplied a variety of weapons, but earlier discussions on providing MiG-29s, which are also used by Poland and Bulgaria, were halted because the plans were perceived as too risky in increasing tensions between Russia and Nato.

### **22. Putin’s war moves Finland and Sweden closer to joining NATO**

Washington Post, 12 Apr 22, Ishaan Tharoor

If one accepts the rationale that Russia invaded Ukraine to thwart Kyiv’s entry into NATO and check the Western military alliance’s eastward march — and there are plenty of reasons, of course, not to accept that rationale — then on those grounds alone, President Vladimir Putin’s gambit has been a disaster. The Russian assault on Ukraine has led to an almost unprecedented moment of solidarity in Europe, waves of Western military equipment pouring into Ukraine and the mass expulsion of suspected Russian spies in European capitals. Ukraine might not be in the queue to join NATO right now, but its dogged resistance has accelerated its prospect of joining the European Union and further unmooring itself from the Russian orbit.

On Sunday, NATO Secretary General Jens Stoltenberg said that the alliance was now planning a much larger, permanent military presence on its borders with Russia. “Regardless of when, how, the war in Ukraine ends, the war has already had long-term consequences for our security,” he told Britain’s Daily Telegraph newspaper. “NATO needs to adapt to that new reality. And that’s exactly what we are doing.”

Indeed, one of the lasting legacies of the Russian invasion may be how the war spurred NATO’s strengthening and expansion. Finland and Sweden, two Nordic countries with deep histories of nonalignment, now appear on the precipice of joining the bloc. A report Monday in the Times of London suggested that both nations could clinch NATO membership in a matter of months.

“I think we will end the discussion before midsummer,” Finnish Prime Minister Sanna Marin told reporters on Friday, referring to imminent deliberations on NATO membership that would conclude by the June 25 holiday. “We will have very careful discussions, but we will also not take any more time than we have to in this process, because the situation is of course very severe.”

A statement Monday from Sweden’s Social Democrats, who lead a minority government in Stockholm, made clear that the center-left party was reevaluating its traditional opposition to NATO membership. “When Russia invaded Ukraine, Sweden’s security position changed fundamentally,” the party said.

Public opinion in both countries lurched dramatically in favor of joining NATO after the invasion began. For the first time, a majority of Swedes support entry to the bloc, while a poll this weekend found that 68 percent of Finns would back gaining membership and that an even greater number would support the endeavor if it had the public endorsement of the country’s President Sauli Niinisto and Marin’s government. (Consider that, just in 2019, more than half of Finns were opposed to joining NATO.)

The swing in sentiment has prompted parties in and out of power in both countries to announce ongoing reassessments of their policy positions on NATO. Parliamentary processes will play out over the coming months but the conclusion seems clear: No NATO member state — not even Putin-friendly Hungary — is expected to veto the Finnish and Swedish membership bids, whenever they formally materialize.

On Monday, Kremlin spokesman Dmitry Peskov warned the two Nordic countries against joining NATO, an alliance which he said “remains a tool geared towards confrontation.” Given the ongoing Russian campaign in Ukraine, Peskov’s admonishment — as well as a Russian foreign ministry threat in February of “serious military and political consequences” for Finland and Sweden — probably only strengthens the case to enter the alliance.

In one stroke, Finland joining NATO would more than double Russia’s existing land border with the member states of the Western military alliance, fencing in the Kremlin further. “How can this be anything but a massive strategic blunder for Putin?” a senior U.S. official scoffed to the Times.

Entry into NATO would be a historic move for both countries. Since the early 19th century, for reasons initially tied up in the geopolitics of the Napoleonic wars, Swedish governments maintained a studied neutrality that lasted through the end of the Cold War. After heroically resisting a Soviet invasion more than eight decades ago, tiny Finland settled for an uneasy status quo next to the Soviet juggernaut: It adopted a careful neutrality, accepted a degree of Soviet influence in its affairs, but avoided the same fate of Soviet domination experienced by countries in Eastern and Central Europe.

This arrangement became known as “Finlandization” — a nation converted into a process of geopolitical submission — and has been repeatedly mooted as a path through which Moscow and Kyiv can find some form of peaceful understanding. More than six weeks into the war, though,

it's hard to imagine Ukrainians accepting any kind of tacit subordination to Russia. Finlandization, meanwhile, has long been viewed as a pejorative term in Finland itself.

In practice, both Finland and Sweden already have close military ties with NATO partners and E.U. neighbors. According to the Economist, some experts even suggest that Finland's military capabilities are "more 'NATO interoperable' — capable of conducting joint operations alongside other allies — than some actual members."

The political journey toward NATO has taken longer. "It was only when Russia under Putin started to demonstrate that its threshold for using military force was lower than many had hoped — first with the war with Georgia in 2008 and then the invasions of Ukraine beginning in 2014 — that a debate on possible NATO membership started," wrote former Swedish prime minister Carl Bildt in a Washington Post op-ed last month.

After Putin's war on Ukraine, Bildt added, "there is no way back to a past of illusory neutrality."

### **23. NATO's 'Achilles heel': alliance conducts war games in nervous Lithuania**

The Guardian (UK), 11 Apr 22, Philip Oltermann

About 30km west of the Belarusian border, the enemy's tanks were rolling through the pine forests of Lithuania at speed until a makeshift obstacle made of barbed wire blocked their path. Soldiers carrying bolt cutters jumped out of the armored vehicle at the front to clear the road.

Then, a deafening bang. In its rush to victory, the advancing party had neglected to check the sandy terrain underneath the roadblock for mines. Luckily, for them, this was merely a dress rehearsal for a showdown between Russia and the North Atlantic alliance.

No live explosives were used in NATO's "Rising Griffin" maneuver at the Pabradė military base in eastern Lithuania. Instead, referees politely informed the tank commanders that their vehicles would have been ripped to shreds. The Russian enemy was being impersonated by American and Norwegian troops.

The western defenders may have notched up a tactical victory against an eastern aggressor on this sunny April morning, yet NATO's security architecture has never looked more fragile than in the spring of 2022, especially when viewed from Lithuania, a country long considered the alliance's Achilles heel.

An independent republic since 1990, the southernmost of the three Baltic states borders both Russia-allied Belarus on its eastern side and the Russian exclave of Kaliningrad on its western flank. On Russian television, pundits have openly urged the Kremlin to escalate the war in Ukraine by enforcing a military corridor along the "Suwalki gap" — Lithuania's short border with Poland — thus cutting off the Baltics from other NATO-allied lands.

“Until last November, we had the Russian army quite far away from NATO’s borders,” said Gabrielius Landsbergis, Lithuania’s foreign minister. “Now the military activity is very close. To add to that, Lithuania lies between the territory of Belarus and the territory of Kaliningrad. Which puts us in a strategic situation that is, let’s say, interesting.”

Since 2016, after Russia’s annexation of Crimea, “enhanced forward presence” battlegroups have been stationed in four member states on NATO’s eastern flank: Poland, Estonia, Latvia and Lithuania.

The war in Ukraine has led the alliance to further bolster its presence in the region, with multinational battalions to be dispatched to Romania, Bulgaria, Hungary and Slovakia. The military presence in Lithuania has been increased from approximately 1,200 to roughly 1,600 soldiers and equipped with new hardware, such as the German army’s light and mobile Ozelot anti-aircraft system, which can be used to protect airports from aerial assaults.

But the function of these military units remains that of a “tripwire”: a reminder to hardliners in the Kremlin that invading what they may see as renegade breakaway nations of a former Russian empire would automatically trigger a military conflict with other western European states. But in their current state, there is little doubt the enhanced forward presence units would sooner or later be overrun.

The scenario being rehearsed in the Rising Griffin exercise was a David v Goliath one, with the attacking force taking the role of the giant. The priority of NATO’s troops in the maneuver, said one officer, was to “delay the enemy”, not to hold the line.

As NATO members prepare to meet in Madrid in June, Lithuania, along with its Baltic neighbor Estonia, is calling on NATO to urgently adjust its posture in the region from deterrence to what it calls “forward defense”.

“What we’re seeing in Russia and Belarus is now a dangerous country with the intention to attack other sovereign states,” Landsbergis told the Guardian. “It’s a double-edged sword: on the one hand Russia has proven in Ukraine that it is a declining regional power. On the other hand, it can still do a lot of damage on its way down, as it seems to have no regard for its own losses. We have to defend the Baltic states, especially those that are geographically interesting to Russia.”

In keeping with the “founding act”, a political agreement signed by NATO and Russia in 1997, there are restrictions on how many western allied troops are allowed to be deployed to the Baltics, and how close they can be stationed to the border.

The enhanced forward presence in Lithuania, which is made up of seven European nations and led by Germany’s Bundeswehr, has to be rotated every six months at considerable cost and effort, with hundreds of vehicles having to be transported by road, rail or air before each changeover.

While countries such as Germany and the UK remain committed to the founding act, Lithuania and other states in the region say the document is no longer viable as a treaty.

“We consider it null and void after what Russia has done,” Landsbergis said. “The new reality we have to accept is that the treaties that built the old security environment with Russia are no more. We have to look at this with new eyes. There has to be a permanent military presence with everything needed to defend the skies, defend the seas and defend the land of the Baltic states.”

Estonia’s prime minister last week called for the three Baltic states to be handed “war-fighting capabilities”, with divisions of up to 25,000 soldiers per country.

“The question we have to ask ourselves is: what will be the new global security architecture of the world after this war?” said Landsbergis. “At the moment, we are merely reacting to what is happening in Ukraine. But that has to change. We have to start thinking in strategic terms.”

#### **24. Ukraine braces for new offensive as Russia reinforces military in east**

Washington Post, 11 Apr 22, By Dan Lamothe, Kim Bellware and Mary Ilyushina

Ukraine and its international partners are bracing for Russia to launch a new offensive, with the Pentagon on Monday saying there are signs that the Kremlin has begun reinforcing and resupplying its forces in the eastern Donbas region as a top official in Moscow vowed there would be no letup in hostilities before the next round of peace talks.

U.S. intelligence has observed a massive Russian military convoy making its way south toward Izyum, a strategically important town in northeast Ukraine that Russia seized earlier this month and may use now as a staging point to carry out assaults on larger cities to the south, said Pentagon spokesman John Kirby. The expectation, Kirby added, is that the “same brutal tactics, that same disregard for civilian life and civilian infrastructure, will probably continue” as Russian military commanders concentrate on the Donbas.

The bleak U.S. assessment came amid renewed concerns about the potential for a chemical weapons attack, and as Austria’s chancellor, Karl Nehammer, became the first Western leader to meet face to face with Russian President Vladimir Putin since the incursion began in late February. Nehammer’s trip, according to officials in Vienna, was intended to convey to the Russian leader that, morally, Putin had already lost the war.

“This is not a friendly visit,” the chancellor said in a statement. “I have just come from Ukraine and have seen with my own eyes the immeasurable suffering caused by the Russian war of aggression.”

Amid the global outrage over accusations that Russian troops committed atrocities targeting civilians in areas around the capital, Kyiv, French law enforcement officials prepared to start working on related investigations after arriving in Ukraine on Monday. Prosecutors in France have opened multiple probes into potential war crimes committed against French nationals there.

President Biden, meanwhile, met virtually with Indian Prime Minister Narendra Modi and urged him not to increase Russian energy imports, as the international community seeks to impose greater financial pressure on Moscow to call off its war. Biden said after the meeting that the

United States and India are in “close consultation” in managing the “destabilizing” effects of Russia’s actions.

While Russia has pulled back from the suburbs of Kyiv and other parts of northern Ukraine, Putin’s forces continue to attack elsewhere.

Russia has continued to fire artillery, rockets and mortars at the northern city of Kharkhiv, Ukrainian military officials said. Russian forces, they said, attempted on Monday to storm the city of Sievierodonetsk in the Donbas region but were unsuccessful.

In a speech relayed via video to South Korean lawmakers, Ukrainian President Volodymyr Zelensky on Monday said the Russian buildup in eastern Ukraine includes “tens of thousands of soldiers and a huge amount of equipment.” With its new offensive, he said, Russia aims to “break our national resistance.”

Zelensky highlighted the destruction in Mariupol, a port city in the south that has been bombarded for weeks.

“There are tens of thousands of dead,” the Ukrainian leader said in his address. “But even despite this, the Russians do not stop the offensive. They want to make Mariupol a demonstratively destroyed city.”

The mayor of Mariupol, Vadym Boychenko, said in an interview with the Associated Press that 10,000 civilians there have been killed. He estimated that the death toll could double amid the Russians’ unrelenting assault, which has made it difficult for rescue workers to reach the dead and the wounded.

The Pentagon also assessed that the number of people killed in Mariupol could be as high as Zelensky described.

“I don’t think anybody’s really going to know until Ukrainian authorities are able to get in there and look and see,” Kirby said. “But if you just look at the imagery, and you see how much the Russians have pounded Mariupol from the air, it’s inconceivable to imagine that there aren’t going to be civilian casualties and that it could be a significant number.”

Zelensky said in a separate video address released late Monday that the government in Kyiv takes “as seriously as possible” an apparent threat to unleash chemical weapons on the Ukrainian units remaining in Mariupol, which earlier in the day claimed on social media that such an attack had already occurred there.

Kirby acknowledged that U.S. officials were aware of those claims but were unable to confirm their veracity, saying that the Pentagon would closely monitor the situation. “These reports, if true, are deeply concerning and reflective of concerns that we have had about Russia’s potential to use a variety of riot control agents, including tear gas mixed with chemical agents, in Ukraine.”

The Russian Embassy in Washington did not immediately respond to a request for comment.

Rescuers on Monday pulled seven more bodies from ruins in Borodyanka, an area northwest of Kyiv that was devastated by airstrikes. The dead there were found in the rubble of two apartment buildings, Ukraine's emergency services agency said in a Telegram post. Nineteen victims have been removed from the rubble, according to the update, and rescue efforts continue.

A senior European Union official, Josep Borrell, said that he "witnessed the brutal, brutal aggression of the Russian troops against the civilian population" during an official visit to Kyiv with European Commission President Ursula von der Leyen, and that the E.U. would support the work of prosecutors from Ukraine and the International Criminal Court to collect evidence of possible war crimes committed by Russian forces.

Borrell, the E.U.'s high representative for foreign affairs and security policy, predicted that more bloodshed is in store as Russia masses forces in the east and prepares to intensify operations in the next days.

A senior U.S. defense official, speaking on the condition of anonymity under terms set by the Pentagon, said that it was unclear when Russia may launch the new assault but that there were signs it was preparing to do so. So far, this official said, Russia has reinforced its military posture around the city of Donetsk, where Ukrainian forces have battled Russian separatists for several years, by adding artillery units to the southwest.

The convoy now pressing south from the Russian border includes a command element, a support battalion, helicopter support and infantrymen for security, the U.S. official said, calling it "clear evidence" that Russia already is pursuing its goal to seize the Donbas after failing to take Kyiv. Russia has focused the majority of its airstrikes in recent days on the Donbas region, the official said.

Moscow's decision to name Gen. Alexander Dvornikov as its top commander in Ukraine is unlikely to alter Russia's tactics, U.S. officials said. Dvornikov has been dubbed the "butcher of Syria" for the violence his forces inflicted during Russia's military campaign there in the last few years.

"We're probably turning another page in the same book of Russian brutality," Kirby told reporters Monday.

Russia will not pause its military operations in Ukraine before the next rounds of peace talks, Russian Foreign Minister Sergei Lavrov said Monday in an interview with state TV channel Rossiya 24. He added that while Putin had ordered a temporary halt in military action during an early round of talks between Russian and Ukrainian delegates, Moscow has since changed its stance.

"After we became convinced that the Ukrainians were not planning to reciprocate, a decision was made that during the next rounds of talks, there would be no pause until a final agreement is reached and signed," Lavrov said.

In the interview, Lavrov also appeared to recast Moscow's goals, saying its operations in Ukraine are meant to end a course by the United States "towards world domination." Russian officials previously justified their invasion by calling it an effort to "denazify" Ukraine.

Amid the bloodshed, the U.N. Development Program announced a new initiative to support Ukraine over the next two years as it seeks to deal with the devastation and rebuild its institutions for a possible postwar future.

The program will provide on-the-ground services including infrastructure repair, debris removal and new ways to generate income for those who have lost their jobs, U.N. officials said. They cited earlier research finding that the war could wipe out 18 years of socioeconomic progress in Ukraine if it is not resolved decisively, and soon.

"The war in Ukraine continues to inflict immense human suffering," UNDP Administrator Achim Steiner said in a statement. Early estimates, he said, "project that close to two decades of socio-economic progress could be lost if the war continues — with 9 out of 10 people at risk of falling into poverty."

## **25. Western nations adapt their Ukraine help as war enters new phase**

Defense News, 11 Apr 22, Joe Gould

The U.S. and its allies are preparing to send heavier weapons to Ukraine in anticipation of Russia focusing its efforts on the eastern part of the country.

British Prime Minister Boris Johnson paid a surprise visit to Ukrainian President Volodymyr Zelenskyy in Kyiv on Saturday, where he pledged 120 armored vehicles and new anti-ship missile systems. This came a day after he promised to send an additional £100 million (U.S. \$130 million) of high-grade military equipment to Ukraine, saying Britain wants to help Ukraine defend itself against Russian aggression.

In the United States, Chairman of the Joint Chiefs of Staff Gen. Mark Milley forecast the war's new phase will play out in flat, open terrain and will increasingly involve armor and artillery. On Monday, a senior defense official said the Pentagon will send arms to Ukraine for that fight, including more Javelin anti-tank weapons as well as counter-artillery radars.

"I don't think they're in Ukraine yet, but they're on the move," the Pentagon official said of the Javelins. "That's a very specific example of how we're trying to help the Ukrainians in this particular new phase of the conflict."

Thwarted in its early plan for a quick takeover of the capital Kyiv, Russia is resupplying and reinforcing its invasion force in eastern Ukraine with an 8-mile convoy of vehicles. The group, which includes command-and-control support and possibly helicopters for air support, is apparently headed toward Iziurm in the Kharkiv region of eastern Ukraine — all while Russia is reinforcing its positions southwest of Donetsk with artillery units.

The action comes as Ukrainian Foreign Minister Dmytro Kuleba called for more weapons for his country, and stronger sanctions against Moscow, during meetings with NATO foreign ministers in Brussels last week.

Ahead of the talks, Kuleba said his agenda was “very simple — it has only three items on it: It’s weapons, weapons and weapons.”

A \$100 million package of U.S. security assistance announced last week included Javelins, four counter-artillery and counter-UAV tracking radars, four counter-mortar radar systems, armored Humvees, and laser-guided rocket systems.

The Czech Republic became the first NATO member to send tanks to Ukraine, which included T-72 and BVP-1 infantry fighting vehicles, Reuters reported last week.

The package of military aid Britain announced last week includes more Starstreak anti-aircraft missiles, another 800 anti-tank missiles and precision munitions capable of lingering in the sky until directed to their target.

“Ukraine has defied the odds and pushed back Russian forces from the gates of Kyiv, achieving the greatest feat of arms of the 21st century,” Johnson said in a statement. “It is because of President Zelenskyy’s resolute leadership and the invincible heroism and courage of the Ukrainian people that [Russian President Vladimir] Putin’s monstrous aims are being thwarted.”

It’s a trickier political question in Germany, where Chancellor Olaf Scholz is reportedly delaying a final decision on whether to send German tanks to Ukraine. While the Defense Ministry argues it needs them for its own use, German Foreign Minister Annalena Baerbock said Monday that Ukraine needs “heavy weapons.”

“Now is not the time for excuses; now is the time for creativity and pragmatism,” Baerbock said at a meeting of European Union foreign affairs ministers in Luxembourg.

Russia warned Thursday that supplying weapons to Ukraine would thwart ongoing peace negotiations between the two countries.

“Pumping weapons into Ukraine will not contribute to the success of Russian-Ukrainian talks,” Kremlin spokesperson Dmitry Peskov said.

## **26. US orders consular staff to leave Shanghai amid COVID surge**

Associated Press, 11 Apr 22

The U.S. has ordered all non-emergency consular staff to leave Shanghai, which is under a tight lockdown to contain a COVID-19 surge.

### **31. What the U.S. Military needs to learn from the Ukraine War**

TIME, 11 Apr 22, James Stavridis

As the brutal fighting continues in the Ukraine War, it seems likely to fundamentally upend the way we wage war in the 21st-century. From new tactics to equipment, the Russian invasion of Ukraine may presage fundamental changes in how war is conducted. What can Western militaries learn from the war thus far?

First, the extraordinary success the Ukrainian forces (armed with western technology) are enjoying against Russia armor. The numbers of tanks, armored vehicles, and heavy trucks destroyed by the Ukrainians are almost certainly in the thousands. This is largely the result of the hand-held anti-armor weapons provided by NATO countries (NLAWs from Britain, Javelins from the U.S., etc.).

But it is also indicative of a tactical approach by the Ukrainians that fuses the intelligence provided by the West; the portability of the missile and drone systems; the employment of them by small, light special forces teams; and entirely new systems like the Switchblade drones.

Most importantly, each tank and armored vehicle destroyed means more dead Russians. Russian soldiers killed in action probably number around 15,000 over five weeks, which is staggering. As a point of comparison, the U.S. lost 7,000 in twenty years of wars in Iraq and Afghanistan. And the lost armor stocks will be difficult to replace in the short term. Each Russian tank costs more than \$10 million, but each missile is only a hundred thousand dollars or so. War is hell, as General Sherman said in the American Civil War, but it is also expensive.

Is it time to write the obituary for the tank on the battlefield? Will they turn out to be the battleships of the 21st century, rendered obsolete by new technologies and tactics? It is certainly time to consider reducing tank inventories (as the U.S. Marine Corps is already doing) and using the resources to move toward new systems, notably unmanned. Tanks can still be effectively employed, but must be used in a coherent combined-arms manner that includes protection of them from such “cheap kill” mechanisms.

Second, the concept of close air support is increasingly at risk as well. Alongside the concerns about the efficacy of heavy armor are about the vulnerability of helicopters. We are seeing \$18 million Russian attack helicopters destroyed by a hundred thousand dollar stingers—over and over. This was a key tactic in allowing the Afghanistan mujahideen to defeat the Soviet Union in the 1980s. Again, the economics of this, especially for a weak economy like Russia, are daunting, as well as replacing trained pilots.

And that is before new swarm drone systems come into full force. As artificial intelligence becomes a wartime reality, the ability to control large numbers of unmanned systems and operate them in synch to attack large relatively less maneuverable platforms like helicopters and troop transports. We are at the leading edge of achieving this capability, and doing so augers badly for expensive manned aircraft, especially those that operate routinely near to the ground.

The lesson here is not (yet) to fully walk away from manned aircraft providing the close support on the battlefield. But the Ukrainian war is a warning that we should be spending more on research and development that improves unmanned air systems, both in ground attack and in anti-air capacities; leverage improvements in artificial intelligence to make them operate synergistically together; and experiment with such capabilities aggressively to be able to provide close air support from higher altitudes and with unmanned, less expensive vehicles controlled directly by ground forces.

Third, another key factor on the Ukrainian battlefield has been the ability of Western intelligence systems to track Russian formations and provide real-time targeting directly to the Ukrainians. This has led not only to high levels of Russians killed in action, but also to operations killing Russian general officers. This in turn creates chaotic conditions, with numerous reports indicating a lack of coherent command and control on the battlefield, and operations being directed from Moscow.

When I was Supreme Allied Commander at NATO, in strategic command of the Afghan operation, I could not have imagined taking tactical control of 150,000 troops in the field. Yet that is exactly what appears to be happening in Ukraine, with attendant failures. The lesson is that by providing real-time, highly precise targeting to forces in the field, a belligerent can help undermine one of the true centers-of-gravity in combat: a coherent command and control system anchored by capable senior leaders.

Finally, we should learn from the continuing Russian playbook of what are clearly war crimes. We need to appreciate that our opponents are going to utilize horrible tactics that are in fact war crimes: destruction of civilian infrastructure (including internet and cyber systems) with indiscriminate fires; false flag operations replete with deep fake videos; weaponizing civilian populations by creating the conditions for mass movements, taxing the logistics of the nation under attack; utilization of unprincipled mercenaries like the Wagner Group, Chechens, and Syrians; and at least threatening the use of chemical and nuclear weapons.

All of this has been called “hybrid” or “gray zone” warfare, and we’ve seen the Russians go to this list of dirty tricks in Afghanistan, Chechnya, and Syria over the past several decades. We need to do a better job of preparing to face these new realities on the battlefield. Obviously, we will not use these techniques, but we need to reverse engineer and blunt them in our training and equipment choices. This means training our troops to operate in chemical and biological environments more effectively; providing more civil support to local populations to defuse the impact of refugees; sharpen our ability to collect evidence to undermine fake videos and propaganda; and hone our responses to battlefield cyber attacks to include offensive options.

A new tactical triad is emerging in the 21st century battlefield – special forces, unmanned systems, and cyber will be far more important going forward. While legacy systems from tanks to destroyers to close air support aircraft will retain utility, we need to rethink our way of war. Sadly, there is much to learn from the battlefields of Ukraine.

### **32. What is the U.S.'s long-term policy toward Russia now?**

Wall Street Journal, 11 Apr 22, Sabrina Siddiqui and William Mauldin

In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

The response has brought U.S.-Russia relations to their lowest point since the Cold War. Left unclear is the impact on Washington's posture toward Russia in the long term and how permanent the U.S. government's actions would be, should Moscow change its trajectory in Ukraine.

So far, the Biden administration has focused on using sanctions to inflict pain on Russia's energy and financial sectors, its wealthy oligarchs and military complex, in a bid to force Russia to withdraw from Ukraine and end hostilities.

Yet President Biden has also labeled Mr. Putin a war criminal whose actions merit a trial and suggested the Russian president cannot remain in power, a remark that prompted a swift White House follow-up that regime change wasn't U.S. policy.

That rhetoric has raised questions about whether the U.S. hopes to see Mr. Putin ousted and put on trial, or would look for a way to resume diplomatic and commercial relations should a cease-fire be achieved between Russia and Ukraine—or would chart a path somewhere in between.

A return to anything approaching normal while Mr. Putin remains in charge appears unlikely, some former officials and Russia experts say, and Mr. Biden himself has reaffirmed his view that the world would be better off without the current Russian president.

"Once this war is over—and of course, it may not be over for some time—it's very hard to see U.S.-Russia relations recovering as long as Vladimir Putin is in power," said Angela Stent, a professor at Georgetown University and a Russia specialist.

National security officials acknowledge that the Biden administration failed in its goal to have a "stable and predictable" relationship with Russia due to Mr. Putin's invasion, and that ties are unlikely to return to where they stood before the war. But it is too soon to draw up a new overarching approach toward Moscow, they say.

"There will be no relief from sanctions or other costs we have and will continue to impose on Russia until President Putin reverses course and relents in his brutal aggression," State Department spokesman Ned Price said last month, a refrain repeated by top White House officials in recent days.

Maintaining flexibility over the longer term to allow Mr. Putin to seek a diplomatic exit or to respond to changes on the battlefield could have its advantages.

So far, Ukraine and Russia have engaged in several rounds of cease-fire talks to no avail. Should Moscow and Kyiv reach a peace deal, the U.S. and European countries would likely be willing to lift some but not all sanctions on Moscow as part of the arrangement, assuming Ukraine supported the move, former administration officials said. The U.S. and its allies have avoided telegraphing what it would take to lift sanctions.

John Herbst, U.S. ambassador to Ukraine during the George W. Bush administration, said some kind of thaw could be possible with the Russian leader retaining power.

“I despise Putin, but if he tomorrow were to recognize that he can’t win in Ukraine, he’s stopping the war...then our relationship will get better,” said Mr. Herbst, who is now at the Atlantic Council think tank in Washington. He said one way for Mr. Putin to achieve sanctions relief would be to return to the status quo before the invasion, which the Russian leader has shown no interest in doing.

After failing to seize Kyiv quickly and oust the government, Russian forces are now regrouping and are expected to launch a new offensive in the Donbas region of Ukraine in coming weeks.

Elsewhere, Russia and the U.S. are expected to continue cooperating on some strategic and security objectives. Biden administration officials point to negotiations with Iran over reviving the Obama-era nuclear accord, in which Russia is a key participant; talks about the reconstruction of Afghanistan following the U.S. withdrawal last summer; and arms control and involvement in the International Space Station.

A State Department spokeswoman said the U.S. government has no intention of suspending diplomatic relations with the Kremlin, despite Moscow’s threats to sever such ties. Diplomats with the U.S. Embassy in Moscow, whose numbers have been reduced dramatically, continue to engage with Russian officials.

Still, alleged Russian war crimes are an issue that could complicate relations between the U.S. and Russia in the future.

Officials in the Biden administration and other allied countries have pointed to killings of civilians blamed on Russian forces in the town of Bucha and the city of Mariupol as potential evidence of wartime atrocities for which Russia should be held accountable. The U.S. Justice Department on Wednesday said it was helping foreign prosecutors gather evidence of possible war crimes in Ukraine.

“With the pounding of Mariupol that is happening in front of our eyes and the latest events in Bucha that really puts Putin beyond the pale,” said Eugene Rumer, a former intelligence officer who leads the Russia program at the Carnegie Endowment for International Peace. “I don’t know what leader can sit down with Putin—even at that long table where world leaders meet with him—and negotiate something and shake hands on it.”

The Biden administration has also been bracing for potential escalation on Russia's part and recently said the U.S. has been supplying Ukraine with protective equipment and supplies in case the Russians used chemical or biological weapons.

The White House has repeatedly ruled out sending U.S. troops to Ukraine or instituting a no-fly zone, but it has signaled that a chemical-weapons attack by Russia would trigger a response from the North Atlantic Treaty Organization.

Negotiations to end the war are likely to become more difficult as more allegations of civilian killings emerge, said Michael McFaul, U.S. ambassador to Russia in the Obama administration.

"There can be no return to business as usual with Putin as a leader," said Mr. McFaul, now a professor at Stanford University.

For now, the U.S. and its allies are left with the hope that sanctions and Ukrainian resistance will force Mr. Putin to back down. They have failed so far to stop Moscow's offensive, even though the Russian economy is headed into what the International Monetary Fund and other global financial institutions say will likely be a deep recession.

Officials note that punitive economic measures take time to bite. But sanctions programs against authoritarian regimes in North Korea, Iran, Venezuela and Cuba have failed to achieve major shifts in those governments.

Sen. Ben Cardin (D., Md.), a member of the Senate Foreign Relations Committee, said broad economic sanctions on Russia could be lowered as a part of a peace deal, should Ukrainian President Volodymyr Zelensky agree. But he said he didn't want Mr. Zelensky to be pressured to accept a deal.

He also said sanctions aimed at Mr. Putin and efforts to hold Russians to account over human rights should remain in place.

"Putin has to be held accountable—that means war-crimes accountability," he said.

Said Sen. Thom Tillis (R., N.C.), a member of the Senate Armed Services Committee: "I hope at some point we'll be able to normalize relations with a leader of Russia. I just don't know if that could ever be with Vladimir Putin."

### **33. Putin's War in Ukraine is a watershed. Time for America to get real.**

New York Times, 11 Apr 22, Dr. Charles A. Kupchan

During his recent speech in Warsaw, President Biden said that Vladimir Putin "cannot remain in power," only to clarify a few days later that he was merely expressing outrage, not announcing a new U.S. policy aimed at toppling Russia's leader. The episode, interpreted by many as a dangerous gaffe, underscored the tension in U.S. foreign policy between idealism and realism.

Mr. Putin's invasion of Ukraine should provoke moral outrage in all of us, and, at least in principle, it warrants his removal from office. But Mr. Putin could well remain the leader of a major power into the next decade, and Washington will need to deal with him.

This friction between lofty goals and realpolitik is nothing new. The United States has since the founding era been an idealist power operating in a realist world — and has on balance succeeded in bending the arc of history toward justice. But geopolitical exigency at times takes precedence over ideals, with America playing power politics when it needs to.

During the Cold War, Washington promoted stability by tolerating a Soviet sphere of influence and cozying up to unsavory regimes willing to fight Communism. In contrast, after the collapse of the Soviet Union, America operated under conditions of geopolitical slack; great-power rivalry was muted, enabling Washington to put front and center its effort to promote democracy and expand a liberal, rules-based international order.

What, then, is the path forward? The war in Ukraine now confronts the United States with the need to tilt back toward the practice of realpolitik. Washington's commitment to keeping NATO's doors open to Ukraine was a laudable and principled stand against an autocratic Russia. Yet America's idealist cause has run headlong into Russian tanks; Washington's effort to do right by Ukraine has culminated in Russia's ruthless effort to put the country back under Moscow's sway.

Mr. Putin has just sent history into reverse. The United States should seek to foil and punish Moscow's aggression, but Washington also needs to be pragmatic to navigate a world that, even if more unruly, is also irreversibly interdependent.

### **The gap between means and ends**

Russia's invasion of Ukraine has exposed a gap between America's ideological aspirations and geopolitical realities that has been widening since the 1990s. During the heady decade after the end of the Cold War, Washington was confident that the triumph of American power and purpose cleared the way for the spread of democracy. A primary instrument for doing so was the enlargement of NATO.

But from early on, the American foreign policy establishment allowed principle to obscure the geopolitical downsides of NATO enlargement. Yes, NATO membership should be open to all countries that qualify, and all nations should be able to exercise their sovereign right to choose their alignments as they see fit. But geography and geopolitics still matter; major powers, regardless of their ideological bent, don't like it when other major powers stray into their neighborhoods.

It's true that Moscow's dismay at the prospect of Ukraine's membership in NATO most likely is fed in part by nostalgia for the geopolitical heft of the Soviet days, Mr. Putin's paranoia about a "color revolution" arising in Russia, and mystical delusions about unbreakable civilizational links between Russia and Ukraine. But it is also true that the West erred in dismissing Russia's

legitimate security concerns about NATO setting up shop on the other side of its 1,000-mile-plus border with Ukraine.

All major powers desire strategic breathing room — which is precisely why Russia has objected to NATO's eastern expansion since the end of the Cold War. NATO may be a defensive alliance, but it brings to bear aggregate military power that Russia understandably does not want parked near its territory.

Indeed, Moscow's objections to NATO membership for Ukraine are very much in line with America's own statecraft, which has long sought to keep other major powers away from its borders.

The United States spent much of the 19th century ushering Britain, France, Russia and Spain out of the Western Hemisphere. Thereafter, Washington regularly turned to military intervention to hold sway in the Americas. The exercise of hemispheric hegemony continued during the Cold War, with the United States determined to box the Soviet Union and its ideological sympathizers out of Latin America. When Moscow deployed missiles to Cuba in 1962, the United States issued an ultimatum that brought the superpowers to the brink of war.

After Russia recently hinted that it might again deploy its military to Latin America, the State Department spokesman, Ned Price, responded, "If we do see any movement in that direction, we will respond swiftly and decisively." Given its own track record, Washington should have given greater credence to Moscow's objections to bringing Ukraine into NATO.

NATO's open-door policy has meanwhile encouraged countries in Europe's east to lean too far over their strategic skis. While the allure of joining the alliance has encouraged aspirants to carry out the democratic reforms needed to qualify for entry, the open door has also prompted prospective members to engage in excessively risky behavior.

Not long after NATO in 2008 pledged that Georgia and Ukraine "will become members of NATO," Georgia's president, Mikheil Saakashvili, launched an offensive against pro-Russian separatists in South Ossetia with whom the country had been sporadically fighting for years. Russia promptly carved up Georgia, grabbing control of South Ossetia and Abkhazia. Mr. Saakashvili thought the West had his back, but he miscalculated and overreached.

In similar fashion, NATO encouraged Ukraine to beat a path toward the alliance. The 2014 Maidan Revolution toppled a pro-Moscow regime and put Ukraine on a westward course, resulting in Russia's intervention in Crimea and Donbas. NATO's open door then beckoned, prompting Ukrainians in 2019 to enshrine their NATO aspirations in the Constitution.

Now Russia has again invaded the country to block its westward path. Given its unenviable proximity to Russia, Ukraine would have been better off playing it safe, quietly building a stable democracy while sticking with the neutral status that it embraced when it exited the Soviet Union. Indeed, Ukraine's potential return to neutrality figures prominently in the talks between Kyiv and Moscow to end the war.

NATO has wisely avoided direct involvement in the fighting in Ukraine in order to avert war with Russia. But NATO's unwillingness to protect Ukraine has exposed a troubling disconnect between the organization's stated goal of making the country a member and its judgment that defending Ukraine is not worth the cost.

In effect, the United States and its allies, even as they impose severe sanctions on Russia and send arms to Ukraine, are revealing that they do not deem the defense of the country to be a vital interest. But if that is the case, then why have NATO members wanted to extend to Ukraine a security guarantee that would obligate them to go to war in its defense?

NATO should extend security guarantees to countries that are of intrinsic strategic importance to the United States and its allies, but it should not make countries strategically important by extending them security guarantees. In a world that is rapidly reverting to the Hobbesian logic of power politics, when adversaries may regularly test U.S. commitments, NATO cannot afford to be profligate in handing out such guarantees. Strategic prudence requires distinguishing vital interests from lesser ones and conducting statecraft accordingly.

### **Beginning the world all over again**

Americans have long understood the purpose of their power to be not only security but also the spread of liberty at home and abroad. As Thomas Paine wrote in 1776, "We have it in our power to begin the world all over again."

Paine was surely engaging in hyperbole. But successive generations of Americans have taken the nation's exceptionalist calling to heart, with quite impressive results. Through the power of its example as well as its many exertions abroad — including World War I, World War II and the Cold War — the United States has succeeded in expanding the footprint of liberal democracy.

But the ideological aspirations of the United States have at times fueled overreach, producing outcomes at odds with the nation's idealist ambitions. The founding generation was determined to build an extended republic that would stretch to the Pacific Coast. The exalted banner of Manifest Destiny provided ideological justification for the nation's westward expansion — but also moral cover for trampling on Native Americans and launching a war of choice against Mexico that led to U.S. annexation of roughly half of Mexico's territory.

President William McKinley in 1898 embarked on a war to expel colonial Spain from Cuba, insisting that Americans had to act "in the cause of humanity." Yet victory in the Spanish-American War turned the United States itself into an imperial power as it asserted control over Spanish possessions in the Caribbean and Pacific, including the Philippines. The resulting Filipino insurgency led to the deaths of some 4,000 U.S. troops and more than 200,000 Filipino fighters and civilians.

As he prepared the country for entry into World War I, President Woodrow Wilson declared before Congress that "the world must be made safe for democracy." After U.S. forces helped bring the war to a close, he played a leading role in negotiations over the League of Nations, a global body that was to preserve peace through collective action, dispute resolution and

disarmament. But such idealist ambitions proved too much even for Americans. The Senate shot down U.S. membership in the League; Wilson's ideological overreach cleared the way for the stubborn isolationism of the interwar era.

"The Iraqi people are deserving and capable of human liberty," President George W. Bush proclaimed just before launching the invasion of Iraq in 2003. But the war resulted in far more bloodshed and chaos than liberty. Likewise, two decades of exhaustive U.S. efforts to bring stability and democracy to Afghanistan fell far short, with the American withdrawal last summer giving way to Taliban rule and a humanitarian nightmare. Across these historical episodes, noble ambitions became divorced from strategic realities, yielding dreadful results.

### **Getting Real**

NATO meant well in opening its doors to Ukraine, yet good intentions have again stumbled on geopolitical realities. To be sure, Mr. Putin had the opportunity to settle his objections to Ukraine's membership in NATO at the negotiating table. Last June, President Biden admitted that whether Ukraine joins the alliance "remains to be seen"; more recently, President Emmanuel Macron of France floated the idea of "Finlandization" for Ukraine — effective neutrality — and proposals for a formal moratorium on further enlargement circulated. Mr. Putin could have picked up these leads, but he instead opted for war — and now owns the resulting death and destruction.

Russia's relationship with the West is fast heading toward militarized rivalry. In light of the tight strategic partnership that has emerged between Moscow and Beijing — and China's own geopolitical ambitions — the next Cold War may well pit the West against a Sino-Russian bloc stretching from the Western Pacific to Eastern Europe.

The return of a two-bloc world that plays by the rules of realpolitik means that Washington will need to dial back its efforts to expand the liberal order, instead returning to a strategy of patient containment aimed at preserving geopolitical stability and avoiding great-power war. A new strategic conservatism will require avoiding the further extension of defense commitments into geographic areas that Russia and China consider their rimlands.

Instead, the United States should seek stable balances of power in the European and Asia-Pacific theaters. Washington will need to strengthen its forward presence in both theaters, requiring higher and smarter military spending and the strict avoidance of demanding wars of choice and nation-building adventures in the Middle East or other peripheral regions.

At the same time, taming an interdependent world will require working across ideological lines. Washington should ease off on the promotion of democracy and human rights abroad and the Biden administration should refrain from its tendency to articulate a geopolitical vision that too neatly divides the world into democracies and autocracies. Strategic and economic expedience will at times push the United States to partner with repressive regimes; moderating oil prices, for example, may require collaboration with Iran, Saudi Arabia and Venezuela.

Even though the United States will continue teaming up with its traditional democratic allies in Europe and Asia, many of the world's democracies will avoid taking sides in a new era of East-West rivalry. Indeed, Brazil, India, Israel, South Africa and other democracies have been sitting on the fence when it comes to responding to Russia's invasion of Ukraine.

Russia clearly poses the most immediate threat to geopolitical stability in Eurasia, but China, because of its emergence as a true competitor of the United States, still poses the greater geopolitical challenge in the longer term. Now that Russia and China are regularly teaming up, they could together constitute an opposing bloc far more formidable than its Soviet forbear. Accordingly, the United States should exploit opportunities to put distance between Moscow and Beijing, following the lead of the quintessential realists Richard Nixon and Henry Kissinger, who in the 1970s weakened the Communist bloc by driving a wedge between China and the Soviet Union.

The United States should play both sides. Russia's invasion of Ukraine marks a fundamental breach with the Atlantic democracies, yet the West cannot afford to completely turn its back on Russia; too much is at stake. As during the Cold War, Washington will need a hybrid strategy of containment and engagement. Russia should remain in the penalty box for now, with the United States pushing back against the Kremlin's territorial expansionism and other aggressive behavior by reinforcing NATO's eastern flank and maintaining harsh economic sanctions.

But Washington should also remain on the lookout for opportunities to engage with Moscow. Its invasion of Ukraine has just made Russia an economic and strategic dependent of China; Mr. Putin will not relish being Xi Jinping's sidekick. The United States should exploit the Kremlin's discomfort with becoming China's junior partner by signaling that Russia has a Western option.

Assuming an eventual peace settlement in Ukraine that permits the scaling back of sanctions, the Western democracies should remain open to cautious and selective cooperation with Moscow. Areas of potential collaboration include furthering nuclear and conventional arms control, sharing best practices and technologies on alternatives to fossil fuels, and jointly developing rules of the road to govern military and economic activity in the Arctic.

Russia needs China more than China needs Russia, so Washington should also seek to pull Beijing away from Moscow. Beijing's ambiguous response to the invasion of Ukraine suggests at least a measure of discomfort with the economic and geopolitical disruption that has been produced by Russian recklessness. Yet Beijing continues to benefit from Russian energy and strategic cooperation and from the fact that Mr. Putin is forcing the United States to focus on Europe, thereby stalling the U.S. "pivot to Asia." Nonetheless, Washington should keep an eye out for opportunities to work with Beijing in areas of common interest—trade, climate change, North Korea, digital governance, public health—to improve relations, tackle global problems and potentially weaken the bond between China and Russia.

As during the Cold War, a world of rival blocs could mean economic as well as geopolitical division. The severe impact of the sanctions imposed on Russia underscores the dark side of globalization, potentially driving home to both the United States and China that economic interdependence entails quite considerable risk. China could distance itself from global markets

and financial systems, while Washington could seek to further decouple the United States from Chinese investment, technology, goods and supply chains. The world may be entering a prolonged and costly era of deglobalization.

The United States will always be an idealist country struggling to navigate a realist world. That's as it should be; the globe is a better place for it. But Russia's invasion of Ukraine is a geopolitical watershed: A more realist world is back, requiring that America's idealist ambitions yield more regularly to inescapable strategic realities.

### **34. Could the Siloviki challenge Putin? What it would take for a coup by Kremlin insiders** Foreign Affairs, 11 Apr 22 Andrei Soldatov and Irina Borogan

Among the many questions surrounding Russia's disastrous war in Ukraine, one of the most notable concerns the growing tensions between Russian President Vladimir Putin and his own security services and military. The war started with Putin holding a televised security council meeting in which he humiliated Sergei Naryshkin, the chief of the foreign intelligence service, for insufficient enthusiasm about the invasion. Two weeks later, with Russian forces facing high casualties and unexpected resistance, Putin placed two generals of Russia's Federal Security Service (FSB) under house arrest and began an investigation into bad intelligence and the misuse of funds designated for cultivating pro-Kremlin groups in Ukraine. He also forced a deputy commander of the National Guard to resign, apparently because of a criminal investigation. In early April, one of the FSB generals who had been placed under house arrest was transferred to Lefortovo prison.

Then it was the military's turn. For nearly two weeks in March, amid rumors that Putin was furious with the progress of the invasion, Defense Minister Sergei Shoigu, the public face of the war and generally regarded as one of Putin's most trusted lieutenants, disappeared from view. When Shoigu finally resurfaced, first in a video clip of a security council meeting and then in person at a conference in the Ministry of Defense, he appeared somber and withdrawn. At the end of March, U.S. intelligence forces suggested that the Russian Defense Ministry has not been giving Putin a clear picture about the war, perhaps out of fear of further repercussions. And on April 9, Putin reorganized the military chain of command, appointing General Alexandr V. Dvornikov to be in charge of the operations in Ukraine.

At first glance, these developments suggest a striking change. In the years before the war, the siloviki, as Russia's security elite are known, had been one of the main power centers of Putin's regime. As a former KGB officer himself, Putin has long relied on the security services to enforce his policies and help him maintain his grip on power. And although the siloviki have been somewhat eclipsed by Shoigu's Defense Ministry in recent years, never before has Putin appeared to be so at odds with both the security services and the military as he is now. Given

Putin's increasingly ruthless crackdown on these men and the growing awareness in Moscow that the war has gone badly, some observers are wondering how long they will tolerate his catastrophic mistakes.

Such questions, however, overlook the historical relationship between the security forces and the Russian state—and the particular way that Putin has built his base of power. Although the recent developments are noteworthy, they do not suggest a larger breakdown of the existing order. Even amid the current tensions, the chances that leading members of the security or military elite might make a move against Putin remain slim. It is worth considering, then, why this is so, and what might have to happen for that to change.

### **Militarized, not mobilized**

To understand why the siloviki may be unlikely to turn against Putin, it is necessary to first understand the historic relationship between the military and the state. Historically, the Russian army has never posed much of a threat to the country's rulers. Unlike in other heavily militarized societies, there have been very few successful or attempted military coups in Russia. The last time the Russian army launched an open rebellion was in 1825, when the Decembrists tried to dethrone Tsar Nicolas I; the revolt failed disastrously, with most of the coup leaders killed or exiled. Nor has the Russian military given rise to alternative centers of power—in the mold of Egypt's Free Officers, for example, who toppled King Farouk in 1952. This is not for lack of trying: on several occasions since the collapse of the Soviet Union, groups of military veterans have sought to gain political power, but each time they have failed.

During the 1990s, before Putin came to power, the Russian government was weak, and the Kremlin was forced to balance between competing groups. Sometimes, this led to efforts by members of the military to gain influence or even overthrow the government. In October 1993, a group of former Soviet veterans calling themselves the Union of Officers took part in an ultraconservative revolt, but they were arrested before the rebellion got underway. Four years later, a Russian combat general named Lev Rokhlin left the army and formed his own political party called the Movement in Support of the Army, which aimed at taking over the Kremlin. It quickly gained popularity, but then in 1998, Rokhlin's wife shot him during a family feud at their dacha. The killing gave rise to numerous conspiracy theories, but one thing became clear: Rokhlin's movement didn't survive his death.

There have been very few successful coups in Russian history.

In those years, the security services and sometimes the generals and officers in the military would occasionally throw their weight behind powerful regional leaders, including the mayor of Moscow, as a counterweight to the president. But Putin has systematically eliminated that kind of threat. Russia no longer has any significant opposition forces. Putin's political opponents have either been killed off (like Boris Nemtsov, who was assassinated near the Kremlin in 2015), thrown in jail (like Alexei Navalny, who has been locked up since January 2021 and was recently given a new sentence of nine years in a maximum security penal colony), or forced into exile (like nearly all of Navalny's lieutenants and a growing number of former insiders, such as

Vladimir Milov, the former deputy minister of energy, Sergei Aleksashenko, the former deputy finance minister, and even Andrei Kozyrev, the former foreign minister of Russia).

On the few occasions that members of the military have challenged Putin, they have been easily stopped in their tracks. In 2005, for example, Vladimir Kvachkov, a retired colonel in military intelligence, tried to assassinate Anatoly Chubais, the economist who was known as the father of Russia's controversial privatization program of the 1990s. In the early 2000s, Chubais remained close to Putin and still enjoyed his support. Kvachkov's group detonated a roadside bomb and sprayed Chubais's car with automatic gunfire, but the assassination attempt failed, and Kvachkov was sent to prison. When Kvachkov was released, he mounted a political comeback that went nowhere, and he was later rearrested by the FSB. His popularity was limited to aging Red Army retirees who believed that the Soviet Union had been destroyed as a result of a Jewish conspiracy. Everyone else viewed him as a tainted has-been. As a Spetsnaz officer who heard one of Kvachkov's speeches told us at the time, "Why should we listen to him about politics if he failed to execute an ambush operation of the kind he supposedly brought to perfection in Afghanistan?"

### **Watched from behind**

In fact, quite apart from Putin's systematic elimination of opposition forces, there is a deeper structural reason for the military's inability to launch an effective challenge to the Kremlin. During the Soviet years, the secret police kept the army under its watchful eye. As early as 1918, less than a year after the Bolshevik Revolution, the Cheka, the precursor of the KGB, formed a unit to deal with dissent within the Red Army. This vigilance was continued under Stalin and his successors, all of whom kept a firm grip on the army: every military division had Communist Party cells planted in it, and the KGB established a large military counterintelligence force to spy on the army. And when the Soviet Union collapsed, the KGB was largely reconstituted as the FSB, with the new service occupying the same headquarters at Lubyanka and following many of the same practices.

Since coming to power, Putin has aggressively expanded these powers, giving the FSB wide latitude to monitor dissent within the military. As early as the beginning of 2000, when he was still acting president, Putin approved a new series of regulations that expanded the FSB's involvement in military counterintelligence. The FSB was empowered to investigate, as the law put it, any "illegal armed formations, criminal groups, and individuals and public associations" that may be seeking a "violent change of the political system of the Russian Federation and the violent seizure or violent retention of power." In 2004, the FSB's military counterintelligence unit was elevated to the rank of a full department of the security services. Soon it became the largest division of the FSB, with numerous agents deployed in the Russian army

As a result of this mandate, FSB agents are pervasive in Russia's military today. There are rules governing how many FSB agents must be assigned to each military unit and each military facility. According to FSB policy, for example, a small National Guard air base in Ermolino, in the region of Kaluga—a base that houses only six planes and perhaps a dozen helicopters—must be supervised by the local FSB chief, along with more than 20 recruited assets and 16 confidential contacts within the base's personnel.

The FSB has a pervasive culture of mistrust.

In the war in Ukraine, the official role of the FSB is to make sure that Russian troops are not sabotaged or attacked from behind. FSB agents are also in charge of establishing political control over occupied territories, including cities and areas that have fallen into Russian control. But they also keep a watchful eye on the troops themselves.

With such incessant surveillance, the Russian army has never produced the kind of officers who might lead an effective revolt. But what about the FSB men themselves? As Putin's own regime has shown, in contrast to the military, the KGB has produced one of the country's most powerful leaders since Stalin. Arguably, then, the biggest threat to Putin might well come from the agency whose powers he has steadily bolstered over the years: the officers at Lubyanka.

### **Putin's willing enforcers**

If anyone is expecting members of the security services to rise up against Putin, however, they would do well to consider the negligible record of effective FSB dissent. The Russian security services have always been prone to corruption, but they have not been particularly adept at building effective power bases and patronage networks of their own. Because of the way the FSB is structured, individual officers tend to be loyal to their rank and position, rather than to particular senior officers within the services; if an FSB general loses his job, he cannot rely on the continued loyalty of his former subordinates.

Members of the FSB are also acutely aware that they may be subject to Putin's crackdowns as much as anyone else. At present, there are dozens of FSB officers who have been jailed on charges of corruption and treason (often involving alleged spying for the United States). Although the charges are sometimes real, there often appear to be other motives determining who is targeted. In most cases, those who have been charged were arrested by the FSB's own internal security department. As a result of these practices, there has long been a pervasive culture of mistrust within the FSB: midlevel officers don't trust the generals, and the generals don't trust their subordinates. Older members still recall that the 1991 putsch led by Vladimir Kryuchkov, the head of the KGB, failed because the rank and file chose to stand by and wait rather than participate in his plot.

The present generation of FSB officers, men in their 30s and 40s, have no memory of any president other than Putin and have built their careers under one director, Aleksandr Bortnikov, who has led the agency since 2007. They present a striking contrast to the previous generation, active in the 1990s, when the FSB rank and file was forced to continually navigate between different political groups jockeying for power. These days, the FSB officers serve only the president by obeying orders. Their main function is to ruthlessly eliminate any potential sources of opposition or dissent, pure and simple, no questions asked. And the elevated status they enjoy in Russian society has tended to make them even more loyal to the regime.

### **The limits of loyalty**

Although Putin has long counted on the steadfast support of his military and security services, the war in Ukraine suggests that there may be limits to how far this can go. The increasingly visible tensions between him and senior members of his security elite suggest that Putin may be more paranoid than ever about possible challenges to his rule. On the other hand, such discord may also indicate that at least some members of his inner circle are displeased with the course he has set. And since Putin's chosen way of dealing with problems – including the bad intelligence and bad military performance in Ukraine – is to blame the siloviki, they don't feel particularly encouraged to give him an accurate picture about what is happening. They also don't want to stick their necks out.

Lacking political experience and a broad base of support, the siloviki – both the security services and the military – are hardly capable of producing and leading a coup d'état on their own. Nor are they likely to be swayed if popular sentiment in Russia turns dramatically against Putin. But the siloviki are ruthless in protecting their own interests, and there is one way, at least, that they might lose faith: if Russia's economic troubles reach the point that its regional governors begin to break ranks with Putin and the economic order that has sustained Putin's security state for more than 20 years begins to collapse, then the siloviki may well conclude that the Kremlin is losing control of the country and that their own future is threatened. In that case, they could step aside and let it happen – or even provide a hand.

#### **35. Rahi welcomes return of Arab ambassadors, calls for voting in favor of 'Lebanon's identity'**

Asharq Al-Awsat, 11 Apr 22

Maronite Patriarch Beshara al-Rai welcomed the return of the ambassadors of Gulf States to Beirut, saying the move “makes Lebanon feel that it is an active member of the Arab League.”

Rahi pointed to three “positive” signs that emerged in Lebanon over the past week, noting the announcement of Pope Francis' visit to Lebanon in June, the initial agreement with the International Monetary Fund (IMF), and the return of ambassadors of the Gulf States to Lebanon.

“These positive steps come while important developments are taking place at the regional and international levels, which we hope the Lebanese state will benefit from within the national framework,” Rai said in comments during Palm Sunday's sermon in Bkirki.

I. NATO Chief Says Finland, Sweden Welcome to Apply to Join  
(AP, Lorne Cook, 6 Apr 22)...

NATO would quickly welcome Finland and Sweden into its ranks with open arms if they decided to apply, the military alliance's top civilian official said Wednesday, as Russia's war on Ukraine spurs public support in the two Nordic countries for membership. The military organization might also be ready to provide security guarantees to the countries if any potential membership bid angers Russia. NATO Secretary-General Jens Stoltenberg said. A poll last month by Finnish broadcaster YLE showed that, for the first time, more than 50% of Finns support joining the Western military alliance. In neighboring Sweden, a similar poll showed that those in favor of NATO membership outnumber those against. "If they decide to apply, I expect that all allies will welcome them," Stoltenberg told reporters in Brussels, as NATO foreign ministers met to discuss the war in Ukraine. "We know that they can easily join this alliance if they decide to apply."

Before launching the war on Ukraine, President Vladimir Putin demanded that the 30-nation military organization stop expanding and pull its troops back from Russia's borders. So the prospect of neighboring Finland, and Sweden, joining is unlikely to be welcomed in Moscow. To shield them, Stoltenberg said NATO member countries might be prepared to provide a security guarantee to cover the two neutral nations from when they announce a possible membership bid until their applications are endorsed. Once members, they would benefit from NATO's collective defense clause, which obliges all members to come to the aid of any ally that comes under attack. "I am certain that we will find ways to address concerns they may have regarding the period between the potential application and the final ratification," Stoltenberg said. He declined to speculate about what those security guarantees might involve.

Finnish Foreign Minister Pekka Haavisto said his country's lawmakers are due this month to debate a government white paper on security, including an option for NATO accession. He said Russia's invasion of Ukraine has changed public opinion. "In three or four weeks we have a majority, first time ever" in favor of joining, Haavisto said. He said Finland knows that "Russia is ready to take bigger risks, as we can see in Ukraine, bigger risks also for its own security. We can also see that Russia is capable of gathering more than 100,000 men against just one country, even

without touching its reserves.” Haavisto added that “the threshold has been lowered, at least in the debate,” on Russia’s possible use of tactical nuclear or chemical weapons. He too was reluctant to go into detail about any security guarantee that Finland might need, particularly as debate about joining continues at home. But Haavisto did say it’s something that his country would want to discuss with “key” NATO members, and that Finnish leaders have been in contact with U.S. President Joe Biden and Secretary of State Antony Blinken.

## 2. Stoltenberg: NATO Has Learned a Lesson From Ukraine, We Will Do More for BiH Because It Is Vulnerable (Sarajevo Times, 6 Apr 22)...

NATO Secretary General Jens Stoltenberg told at yesterday’s news conference that NATO is determined to send more weapons to Ukraine and do more for Bosnia and Herzegovina (BiH) and Georgia. Stoltenberg held a press conference ahead of a meeting of NATO foreign ministers that will be held today and tomorrow in Brussels. Namely, the NATO Secretary General warned that they expect NATO will cause further escalation of relations with Eastern European countries. He stressed that NATO would supply even more weapons to Ukraine and that NATO would do more for partners such as BiH and Georgia, countries vulnerable to Russian threats and influence. Also, NATO will call on its allies to deliver additional weapons to Ukraine. “NATO will not recognize the Russian occupation of Ukraine, and especially the occupation of Crimea.” Stoltenberg pointed out NATO’s clear position on this issue.

As for relations with Finland and Sweden, which are not yet members of NATO, Stoltenberg noted that the alliance will respect the will of these two countries if they want to join the alliance. NATO expects additional evidence of Russian crimes against civilians and war crimes to emerge. Just before the end of the press conference, Stoltenberg explained that NATO had learned a lesson from Ukraine about the need to help countries that are not in NATO or the European Union (EU). NATO will consider how to help those countries and examine what it can do for BiH and Georgia.

## 3. If Dayton Accords Are Not Reformed, the Agony of Bosnia-Herzegovina Will Be Prolonged (Deutsche Welle, Rüdiger Rossig, 6 Apr 22)...

Every year on April 6 the inhabitants of the Bosnian capital commemorate the Day of the City of Sarajevo. The day marks both the city’s liberation from the German occupying forces in 1945 and the start of the siege by Bosnian Serbs in 1992. The day before, the Bosnian parliament had declared the country’s independence from what had been communist Yugoslavia. On April 5, 1992, more than 100,000 people also took part in peace protests — until shots were fired on the demonstrators from the seat of the Serbian nationalist party. The bullets killed two women: the first victims of the Bosnian War. The following day, what had been the Yugoslav army, but was, at that point, under the control of Serbian nationalists, began encircling Sarajevo. The siege lasted 1,425 days and cost the lives of 11,541 people. Most Bosnians had not believed that it would come to war — irrespective of whether they belonged to the approximately 44% Muslim Bosniaks, the 17% Catholic ethnic Croatians, the 31% orthodox Christian ethnic Serbs or numerous minorities of the tiny West Balkan state’s 4.4 million population. And they had good reason. One-third of all marriages in the country were ethnically mixed. In previous decades, many people had migrated there from other parts of Yugoslavia, and there had never been any conflict up to then. But the future of Bosnia had long been in dispute. On March 1, 1992, 99.4% of the electorate had voted in favor of independence from Yugoslavia. But the turnout was only 63.4%, as most Bosnian Serbs boycotted the referendum. The majority of Serbian lawmakers had already left the Bosnian parliament by the end of 1991 and had founded a proto-state called the Republika Srpska (Serb Republic) on January 9, 1992.

In early April 1992, Serbian nationalists began the brutal “ethnic cleansing ” of the area of Bosnia controlled by their troops. The aim was not just to crush the non-Serbian elites, but also any kind of opposition and civil society and

to unite with neighboring Serbia. In 1993, armed Bosnian Croat nationalists attacked their former Bosniak allies. They called for unification with neighboring Croatia. This "war in a war" lasted about a year. Who was fighting whom in Bosnia? It was not an ethnic conflict, but a conflict waged by nationalists, who were former communist apparatchiks, members of the intelligence services and the military. Their opponents were a population whose majority wanted western European-style democracy, the rule of law and prosperity, according to all opinion polls. That, however, would have meant an end to the primacy of the existing elites. And that was why those elites were determined to stop that process whatever it took.

From 1991 onwards international brokers — primarily the United Nations and the European Community (EC), the forerunner of today's European Union — intervened in the war that accompanied the break-up of Yugoslavia. However, they negotiated between the heavily armed aggressors and their almost defenseless targets as if this were a conflict between two equally strong parties. One consequence of this misreading of the situation was the deployment of the lightly armed UNPROFOR force to keep the peace in an area where war was already raging. The peacekeepers were not only unable to implement any of the countless "ceasefires" in the intervening three-and-half years; they also completely failed in the UN "safe area" Srebrenica, where Bosnian Serb forces murdered more than 8,000 Bosniak men and boys in July 1995.

The genocide and Serbian attacks on UNPROFOR personnel led the international community to finally broker the Dayton Accords and forge a new constitution. According to the peace agreement, which was named after the venue of the negotiations in the US airbase in Dayton, in the US state of Ohio, Bosnia remained a state, but was divided into two "entities" — the Republika Srpska and the Federation of Bosnia and Herzegovina, which was, in turn, carved up into 10 cantons, as well as a self-governing administrative unit. The country has one of the most complicated institutional structures in the world with a confusing muddle of ministries and responsibilities. The Office of the High Representative (OHR) is in charge of keeping the peace and answers to the Peace Implementation Council (PIC), which is made up of the powers that guarantee the Dayton Accords and includes several European states, including Germany, as well as the United States and Russia.

The Dayton Agreement was a shabby compromise, but it was the only way to quickly end a war that had brought about 100,000 fatalities and displaced more than two million people. By 1995, the Serb side also had significant interest in bringing an end to the fighting in the face of huge military defeats against what had become a highly professional Bosnian army. While Bosnian Serbs were slaughtering people in Srebrenica, Bosnian forces advanced far into Republika Srpska. The Serbian entity in Bosnia-Herzegovina would be far smaller today were it not for the Dayton Accords. But instead of being grateful for this agreement, the Bosnian-Serb leaders interpreted Dayton as a victory. In the following years, Milorad Dodik, the president of Republika Srpska, extended his power base, turning it increasingly into a state within a state. But neither the Serbian entity nor the rest of Bosnia have developed positively from the perspective of its citizens. Nowadays, the western Balkan state has just 3.2 million inhabitants. Unemployment is high and wages are low. The country has an aging population, life expectancy continues to sink, and more and more young people are leaving. Former communist nationalists such as Dodik or the Bosnian Croat politician Dragan Covic are accused by the opposition and non-governmental organizations such as Transparency International of corruption, cronyism and human rights violations.

The politics of these nationalist leaders are characterized by aggressive rhetoric, continual obstruction of political business and regular secession threats. For years, Serbian nationalists have been supported largely by Putin's Russia, which hopes in this way to destabilize the political course adopted by the EU and the US in the western Balkans. Nevertheless, it is unlikely that Bosnia-Herzegovina will break apart — its leaders live from the international subsidies that keep this jointly governed state alive. In addition, it is unlikely that the Serbian and Croatian governments really want a union with the Bosnian Serbs or Croats that would fundamentally change political relations in their countries.

If the would-be separatists in Bosnia were, nonetheless, to try to achieve their aims with violence, their uprising would be unlikely to last long. The next Russian barracks are far away, there are over 1,000 NATO troops from the EUFOR mission stationed in Bosnia-Herzegovina itself and thousands of others in all neighboring countries apart from Serbia. The threat that Bosnia does face is an endless prolonging of the agony that it has endured since the end of the war. To prevent that, the Peace Implementation Council (PIC) and the Office of the High Representative (OHR) have to be turned into functioning institutions and mandated to reform the Dayton Agreement. That is only possible without Moscow, which obviously does not wish Bosnia-Herzegovina to become a functioning democracy governed by the rule of law. In addition, the country needs to be given a clear prospect of EU membership and economic aid to boost living standards. Democracy, the rule of law, prosperity and integration into the EU are the most effective weapons that could help democracies prevent the rule of powerful cliques in post-communist states. In Bosnia, Belarus or Russia.

4. In a Break With the Past, U.S. Is Using Intel to Fight an Info War With Russia, Even When the Intel Isn't Rock Solid  
(NBC, Ken Dilanian, Courtney Kube, Carol E. Lee, and Dan De Luce, 5 Apr 22)...

It was an attention-grabbing assertion that made headlines around the world: U.S. officials said they had indications suggesting Russia might be preparing to use chemical agents in Ukraine. President Joe Biden later said it publicly. But three U.S. officials told NBC News this week there is no evidence Russia has brought any chemical weapons near Ukraine. They said the U.S. released the information to deter Russia from using the banned munitions. It's one of a string of examples of the Biden administration's breaking with recent precedent by deploying declassified intelligence as part of an information war against Russia. The administration has done so even when the intelligence wasn't rock solid, officials said, to keep Russian President Vladimir Putin off balance. Coordinated by the White House National Security Council, the unprecedented intelligence releases have been so frequent and voluminous, officials said, that intelligence agencies had to devote more staff members to work on the declassification process, scrubbing the information so it wouldn't betray sources and methods. Observers of all stripes have called it a bold and so far successful strategy — although not one without risks. "It's the most amazing display of intelligence as an instrument of state power that I have seen or that I've heard of since the Cuban Missile Crisis," said Tim Weiner, the author of a 2006 history of the CIA and 2020's "The Folly and the Glory," a look at the U.S.-Russia rivalry over decades. "It has certainly blunted and defused the disinformation weaponry of the Kremlin." Four days before the end of the Cuban Missile Crisis in 1962, the U.S. publicized spy plane photos to show the Soviet Union had deployed nuclear missiles not far from Florida's coast. The Biden administration began releasing reams of intelligence about what it said were Putin's plans and intentions even before the invasion of Ukraine began. Just this week, national security adviser Jake Sullivan stood at the White House podium and read out what officials said was more declassified intelligence, asserting that Russia's pullout from areas around Kyiv wasn't a retreat but a strategic redeployment that signals a significant assault on eastern and southern Ukraine, one that U.S. officials believe could be a protracted and bloody fight. The idea is to pre-empt and disrupt the Kremlin's tactics, complicate its military campaign, "undermine Moscow's propaganda and prevent Russia from defining how the war is perceived in the world," said a Western government official familiar with the strategy. Multiple U.S. officials acknowledged that the U.S. has used information as a weapon even when confidence in the accuracy of the information wasn't high. Sometimes it has used low-confidence intelligence for deterrent effect, as with chemical agents, and other times, as an official put it, the U.S. is just "trying to get inside Putin's head." Some officials believe, however, that trying to get into Putin's head is a meaningless exercise, because he will do what he wants regardless. After this story was published, a U.S. official told NBC News that "the U.S. government's effort to strategically downgrade intelligence to share with allies and the public is underpinned by a rigorous review process by the National Security Council and the Intelligence Community to validate the quality of the information and protect sources and methods." The official added that "we only approve the release of intelligence if we are confident those two requirements are met."

The biggest success of the U.S. information offensive may have been delaying the invasion itself by weeks or

months, which officials believe they did with accurate predictions that Russia intended to attack, based on definitive intelligence. By the time Russia moved its troops in, the West presented a unified front. Before the invasion, the U.S. asserted that Russia intended to stage a false flag attack against members of Ukraine's Russian-speaking population as a justification for war and that the plans included a video featuring fake corpses. The video never materialized; Russia has consistently claimed it was invading to protect ethnic Russians from "Nazis" in Ukraine. The U.S. accurately predicted that Putin intended to go through with the attack, even as other Western countries, notably France, argued otherwise. The head of France's military intelligence agency stepped down last week over the wrong call. A former U.S. official said administration officials believe the strategy delayed Putin's invasion from the first week of January to after the Olympics and that the delay bought the U.S. valuable time to get allies on the same page in terms of the level of the Russian threat and how to respond. CIA Director William Burns, a former ambassador to Russia, told lawmakers at a congressional threats hearing last month that "in all the years I spent as a career diplomat, I saw too many instances in which we lost information wars with the Russians." Now, he said, "by being careful about this we have stripped away the pretext that Putin, in particular, often uses." "That has been a real benefit, I think, to Ukrainians," he said. The policy has drawn lavish praise even from some Republicans. "You were spot on in your intelligence," Rep. Brian Fitzpatrick, R-Pa., said at the House's annual worldwide threats hearing last month, addressing Burns and other intelligence agency leaders. "Your decision to declassify, both the form and the fashion in which you did so, saved lives. Sleep well, and thank you for doing that." But the strategy has its dangers. One of them, the Western official said, is that getting something clearly wrong would be extremely damaging to U.S. credibility and play into Moscow's hands.

As the war has proceeded, the administration has used intelligence to warn of possible Russian actions and draw attention to Russian military failings. At times, the Biden administration has released information in which it has less confidence or about things that are possible rather than truly likely. Last week, U.S. officials told reporters they had intelligence suggesting Putin is being misled by his own advisers, who are afraid to tell him the truth. But when Biden was asked about the disclosure later in the day — after it made headlines around the globe — he was less than definitive. "That's an open question. There's a lot of speculation," Biden told reporters. "But he seems to be — I'm not saying this with a certainty — he seems to be self-isolating." The degree to which Putin is isolated or relying on flawed information can't be verified, said Paul Pillar, a retired career U.S. intelligence officer. "There's no way you can prove or disprove that stuff," he said. Two U.S. officials said the intelligence about whether Putin's inner circle was lying to him wasn't conclusive — based more on analysis than hard evidence. Other officials disputed that, saying the intelligence was very reliable and had been vetted at the highest levels. In another disclosure, U.S. officials said one reason not to provide Ukraine with MiG fighter jets is that intelligence showed Russia would view the move as escalatory. That was true, but it was also true of Stinger missiles, which the Biden administration did provide, two U.S. officials said, adding that the administration declassified the MiG information to bolster the argument not to provide them to Ukraine. Likewise, a charge that Russia had turned to China for potential military help lacked hard evidence, a European official and two U.S. officials said. The U.S. officials said there are no indications China is considering providing weapons to Russia. The Biden administration put that out as a warning to China not to do so, they said. The European official described the disclosure as "a public game to prevent any military support from China." Game or not, U.S. intelligence officials say it has been successful. Intelligence is rarely definitive, and Biden officials have calculated in some cases that it's better to pre-empt something that might not happen, rather than stay silent and watch it unfold. "It doesn't have to be solid intelligence when we talk about it," a U.S. official said. "It's more important to get out ahead of them — Putin specifically — before they do something. It's preventative. We don't always want to wait until the intelligence is 100 percent certainty that they are going to do something. We want to get out ahead to stop them." The official said there was an extensive discussion about whether to reveal that the Russians had a blacklist of Ukrainian enemies whom they intended to arrest and possibly kill once they seized control. Officials weighed the potential harm of divulging the intelligence. "That was a big decision," the official said. But the intelligence appears to have been borne out by witness accounts from towns Russian once occupied and has now left, where political assassinations have been documented.

Some U.S. officials have advocated a strategy of leaning further forward in declassifying and releasing intelligence for years, as U.S. adversaries became adept at using modern communications platforms to spread propaganda. In 2020, nine of 11 U.S. military combatant commanders signed a memo urging the U.S. intelligence community to

declassify more information to counter disinformation and propaganda from Moscow and Beijing. The U.S. can bolster support from allies only by “waging the truth in the public domain against America’s 21st century challengers,” the officers wrote. But efforts to compete in the battle of ideas, they added, are hamstrung by overly stringent secrecy practices. “We request this help to better enable the US, and by extension its allies and partners, to win without fighting, to fight now in so-called gray zones, and to supply ammunition in the ongoing war of narratives,” the four-star generals wrote to the acting director of national intelligence at the time, Joseph Maguire. “Unfortunately, we continue to miss opportunities to clarify truth, counter distortions, puncture false narratives, and influence events in time to make a difference,” the generals said. In the past, the U.S. had sat on its hands as Russia waged information war. In 2014, days before Russia invaded Ukraine’s Crimean peninsula, Russia released a recording of an apparent phone conversation between senior U.S. diplomat Victoria Nuland and the ambassador to Ukraine at the time, in which Nuland disparaged the European Union. The move was part of a wave of disinformation and propaganda from Moscow surrounding the seizure of Crimea. But the Obama administration didn’t react. That’s because the U.S. had opted out of the great power propaganda wars after the 9/11 attacks, Weiner said. “So what was the United States’ response to all of this?” Weiner asked. “Crickets, nothing, zip. They had no response.” The Biden strategy has been different. Pillar said the Biden administration took a significant risk in predicting Russia would invade Ukraine, a bold move that was vindicated by Putin’s actions. “That suggests that there are some pretty strong bases for this information,” Pillar said. “Not only did it turn out to be correct ... but evidently it had been presented to the president with enough confidence that he felt confident going out on the limb as far as he did.” Said Pillar, “Boy, if there wasn’t an invasion, this would have a huge ‘cry wolf’ effect and make our president look pretty bad.”

#### 5. Satellite Companies Join the Hunt for Russian War Crimes (Politico, 6 Apr 22)...

It’s an unlikely theme here at the largest annual gathering of space industry executives: how to help bring war criminals to justice. The expanding constellations of commercial spy satellites that have been capturing high-resolution photos and radar images of Russian troop movements are now proving to be a game-changing tool for international authorities and human rights groups who are aggressively working to document Russia’s targeting of civilians in Ukraine. And companies are stepping up their efforts to help build war crimes cases. They are cueing their satellites to pinpoint mass graves, bombed-out hospitals and shattered schools. They are helping to identify military units that have targeted civilians. And their real-time data is being used to deploy investigators, such as those from the International Criminal Court and United Nations, to collect more physical evidence or personal testimony from witnesses on the ground in Ukraine. “There is truth in imagery,” Steve Butow, director of the space portfolio at the Defense Innovation Unit, the Pentagon’s Silicon Valley outpost, said in an interview at the Space Foundation’s National Space Symposium. “We know where the hospitals, schools and other things are and the analytics are showing these are exactly the things being targeted.” “It is not propaganda from the West,” he added. “The global community is seeing this for what it is. They can show exactly what is happening on the ground.”

President Joe Biden singled out the indiscriminate killing of hundreds of civilians in the Ukrainian town of Bucha over the weekend as a war crime and highlighted the need to collect evidence that could implicate Russian military or political leaders. “What’s happening in Bucha is outrageous,” he said. The White House also said it has other evidence showing Russia violating the laws of war. Secretary of State Antony Blinken said the U.S. government is working “to provide the information that we have to the relevant institutions and organizations that will put all this together and there needs to be accountability for it.” The International Criminal Court has an “active investigation” underway into war crimes in Ukraine after referrals from dozens of nations. And on Tuesday, U.N. Secretary-General António Guterres called for a coordinated international effort to collect evidence, citing the wholesale destruction of civilian areas and growing reports of rape and other human rights violations committed by Russian troops. After the “horrifying images” of what took place in Bucha, Guterres said, “I immediately called for an independent investigation to guarantee effective accountability.” Many of those probes are being guided by images captured from commercial satellites orbiting the Earth.

One of the leading commercial satellite providers, Maxar Technologies, has been working “24-7 operations on this,” said CEO Dan Jablonsky. He said the company has “shouldered out” other customers who are waiting for imagery so that Maxar can continue to make the Ukraine crisis a high priority. And one of those increasing demands is to chronicle the humanitarian consequences of the conflict. “Buildings getting blown up, holes being dug for graves, those kinds of things are being tracked and recorded and documented in a way that we think is very important,” Jablonsky said in an interview. The global network of imaging satellites operated by Maxar and other U.S. and international companies are proving to be “an unblinking, unclassified eye that is not information from the government but it can be used to hold people accountable for behavior,” Butow added. Stacey Dixon, the deputy director of national intelligence, also revealed at the conference on Tuesday that, at the outset of the Ukraine conflict, the U.S. government encouraged satellite companies to share their imagery far and wide. “Early on, we also asked a few commercial companies ... to rapidly make available imagery like the buildup that was happening around Ukraine’s borders to help shed a light on what Russia was doing,” she said. “This allowed others to independently interpret the images, piecing them together with other information, and tell the world what was about to happen.” Members of Congress have also urged U.S. spy agencies to declassify intelligence they have collected on alleged Russian war crimes. But it’s the widespread availability of commercial satellites — that can collect images day or night — that is reshaping how war crimes are being investigated.

While the technology has been used piecemeal in the past to illuminate Chinese human rights abuses against the Uyghur Muslims in China, genocide in Sudan and other human catastrophes, its role putting the war in Ukraine under the microscope is seen as revolutionary. The commercial satellite constellations have grown dramatically in size and capability in recent years, providing higher resolution images and allowing much more frequent coverage over areas of interest. Dozens of companies and universities in the U.S. alone have government licenses to operate “remote sensing” technologies from orbit. “We’re able to know in real-time,” said Ritwik Gupta, a research scientist at the Lawrence Berkeley National Laboratory in California who is assisting U.S. European Command in Germany. “You want to see human rights violations in Bucha? We can get Maxar tasked and get imagery over that same exact region in a couple of minutes.” Another company that has been working “around the clock” on the task is Planet Labs, which for years has coordinated with and supported human rights organizations. Now, international war crimes investigators are “spending enormous amounts of time using these tools to try to identify instances of the intentional targeting of civilians,” said Andrew Zolli, its chief impact officer. Zolli also said what’s different in Ukraine than previous conflicts is that these investigations can now take place in real-time, in large part due to publicly available satellite data that was once the sole purview of secret government spy agencies. “The satellites will guide the war crimes prosecutors to sites where they will collect ground evidence,” Zolli said. “And the combination of the ground evidence and satellite imagery and other digital sources of evidence will be collected for future prosecutions.” “Normally, you have these events occur and people are scattered to the winds and it takes years to track them down,” he added. “And then you have faulty memories, and you have to collect more evidence ... to more firmly establish the facts of what happened.”

But it also means international authorities don’t have to wait for the shooting to stop to begin their painstaking work. “The prosecutions may come in the future, but the investigation doesn’t come in the future anymore,” Zolli said. “The investigation comes right now. This is about getting real-time information and deploying war crimes prosecutors in the moment when the conflict is still raging.” “And unfortunately,” he added, “there are just more instances than we can count.” For Butow, the war crimes task is also a test of how the space community can use its enormous technological capacity to advance democratic interests. “That to me is a strategic impact,” he said. “If you really want to shape the world we live in and make sure that democracy and freedom prevails, you want this kind of information to be out there.” Some executives are pushing for more. HawkEye 360 operates satellites that can track radio frequencies, such as those emitting from military units in confined areas — another possible line of investigation to pinpoint units or individuals responsible for atrocities. It is urging symposium attendees to harness more of their capacity, in both resources and technology. The company is circulating a “concept paper” at panel discussions and cocktail receptions proposing that space companies contribute to a “Space Industry for Ukraine” initiative to finance “high-value” projects, such as providing satellite data to assist aid groups operating in Ukraine “to maximize their command and control especially during refugee evacuation missions.” “We believe there is an

additional humanitarian role that our shared space community can serve in supporting the people of Ukraine," it says, citing "communications support, and imagery, radar and [radio frequency] data."

6. Drones, Phones and Satellite Technology Are Exposing the Truth About Russia's War in Ukraine in Near Real-Time  
(CNN, Nic Robertson, 6 Apr 22)...

Russia's lies may be catching up with it faster than it ever imagined. The war in Ukraine is defying President Vladimir Putin's expectations at every turn, not only with Russia's failure to capture Kyiv as planned but with the war crimes his soldiers are alleged to have committed in Bucha, a city close the capital, exposed for the world to see. Throughout history, wars have been won by forces turning new technologies to their advantage. The 1415 victory of English King Henry V over the French at the Battle of Agincourt came courtesy of his archers and their newly developed longbows, raining arrows over a range the French could not match. The war in Ukraine may see another historic first, with technology cutting through the fog of war, exposing the aggressors' lies and accelerating efforts to bring about their defeat. Satellite images of murdered civilians that match videos, recorded weeks later, of bodies at the roadside are providing compelling evidence of Russian war crimes, convincing Western leaders to ramp up sanctions on Russia and accelerate weapons supplies for Ukraine. How this will affect the final outcome of the war is unclear. But what is evident at a time when Ukraine is urgently seeking any additional leverage as Russian forces regroup for a new offensive, is that Russia's actions in Bucha are strengthening Ukraine's hand. While battlefield satellite imagery has been available to governments for decades and was instrumental in pinpointing war crimes during the Bosnian civil war in the 1990s -- notably locating a mass grave of many of the 7,000 Bosnian Muslims slaughtered in the town of Srebrenica in 1995 -- it has never been so immediately available in the public domain as now.

Putin and his battlefield commanders appear not to care or not to have grasped the fact that orders and actions now leave an indelible record beyond their control that could come back to haunt them. They will be aware that in many past conflicts -- even as recent as the Syrian civil war -- leaders like Bashar al Assad escaped conviction and have even been rehabilitated, despite vast troves of incriminating documents spirited from government offices and police stations. But this is not the only lesson to which Putin should pay attention. Following the bloody breakup of Yugoslavia and the Bosnian civil war, the war crimes tribunal in the Hague used political and military leaders' own words to help convict them. When the International Criminal Tribunal for the former Yugoslavia (ICTY) put Bosnian Serb President Radovan Karadzic on trial, it had video of him looking over Sarajevo, condemning the civilians below to artillery and mortar fire. His military partner in war crimes there, General Ratko Mladic, also saw his words come back to help convict him, as video showed him on the outskirts of Srebrenica directing the filtering of civilians, many of whom would shortly be slaughtered by his soldiers, following his orders. That type of link may be harder to pin on Putin, but his 20-page thesis published last summer on why Ukraine is not a country, and his TV comments on why Russia should invade, will, if previous war crime courts are a precedent, count against him as author and director of the war. If Putin were to come to trial, his unravelling may turn out to have begun with his inability to understand his army's weaknesses and Ukraine's strengths. Failure to fulfil his first major objective, the capture of Kyiv, forced his troops to retreat, leaving their tide of terror exposed. They did what they have done so many times before, in Syria, in Chechnya, in Georgia: committed awful abuses. And Putin and his officials did what they have done so many time before: lied to cover their crimes.

Russian defense officials claimed photos and videos that emerged on April 2, showing murdered civilians -- shot in the head, some with their hands and legs bound -- were fake, saying their troops left before the killings occurred. "The troops left the city on March 30," the defense ministry said in a statement. "Where was the footage for four days? Their absence only confirms the fake." They were very clear about the date. Foreign Minister Sergey Lavrov, one of Putin's most seasoned spin masters, doubled down on the clumsy cover-up, insisting "Russian forces left the Bucha town area as early as the 30th of March." But publicly available satellite images from space-tech company Maxar, taken March 18 while Russian troops were in control, showed the civilians lying dead at the road side in

exactly the same locations as Ukrainian forces discovered them when they re-entered the town in early April. And drone video shot before March 10 showed a cyclist being shot and killed by Russian troops. Ukrainian forces found his body weeks later, exactly where he fell. In the months prior to Russia's invasion and the days since Maxar's images appeared, tracking Russian forces and their destruction, the public's understanding of the battlefield has been revolutionized. Coupled with the near-ubiquitous use of smartphone cameras, geolocation technology and sophisticated drones, Putin faces the possible reckoning he escaped in previous conflicts.

Ukrainian President Volodymyr Zelensky wants more cameras, and wider access, to let the public see for themselves: "This is what we are interested in, maximum access for journalists, maximum cooperation with international institutions, enrolment of the International Criminal Court, complete truth and full accountability," he said in a video address on Monday. Ukraine's enigmatic leader has realized it's not just high-tech, tank-busting weapons like Javelins and NLAWs, or surface-to-air missiles like Stingers and Starstreaks, that could turn the tide in the war. It's truth, and the tools -- satellites, drones and smartphones -- to deliver it. Unparalleled in any modern war, technology could hand the underdog this surprising advantage, undermining the lies of an oversized aggressor. Zelensky was at pains for the United Nations to understand this when he spoke to them Tuesday: "It is 2022 now. We have conclusive evidence. There are satellite images. And we can conduct full and transparent investigations." Like Henry V in 1415, Zelensky knows an advantage when he sees it. While satellite imagery may not be as game-changing as a six-foot yew branch and a length of hemp string, if he can use it cleverly, he may force Putin to talk much sooner than the Russian President would like.

7. US Disrupts Global 'Botnet' Controlled by Russian Military Intelligence, DoJ Says (Guardian, David Smith, 6 Apr 22)...

The US has disrupted a global "botnet" controlled by Russia's military intelligence agency, Attorney General Merrick Garland announced on Wednesday. A botnet is a network of hijacked computers used to carry out cyberattacks. "The Russian government has recently used similar infrastructure to attack Ukrainian targets," Garland told reporters at the justice department. "Fortunately, we were able to disrupt this botnet before it could be used. Thanks to our close work with international partners, we were able to detect the infection of thousands of network hardware devices. "We were then able to disable the GRU's [the military intelligence agency] control over those devices before the botnet could be weaponised." The attorney general also announced charges against Russian oligarch Konstantin Malofeyev for sanctions violations. He said the billionaire had been previously identified as a source of financing for Russians promoting separatism in Crimea and providing support for the so-called Donetsk People's Republic in eastern Ukraine. "After being sanctioned by the United States, Malofeyev attempted to evade the sanctions by using co-conspirators to surreptitiously acquire and run media outlets across Europe," Garland said. The indictment is the first of a Russian oligarch in the US since the Russian invasion of Ukraine.

In a related move, a federal court in the southern district of New York unsealed a criminal indictment against TV producer John Hanick, 71, a US citizen charged with violations of sanctions and false statements because of his work for Malofeyev over several years. Matthew Olsen, assistant attorney general of the justice department's national security division, said: "The defendant Hanick knowingly chose to help Malofeyev spread his destabilizing messages by establishing, or attempting to establish, TV networks in Russia, Bulgaria and Greece, in violation of those sanctions." Last month Garland, who is America's top law enforcement official, announced the launch of Task Force KleptoCapture, an interagency law enforcement task force dedicated to enforcing the sweeping sanctions against Russia over its invasion of Ukraine. He vowed on Wednesday: "Our message to those who continue to enable the Russian regime through their criminal conduct is this: it does not matter how far you sail your yacht, it does not matter how well you conceal your assets, it does not matter how cleverly you write your malware or hide your online activity. "The justice department will use every available tool to find you, disrupt your plots and hold you accountable."

Garland, whose grandparents fled antisemitism at the border of western Russia and eastern Europe more than a century ago, acknowledged horrific images that emerged from Bucha in Ukraine his week. “We have seen the dead bodies of civilians, some with bound hands, scattered in the streets. We have seen the mass graves. We have seen the bombed hospital, theatre and residential apartment buildings. “The world sees what is happening in Ukraine. The justice department sees what is happening in Ukraine. This department has a long history of helping to hold accountable those who perpetrate war crimes.” He noted that one of his predecessors, Attorney General Robert Jackson, later served as a chief American prosecutor at the Nuremberg trials after the second world war. “Today, we are assisting international efforts to identify and hold accountable those responsible for atrocities in Ukraine and we will continue to do so.”

#### 8. Hackers’ Fake Claims of Ukrainian Surrender Aren’t Fooling Anyone. So What’s Their Goal? (New York Times, Kate Conger, 5 Apr 22)...

Andriy Taranov, a board member at the Ukrainian public broadcasting company Suspilne, was sitting in his office last month when he noticed a strange message running across the bottom of the television screen. It said Volodymyr Zelensky, the president of Ukraine, had announced a surrender. Mr. Taranov was stunned because there had been no chatter about a surrender among reporters covering Russia’s invasion of the country. “There’s nothing like that in any journalist circle,” he remembered thinking. “It looks absolutely contradictory.” The message was fake, he quickly realized. It had been planted on the chyron of Media Group Ukraine’s live broadcast by hackers. Since Russia’s invasion began in late February, hackers have repeatedly broken into the social media accounts and broadcasting systems of trusted information sources in Ukraine, like government officials and prominent media outlets. They used their access to spread false messages that Ukraine was surrendering, sometimes using fake videos to bolster their claims. And while there is no evidence that the misinformation campaign has had any discernible effect on the conflict, experts say the hackers’ intentions might not be to actually trick anyone. Instead, the hackers are most likely trying to erode confidence in Ukrainian institutions and show that the government and news media cannot be relied upon for information or to keep hackers out of their systems. The tactics mirror those used in other Russian disinformation campaigns, which have focused on fomenting divisions and cultural conflict. “You can build uncertainty, confusion and distrust,” said Ben Read, a director at the cybersecurity firm Mandiant. “It doesn’t need to stand up to a close reading to have some effect on the population; it erodes trust in all messages.”

Facebook traced one hacking campaign, which targeted military officials, to state-sponsored hackers in Belarus. Other cyberattacks, including those against media outlets and telecommunications networks, have not yet been attributed to specific state actors. But Ukrainian officials suspect that Russia is behind the hacking and disinformation. “Of course they are behind these attacks,” said Victor Zhora, deputy head of Ukraine’s cybersecurity agency, the State Service of Special Communications and Information Protection. “This is the first time in history we deal with a conventional war and a cyberwar at the same time.” Mr. Zhora said. “It completely changes our landscape for what is happening around Ukraine.” The attempts to spread disinformation about a Ukrainian surrender started days after Russia’s invasion began. Hackers broke into the Facebook accounts of high-profile Ukrainian military leaders and politicians, then used their access to post false messages announcing a surrender. They accompanied some of the posts with videos of soldiers waving a white flag, falsely claiming that the footage depicted Ukrainian soldiers. Meta, the parent company of Facebook, said it quickly detected the attack and in some cases was able to prevent the hackers from posting fake messages from the compromised accounts. The hackers were affiliated with a group that security researchers call Ghostwriter, Meta said, which has been linked to Belarus. Ghostwriter frequently targets public figures in Europe, security researchers said, often using compromised social media and email accounts to push messages intended to chip away at support for NATO. Since the war in Ukraine began, the group has focused its efforts there, according to researchers. “They’re aligned with Russian goals,” Mr. Read said of Ghostwriter.

In mid-March, Ukrainian officials detected another hacking campaign that tried to spread false information about a

surrender. According to the Security Service of Ukraine, the country's law enforcement and intelligence agency, a hacker set up a relay system to help route calls for the Russian military. The system was also used to send text messages to Ukrainian security forces and civil servants, urging them to surrender and to support Russia, the law enforcement agency said. The Security Service of Ukraine said it had arrested the person responsible for the messages, who it said had placed thousands of calls each day on behalf of the Russian military. Another, more visible attempt to spread disinformation about a surrender soon followed. On March 16, a "deepfake" video of Mr. Zelensky asking Ukrainians to lay down their weapons and surrender to Russia emerged on social media. Hackers targeted television stations and news outlets in Ukraine to spread the digitally manipulated video, broadcasting it on Ukraine 24, a television station operated by Media Group Ukraine, and posting it to the outlet's YouTube channel. Media Group Ukraine said it believed Russian hackers were responsible. "Our systems have been under constant attack for over two weeks, before being hacked," said Olha Nasyk, a spokeswoman for the company. "We have strengthened the protection and applied the necessary technical means to prevent such incidents from recurring."

Deepfakes like the one of Mr. Zelensky use artificial intelligence to create seemingly realistic footage of people doing and saying things that they did not actually say or do. Researchers have warned that the technology could be exploited during elections and other high-profile political moments to spread lies about prominent politicians. Oleksiy Makukhin, an expert who has worked on combating misinformation in Ukraine, said he first saw the digitally manipulated video of Mr. Zelensky circulating on the messaging app Telegram. But many of the messages about the video highlighted the fact that it was a fake and poked fun at it for being poorly made, Mr. Makukhin said. "I hardly can think of any person in Ukraine who believed in it," he said. "People in Ukraine are already rather educated about disinformation, which Russia is distributing all the time." Still, Mr. Zelensky took to his official channel on Telegram to deny the video's claims. "We are defending our land, our children, our families," he said. "So we don't plan to lay down any arms until our victory." On Friday, the Security Service of Ukraine said it had discovered another text message campaign that had pushed over 5,000 messages about surrendering using a bot farm linked to Russia. "The outcome of events is predetermined!" the text messages said, according to the agency. "Be prudent and refuse to support nationalism and leaders of the country who discredited themselves and already fled the capital!!!" Mr. Makukhin said he believed the disinformation was an effort to frighten civilians, comparing it to the shelling of neighborhoods. "I think the only reason for it is to terrorize the population, to make pressure and eventually try with this pressure to make our government surrender," he said. "There is still general consensus in society that we cannot surrender. Otherwise all this pain and death were for nothing."

DETER

9. Russia's Failure to Take Down Kyiv Was a Defeat for the Ages  
(AP, Robert Burns, 6 Apr 22)...

Kyiv was a Russian defeat for the ages. The fight started poorly for the invaders and went downhill from there. When President Vladimir Putin launched his war on Feb. 24 after months of buildup on Ukraine's borders, he sent hundreds of helicopter-borne commandos — the best of the best of Russia's "spetsnaz" special forces soldiers — to assault and seize a lightly defended airfield on Kyiv's doorstep. Other Russian forces struck elsewhere across Ukraine, including toward the eastern city of Kharkiv as well as in the contested Donbas region and along the Black Sea coast. But as the seat of national power, Kyiv was the main prize. Thus the thrust by elite airborne forces in the war's opening hours. But Putin failed to achieve his goal of quickly crushing Ukraine's outgunned and outnumbered army. The Russians were ill-prepared for Ukrainian resistance, proved incapable of adjusting to setbacks, failed to effectively combine air and land operations, misjudged Ukraine's ability to defend its skies, and bungled basic military functions like planning and executing the movement of supplies. "That's a really bad combination if you want to conquer a country," said Peter Mansoor, a retired Army colonel and professor of military history at Ohio State University. For now at least, Putin's forces have shifted away from Kyiv, to eastern Ukraine. Ultimately, the Russian leader may achieve some of his objectives. Yet his failure to seize Kyiv will be long remembered — for how it defied prewar expectations and exposed surprising weaknesses in a military thought to be one of the strongest in the world. "It's stunning," said military historian Frederick Kagan of the Institute for the Study of War, who says he knows of no parallel to a major military power like Russia invading a country at the time of its choosing and

failing so utterly.

On the first morning of the war, Russian Mi-8 assault helicopters soared south toward Kyiv on a mission to attack Hostomel airfield on the northwest outskirts of the capital. By capturing the airfield, also known as Antonov airport, the Russians planned to establish a base from which to fly in more troops and light armored vehicles within striking distance of the heart of the nation's largest city. It didn't work that way. Several Russian helicopters were reported to be hit by missiles even before they got to Hostomel, and once settled in at the airfield they suffered heavy losses from artillery fire. An effort to take control of a military airbase in Vasylkiv south of Kyiv also met stiff resistance and reportedly saw several Russian Il-76 heavy-lift transport planes carrying paratroopers downed by Ukrainian defenses. Although the Russians eventually managed to control Hostomel airfield, the Ukrainians' fierce resistance in the capital region forced a rethinking of an invasion plan that was based on an expectation the Ukrainians would quickly fold, the West would dither, and Russian forces would have an easy fight. Air assault missions behind enemy lines, like the one executed at Hostomel, are risky and difficult, as the U.S. Army showed on March 24, 2003, when it sent more than 30 Apache attack helicopters into Iraq from Kuwait to strike an Iraqi Republican Guard division. On their way, the Apaches encountered small arms and anti-aircraft fire that downed one of the helos, damaged others and forced the mission to be aborted. Even so, the U.S. military recovered from that setback and soon captured Baghdad.

The fact that the Hostomel assault by the Russian 45th Guards Special Purpose Airborne Brigade faltered might not stand out in retrospect if the broader Russian effort had improved from that point. But it did not.

The Russians did make small and unsuccessful probes into the heart of Kyiv, and later they tried at great cost to encircle the capital by arcing farther west. Against enormous odds, the Ukrainians held their ground and fought back, stalling the Russians, and put to effective use a wide array of Western arms, including Javelin portable anti-tank weapons, shoulder-fired Stinger anti-aircraft missiles and much more. Last week the Russians abandoned Hostomel airfield as part of a wholesale retreat into Belarus and Russia. A sidelight of the battle for Kyiv was the widely reported saga of a Russian resupply convoy that stretched dozens of miles along a main roadway toward the capital. It initially seemed to be a worrisome sign for the Ukrainians, but they managed to attack elements of the convoy, which had limited off-road capability and thus eventually dispersed or otherwise became a non-factor in the fight. "They never really provided a resupply of any value to Russian forces that were assembling around Kyiv, never really came to their aid," said Pentagon spokesman John Kirby. "The Ukrainians put a stop to that convoy pretty quickly by being very nimble, knocking out bridges, hitting lead vehicles and stopping their movement." Mansoor says the Russians underestimated the number of troops they would need and showed "an astonishing inability" to perform basic military functions. They vastly misjudged what it would take to win the battle for Kyiv, he says. "This was going to be hard even if the Russian army had proven itself to be competent," he said. "It's proven itself to be wholly incapable of conducting modern armored warfare."

Putin was not the only one surprised by his army's initial failures. U.S. and other Western officials had figured that if the invasion happened, Russia's seemingly superior forces would slice through Ukraine's army like a hot knife through butter. They might seize Kyiv in a few days and the whole country in a few weeks, although some analysts did question whether Putin appreciated how much Ukraine's forces had gained from Western training that intensified after Putin's 2014 seizure of Crimea and incursion into the Donbas. On March 25, barely a month after the invasion began, the Russians declared they had achieved their goals in the Kyiv region and would shift focus to the separatist Donbas area in eastern Ukraine. Some suspected a Putin ploy to buy time without giving up his maximalist aims, but within days the Kyiv retreat was in full view. Putin may yet manage to refocus his war effort on a narrower goal of expanding Russian control in the Donbas and perhaps securing a land corridor from the Donbas to the Crimean Peninsula. But his failure in Kyiv revealed weaknesses that suggest Russia is unlikely to try again soon to take down the national capital. "I think they learned their lesson," said Mansoor.

#### 10. U.S. Training Small Number of Ukrainians on Switchblade Drones -Defense Official (Reuters, Phil Stewart and Idrees Ali, 6 Apr 22)...

A small number of Ukrainians have been trained in the United States on how to operate killer "Switchblade" drones, single-use weapons that fly into their targets and detonate on impact, a senior U.S. defense official disclosed on Wednesday. The Ukrainians undergoing training on the Switchblades and other weaponry number less than a dozen. They had arrived in the United States for regular military education programs prior to Russia's invasion of Ukraine on Feb. 24. "We took advantage of the opportunity to pull them aside for a couple of days and provide them some training, particularly on the Switchblades UAV," the senior U.S. defense official told reporters, speaking on condition of anonymity. "UAV" refers to an unmanned aerial vehicle. The United States withdrew its military advisers from Ukraine ahead of Russia's invasion, seeking to avoid a direct military confrontation between U.S. and Russian forces that could escalate into a broader war. As a result of the withdrawal, the United States and NATO have largely constrained their provision of weaponry to Ukraine to systems that Ukrainian forces knew how to operate prior to Russia's invasion. That includes U.S. weapons that have given Ukraine an edge against Russian forces, like Javelin anti-tank missiles and portable Stinger surface-to-air missiles that can target Russian aircraft. It also includes Soviet-era systems that are still in the inventories of some NATO nations.

But Switchblades, which are relatively easy-to-use and could be highly effective in attacking Russian ground forces, had not been part of training packages prior to Russia's invasion. The drones are made by AeroVironment Inc(AVAV.O). The drones, which have a range of 40 km (25 miles), can be used against vehicles including trucks, tanks and armored personnel carriers. In recent testimony, the assistant secretary of defense for international security affairs, Celeste Wallander, said the United States had committed to sending Ukraine 100 Switchblade systems. Defense Secretary Lloyd Austin said on Tuesday that the Pentagon is sending Ukraine two variants of the Switchblade, including one with an anti-armor warhead. "The Switchblade 600 and 300 will move as quickly as they possibly can," Austin told the House of Representatives Armed Services Committee. Ukrainians are expected to quickly use the first 100 systems sent. "I'm convinced that when we get the first set of Switchblades in, there will be an immediate request from the Ukrainians for more," the top U.S. commander in Europe, Air Force General Tod Walters, told Congress on March 30. The senior U.S. official declined to say on Wednesday where in the United States the training of Ukrainians was taking place or offer more information on other weapons systems they're being trained on. "Our expectation is that these individuals will be heading back into Ukraine relatively soon as they were originally anyway," the official told reporters.

#### 11. Russia Has Completed Withdrawal From Around Kyiv -U.S. Defense Official (Reuters, Idrees Ali and Phil Stewart, 6 Apr 22)...

The United States assesses that Russia has now completed its withdrawal from around Kyiv and is refitting and resupplying its troops for an expected redeployment into Ukraine, a senior U.S. defense official said on Wednesday. Over the weekend, Ukraine said its forces had seized back all areas around Kyiv, claiming complete control of the capital region for the first time since Russia launched the invasion. "We are assessing that all the Russians have left," the official said, speaking on condition of anonymity, adding that the U.S. assessment was completed in the past 24 hours. The withdrawal included Russian troops leaving the city of Chernihiv as well. But the official said Kyiv remained under threat, even if Russian ground troops had left the area. Out of the 130 Russian battalion tactical groups that were sent to Ukraine for the invasion, more than 80 still remained in the country. "The threat of (a) ground invasion (of Kyiv) is clearly gone for the moment... but it's not clear what their longer-range goals are," the official said. The troops leaving the area were withdrawing to Belarus and Russia to reconsolidate, but it was not clear how many would eventually be sent back to Ukraine," the official added.

As Russian troops regrouped for battles in east Ukraine, towns surrounding Kyiv bore scars of five weeks of fighting. Western policymakers have denounced the killings in the town of Bucha as a war crime, and Ukrainian

officials say a mass grave by a church there contain between 150 and 300 bodies. Moscow, which refers to the conflict as a "special military operation" designed to "denazify" Ukraine, denied targeting civilians there or elsewhere. Russia's foreign ministry said images of dead bodies in Bucha were staged to justify more sanctions against Moscow and derail peace talks with Kyiv. "When you see individuals with their hands tied behind their backs and evidence of being shot in the head, that certainly appears to be premeditated, it appears to be planned, it certainly appears to be very, very deliberate," the U.S. official said. It was not clear to the United States who gave the order for the killings and unclear what the motivation was for the killings.

## 12. NATO Must Prepare for 'Long Haul' in Ukraine, Stoltenberg Says (Politico, Lili Bayer, 6 Apr 22)...

NATO allies must plan for the possibility that the war in Ukraine could last months or even years, the military alliance's chief Jens Stoltenberg warned on Wednesday. Stoltenberg made his remarks as NATO foreign ministers gathered in Brussels on Wednesday to discuss how to best support Ukraine as Russian troops regroup and Moscow plots its next move. Speaking to reporters, Stoltenberg called the coming weeks "a critical phase of the war." "We have to be realistic and realize that this may last for a long time, for many months, for even years," he said. "We have to be prepared for [the] long haul," the secretary-general added. "both when it comes to supporting Ukraine, sustaining sanctions and strengthening our defenses."

Since the war started in late February, NATO allies have been providing a wide range of support to Ukraine, including weapons, while maintaining the position that no NATO planes or troops will enter Ukrainian territory. Now, the alliance is under growing pressure to offer more weapons, tanks and even jets to Ukraine amid concerns about Russian atrocities against Ukrainian civilians. Another source of pressure: NATO allies expect Russia will soon launch a renewed push in Ukraine's east after drawing back from Kyiv, Ukraine's capital. Putin has made frozen conflicts a trademark of his foreign policy for years, including in the occupied territories of Georgia, Moldova and Ukraine. While Russian forces failed to capture Kyiv and topple the Ukrainian government, the NATO chief has said Putin now wants to conquer and occupy a larger part of Donbas. "We see that Russia is moving forces out of the north to reinforce them, to resupply them, to rearm them and then to move them to the east, where we are expecting a major offensive," Stoltenberg told reporters. Still, he added, "we have seen no indication that President Putin has changed his ambition to control the whole of Ukraine."

[Top of the Document]

## 13. Russia's War Against Ukraine Entering a Critical Phase – Stoltenberg (Ukrinform, 6 Apr 22)...

Russia's war against Ukraine is entering a critical phase, and NATO allies are ready to provide Kyiv with all necessary assistance to counter another possible offensive of the invaders. NATO Secretary General Jens Stoltenberg said this ahead of the meeting of NATO Ministers of Foreign Affairs on April 6-7, 2022. an Ukrinform correspondent reported. "We are now in a critical phase of the war. We see that Russia is moving forces out of the north to reinforce them, to resupply them, to rearm them and then to move them into the east where we are expecting a major offensive. President Putin's aim is to try to control the whole of Donbas and to establish a land bridge [to Crimea]. We have seen no indication that President Putin has changed his ambition to control the whole of Ukraine and also to rewrite the international order," he said. Stoltenberg noted that Ukrainian Minister of Foreign Affairs of Ukraine Dmytro Kuleba will take part in the NATO ministerial meeting, and this will be a good opportunity to get information about the situation in Ukraine and the needs of the Armed Forces. "We will be joined by Foreign Minister Kuleba from Ukraine, and I think it's important that we have this opportunity to engage directly with him. To discuss with him to listen, to hear Minister Kuleba and also to discuss the way forward together. We'll also be joined by other partners, the Foreign Minister of Georgia, Finland, Sweden, the European Union, and also by our partners from the Asia Pacific, Australia, New Zealand, Japan, and South Korea. And these are all highly valued partners," he said.

According to the NATO secretary general, tonight, Foreign Ministers will discuss NATO's New Strategic Concept which will address the new security reality, including the security consequences of Russia's aggressive actions, of the shifting global balance of power, the security consequences of a much stronger China, and the challenges Russia and China are posing together to our rules based international order and our democratic values. Stoltenberg stressed that the mass killings of civilians in Bucha and other Ukrainian cities, occupied by Russian invaders, revealed the true nature of Putin's war. "We have all seen the atrocities that have been committed in Bucha and other places in Ukraine. This reveals the true nature of President Putin's war, and the targeting and killing of civilians is a war crime and therefore, NATO allies are supporting the international efforts to establish all the facts, to investigate, and to make sure that perpetrators are punished," he said.

[Top of the Document]

#### 14. NATO Scours the Skies for Incursions Amid Rising Russia Tensions (Bloomberg, Natalia Drozdiak, 6 Apr 22)...

An unidentified Russian aircraft flying off the northern coast of Norway raised up an alert among NATO officials this week, prompting a Norwegian fighter jet to lift off into the sky and investigate. Huddled in a control center deep in a bunker in Uedem, western Germany, operators monitor air traffic 24/7 for the North Atlantic Treaty Organization territory from the Alps up to Iceland. A green blip on radar screens on Tuesday showed what appeared to be a Russian plane likely looking to collect intelligence on anything from radar capabilities and air bases to logistics on the ground. A duty controller at the operations center ordered a so-called alpha scramble, which sends a fighter jet in air within minutes to monitor the aircraft, collect any markings or tail-numbers and check if it's carrying any missiles. That information is fed back into a database to match any previous records.

Such encounters occur every other day on average and haven't seen a significant uptick since the start of Russia's war with Ukraine, NATO officials said. Monitoring the alliance's airspace has become all the more important since the invasion as NATO looks to beef up its presence in the east to deter any potential aggression from Moscow, but also looks to ensure no incidents spiral out of control and unintentionally drag NATO allies into the conflict. "We don't want to be provocative but it's to determine what this airplane is doing and report that back," said Steve Carocci, director of the air operations center at Uedem, adding that so far officials haven't seen any NATO airspace violations from the Russian side. An incident earlier in March, when a drone flew from Ukraine through several NATO countries before crashing outside Zagreb, has highlighted the sensitivity of the work. An investigation is ongoing into the incident. Russian intelligence-gathering planes also frequently cruise near Norway, in light of Moscow's interests in the Arctic Circle. Moscow is making the so-called Northern Sea Route, which runs along its Arctic coastline, a key part of its strategy to boost natural gas exports to Asia.

The NATO alliance, which includes the U.S. and 29 other countries as members, employs as many as 8,000 people for air policing. In addition to Uedem, a center in Torrejon, Spain monitors traffic in the southern part of the alliance. Around 30 surveillance and fighter jets are in the air at any one time monitoring NATO airspace. That includes also peering into Ukrainian territory, to some degree. While no allied planes will enter into Ukrainian airspace, some planes and ground radar sites can pick up information about what's in Ukrainian airspace or on land. NATO's airborne warning and control system aircraft, for instance, can see up to 250 kilometers (155 miles) on ground and 400 kilometers in the air, depending on weather conditions. "You always need some early warnings," Harold Van Pcc, commander of the Uedem center, said. "The farther you can look into the other side, the more time you have to prepare for what's coming up."

[Top of the Document]

#### 15. Ukraine War: Putin's Daughters Targeted by US Sanctions (BBC, 6 Apr 22)...

The US has imposed sanctions against Russian President Vladimir Putin's inner circle, including his daughters. The list also includes the family of Foreign Minister Sergei Lavrov and major banks. The measures follow new revelations of atrocities by Russian troops in Ukraine, including images of bodies of civilians scattered on the streets of Bucha, near the capital Kyiv. Russia says, without evidence, the images are staged by Kyiv officials. Even though satellite images have shown the civilians were killed when Russians were in control of Bucha, Mr Putin on Wednesday described the event as a "crude and cynical provocation by the Kyiv regime". Referring to the Bucha murders, US President Joe Biden said on Wednesday: "There's nothing less happening than major war crimes." "Responsible nations have to come together to hold these perpetrators accountable," Mr Biden added. The US said that Mr Putin's daughters, Katerina Vladimirovna Tikhonova and Maria Vladimirovna Vorontsova, were being put under sanctions "for being the adult children of Putin, a person whose property and interests in property are blocked". The announcement described Ms Tikhonova as "a tech executive whose work supports the GoR [Russian government] and defense industry". Her sister, Ms Vorontsova, it went on, "leads state-funded programs that have received billions of dollars from the Kremlin toward genetics research and are personally overseen by Putin". Asked why the US was targeting Mr Putin's daughters, a senior Biden administration official said the US thought they could be in control of some of their father's assets. "We have reason to believe that Putin, and many of his cronies, and the oligarchs, hide their wealth, hide their assets, with family members that place their assets and their wealth in the US financial system, and also many other parts of the world," the official said. "We believe that many of Putin's assets are hidden with family members, and that's why we're targeting them."

The US sanctions announced by the White House include: economic measures to ban new investment in Russia, severe financial sanctions on Russia's largest private bank, Alfa Bank, and its largest financial institution, Sberbank, sanctions on critical major state-owned enterprises, sanctions on Russian government officials and their family members. Meanwhile the UK has announced further sanctions against eight oligarchs and Russian banks, including the country's largest, Sberbank, and Credit Bank of Moscow. The European Union is also debating cutting off Russian coal imports as concern over alleged war crimes increases. Before the new raft of sanctions was announced in Washington, Ukrainian President Volodymyr Zelensky said he could not "tolerate any indecisiveness". Speaking to the Irish parliament on Wednesday, he said there was still a need to convince some in Europe who believe "war and war crimes are not as horrific as financial losses" to back tougher sanctions. He added that "Russian oil cannot feed the Russian military machine", with Ukraine's foreign minister arguing on Twitter that an embargo on gas and oil was needed to truly impact Russia's ability to finance the war.

Josep Borrell, the EU's chief diplomat, separately acknowledged on Wednesday that the one billion euros (\$1.09bn; €833m) Europe spent on Russian energy every day put into sharp perspective the billion euros given to Ukraine in military assistance since the start of the invasion. Some European member states, including Germany, are heavily reliant on Russian energy and had been reluctant to directly target the sector. However, in a first, the European Commission proposed a potential ban on imports of Russian coal on Tuesday, which must be agreed by all 27 members. Europe buys around €4bn (\$4.4bn; £3.3bn) worth of coal from Moscow every year. Sentiment appeared to change after evidence of Russian war crimes emerged, with French President Emmanuel Macron joining calls for a ban on coal earlier this week. The ban was suggested ahead of a range of sanctions set to be announced in coordination with the US and other G7 nations. European member states are also expected to impose a "full transaction ban" on four Russian banks and ban a range of other Russian and Belarusian imports, including wood, cement, seafood and liquor, worth €5.5 billion (\$6bn; £4.59bn). And Ursula von der Leyen, the European Commission president, said she intends to close EU ports to Russian vessels and ban Russian and Belarusian road transport operators from the region. Ms Von der Leyen accused Russia of "waging a cruel and ruthless war" against Ukrainian civilians and said the EU must "sustain utmost pressure on Putin and the Russian government at this critical point". But Lithuanian Foreign Minister Gabrielius Landsbergis on Tuesday evening criticized the EU's proposed sanctions package, calling it a "feeble response" which is "an invitation for more atrocities." "Coal, four banks... a ban on ports and borders (with exceptions) is not really an adequate sanctions package to the massacres that are being uncovered," Mr Landsbergis wrote on Twitter.

## 16. Russia Says It Wants to Keep Diplomatic Ties With West Despite Expulsions (Reuters, 5 Apr 22)...

Russia wants to maintain diplomatic relations with Western countries despite a series of expulsions of its diplomats, Russian Deputy Foreign Minister Alexander Grushko said on Wednesday. Several European countries including France, Belgium, the Netherlands and Italy have expelled large numbers of Russian diplomats in recent days. The moves coincide with outrage across Europe over reports of the discovery of mass graves and of civilian killings in the Ukrainian town of Bucha following the retreat of Russian forces conducting what Moscow calls its "special operation" in Ukraine. Grushko told Interfax that Russia, which has pledged to respond to the expulsions, was assessing the decisions by European countries. "Nevertheless our position remains absolutely the same: we advocate for diplomatic channels to remain open."

Grushko said European countries disrupting the work of Russian diplomats were damaging their own interests and warned against any potential action against the Russian exclave of Kaliningrad, wedged between Poland and Lithuania on the Baltic seaboard. "I really hope that common sense in Europe will not allow any games to be started around Kaliningrad," TASS quoted him as saying. "I think many understand that this would be playing with fire." Grushko said Russia had "no contact with NATO". "There is nothing to discuss with NATO," TASS quoted him as saying. Russia sent tens of thousands of troops into Ukraine on Feb. 24 in what it called a special operation to degrade its southern neighbour's military capabilities and root out people it called dangerous nationalists. Ukrainian forces have mounted stiff resistance and the West has imposed sweeping sanctions in an effort to force Russia to withdraw its forces.

## PREPARE

## 17. NATO Unveils Tech Accelerator Footprint, With Plans for Over 60 Sites (DefenseNews, Vivienne Machi, 6 Apr 22)...

NATO is set to establish a new trans-Atlantic initiative meant to speed up the development of critical technologies, with one Euro-centric headquarters stationed in London and more than 60 partner sites around its alliance. Last summer at the 31st annual NATO Summit in Brussels, Secretary General Jens Stoltenberg announced plans to establish the Defence Innovation Accelerator of the North Atlantic, or DIANA, based on the U.S. Defense Advanced Research Projects Agency. Nearly a year later, NATO's foreign ministers are ready to approve a formal charter for DIANA and commit to providing an initial €1 billion (U.S. \$1.1 billion) innovation fund. The ministers will approve DIANA's charter during their April 6-7 meeting in Brussels. Stoltenberg said April 5 during a pre-ministerial press briefing. The initiative comes with more than 60 innovation sites. That includes a headquarters in Europe and another in North America, about 10 "accelerator sites" that provide financing, mentorship and exposure to business opportunities to participating startups, and more than 50 dedicated test centers hosting labs and equipment. "Altogether, the initial footprint will cover 20 NATO nations, representing a true trans-Atlantic endeavor, and we expect it will continue to expand in the future," Stoltenberg said.

The technology accelerator will be a new NATO body, tasked to bring innovative civilian and military organizations closer together to develop cutting-edge solutions in the realms of emerging and disruptive technologies, said David van Weel, NATO assistant secretary general for emerging security challenges. The plan is for allies to agree upon a new strategic direction every two years, which will then dictate critical defense and security problems as well as the desired solutions. "This provides strong signals of market demand and opportunity for innovators," van Weel said at a Tuesday press briefing. From there, startups, academic institutions and nontraditional industry members can participate in so-called challenge programs that work to solve real-world problems — such as operating in a GPS-denied environment — and submit proposals to participate in DIANA's accelerator effort.

Member nations submitted proposals for more than 90 institutions to be part of the DIANA footprint; after evaluations, NATO pared it down to more than 10 accelerator sites and over 50 test centers, with many already in existence, van Weel said. Among those selected sites are the Niels Bohr Institute at the University of Copenhagen in Denmark, which will focus on quantum technologies, and a new site in Turin, Italy, which will be dedicated to the space domain. Imperial College London will host the European headquarters along with a DIANA accelerator, in a space currently housing the U.K.'s Defence and Security Accelerator, according to the British government. The U.K.'s program will be "twinning" with a new accelerator based in Tallinn, Estonia, to help share expertise, test cyber innovations and explore the viability of "virtual sites" to trial new tech such as autonomous vehicles. "The UK and Estonia are two of the most innovative countries in NATO, and our hosting of DIANA will harness that innovation for the benefit of all allies tackling future military threats," British Defence Secretary Ben Wallace said in a news release.

While the centers on the European side have all been selected, the North American footprint will be announced at the NATO Summit in June in Madrid, Spain. The goal is to have DIANA reach its full operational capability by 2025, said van Weel. Alongside the tech accelerator is a nascent venture capital fund, dubbed the NATO Innovation Fund. "Ultimately, reimagining NATO's engagement with civilian innovators is only credible if we also provide the right funding mechanisms," van Weel noted. Twenty-one members worked together to establish the underlying framework of the fund — outlining the investment strategy, the pool of capital, and determining the fund's structure and governance. They also provided initial financial support. The Innovation Fund will invest €1 billion into "deep-tech startups" over 15 years. These are public funds that participating nations can allocate, either from their existing defense budgets or established innovation funds, a senior NATO official said Tuesday.

The participating nations in DIANA's innovation fund currently include Belgium, the Czech Republic, Denmark, Estonia, Germany, Greece, Hungary, Italy, Latvia, Lithuania, Luxembourg, Montenegro, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Turkey and the United Kingdom. Other member nations can decide to contribute to the Innovation Fund at a later date, but they would have no say over its framework, the NATO official said. A key aspect of DIANA will be to support NATO's work in harnessing critical technology areas known as emerging and disruptive technologies, or EDT. The alliance recently identified propulsion and new materials as two new EDTs that deserve attention, joining artificial intelligence, autonomy, big-data processing, quantum-enabled technologies, biotechnology, hypersonic technology and space-related systems. NATO has released public strategies for several of these EDTs — for space, AI and big-data processing. The alliance's strategy on autonomy is expected to be released this year, and one on quantum-enabled technologies will come the following year, the official said.

I. Finland Gears up for Historic NATO Decision  
(AFP, 10 Apr 22)...

The Nordic nation of 5.5 million has traditionally been militarily non-aligned, in part to avoid provoking its eastern neighbour, with which it shares a 1,300 kilometre (830 mile) border. But Russia's invasion of Ukraine on February 24 saw public support for joining NATO double from 30 to 60 percent, according to a series of polls. "Never underestimate the capacity of Finns to take rapid decisions when the world changes," former Finnish prime minister Alexander Stubb told AFP. Himself a long-time NATO advocate, Stubb now believes Finland making a membership application is "a foregone conclusion" as Finns re-evaluate their relationship with their neighbour. Next week a government-commissioned national security review will be delivered to parliament, the Eduskunta, to help Finnish MPs make up their own minds, before it is put to a vote. "We will have very careful discussions but not taking any more time than we have to," Prime Minister Sanna Marin told a news conference on Friday. "I think we will end the discussion before midsummer," she added. "My guess is that the application will be filed sometime during the month of May" in time for the June NATO summit in Madrid, Stubb said.

Finland declared independence in 1917 after 150 years of Russian rule, only for its vastly outnumbered army to fight off an attempted Soviet invasion during the Second World War inflicting heavy losses on the Red Army. Hostilities ended in a peace deal that saw Finland ceding several border areas to the Soviet Union. Finnish leaders agreed to remain neutral during the Cold War in exchange for guarantees from Moscow that it would not invade. The country's forced neutrality to appease its stronger neighbour coined the term "Finlandization". Finland has remained outside the transatlantic military alliance, and despite some cuts after the Cold War it has focused on maintaining well-funded defence and preparedness capabilities. "We're able to mobilise 280,000 to 300,000 men and women within a matter of days," Stubb said, adding that 900,000 reserves could also be called up. Last week Finland's government agreed a 40-percent hike in defence spending by 2026, to further strengthen the country's position. "We have walked a long way when it comes to our security policies, and they have worked so far," said Centre Party MP Joonas Kontta. Like the majority of his parliamentary colleagues, the 32-year-old used to think that NATO membership was "something that we don't need at the moment". But Russia's invasion "changed something in Europe in a way that can't be changed back", he told AFP, and Kontta recently announced that he now believes it is time to seek to join the alliance. A number of MPs have also recently announced similar changes of heart regarding

Finland's "NATO question" -- although many more are keeping their positions to themselves awaiting more detailed discussions.

Only six of Finland's 200 MPs in a recent poll by public broadcaster Yle openly voiced anti-NATO views, including Markus Mustajarvi from the Left Alliance party Finland and Sweden's non-alignment "has brought stability to the whole of Northern Europe", the Lapland MP told AFP. Mustajarvi questions whether NATO's Article 5 commitment to mutual defence would provide genuine protection in case of an attack. Instead he cites Finland's own defence capabilities which are "so strong that they would force Russia to think what price it would pay for attacking". Despite receiving "all sorts of feedback" from the public and his fellow MPs over his stance, Mustajarvi insists he has "thought this through to the end and so far I don't see a reason to change my position".

Since Russia's attack, Finland's leadership has undertaken an intensive series of talks to canvass opinion from other NATO states about a possible membership bid. Along with neighbouring Sweden, Finland has received public assurances from secretary general Jens Stoltenberg that the alliance's door remains open, as well as expressions of support from numerous members including the US, UK, Germany, France and Turkey. But attempting to join NATO would likely be seen as a provocation by the Kremlin, for whom the expansion of the US-led alliance on its borders has been a prime security grievance. Finland's president Sauli Niinisto has warned that Russia's response could be "on the brash side", including airspace, territorial violations and hybrid attacks. The Kremlin has pledged to "rebalance the situation" in the event of Finland joining NATO. Meanwhile, Foreign Minister Pekka Haavisto has acknowledged that Russia could seek to destabilise a membership bid during the "grey zone" between an application and its ratification by all 30 NATO states, which could take four months to a year. "Finland has always tried to stay away from the grey zone," Stubb said, but he believes that Finland has the resilience to withstand potential Russian aggression or hybrid attacks.

## 2. Swedes, Finns Worry About Security Risk on the Path to NATO (Bloomberg, Kati Pohjanpalo and Natalia Drozdiak, 9 Apr 22)...

As Sweden and Finland deliberate joining NATO, the two countries are seeking more clarity on how to bridge the gap between filing their applications and when the military alliance's security guarantees would kick in with full membership. While there is little sign that the two Nordic nations would struggle to secure acceptance, Russia has repeatedly warned both against joining the North Atlantic Treaty Organization and so they are concerned about potential aggression from Moscow if they formally signal their alignment with the western bloc. Public backing for joining the North Atlantic Treaty Organization underwent a historic shift in both nations after Russia invaded Ukraine, and in Finland, almost half of all lawmakers now openly support an application. As policymakers have gone on a diplomatic overdrive to remove any doubts about being welcomed by all members, they seek more certainty about near-term guarantees that they wouldn't be left alone against Russia. NATO's Article 5 mutual defense clause only applies to members. "Finland's concern over the gray zone between the membership application and full membership" is "quite well understood among NATO countries," Foreign Minister Pekka Haavisto said on Thursday. It could take between four months and a year for the 30 NATO members to ratify their applications, Haavisto said, signaling he'd been given indication countries would be willing to hurry the process.

Asked about their possible memberships, NATO Secretary-General Jens Stoltenberg said earlier this week that he expected all 30 allies would welcome them if they decided to apply. He said NATO "will find ways to also address the concerns" about the interim period. Finland and Sweden already have some degree of collective security commitments through their membership of the European Union. Article 42.7 of the EU treaty states that if a member is the victim of armed aggression, other members have the obligation to aid them, but this doesn't bind the U.S. in the way that their membership in NATO would. NATO officials say they would welcome Finnish and Swedish membership and point to long and deep partnerships with the countries, including through regular joint military

exercises with their armed forces. Any membership bid from Sweden hinges on the ruling Social Democrats changing their stance, while Finns appear to have made up their minds to join and are putting together a parliamentary process designed to engage lawmakers from across the political spectrum.

A security-policy white paper due in Helsinki next week won't contain a proposal for joining, but the government and president are prepared to submit an addendum on that "when the time is right" after they are satisfied lawmakers back the bid, Ilaavisto said. "I think we will end the discussion before midsummer," Prime Minister Sanna Marin told reporters on Friday, referring to a holiday that falls on June 25 this year. "We will have very careful discussions, but we will also not take any more time than we have to in this process, because the situation is of course very severe," she said. Sweden and Finland have for years worked closely with allies on military interoperability, on exercises, training and also meet NATO standards when it comes to political, democratic, civilian, control over the security institutions and the armed forces, Stoltenberg said. "There are no other countries that are closer to NATO," Stoltenberg said on Wednesday.

### 3. Poland-Ukraine Ties Seen as Target of Russian Disinformation (AP, Vanessa Gera, 10 Apr 22)...

Days before Poland's Independence Day in November, vandals painted the blue-and-yellow colors of the Ukrainian flag on monuments in Krakow. The vandalism, which took place as Russia massed troops near Ukraine's border, looked as if Ukrainians were defacing memorials to Polish national heroes. Yet some clues suggested otherwise. The flag's colors were reversed, with the yellow on top of the blue and one offensive message was in an unnatural mix of Russian and Ukrainian. Though prosecutors are still investigating, Polish and Ukrainian authorities believe it was most likely a Russian-inspired attempt to trigger ethnic hostility between Ukrainians and Poles. Polish and Ukrainian authorities have for years accused Russia of trying to provoke hostility between their neighboring nations as part of a broader effort to divide and destabilize the West — and the concerns have gained greater urgency since Russia invaded Ukraine. Poland and Ukraine are neighbors and allies but they share a difficult history of oppression and bloodshed, and those historical traumas sometimes rise to the surface. Poland has also accepted large numbers of Ukrainian refugees, creating fears that could become another wedge issue that Russia could exploit. "The Russian efforts to sow divisions between the Poles and Ukrainians, particularly by means of exploiting historical issues, are as old as time," said Stanislaw Zaryn, the spokesman for Poland's security services. "Russia has redoubled them since the war began," he said. "And they are more dangerous now because the war is going on and it can affect more people than before." Reacting to the November incident, the Ukrainian Embassy in Warsaw immediately denounced it as "shameful" and "a provocation aimed at harming the good neighborly relations between Ukraine and Poland."

More than 2.5 million Ukrainian refugees have arrived in Poland since the war began, and while some move on to other countries more than half have remained. Poles have reacted with an outpouring of help and goodwill and the government has extended to the Ukrainians the same rights to education and health care that Poles have. Never Again, an anti-racism association in Poland, has documented several attempts to stoke aversion to the Ukrainian refugees and even to openly justify Russian President Vladimir Putin's invasion. In some cases those behind the messages are far-right Polish activists or politicians with pro-Kremlin views, according to a report the organization published Thursday. "These groups do not enjoy widespread public support, but they do their best to make Poles and Ukrainians quarrel, spread hateful content, conspiracy theories and false information, primarily in the internet space," it said. Larysa Lacko, an expert on countering disinformation at NATO, said Russia is known to exploit refugees as a wedge issue because it touches on the economy, race and other sensitive issues, and that she has also observed Russian "disinformation talking about historical grievances." Western Ukraine was once under Polish rule, with Ukrainians largely subservient to a Polish landowning class. Resentments erupted in ethnic bloodshed during World War II, when the Ukrainian Insurgent Army, a nationalist military formation, slaughtered tens of thousands of Poles in the Nazi-occupied Polish regions of Volhynia and Eastern Galicia.

Poland also has a difficult history with Moscow. Nazi Germany and the Soviet Union carved up Poland at the start of World War II in 1939, invading and occupying the country based on a secret clause in the notorious Molotov-Ribbentrop pact. Poles suffered atrocities inflicted by both occupying states. The Nazis set up death camps and concentration camps where they murdered Jews and they killed many other Polish citizens as well. Meanwhile, the Soviets sent some Poles to Siberia and murdered 22,000 Polish officers in the Katyn massacres of 1940. Even after the war, Poland was forced to live under Moscow's oppressive control for the decades of the Cold War. It still stings Poles to remember the Soviet Union denied the truth of the Katyn killings for decades, forbidding Poles from publicly commemorating the victims. When the Polish wartime government-in-exile asked the International Red Cross to investigate the Nazi disclosures of the Soviet crimes, Moscow smeared the Polish leaders as "Fascist collaborators" — much as they have falsely accused Ukraine today of being a Nazi state. Some Poles, especially those who lived through the war, remember those times and carry a lingering hostility to both Russians and Ukrainians. One false claim Polish authorities say Russians are spreading is that Poland seeks to reclaim Lviv and other territory in western Ukraine that once was Polish. "Those claims are untrue," the Polish Foreign Ministry said in a series of tweets seeking to debunk false claims. "Poland will never accept the annexation of any territory belonging to an independent state." Another is that Poland, a NATO ally hosting thousands of U.S. troops, is working to set the West against Russia. That claim was made recently by former Russian president Dmitry Medvedev, the current deputy chairman of the Russian security council. "Now the interests of the citizens of Poland have been sacrificed due to the Russophobia of mediocre politicians and their puppeteers from across the ocean with clear signs of senile insanity," Medvedev wrote recently on Telegram, a social media app popular in Russia and Ukraine.

Zaryn, the Polish security services spokesman, also pointed to a Polish Facebook page called "A Ukrainian is NOT my brother," whose posts call on followers not to forget the Ukrainian massacres of Poles in the 1940s. The page was created less than a month after Russia annexed Ukraine's Crimean Peninsula in 2014 and has nearly 55,000 followers. In recent weeks posts have criticized Polish authorities for their strong support for Ukraine. Zaryn said evidence points to it being run by a woman with ties to a pro-Kremlin party, Zmiana, in Poland. The former leader of the party, Mateusz Piskorski, has worked for Russian news outlets RT and Sputnik and has been charged with espionage for Russia and China. Poland's government has been taking steps to protect itself, with public warnings about the disinformation attempts and expulsions of dozens of suspected Russian agents and one arrest. Days after Russia invaded Ukraine on Feb. 24, Polish authorities arrested a man they accused of being an agent of the Russian military intelligence agency, GRU, in Przemysl, a key entry points for Ukrainian refugees, as he sought to cross into Ukraine. In late March, Poland ordered the expulsion of 45 suspected Russian intelligence officers they accused of using diplomatic status as a cover to operate in the country. "The illegal activities of these diplomats can also pose a threat to those people who left their country to flee the war and found protection in our country," Foreign Ministry spokesman Lukasz Jasina said. At a moment of huge solidarity in Poland and elsewhere with Ukrainians, disinformation is limited in its impact, argued Lacko, the NATO expert working to counter disinformation. "Given the atrocities on the ground, it's harder to fall into these sorts of traps," she said. But officials in Poland say they have to remain on guard, especially if the number of refugees grows, creating the potential for more social anxieties that can be exploited.

#### 4. Lithuania to Resume Training Ukrainian Military in Operating Western Weaponry (Ukrinform, 10 Apr 22)...

Lithuania plans to organize training for Ukrainian servicemen in the near future to help them prepare for operating Western military equipment. This was reported by Delfi with reference to the commander of the Lithuanian Army, General Valdemaras Rupsis, according to Ukrinform. "In order to achieve the maximum result, we will soon organize training for the Ukrainian military here in Lithuania... We are ready to train their instructors to prepare them to work with equipment that we control, with military equipment, machinery or weapons that are out there, necessary for carrying out operations in Ukraine," Rupsis said. The top military official discussed the issue separately with U.S. Army Chief of Staff James Charles McConville, who is currently in Lithuania. Rupsis also reminded that "for almost two months now Ukraine has been fighting not only for its own security, but also for the

security and democracy of the whole of Europe." Earlier, on the eve of Russia's full-scale invasion of Ukraine, NATO military instructors were withdrawn from Ukraine and Ukrainian military training in NATO member states has also been canceled. As Ukrinform reported earlier, from February 24 to April 9, Russian troops lost in Ukraine approximately 19,300 personnel, 722 tanks, 1,911 armored combat vehicles, 342 artillery systems, 108 MLR systems, 55 air defense units, 152 aircraft, and 137 helicopters.

5. What Weapons to Send to Ukraine? How Debate Shifted From Helmets to Tanks.  
(Washington Post, William Booth, Emily Rauhala, and Michael Birnbaum, 9 Apr 22)...

Ukrainian officials are clear on what they want from the United States and Europe: weapons. Big, heavy weapons. Not helmets. Tanks. They say they need these weapons now, not later. And a lot of them. The message has been broadly the same from the start of Russia's invasion, when Ukrainian President Volodymyr Zelensky reportedly said "I need ammunition, not a ride," to this past week, when Foreign Minister Dmytro Kuleba told NATO leaders in Brussels that he had a threefold agenda: "weapons, weapons and weapons." But in the United States and Europe, the discussions over what types of weapons to send are far different from what they were just six weeks ago. This is a pivotal moment of the war, and as the battlefield shifts, the sorts of weapons Ukrainian forces need are changing, too. There is no longer a fear that the Ukrainian capital, Kyiv, could fall within days. Russian forces are repositioning for a fight over eastern Ukraine — what many predict will be full-scale confrontation on flat, open, rural terrain, between infantry, armor and artillery, in the kind of engagements not seen in generations. On Saturday, Britain's Prime Minister Boris Johnson made a surprise visit to Kyiv to meet with Zelensky. His main message was about weapons: that Britain would supply 120 more armored vehicles, in addition to anti-ship missile systems to support Ukraine in the Black Sea. This next phase of war in Ukraine could be "protracted" — "measured in months or longer," national security adviser Jake Sullivan warned at a White House briefing. It could look like something from World War II, with two large armies facing off, Kuleba told NATO foreign ministers earlier this week. "To win such a war, we need different help than what we have been receiving before," said Ukraine's defense minister, Oleksii Reznikov, in a video appeal released Thursday. "We want to liberate the enemy-occupied territories as soon as possible. To do this, we need other weapons." In the early days of fighting, NATO countries worried that the weaponry they gave to Ukraine might be quickly captured by superior Russian forces, or that Ukrainian troops did not have the time to train to use new equipment effectively, or that sending offensive weapons would escalate the conflict and enrage Russian President Vladimir Putin, who was rattling his nuclear sword. Weapons are easier to give than to take back. But as the war has gone on, those concerns have begun to recede. Now, some NATO countries are preparing to supply Ukraine with more lethal, sophisticated, long-range and heavily armored weapons. The question is whether those will come as fast as Ukrainian officials want to stop Russia's advance and push out Russian troops.

Since the Feb. 24 invasion, Western governments have supplied Ukraine with billions of dollars worth of weapons, including thousands of easy-to-use, shoulder-fired missile systems, which proved especially deadly, in the hands of small Ukrainian commando groups, in slowing, stopping and then reversing the Russian assault on Kyiv. These "shoot-and-scoot" launchers were decisive, according to military analysts. "We know that military assistance is having a critical impact on this conflict," Sullivan said Monday, highlighting the U.S.-produced, shoulder-fired anti-aircraft Stingers and antitank Javelins that have been shipped to Ukraine. Now, as the war pivots to the east, the numbers and types of weapons supplied by the United States and Europe will again prove critical for Ukraine. Its forces need to quickly rebuild, to replace equipment lost in six weeks of fighting and to supply the reserve units that the Ukrainian military is now trying to put into the field. They also need to prepare for a new sort of war, with the ultimate aim of not only defending cities but also turning out Russian forces. "So antitank missiles alone are not going to cut it," said Michael Kofman, research program director in the Russia Studies Program at CNA, a think tank based in Arlington, Va. Kofman estimated that Ukraine needs "hundreds" of armored combat vehicles, including tanks, and a tremendous amount of ammunition. Reznikov ticked off a longer list: air defense systems and combat aircraft to protect citizens and Ukrainian troops from missiles and airstrikes; long-range artillery to keep Russian forces at a distance; tanks and armored vehicles to break through Russian defenses and liberate the occupied territories; and anti-ship missiles to beat back the Russian naval siege and unblock ports on the Black Sea. Western governments have been reluctant to send such heavy weaponry. But the Czech Republic has become the first NATO

country to contribute tanks, a senior Czech official confirmed to The Washington Post on Saturday, speaking on the condition of anonymity to discuss a transfer that hasn't been announced officially. "Hopefully, that will start a race to who can supply more," said William Alberque, director of strategy, technology and arms control at the International Institute for Strategic Studies. "It's hard to be the first one" to send tanks, "but when someone breaks the ice, it's much easier," said Margiris Abukevicius, a Lithuanian vice minister of defense who was in Washington this past week to discuss military cooperation with the United States.

In the opening weeks of the war, Ukraine's backers were mostly focused on providing weapons that Ukrainian forces already knew how to use or that could be deployed with minimal training. A soldier could learn how to fire a Javelin, for instance, by watching a short video. And formerly communist countries in Central and Eastern Europe could share their stockpiles of Soviet- and Russian-made equipment that integrates easily with Ukraine's existing stock. But European defense officials told The Post that their thinking about the number and types of weapons they are willing to send has evolved, as Ukrainian forces have shown the ability to fight — and have bought themselves time to train on more complicated Western-made equipment. At the outset, "we were supplying weapons only if we knew the Ukrainians were able to operate them from the first moment. Now we are seeing more advanced weapons and a willingness to invest some time to help them use it," Abukevicius said. At NATO meetings in Brussels this past week, the focus was on getting Ukrainian forces more advanced weapons systems as quickly as possible. "Countries indicated they are willing to go further, because we recognize that this is a new offensive, that the Russian forces are more concentrated and that more advanced weapons will be required," said a Western official at the NATO sessions who spoke on the condition of anonymity to freely discuss the talks. The British prime minister on Saturday said his country will be providing Ukraine with 120 heavily armored troop carriers called Mastiffs — and that British troops will help train the Ukrainians in their operation. Britain will also supply anti-ship weapons for the first time. Ukraine's president welcomed Britain's "decisive and significant support" and urged other allies to keep the pressure on Russia. The latest package from the United States, Sullivan said, includes laser-guided rocket systems, Puma drones and armored high-mobility multipurpose wheeled vehicles. More arms shipments from the United States are coming soon, Sullivan said, promising that the types of advanced weapons headed to Ukraine will be "extraordinary" and "unprecedented," though he declined to offer specifics. For tanks and air defense, the focus remains on older systems. Central Europe holds warehouses of old Soviet and post-Soviet tanks — the T-72s and even earlier T-64s — and Alberque said Ukrainian forces know how to drive and repair those tanks. In some cases, the White House has agreed to send new equipment to Central European countries if those countries give their old equipment to Ukraine. So a steady stream of their defense officials have passed through Washington in recent weeks, seeking assurances that the United States would backfill them with more modern equipment in short order. President Biden said in a statement Friday that the United States would reposition a Patriot missile system to Slovakia, after that country sent an S-300 air defense system to Ukraine.

The debate about weaponry has evolved along with the conflict, although there remain divisions about the risks of NATO involving itself too deeply in the fight. The Ukrainians say it no longer makes sense for Western governments to debate whether arms sent to Ukraine are "defensive" or "offensive" — or might somehow "escalate" the war, which has seen dense urban centers indiscriminately shelled by Russia, alongside charges that Russian forces have committed war crimes by deliberately targeting civilians. At the NATO meeting in Brussels this past week, the distinction between offensive and defensive weapons appeared to be falling away. "This is about defending Ukrainian territory, therefore they need all the types of equipment that we are able to supply," a NATO official told The Post, speaking on the condition of anonymity to discuss defense decisions. "I have urged allies to provide further support of many different types of systems, both the light weapons but also heavier weapons," NATO Secretary General Jens Stoltenberg said. But there is still wariness among Western allies. Russia has warned that it will treat arms shipments to Ukraine from NATO countries as "legitimate targets" for military action, potentially setting up more-direct confrontations between Russia and NATO. At the same time, supplying Ukraine with long-range artillery, for example, includes the risk of the conflict spilling over borders. Germany, which was chided for offering to send 5,000 protective helmets in January, has embraced the need for lethal aid, though it has been reluctant to see larger, more offensive weapons sent to Ukraine. NATO countries, too, have so far agreed that they will not send warplanes to the Ukrainian air force. But backers of arming Ukraine more vigorously say that if Kyiv doesn't win now, the next battle will be with NATO anyway. "In the beginning, we were supplying weapons

to sustain their fight. Now we are supplying weapons to advance and win," Abukevicius said.

Ben Hodges, who served as commander of U.S. Army Europe during the Obama and Trump administrations, said there is a narrow window to arm Ukrainian forces as the war enters a new phase. "The next three weeks are critical," he said, and "will determine if Ukraine can break the back of the Russian forces, or if this goes for months, maybe years." Ukraine has expressed frustration with the speed of weapons delivery. Reznikov warned this past week that "procrastination with the provision of weapons leads to the death of our children, to the depletion of our country."

#### 6. Ukraine: Inside the Spies' Attempts to Stop the War (BBC, Gordon Corera, 10 Apr 22)...

For nearly a dozen days in February, a small group of intelligence officers had been going to bed early. They had seen the intelligence predicting a war and knew that if Russia was really going to invade Ukraine, it would begin in the early hours of the morning. But when the news finally came on 24 February, it still felt unreal, one recalls: "It was hard to believe it was actually happening until I woke up early that morning and put the radio on." For months they had been sounding the alarm. "That day people went from 'Why are you being so hysterical?' to 'Why weren't you more hysterical?'" says the official. There was no satisfaction in being proved right, another intelligence official adds. But at least they felt they had tried to stop a war whose scale they had been warning of for months. The run-up to war and the weeks after it started saw American and British intelligence make public some of their most closely held secrets as part of an unprecedented campaign.

For decades, intelligence had normally been something to share with as few individuals as possible. No longer. The decision had been taken to make the whole world know about it. This not only marked a dramatic shift in the way Western intelligence had been operating - it also meant confronting the painful legacy of the invasion of Iraq. The first signs of Russia's intentions arrived a year ago. Intelligence from satellite imagery pointed to a Russian troop build-up near Ukraine. But analysts had little understanding of Moscow's true intentions. That changed in mid-2021. "From summer we saw a small group of senior people planning for a full military invasion of the whole country," explains one Western intelligence official. The intelligence-gathering and analysis was a joint US-UK affair, those involved say - one calling it a "family" operation. There was no single moment of understanding but rather a picture that became increasingly clear as time passed. The exact provenance of the intelligence remains classified - officials suggest it came from multiple sources. But it provided a picture which continued to build as London and Washington saw invasion plans being finalised.

Vladimir Putin seemed to believe he had to act quickly to fulfil his ambition of bringing Ukraine back into Russia's sphere of influence. And he believed the only way to do so was by using force. "He felt like he had a closing window of opportunity," says one person who was directly involved. By autumn, Washington had decided it needed to do something with what it was being told by its spies. That decision, those involved say, was taken at the very highest level of the White House by President Biden. A crucial moment came in early November when CIA Director William Burns travelled to Moscow - to warn that Washington knew what was being planned. The trip was not kept secret. The first time some Russian officials were told that their country might be seriously intending to act against Ukraine was when they heard it from the director of the CIA, one official says. The next stage was to make some of the intelligence public. One individual involved in the discussions, who like others spoke on condition of anonymity, recalls times where it was asked: "What is the point of knowing all of this, if we can't do something with it?"

In Washington, Director of National Intelligence Avril Haines - who briefed allies at Nato in November - and National Security Adviser Jake Sullivan are credited with pushing for the release of material. Experts on

declassification, trained to understand the risks, began to work round the clock to establish what could be shared. "The Intelligence Community surged personnel and resources to support classification reviews for increased intelligence sharing with allies and partners and declassification reviews for potential release to the public (and) leveraged its established declassification process, which is designed to protect sources and methods," Nicole de Haay, a spokeswoman for the US intelligence community, told the BBC. One advantage was being able to use commercially available satellite imagery to support the case. By early December, details of Russia's plans for a 175,000-strong invasion had appeared in the Washington Post. In London, the intelligence - coming in from GCHQ and MI6 - was met with near-disbelief in some quarters. A common problem inside and outside government was that people simply could not believe a major land war could break out in Europe in the 21st Century. It was only late in the year - after the material went through a formal assessment process and the Joint Intelligence Committee issued its considered view that an invasion was now "highly likely" - that everyone began to realise this was for real.

The rigour of that process was a direct result of lessons learned nearly two decades ago when intelligence had been used to make the public case for war in Iraq in a haphazard, improvised way. In 2003, amid accusations of politicisation, the reputation of US and UK spies was damaged - especially after the intelligence proved to be wrong. The ghosts of Iraq have since haunted discussions about using intelligence in public - but Ukraine offered an opportunity to try to put that legacy to bed. New procedures had been put in place to ensure secret information went through a strict assessment process to govern how it could be used. Other allies were also briefed. But many remained sceptical. Because the source of the intelligence could not be shared it was sometimes hard to overcome this incredulity, one official says.

Some European partners did not buy the analysis that Russia's build-up was anything more than bluff. A scepticism about Anglo-American intelligence was also another legacy of Iraq's missing weapons of mass destruction. France has recently sacked its head of military intelligence for failing to appreciate what was being planned. The fear for spies in publicising material is that this tips off the other side that they have a leak and potentially closes off that source. This was why, in World War Two, the UK kept the secret of Bletchley Park so tightly. There have been other occasions since Iraq when intelligence has been made public, for instance over the use of chemical weapons in Syria, but never on the scale seen over Ukraine. The release included the UK sharing details of Russian plans to install specific individuals as part of a puppet government in Kyiv - and Washington revealing plans by Moscow to stage pretexts for war, so-called false flags, involving dead bodies whom they would falsely claim had been killed by Ukrainians.

American and British spies both believe that publicising this material robbed Moscow of the ability to justify the invasion to its own people and other countries as a defensive move. One spy says of those days before the invasion that he had never seen anything like it - highly classified material would be on his desk one day and then emerge in the public domain the next. But the unprecedented outpouring of intelligence was not enough to stop the invasion. The public release had not deterred Moscow. That may never have been possible but officials believe it did disrupt Russia's plans. And it meant the reaction across the West was swifter and more unified than it might otherwise have been, they argue. They say they made it much easier for other countries to rally round tougher measures than if there had been a confused and disputed picture of who was the real aggressor. The release has continued after the invasion in speeches, statements and briefings - the head of GCHQ claimed just over a week ago that Putin was still not getting the full picture from his own officials and there have been warnings of possible "false flag" use of chemical weapons.

There is also a recognition of a new world in which so-called open-source intelligence - things like commercial satellite imagery and data - has made it more possible to verify or support assertions and that fighting an information war - including through intelligence - is now vital, partly to counter Russian assertions. On one level, much of the intelligence was spot-on. There was, as forecast, a full invasion from multiple directions with the purpose of

toppling and replacing the Zelensky government. Western spies also correctly predicted that Moscow had misplaced confidence about the reception it would encounter. "They genuinely believed there would be flags out to welcome them," says a Western intelligence officer. But one assumption did prove wrong - that Moscow's military would prevail in a matter of weeks. Instead, the war would not turn out as many expected, with Ukraine outperforming militarily while Russia underperformed. That is a reminder that intelligence has its limits - particularly in predicting some of the complexities of war and the uncertainties of people's morale and reaction. And for all its success before the war, Western spies concede that intelligence cannot tell them for sure what will happen next.

DETER

7. U.S. Will Supply Ukraine With 'the Weapons It Needs' Against Russia  
(Reuters, Joel Schectman and Brendan O'Brien, 10 Apr 22)...

The United States is committed to providing Ukraine with "the weapons it needs" to defend itself against Russia, U.S. national security adviser Jake Sullivan said on Sunday as Ukraine seeks more military aid from the West. Sullivan said the Biden administration will send more weapons to Ukraine to prevent Russia from seizing more territory and targeting civilians, attacks that Washington has labeled war crimes. "We're going to get Ukraine the weapons it needs to beat back the Russians to stop them from taking more cities and towns where they commit these crimes," Sullivan said on ABC News' "This Week". Moscow has rejected accusations of war crimes by Ukraine and Western countries. Speaking later on NBC News' "Meet the Press", Sullivan said the United States was "working around the clock to deliver our own weapons . . . and organizing and coordinating the delivery of weapons from many other countries." "Weapons are arriving every day," Sullivan said, "including today." The United States has sent \$1.7 billion in military assistance to Ukraine since Russia launched its invasion on Feb. 24, the White House said last week.

Weapons shipments have included defensive anti-aircraft Stinger and anti-tank Javelin missiles, as well as ammunition and body armor. But U.S. and European leaders are being pressed by Ukraine President Volodymyr Zelenskiy to provide heavier arms and equipment to engage Russia in the eastern region of the country, where Russia is expected to intensify its military efforts. In excerpts of an interview with CBS News' "60 Minutes" that will air later on Sunday, Zelenskiy expressed skepticism that the United States would deliver the weapons he said are needed. Whether Ukraine can beat back the Russian incursion "depends on how fast we will be helped by the United States. To be honest, whether we will be able to survive depends on this," Zelenskiy said. "I have 100% confidence in our people and in our armed forces, but unfortunately I don't have the confidence that we will be receiving everything we need."

On Friday, Ukrainian officials said more than 50 people were killed in a missile strike on a train station in city of Kramatorsk in the Donetsk region, where thousands of people had gathered to evacuate. Russia's invasion has forced around a quarter of the population of 44 million to leave their homes, turned cities into rubble and killed or injured thousands. Moscow has repeatedly denied targeting civilians in what it calls a "special operation" to demilitarise and "denazify" its southern neighbour. Ukraine and Western nations have dismissed this as a baseless pretext for war. Russia on Saturday appointed a new general to lead its forces in Ukraine, Aleksandr Dvornikov, who had significant military experience in Syria. With that background, Sullivan said he expects Dvornikov to authorize more brutality against the Ukrainian civilian population.

Republican U.S. Representative Liz Cheney, speaking on CNN's "State of the Nation", urged the Biden administration to provide Ukraine with both offensive weapons such as tanks and planes and defensive systems like anti-tank and anti-aircraft missiles. "I think we need to do everything that Zelenskiy says he needs at this point, given the just unbelievable battle that they have put up," she said. A CBS News poll released on Sunday showed

widespread support among Americans for sending more weapons to Ukraine. According to the poll, which was conducted last week as news of Russian attacks on civilians unfolded, 72% of those surveyed favor sending more weapons, while 78% support economic sanctions on Russia.

#### 8. US Doubts New Russian War Chief Can End Moscow's Floundering (AP, Robert Burns and Hope Yen, 10 Apr 22)...

Russia has tapped a new Ukraine war commander to take centralized control of the next phase of battle after its costly failures in the opening campaign and carnage for Ukrainian civilians. U.S. officials don't see one man making a difference in Moscow's prospects. Russia turned to Gen. Alexander Dvornikov, 60, one of Russia's most experienced military officers and according to U.S. officials a general with a record of brutality against civilians in Syria and other war theaters. Up to now, Russia had no central war commander on the ground. The general's appointment was confirmed by a senior U.S. official who not authorized to be identified and spoke on condition of anonymity. But the White House national security adviser, Jake Sullivan, said "no appointment of any general can erase the fact that Russia has already faced a strategic failure in Ukraine." "This general will just be another author of crimes and brutality against Ukrainian civilians," Sullivan said. "And the United States, as I said before, is determined to do all that we can to support Ukrainians as they resist him and they resist the forces that he commands."

White House press secretary Jen Psaki echoed that thought. "The reports we're seeing of a change in military leadership and putting a general in charge who was responsible for the brutality and the atrocities we saw in Syria shows that there's going to be a continuation of what we've already seen on the ground in Ukraine and that's what we are expecting," she said. The decision to establish new battlefield leadership comes as Russia gears up for what is expected to be a large and more focused push to expand Russian control in Ukraine's east and south, including the Donbas, and follows a failed opening bid in the north to conquer Kyiv, the capital. Dvornikov gained prominence while leading the Russian group of forces in Syria, where Moscow has waged a military campaign to shore up President Bashar Assad's regime during a devastating civil war. Dvornikov is a career military officer and has steadily risen through the ranks after starting as a platoon commander in 1982. He fought during the second war in Chechnya and took several top positions before being placed in charge of the Russian troops in Syria in 2015. Under Dvornikov's command, Russian forces in Syria were known for crushing dissent in part by destroying cities, lobbing artillery and dropping what were often crudely made barrel bombs in sustained attacks that have displaced millions of Syrian civilians. The United Nations says the more than decade-long war has killed more than 350,000 people.

In 2016, Russian President Vladimir Putin awarded Dvornikov the Hero of Russia medal, one of the country's highest awards. Dvornikov has served as the commander of the Southern Military District since 2016. Lt. Col. Fares al-Bayoush, a Syrian army defector, said Sunday that while the situation in Syria is different than in Ukraine because the Russian military was fighting insurgent groups and not Ukraine's professional army, he expects a similar "scorched-earth" strategy. Al-Bayoush said he believes the aim of naming Dvornikov as Ukraine war commander is to turn the war into "rapid battles" in several places at the same time. "I expected him to use the scorched earth policy that was used in Syria," al-Bayoush said, referring to Russian-backed attacks in Syria in which cities and towns were put under long sieges while being subjected to intense bombardment that left many people dead and caused wide destruction to infrastructure and residential areas. "He has very good experience in this policy." "This commander is a war criminal," al-Bayoush said by telephone from Turkey.

Since Russia joined the war in Syria in September 2015, Assad's forces have taken control of most of the country after being on the verge of collapse. The Russian air force carried out thousands of airstrikes since, helping Russian-backed Syrian troops take areas after fighters were forced to choose between an amnesty in return for dropping their arms or being taken by buses into rebel-held areas. The last major Russian-backed offensive in Syria lasted several

months, until March 2020, when a truce was reached between Russia and Turkey, which supported rival sides. Sullivan on Sunday said the Russian general has a record of brutality against civilians in Syria and “we can expect more of the same” in Ukraine. But he stressed that the U.S. strategy remains the same in supporting Ukraine and its president, Volodymyr Zelenskyy. “Our policy is unequivocal — that we will do whatever we can to help Ukraine succeed,” Sullivan said. “Which means that we need to keep giving them weapons so that they can make progress on the battlefield. And we need to keep giving them military support and strong economic sanctions to improve their position, their posture at the negotiating table.”

Defense Secretary Lloyd Austin, meanwhile, spoke by video conference Sunday to a small number of Ukrainian troops in the U.S. who are now returning to their country. The group has been in the U.S. since last fall for military schooling and were given training on new drones the U.S. sent to Ukraine last week for the war with Russia. Austin thanked the Ukrainian troop members for their courage and service and pledged continued U.S. support and security aid, according to Pentagon spokesman John Kirby. Kirby said the small group was given some advanced tactical training, including on the Switchblade armed “kamakazi” drones, as well as instruction on patrol craft operations, communications and maintenance. In an interview Saturday with The Associated Press, Zelenskyy acknowledged that despite his hopes for peace, he must be “realistic” about the prospects for a swift resolution given that negotiations have so far been limited to low-level talks that do not include Putin. Zelenskyy renewed his plea for more weapons before an expected surge in fighting in the country’s east. He said, with frustration in regards to supplies of weapons from the U.S. and other Western nations, “of course it’s not enough.” Sullivan spoke on CNN’s “State of the Union” and NBC’s “Meet the Press. Psaki spoke on “Fox News Sunday.”

9. War Crimes Were Part of Russia's Master Plan, National Security Adviser Says (Politico, David Cohen, 10 Apr 22)...

National security adviser Jake Sullivan said Sunday that the war crimes committed by Russian forces in Ukraine were part of President Vladimir Putin’s master plan for the invasion. “We, in fact, before the war began declassified intelligence and presented it,” Sullivan said on ABC’s “This Week,” “indicating that there was a plan from the highest levels of the Russian government to target civilians who oppose the invasion, to cause violence against them, to organize efforts to brutalize them in order to try to terrorize the population and subjugate it. So this is something that was planned.” Russia’s recent retreat from areas near Kyiv left behind massive evidence of atrocities, particularly in Bucha, where civilians who had been executed, many with their hands tied behind their backs, were found through the area. On top of that, Russia has targeted civilian sites throughout the war, with airstrikes on hospitals and places where refugees have congregated. “The images that we’ve seen out of Bucha and other cities have been tragic, they’ve been horrifying,” Sullivan told host Jonathan Karl. “They’ve been downright shocking, but they have not been surprising.”

Sullivan did say that it was possible that some acts of brutality were spontaneous, suggesting that Russian soldiers who were frustrated by how poorly the invasion was going turned on Ukraine’s civilians. “They had been told they were going to have a glorious victory,” Sullivan said of the Russian troops, “and just ride into Kyiv without any opposition with Ukrainians welcoming them and when that didn’t happen, I do think some of these units engaged in these acts of brutality, these atrocities, these war crimes even without direction from above.” “But make no mistake, the larger issue of broad-scale war crimes and atrocities in Ukraine lies at the feet of the Kremlin and lies at the feet of the Russian president,” he added.

[Top of the Document]

10. Stoltenberg: NATO Planning Large, Permanent Military Presence on Eastern Border (Politico, Johanna Trecek, 10 Apr 22)...

NATO military commanders are working on plans to transform the alliance’s presence on its eastern borders to a

force capable of taking on an invading army, Secretary-General Jens Stoltenberg told the Telegraph in an interview. Stoltenberg described the alliance's presence on its eastern borders thus far as a relatively small "tripwire" force intended to symbolize the alliance's commitment to defend itself from any Russian attack. Russia's war against Ukraine will change that. "Regardless of when, how, the war in Ukraine ends, the war has already had long-term consequences for our security. NATO needs to adapt to that new reality. And that's exactly what we are doing," Stoltenberg said. "NATO is the most successful alliance in history for two reasons. One is that we have been able to unite Europe and North America. The other is that we have been able to change when the world is changing. Now the world is changing, and NATO is changing." Stoltenberg backed Ukraine's calls on Western allies such as Germany to drop the distinction between defensive and offensive weapons with some members. Berlin has ruled out the provision of offensive weaponry to Kyiv. "Ukraine is now defending itself against an invasion. So everything Ukraine does is defensive," Stoltenberg said.

#### 11. Missile Kills at Least 52 at Crowded Ukrainian Train Station (AP, Adam Schreck and Cara Anna, 9 Apr 22)...

A missile hit a train station in eastern Ukraine where thousands had gathered Friday, killing at least 52 and wounding dozens more in an attack on a crowd of mostly women and children trying to flee a new, looming Russian offensive, Ukrainian authorities said. The attack, denounced by some as yet another war crime in the 6-week-old conflict, came as workers unearthed bodies from a mass grave in Bucha, a town near Ukraine's capital where dozens of killings have been documented after a Russian pullout. Photos from the station in Kramatorsk showed the dead covered with tarps, and the remnants of a rocket painted with the words "For the children," which in Russian implied that children were being avenged by the strike, though the exact reason remained unclear. About 4,000 civilians had been in and around the station, heeding calls to leave before fighting intensifies in the Donbas region, the office of Ukraine's prosecutor-general said. Ukrainian President Volodymyr Zelenskyy, who says he expects a tough global response, and other leaders accused Russia's military of deliberately attacking the station. Russia, in turn, blamed Ukraine, saying it doesn't use the kind of missile that hit the station — a contention experts dismissed. Zelenskyy told Ukrainians in his nightly video address Friday that efforts would be taken "to establish every minute of who did what, who gave what orders, where the missile came from, who transported it, who gave the command and how this strike was agreed to." Pavlo Kyrylenko, the regional governor of Donetsk, in the Donbas, said 52 people were killed, including five children, and dozens more were wounded. "There are many people in a serious condition, without arms or legs," Kramatorsk Mayor Oleksandr Goncharenko said, adding that the local hospital was struggling to treat everyone.

British Defense Minister Ben Wallace denounced the attack as a war crime, and U.N. Secretary-General Antonio Guterres called it "completely unacceptable." "There are almost no words for it," European Union Commission President Ursula von der Leyen, in Ukraine, told reporters. "The cynical behavior (by Russia) has almost no benchmark anymore." Ukrainian authorities and Western officials have repeatedly accused Russian forces of atrocities in the war that began with a Feb. 24 invasion. More than 4 million Ukrainians have fled the country, and millions more have been displaced. Some of the grisliest evidence has been found in towns around Ukraine's capital, Kyiv, from which Russian President Vladimir Putin's troops pulled back in recent days. In Bucha, Mayor Anatoliy Fedoruk has said investigators found at least three sites of mass shootings of civilians and were still finding bodies in yards, parks and city squares — 90% of whom were shot. Russia has falsely claimed that the scenes in Bucha were staged.

On Friday, workers pulled corpses from a mass grave near a church under spitting rain, lining up black body bags in rows in the mud. About 67 people were buried in the grave, according to a statement from Prosecutor-General Iryna Venediktova's office. "Like the massacres in Bucha, like many other Russian war crimes, the missile attack on Kramatorsk should be one of the charges at the tribunal that must be held," Zelenskyy said, his voice rising in anger late Friday. He expounded on that theme in an excerpted interview with CBS' "60 Minutes" that aired Friday, citing communications intercepted by the Ukrainian security service. "There are (Russian) soldiers talking with their

parents about what they stole and who they abducted. There are recordings of (Russian) prisoners of war who admitted to killing people," he said. "There are pilots in prison who had maps with civilian targets to bomb. There are also investigations being conducted based on the remains of the dead."

Zelenskyy's comments echo reporting from Der Spiegel saying Germany's foreign intelligence agency had intercepted Russian military radio traffic in which soldiers may have discussed civilian killings in Bucha. The weekly also reported that the recordings indicated the Russian mercenary Wagner Group was involved in atrocities there. German government officials would not confirm or deny the report, but two former German ministers filed a war crimes complaint Thursday. Russia has denied that its military was involved in war crimes. After failing to take Kyiv in the face of stiff resistance, Russian forces have now set their sights on the Donbas, the mostly Russian-speaking, industrial region where Moscow-backed rebels have been fighting Ukrainian forces for eight years and control some areas. A senior U.S. defense official said Friday that the Pentagon believes some of the retreating units were so badly damaged they are "for all intents and purposes eradicated." The official spoke on condition of anonymity to discuss internal military assessments. The official said the U.S. believes Russia has lost between 15% and 20% of its combat power overall since the war began. While some combat units are withdrawing to be resupplied in Russia, Moscow has added thousands of troops around Ukraine's second-largest city, Kharkiv, he said.

The train station hit is in Ukrainian government-controlled territory in the Donbas, but Russia's Defense Ministry accused Ukraine of carrying out the attack. So did the region's Moscow-backed separatists, who work closely with Russian regular troops. Western experts refuted Kremlin spokesperson Dmitry Peskov's assertion that Russian forces "do not use" that type of missile, saying Russia has used it during the war. One analyst added that only Russia would have reason to target railway infrastructure in the Donbas. "The Ukrainian military is desperately trying to reinforce units in the area ... and the railway stations in that area in Ukrainian-held territory are critical for movement of equipment and people," said Justin Bronk, a research fellow at the Royal United Services Institute in London. Bronk pointed to other occasions when Russian authorities have tried to deflect blame by claiming their forces no longer use an older weapon "to kind of muddy the waters and try and create doubt." He suggested Russia specifically chose the missile type because Ukraine also has it.

A Western official, speaking on condition of anonymity to discuss intelligence, also said Russia's forces have used the missile — and that given the strike's location and impact, it was "likely" Russia's. Ukrainian officials have almost daily pleaded with Western powers to send more arms, and to further punish Russia with sanctions and exclusion of Russian banks from the global financial system. NATO nations agreed Thursday to increase their supply of weapons, and Slovakian Prime Minister Eduard Heger announced on a trip to Ukraine on Friday that his country has donated its Soviet-era S-300 air defense system to Ukraine. Zelenskyy had appealed for S-300s to help the country "close the skies" to Russian warplanes and missiles. American and Slovak officials said the U.S. will then deploy a Patriot missile system to Slovakia.

After meeting with Zelenskyy on Friday, during which he urged the EU to impose a full embargo on Russian oil and gas, von der Leyen gave him a questionnaire that is a first step for applying for EU membership. She said the process for completing the questionnaire could take just weeks — an unusually fast turnaround; Zelenskyy quipped in English that they'd have the answers in a week. Elsewhere, in anticipation of intensified attacks by Russian forces, hundreds of Ukrainians fled villages that were either under fire or occupied in the southern regions of Mykolaiv and Kherson. In the northeast's Kharkiv, Lidiya Mezheritska stood in the wreckage of her home after overnight missile strikes turned it to rubble. "The 'Russian world,' they say," she said, wryly invoking Putin's nationalist justification for invading Ukraine. "People, children, old people, women are dying. I don't have a machine gun. I would definitely go (fight), regardless of age."

[Top of the Document]

## 12. Ukraine Digs in to Fight Russia's Looming Eastern Offensive (AP, Adam Schreck and Cara Anna, 10 Apr 22)...

Ukrainian forces dug in while Russia lined up more firepower Sunday and tapped a decorated general as war commander ahead of a potentially decisive showdown in eastern Ukraine that experts said could start within days with a full-scale offensive. The outcome of that confrontation could determine the course of the war, which has flattened cities, killed untold thousands and isolated Moscow economically and politically. Questions remain about the ability of Russia's depleted and demoralized forces to conquer much ground after their advance on the capital, Kyiv, was repelled by determined Ukrainian defenders. Britain's Defense Ministry reported Sunday that the Russian armed forces were trying to compensate for mounting casualties by recalling veterans discharged in the past decade. Meanwhile, a senior U.S. official said Russia appointed Gen. Alexander Dvornikov, one of its most seasoned military chiefs, to oversee the invasion that Moscow refers to as a "special military operation." The official was not authorized to be identified and spoke on condition of anonymity.

The new battlefield leadership comes as the Russian military prepares for what is expected to be a large, focused push to expand control in the country's east. Russia-backed separatists have fought Ukrainian forces in the eastern Donbas region since 2014 and declared some territory there as independent republics. Dvornikov, 60, gained prominence as head of the Russian forces that were deployed to Syria in 2015 to shore up President Bashar Assad's regime amid the country's devastating civil war. Russian authorities do not generally confirm such appointments and have said nothing about a new role for Dvornikov, who received the Hero of Russia medal, one of the country's highest awards, from President Vladimir Putin in 2016. U.S. national security adviser Jake Sullivan, speaking Sunday on CNN's "State of the Union," played down the significance of the appointment. "What we have learned in the first several weeks of this war is that Ukraine will never be subjected to Russia," Sullivan said. "It doesn't matter which general President Putin tries to appoint."

Western military analysts say Russia's assault was increasingly focusing on a sickle-shaped arc of eastern Ukraine from Kharkiv, Ukraine's second-largest city, in the north to Kherson in the south. Newly released Maxar Technologies satellite imagery showed an 8-mile (13-kilometer) convoy of military vehicles headed south to the Donbas, recalling images of a convoy that got stalled on roads to Kyiv for weeks before Russia gave up on trying to take the capital. On Sunday, Russian forces shelled government-controlled Kharkiv and sent reinforcements toward Izyum to the southeast in a bid to break Ukraine's defenses, the Ukrainian military command said. The Russians also kept up their siege of Mariupol, a key southern port that has been under attack and surrounded for nearly 1 ½ months. A Russian Defense Ministry spokesman, Maj. Gen. Igor Konashenkov, said Russia's military used air-launched missiles to hit Ukraine's S-300 air-defense missile systems in the southern Mykolaiv region and at an air base in Chuhuiv, a city not far from Kharkiv. Sea-launched Russian cruise missiles destroyed the headquarters of a Ukrainian military unit stationed farther west in the Dnipro region, Konashenkov said. Neither the Ukrainian nor the Russian military claims could be independently verified. The airport in Dnipro, Ukraine's fourth-largest city, was also hit by missiles twice on Sunday, according to the regional governor.

Ukrainian President Volodymyr Zelenskyy appealed for stronger military and political support from the West, including NATO members that have funneled weapons and military equipment to Ukraine but denied some requests for fear of getting drawn into the war. In a late-night video message, Zelenskyy argued that Russia's aggression "was not intended to be limited to Ukraine alone." The "entire European project is a target," he said. "That is why it is not just the moral duty of all democracies, all the forces of Europe, to support Ukraine's desire for peace," Zelenskyy said. "This is, in fact, a strategy of defense for every civilized state." The Ukrainian leader also thanked British Prime Minister Boris Johnson, who made a surprise visit to Kyiv on Saturday. Zelenskyy said they discussed "what help the United Kingdom will provide to the post-war reconstruction of Ukraine," especially to rebuild the Kyiv region. Ukrainian authorities have accused Russian forces of committing war crimes against civilians, including airstrikes on hospitals, a missile attack that killed 52 people at a train station and other violence that came

to light as Russian soldiers withdrew from the outskirts of Kyiv. Zelenskyy said that when he and German Chancellor Olaf Scholz spoke by phone Sunday, "we emphasized that all perpetrators of war crimes must be identified and punished."

A day after meeting with Zelenskyy in Kyiv, Austrian Chancellor Karl Nehammer announced that he will meet Monday in Moscow with Putin. Nehammer aims to encourage dialogue between Ukraine and Russia and to address "war crimes" during the meeting, the Austria Press Agency reported. Austria, a member of the European Union, is militarily neutral and not a member of NATO. Ukraine has blamed Russia for killing civilians in Bucha and other towns outside the capital where hundreds of bodies, many with their hands bound and signs of torture, were found after Russian troops retreated. Russia has denied the allegations and falsely claimed that the scenes in Bucha were staged. Maria Vaselenko, 77, a resident of Borodyanka, said her daughter and son-in-law were killed, leaving her grandchildren orphaned. "The Russians were shooting. And some people wanted to come and help, but they were shooting them. They were putting explosives under dead people," Vaselenko said. "That's why my children have been under the rubble for 36 days. It was not allowed" to remove bodies.

In Mariupol, Russia was deploying Chechen fighters, reputed to be particularly fierce. Capturing the city on the Sea of Azov would give Russia a land bridge to the Crimean Peninsula, which Russia seized from Ukraine eight years ago. Residents have lacked food, water and electricity since Russian forces surrounded the city and frustrated evacuation missions. Ukrainian authorities think an airstrike on a theater that was being used as a bomb shelter killed hundreds of civilians, and Zelenskyy has said he expects more evidence of atrocities to be found once Mariupol no longer is blockaded. The Institute for the Study of War, an American think tank, predicted that Russian forces will "renew offensive operations in the coming days" from Izyum, a town southeast of Kharkiv, in the campaign to conquer the Donbas, which comprises Ukraine's industrial heartland. But in the view of the think tank's analysts, "The outcome of forthcoming Russian operations in eastern Ukraine remains very much in question." Elsewhere, the International Atomic Energy Agency said Ukraine was able to rotate staff at the decommissioned Chernobyl nuclear plant for only the second time since Russian forces seized the facility early in the war. The nuclear agency said the situation around Chernobyl, site of a 1986 nuclear disaster, "remained far from normal" after Russians departed at the end of March. Ukrainian officials told the agency Sunday that laboratories for radiation monitoring at the site were destroyed and instruments damaged or stolen.

13. Putin's Target Is 'Entire European Project', Says Zelenskiy, as Ukraine Braces for Eastern Assault (Guardian, 10 Apr 22)...

Volodymyr Zelenskiy has said Russia is targeting all of Europe with its aggression and that stopping the invasion of Ukraine is essential for the security of all democracies. Officials have said a grave with dozens of Ukrainians civilians was found in Buzova village near Kyiv, the latest such discovery as Russian forces retreat from their offensive on the capital and shift their assault to the east. In his late-night address to Ukrainians on Saturday, the Ukrainian president said Russian aggression "was not intended to be limited to Ukraine alone" and the "entire European project is a target for Russia". "That is why it is not just the moral duty of all democracies, all the forces of Europe, to support Ukraine's desire for peace," he said. "This is, in fact, a strategy of defence for every civilised state. "This will be a hard battle, we believe in this fight and our victory. We are ready to simultaneously fight and look for diplomatic ways to put an end to this war."

His address came as civilians continued to flee eastern parts of the country before an expected onslaught and firefighters searched for survivors in a northern town no longer occupied by Russian forces. Zelenskiy thanked the leaders of Britain and Austria for their visits on Saturday to Kyiv, Ukraine's capital, and pledges of further support. He also thanked the European Commission president and Canada's prime minister for a global fundraising event that brought in more than €10bn for Ukrainians who have fled their homes. Zelenskiy repeated his call for a

complete embargo on Russian oil and gas, which he called the sources of Russia's "self-confidence and impunity". "Freedom does not have time to wait," Zelenskiy said. "When tyranny begins its aggression against everything that keeps the peace in Europe, action must be taken immediately." More than six weeks after the invasion began, Russia has pulled its troops from the northern part of the country, around Kyiv, and refocused on the Donbas region in the east. Maxar satellite imagery showed an eight-mile (13km) convoy of military vehicles headed south to the Donbas region through the Ukrainian town of Velykyi Burluk.

Western military analysts said an arc of territory in eastern Ukraine was under Russian control, from Kharkiv Ukraine's second-largest city in the north to Kherson in the south. But counterattacks are threatening Russian control of Kherson, according to the western assessments, and Ukrainian forces are repelling Russian assaults elsewhere in the Donbas, a largely Russian-speaking and industrial region. Civilians were evacuating eastern Ukraine following a missile strike on Friday that killed at least 52 people and wounded more than 100 at the Kramatorsk train station, where thousands clamoured to leave. With trains not running out of Kramatorsk on Saturday, residents boarded buses or looked for other ways to leave, fearing the kind of unrelenting assaults and occupations by Russian invaders that brought food shortages, demolished buildings and death to other cities. "It was terrifying. The horror, the horror," one resident told Sky news, recalling Friday's attack on the train station. "Heaven forbid, to live through this again. No, I don't want to." Zelenskiy called the train station attack the latest example of war crimes by Russian forces. Russia denied responsibility.

The Kramatorsk mayor, Oleksander Honcharenko, said he expected just 50,000 to 60,000 of the city's population of 220,000 to remain as people flee. Residents of the besieged region of Luhansk would have nine trains on Sunday on which to get out, the region's governor, Serhiy Gaidai, wrote on the Telegram message service. Ukrainian authorities have worked to identify victims and document possible war crimes in the north. The mayor of Bucha, a town near Kyiv where graphic evidence of civilian slayings emerged after Russian forces withdrew, said search teams were still finding bodies of people shot at close range in yards, parks and city squares. Workers unearched 67 corpses on Friday from a mass grave near a church, according to Ukraine's prosecutor general. Russia has falsely claimed that the scenes in Bucha were staged. Ukrainian authorities have said they expect to find more mass killings once they reach the southern port city of Mariupol, which is also in the Donbas and has been subjected to a month-long blockade and intense fighting. The city's location on the Sea of Azov is critical to establishing a land bridge from the Crimean peninsula, which Russia seized from Ukraine eight years ago.

As journalists who had been largely absent from the city began to trickle back in, new images emerged of the devastation from an airstrike on a theatre last month that reportedly killed hundreds of civilians seeking shelter. Ukrainian officials have pleaded with western powers almost daily to send more arms and further punish Moscow with sanctions, including the exclusion of Russian banks from the global financial system and a total EU embargo on Russian gas and oil. During his visit on Saturday, the Austrian chancellor, Karl Nehammer, said he expected more EU sanctions against Russia but defended his country's opposition so far to cutting off deliveries of Russian gas, while acknowledging that "as long as people are dying, every sanction is still insufficient". Austria is militarily neutral and not a member of Nato. The visit by Boris Johnson, the British PM, came a day after the UK pledged an additional £100m in high-grade armaments. Johnson also confirmed further economic support, guaranteeing an additional \$500m in World Bank lending to Ukraine, taking Britain's total loan guarantee to up to \$1bn. The visits are a sign that Kyiv is returning to some degree of normality. Some residents are coming back and cafes and restaurants are reopening. Italy said it planned to reopen its embassy this month. The European Union on Friday adopted new sanctions against Russia, including bans on the import of coal, wood, chemicals and other products. Oil and gas imports from Russia remain untouched. Ukraine has banned all imports from Russia, a key trading partners before the war with annual imports valued at about \$6bn. In the interview with AP, Zelenskiy noted increased support for the Ukrainian war effort, but when asked if it was sufficient to shift the war's outcome, he replied: "Not yet," switching to English for emphasis. "Of course it's not enough."

14. Russia Stages War Games in Kaliningrad Enclave, Ifax Says  
(Reuters, 10 Apr 22)...

Russia staged war games on Saturday in Kaliningrad – an enclave on the Baltic Sea sandwiched between Poland and Lithuania – Interfax news agency cited the Baltic Fleet Command as saying, days after a senior official warned European countries against any potential action against Kaliningrad. “Up to 1,000 military personnel... and more than 60 military equipment units were involved in the control checks,” Interfax news quoted the Russian Baltic Fleet Command’s press service as saying. Separately, 20 Su-27 fighters and Su-24 front-line naval aviation bombers conducted planned combat training overnight, simulating attacks on low-speed air and ground targets, command posts and military equipment in Kaliningrad, Interfax said. It did not give a reason for the exercises or say when they had been planned. Russian Deputy Foreign Minister Alexander Grushko warned European countries on Wednesday against any potential action against the Russian exclave of Kaliningrad, saying “this would be playing with fire.” Russia sent tens of thousands of troops into Ukraine on Feb. 24 in what it called a special operation to degrade its southern neighbour’s military capabilities and root out people it called dangerous nationalists. The West has imposed sweeping sanctions in an effort to force Russia to withdraw its forces, and NATO has beefed up its defences on its eastern flank.

1. Sweden and Finland Make Moves to Join Nato  
(Guardian, Jon Henley, 11 Apr 22)...

Sweden's ruling party has begun debating whether the country should join Nato, and neighbouring Finland expects to reach a decision within weeks, as Moscow warned that the Nordic nations' accession would "not bring stability" to Europe. Both countries are officially non-aligned militarily, but public support for Nato membership has almost doubled since Russia's invasion of Ukraine, to about 50% in Sweden and 60% in Finland, multiple opinion polls suggest. Sweden's centre-left Social Democrats, led by prime minister Magdalena Andersson, said their "security review" was about more than just joining the 30-nation alliance, adding that the party could decide to apply even without the backing of members. Having stressed at the outbreak of the war that non-alignment had "served Sweden's interests well", Andersson said she was "ready to discuss" the policy in light of Moscow's aggression, and in late March said she "did not rule out" joining Nato. "When Russia invaded Ukraine, Sweden's security position changed fundamentally," the party said in a statement on Monday. The Social Democrat general secretary, Tobias Baudin, said the security review would be complete "before the summer".

The question is expected to be a key issue in parliamentary elections due on 11 September, with centre-right opposition parties already saying they would back a Nato application and the far-right Sweden Democrats also open to the idea. Finland, which shares a 1,340km (830-mile) border with Russia and, like Sweden, is a Nato partner after abandoning its position of strict neutrality at the end of the cold war, is expected to outline its decision regarding the alliance before midsummer. Alexander Stubb, a former prime minister of Finland, told AFP it was "a foregone conclusion" that Helsinki would apply to join Nato, probably in time for a June Nato summit in Madrid. A government-commissioned national security review is due to be delivered to parliament next week to help Finnish MPs decide on the question before they vote, with one recent poll suggesting only six of the country's 200 MPs were opposed. "We will have very careful discussions, but not taking any more time than we have to," the country's prime minister, Sanna Marin, said last week. "I think we will end the discussion before midsummer," she said.

Both countries have received public assurances from the Nato secretary general, Jens Stoltenberg, that their

applications would be welcome, as well as expressions of support from several members including the US, UK, Germany, France and Turkey. But the move would almost certainly be seen as a provocation by the Kremlin, whose spokesperson, Dmitry Peskov, said on Monday that the alliance was “a tool geared towards confrontation” and that their possible accession “will not bring stability to the European continent”.

[Top of the Document]

## 2. Ukraine War: Russia Warns Sweden and Finland Against Nato Membership (BBC, 11 Apr 22)...

Russia has warned Finland and Sweden against joining Nato, arguing the move would not bring stability to Europe. Kremlin spokesman Dmitry Peskov told reporters that “the alliance remains a tool geared towards confrontation”. It comes as US defence officials said Moscow’s invasion of Ukraine has been a “massive strategic blunder” which is likely to bring Nato enlargement. US officials expect the Nordic neighbours to bid for membership of the alliance, potentially as early as June. Washington is believed to support the move which would see the Western alliance grow to 32 members. US State Department officials said last week that discussions had taken place between Nato leaders and foreign ministers from Helsinki and Stockholm. Before it launched its invasion, Russia demanded that the alliance agree to halt any future enlargement, but the war has led to the deployment of more Nato troops on its eastern flank and a rise in public support for Swedish and Finnish membership.

Finnish MPs are expected to receive a security report from intelligence officials this week, and Prime Minister Sanna Marin said she expects her government “will end the discussion before midsummer” on whether to make a membership application. Finland shares a 1,340km (830 miles) long border with Russia and has been rattled by the invasion of Ukraine. And Sweden’s ruling Social Democratic party, which has traditionally opposed Nato membership, said it is rethinking this position in light of Russia’s attack on its western neighbour. Party secretary Tobias Baudin told local media that the Nato review should be complete within the next few months. “When Russia invaded Ukraine, Sweden’s security position changed fundamentally,” the party said in a statement on Monday. But Moscow has been clear that it opposes any potential enlargement of the alliance. Mr Peskov warned the bloc “is not that kind of alliance which ensures peace and stability, and its further expansion will not bring additional security to the European continent”.

Last week Mr Peskov said that Russia would have to “rebalance the situation” with its own measures were Sweden and Finland to join Nato. And in February Maria Zakharova, Russia’s foreign ministry spokeswoman, warned of “military and political consequences” if the countries joined the bloc. Nato was formed in 1949 to counter the threat of Soviet expansion, though since the fall of the Berlin wall a number of formerly communist eastern European countries have joined. Member states agree to come to one another’s aid in the event of an armed attack against any individual member state. Despite the threats, both countries have pushed ahead with their bids and stepped up defence spending. On Monday, army leaders in Helsinki announced a new plan to allocate €14m (£10.88m) to purchase drones for Finland’s military. And last month Swedish officials said they would boost defence spending by three billion kronas (\$317m; £243m) in 2022.

## 3. US Sanctions Western Balkan Figures, Citing ‘Threat to Regional Security’ (Politico, Nektaria Stamouli, 11 Apr 22)...

The United States sanctioned seven people in the Western Balkans on Monday, including former leaders of North Macedonia and the short-lived State Union of Serbia and Montenegro, calling them a “serious threat to regional stability.” Those targeted — from Albania, Bosnia and Herzegovina, Montenegro and North Macedonia — were added to the list of specially designated nationals, maintained by the U.S. Treasury Department’s Office of Foreign Assets Control, or OFAC. This means their assets are blocked, U.S. citizens are generally prohibited from dealing with them, and they are also banned from entering the U.S. “The people designated today constitute a serious threat

to regional stability, institutional trust, and the aspirations of those seeking democratic and judicious governance in the Western Balkans," said Brian Nelson, the Treasury's undersecretary for terrorism and financial intelligence, in a statement. Those listed include Svetozar Marović, the last president of the former State Union of Serbia and Montenegro, which dissolved in 2006. Marović also served as deputy president of the Democratic Party of Socialists of Montenegro until 2015, when he was arrested over his involvement in corruption scandals related to construction projects. He admitted to the charges and signed two plea deals, but before serving his sentence he fled to Serbia, where he now resides. Montenegro's government has been seeking his extradition from Belgrade since 2019.

North Macedonia's former Prime Minister Nikola Gruevski is also named. Gruevski was convicted by a court in his country on corruption-related charges, but fled and received asylum in Hungary, which the U.S. Treasury said "represents a serious setback for accountability for corruption and corruption-related activities in North Macedonia." OFAC also designated Gruevski's former chief of counterintelligence, Sašo Mijalkov, who the Treasury says was accused of being involved in a vote-rigging scheme and an illegal wiretapping operation targeting opposition politicians, judges and journalists "that provided political and economic gain, and which precipitated a two-year political crisis in the country." From Albania, the list includes former MP Aqif Rakipi and media mogul Ylli Ndroqi, accusing him of using his outlets to "extort and blackmail Albanian citizens." It also includes Asim Sarajlic, a member of the parliament of Bosnia and Herzegovina, and the country's former chief prosecutor, Gordana Tadic.

#### 4. How Meta Fumbled Propaganda Moderation During Russia's Invasion of Ukraine (Reuters, Katie Paul and Munsif Vengattil, 11 Apr 22)...

Days after the March 9 bombing of a maternity and children's hospital in the Ukrainian city of Mariupol, comments claiming the attack never happened began flooding the queues of workers moderating Facebook and Instagram content on behalf of the apps' owner, Meta Platforms (FB.O). The bombardment killed at least three people, including a child, Ukraine's President Volodymyr Zelenskyy said publicly. Images of bloodied, heavily pregnant women fleeing through the rubble, their hands cradling their bellies, sparked immediate outrage worldwide. Among the most-recognized women was Mariana Vishegirska, a Ukrainian fashion and beauty influencer. Photos of her navigating down a hospital stairwell in polka-dot pajamas circulated widely after the attack, captured by an Associated Press photographer. Online expressions of support for the mother-to-be quickly turned to attacks on her Instagram account, according to two contractors directly moderating content from the conflict on Facebook and Instagram. They spoke to Reuters on condition of anonymity, citing non-disclosure agreements that barred them from discussing their work publicly. The case involving the beauty influencer is just one example of how Meta's content policies and enforcement mechanisms have enabled pro-Russian propaganda during the Ukraine invasion, the moderators told Reuters. Russian officialdom seized on the images, setting them side-by-side against her glossy Instagram photos in an effort to persuade viewers that the attack had been faked. On state television and social media, and in the chamber of the U.N. Security Council, Moscow alleged - falsely - that Vishegirska had donned make-up and multiple outfits in an elaborately staged hoax orchestrated by Ukrainian forces. Swarms of comments accusing the influencer of duplicity and being an actress appeared underneath old Instagram posts of her posed with tubes of makeup, the moderators said. At the height of the onslaught, comments containing false allegations about the woman accounted for most of the material in one moderator's content queue, which normally would have contained a mix of posts suspected of violating Meta's myriad policies, the person recalled. "The posts were vile," and appeared to be orchestrated, the moderator told Reuters. But many were within the company's rules, the person said, because they did not directly mention the attack. "I couldn't do anything about them," the moderator said. Reuters was unable to contact Vishegirska. Meta declined to comment on its handling of the activity involving Vishegirska, but said in a statement to Reuters that multiple teams are addressing the issue. "We have separate, expert teams and outside partners that review misinformation and inauthentic behavior and we have been applying our policies to counter that activity forcefully throughout the war," the statement said. Meta policy chief Nick Clegg separately told reporters on Wednesday that the company was considering new steps to address misinformation and hoaxes from Russian government pages, without elaborating. read more Russia's Ministry of Digital Development, Communications and Mass Media and the Kremlin did not respond to requests for comment. Representatives of Ukraine did not respond to a request for comment.

Based at a moderation hub of several hundred people reviewing content from Eastern Europe, the two contractors are foot soldiers in Meta's battle to police content from the conflict. They are among tens of thousands of low-paid workers at outsourcing firms around the world that Meta contracts to enforce its rules. The tech giant has sought to position itself as a responsible steward of online speech during the invasion, which Russia calls a "special operation" to disarm and "denazify" its neighbor. Just a few days into the war, Meta imposed restrictions on Russian state media and took down a small network of coordinated fake accounts that it said were trying to undermine trust in the Ukrainian government. It later said it had pulled down another Russia-based network that was falsely reporting people for violations like hate speech or bullying, while beating back attempts by previously disabled networks to return to the platform. Meanwhile, the company attempted to carve out space for users in the region to express their anger over Russia's invasion and to issue calls to arms in ways Meta normally would not permit. In Ukraine and 11 other countries across Eastern Europe and the Caucasus, it created a series of temporary "spirit of the policy" exemptions to its rules barring hate speech, violent threats and more; the changes were intended to honor the general principles of those policies rather than their literal wording, according to Meta instructions to moderators seen by Reuters. For example, it permitted "dehumanizing speech against Russian soldiers" and calls for death to Russian President Vladimir Putin and his ally Belarusian President Alexander Lukashenko, unless those calls were considered credible or contained additional targets, according to the instructions viewed by Reuters.

The changes became a flashpoint for Meta as it navigated pressures both inside the company and from Moscow, which opened a criminal case into the firm after a March 10 Reuters report made the carve-outs public. Russia also banned Facebook and Instagram inside its borders, with a court accusing Meta of "extremist activity." read more Meta walked back elements of the exceptions after the Reuters report. It first limited them to Ukraine alone and then canceled one altogether, according to documents reviewed by Reuters, Meta's public statements, and interviews with two Meta staffers, the two moderators in Europe and a third moderator who handles English-language content in another region who had seen the advisories. The documents offer a rare lens into how Meta interprets its policies, called community standards. The company says its system is neutral and rule-based. Critics say it is often reactive, driven as much by business considerations and news cycles as by principle. It's a complaint that has dogged Meta in other global conflicts including Myanmar, Syria and Ethiopia. Social media researchers say the approach allows the company to escape accountability for how its policies affect the 3.6 billion users of its services. The shifting guidance over Ukraine has generated confusion and frustration for moderators, who say they have 90 seconds on average to decide whether a given post violates policy, as first reported by the New York Times. Reuters independently confirmed such frustrations with three moderators. After Reuters reported the exemptions on March 10, Meta policy chief Nick Clegg said in a statement the next day that Meta would allow such speech only in Ukraine. Two days later, Clegg told employees the company was reversing altogether the exemption that had allowed users to call for the deaths of Putin and Lukashenko, according to a March 13 internal company post seen by Reuters. At the end of March, the company extended the remaining Ukraine-only exemptions through April 30, the documents show. Reuters is the first to report this extension, which allows Ukrainians to continue engaging in certain types of violent and dehumanizing speech that normally would be off-limits. Inside the company, writing on an internal social platform, some Meta employees expressed frustration that Facebook was allowing Ukrainians to make statements that would have been deemed out of bounds for users posting about previous conflicts in the Middle East and other parts of the world, according to copies of the messages viewed by Reuters. "Seems this policy is saying hate speech and violence is ok if it is targeting the 'right' people," one employee wrote, one of 900 comments on a post about the changes. Meanwhile, Meta gave moderators no guidance to enhance their ability to disable posts promoting false narratives about Russia's invasion, like denials that civilian deaths have occurred, the people told Reuters. The company declined to comment on its guidance to moderators.

In theory, Meta did have a rule that should have enabled moderators to address the mobs of commenters directing baseless vitriol at Vishegirskaya, the pregnant beauty influencer. She survived the Mariupol hospital bombing and delivered her baby, the Associated Press reported. Meta's harassment policy prohibits users from "posting content about a violent tragedy, or victims of violent tragedies that include claims that a violent tragedy did not occur," according to the Community Standards published on its website. It cited that rule when it removed posts by the

Russian Embassy in London that had pushed false claims about the Mariupol bombing following the March 9 attack. But because the rule is narrowly defined, two of the moderators said, it could be used only sparingly to battle the online hate campaign against the beauty influencer that followed. Posts that explicitly alleged that the bombing was staged were eligible for removal, but comments such as "you're such a good actress" were considered too vague and had to stay up, even when the subtext was clear, they said. Guidance from Meta enabling commenters to consider context and enforce the spirit of that policy could have helped, they added. Meta declined to comment on whether the rule applied to the comments on Vishegirskaia's account. At the same time, even explicit posts proved elusive to Meta's enforcement systems. A week after the bombing, versions of the Russian Embassy posts were still circulating on at least eight official Russian accounts on Facebook, including its embassies in Denmark, Mexico and Japan, according to an Israeli watchdog organization, FakeReporter. read more One showed a red "fake" label laid over the Associated Press photos of Mariupol, with text claiming the attack on Vishegirskaia was a hoax, and pointing readers to "more than 500 comments from real users" on her Instagram account condemning her for participating in the alleged ruse. Meta removed those posts on March 16, hours after Reuters asked the company about them, a spokesperson confirmed. Meta declined to comment on why the posts had evaded its own detection systems. The following day, on March 17, Meta designated Vishegirskaia an "involuntary public person," which meant moderators could finally start deleting the comments under the company's bullying and harassment policy, they told Reuters. But the change, they said, came too late. The flow of posts related to the woman had already slowed to a trickle.

5. Putin's Mysterious Facebook 'Superfans' on a Mission  
(BBC, Jack Goodman & Olga Robinson, 11 Apr 22)...

Russia's invasion of Ukraine has been widely condemned in many parts of the world, but a network of Facebook groups run by people with obscure motivations would like to change perceptions of the country's leader. Millions of people have viewed posts committed to portraying President Vladimir Putin as smiling, benevolent and peace-loving. These are Putin's superfans - and we've been tracking what they do and where they come from.

The BBC has been investigating these huge pro-Putin groups with the help of researchers from the Institute for Strategic Dialogue (ISD). ISD experts identified 10 pro-Putin public groups, boasting names such as Vladimir Putin - Leader of the Free World. The groups have more than 650,000 members between them. Content includes photos and messages praising the Russian leader, written in a number of languages, including English, Russian, Farsi, Arabic and Khmer. Not only are they popular, but they are very active. Over the past month, researchers counted 16,500 posts, receiving more than 3.6 million interactions. The overall aim of the groups seems to be to promote Mr Putin as a hero standing up to the West, with overwhelming international support. The images often show the Russian leader "walking confidently, holding puppies, staring longingly into the camera, saluting troops, and riding an array of wild animals, including bears and lions". These groups have gained more than 100,000 new members since the start of the invasion on 24 February. Digging into the details of the people driving most of the content, it emerged that many of the fans listed as administrators of the groups have duplicate accounts under the same name. The researchers found at least 100 such accounts in the network. These accounts generally follow each other and sometimes post heart-warming messages or send heart emojis to each other. And they administer these pro-Putin accounts alongside others pretending to be the Russian Federation or the Russian security services, which are clearly fake. Running duplicate accounts is a potential violation of Facebook's rules on inauthentic behaviour, the ISD says. Lead researcher Moustafa Ayad calls the practice an example of "astroturfing" - an online operation involving multiple accounts that falsely gives something the impression of wider grassroots support. The campaign "creates the appearance of widespread support for Putin and the Kremlin in the shadow of the invasion and relies on... inauthentic accounts to accomplish its goal", according to the ISD report.

A closer examination of some of the group admins shows some unusual activity. One, named Marine, who says her location is Syria, uses three separate accounts to generate support for the president. Her three accounts, in Arabic, post at the same time every day. Another moderator, Victoria, from Cambodia, has been pushing content in a Khmer

language group. Since 4 February, her posts have generated more than 34,000 reactions and have been shared more than 4,000 times. And Marine and Victoria jointly run a Khmer-language Facebook page, part of a wider pattern of co-ordination between some of the accounts. Posts are widely shared across different groups. For instance, another account listed as located in Bulgaria posted the same Putin image 12 times in the space of a couple of minutes. We tried to contact the people behind all of these accounts for comment, but didn't have much luck. But a man in Kenya, called Raj, who's in several of these groups and includes "Putin" at the end of his name on Facebook, did answer the phone when we rang. In a brief conversation, he called the president a "great leader" but said he didn't want to discuss the war. We emailed him further questions about his interest in Russia, but he didn't respond. Hasmik, from Armenia, says she's a journalist and now helps to run six pro-Putin groups. We asked who invited her to do it. She told us it was the people already running the groups and said that she wasn't paid for her efforts.

It's difficult to glean the motivations of the people behind the accounts. There is no obvious link to the Russian government and unlike other well-known Russian disinformation campaigns, the network isn't subtle; nor do the people involved hide their intentions. But we can't rule out the possibility that the network has some links to the Russian authorities or pro-Putin elements inside Russia. Many people around the world are drawn to Mr Putin and his anti-West view of the world. We contacted Facebook, which says it has policies against fake accounts and has suspended a number of accounts based on information from the report and their own investigations. "We're continuing to take strong action to prevent the spread of misinformation relating to the crisis in Ukraine," says a spokesman for parent company Meta.

In the course of our research, we came across another interesting phenomenon - Vladimir Putin impersonation accounts. Mr Putin is one of the few world leaders who doesn't use social media, and there's no official Facebook account in his name. He reputedly doesn't even have a smartphone. According to his spokesman, Mr Putin simply "does not need" social media as it "doesn't give him anything he doesn't have already". But some have filled the gap left by his online absence. The page on Facebook displayed above had more than three million followers until it was taken down for impersonation shortly after the invasion at the end of February. A significant number of its subscribers - more than 700,000 - joined during the pandemic, when the page was talking up Russian-made Covid vaccines. More recently, the page was posting messages amplifying the Kremlin's view of the war, and many commenting on it appeared to believe it contained the genuine words of the Russian president. Shortly after the invasion, a post on the page declared the goal of the "operation" was "peacekeeping... aimed only at the demilitarisation of a neighbouring country". This message was shared and liked more than 200,000 times. And the page also had a habit of tagging people in its messages about Mr Putin, including users identified by researchers as having duplicate accounts. In other words, it was interacting with the Putin superfans. We don't know who's behind this account. The people managing it are based in Russia and Latvia, according to the page's transparency section. Fan pages are fertile ground to drum up support for the Kremlin internationally, says Nika Aleksejeva, a researcher at the Digital Forensic Research Lab (DFRLab), part of the Atlantic Council think tank. "They may help to build public support in foreign countries for Russia's so-called 'military operation in Ukraine' unless taken down by mainstream social media platforms," she says. DFRLab documented how one Putin-impersonator account posting in Arabic had paid for adverts targeting users in several countries, including Algeria, Libya, Egypt, Yemen, Morocco, Lebanon, and Tunisia. The page had more than one million followers, but has since been deleted. Another prominent Putin page, posted in Arabic, used to be managed by a man who is also a big fan of Syrian leader Bashar al-Assad. It attracted almost a million followers before recently disappearing.

6. China's Echoes of Russia's Alternate Reality Intensify Around the World  
(New York Times, Paul Mozur, Steven Lee Myers, and John Liu, 11 Apr 22)...

When Twitter put up a warning message atop a Russian government post denying civilian killings in Bucha, Ukraine, last week, China's state media rushed to its defense. "On Twitter @mfa\_russia's statement on #Bucha got censored," wrote Frontline, a Twitter account associated with China's official English-language broadcaster, CGTN. In a Chinese Communist Party newspaper, an article declared that Russians had offered definitive evidence to prove

that the lurid photos of bodies in the streets of Bucha, a suburb of Ukraine's capital, Kyiv, were a hoax. A party television station in Shanghai said Ukraine's government had created the grisly tableaux to win sympathy in the West. "Obviously, such evidence would not be admissible in court," the report said. Only a month ago, the White House warned China not to amplify Russia's campaign to sow disinformation about the war in Ukraine. The Chinese efforts have intensified anyway, contradicting and disputing the policies of NATO capitals, even as Russia faced renewed condemnation for the killings in Bucha and other atrocities in recent days. The result has been to create an alternate reality of the war — not just for the consumption of China's citizens but also for a global audience. The propaganda has challenged the Western efforts to isolate Russia diplomatically, particularly in the Middle East, Africa and Latin America, which have been fertile ground for conspiracy theories and distrust of the United States. "Russia and China have long shared distrust and animosity toward the West," said Bret Schafer, an analyst who tracks disinformation for the Alliance for Securing Democracy, a nonprofit group in Washington. "On Ukraine, it's a level above that — just the extent to which they have parroted some pretty specific and in some cases pretty far-fetched claims from Russia."

The campaign by China has further undercut the country's effort to present itself as a neutral actor in the war, eager to promote a peaceful resolution. In fact, its diplomats and official journalists have become combatants in the informational war to legitimize Russia's claims and discredit international concerns about what appear to be war crimes. Since the war began, they have parroted the Kremlin's justifications for it, including President Vladimir V. Putin's claim that he was fighting a neo-Nazi government in Kyiv. On Twitter alone, they have used the word "Nazi" — which Russia uses as a rallying cry — more times in the six weeks of the war so far than they did in the six months before, according to a database created by the Alliance for Securing Democracy. In an example on Wednesday, an official with China's Ministry of Foreign Affairs tweeted a doctored photo appearing to show Nazis holding a flag with a swastika next to flags of Ukraine and the United States. "Surprisingly, the US stands with the neo-Nazis!" the official, Li Yang, wrote of the image, which originally featured a neo-Nazi flag in place of the American flag. The timing and subjects of many of the themes prominent in the countries' coverage suggest coordination or at least a shared view of the world and the United States' pre-eminent role in it. China's attacks on the United States and the NATO alliance, for example, now closely hew to those in Russian state media blaming the West for the war. At times, even the wording — in English for global audiences — is almost identical.

After YouTube banned RT and Sputnik, two Russian television channels, for content "minimizing or trivializing well-documented violent events," both RT and Frontline accused the platform of hypocrisy. They did so using the same videos of former American officials, including President George W. Bush, President Barack Obama and Hillary Rodham Clinton, joking about weapons, drones and the killing of Col. Muammar el-Qaddafi, the former Libyan leader. In another instance, the same accounts used a video of Joseph R. Biden Jr. warning in 1997, when he was a senator, that NATO's eastward expansion could provoke a "vigorous and hostile" reaction from Russia to suggest that Mr. Putin's decision to go to war was justified. China's efforts have made it clear that the White House's warning did little to influence Beijing. China's propagandists have instead intensified their efforts, amplifying not only the Kremlin's broad views about the war but also some of the most blatant lies about its conduct. "If you're just looking at the outputs, then that message didn't get through," Mr. Schafer said. "If anything, we've seen them sort of double down." The White House did not respond to a request for comment about China's support of Russian disinformation.

While the extent of any direct collusion between Russian and Chinese on war propaganda remains uncertain, the roots of cooperation in international media outreach stretch back nearly a decade. China's leader, Xi Jinping, pledged to deepen ties between Russian and Chinese state media on his first foreign trip in 2013 — to Moscow. Since then, the two countries' myriad state media organs have signed dozens of pledges to share content. Sputnik alone has reached 17 agreements with major Chinese media, which shared its articles over 2,500 times in 2021, according to Vasily V. Pushkov, the international cooperation director for Rossiya Segodnya, the state company that owns and operates Sputnik. The two have taken other cues from each other as well. In mid-March, after Russia Today began to use clips of the Fox News host Tucker Carlson to support the idea that the United States was

developing bioweapons in Ukraine, Chinese state media also began to pick up Mr. Carlson's broadcasts. On March 26, Mr. Carlson was quoted on China's flagship nightly news broadcast, averring that "it turns out our government has for some time funded biolabs in Ukraine." The next day, the English-language channel, CGTN, repeated a Russian claim tying the labs to the laptops of Hunter Biden, the American president's son. Russian and Chinese state media have also increasingly drawn on the opinions of the same group of internet celebrities, pundits and influencers, featuring them on their shows as well as in YouTube videos. One of them, Benjamin Norton, is a journalist who claimed that a coup sponsored by the United States government took place in Ukraine in 2014 and that U.S. officials had installed the leaders of the current Ukrainian government. He first explained the conspiracy theory on RT, although it was later picked up by Chinese state media and tweeted by accounts like Frontline. In a March interview, which China's state broadcaster, CCTV, trumpeted as an exclusive, Mr. Norton said the United States, not Russia, was to blame for Russia's invasion. "Regarding the current situation in Ukraine, Benjamin said that this is not a war caused by Russia's invasion of Ukraine, but a war planned and provoked by the United States as early as 2014," an unnamed CCTV narrator said.

At times, China's information campaigns have seemed to contradict the country's official diplomatic statements, undercutting China's efforts to play down the links between its relationship with Russia and the brutal invasion. On Wednesday, Zhao Lijian, a spokesman for China's Ministry of Foreign Affairs, called the images from Bucha "disturbing" and asked for all parties to "exercise restraint and avoid groundless accusations." Only the day before, Chen Weihua, a vocal and prolific editor at China Daily, which is owned by the Chinese government, seemed to do just that. He retweeted a widely shared post that said there was not "one iota" of proof of massacre in Bucha and accused the West of "staging atrocities to jack up emotions, demonize adversaries and extend wars." Mr. Chen is one strand of a sprawling network of diplomats, government-controlled media, and state-backed pundits and influencers who have extended China's domestic narrative about the conflict to overseas platforms like Twitter and Facebook. Central to their message is that the United States and NATO, not Mr. Putin, are responsible for the war. One political cartoon, shared by state media and Chinese diplomats, portrayed the European Union as kidnapped by Uncle Sam and chained to a tank with a NATO flag. Another, from a Chinese diplomat in St. Petersburg, Russia, showed an arm with a stars-and-stripes sleeve stuffed up the back of a European Union puppet brandishing a spear. Other images portraying the European Union as a lackey of the United States came out of a number of official Chinese accounts in the run-up to a tense meeting between Mr. Xi and the European Union, in which Europe called on China not to subvert Western sanctions or support Russia's war. Maria Repnikova, a professor of global communication at Georgia State University who studies China and Russia information campaigns, said the two countries had "a shared vision of resenting the West" that drove nationalistic sentiment at home. At the same time, the shared messages have resonated globally, especially outside the United States and Europe. "It's not coordination but echoes of the similar sort of concerns or stance when it comes to this war," she said of views in Africa and other parts of the world. "China is also trying to showcase that it's not isolated."

7. US Army Chief of Staff on Hand as Ally Lithuania Announces Training for Ukrainians (Stars & Stripes, John Vandiver, 11 Apr 22)...

Lithuania will host a mission to train Ukrainian soldiers to use new weaponry that the Baltic country's fellow NATO allies are sending Kyiv to assist in its war against invading Russian forces. Lithuanian defense officials announced the plan Sunday, the same day U.S. Army chief of staff Gen. James McConville was in the country for security talks. Meanwhile, the Pentagon said Sunday that it had concluded a separate training effort with Ukrainian forces in the U.S. The troops were being trained on operating maritime patrol craft and use of weapons systems, such as the Switchblade drone, that the U.S. is now providing to Ukraine. "To achieve maximum effect, we will soon organize military training for Ukrainian troops here in Lithuania," Lt. Gen. Valdemaras Rupsys, the Lithuanian defense chief, told local reporters. The effort will center on training Ukrainian military instructors, who can in turn pass on their weapons knowledge to rank-and-file troops in Ukraine, Rupsys told the Delfi news agency. Rupsys also held talks with McConville, who told reporters that the Pentagon continues to assess what the future American force structure will look like in countries such as Lithuania, which have been eager for a larger American military presence. "We

have rotational forces here, and our policymakers have said that they will defend every inch of NATO,” Delfi quoted McConville as saying. “And they are working through what that will look like as far as rotational or permanent troops as we speak.”

For now, there are no immediate plans for U.S. soldiers to join the Lithuanian initiative, which is expected to begin in the coming weeks. “We can’t speculate on whether or not that could change in the future,” U.S. Army Europe and Africa said in a statement Monday. The U.S. has long been involved in the training of the Ukrainian military. For years, the Army operated out of a site in western Ukraine that was focused on preparing troops to fight Russian-backed separatists in the eastern region known as the Donbas. However, because of security concerns, the American training was put on hold less than two weeks before Feb. 24, the date Russia launched its full-fledged invasion. The Russia-Ukraine war was preceded by a buildup of about 200,000 Russian service members and materiel near Ukraine’s borders on three sides. At the time of the halt in the U.S. training, about 160 National Guard soldiers were relocated from Ukraine to Germany, where they continue to take part in other Army instruction in Europe.

#### 8. Western Nations Adapt Their Ukraine Help as War Enters New Phase (DefenseNews, Joe Gould, 11 Apr 22)...

The U.S. and its allies are preparing to send heavier weapons to Ukraine in anticipation of Russia focusing its efforts on the eastern part of the country. British Prime Minister Boris Johnson paid a surprise visit to Ukrainian President Volodymyr Zelenskyy in Kyiv on Saturday, where he pledged 120 armored vehicles and new anti-ship missile systems. This came a day after he promised to send an additional £100 million (U.S. \$130 million) of high-grade military equipment to Ukraine, saying Britain wants to help Ukraine defend itself against Russian aggression. In the United States, Chairman of the Joint Chiefs of Staff Gen. Mark Milley forecast the war’s new phase will play out in flat, open terrain and will increasingly involve armor and artillery. On Monday, a senior defense official said the Pentagon will send arms to Ukraine for that fight, including more Javelin anti-tank weapons as well as counter-artillery radars. “I don’t think they’re in Ukraine yet, but they’re on the move,” the Pentagon official said of the Javelins. “That’s a very specific example of how we’re trying to help the Ukrainians in this particular new phase of the conflict.”

Thwarted in its early plan for a quick takeover of the capital Kyiv, Russia is resupplying and reinforcing its invasion force in eastern Ukraine with an 8-mile convoy of vehicles. The group, which includes command-and-control support and possibly helicopters for air support, is apparently headed toward Izium in the Kharkiv region of eastern Ukraine ? all while Russia is reinforcing its positions southwest of Donetsk with artillery units. The action comes as Ukrainian Foreign Minister Dmytro Kuleba called for more weapons for his country, and stronger sanctions against Moscow, during meetings with NATO foreign ministers in Brussels last week. Ahead of the talks, Kuleba said his agenda was “very simple ? it has only three items on it: It’s weapons, weapons and weapons.” A \$100 million package of U.S. security assistance announced last week included Javelins, four counter-artillery and counter-UAV tracking radars, four counter-mortar radar systems, armored Humvees, and laser-guided rocket systems.

The Czech Republic became the first NATO member to send tanks to Ukraine, which included T-72 and BVP-1 infantry fighting vehicles, Reuters reported last week. The package of military aid Britain announced last week includes more Starstreak anti-aircraft missiles, another 800 anti-tank missiles and precision munitions capable of lingering in the sky until directed to their target. “Ukraine has defied the odds and pushed back Russian forces from the gates of Kyiv, achieving the greatest feat of arms of the 21st century,” Johnson said in a statement. “It is because of President Zelenskyy’s resolute leadership and the invincible heroism and courage of the Ukrainian people that [Russian President Vladimir] Putin’s monstrous aims are being thwarted.” It’s a trickier political question in Germany, where Chancellor Olaf Scholz is reportedly delaying a final decision on whether to send German tanks to Ukraine. While the Defence Ministry argues it needs them for its own use, German Foreign Minister Annalena

Baerbock said Monday that Ukraine needs “heavy weapons.” “Now is not the time for excuses; now is the time for creativity and pragmatism,” Baerbock said at a meeting of European Union foreign affairs ministers in Luxembourg. Russia warned Thursday that supplying weapons to Ukraine would thwart ongoing peace negotiations between the two countries. “Pumping weapons into Ukraine will not contribute to the success of Russian-Ukrainian talks,” Kremlin spokesperson Dmitry Peskov said.

[Top of the Document]

#### 9. Germany’s Baerbock Calls for ‘Heavy Weapons’ for Ukraine (Politico, Hans von der Burchard, 11 Apr 22)...

German Foreign Minister Annalena Baerbock on Monday urged Western countries to supply Ukraine with “heavy weapons,” while issuing thinly veiled criticism of Chancellor Olaf Scholz, who has delayed deliveries of tanks to Kyiv. “What’s clear: Ukraine needs more military material, especially heavy weapons,” Baerbock said at a meeting of EU foreign affairs ministers in Luxembourg, adding that “the terrible horror that we see every day” in Russia’s war against Ukraine made the need for such supplies “more than clear.” Germany has already delivered defensive weapons such as anti-tank missiles to Ukraine, while “heavy weapons” implies sending tanks, artillery or advanced air defense systems. POLITICO reported last week that Scholz is delaying a final decision on whether to send German tanks to Ukraine, despite pressure from his coalition partners the Greens, led by Baerbock and Vice-Chancellor Robert Habeck. The foreign minister also issued indirect but harsh criticism of Scholz’s position: “Now is not the time for excuses; now is the time for creativity and pragmatism,” she said.

Scholz argued last week that Germany should reach a common position with allies on delivering tanks before sending them to Ukraine, while the German defense ministry, which is led by Scholz’s Social Democratic Party colleague Christine Lambrecht, argued that Germany could not immediately deliver tanks to Ukraine from its own army stock because it needs them for its own defense as well as for NATO tasks. A defense ministry spokesperson argued on Monday that supplying Ukraine with offensive weapons was complicated and would require additional training as well as logistical support for maintenance and spare parts. Yet Baerbock pushed back against that argument, calling for “creativity and pragmatism” to solve “issues such as replacement materials and joint training” in order “to support Ukraine as soon as possible.” Western officials have said that Russia is preparing for a major offensive in Eastern Ukraine in the coming weeks. The Ukrainian government has appealed to Germany and other EU governments to supply tanks and air defense systems to stop that offensive and also to be able to take back Ukrainian territories that are currently occupied by Russian forces.

[Top of the Document]

#### 10. Russia Could Triple Troop Numbers in Bid to Take Donbas, Say Western Officials (Independent, Patrick Daly, 11 Apr 22)...

Vladimir Putin is expected to double or even possibly triple the number of Russian troops in the Donbas as the Russian president resorts to a “diminished” invasion strategy, according to Western officials. The amassing of troops, however, will not necessarily give Moscow an advantage over Ukraine, with Kyiv’s forces having had success in pushing back insurgents in the east of the country, they said. The Russian leader has been forced to “diminish considerably” the plan in Ukraine, one official said, amid suggestions Mr Putin wants to take the Donbas region before May 9 – when Russia traditionally marks the Soviet Union’s World War Two victory against Nazi Germany with military parades in Moscow – in an attempt to claim victory for his so-called “special operation”. Another official said: “I would imagine that, at outside estimates, what you’re looking at is a force which is probably the Russians looking to double or even treble the amount of force that they bring into that Donbas area. “But I would note that that is going to take some considerable time to bring them up to that sort of number. “And even when they bring themselves to that number, there is a question over how effectively they can bring those forces into the battle. “The Russians have shown themselves to be not very effective in this invasion as to being able to use their numerical advantage effectively to actually bring about a decisive engagement.”

It comes after Downing Street confirmed further details of the Prime Minister's trip to the Ukrainian capital to meet with President Volodymyr Zelensky. Boris Johnson held talks with his counterpart over a dinner of roast beef after touring Independence Square on Saturday. The British leader was in Kyiv for around five hours, and travelled by car, helicopter, military plane and train, according to a No 10 spokeswoman. Western officials said they hoped that, with Russia's military regrouping and moving east, more European leaders could travel to Kyiv to show solidarity "on the ground" with Ukraine. While Russian troops are poorly-led and ill-disciplined, they are also becoming desensitised by the war, an official said, leading to "revolting" behaviour, such as the "targeting of civilians". The Foreign Office said it was "shocked" by reports of mass graves being found in the village of Buzova outside Kyiv. Local officials said bodies showing "evidence of execution" had been discovered following the Russian withdrawal. Buzova is near Bucha, another town where atrocities were discovered although Russia has claimed the scenes from the aftermath of its occupation were staged.

The UK will work with allies to "investigate war crimes and ensure justice is done", a Foreign Office spokesman said. The next phase of the conflict is expected to see focus shift to the south east of Ukraine, although it is not known when a fresh assault will commence. Western officials said that 37 to 38 Russian battalion tactical groups are "non-combat effective" – up by almost 10 on last week's estimate. The total force available is about 90 battalion tactical groups, with between 700 and 1,000 troops said to be contained in each one. One official said: "It is clear there is an intent to reinforce the Russian presence in and around those forces, both in and surrounding the Donbas. "We're already starting to see some Russian forces continue their attacks into the Donbas, and we are also seeing Ukrainian forces being effective in causing them problems. "I think the losses that we've seen and the scale of losses, regardless of the reinforcing of their forces into the Donbas, it is still unclear how they (Russia) are going to overcome some of the morale issues they will have with their troops. "And we've seen numbers of troops being unwilling to fight and refusing to engage in operations. "When they do start, with the scale of operations we anticipate in the Donbas, they will also have large logistic lines open up which will be vulnerable potentially to attack by Ukrainian forces."

Britain is increasingly worried that Russia could use white phosphorus munitions in the bombardment of the besieged Ukrainian port Mariupol. White phosphorus is used for illumination at night or to create a smokescreen, but when it is deployed as a weapon it causes horrific burns. Western officials think that, for Russia, bringing about the fall of Mariupol is seen as crucial for both freeing up troops for the fight in the Donbas but also for creating a route north for the Kremlin's forces as they look to form a pincer movement on Ukrainian defenders in the east. Meanwhile, the Russian military said it had destroyed a shipment of air defence missile systems provided to Ukraine by the West. The claim has not been verified. Russian defence ministry spokesman Maj Gen Igor Konashenkov said the military used sea-launched Kalibr cruise missiles to destroy four S-300 air defence missile launchers on the southern outskirts of the city of Dnipro, which lies in the east of Ukraine. He said about 25 Ukrainian troops were also hit by the strike on Sunday.

11. Russians Ready for New Offensive in Eastern Ukraine, U.S. Official Warns (Politico, Quint Forgey, 11 Apr 22)...

Russia has begun an effort to "resupply and reinforce" its forces in eastern Ukraine before mounting a new offensive in the Donbas region, a senior Defense Department official said on Monday. The official, who spoke on condition of anonymity, pointed to open-source images showing a line of Russian military vehicles heading toward the Ukrainian city of Izyum — just outside the Donbas, to its northwest. Although Russian forces still remain north of Izyum, the official said, the United States assesses that the line of vehicles includes a command and control element and a support group battalion, as well as perhaps rotary wing aviation support and other infantry support. "We do believe that this is an early effort by the Russians to bolster their presence and their capabilities in the Donbas," the official said, adding that the developments are "clear evidence of what we've been saying for a while now: that the Russians are going to want to pour more of their assets into the Donbas." Russia's planned assault on the Donbas comes after

its forces retreated from around the capital of Kyiv in recent days after encountering stiff Ukrainian resistance. Their hasty withdrawal exposed scenes of apparent war crimes and other atrocities in Bucha and other suburbs of Kyiv. Now, the official said on Monday, “the locus of everything we’re seeing is on the Donbas region,” from which Russia launched its latest invasion of Ukraine in February, 47 days ago.

Before proceeding with a full-scale invasion on the country, Russia first moved troops across its western border into the Donbas, which is home to two breakaway areas largely held by Moscow-backed separatists: the so-called Donetsk People’s Republic and Luhansk People’s Republic. The United States does not yet “assess that a new offensive has started” in the Donbas, the official said on Monday. But the official noted that a “hot war” has already been underway in the region since 2014 – when fighting began between Ukrainians and the pro-Russian separatists backed by Moscow. The official also said the United States assessed that Russia had indeed appointed Gen. Alexander Dvornikov to lead its war effort in Ukraine, as was reported over the weekend. Dvornikov previously oversaw Russian forces in Syria, and his brutal tactics there have prompted fears in the United States that the invasion of Ukraine could become even more violent as the fight shifts eastward. But the official said on Monday that “it remains to be seen what sort of an effect” Dvornikov will be able to have on Russian forces, who have faced significant logistical and morale problems amid the protracted conflict. “They have high challenges to surmount, and the choice of a general doesn’t mean that they’re poised for greater success here,” the official said. “We’ll just have to wait and see.”

[Top of the Document]

## 12. Russian Forces Ramp up Efforts to Gain Control of Mariupol (Irish Times, 11 Apr 22)...

Russian forces are pushing hard to establish control over the southern port city of Mariupol, the linchpin between Russian-held areas to the west and east and already devastated by weeks of siege and bombardment. Thousands of Russian troops were massing for a fresh offensive in the east, according to Ukrainian president Volodymyr Zelenskiy on Monday. He added that Moscow said it would not halt its military operation in Ukraine for any further peace talks. British intelligence indicated that Ukrainian forces had already repulsed several Russian assaults in eastern regions. Britain’s defence ministry said Russian shelling continued in the Donetsk and Luhansk regions. But Ukrainian forces had beaten back several assaults and destroyed tanks, vehicles and artillery equipment, it said. For now at least, the invading forces have abandoned their attempt to capture the capital Kyiv but they are redoubling efforts in the east. The invasion – which Russia calls a “special military operation” – has left a trail of death and destruction. Moreover, the attack has drawn condemnation from western countries and triggered concern about President Putin’s broader ambitions.

Russia’s defence ministry said sea-launched missiles had on Sunday destroyed S-300 anti-aircraft missile systems which had been supplied to Ukraine by a European country. The batteries were concealed in a hangar on the outskirts of Dnipro in central Ukraine, it said. The United States did not have evidence that any S-300 missile defence system had been destroyed by Russia, said a senior defence official. Washington believes Russia has started reinforcing and resupplying its troops in Donbas in eastern Ukraine, the official added, but that the US does not believe this is the start of a new offensive in the region. President Zelenskiy appealed to South Korea’s parliament by videolink to provide his country with military aid to assist Ukraine’s struggle against the Russian onslaught. About one-quarter of Ukraine’s 44 million population have been forced from their homes, cities turned into rubble and thousands have been killed or injured, many of them civilians. Russian foreign minister Sergei Lavrov confirmed that the Kremlin would not halt its operation for any new round of peace talks. And he accused Kyiv of failing to reciprocate in previous sessions. Mr Lavrov told state television he saw no reason not to continue with talks. But although President Putin had ordered a suspension of military action during a first round in February, Moscow’s position had changed, he said. “A decision was made that during the next rounds of talks, there would be no pause [in military action] so long as a final agreement is not reached,” said Mr Lavrov. Austrian leader Karl Nehammer met President Putin in Moscow on Monday and was expected to call for an end to the conflict. It was Mr Putin’s first face-to-face meeting with a European Union leader since the invasion started. “This is not a friendly

meeting.” Mr Nehammer was quoted as saying in a statement issued by his office, reiterating that he had hoped to help bring an end to the war or improve conditions for civilians. “The conversation with President Putin was very direct, open and tough.”

Mounting civilian casualties have triggered widespread international condemnation and new sanctions. Luhansk governor Serhiy Gaidai said shelling in the region was increasing day by day. “The most difficult situation is in [the cities of] Rubizhne and Popasna. They are being shelled constantly, round the clock,” said Mr Gaidai. He urged all civilians to evacuate. “Those that wanted to leave have already left, while now many are left in bomb shelters who are perhaps frightened to come out . . . or scared to lose their possessions.” Moscow has rejected accusations of war crimes by Ukraine and western countries. It has repeatedly denied targeting civilians and says its aim is to demilitarise and root out dangerous nationalists in its southern neighbour. Ukraine and western nations have dismissed this as a baseless pretext for war. German foreign minister Annalena Baerbock, speaking before a meeting of European ministers in Luxembourg, said Berlin saw “massive indications” of war crimes in Ukraine. Meanwhile, French bank Société Générale became the latest company to retreat from Russia. It agreed to sell its stake in Rosbank and the Russian lender’s insurance subsidiaries to Interros Capital, a firm linked to billionaire Vladimir Potanin. The invasion has triggered a wave of financial sanctions from the United States, Europe and Britain, prompting western companies to sell their Russian assets. Several European Union ministers said on Monday the bloc’s executive was drafting proposals for an oil embargo on Russia, although there was still no agreement to ban Russian crude. The World Bank forecast the war would cause Ukraine’s economic output to collapse by 45 per cent this year, with half of its businesses shuttered, grain exports mostly cut off by Russia’s naval blockade and destruction rendering economic activity impossible in many areas. The bank forecast Russia’s gross domestic product would contract by 11.2 per cent this year due to sanctions.

### 13. Russia Says West Helping Ukraine Prepare Fake Allegations of War Crimes (Reuters, 11 Apr 22)...

Moscow said on Monday that the United States and Britain were helping Ukraine prepare fake claims about the alleged persecution of civilians in Ukraine to feed to international media in an attempt to smear Russia. Since Russian troops withdrew from towns and villages around the Ukrainian capital Kyiv, Ukrainian troops have been showing journalists corpses of what they say are civilians killed by Russian forces, destroyed houses and burnt-out cars. The West says the dead civilians are evidence of war crimes. Reuters reporters saw dead bodies in the town of Bucha but could not independently verify who was responsible for the killings. Russia’s defence ministry said Ukraine’s government was being directed by the United States to sow false evidence of Russian violence against civilians despite what it cast as Moscow’s “unprecedented measures to save civilians.” “The United States, which has many years of experience in organizing provocations with human victims, continues its campaign to create and promote false ‘evidence.’” the ministry said.

Ukraine says Russia is guilty of genocide and has called on the West and the NATO military alliance to give it more support. Russia said British intelligence was helping Ukraine to prepare new fake claims about alleged abuses in northeastern Ukraine. The defence ministry did not provide evidence for its claims of British and U.S. involvement. “New false staged provocations accusing the armed forces of the Russian Federation of allegedly cruel treatment of the population of Ukraine are being prepared by the Kiev regime under the leadership of British special services on the territory of the Sumy region,” the ministry said. Russia said Western journalists had been invited to the Sumy region in northeastern Ukraine to “conduct the filming of staged plots”. The ministry said Western media would publish such fake news shortly. It did not say which media.

It said that Russian troops had left the alleged scene of some of the abuses, the Ukrainian village of Nyzhnya Syrovatka, on March 20. “The goal is to further stoke Russophobia against the backdrop of the rapidly developing

economic crisis in Europe," the ministry said. Russia's Feb. 24 invasion of Ukraine has killed thousands of people, displaced millions and raised fears of a wider confrontation between Russia and the United States. Putin says the "special military operation" in Ukraine is necessary because the United States was using Ukraine to threaten Russia and Moscow had to act to defend Russian-speaking people in Ukraine against persecution. Ukraine says it is fighting against an imperial-style land grab and dismisses Putin's claims of genocide as nonsense.

[Top of the Document]

#### 14. Russia Claims It Destroyed Ukrainian Air Defense Systems (VOA, Ken Bredemeier and Jeff Seldin, 11 Apr 22)...

Russia said Monday that it destroyed several air defense systems in Ukraine over the weekend, ahead of what Ukrainian President Volodymyr Zelenskyy is warning could be the start of a renewed Russian offensive into the country's eastern region. The Russian claims could not be verified, but Russian Defense Ministry spokesman Major General Igor Konashenkov said the military launched cruise missiles to destroy four launchers Sunday on the southern outskirts of the central city of Dnipro and also hit systems in the Mykolaiv and Kharkiv regions. Zelenskyy pleaded Monday for more military aid from the U.S. and its allies, specifically requesting South Korean lawmakers in a video address to send more equipment that can shoot down Russian missiles. Meanwhile, the Pentagon said Monday it is seeing early signs of efforts by Russia to reinforce its troops in eastern Ukraine. The U.S. spotted a convoy north of Izyum with command-and-control elements, enablers, artillery, and rotary blade air support, according to a senior U.S. defense official. The official said there also are indications that Russian forces sent from northern Ukraine to Belarus and the Russian town of Valuyki are now moving toward eastern Ukraine. The official said, "We do not assess a new offensive has started" in eastern Ukraine but added, "What is clear is that the Russians continue to sink to new lows of depravity and brutality as we saw with the missile strike on a train station last week and their continued assault on Mariupol ... . "We're certainly bracing ourselves here for some potentially really, really horrible outcomes," the official said.

The U.S. official said Russia has launched 1,500 missile attacks on Ukraine during 47 days of war, destroying apartment buildings and hospitals throughout the country and killing thousands of Ukrainian civilians. Russia has acknowledged sustaining "significant" troop losses of its own. Russia said one of its latest missile attacks hit four S-300 launchers provided by a European country it didn't name. Slovakia gave Ukraine just such a system last week but denied it had been destroyed. Military analysts say that Russia's failure to capture the Ukrainian capital of Kyiv and the bulk of territory throughout the country has in part been the result of its failure to control the skies over Ukraine to provide cover for ground troops. Nonetheless, its missile bombardment has virtually flattened some cities and one missile attack on a train station killed more than 50 people last Friday. Russia has not been able to stop the flow of more military aid to Ukraine, with eight to 10 flights arriving daily. Zelenskyy told the CBS News show "60 Minutes" on Sunday that Ukraine's fate depends on further Western military assistance. "To be honest, whether we will be able to (survive) depends on this," Zelenskyy said. "Unfortunately, I don't have the confidence that we will be receiving everything we need."

European Union foreign ministers are meeting Monday to discuss another round of sanctions against Russia. Meanwhile, Austrian Chancellor Karl Nehammer met with Russian President Vladimir Putin in Moscow, the first such visit by a European leader since Putin launched the invasion of Ukraine on February 24. In a statement after the meeting, Nehammer said the discussion with Putin was "very direct, open and tough." Nehammer said his most important message to the Russian leader was that the war in Ukraine must end because "in a war there are only losers on both sides." There was no immediate comment from the Kremlin.

[Top of the Document]

#### 15. Russia Will Not Pause Military Operation in Ukraine for Peace Talks (Reuters, 11 Apr 22)...

Russia will not pause its military operation in Ukraine for subsequent rounds of peace talks, Russian Foreign Minister Sergei Lavrov said on Monday. Russian officials say peace talks with Ukraine are not progressing as rapidly as they would like, and have accused the West of trying to derail negotiations by raising war crimes allegations against Russian troops in Ukraine, which Moscow denies. Speaking in an interview with Russian state television, Lavrov said he saw no reason not to continue talks with Ukraine but insisted Moscow would not halt its military operation when the sides convene again. Lavrov said that President Vladimir Putin had ordered to suspend military action during the first round of talks between Russian and Ukrainian negotiators in late February but that Moscow's position had changed since. "After we became convinced that the Ukrainians were not planning to reciprocate, a decision was made that during the next rounds of talks, there would be no pause (in military action) so long as a final agreement is not reached," Lavrov said.

Russia sent tens of thousands of troops into Ukraine on Feb. 24 in what it called a special operation to degrade its southern neighbour's military capabilities and root out people it called dangerous nationalists. Ukrainian forces have mounted stiff resistance and the West has imposed sweeping sanctions on Russia in an effort to force it to withdraw its forces. Lavrov last week accused Kyiv of presenting Moscow with an "unacceptable" draft peace deal that deviated from agreements the sides had previously reached. Kyiv dismissed Lavrov's comments at the time as a tactic to undermine Ukraine or divert attention from war crime accusations against Russian troops. In the interview aired on Monday, Lavrov also said that calls by Josep Borrell, the European Union's top diplomat, for the bloc to continue arming Kyiv marked a "very serious U-turn" in European policy.

PREPARE

16. Army Generals to Be Nominated to Lead European Command, Special Operations Command: Report (MilitaryTimes, Meghann Meyers, 11 Apr 22)...

The current heads of U.S. Army Europe and Africa and Joint Special Operations Command have been chosen for new posts, according to a Wall Street Journal report. Gen. Christopher Cavoli will be nominated to lead U.S. European Command, U.S. officials told WSJ, and Lt. Gen. Bryan Fenton will be tapped for U.S. Special Operations Command. The White House and Pentagon declined to comment on the nominations Monday. Neither has been officially sent to the Senate to prepare for confirmation hearings. Fenton, a career Special Forces officer, took command of JSOC in July, after serving in the defense secretary's office as an adviser. Prior to that, he was the deputy commander of U.S. Indo-Pacific Command. Fenton would be the first Green Beret in nearly 20 years to lead SOCOM. The current head of the command, Gen. Richard Clarke, cut his teeth in the 75th Ranger Regiment, as did Gen. Tony Thomas before him.

Cavoli has led U.S. Army Europe since 2018. He became the head of the Army's combined Europe and Africa command when they consolidated in October 2020. An infantryman-turned-foreign area officer, Cavoli previously lead the Hawaii-based 25th Infantry Division. If confirmed, he would take over for Air Force Gen. Tod Wolters, who has been at the center of the U.S. and NATO responses to Russia's invasion of Ukraine. EUCOM commanders automatically take on a second role as NATO's supreme allied commander. As the war in Ukraine has ramped up, the U.S. has mobilized more than 12,000 troops to Germany and eastern Europe. At the same time, there's ongoing discussion at the Pentagon and within NATO on what the U.S. force posture should look like on the continent going forward.

17. Nato's 'Achilles Heel': Alliance Conducts War Games in Nervous Lithuania (Guardian, Philip Oltermann, 11 Apr 22)...

About 30km west of the Belarusian border, the enemy's tanks were rolling through the pine forests of Lithuania at

speed until a makeshift obstacle made of barbed wire blocked their path. Soldiers carrying bolt cutters jumped out of the armoured vehicle at the front to clear the road. Then, a deafening bang. In its rush to victory, the advancing party had neglected to check the sandy terrain underneath the roadblock for mines. Luckily, for them, this was merely a dress rehearsal for a showdown between Russia and the North Atlantic alliance. No live explosives were used in Nato's "Rising Griffin" manoeuvre at the Pabradė military base in eastern Lithuania. Instead, referees politely informed the tank commanders that their vehicles would have been ripped to shreds. The Russian enemy was being impersonated by American and Norwegian troops. The western defenders may have notched up a tactical victory against an eastern aggressor on this sunny April morning, yet Nato's security architecture has never looked more fragile than in the spring of 2022, especially when viewed from Lithuania, a country long considered the alliance's achilles heel.

An independent republic since 1990, the southernmost of the three Baltic states borders both Russia-allied Belarus on its eastern side and the Russian exclave of Kaliningrad on its western flank. On Russian television, pundits have openly urged the Kremlin to escalate the war in Ukraine by enforcing a military corridor along the "Suwalki gap" – Lithuania's short border with Poland – thus cutting off the Baltics from other Nato-allied lands. "Until last November, we had the Russian army quite far away from Nato's borders," said Gabrielius Landsbergis, Lithuania's foreign minister. "Now the military activity is very close. To add to that, Lithuania lies between the territory of Belarus and the territory of Kaliningrad. Which puts us in a strategic situation that is, let's say, interesting." Since 2016, after Russia's annexation of Crimea, "enhanced forward presence" battlegroups have been stationed in four member states on Nato's eastern flank: Poland, Estonia, Latvia and Lithuania.

The war in Ukraine has led the alliance to further bolster its presence in the region, with multinational battalions to be dispatched to Romania, Bulgaria, Hungary and Slovakia. The military presence in Lithuania has been increased from approximately 1,200 to roughly 1,600 soldiers and equipped with new hardware, such as the German army's light and mobile Ozelot anti-aircraft system, which can be used to protect airports from aerial assaults. But the function of these military units remains that of a "tripwire": a reminder to hardliners in the Kremlin that invading what they may see as renegade breakaway nations of a former Russian empire would automatically trigger a military conflict with other western European states. But in their current state, there is little doubt the enhanced forward presence units would sooner or later be overrun. The scenario being rehearsed in the Rising Griffin exercise was a David v Goliath one, with the attacking force taking the role of the giant. The priority of Nato's troops in the manoeuvre, said one officer, was to "delay the enemy", not to hold the line.

As Nato members prepare to meet in Madrid in June, Lithuania, along with its Baltic neighbour Estonia, is calling on Nato to urgently adjust its posture in the region from deterrence to what it calls "forward defence". "What we're seeing in Russia and Belarus is now a dangerous country with the intention to attack other sovereign states," Landsbergis told the Guardian. "It's a double-edged sword: on the one hand Russia has proven in Ukraine that it is a declining regional power. On the other hand, it can still do a lot of damage on its way down, as it seems to have no regard for its own losses. We have to defend the Baltic states, especially those that are geographically interesting to Russia." In keeping with the "founding act", a political agreement signed by Nato and Russia in 1997, there are restrictions on how many western allied troops are allowed to be deployed to the Baltics, and how close they can be stationed to the border.

The enhanced forward presence in Lithuania, which is made up of seven European nations and led by Germany's Bundeswehr, has to be rotated every six months at considerable cost and effort, with hundreds of vehicles having to be transported by road, rail or air before each changeover. While countries such as Germany and the UK remain committed to the founding act, Lithuania and other states in the region say the document is no longer viable as a treaty. "We consider it null and void after what Russia has done," Landsbergis said. "The new reality we have to accept is that the treaties that built the old security environment with Russia are no more. We have to look at this

with new eyes. There has to be a permanent military presence with everything needed to defend the skies, defend the seas and defend the land of the Baltic states." Estonia's prime minister last week called for the three Baltic states to be handed "war-fighting capabilities", with divisions of up to 25,000 soldiers per country. "The question we have to ask ourselves is: what will be the new global security architecture of the world after this war?" said Landsbergis. "At the moment, we are merely reacting to what is happening in Ukraine. But that has to change. We have to start thinking in strategic terms."

1. Putin's Bullying Backfires as Finland and Sweden Edge Closer to Joining NATO  
(CNN, Luke McGee, 12 Apr 22)...

When Vladimir Putin launched his invasion of Ukraine, his goals were clear. He wanted to bring his neighbor to heel, assert Russian authority in Eastern Europe and make the West think twice about expanding militarily and politically toward Russia's borders. But in one important respect, Putin's plan appears to have failed: The war has united the West against Moscow in ways that seemed unimaginable in January. Now, Finland and Sweden -- nations that are officially non-aligned -- are edging ever closer toward joining NATO, the US-led military alliance. Finland is expected to produce a report on the country's security policy this week, a key step on the road to the nation potentially applying for NATO. That report is expected to start discussions in Finland's parliament about whether to pursue membership in the alliance -- discussions which Finnish Prime Minister Sanna Marin said she hoped would wrap up "before mid-summer." Finland's foreign minister Pekka Haavisto said Monday that it was "important" that neighboring Sweden was following a "similar process" which he expects to take time. "But of course we exchange information all the time and, hopefully, if we make similar kinds of decisions, we could do them around the same time."

Sweden holds an election later this year, in which NATO is likely to be a key campaigning issue, with mainstream parties potentially not objecting to joining the alliance. Swedish Prime Minister Magdalena Andersson did not rule out the possibility of membership in an interview with SVT at the end of March. Sweden is undertaking an analysis of security policy that's due to be completed by the end of May, and the government is expected to announce its position following that report, a Swedish official told CNN. They said their nation could make its position public sooner, depending on when neighboring Finland does. Public opinion in both countries has shifted significantly since the invasion, and NATO allies and officials are on the whole supportive of the two countries joining. The only serious objection could come from Hungary, whose leader is close with Putin, but NATO officials think it would be able to twist Prime Minister Viktor Orban's arm. Given that Putin started his war demanding that NATO roll its borders back to where they were in the 1990s, the fact this is even being considered represents a diplomatic disaster for Moscow. And if Finland in particular were to join, Putin would find Russia suddenly sharing an additional 830-mile border with NATO.

Kremlin spokesman Dmitry Peskov warned on Monday that expanding NATO wouldn't bring any more stability to Europe. "We have repeatedly said that the alliance itself is more of a tool for confrontation. This is not an alliance that provides peace and stability, and further expansion of the alliance, of course, will not lead to more stability on the European continent," he said. Rob Bauer, the head of NATO's military committee, told reporters on Tuesday that the alliance has not ruled out new members, but said it was ultimately up to Finland and Sweden to decide whether they want to join, Reuters reported. "It is a sovereign decision of any nation that wants to join NATO to apply for membership, which they so far have not done ... We are forcing no one into NATO," Bauer said. Nor has Putin's invasion motivated Ukraine to pull back from its desire for closer integration with the West. While the country is unlikely to join NATO, its efforts to join the European Union have accelerated since the start of the war. This would take a very long time and could also face stiff opposition from Hungary, which is already in a nasty battle with Brussels over its violations of the rule of law, causing the EU to propose suspending central funding to Budapest.

However, once again, the fact it's being talked about and the level of support among EU leaders and officials is another indication of just how united the West has become against Russia. It's worth noting that since the start of the war, the West has remained largely united in its response to Russia, be it through economic sanctions or military support for Ukraine. However, there are a few challenges coming up that will test how united this alliance against Russia really is. First, if it emerges that Russia has used chemical weapons in Ukraine, there will be enormous pressure for the West, particularly NATO, to take an even more active role in the war -- something the alliance has been reluctant to do so far. NATO members have already discussed red lines and what action should be taken in the event of chemical weapons, but those details are still private to prevent Russia from taking pre-emptive protective action. However, any NATO intervention would almost certainly lead to a less stable security situation in Europe, as the West would risk a military confrontation with Russia -- a nuclear power, which would likely respond by intensifying its attacks on Ukraine and possibly in other areas of traditional Russian influence. Second, the cost of living crisis in many European countries could soon test the unity of future Western sanctions on Russia and embargoes on Russian energy. If, ultimately, the economy of Western Europe is deemed more important than holding Russia to account for waging war on its peaceful neighbor, then Putin could to some extent get away with invading an innocent country. But for now, as that unity largely holds, it is clear that Putin's desire to belittle the Western alliance has backfired -- and that the strongman has secured pariah status for his nation, possibly for years to come.

## 2. Finland Finishes White Paper Set to Kick off NATO Debates (Bloomberg, Leo Laikola, 12 Apr 22)...

Finland is set to kick off a process that is likely to culminate in an application by Russia's Nordic neighbor to join the defense alliance NATO. The government, together with President Sauli Niinisto, on Tuesday finalized a white paper on changes to the nation's security environment following its former imperial master's attack on Ukraine. The report will be sent to parliament and made public when officially signed off by the government in a session due to take place on Wednesday. While no proposal to join the North Atlantic Treaty Organization is set to be included, the government is prepared to later file an addendum on such a proposal should the required backing for it emerge in parliament, Foreign Minister Pekka Haavisto has said. More than half of voting lawmakers now support joining the alliance, according to an unofficial tally by Finland's biggest newspaper Helsingin Sanomat.

Finland has seen a tectonic shift in attitudes toward the membership in NATO following the invasion of Ukraine, with the latest polls showing a majority of Finns now backing it. With the white paper set to be used as a vehicle for the parliament to debate the issue, a potential entry application could be filed before the 30-member bloc is set to meet for a summit in Madrid June 29-30. The Nordic nation of 5.5-million people, which has the European Union's longest border with Russia, has been warned by its eastern neighbor against joining NATO, raising concerns about

potential aggression from Moscow. On Friday, Finland reported an attack on government websites and a suspected airspace violation by Russian aircraft. The changing security landscape and public opinion is also seeing governing parties move toward supporting a membership in NATO. During the weekend, Finland's Center Party, that's part of a five-party cabinet run by Social Democrat Prime Minister Sanna Marin, opened the door to a potential membership bid. In yet another sign of the change in opinions on security issues, Finns have also given a somber assessment of their eastern neighbor with 84% now seeing Russia a significant military threat.

### 3. In Ukraine, Facebook Fact-Checkers Fight a War on Two Fronts (Washington Post, Naomi Nix, 11 Apr 22)...

First came a one-minute video taken on the streets of Bucha, a Kyiv suburb abandoned by retreating Russian forces. The footage showed numerous bodies, civilians in winter coats, scattered along the muddy roads like leaves on a fall day. Then came the deluge of misinformation: On social media, some argued the images were fake, that the bodies were actors pretending to be dead. Others falsely claimed the Ukrainian military had slain their own countrymen. It fell to Valeriia Stepaniuk, 22, to set things straight. Stepaniuk fact-checks content for Facebook as part of her job at a think tank called VoxUkraine. After scouring credible news sources — such as a BBC article that said satellite imagery disproved Russian claims that the Bucha footage was staged — she and a handful of colleagues are compiling a report to debunk the misinformation flooding social media. “It was hard to write about this, to see everything the first several times,” Stepaniuk said from her home in the Western city of Lutsk. “But now I understand I can’t ignore this. Everyone should see the photos and understand the scale of tragedy.” Stepaniuk is part of a small group of independent fact-checkers in Ukraine who have long worked with Facebook to identify falsehoods on their social networks. When such outside groups determine a post is false, Facebook decreases its visibility in users’ news feeds and attaches a warning label pointing them to an explanation from the fact-checker. The role of these fact-checkers has become more critical since Russia invaded Ukraine on Feb. 24. VoxUkraine started as a blog by economists in 2014, when Ukraine’s president decided not to sign a trade agreement with the European Union, prompting a wave of protests. Now, the think tank is part of a nascent coalition determined to slow the spread of misinformation about the war. These groups bolster Facebook’s own algorithms and thousands of content moderators who police content that breaks its rules.

Before the war, there were no groups assigned to fact-check posts in Russia, according to a Washington Post review, and only two examining content in Ukraine: VoxUkraine and StopFake. Now, there are eight additional groups policing misinformation in the region. The stakes are high, as social media is increasingly becoming a tool of modern warfare. Ukrainians and Russians have both been turning to social media to win hearts and minds around the world as the bloody conflict destroys Ukrainian infrastructure, claims thousands of lives and sends refugees flooding into neighboring countries. Both VoxUkraine and StopFake have lost workers to the front lines. Those who stayed behind have had to fit fact-checking into days filled with planning for escape to Western cities or taking cover during particularly violent moments. “It was very frustrating moment because you need to come to terms with the reality of war,” said StopFake editor in chief Yevhen Fedchenko. “The challenge was how are we going to operate a business in the fog of war.” Meta spokesperson Ayobami Olugbemiga said in a statement that during the invasion the company has “been providing significant resources to fact-checkers covering Eastern Europe to increase their capacity to help slow the spread of misinformation about the war in Ukraine and help ensure their safety.” Facebook, which was recently renamed Meta, has long faced criticism of its role in spreading misinformation globally, particularly in the midst of elections and global conflicts.

Last month, the tech giant announced it had taken down a network of accounts that were operating from Russia and Ukraine to target people there with claims that Western nations were betraying their country. A pair of whistleblower complaints filed to the Justice and Treasury departments in December and February allege that the company has allowed sanctioned entities and individuals to spread Russian propaganda on Facebook and Instagram. The company has hired thousands of content moderators and has trained its algorithms to catch misinformation that breaks the site’s rules on hate speech and other issues. But it also started adding organizations like VoxUkraine and

StopFake following the 2016 election, paying independent news outlets and small media organizations to debunk misinformation. Those organizations are members of the International Fact-Checking Network, which sets editorial standards for fact-checking organizations and is run by the Poynter Institute, a nonprofit research organization. Facebook is also frequently their member organizations' largest source of revenue. VoxUkraine, StopFake and others get access to a special dashboard, where they see a list of potential posts and links in a specific region that could be debunked, according to representatives of several fact checking organizations. Then fact-checkers like Stepaniuk can pick what they want to focus on, relying on government records, press reports and software to help identify false statements, misleading news and doctored imagery. For example, Stepaniuk recently focused her attention on an article with anonymous sources posted on Facebook claiming the United States planned to send the Afghanistan military to fight in Ukraine. She and her colleagues began scouring the Internet for evidence that could support a written explanation about why it wasn't true. They found a news report about a news conference held before Russia's invasion of Ukraine, in which President Biden said he would not send troops to Ukraine. They also noticed that Linda Thomas-Greenfield, the U.S. Ambassador to the United Nations, reiterated that argument in March. And they pointed out that the Afghan National Army had collapsed when the Taliban took over the country last August. They posted an article publishing the results of their findings.

Months before Russia invaded, the Ukrainian-based StopFake was already developing contingency plans in case war broke out. They acted on warnings from foreign intelligence officials about Russia's increasing aggressiveness, Fedchenko said. He took those reports seriously in part because they kept seeing Russian propaganda that offered new twists on old claims such as Ukraine is a failed, fascist state and the Ukrainian military plans to take back control of Crimea with force. "We have been looking at disinformation for eight years and for us it was obvious that it's not the end, it's just the beginning," Fedchenko said. "That gives you a very kind of special attitude because we have a very small team of people who are fighting against a huge machinery of lies." StopFake started working on an editorial plan to cover the war. The group also mulled potential measures to shore up the security of their technological systems. And they thought about how to ensure their employees could get to safety in the event that Kyiv, where the group is based, was surrounded quickly by Russian forces, Fedchenko said. Just a couple of days before Russia's invasion, traffic was unusually high at Russian state-backed propaganda channels on Facebook and YouTube, which were promoting false claims about the war such as that Ukrainians had attacked Russians, according to a Post data analysis. The day Russia invaded, VoxUkraine staffers spent their morning Zoom call developing new products to fight misinformation about the war on the Internet, said Svitlana Slipchenko, the head of VoxUkraine's fact-checking arm. The group decided to further expand their fact checking program beyond Facebook to emerging platforms such as Telegram, where it seemed Russia propaganda was migrating. It also decided to launch a podcast to tell Ukrainians positive news about the war.

After their meeting, VoxUkraine managers began calling on their staff members to check in. Many of them talked about their plans to flee to cities in Western Ukraine such as Sumy and Kryvyi Rih. Some privately told their bosses they wanted to take a mental health break for a few days before returning to work. For others, debunking viral falsehoods was a welcome respite from the chaos of the invasion, said Slipchenko. "In some days, I just wanted to sit at the floor and cry about all that's happening in Ukraine now," Slipchenko said about the early days of the invasion from her Kyiv apartment, where she has heard explosions and seen smoke billowing from the city streets. "The work was the main factor that helped me deal with this situation. I know that I'm on the informational front of this war." That day Maksym Skubenko sat in his apartment mulling his next move to fight the Russian invaders. As chief executive of VoxUkraine, Skubenko had already mapped out contingency plans to swap intelligence with the government, and knew his 25-person team could function without him. So Skubenko, 30, chugged a couple small glasses of whiskey and took a taxi to enlist. Instead of using a computer to patrol the digital front lines of Russia's war in Ukraine, he chose to fight with a gun. "We need to fight," Skubenko said in a Zoom interview. "We need to become stronger and stronger — even stronger than we are right now — and to fight them because they will never stop." Three employees of StopFake's 15-member team also temporarily left their posts to go fight in the war but Fedchenko replaced them by recruiting among alumni of the journalism school where he works.

After the conflict began, Facebook barred Russian state-controlled media outlets from advertising and said it demoted its content on its social networks. The company also started reaching out to a handful of organizations in nearby countries to ask them if they could also fact-check content appearing in Ukraine and Russia. And it added additional groups. Georgia-based Myth Detector is one organization that expanded its capacity to catch viral propaganda about the war. After the invasion, Meta expanded its agreement with the fact-checking site so the group could also debunk falsehoods appearing in Russia, Ukraine and Belarus, according to Tamar Kintsurashvili, executive director of the Media Development Foundation, which started the site. To cope with the influx of Russian disinformation, the organization hired one additional Russian speaker and reallocated two others who speak the language to focus on fact checking, Kintsurashvili said. Latvia-based fact-checking group Re:Check was asked by Facebook to start checking content in Russia and Ukraine. Re:Check editor Evita Puriņa said their three-person team is still primarily focused on checking posts targeted at Latvian audiences, not the posts appearing in the other countries. Puriņa added that the group's resources are "quite limited" but they decided to add another fact-checker. "We realized soon enough we don't have resources enough to cover the war," said Puriņa. "Comparing to January, for example, I would say we have tripled our amount of work." Lead Stories, a global debunking website, has also started fact-checking Russian and Ukrainian language content. The group, which also has a partnership with TikTok, said last month it was onboarding at least half a dozen native speakers to handle posts about the war. "We're building the runway as the airplane is taking off," said co-founder Alan Duke.

More than a hundred fact-checking groups around the world have also joined in to help debunk viral rumors about the conflict in their respective countries. The groups are coordinating so they don't duplicate efforts trying to fact-check the same myths — a strategy they developed while policing misinformation about the covid-19 pandemic. Now, the groups are pooling their debunked posts into a database and posting them on the website, #UkraineFacts. So far, there are more than 1,000 debunked posts on the site. "The key lesson was like immediate collaboration," said Enock Nyariki, community and impact manager for the International Fact-Checking Network. "During covid, it was quite slow but I think this collaboration has benefited greatly from our initial working together." Facebook's fact-checking model — one of its primary methods of policing potential falsehoods on its sites — has some critics. Some have alleged that the outside groups can be too ideologically aligned to fairly determine what's true. Others question whether fact checking is a function Facebook should be taking on in-house. The issue has caught the attention of at least one member of Facebook's Oversight Board, an independent group of journalists, human rights experts and academics funded by the company and tasked with overseeing the company's content moderation decisions. "These organizations do not have any oversight," Oversight Board member Michael McConnell said about Facebook's fact-checking model.

On the front lines of the war, many are doing their best. Kyrlo Perevoshchikov, 23, spends his nights on a mattress on the floor in the underground shelter at Taras Shevchenko National University of Kyiv, where he is getting a degree in international relations. During the days, he goes back up to his dorm room where he reads the news, catches up with friends and fact-checks posts on Facebook. Sometimes, a loud siren warns him that it may be dangerous to be above ground so he heads back down to the shelter or to his windowless bathroom to take cover. Then it's back up to his dorm to fact-check. Last month, Perevoshchikov began looking into an online report that alleged Ukrainian President Volodymyr Zelensky fled Ukraine after Russia's invasion in February. Perevoshchikov debunked it by checking news reports showing interviews and news conferences held by Zelensky in his office during the first four weeks of the war. He also saw videos published by Zelensky's administration in which he mentions the popular viral piece of misinformation himself, Perevoshchikov said. Perevoshchikov, who may have to join the armed services when he graduates this spring, said informational warfare is just as important as combat on the front lines, he said. "It will be success for us that we prevent someone from falling into Russian lies and manipulation," he said. "But there is also a feeling that you are not doing enough — that you could not only write fact checking, but you could also volunteer or maybe help your soldiers."

4. Romania Hasn't Always Seen Itself as a Safe Haven. War in Ukraine Has Changed That (NPR, Michel Martin, Liz Baker, Emma Bowman, Eliza Dennis, 12 Apr 22)...

Sasha and Eugenia had just crossed into Romania from Ukraine, carrying their 2-year old son and heavy duffle bags as they walked through a ferry checkpoint. Sasha, the father, says they decided to leave their home country a week earlier. It had been more than a month since the start of the Russian invasion, and the family had reached a breaking point. "Our child, he needs special care," he says through an interpreter. "And then, all of a sudden, we realized we don't have the medicine; it is not available anymore. And that is the moment we got triggered. We decided we had to leave." More than 4.5 million refugees have fled Ukraine since the war erupted in late February. The vast majority, some 2.6 million, have traveled to Poland. Romania has seen the second-largest influx. For many of the more than 690,000 Ukrainians who have passed through Romania, the port city of Isaccea is the final stop on a difficult journey. For others, like Sasha, Eugenia and their young son, it's a way station, one stop among many on a long, unpredictable search for safety. The couple, who declined to give their last names, came from a village near the ferry departure point in the southern Ukrainian village of Orlivka. Eventually, they hope to reach California, where they have family. They arrived in Romania alongside hundreds of others after a 20-minute ferry ride across the Danube River. The throng of new arrivals entered the country wheeling large suitcases, pushing strollers and carrying pets across a bumpy metal ramp. They were greeted by aid workers, who helped them navigate a maze of relief tents and trucks filled with supplies. Daniel Petrov, a local first responder, is in charge of the extensive operation in Isaccea — one that includes border officials, volunteers and medics from three different agencies that all teamed up to respond to the flood of arriving Ukrainians. In the first weeks of the war, the boat ferried some 800 people on a single trip some days, Petrov says. During those early days, he says, "It was, I must say, traumatizing for both Ukrainians and us — the authorities — on this side." The reason, he explained, "I would use only one word: empathy."

Radu Umbres, a professor of anthropology at the National School for Political Studies and Public Administration in Bucharest, says he was taken aback by his country's warm response to the refugees from Ukraine. "The image that we have of ourselves is that in general, we're not especially generous towards foreigners in particular," he says. "We have this idea that developed, rich countries are the ones that help. But in this case, even a rather small and not so affluent country as Romania has offered quite a lot of support for this, for these neighboring people." Romania's embrace of refugees from Ukraine, Umbres concedes, stands in stark contrast to how the nation responded during Europe's last major humanitarian crisis, when millions of migrants and refugees from across the Middle East and Africa sought safety on the continent, including in Romania. "We had refugees from Iraq, from Afghanistan, from Syria, and the general experience was that they were not welcomed," he says. "To be honest about the matter, it's clear that the empathy that Romanians felt for Ukrainian refugees comes from a certain amount of shared cultural heritage," he says. "Ukrainians are very similar to Romanians in many ways. Of course, we have also some shared post-communist history, [which] makes them in a way very familiar." Umbres says the crisis has also brought back echoes of Romania's own troubled history with Russia — memories that remain deeply personal and deeply painful for many. "So many people have personal histories in which their ancestors have been, in one way or another, hurt by the Russian power, by this kind of authoritarian state. So this, again, helps empathizing with them." Of more than 600,000 refugees who have traveled to Romania, roughly 80,000 have chosen to stay. What's unclear is how large that number may ultimately grow the longer the war drags on. "It's quite possible that many Ukrainians might end up staying in Romania for a long time, given the fact that the Romanian economy is doing rather well in the past few years," Umbres says. "I think that if I look towards the future, I think there's a good chance that we'll have a Ukrainian diaspora living in Romania for some time to come."

About 200 miles southwest of Isaccea, Romania's biggest train station, located in the capital of Bucharest, has transformed into another central hub for Ukrainians fleeing the war. Almost every corner of the Gara de Nord station is being used to assist refugees. There are separate waiting areas for women and children, men and families, where refugees can rest, eat and breastfeed. Yellow-vested volunteers stand ready to field questions. An abandoned storefront now houses refrigerators of food prepared by World Central Kitchen — one of the American-based NGO's 42 distribution sites in Romania providing hot meals to refugees. At a medical tent set up by the local fire department, an EMT named Faisal Hawat has been treating somewhere between 60 and 70 patients a day. Many of these people, he says, are struggling with insomnia and anxiety. In the area sheltering women and children, 5-year-old Dana, who's traveling with her parents, happened to be in Sri Lanka when Russia invaded Ukraine. But her teenage sister is stuck in Kharkiv, one of Ukraine's hardest-hit cities. Dmytro Ishchuk, Dana's father, says they can't

find a way to get her out of the city. "They're just hiding in undergrounds, just waiting for a proper moment," he says, speaking through an interpreter. But he doesn't see such a moment in the near future. Sofia Kotlyarova, an 11-year-old singer and actor from Kyiv, is at the station with her mother and grandmother after her family spent more than a month volunteering in the Ukrainian capital. But after their neighborhood was bombed, says Sofia's mother, Ira, they decided it was time to evacuate. That meant separating from Ira's father, brother and husband, who are still in Ukraine. Under Ukraine's martial law, men between the ages of 18 and 60 aren't allowed to leave the country in case they are needed to fight. Kotlyarova's family has friends in Israel who are willing to take them in if they can get there. They aren't Jewish and don't have family in Israel, so they're hoping Sofia's fame can help their chances of getting in. But they've been disappointed before. The 11-year-old reflected on how quickly her family's lives have changed. Since the invasion, she says, her once-close friends in Russia are now ignoring her calls. "We always thought that Russia was our friend," Sofia says. "We will never forgive them."

DETER

5. 480th Fighter Squadron Rapidly Deploys to Deter Russia on the Black Sea (Air Force Magazine, Abraham Mahshie, 11 Apr 22)...

As Russian President Vladimir Putin threatened Ukraine in early February, amassing some 150,000 troops along its border, worrying NATO allies, the U.S. Air Force needed to reassure eastern flank Allies, and fast. The 480th Expeditionary Fighter Squadron at Spangdahlem Air Base, Germany, answered the call. They had one week to deploy to Romania with eight F-16Cs, 150 service members, and a million pounds of equipment. Seven days later, they were flying. "Usually these things takes months to plan," said 1st Lt. Jayce Webster, project manager for the mission support group "We had to plan airlift, plan ground movements, we had to plan the layout of everything within a week," he said. "So, when you talk about that agile combat, we were able to do that before the jets landed, and we started running." The 86th Air Base, as Fetesti is also known, also received a rotation of two F-35s as part of the air policing mission in mid-February. Romania is rapidly building up this base with new construction, but it's not yet ready for new tenants. There are only hangers to accommodate the Romanian F-16s, so scheduling maintenance is hard.

Still, the Black Sea ally was eager to welcome the added air power. Romania cleared out a building, initially provided all the aircraft fuel, and shared the few spare parts that coincided with their own earlier model F-16 Block 15s. The 30-year-old U.S. aircraft require regular maintenance on wiring and computer systems to stay fully operational. To limit downtime during the five-day wait for spare parts, an aircraft is designated to be "cannibalized" for parts. "It's just the avionics side, it breaks more often," said Master Sgt. Christopher Paden, maintenance production superintendent. "The targeting systems, the digital flight control computer is a common part we change." Now, close to 200 U.S. service members are helping to fly four daily NATO enhanced Air Policing sorties with Allies, protecting NATO's skies alongside Romanian F-16s and MiG-21s, and British and Italian Eurofighters at nearby Mihail Kogalniceanu Air Base. "It's a daily integration with a partner nation," said U.S. Air Force Lt. Col. William Parks, 480th Fighter Squadron detachment commander, who uses a building where Romanian Airmen live and work.

The Romanian Air Force is looking to build its fleet of approximately two dozen MiG-21 Lancers with 49 second-hand F-16s in coming years. It's already taken possession of 17 F-16s. NATO began enhanced Air Policing over the skies and Black Sea coast of Romania and Bulgaria in 2014 when Russia invaded Ukraine. The mission differs from Baltic Air Policing, which began in 2004, and protects the Baltic nations of Lithuania, Latvia, and Estonia, which do not have their own combat jets. "We're here just on the enhanced part of that air patrol, an extra visible and forward symbol to show U.S., Romanian, and NATO unity," Parks said. The mission includes training and exercising with Romanian pilots, what's known as "enhanced vigilance." "Because of the info exchange, the experience exchange," with USAF pilots, "... our troops get kind of like a second wind going towards progress," said Romanian Lt. Alex Nasturel.

Fetesti Air Base is just over 50 miles from the coast of the Black Sea, which is now threatened by a heavy Russian air- and sea-presence. Non-Black Sea NATO ships are forbidden from entering during wartime due to the Montreux Convention, and U.S. intelligence, surveillance, and reconnaissance flights over international air space on the Black Sea are believed to have ceased. Russian fighter jets in recent weeks have tested NATO air space, causing NATO aircraft to scramble in response. With Putin repositioning his troops in the east and south of Ukraine, Romania has also begun to move armored vehicles and land forces to its border with Ukraine. Small villages dot the expansive green fields near the Romanian 86th Air Base. Its symbol, the prickly-leaved pink thistle flower, protrudes through the grass in and around the base in the chilly spring. Despite living at a hotel an hour away in Constanta, along a strip of beach crowded with bars and clubs, the Spangdahlem Airmen avoid the nightlife. Their focus is on mission. Early the morning of April 9, before the 480th even began making its trademark jalapeno popcorn, Maj. Jared "Roam" Aschenbrenner and Capt. Sean "Sega" Sheldon were in a dark room watching slides and getting their "step brief" from Parks, who identified the Combat Air Patrol (CAP) zone in eastern Romania butting up against the border of Ukraine for the pilots to patrol. They would keep an undisclosed buffer distance from the border in accordance with NATO standards. Just across the Ukrainian border is the region of Odesa, thought to be a prime target in Putin's quest to cut Ukraine off from the sea and grab a prized port.

The total time for the CAP was four hours, meaning the pilots would make a 10-minute commute to the center of the country to hit a tanker over the Carpathian Mountains before finishing their sortie and high fiving their replacement enhanced Air Policing pair before returning to Fetesti. On their F-16C Block 50s were AIM-120 Advanced Medium-Range Air-to-Air Missiles, should they be needed. While air encounters have occurred between Russians and other NATO partners, Parks assured the Americans are trained to de-escalate. So far, the Russians have diverted after each intercept without incident. "We're here, we're present, we're showing that NATO's borders are secure," said Parks, who also flies patrols. "If an intercept has to occur, our primary job is to be de-escalatory. Let's go out, let's identify this person. Let's make sure he gets turned around and back to whatever nation or host country that aircraft is out of." With the sun just over the horizon as the hour neared the 0815 departure, 17 maintainers stood back from the two aircraft. Their job was done. The aircraft's GE engine had been roaring for some 40 minutes as all the checks were run. The chocks were pulled, and the two jets began to taxi, one behind the other. In minutes, they were airborne, launching in quick succession, then banking slightly left and rising almost vertically into the orange-hued clouds.

## 6. Biden Appears to Label Russian Atrocities in Ukraine 'Genocide' (Politico, Myah Ward, 12 Apr 22)...

President Joe Biden on Tuesday appeared for the first time to label Russia's atrocities in Ukraine genocide. Speaking in Menlo, Iowa, about his Build a Better America agenda and efforts to lower energy prices, the president said a family's financial situation in the U.S. should not be dependent on another leader's attacks "half a world away," in remarks likely aimed at Russian President Vladimir Putin. "Your family budget, your ability to fill up your tank, none of it should hinge on whether a dictator declares war and commits genocide a half a world away," Biden said. Biden's notable shift in rhetoric comes as other administration officials have so far avoided using the genocide designation. From national security adviser Jake Sullivan to Secretary of State Antony Blinken, officials have said they're monitoring the situation and have yet to reach consensus on whether the atrocities in Ukraine "rise to the level of genocide." "Based on what we have seen so far, we have seen atrocities," Sullivan said last week. "We have seen war crimes. We have not seen a level of systematic deprivation of life of the Ukrainian people to rise to the level of genocide."

The U.S. has long been reluctant to designate genocides. Just three weeks ago, the Biden administration formally labeled the Myanmar military's actions against the country's minority Rohingya population in 2016 and 2017

genocide and crimes against humanity. A flood of horrid imagery poured out of Ukraine last week, with the scenes out of Bucha prompting Biden to say Putin should be put on trial for war crimes. The Justice Department also announced last week that it was contributing to international investigations into alleged war crimes, further escalating U.S. involvement in holding Moscow legally accountable. Tuesday's rhetoric from Biden, whether a slip up or intentional, isn't the first time he's led the administration in a shift toward stronger language. Biden was one of the first U.S. officials to call Putin a war criminal, language other administration officials began to use freely in the following days and weeks.

#### 7. Ukraine War: US 'Deeply Concerned' at Report of Mariupol Chemical Attack (BBC, 12 Apr 22)...

The US and Britain say they are looking into reports that chemical weapons have been used by Russian forces attacking the Ukrainian port of Mariupol. Ukraine's Azov regiment said three soldiers were injured by "a poisonous substance" in an attack on Monday. However, no evidence has been presented to confirm the use of chemical weapons. UK Foreign Secretary Liz Truss said officials were working to "urgently" investigate what she called "a callous escalation" of the war. The Pentagon called the potential use of the weapons "deeply concerning". Western nations have warned that the use of chemical weapons would mark a dangerous escalation of the conflict and have pledged to take firm action if Russia carries out such attacks. Ukraine's Deputy Defence Minister Hanna Maliar said the government was investigating the allegations, adding that early assumptions suggested phosphorous ammunition had been used. Phosphorus is not classed as a chemical weapon under the Chemical Weapons Convention, but using it as an incendiary weapon near civilians would be illegal. On Tuesday, pro-Russian separatist forces in Donetsk denied carrying out the attack.

The Azov battalion, which has been heavily involved in fighting in Mariupol and has strong ties to the far-right, wrote in a Telegram post that Russian forces had dropped "a poisonous substance of unknown origin" during a drone attack at the city's large Azovstal metals plant. It said that its fighters had suffered minor injuries, including shortness of breath. One injured man described a "sweet-tasting" white smoke covering an area of the plant after an explosion. Another said he felt immediately unable to breathe and had collapsed with "cotton legs". The reported incident - which the BBC cannot independently verify - came hours after a spokesperson for the Moscow-backed Donetsk People's Republic urged Russia to bring in "chemical forces" to the besieged south-eastern city. Eduard Basurin told Russian state TV the remaining Ukrainian forces in Mariupol were entrenched at the Azovstal plant and that Russia should encircle it and "smoke out the moles". Speaking on Monday night, President Volodymyr Zelensky said any use of chemical weapons would mark a "new stage of terror against Ukraine" and called on Western nations to arm his forces with the weapons needed to defend his country. "Unfortunately, we are not getting as much as we need to end this war sooner," Mr Zelensky said. "I am sure that we will get almost everything we need, but not only time is being lost. The lives of Ukrainians are being lost — lives that can no longer be returned." UK Defence Minister James Heappey ruled nothing out in terms of a Western response if a chemical attack was confirmed. "There are some things that are beyond the pale, and the use of chemical weapons will get a response and all options are on the table for what that response could be," he said. Last month US President Joe Biden said Nato "would respond" if Russia used chemical weapons in Ukraine. "The nature of the response would depend on the nature of the use," he said.

[Top of the Document]

#### 8. Pentagon Working With Congress on Additional Ukraine Funding (DefenseNews, Bryant Harris and Joe Gould, 12 Apr 22)...

The Defense Department's No. 2 civilian official said Tuesday the Biden administration plans to ask Congress for money to pay for U.S. troop deployments in Eastern Europe — on the same day Senate Minority Leader Mitch McConnell, R-Ky., floated the possibility of additional Ukraine funding. Asked about the potential for additional funding to respond to the crisis, Deputy Defense Secretary Kathleen Hicks said the Pentagon is working with Congress to backfill the cost of U.S. forces surged to Eastern Europe. Those forces were not included in the FY23

budget request, she said. "Congress on a bipartisan basis has been very forward leaning in terms of its interest in making sure they can help us be whole against those requirements," she said at a roundtable with reporters. "As we are able to kind of abrogate those costs, a lot of that is Army cost, in terms of Army movement. We make sure to capture those costs, and we're working with Congress." McConnell on Tuesday noted Congress may need to pass an additional funding bill to respond to Russia's invasion of Ukraine. "We may need to do another supplemental," McConnell said during remarks in his home state of Kentucky. "This is critically important that we win, that the Russians be defeated, that we do everything we can to punish them both on the economic side and military side." Congress finalized a \$1.5 trillion spending bill last month that provides \$13.6 billion in new aid for the Ukraine crisis. The money was in large part to restore military stocks of equipment already transferred to Ukrainian military units through the president's drawdown authority, while \$3.1 billion was to cover "deployment, operational, and intelligence costs" for U.S. forces deployed to Europe in response to the Russian actions.

Legislation supporting Ukraine and punishing Russia has become easy fodder in recent weeks for an otherwise bitterly partisan Congress to pass into law. President Joe Biden signed into law last week two separate bills penalizing Russia, which both the Senate and the House quickly passed before adjourning for a two-week recess. The Senate passed both pieces of legislation — one bill banning Russian energy imports and another suspending normal trade relations with Moscow — by a 100-0 vote. Separately, the Senate unanimously passed another bill last week intended to expedite military aid to Ukraine by easing statutory requirements under the president's authority to lease or loan defense articles to Kyiv. However, the House did not take action on the Ukraine bill before recessing. Hicks said the Biden administration is in a "continuing dialogue" with Ukrainian officials over the types of weapons it plans to send, and that presidential decisions on the matter are pending. "Yes, we will continue to look at the type of capabilities that the Ukrainians are asking for in terms of how to give them more range and distance," Hicks said. Washington is debating an increase to U.S. military deployments in Eastern Europe, which grew after Russia's annexation of Crimea in 2014. That would represent another added expense. But any major changes in force posture will probably have to wait for the early July NATO summit in Madrid, Hicks said. "Given that we're in the midst of operations now, those operations may continue for some time as they are," she said. "I wouldn't anticipate drastic changes in U.S. posture, and certainly not before there's a summit where there's a general understanding of what allied posture is going to be."

[Top of the Document]

#### 9. Pentagon Does 'Not Object' to Potential Transfer of Jets From Slovakia to Ukraine (Washington Examiner, Mike Brest, 12 Apr 22)...

The Pentagon would not stand in the way of a possible transfer of Slovakian fighter jets to Ukraine, a senior U.S. defense official told reporters Tuesday. Slovakia, which has already provided military technology to the Ukrainian military that the United States has back-filled, could provide MiG-29 fighter aircraft, Prime Minister Eduard Heger said Monday, according to Politico, though it's unclear how many the country would provide. "We certainly would not object to it. We have no right to object to it," the defense official said, noting that the U.S., to its knowledge, was not involved in any of the discussion in facilitating the deal. Earlier during the war in Ukraine, the U.S. nixed a proposed Polish deal that would provide Ukraine with MiG-29 aircraft because the Polish wanted to transfer the planes to U.S. custody first. The Pentagon called the possible deal "high-risk" and not "tenable."

The defense official specified that the objection to the previous possible agreement was the role in getting the planes to Ukraine, not Poland's idea to provide the aircraft. "I want to stress again, from the very beginning, we said that these are sovereign decisions that nations can make, and we respect them, and if a nation wants to provide fixed-wing fighter aircraft to Ukraine, then that's up to them to decide and for them to speak to. And what our goal again, our objections to the previous proposal was that the country in question expressed the desire to transfer them into our custody for us to deliver to Ukraine," the official said. "That is what we objected to. We did not object to the idea of the provision of fixed-wing aircraft to Ukraine, and that will be a decision in this case for Slovakia to make," the official continued.

The Slovakian government is looking to move away from relying on MiGs because the upkeep on such aircraft requires a "relationship" with Russia, Heger said, noting that they're waiting two more years to receive U.S.-made F-16s. Ukrainian leaders continued to press Western governments for additional military resources as Russia has changed its operating tactics to focus on the Donbas region, the eastern and southeastern part of the country. The U.S. alone has provided \$1.7 billion in military aid since Russia invaded. Last week, Slovakia provided the Ukrainians with an S-300 air defense system, and U.S. European Command repositioned one Patriot missile system to Slovakia in return.

10. Putin Says Peace Talks With Ukraine Are at Dead End, Goads the West  
(Reuters, Guy Faulconbridge, 12 Apr 22)...

President Vladimir Putin said on Tuesday peace talks with Ukraine had hit a dead end, using his first public comments on the conflict in more than a week to vow his troops would win and to goad the West for failing to bring Moscow to heel. Addressing the war in public for the first time since Russian forces retreated from northern Ukraine after they were halted at the gates of Kyiv, Putin promised that Russia would achieve all of its "noble" aims in Ukraine. In the strongest signal to date that the war will grind on for longer, Putin said Kyiv had derailed peace talks by staging what he said were fake claims of Russian war crimes and by demanding security guarantees to cover the whole of Ukraine. "We have again returned to a dead-end situation for us," Putin, Russia's paramount leader since 1999, told a news briefing during a visit to the Vostochny Cosmodrome 3,450 miles (5,550 km) east of Moscow. Asked by Russian space agency workers if the operation in Ukraine would achieve its goals, Putin said: "Absolutely. I don't have any doubt at all." Russia will "rhythmically and calmly" continue its operation but the most important strategic conclusion was that the unipolar international order which the United States had built after the Cold War was breaking up, Putin said. Putin said Russia had no choice but to fight because it had to defend the Russian speakers of eastern Ukraine and prevent its former Soviet neighbour from becoming an anti-Russian springboard for Moscow's enemies. The West has condemned the war as a brutal imperial-style land grab targeting a sovereign country. Ukraine says it is fighting for its survival after Putin annexed Crimea in 2014 and on Feb. 21 recognised two of its rebel regions as sovereign. Putin dismissed the West's sanctions, which have tipped Russia towards its worst recession since the years following the 1991 fall of the Soviet Union, as a failure. "That Blitzkrieg on which our foes were counting did not work," Putin said. "The United States is ready to fight with Russia until the last Ukrainian - that is the way it is." Putin, who had been ubiquitous on Russian television in the early days of the war, had largely retreated from public view since Russia's withdrawal from northern Ukraine two weeks ago. His only public appearance in the past week was at the funeral of a nationalist lawmaker, where he did not directly address the war. On Monday he met the visiting chancellor of Austria at a country residence outside Moscow but no images of that meeting were released.

Putin dismissed Ukrainian and Western claims that Russia had committed war crimes as fakes. Since Russian troops withdrew from towns and villages around the Ukrainian capital Kyiv, Ukrainian troops have been showing journalists corpses of what they say are civilians killed by Russian forces, destroyed houses and burnt-out cars. Reuters saw dead bodies in the town of Bucha but could not independently verify who was responsible for the killings. Ukraine says Russia is guilty of genocide and U.S. President Joe Biden has accused Putin of war crimes and called for a trial. Putin said he had told Western leaders to think a little about destruction by the United States of the Syrian city of Raqqa, the former de facto capital of the Islamic State caliphate, and in Afghanistan. "Have you seen how this Syrian city was turned to rubble by American aircraft? Corpses lay in the ruins for months decomposing," Putin said. "Nobody cared. No one even noticed." "There was no such silence when provocations were staged in Syria, when they portrayed the use of chemical weapons by the Assad government. Then it turned out that it was fake. It's the same kind of fake in Bucha." The Organisation for the Prohibition of Chemical Weapons has found that poison gas was used repeatedly in Syria, including in Ghouta, an opposition-held suburb of Damascus. Russia has objected to those findings that implicated its ally Syrian president Bashar al-Assad. Washington and its allies have denied targeting civilians in the 2017 air strikes on Raqqa, a Syrian city that had become the headquarters of the Islamic State militant movement the U.S.-led coalition was fighting. Putin, who says Ukraine and Russia are

essentially one people, casts the war as an inevitable confrontation with the United States, which he accuses of threatening Russia by meddling in its backyard. Sixty one years to the day since the Soviet Union's Yuri Gagarin blasted off into the history books by becoming the first man in space, Putin drew an analogy between Soviet space successes and Russia's defiance today. "The sanctions were total, the isolation was complete but the Soviet Union was still first in space," he said. "We don't intend to be isolated," Putin added. "It is impossible to severely isolate anyone in the modern world - especially such a vast country as Russia."

[Top of the Document]

#### 11. Putin and Lukashenko Describe Bucha Killings as 'Fake' and 'Staged by Englishmen' (Politico, Victor Jack, 12 Apr 22)...

Russian President Vladimir Putin called the mass killing of civilians in Bucha "fake" and praised Russia's "noble" war against Ukraine during a visit to eastern Russia with Belarusian President Alexander Lukashenko on Tuesday. "When it comes to Bucha ... it's the exact same fake as in Syria," Putin said, in reference to Russian claims from 2018 that the use of chemical weapons in the Syrian war was staged by foreign agents. Bucha was "a psychological operation staged by Englishmen," Lukashenko added. After Russian troops partially withdrew from Bucha, a town outside of Kyiv, earlier this month, authorities discovered roads lined with civilians apparently tied up and shot at close range, as well as mass graves of local residents. Russia has repeatedly denied it was responsible, but numerous media outlets have independently shown that it was unlikely the scenes were staged by Ukraine.

The Russian president was on a joint visit with the Belarusian premier to the Vostochny Cosmodrome in Russia's far east to celebrate "Space Day" and discuss the two countries' space industries. "What is happening in Ukraine is a tragedy ... but they left us no choice," Putin said, adding that Russia's military "goals are absolutely clear and noble." He also slammed the U.S., alleging Washington was using Ukraine as a proxy conflict and was "ready to fight against Russia until the last Ukrainian" — while repeating claims it was "impossible" to isolate Russia with sanctions because of its size. Russia's economy — which has been hammered by sanctions, inflation and capital flight since its invasion of Ukraine — is set to contract by over 10 percent this year, the biggest drop in GDP in more than two decades. Putin also told reporters that negotiations with Ukraine had reached a "deadlock" due to an "inconsistency on fundamental issues" and suggested talks may take place in Belarus in the future.

[Top of the Document]

#### 12. A Fifth of Russia's War Dead Are 'Officers Sent to Command Putin's Troops in Ukraine' (Independent, Rory Sullivan, 12 Apr 22)...

More high-ranking Russian soldiers have been killed in the conflict, Ukraine's military has said, following reports that about 20 per cent of the Kremlin's war dead are officers. The Ukrainian army said that Colonel Alexander Bespalov, who led the 59th Guards Tank Regiment, and Lieutenant Colonel Vyacheslav Savinov, who worked in artillery reconnaissance, had died. Colonel Bespalov's funeral took place in the central Russian city of Ozersk on Friday, with his death first announced via a local messaging board post, which was later deleted. Their deaths come as the BBC Russian Service concluded that officers account for one in five Russian losses on the battlefields of Ukraine. In a sample of 1,083 dead Russian soldiers, there were 31 majors and 155 troops ranked between second lieutenant and captain, the broadcaster reported.

Experts believe the proportion of officer deaths could be slightly inflated due to the faster return of their bodies to Russia than those of rank-and-file soldiers. Speaking on Friday, Oleksiy Arstovych, a Ukrainian presidential adviser, said the Kremlin had refused to accept the corpses of 3,000 of its regular soldiers early in the war. "They said, 'We don't believe in such quantities. We don't have this number. We're not ready to accept them,'" he told The Washington Post. Moscow has been largely quiet about the number of casualties it has suffered since it invaded Ukraine on 24 February. In only its second update, Vladimir Putin's regime said 1,351 Russian troops had died as of 25 March. However, Kyiv believes almost 20,000 Russian troops have been killed so far in less than seven weeks of

fighting, more than the 15,000 Soviet soldiers who lost their lives in the Soviet-Afghan war, fought between 1979 and 1989.

Although Russia has not released a new death toll for some time, Dmitry Peskov, Mr Putin's spokesperson, said last week that his country had seen "significant losses of troops", describing it as "a huge tragedy for us". On Monday, Western officials confirmed that Russian forces had sustained "extremely high casualties", adding that they are becoming "increasingly difficult to lead". The remarks were made as the Kremlin plans to heighten its attack against the Donbas region of eastern Ukraine.

## PREPARE

13. Army's Cavoli to Be Next EUCOM Chief and NATO Commander in Europe, Report Says (Stars & Stripes, John Vandiver, 12 Apr 22)...

Gen. Christopher Cavoli, a Russian speaker who has led the Army in Europe for the past four years, has been tapped to serve as the next head of U.S. European Command, according to a Wall Street Journal report. Cavoli would replace Gen. Tod Wolters, who is slated to retire, the Journal reported Monday, citing unnamed U.S. officials. The shakeup comes at a crucial time in Europe, where Russia's war on Ukraine has prompted the U.S. and its allies to send thousands more troops to NATO's eastern flank. If confirmed, Cavoli also would serve simultaneously as NATO's supreme allied commander. During his tenure at U.S. Army Europe and Africa, Cavoli has overseen a mission that was growing even before Russia's Feb. 24 full-fledged invasion of Ukraine. Additional units, such as the Army's 56th Artillery Command, have taken up new positions in Germany, marking a reversal from the decadeslong post-Cold War drawdown of U.S. troops in Europe.

In October 2020, Cavoli was promoted in connection with U.S. Army Europe and Africa's elevation to a four-star headquarters. Going forward as EUCOM chief, Cavoli is expected to play a key role in designing what the future U.S. mission in Europe will look like. Joint Chiefs of Staff Chairman Army Gen. Mark Miley and other military leaders have said they anticipate more U.S. troops being based on NATO's eastern flank in the future in connection with concerns about further Russian aggression. That increase could involve rotational forces or a mix of revolving and permanently based troops. Cavoli, who was born to an Army family in Wuerzburg, Germany, during the Cold War, grew up at various military bases around Europe. A graduate of Princeton University, he served multiple tours in Afghanistan. He also is a foreign area officer and held a previous staff job as director for Russia on the Joint Staff. A replacement for Cavoli at Army headquarters in Wiesbaden, Germany has not yet been announced.

14. U.S. Amphibious Combat Group Deploys to the High North Amid High Tensions (Independent Barents Observer, Thomas Nilsen, 12 Apr 22)...

The North Atlantic with Iceland and northern Norway are critical communication links between North America and Europe in times of war. This winter, one NATO exercise has followed the other. The Norwegian-led Cold Response was followed by the Iceland-hosted, U.S. Sixth Fleet-led Northern Viking. Now, the largest warship that participated outside Keflavik last week sails into the waters of northern Norway with the U.S. 22nd Marine Expeditionary Unit, forces consisting of amphibious vessels, aircraft, helicopters, multi-role attack ships, logistics and a command unit. Training is set to kick off next week. "This is a very important allied unit from the U.S. Marine Corps," says Lt. Gen. Yngve Odlo, head of the Norwegian Operations Headquarters.

In case of war, Norway depend on reinforcement from allied forces. "Receiving and joint training with allied forces

is very important and contributes to high operational readiness. Norway, and especially parts of Nordland and Troms regions, are favorable training areas for several of our allied forces," Odlo notes. The amphibious assault ship "USS Kearsage" made port call to Tromsø on Monday. The dock landing ship "USS Gunston Hall" and the destroyer "USS Gravelly" are also taking part. With soldiers from the Marine Corps Base Camp Lejeune, North Carolina, the 22nd Marine Expeditionary Unit ready for fast reaction winter operations includes a tiltrotor squadron, the ground combat element, a landing team, aviation combat forces, and a logistic element. The training will last until early summer, the Armed Forces informs.

#### 15. Albania's Former 'Stalin City' Looks West With NATO Airbase (AFP, 12 Apr 22)...

In an Albanian city once named for Soviet dictator Joseph Stalin, dozens of Soviet- and Chinese-made planes rust in the open air on a former communist airbase, some with flat tyres, others covered with dust. The site in the central city now called Kucova is being transformed into a modern NATO airbase, a symbol of Albania's westward shift -- and a key military buffer in Europe as Russia wages war in Ukraine. The renovation project was agreed in 2018 by the Balkan state and NATO, which has already committed \$55 million (50.4 million euros) to the project, according to Albanian sources. Construction began at the beginning of the year, ahead of Russia's February 24 invasion of Ukraine that has sparked fears of a spillover into NATO and EU member states. Though the timing of the Kucova base redevelopment was a coincidence, for some it is a welcome one. "The changed global security environment has now created considerable impetus for the completion of the (base) renovation plan," a NATO official in Brussels told AFP, speaking on condition of anonymity. The base, due to be completed in 2023, will give the "alliance an important strategic facility in the Western Balkans, within short reach of the Mediterranean, Middle East and the Black Sea region", the NATO official said.

After decades of global isolation, Albania became a NATO member in 2009. It was shunned by much of the world under paranoid Communist dictator Enver Hoxha, who forged close ties with the Soviet Union and China before falling out with them over their apparent deviation from true Marxism. The country embraced the West after the fall of the communist regime in 1990, and today is eager to become an EU member. The defunct aircraft at the Kucova base are reminders of a chapter of Albania's history many are happy to leave behind -- and a signal to Russia which has sought to extend its influence in the region. "The construction of this base is a clear message to other players with bad intentions in the Western Balkans region," Albania's Defence Minister Niko Peleshi told AFP. The construction is certain to irk Moscow, which strongly opposes any NATO expansion into eastern and central Europe -- especially in the Balkans which has traditionally been torn between East and West. Today, Albania's neighbours Croatia, Montenegro and Northern Macedonia are all part of NATO too. For Seit Putro, who has worked in the finance department at the base for more than 30 years, it's a welcome confirmation of Albania's political allegiances. "Once in the East, we are now in our place, next to the West, which is a good step forward for all," he told AFP.

The 350-hectare (865-acre) site in the former 'Stalin City' was built in the 1950s under Hoxha with help from the Soviets, and completed later with a network of the same kind of underground tunnels that were dug across the country in case of nuclear attack. Once the NATO renovation is finished, it will function as a tactical operational base, kitted out with a refurbished runway more than two kilometres (1.2 miles) long, an updated control tower and new storage units. It will have the capacity to host state-of-the-art military aircraft and can also be used for refuelling and ammunition storage. Officials are also hoping the base, which once employed 700 people, will create new jobs in the poor region, 85 kilometres south of the capital Tirana. It will have a "very positive economic and social impact", said deputy commander of the base, Major Leandro Syka.

The aircraft now languishing on the airbase mainly consist of Chinese and Soviet MiGs, Soviet-made Antonovs and Yak-18s. At the end of the Cold War, the base had about 200 planes and 40 helicopters, which were put out of

commission as they were obsolete. About 75 remain today, and their fate remains uncertain. The authorities have to yet to decide whether they will be auctioned, put in a museum or turned into scrap metal. For some, they hold painful memories from past conflicts. Former pilot Niazi Nelaj remembers clearly his first flight aboard a Mig-15, which bore bullet marks from combat in distant Asian countries. But the 85-year-old is happy to see the airbase aligned with NATO, and he believes Albania's previous pivot toward the East was only an "accident of history". "Albania's natural alliance has always been and will be with the West," he said.

1. Biden's European Trip Will Be Heavy on Displays of Western Unity but Could Be Light on Actions to Stop Putin's Ukraine War  
(CNN, Kevin Liptak, 20 Mar 22)...

President Joe Biden and his fellow world leaders hope to finalize and unveil a package of new measures to punish Russia, help Ukraine and demonstrate Western unity at a string of emergency summits in Europe this week. But aside from a dramatic wartime show of resolve, few observers believe anything the leaders can agree upon will be enough to end the bloodshed in Ukraine or dissuade Russian President Vladimir Putin from continuing his attacks that are increasingly harming civilians. Since the prospect of the NATO leaders summit was first broached roughly two weeks ago, American and European officials have been discussing potential announcements for leaders to make at the conclusion of the gathering, according to several people familiar with the plans. That could include new rounds of sanctions on Russian oligarchs, additional measures restricting the country's finances and new steps to limit import of Russian energy products. Discussions are also underway on what measures can be unveiled to provide more support for Ukraine, including new shipments of military assistance or financial aid to bolster the country's defenses. And Biden has left open the option of scaling up US troop deployments to NATO members along the alliance's eastern edge, reinforcing American commitment to European defense at a critical moment. But the stark reality that those moves are unlikely to curb Putin's war will loom over Biden's visit to Brussels for a snap meeting of the North Atlantic Treaty Organization, along with a special session of the European Council and a gathering of the G7. Biden could also add another stop in Eastern Europe, potentially Poland, officials have said. He departs Washington on Wednesday for the high-level diplomatic maneuvers.

While Biden has been successful in rallying European and Asian allies behind a punishing set of sanctions and unparalleled levels of military assistance, he and his NATO counterparts have drawn lines at where their support will end. And while all parties seem to support a diplomatic resolution to the crisis, US and European officials say the parameters of such a settlement remain murky. That leaves open how Biden's visit to Europe -- one of the inflection moments of his presidency -- can alter the course of the worst conflict in Europe since World War II. And it poses another discussion point that world leaders must begin to broach: What happens if, or when, Ukraine can no longer withstand Russia's assault? "They're going to have to look at what happens if Ukraine is lost," said retired

Army Gen. Wesley Clark, a former NATO supreme allied commander. "After they have weighed the problem of what happens if Ukraine falls, they have to consider what more can be done to sustain Ukraine in the fight. Yes, there's a risk. There's always a risk in dealing with Mr. Putin."

Biden was publicly challenged by Ukraine's leader last week to assume responsibility for bringing an end to the fighting. In an emotional address to Congress, in which he called for a no-fly zone and help procuring fighter jets, President Volodymyr Zelensky spoke directly to Biden, who was watching from his private library on the third floor of the White House.

"Being the leader of the world means being the leader of peace," Zelensky said in English.

Biden was also challenged by Ukraine's former President, Petro Poroshenko, to visit Ukraine as a "symbol of our solidarity" during his trip to Europe this week. Speaking to CNN's Jim Acosta Saturday afternoon, Poroshenko called Biden a "very good friend of mine and a very good friend of Ukraine," adding that a visit by Biden would be "an extremely right step to demonstrate that the whole world is together with us against Russia." Those personal appeals will have resonated with a man who vowed while seeking office to restore American leadership, renew US alliances and defend democracy from the creeping tide of authoritarianism.

Nowhere will that challenge be more pertinent than at this week's emergency talks, where leaders are looking to Biden for direction and purpose as the war in Ukraine grinds ahead.

"He's challenging Biden to live up to his responsibilities as a leader of the West, a leader of the democratic community of nations. And he presented the de facto challenge to NATO," said Ian Brzezinski, a deputy assistant secretary of defense for Europe and NATO in the George W. Bush administration. "He was saying if NATO is not up to this challenge, we have to think of other security arrangements," Brzezinski said. "What a powerful challenge to the relevance of NATO in this day and age. That sets the context for ... (the) summit meeting."

Yet as the summits were announced last week, some European diplomats revealed concern at what they viewed as a lack of major steps available for the leaders to take at the high-profile gathering, which both Russia and Ukraine will be watching closely. Major items that Ukraine wants, like help from NATO in establishing a no-fly zone or providing Soviet-era fighter jets, appear for now off the table as the US and its partners seek to avoid direct confrontation with Russia. That means any announcement coming out of the meetings would likely focus more on ramping up assistance that's already being provided, including military and financial aid, or applying new sanctions on Russia. European and US officials said discussions about announcements and a concluding joint statement were ongoing as countries look to settle on a decision or takeaway for the summit to produce. "The President is looking forward to seeing his counterparts face to face. I suspect they will have a number of new measures that they will be able to disclose and roll out during those conversations, but I'm not going to get ahead of them a few days in advance," US deputy national security adviser Jon Finer said last week on CNN.

Having a major announcement materialize during the summit could help underscore the current unity among the allies, which US officials say has surprised Putin as his military struggles with losses on the ground. "He miscalculated about the West. I think he thought that ... there would be some scolding, maybe a couple of sanctions, but he could withstand it, and he could continue, and he could move on," said Marie Yovanovitch, the former US ambassador to Ukraine. "Instead, he has inspired a resurgence of NATO. And the West is united in opposition and trying to provide not only sort of strengthening NATO and the flank countries on Ukraine's border, but also in providing support to Ukraine."

The upcoming summits will also present Biden an opportunity to take his counterparts' temperature on another

matter: What to do if Chinese President Xi Jinping decides to provide Russia military or economic support, as Putin has requested. On a 110-minute call with Xi last week, Biden laid out the "implications and consequences" of going ahead with that support, according to the White House. But punishing China -- the world's second-largest economy - - would be far more complicated than it has been with Russia, and would require the same unity with Europe, which hasn't always agreed with Biden on how to approach Beijing. "This is an incredibly important summit. It is taking place on an extraordinary basis in the midst of a crisis. It is partly to make sure that we and our allies [are] on the same page, which is good. But it's also very important for sending a signal to Vladimir Putin," said Kurt Volker, a former US ambassador to NATO and special envoy for Ukraine. Volker identified several messages the alliance must send during its summit, including recommitting to the Article 5 guarantee of collective defense and making clear the use of nuclear weapons by Russia would warrant a Western response. But he said NATO must also make clear that Ukraine -- not a member of its grouping -- is nonetheless a matter of critical importance to its members. "I think it's very important that NATO also send a signal about Ukraine, that Ukraine's survival as an independent and sovereign state in Europe is a NATO interest," Volker said. "We don't want to say what we don't do. We don't want to be too specific about what we will do. But we need to send a signal to Putin that we're not going to sit by while he destroys and eliminates a sovereign European country."

2. On NATO's Vulnerable Eastern Edge. Baltic Nations Face High Stakes in Ukraine Crisis (Washington Post, Missy Ryan, Michael Birnbaum, Paul Sonne, and Steve Hendrix, 20 Mar 22)...

Late last month, Estonia's foreign minister, Eva-Maria Liimets, flew into Kyiv to join her counterparts from fellow Baltic nations in an expression of solidarity with Ukraine as tensions mounted with Russia. Like Ukraine, the three Baltic states — Latvia, Lithuania and Estonia — were once part of the Soviet Union. Unlike Ukraine, they had joined NATO in the early 2000s, and now enjoy the protection the alliance's mutual defense guarantee provides. After she arrived, Liimets, a soft-spoken career diplomat, took a walk around central Kyiv's cobblestone streets in the cold night air. A tense calm suffused the city. Early the next morning, a little before 6 a.m. on Feb. 24, Estonia's ambassador in Ukraine called her with an urgent message: President Vladimir Putin's invasion had begun. Like it was for millions in Ukraine — where the airspace was now closed and roads were quickly jammed by people trying to flee — the high stakes of the slow-building showdown with Russia were starkly apparent. Within minutes, Liimets packed her bags and was on her way to Estonia's nearby embassy, and then, escorted by Ukrainian security, in a convoy headed west toward the Polish border. As they navigated droves of fleeing residents — it took more than four hours to get out of Kyiv — she could hear the sound of distant shelling. As Russia presses its invasion deeper into Ukraine, Baltic leaders say the world has finally woken up to the admonitions they have been making for years: that Putin is prepared to use force, like he did in Georgia, Crimea and eastern Ukraine, to advance his political goals. "Unfortunately, we were right," Liimets said in an interview. Putin's action in Ukraine, she said, "shows that Russia has not felt enough international pressure and they could continue with their ... plan to invade one of their neighboring countries."

As the global implications of Putin's assault set in, Baltic nations' appeals for greater deterrence are translating into additional troop and aircraft deployments. Already in recent months, new NATO and U.S. forces have been dispatched to the region. In Estonia, a British-led force of some 2,500 NATO troops conducts training and exercises with local forces. Additional NATO forces are there for the Baltic air policing mission, which now includes American F-35s and British and U.S. F-16s. There are also American F-35s in Lithuania. Such forces provide valuable reassurance for a country like Estonia, which has an active-duty force of 4,000 troops, and no combat aircraft. At the same time, the region's leaders are urging the bloc to do even more to bolster deterrence along its exposed eastern flank by abandoning a decades-old prohibition on permanent NATO basing there. They also want an expansion of the "air policing" mission over the Baltic Sea and the placement of NATO air defense systems, like Romania and Poland already have. Lithuanian President Gitanas Nausėda issued a stark warning this month, saying that Putin "will not stop in Ukraine." The NATO reinforcements come after years in which Baltic officials say their fears were dismissed by much of Europe as paranoia or some kind of post-Soviet stress disorder. Even after Russia launched the first state-on-state cyberattack in 2007, a digital assault on Estonia over its decision to relocate a Soviet-era monument, NATO's military planners moved slowly, drawing up detailed defense plans for the region only after Russia's annexation of Crimea in 2014.

Across the Baltic countries, residents are showing their support for Ukraine, hanging blue-and-yellow flags and protesting outside Russian embassies, and taking what action they can to push back against Putin. In Lithuania, a volunteer corps of online “elves,” including at least one member of Parliament, methodically debunks and derides Russian trolls and bots. Others post five-star reviews of Russian hotels and restaurants merely as a way of including photographs and data about Russian attacks on Ukrainian civilians. A popular app automatically connects users to one of 40 million randomly generated Russian phone numbers and provides tips on starting a conversation about Ukraine when the call is answered. “Our biggest weapon is that we understand the Russians and we speak their language,” said Aleksandra Ketleriene, 34, an online reporter for the national broadcasting service. A large portion of the region’s population remembers the Soviet occupation, which ended in 1991. During the decades of Soviet rule, the Kremlin lured ethnic Russians to the Baltics by giving them better jobs and better housing than what was available to local residents, the most rebellious of whom were sent to prison camps in Siberia. When the Soviet Union collapsed, Russians who were left behind, especially in Latvia and Estonia, posed a challenge for local policymakers, who faced the difficulty of integrating large numbers of people who looked to Russia as their political and cultural homeland. “The Ukrainians are fighting for us,” said Dainius Navikas, a management consultant in Vilnius, the Lithuanian capital. Last week, he donated a vehicle to be converted to military use and delivered to Ukrainian fighters as part of a private aid campaign that has already netted more than 17 million euros from Lithuania’s 2.8 million citizens. “If they lose, we could be next.”

Others are making preparations for what they fear might be an eventual Russian assault. At social gatherings in Riga, the capital of Latvia, young families are swapping details of their plans to evacuate further west should it become necessary. Some are laying backup plans for their children to leave the country without them if need be. In the Estonian capital, Tallinn, residents are checking their basements in case they need to use them as shelters. In the university town of Tartu, one grocery store’s shelves were empty of iodine, the solution that protects against radiation exposure after a nuclear attack. “So far we are not being threatened, as far as I understand,” said Dima Golubevs, a 40-year-old Latvian video producer at a recent protest outside Russia’s embassy in Riga. But he noted that he was still a tiny bit nervous about whether NATO would come to the aid of Latvia in the event of a Russian invasion. “I can say 99 percent I feel safe,” Golubevs said. “But 1 percent is still a lot.” Even as European leaders show a united front in support of Ukraine, some Baltic officials feel a more urgent threat to their security than do other NATO nations. Last week, Lithuania’s Parliament approved a resolution calling for a no-fly zone over Ukraine, a step that the United States and other NATO leaders have said they will not take because it could trigger war with Russia.

While Baltic nations want to support Ukraine, officials also feel constrained in the military aid they can supply to Ukraine, mindful of the need to keep weaponry in reserve in case they need it themselves. More than a frontal attack on NATO, some officials worry about the possibility that Putin could launch a smaller maneuver to show that NATO is weak — for example, seizing an island off the coast of Estonia — or renew hybrid warfare, like the cyberattacks that struck Estonia in 2007. “If he wins in Ukraine, it will legitimize war for him,” as a way to achieve his goals with other countries, said one Baltic official who spoke on the condition of anonymity to discuss the matter frankly. Despite the stepped-up defenses, there is also concern that the West might relax its resolve, either due to a negotiated settlement between Ukraine and Russia or because of the high cost of economic sanctions on Russia — with potentially problematic results in Eastern Europe. “My biggest fear is that the minute there is the slightest concession from Russia, countries will rush to lift these sanctions,” said Toomas Ilves, who served as Estonia’s president from 2006 to 2016. While the world may now share the Baltics’ perspective more than ever before, Ilves said, “there is little joy in being right.”

3. ‘Do the Right Thing’: How US, Allies United to Punish Putin  
(AP, Josh Boak, 20 Mar 22)...

Just days before Russia invaded Ukraine on Feb. 24, President Joe Biden quietly dispatched a team to European Union headquarters in Belgium. These were not spy chiefs or generals, but experts in reading fine print and tracking the flow of money, computer chips and other goods around the world. Their mandate: inflict maximum pain on Russian President Vladimir Putin, making it harder, if not impossible, for him to fund a prolonged war in Ukraine and denying him access to technologies at the core of modern warfare. There were intense meetings in February in Brussels, Paris, London and Berlin, often running six hours at a time as the allies tried to craft the details of a historic economic blockade, according to Biden administration officials. Some of the exports the U.S. wanted to ban were met with reluctance by the Europeans, who would essentially be telling their own companies to forgo several billion dollars in annual revenues from Russia. When there was a deadlock, U.S. negotiators would put Commerce Secretary Gina Raimondo on the phone. "You can say 'no' now, but when the body bags are coming out of Ukraine, you're not going to want to be a holdout," Raimondo said she told allied counterparts. "Do the right thing." Everyone signed on — and before the invasion. Raimondo said what ultimately drove the agreement and the fast timeline was the threat of Putin's imminent attack on Ukraine. "We all got religion fast that it was time to band together and stick together," she said. "If you cause enough pain, isolate Putin, it will bring this war to an end."

The wealthiest nations in the world — outside of China — are directly confronting Putin on their preferred terms. They have imposed sanctions in which their strengths intersect with Russia's vulnerabilities. Russia is reliant on the U.S., the EU, Japan, South Korea and Taiwan for cutting-edge technologies and investment, so the allies decided to cut Moscow off. It's a strategic play designed to trap Putin in a downward spiral, as foreign investors pull out their money in response to the atrocities. It's also a remarkable show of unity that could be tested in the coming weeks by the allies' own dependence on fossil fuels. A group of economists estimated Thursday that EU countries have transferred more than 13.3 billion euros (\$14.7 billion) to Russia for oil, natural gas and coal since the war began, essentially funding Putin's war machine. While the allied talks in the lead-up to the war were critical, the EU was not just waiting around for U.S. direction to act. Bloc members had been consulting for months. One EU diplomat, speaking on condition of anonymity to discuss internal talks, outlined in an interview as far back as January potential penalties that included the export ban, noting that the EU had held together its coalition on enforcing sanctions since Russia's 2014 occupation of parts of the Donbas region in Ukraine. But this time, the U.S. and EU responded to Russia's aggression with a novel set of policies to cripple Putin's ability to fight by denying it access to the semiconductors, computers, telecommunications equipment, lasers and sensors integral to war materiel. This is a supply chain squeeze that will force Russia to raid existing airplanes, tanks and other gear for spare parts essentially eroding its military and economic capacity. The same U.S. and EU officials dealing with their own supply chain challenges after the pandemic found a way to amplify the problem for Russia through trade regulations.

In a sign of early success, U.S. officials point to the closing of Lada auto plants in Russia and the more than 300 companies that have stopped doing business with Russia. The companies are not just Starbucks, but chipmakers such as Germany's Infineon that said it stopped all direct and indirect deliveries to Russia as well as technical support. Within days of the invasion, the allies blocked the foreign assets of Russia's central bank. Two senior Biden administration officials, who were not authorized to publicly discuss the strategy and spoke on condition of anonymity, said this option was not initially presented to allies out of concern that Russia could move its money ahead of time. They waited to present the asset freeze until the invasion started and the images of bombings and death compelled the Europeans to almost immediately agree. The freeze rendered half of the more than \$600 billion in Putin's war chest unusable. While the Russian stock market has been closed and the value of the ruble has plunged, the sanctions are designed so that the financial effects tightens over time. As long as Ukraine is able to hold out with military aid against severe casualties, the sanctions will do more to exhaust Putin. EU Commission Vice President Valdis Dombrovskis on Thursday praised the "very good coordination" among nations and said the sanctions "are biting hard. Russia's financial markets are close to collapse." He also noted that the sanctions create costs for the allies, though the price is much less than the consequences of the war spreading. Yet with every new round of sanctions, the unity of the 27 EU members is tested ever more. If imposing a ban on Russian oil and gas comes up, Germany and Italy, both heavily dependent on Russian energy, will be in a tough spot to contain the drive of several eastern member nations like Poland and the Baltic states that want to hit Putin as hard as possible as soon as possible. The U.S. is less dependent on Russian oil and natural gas, making it easier for Biden to ban those

imports earlier this month. There is also the risk that the sanctions will fail to stop Putin or that Russia can still find ways to bring goods into its economy. Trade data analyzed by ImportGenius show that China supplanted Germany in 2021 as the leading source of exports to Russia — and U.S. officials say that Russia has solicited help from the Chinese government.

On Twitter, Olivier Blanchard, former chief economist at the International Monetary Fund and now a fellow at the Peterson Institute of International Economics, equated the sanctions to the bombing of German factories during World War II. Those bombings disrupted the German war machine in ways that made it impossible to prolong an extended fight — and economists had a role in choosing the targets. For all that has been done, questions remain about whether it is enough. Blanchard recommends expanding the export controls from defense-related production to “anything which disorganizes production” in the Russian economy. If Russian-made refrigerators need a gasket made in the EU, restricting access to that gasket makes it harder for the Russian economy to function, he said. Tania Babina, a finance professor at Columbia University who was born in Ukraine, said that sanctions tend not to stop dictators and she warned that Putin might ultimately become even more entrenched unless the U.S. and EU take more aggressive action. She said Europeans need to add sanctions that ban the use of Russian oil and natural gas. “He is going to throw everything to win, will send his grandma to fight if needed,” Babina said. “He cannot lose Ukraine. That is why it is so paramount to cut off Russia’s energy export revenues.” But Babina noted that there is another far more chilling cost to the allied strategy of sanctions: Ukrainian lives. “How many people do we let die before Putin runs out of assets?” she asked.

#### 4. Russia-Ukraine War Puts Emphasis on Race for Hypersonic Weapons in the US (AP, David Sharp, 20 Mar 22)...

Lagging behind Russia in developing hypersonic weapons, the US Navy is rushing to field its first, with installation on a warship starting as soon as late next year. The United States is in a race with Russia and China to develop these weapons, which travel at speeds akin to ballistic missiles but are difficult to shoot down because of their maneuverability. The Russian military says it already deployed hypersonic missiles and claimed Saturday to have used one for the first time in combat against a target in Ukraine. The Pentagon couldn’t confirm a hypersonic weapon was used in the attack. The American military is accelerating development to catch up. The US weapon would launch like a ballistic missile and would release a hypersonic glide vehicle that would reach speeds seven to eight times faster than the speed of sound before hitting the target. In Maine, General Dynamics subsidiary Bath Iron Works has begun engineering and design work on changes necessary to install the weapon system on three Zumwalt-class destroyers. The work would begin at a yet-to-be-named shipyard sometime in the fiscal year that begins in October 2023, the Navy said.

Hypersonic weapons are defined as anything traveling beyond Mach 5, or five times faster than the speed of sound. That’s about 3,800 mph (6,100 kph). Intercontinental ballistic missiles far exceed that threshold but travel in a predictable path, making it possible to intercept them. The new weapons are maneuverable. Existing missile defense systems, including the Navy’s Aegis system, would have trouble intercepting such objects because maneuverability makes their movement unpredictable and speed leaves little time to react. Russia says it has ballistic missiles that can deploy hypersonic glide vehicles as well as a hypersonic cruise missile. The US is “straining just to catch up” because it failed to invest in the new technology, with only a fraction of the 10,000 people who were working on the program in the 1980s, said US Rep. Jim Cooper, a Tennessee Democrat who’s chair of a subcommittee that monitors the program. “If we want to pursue parity, we will need to back this effort with more money, time, and talent than we are now,” he said.

The Russian invasion of Ukraine serves as a backdrop as the Pentagon releases its budget proposal that lays out its goals for hypersonics and other weapon systems later this month. The three stealthy Zumwalt-class destroyers to be

equipped with the new weapons have plenty of space to accommodate them — thanks to a design failure that works to the Navy’s advantage in this instance. The ships were built around a gun system that was supposed to use GPS-guided, rocket-boosted projectiles to pound targets 90 miles (145 kilometers) away. But those projectiles proved to be too expensive, and the Navy canceled the system, leaving each of the ships with a useless loading system and a pair of 155-mm guns hidden in angular turrets. The retrofit of all three ships will likely cost more than \$1 billion, but will give a new capability to the tech-laden, electric-drive ships that already cost the Navy \$23.5 billion to design and build, said Bryan Clark, a defense analyst at the Hudson Institute. “The engineering is not that hard. It’ll just take time and money to make it happen,” Clark said.

The Navy intends to field the weapons on the destroyers in the 2025 fiscal year and on Virginia-class nuclear-powered attack submarines in the 2028 fiscal year, the Navy said. The destroyers would be based in the Pacific Ocean, where they would be a deterrent to China, should it become emboldened by Russia’s attack on Ukraine and consider attacking Taiwan, Clark said. The US focus on hypersonic weapons represents a pivot after hesitating in the past because of technological hurdles. Adversaries, meanwhile, continued research and development. Russia fired off a salvo of Zircon hypersonic cruise missiles in late December, heralding the completion of weapon testing. But Russia may be exaggerating the capability of such superweapons to compensate for weakness in other areas, said Loren Thompson, a defense analyst at the Lexington Institute. For the time being, Russia doesn’t have many of the weapons, and it’s unclear how effective they are, he said.

#### 5. Pentagon’s Work With Ukraine’s Biological Facilities Becomes Flashpoint in Russia’s Information War (Wall Street Journal, Sharon Weinberger, 20 Mar 22)...

On his first official visit abroad, the new senator from Illinois, Barack Obama, was taken to a facility in Ukraine where the U.S. helped scientists working with dangerous biological materials. But rather than produce biological weapons, U.S. officials in that ramshackle building were trying to prevent lethal pathogens from falling into the hands of terrorists. “I removed a tray of glass vials containing *Bacillus anthracis*, which is the bacterium that causes the anthrax,” recalls Andrew Weber, the Pentagon official who was in charge of the U.S.-funded program that worked with the Ukrainian government. Mr. Weber said he showed the tray “to a very concerned-looking young senator.” Mr. Obama himself recalled seeing in his 2005 trip to Ukraine “test tubes filled with anthrax and the plague lying virtually unlocked and unguarded.” A decades-old Pentagon program that was used to secure biological weapons across the former Soviet Union — and to build trust between Washington and Moscow after the Cold War — has instead become a new flashpoint in an information war between the two countries in the wake of Russia’s invasion of Ukraine. Moscow has accused the Pentagon of funding weapons work in Ukraine’s biological laboratories. “These were not peaceful experiments,” Russian Foreign Minister Sergei Lavrov said earlier this month. China, whose leader Xi Jinping has cultivated a close relationship with Russian President Vladimir Putin, has echoed those allegations. “Russia has found during its military operations that the U.S. uses these facilities to conduct bio-military plans,” the Chinese Foreign Ministry spokesman told reporters.

U.S. officials have flatly denied those claims and warned that Moscow could use its allegations to justify its own use of weapons of mass destruction in Ukraine. “We believe that Moscow may be setting the stage to use a chemical weapon and then falsely blame Ukraine to justify escalating its attacks on the Ukrainian people,” Secretary of State Antony Blinken said last week. “Manufacturing events and creating false narratives of genocide to justify greater use of military force is a tactic that Russia has used before.” The allegations have shocked those who are most familiar with the Pentagon’s post-Cold War initiative, called the Cooperative Threat Reduction program. That is because not only has Russia been aware of the Pentagon’s work securing chemical, biological and nuclear facilities across the former Soviet Union, but it had also been its beneficiary for many years. “They’re outrageous claims,” said Robert Pope, the head of the Defense Threat Reduction Agency, or DTRA, the arm of the Pentagon in charge of running the program. “We were created 30 years ago to eliminate weapons of mass destruction, and Russia knows well we eliminate weapons of mass destruction.” The program, which dates back to 1991 and continues today, stretches across the former Soviet Union. Since the program started, the Pentagon has spent approximately \$12

billion on securing material used in weapons of mass destruction in post-Soviet republics, according to a DTRA spokeswoman. Of those funds, about \$200 million has been spent on the biological work in Ukraine since 2005. The funds have supported dozens of labs, health facilities and diagnostic sites around the country, the DTRA spokeswoman said.

Mr. Weber, who was in charge of negotiating the initial agreement with Kyiv to work on securing the country's biological materials and facilities, said that work expanded to Ukraine after the 9/11 attacks, when al Qaeda terrorists hijacked aircraft and crashed them into the World Trade Center towers and the Pentagon. U.S. policy makers grew worried about the potential for terrorists to steal biological materials—fears that were heightened after letters containing anthrax were sent in the U.S. mail to congressional offices and media outlets. The FBI eventually concluded that an American scientist employed at a military lab sent the letters.

The president of Ukraine at the time, Leonid Kuchma, concerned about the threat of terrorism in his own country, asked the U.S. for help. Since the collapse of the Soviet Union a decade earlier, Ukraine had been starved of the funds needed to secure its biological facilities. Mr. Weber put together a team that visited Ukraine's biological and chemical facilities, which ranged from large laboratories to small veterinary research centers. "We found that a number of them had dangerous pathogen collections left over from Soviet days," he said. "They were in pretty bad shape."

Ukraine's laboratories—unlike some in other former Soviet republics—weren't directly involved in the Cold War biological-weapons program, but they did have pathogens that fed into offensive work, according to Mr. Weber. Those pathogens, like anthrax, could pose a threat if released, whether accidentally or on purpose. The focus of U.S. work in Ukraine was to consolidate that biological material, much of it related to agriculture, into secure facilities, which the U.S. would pay to build or upgrade. Paul McNelly, who from 1995 to 2003 directed the Defense Department's chemical and biological elimination programs in Russia, Kazakhstan and Uzbekistan, said he was stunned with what he saw inside the former Soviet facilities.

"You would walk into these places and the refrigerators that stored these dangerous pathogens, they had no locks on them at all," Mr. McNelly said. "There would be vials that were labeled tularemia, plague, different things like that. And these people, most of them, weren't masked. Their gowns were antiquated." He added: "It was horrible." As part of the program, the Pentagon spent \$1 billion to build the Russians a facility in Shchuchye, Siberia, to demilitarize some two million chemical weapons. By the time it was done in 2009, ties with Moscow were growing tense. The price of oil was going up, giving Russia more revenue to wean itself off foreign assistance. At the same time, Mr. Putin was consolidating power.

As a result, the Russian government became a less-willing partner to the Pentagon's drive to secure the deadly materials, according to James Tegnalia, who served as the head of DTRA from 2005 to 2009. "They wanted our money, but they didn't want to admit that we built the facility," Mr. Tegnalia said. "You could see that they were getting ready to pull back."

Russia's Foreign Ministry had in the past praised the program. But by 2012, Moscow declined to renew cooperation, saying it could pay for the work on its own. In 2014, the year Moscow illegally annexed Crimea and began backing separatists in Ukraine's Donbas region, the program in Russia drew to a close. A spokesman for the Russian Embassy in Washington, D.C., didn't respond to a request for comment on the Pentagon program. Yet even with that chapter of its cooperation over, the Russian claims about the Pentagon conducting secret weapons work in Ukraine came as a surprise not only to those who have worked on the program but also to other Western officials. The Kremlin has in the past used such charges as cover for its own actions, they say. "We are concerned that Moscow could stage a false-flag operation, possibly including chemical weapons," North Atlantic Treaty Organization Secretary-General Jens Stoltenberg said last week.

U.S. officials have declined to discuss what specific intelligence, if any, they have to indicate Russia might be preparing to deploy chemical or other unconventional weapons to Ukraine. But they say Russia has a history of using chemical weapons, including against Mr. Putin's domestic political opponents, and it has encouraged their use in Syria by President Bashar al-Assad's government. The Russian government shot back against the U.S. allegations, denying plans to use chemical weapons. In a post last week on its official Telegram channel, the Russian Defense Ministry said the units fighting in Ukraine "do not have chemical munitions." Mr. Tegnelia, the former DTRA director, views Russia's allegations as a path to an even more dangerous escalation. "If you see them using chemical weapons in Ukraine, watch out," he said, "because they're only one step away from nuclear weapons."

#### 6. West Hits Vladimir Putin's Fake News Factories With Wave of Sanctions (Guardian, Jon Unge, 20 Mar 22)...

Twelve key disinformation outlets used to bolster Vladimir Putin have been hit with sanctions in an online crackdown on "false and misleading" reports claimed to be orchestrated by Russian intelligence. The Foreign Office announced last week that sanctions would be imposed on the Internet Research Agency, the notorious Russian-based troll factory. Two other alleged disinformation websites, New Eastern Outlook and Oriental Review, were also targeted. The Internet Research Agency has been exposed in the past for paying Russia-based bloggers £500 a month to flood the internet with pro-Putin comments on chat forums, social networks and the comment sections of western publications. Government investigators also claim Russian intelligence supports international news and analysis websites which promote the Kremlin's view of the Ukraine invasion. Tom Southern, of the Centre for Information Resilience, a non-profit UK social enterprise which counters disinformation, said the impact of Russian information manipulation campaigns in the Ukraine conflict was being blunted by concerted action by governments and social media companies. "This seems to be a turning point against this fake news," he said.

The US treasury has imposed sanctions on the three outlets identified by the UK authorities. It has also taken action against at least nine others, five of which have been targeted with sanctions since the Ukraine invasion. One of the websites sanctioned by the US is the Strategic Culture Foundation, which describes itself as a "platform for extensive analysis on Eurasian and global affairs". The website has cited Russian claims of a "covert project" to turn Ukraine into a nuclear power. One of its authors also claimed the novichok poisoning of Sergei and Yulia Skripal in Salisbury in March 2018 was likely to be a British "false flag" operation to "incriminate, demonise and delegitimise Russia". The US treasury describes the website as an online journal registered in Russia which is directed by the country's foreign intelligence service. It states: "It publishes conspiracy theorists, giving them a broader platform to spread disinformation, while trying to obscure the Russian origin of the journal so that readers may be more likely to trust the sourcing." The Twitter and Facebook accounts of the website have been suspended since September 2020. The Strategic Culture Foundation did not respond to a request for comment, but says on its website that allegations it was connected with Russian intelligence services were "unsubstantiated" and were "a glimpse into the dystopian future of suppressing dissident voices by governments previously known as democratic".

American officials have also sanctioned three other outlets claimed to be linked to the Strategic Culture Foundation: the news outlets SouthFront, NewsFront and InfoRos. All three are alleged by US officials to be connected to Russian intelligence. Bret Schafer, a senior fellow at the Alliance for Securing Democracy, a US group that tracks online disinformation, said it did not appear the tactics previously used to interfere in the American electoral system – with thousands of accounts on numerous platforms – were being widely deployed for the Ukraine conflict. He said Russia-backed websites were being used to get false information and propaganda more widely disseminated, but were being routinely blocked on social media. "They are trying to get dirty information into the online ecosystem and hope it is picked up by websites and individuals with larger reach," he explained. The Russian state-backed news channel RT had its licence to broadcast in the UK revoked by media regulator Ofcom last week. Analysts said the channel's output was the "tip of the iceberg" in the Kremlin's propaganda campaign. The Ukraine government

has faced disinformation attacks, including a faked video circulated online last week of president Volodymyr Zelenskiy advising his soldiers to lay down their arms. It was quickly dismissed by Zelenskiy as a “childish provocation”. Liz Truss, the foreign secretary, last week said the government was taking action against Russian propaganda, from both the Kremlin’s press office and online disinformation outlets. She said: “We are going further and faster than ever in hitting those closest to Putin – from major oligarchs, to his prime minister, and the propagandists who peddle his lies and disinformation. We are holding them to account for their complicity in Russia’s crimes in Ukraine.”

## 7. Truth Is Another Front in Putin’s War

(New York Times, Steven Lee Myers and Stuart A. Thompson, 20 Mar 22)...

In the tense weeks before Russia invaded Ukraine on Feb. 24, Russian officials denied that it planned anything of the sort, denouncing the United States and its NATO allies for stoking panic and anti-Russian hatred. When it did invade, the officials denied it was at war. Since then, the Kremlin has cycled through a torrent of lies to explain why it had to wage a “special military operation” against a sovereign neighbor. Drug-addled neo-Nazis. Genocide. American biological weapons factories. Birds and reptiles trained to carry pathogens into Russia. Ukrainian forces bombing their own cities, including theaters sheltering children. Disinformation in wartime is as old as war itself, but today war unfolds in the age of social media and digital diplomacy. That has given Russia — and its allies in China and elsewhere — powerful means to prop up the claim that the invasion is justified, exploiting disinformation to rally its citizens at home and to discredit its enemies abroad. Truth has simply become another front in Russia’s war. Using a barrage of increasingly outlandish falsehoods, President Vladimir V. Putin has created an alternative reality, one in which Russia is at war not with Ukraine but with a larger, more pernicious enemy in the West. Even since the war began, the lies have gotten more and more bizarre, transforming from claims that “true sovereignty” for Ukraine was possible only under Russia, made before the attacks, to those about migratory birds carrying bioweapons.

Russia’s message has proved successful domestically, where the Kremlin’s claims go unchallenged. Surveys suggest a majority of Russians support the war effort. Internationally, the campaign has seeped into an information ecosystem that allows them to spread virulently, reaching audiences that were once harder to reach. “Previously, if you were sitting in Moscow and you wanted to reach audiences sitting in, say, Idaho, you would have to work really hard doing that,” said Elise Thomas, a researcher in Australia for the Institute of Strategic Dialogue, referring to disinformation campaigns dating to the Soviet Union. “It would take you time to set up the systems, whereas now you can do it with the press of a button.” The power of Russia’s claim that the invasion is justified comes not from the veracity of any individual falsehood meant to support it but from the broader argument. Individual lies about bioweapons labs or crisis actors are advanced by Russia as swiftly as they are debunked, with little consistency or logic between them. But supporters stubbornly cling to the overarching belief that something is wrong in Ukraine and Russia will fix it. Those connections prove harder to shake, even as new evidence is introduced. That mythology, and its resilience in the face of fact-checking and criticism, reflects “the ability of autocrats and malign actors to completely brainwash us to the point where we don’t see what’s in front of us,” said Laura Thornton, the director and senior fellow at the German Marshall Fund’s Alliance for Securing Democracy.

The Kremlin’s narratives today feed on pre-existing views of the war’s root causes, which Mr. Putin has nurtured for years — and restated in increasingly strident language last week. The strategy to deceive, or at least confuse, international observers was used after the bombing of a maternity ward in Mariupol on March 9. Twitter and Facebook eventually removed the posts, but gruesome photographs, stamped “Fake,” continued circulating across the internet, including on the chat app Telegram. Another meme gained even more traction, relying on a yearslong campaign in Russia to stoke unfounded fears that the United States was manufacturing biological weapons in Ukraine. The day after the bombardment, official Russian accounts falsely claimed that a pregnant woman seen in photos from Mariupol had faked her injuries. The Story appeared on the official accounts of more than a dozen Russian embassies, according to data collected by FakeReporter, an Israeli group that studies disinformation, and

ricocheted across Twitter, Facebook and Telegram. Many of the posts used the exact same media and similar language, suggesting a coordinated campaign. Twitter and Facebook eventually removed the posts, but gruesome photographs, stamped "Fake," continued circulating across the internet, including on the chat app Telegram.

Another meme gained even more traction, relying on a yearslong campaign in Russia to stoke unfounded fears that the United States was manufacturing biological weapons in Ukraine. The claim gained ground in English-language social media just two days into the invasion after a Twitter post by the account WarClandestine went viral. Until the account was suspended, it peddled QAnon conspiracy theories about secretive government plots. These theories fester and then seep into the mainstream. By early March, the Russian Defense Ministry claimed it had uncovered "traces of a military biological program" in Ukraine, which it said was "financed by the U.S. Defense Ministry. The Fox News host Tucker Carlson soon floated the idea on his show, airing Russia's statement and dismissing the explanation from United States officials that they were diagnostic and biodefense laboratories used for research, saying, "Whether you call them weapons or not is completely irrelevant, because they can be used as weapons." Mr. Carlson's commentaries were then picked up in Russian media, including in a Telegram post by the Russian state news agency RIA Novosti that received over one million views. China's government and state media parroted the claim too, in what was clearly an effort to discredit the American government's frequent criticism of China's behavior.

When Russia took such claims to an emergency meeting of the United Nations Security Council, however, it faced withering criticism. "Russia has today brought into the Security Council a series of wild, completely baseless and irresponsible conspiracy theories," the British representative, Barbara Woodward, told the Council. "Let me put it diplomatically: They are utter nonsense." Russia's accusations about nefarious American activities in Ukraine date back decades, resurfacing in new forms with each new crisis, like the political upheaval in 2014 that led to Russia's annexation of Crimea. Ukraine is waging an information campaign of its own, aiming to discredit Russia, exaggerate its own military successes and minimize its losses. It has also circulated false reports of heroism, including the martyrdom of soldiers defending an island in the Black Sea and the exploits of an ace fighter pilot in the skies over Kyiv. By most accounts, Ukraine has so far been winning the information war, led by a powerful social media operation that flooded the internet with its own jumble of anecdotes and myths, bolstering morale among Ukrainians and uniting the Western world behind its cause. The most central figure in their campaign has been President Volodymyr Zelensky himself, whose video messages to Ukrainians and the world have combined bravery with the stage presence of the television performer he once was.

Russia, though, has more tools and reach, and it has the upper hand with weaponry. The strategy has been to overwhelm the information space, especially at home, which "is really where their focus is," said Peter Pomerantsev, a scholar at the Stavros Niarchos Foundation Agora Institute at Johns Hopkins University who has written extensively about Russian propaganda. Russia's propaganda machine plays into suspicion of the West and NATO, which have been vilified on state television for years, deeply embedding distrust in Russian society. State media has also more recently echoed beliefs advanced by the QAnon movement, which ascribes the world's problems largely to global elites and sex traffickers. Those beliefs make people feel "scared and uncertain and alienated," said Sophia Moskalenko, a social psychologist at Georgia State University. "As a result of manipulating their emotions, they will be more likely to embrace conspiracy theories." Mr. Putin's public remarks, which dominate state media, have become increasingly strident. He has warned that nationalist sentiment in Ukraine is a threat to Russia itself, as is NATO expansion. Yet when the invasion began, it seemed to catch the organs of the propaganda apparatus unprepared. Officials and state media had just spent weeks accusing the Biden administration of exaggerating what Russia claimed were simply regular military exercises, not the buildup of an invasion force. "Clearly, they did not prepare the information warfare machine," Mr. Pomerantsev said. "It takes months to prepare something like this."

That could explain the changing, disjointed nature of Russia's campaign. The threat of biological weapons in Ukraine — let alone secret American weapons factories producing them there — was not cited as a rationale for the "special military operation" that Mr. Putin announced at dawn on Feb. 24. These falsehoods emerged only later. "They throw stuff out and they see what works," said Ms. Thomas, the researcher from the Institute for Strategic Dialogue. "And what's really working for them at the moment is the biolabs stuff." The Kremlin's campaign has gone beyond simply propagating its message. It has moved swiftly to silence dissenting points of view that could cut through the fog of war and discourage the Russian population. For now, the campaign appears to have rallied public opinion behind Mr. Putin, according to most surveys in Russia, though not as high as might be expected for a country at war. "My impression is that many people in Russia are buying the government's narrative," said Alexander Gabuev, a senior fellow at the Carnegie Moscow Center. "They have doctored images on state-controlled media. Private media don't cover the war, fearing 15 years in prison. Same goes for people on the social media. Russia has lost information warfare globally, but the regime is quite successful at home." The question is for how long.

Cracks have appeared in the information fortress the Kremlin is building. A week after the invasion began, when it was already clear the war was going badly for Russian troops, Mr. Putin rushed to enact a law that punishes "fake news" with up to 15 years in prison. Media regulators warned broadcasters not to refer to the war as a war. They also forced off the air two flagships of independent media — Ekho Moskvy, a liberal radio station, and Dozhd, a television station — that gave voice to the Kremlin's opponents. Access to Facebook, Twitter, TikTok and most recently Instagram has also been severed inside Russia — all platforms the country's diplomats have continued to use outside to misinform. Once spread, disinformation can be tenacious, even in places with a free press and open debate, like the United States, where polls suggest that more than 40 percent of the population believes the 2020 election was stolen from former President Donald J. Trump. "Why are people so surprised that this kind of widespread disinformation can be so effective in Russia when it was so effective here?" Ms. Thornton of the German Marshall Fund said. As the war in Ukraine drags on, however, casualties are mounting, confronting families in Russia with the loss of fathers and sons. That could test how persuasive the Kremlin's information campaign truly is. The Soviet Union sought to keep a similar veil of silence around its decade-long quagmire in Afghanistan in the 1980s, but the truth seeped into public consciousness anyway, eroding the foundation of the entire system. Two years after the last troops pulled out in 1989, the Soviet Union itself collapsed.

8. TikTok Was 'Just a Dancing App'. Then the Ukraine War Started  
(Guardian, Kari Paul, 20 Mar 22)...

Many have called the invasion of Ukraine the world's first "TikTok war", and experts say it is high time for the short video platform — once known primarily for silly lip syncs and dance challenge — to be taken seriously. Some politicians are doing just that. In a speech, the Ukrainian president, Volodymyr Zelenskyy, appealed to "TikTokers" as a group that could help end the war. Last week, Joe Biden spoke to dozens of top users on the app in a first-of-its-kind meeting to brief the influencers on the conflict in Ukraine and how the US is addressing it. But even as world leaders increasingly legitimize the platform, others continue to dismiss it as frivolous. The White House meeting was lampooned on Saturday Night Live in a skit, and mocked relentlessly on Twitter, while the Republican senator Josh Hawley scolded Biden for asking "teenagers to do his job". Experts say this mentality is a mistake. "TikTok is constantly overlooked and deprioritized by people who do not take the time to understand it," said Abbie Richards, an independent researcher who studies the app. "Many of the problems we are seeing with it today stem from this false idea that it is just a dancing app."

Ukraine-related content on TikTok has exploded since the country was invaded on 24 February, with videos tagged #Ukraine surpassing 30.5bn views as of 17 March. One report from the New York Times found that, proportionally, Ukraine content on TikTok outpaces that on platforms more than twice its size. With that dramatic rise came an influx of misinformation and disinformation. Videos of unrelated explosions were re-posted as if they were from Ukraine. Media uploaded from video games were passed off as footage of real-life events. Russian propaganda went

viral before it could be removed. “We saw immediately from the start of the conflict that TikTok was structurally incompatible with the needs of the current moment regarding disinformation,” Richards said. TikTok has a number of features that make it uniquely susceptible to such issues, according to a paper published by Harvard’s Shorenstein Center on Media titled *TikTok, the War on Ukraine, and 10 Features that Make the App Vulnerable to Misinformation*. Its core features prime it for remixing media, allowing users to upload videos and sound clips without attributing their origins, the paper said, which makes it difficult to contextualize and factcheck videos. This has created a digital atmosphere in which “it is difficult – even for seasoned journalists and researchers – to discern truth from rumor, parody and fabrication”, researchers added. Design features within the app also create an easy pathway for misinformation, researchers say. Users post mostly under pseudonyms; the date of upload for videos is not prominently displayed, complicating attempts to contextualize content; and the newsfeed structure – with each video taking up the entirety of a user’s screen – makes it difficult to seek out additional sources. Unlike on Facebook, where the user’s feed is filled primarily with content from friends and people they know, TikTok’s “for you page” is largely content from strangers determined by the company’s opaque algorithm. And the more a platform relies on algorithms rather than a chronological newsfeed, the more susceptible it can be to mis- and disinformation, experts say. That is because algorithms favor content that gets more engagement. “One thing that is common across all platforms is that algorithms are optimized to detect and exploit cognitive biases for more polarizing content,” said Marc Faddoul, a researcher at the TikTok Observatory where he studies the platform and its content policies. “Disinformation is very engaging for users, so it is more likely to appear on feeds.” These issues are exacerbated by the age and size of TikTok. The app is relatively young, launched in 2016, and has grown rapidly to 130m in the United States and more than 1bn globally. Though smaller than Facebook, which has 230m users in the US and 2.9bn globally, the platform is facing many of the same issues with fewer resources and less experience. TikTok is continuing to evolve after it saw usership soar during the pandemic-induced lockdowns of 2020, said Emily Dreyfuss, a researcher at Harvard’s Shorenstein Center on Media who co-authored the research paper. “That is when we really started to see a shift from what people thought was just an app for teenagers to do viral dance tricks to a real part of the cultural conversation,” she said.

TikTok has, like many other social media companies, scrambled to keep up with the onslaught of disinformation about the war in Ukraine. It uses a combination of algorithms and human moderators to manage the platform, spokeswoman Jamic Favazza told the Guardian, with teams that speak more than 60 languages and dialects including Russian and Ukrainian. It has rushed out the launch of a state-controlled media policy to address propaganda put out by Russian entities. “We continue to respond to the war in Ukraine with increased safety and security resources to detect emerging threats and remove harmful misinformation,” Favazza said. Meanwhile TikTok added digital literacy tips on its Discover page “to help our community evaluate and make decisions about the content they view online”. It has for years voluntarily released transparency reports about what content it has removed. But researchers say there is more to be done. Despite these moves, some state-controlled media accounts such as RT remain on the app, though access to them has been banned in the EU. Richards, the TikTok researcher, noted that a disinformation campaign she studied for a recent report remains on the platform, with dozens of videos using the caption “Russian Lives Matter” continuing to rack up thousands of views.

In many ways TikTok has been far more responsive to criticism than its predecessors, including social media giants such as Facebook. But while the company is dutifully flagging misinformation and cracking down on Russian state content, reining in disinformation on a mass scale is becoming more complicated than ever as influencers’ power grows. Well-followed accounts have an outsized influence on what media their followers consume, regardless of how much expertise they actually have in a given subject matter. Studies show consumers are substantially more likely to trust a recommendation from someone they follow on social media than a traditional advertisement, and the same goes for information shared online. TikTok is “driven by a culture that values individual creators and platform-specific microcelebrities”, the Shorenstein Center paper argued, making influencers and people with large followings particularly susceptible to inadvertently sharing inaccurate or manipulated content. “Influencers have great incentive to enter the discourse about a breaking news event or ongoing crisis, since these posts can boost users’ profiles; even one viral video can popularize an entire account,” the paper said. Meanwhile, very few checks and balances exist in terms of how they operate in the online media space, said Dreyfuss, noting that they operate in similar media spaces as journalists with far less training or media literacy, such as how to factcheck false claims that

even seasoned researchers struggle to detect. "There is no formal accountability for influencers and they are often catering only to the whims of their fans," Dreyfuss said. Experts say it is urgent that legislators and the general public take this collision of massive influence with little accountability seriously. In inviting top influencers to the White House, the Biden administration took a meaningful step in that direction. For their part, influencers are also recognizing the power that they hold. One 18-year-old TikTok star with more than 10.5m followers told the Washington Post she sees herself as "a White House correspondent for Gen Z" who is there to "relay the information in a more digestible manner".

#### 9. Poland's Open-Door Policy Helps Ukrainian Refugees Build New Lives (Deutsche Welle, Monika Sieradzka, 20 Mar 22)...

For Ukrainian refugees in Poland these days, the most important word is "PESEL" — the abbreviation for the Polish national identity number. Poland's government has promised refugees from neighboring Ukraine that they can stay in the country for up to 180 days and access the labor market, health care system and social benefits. Refugees need a PESEL number for that. Polish authorities set up one of the biggest registration centers so refugees can apply for a PESEL number at the National Stadium in Warsaw. On Friday evening, a day before the center opened, long lines had already formed outside the building. Flasks full of hot tea were provided for the people waiting at the gate to the stadium. "I will wait here as long as necessary. I need a work permit, I need to find work, and I need to do it as soon as possible," 24-year-old Viktoria told DW. The IT specialist from Kyiv was allowed to go in at 9 a.m. the following day. During the night, she took turns standing in line with her friends and sleeping in a car in the stadium's parking lot. Viktoria's persistence paid off — she's hoping to get the PESEL number within a few days. Others aren't so lucky. Anyone who got to the stadium after 7 a.m. had no chance of being served the same day. Volunteers had prepared purple wristbands and handed them out to those who were guaranteed to get their turn the next day.

There are currently over 2 million Ukrainian refugees in Poland. Some 123,000 received PESEL numbers within the first two days of the registration drive. Additional registration points — such as the one at the National Stadium — and registration buses that travel to refugee shelters should speed up the operation. City and municipal offices, which typically issue the national identity numbers, are overwhelmed. In the Polish city of Przemysl, near the Ukrainian border, the city office is working at full speed, but with only four fingerprint machines and a total of seven officers, there are long waiting times here as well. "I don't speak Polish, and I expect it probably won't be possible to work at a bank," she told DW. "But I need to find some kind of work quickly to secure a living for my son and me." Kokesnyk took her passport with her when she fled Ukraine, making the formalities easier. Those who escaped the war without proof of identity also receive refuge in Poland but registering and receiving an ID number takes longer.

A law recently passed by the Polish parliament ensures refugees' access to the labor market, health care and social benefits, including monthly child benefits of €110 (\$121) per child. New arrivals from Ukraine receive the equivalent of €70 in welcome money, after which they have to fend for themselves. The new law also guarantees Polish citizens who host Ukrainians the equivalent of €9 a day for expenses. Alexandra Stefaniv from Lviv sits in the waiting room while her Polish relative Leon Bortnik helps fill out the application. The logistics entrepreneur from Przemysl is taking care of his Ukrainian relatives in a recently inherited apartment that had been empty. "I suddenly got a call from my mother's sister from Ukraine. She asked me if I could host her and her immediate family. There is only one right answer to that," Bortnik tells DW. He wants to help Stefaniv find a job and knows many people in the region. For Stefaniv, who is 46, her own future is highly uncertain. "I'm confused. I have no idea what to do in Poland. Should I look for work? But I do hope that the war will be over soon and that I can return home," she says, adding that her husband stayed in Lviv, and she never planned to leave Ukraine.

Since the war started, 3.3 million Ukrainians have emigrated, many to Poland. Even before that, the country of 38

million people had more than a million Ukrainian migrants who left their country since the Russian annexation of Crimea in 2014. In 2021, 90% of respondents in a survey by the University of Warsaw's Center for Prejudice Research said they accepted Ukrainians as colleagues and neighbors. In recent decades, migrants in Poland have accounted for a small fraction of society. Apart from Ukrainian emigrants since 2014, there is no other migrant group of comparable size. Compared to other EU countries, Poland had closed itself off to migrants. The current arrival of refugees is a completely new phenomenon. After more than three weeks of an outpouring of solidarity during which Ukrainian war refugees were welcomed with open arms, questions are emerging in the media of how the already overburdened social and health care systems can serve millions more people. Concerns are also growing among some parent associations about the prospect of overcrowded school classes.

Agnieszka Lada-Konefal, deputy director of the German Poland Institute in Darmstadt, speaks of an enormous challenge for the administration and society that will irrevocably change the country. "Poles will have to learn to live together with people who are somewhat different," the political scientist told DW, adding it was an experience that many people already had with Ukrainians taking refuge in the country in recent years. Schoolchildren will also have to learn to adapt to classmates with a different language and culture as well as difficult experiences of war, she said. "Children and young people will have to cope with that," says Lada-Konefal. "They will have to learn to live with others, to open up. That is part of development." But parts of society may feel overwhelmed by the number of refugees, and more migration from Ukraine could also be used by populists to "spread hatred and resentment," the political scientist said. "If the costs are high and the crisis and the war drag on for a long time, it's hard to say whether Polish society will be able to accept this and learn to live with it," Lada-Konefal adds.

DETER

10. Turkey Says Russia and Ukraine Nearing Agreement on 'Critical' Issues (Reuters, 19 Mar 22)...

Turkey's foreign minister said in an interview published on Sunday that Russia and Ukraine were nearing agreement on "critical" issues and he was hopeful for a ceasefire if the two sides did not backtrack from progress achieved so far. Russian forces invaded Ukraine on Feb. 24. President Vladimir Putin has called Russia's actions a "special operation" meant to demilitarize Ukraine and purge it of what he sees as dangerous nationalists. Ukraine and the West say Putin launched an aggressive war of choice. Foreign ministers Sergei Lavrov of Russia and Dmytro Kuleba of Ukraine met in the Turkish resort town of Antalya earlier this month with Turkish Foreign Minister Mevlut Cavusoglu also attending. The discussions did not yield concrete results. But Cavusoglu, who also travelled to Russia and Ukraine last week for talks with Lavrov and Kuleba, told Turkish daily Hurriyet that there had been "rapprochement in the positions of both sides on important subjects, critical subjects". "We can say we are hopeful for a ceasefire if the sides do not take a step back from the current positions," he said, without elaborating on the issues. Turkish presidential spokesman Ibrahim Kalin, speaking to al Jazeera television, said the two sides were getting closer on four key issues. He cited Russia's demand for Ukraine to renounce ambitions to join NATO, demilitarisation, what Russia has referred to as "de-nazification", and the protection of the Russian language in Ukraine.

Ukraine and the West have dismissed Russian references to "neo-Nazis" in Ukraine's democratically elected leadership as baseless propaganda, and Kalin said such references were offensive to Kyiv. Kyiv and Moscow reported some progress in talks last week toward a political formula that would guarantee Ukraine's security, while keeping it outside NATO, though each sides accused the other of dragging matters out. Kalin said a permanent ceasefire could come only through a meeting between Putin and Ukrainian President Volodymyr Zelenskyy. But he said Putin felt that positions on the "strategic issues" of Crimea and Donbas were not close enough for a meeting. Russia annexed the Crimean peninsula from Ukraine in 2014 while part of the eastern industrial Donbas region was seized by Russian-backed separatist forces that year.

NATO member Turkey shares a maritime border with Ukraine and Russia in the Black Sea, has good relations with both and has offered to mediate between them. It has voiced support for Ukraine, but has also opposed far-reaching Western sanctions imposed on Moscow over the invasion. While forging close ties with Russia on energy, defence and trade and relying heavily on Russian tourists, Turkey has sold drones to Ukraine, angering Moscow. Turkey also opposes Russian policies in Syria and Libya, as well as Moscow's annexation of Crimea. President Tayyip Erdogan has repeatedly said Turkey will not abandon its relations with Russia or Ukraine, saying Ankara's ability to speak to both sides was an asset.

11. U.S. Suggested Turkey Transfer Russian-Made Missile System to Ukraine (Reuters, Humejra Pamuk, 19 Mar 22)...

The United States has informally raised with Turkey the unlikely possibility of sending its Russian-made S-400 missile defense systems to Ukraine to help it fight invading Russian forces, according to three sources familiar with the matter. U.S. officials have floated the suggestion over the past month with their Turkish counterparts but no specific or formal request was made, the sources told Reuters. They said it also came up briefly during Deputy Secretary of State Wendy Sherman's visit to Turkey earlier this month. The Biden administration has been asking allies who have been using Russian made equipment and systems including S-300s and S-400s to consider transferring them to Ukraine as it tries to fend off a Russian invasion that began on Feb. 24. The idea, which analysts said was sure to be shot down by Turkey, was part of a wider discussion between Sherman and Turkish officials about how the United States and its allies can do more to support Ukraine and on how to improve bilateral ties.

The Turkish authorities have not commented on any U.S. suggestion or proposal relating to the transfer to Ukraine of Ankara's S-400 systems, which have been a point of long-standing contention between the two NATO allies. Turkish foreign ministry officials were not immediately available for comment. Turkish sources and analysts said any such suggestion would be a non-starter for Turkey, citing issues ranging from technical hurdles related to installing and operating the S-400s in Ukraine, to political concerns such as the blowback Ankara would likely face from Moscow. Washington has repeatedly asked Ankara to get rid of the Russian-built surface-to-air missile batteries since the first delivery arrived in July 2019. The United States has imposed sanctions on a Turkey's defence industry and removed NATO member Turkey from the F-35 fighter jet programme as a result. Ankara has said it was forced to opt for the S-400s because allies did not provide weapons on satisfactory terms.

U.S. officials are keen to seize this moment to draw Turkey back into Washington's orbit. Efforts to find "creative" ways to improve the strained relationship have accelerated in recent weeks, even though no specific proposal has so far gained traction, U.S. and Turkish sources have said. "I think everyone knows that the S-400 has been a long standing issue and perhaps this is a moment when we can figure out a new way to solve this problem," Sherman told Turkish broadcaster Haberturk in an interview on March 5. It was not clear what exactly she meant and the State Department has not answered questions about her comments. The White House did not respond to a request for comment about the suggestion made during her visit to Turkey. The effort is also part of a wider bid by the Biden administration to respond to Ukrainian President Volodymyr Zelenskiy's plea to help protect Ukraine's skies. Russian or Soviet-made air defense systems such as S-300s that other NATO allies have and S-400s are sought after. One source familiar with U.S. thinking said Washington's floating of the possibility came as a result of the renewed effort to improve ties at a time when Ankara has been spooked by Russia's invasion of Ukraine.

Turkish President Erdogan had not received a specific heads up from Russian President Vladimir Putin on his plans of a full-scale attack on Ukraine, another source familiar with the discussions said. Turkey shares a maritime border with Ukraine and Russia in the Black Sea and has good ties with both. It has said the invasion is unacceptable and

voiced support for Ukraine, but has also opposed sanctions on Moscow while offering to mediate. Ankara has carefully formulated its rhetoric not to offend Moscow, analysts say, with which it has close energy, defence and tourism ties. But Ankara has also sold military drones to Kyiv and signed a deal to co-produce more, angering the Kremlin. Turkey also opposes Russian policies in Syria and Libya, as well as its 2014 annexation of Crimea. "Turkey has managed to walk on the razor's edge and a transfer of a Russian S-400 would certainly lead to severe Russian ire," said Aaron Stein, director of research at the Philadelphia-based Foreign Policy Research Institute. "And for Erdogan, the S-400 has become a symbol of Turkish sovereignty, so trading it away wouldn't be all roses and flowers."

[Top of the Document]

## 12. Zelenskyy Says He's Willing to Talk With Putin but Not Yield His Nation's Independence (Politico, David Cohen, 20 Mar 22)...

President Volodymyr Zelenskyy of Ukraine said on Sunday he was ready to negotiate with Russian President Vladimir Putin but not willing to yield on his nation's territorial integrity. Speaking through an interpreter on CNN's "Fareed Zakaria GPS," he said: "I am ready for negotiations with him. I was ready over the last two years, and I think that without negotiations we cannot end this war." "If there is just 1 percent chance for us to stop this war," he added. "I think that we need to take this chance, we need to do that." Ukraine's president also warned that talks were the best hope to avert a third world war. Zelenskyy's nation continues to hold off a Russian military that was widely believed to be one of the most powerful in the world but has suffered extensive casualties, some of it from Russian airstrikes on civilian targets. During the interview with Zakaria, he displayed a wide range of emotions, including defiance in the face of the invasion, pride in how his nation has responded, frustration with other world leaders for not taking his previous warnings about Russia seriously, concern about what Russian President Vladimir Putin might do next, and despair over the losses that his nation is suffering. "Unfortunately, our dignity is not going to preserve lives," he said at one point.

In discussing negotiations, Zelenskyy said that his nation was willing to make only limited compromises, but not the handing over of territory his citizens are fighting so hard to retain. He said his nation would need "security guarantees, sovereignty, restoration of territorial integrity, real guarantees for our country" in order to agree to stop the fighting. "There are compromises for which we cannot be ready as an independent state," he said. "Any compromises related to our territorial integrity and our sovereignty, and the Ukrainian people have spoken about it they have not greeted Russian soldiers with a bunch of flowers, they have greeted them with bravery, they have greeted them with weapons in their hands." Zelenskyy, who became president in 2019, also said that he had been saying for years that Ukraine deserved to be fully integrated into Europe, as a member of both NATO and the European Union. He said even the promise of those things could have helped block Russian expansionist policies. "If Russia continues to make soundings, testing the crowd, and if they do not see any kind of response from the West, they will continue to advance," he said. "I have been talking about this from the very first day of my presidency."

Zelenskyy reiterated that he had been pleading with other world leaders in the run-up to the current invasion. "I told them that we are running out of time," he said. "You have to admit Ukraine into NATO right now. We did not have much time. You have to accept Ukraine as a member of the EU. We deserve these alliances." But, he noted: "Everyone in the West told me that we do not have any chance of NATO or EU membership. I asked them not to drive the Ukrainian people into a corner because our people are brave." Zelenskyy, who is Jewish and who lost members of his family in the Holocaust during World War II, said he found it absurd that Putin, conjuring up the image of the German invasion of the Soviet Union in 1941, has said Ukraine is dominated by neo-Nazis.

[Top of the Document]

## 13. US Backs Zelenskyy's Efforts to Negotiate With Putin (Los Angeles Times, Erin B. Logan, 20 Mar 22)...

The Biden administration is backing Ukrainian President Volodymyr Zelenskyy's efforts to negotiate a peaceful end to Russia's invasion of his country as it continued to accuse Russian forces of deliberately targeting civilians in what would amount to war crimes, top U.S. officials said Sunday. "We have supported the negotiations that President Zelenskyy has attempted to do with the Russians," Linda Thomas-Greenfield, U.S. ambassador to the United Nations, told CNN, though she quickly sought to temper expectations. "And I do use the word 'attempted' because the negotiations seem to be one-sided, and the Russians have not leaned into any possibility for a negotiated and diplomatic solution. ... But we're still hopeful that the Ukrainian effort will end this brutal war." Zelenskyy had told CNN on Sunday that "without negotiations, we cannot end this war," a day after calling for direct talks with Russian President Vladimir Putin to end the conflict. "Russian forces have come to exterminate us, to kill us," he said speaking through an interpreter. "If there is just a 1% chance to stop this war, we need to do that."

Zelenskyy's pleas come as Ukrainian officials on Sunday accused Russia of bombing an art school in the besieged city of Mariupol where hundreds had taken shelter. Zelenskyy in a daily address said the attack will "go down in history" as a war crime. "The terror the occupiers did to the peaceful city will be remembered for centuries to come," Zelenskyy said. In a Saturday statement on Telegram, the city council of Mariupol said that "several thousand" residents had been taken to camps in Russian territory. Thomas-Greenfield said she could not confirm the reports but added it would be "unconscionable for Russia to force Ukrainian citizens into Russia, and put them in what will basically be concentration and prisoner camps."

U.S. officials have been critical of Russian attacks on hospitals, schools and other infrastructure since it launched its invasion on Feb. 24. Defense Secretary Lloyd J. Austin III on Sunday accused Putin of targeting "cities, towns and civilians" because "he's not been able to achieve the goals as rapidly as he wants to achieve." Austin said that Putin's tactics were "disgusting" and that intentionally targeting civilians would constitute war crimes. His comments echoed those by President Joe Biden who last week called Putin a "war criminal." U.S. and Western officials are also concerned that Putin may order the use of chemical and biological weapons. To lay the groundwork for such an attack, the Kremlin has been leveling "spurious accusations that the U.S. was supporting Ukraine's chemical weapons program," Thomas-Greenfield said. "This is a 'false flag' effort by the Russians," she said. "They are advancing what they might intend to do. We have seen it happen before. They are the ones who've used chemical weapons. They used them in Syria. They have used chemical weapons against their own people. And we are concerned that they may use chemical weapons in Ukraine."

The United Nations has said that nearly 900 civilians have been killed so far in Ukraine, and more than 3 million people have fled the nation, setting off a refugee crisis. NATO nations are scrambling to handle the potential humanitarian disaster while ratcheting up pressure on Putin to withdraw his forces. Biden plans on traveling to Brussels to attend an emergency NATO summit to discuss measures the alliance can take to further counter Putin. Since the invasion, the U.S. and its allies have imposed stiff economic sanctions on the Kremlin, curtailed imports of Russian oil and restricted airspace to Russian commercial air traffic. In the hopes of stiffening Ukrainian resistance to the Russian onslaught, the U.S. and NATO members have boosted the flow of arms, humanitarian supplies and financial assistance to Kyiv. While stressing the U.S. commitment to defending NATO countries against any Russian attack and bolstering its troop presence in Europe, Biden has said he will not dispatch troops to Ukraine. U.S. officials believe such a step would probably set off a broader conflict.

Zelenskyy has invited Biden to Kyiv, a trip that was ruled out on Sunday by Thomas-Greenfield and White House press secretary Jen Psaki. In a tweet, Psaki said the NATO summit "will be focused on continuing to rally the world in support of the Ukrainian people and against President Putin's invasion of Ukraine, but there are no plans to travel into Ukraine." The invasion has not gone the way Putin and his military commanders had hoped. Much of the fighting throughout the country has reached a stalemate, according to experts and U.S. officials. A report by the

Institute for the Study of War, a Washington think tank, released on Saturday assessed that “Ukrainian forces have defeated the initial Russian campaign of this war.” “The initial Russian campaign to seize Ukraine’s capital and major cities and force regime change has failed,” the report said.

14. US Not Optimistic About Ukraine Talks as Zelenskiy Ups Pressure on Biden  
(Guardian, Richard Luscombe, 20 Mar 22)...

Joe Biden’s ambassador to the United Nations warned on Sunday there was little immediate hope of a negotiated end to the war in Ukraine, as pressure continued to build on the US president ahead of a crucial Nato summit in Europe this week. Linda Thomas-Greenfield was reacting on CNN’s State of the Union to an interview with Volodymyr Zelenskiy in which the Ukrainian president told the same network only talks would end the war and its devastating toll on civilians. “We have to use any format, any chance, to have the possibility of negotiating, of talking to [Russian president Vladimir] Putin,” Zelenskiy told Fareed Zakaria, the host of GPS. “If these attempts fail, that would mean that this is a third world war.” Thomas-Greenfield said she saw little chance of a breakthrough. “We have supported the negotiations that President Zelenskiy has attempted with the Russians, and I use the word attempted because the negotiations seem to be one-sided, and the Russians have not leaned in to any possibility for a negotiated and diplomatic solution,” she said. “We tried before Russia decided to move forward in this brutal attack on Ukraine and those diplomatic efforts were not responded to well by the Russians, and they’re not responding now. But we’re still hopeful that the Ukrainian effort will end this brutal war.”

The Nato secretary general, Jens Stoltenberg, told NBC’s Meet the Press: “Turkey is doing some real effort to try to facilitate, support talks between Russia and Ukraine. It’s far too early to say whether these talks can lead to any concrete outcome.” Biden, who faces growing dissatisfaction over his approach to the war, will travel to Brussels on Thursday. He will hear a proposal from Poland for Nato to send a peacekeeping force into Ukraine, something Thomas-Greenfield said was unlikely. “I can’t preview what decisions will be made and how Nato will respond to the Polish proposal,” she said. “What I can say is American troops will not be on the ground in Ukraine at this moment. The president has been clear on that. “Other Nato countries may decide that they want to put troops inside of Ukraine, that will be a decision that they have made. We don’t want to escalate this into a war with the United States but we will support our Nato allies.” Thomas-Greenfield was asked about reports that thousands of residents of the besieged city of Mariupol have been deported to Russia. “I’ve only heard it,” she said. “I can’t confirm it. But I can say it is disturbing. It is unconscionable for Russia to force Ukrainian citizens into Russia and put them in what will basically be concentration and prisoner camps.”

Republicans were critical of the pace and content of US support for Ukraine. Following Zelenskiy’s address to Congress on Wednesday, the White House announced \$800m in military aid, following a \$13.6bn package. But Biden has rejected a no-fly zone and the transfer of Polish Mig fighter jets. “The president has had to be pushed and pulled to where he is today,” the Wyoming Republican senator John Barasso told ABC’s This Week. “It was Congress that brought about sanctions, that brought about the ban on Russian oil, that brought about weapons and all of this big aid package. So far the administration has only released \$1bn of that. We might not have been in this situation if they had done punishing sanctions before the tanks began to roll.” Speaking to CBS’s Face the Nation, the Senate minority leader, Mitch McConnell, said he believed Biden “needs to step up his game”. The president, McConnell said: “has generally done the right thing but never soon enough. I am perplexed as to why we couldn’t get the Polish-Russian Migs into the country.” McConnell added that Biden should visit friendly countries close to the conflict zone, such as Romania, Poland, and the Baltic nations. “They’re right on the frontlines and need to know that we’re in this fight with them to win,” he said. McConnell also condemned Republican extremists who have opposed support for Ukraine, such as the North Carolina congressman Madison Cawthorne, who has called Zelenskiy “a thug”. “There are some lonely voices out there who are in a different place,” McConnell said.

Concern is rising among Biden's allies. Dick Durbin of Illinois, the Democratic Senate whip, reiterated the call to approve air support for Ukraine. "We're asking for one-third of the Polish air force to be sent into Ukraine," he told ABC. The people of Poland, of course, want to make certain that they're safe. They're only a few miles away from the devastation that's going on in Ukraine. "There are other ways for us to provide surface-to-air missiles and air defenses that will keep the Russians at bay in terms of their aerial attacks. There are ways to do that that are consistent with the Nato alliance and would not jeopardise expanding this into world war three or even worse." Marek Magierowski, the Polish ambassador to the US, stressed that the proposal for a peacekeeping force in Ukraine was only "a preliminary concept". "We can't take any decisions unilaterally, they have to be taken by all Nato members," he told CNN, adding: "If there is an incursion into Nato territory, I believe that Russia can expect a very harsh response on the part of our alliance." Zelenskiy lamented the provision only of economic and limited military support. "If we were a Nato member, a war wouldn't have started," he said. "If Nato members are ready to see us in the alliance, do it immediately because people are dying on a daily basis. "But if you are not ready to preserve the lives of our people, if you just want to see us straddle two worlds, if you want to see us in this dubious position where we don't understand whether you can accept us or not, you cannot place us in this situation, you cannot force us to be in this limbo."

Zelenskiy, however, appeared to acknowledge last week that Ukraine would not join Nato. On CBS's Face the Nation, the US defense secretary, Lloyd Austin, said the use of chemical weapons by Russia, which many analysts predict, would produce a "significant reaction" from the US and the international community. On NBC, Stoltenberg said the use of chemical weapons "would be a blatant and brutal violation of international law". But he would not say such an outcome would change Nato policy towards intervention. Biden this week spoke to the Chinese president, Xi Jinping, seeking to prevent support for Russia. The Chinese ambassador to the US, Qin Gang, spoke to CBS. He said: "What China is doing is sending food, medicine, sleeping bags and baby formula, not weapons and ammunition to any party." Gang also said Chinese condemnation of the Russian invasion, for which some have called, would not "solve the problem". "I would be surprised if Russia will back down by condemnation," he said. In Ukraine, fighting continues. The retired US army general and former CIA director David Petraeus told CNN the conflict had reached "a bloody stalemate, with lots of continued damage on both sides, lots of destruction, especially from the Russians".

15. US and NATO Officials Struggle to Decipher Status of Negotiations Between Russia and Ukraine (CNN, Zachary Cohen, Natasha Bertrand, and Alex Marquardt, 20 Mar 22)...

US and NATO officials believe Russian President Vladimir Putin has not backed off his original demands in talks with Ukraine, and there is a heavy dose of skepticism in Western capitals about how credible Moscow's engagement truly is -- even as the status of those negotiations remains difficult to decipher, according to multiple sources briefed on the situation. Ukrainian President Volodymyr Zelensky has recently indicated he is willing to consider some concessions to Russia to help bring an end to the violence, including a neutrality policy -- albeit one underpinned by robust security guarantees, raising more questions about the current state of talks and specific elements of any peace deal that may be under consideration. "I'm ready for negotiations with (Putin). I was ready for the last two years. And I think that without negotiations, we cannot end this war." Zelensky told CNN's Fareed Zakaria in an exclusive interview Sunday. But he warned that any failure of negotiation attempts fail could lead to "a third World War." Ukrainian and Russian negotiators have met four times since the start of Russia's invasion. Russian Foreign Minister Sergey Lavrov weighed in on the possibility of Ukraine agreeing to neutral status during a media event in Moscow on Saturday. "After our operation in Ukraine ends, and I hope its ends with a signing of a comprehensive agreement on the issues I mentioned -- security issues, Ukraine's neutral status with the guarantees of its security as (Putin), a couple of months ago as I recall, commented at a news conference on our initiative of non-expansion of NATO, he said we understood every country needs guarantees of its security," said Lavrov. But details on negotiations remain scant with many NATO countries, including the US, remaining on the outside looking in when it comes to the secretive talks, with one European defense official calling negotiations "a bit of a dark avenue right now." The Biden administration still sees no indication that Putin is willing or ready to deescalate the conflict -- making it difficult for US officials to be optimistic about the current state of negotiations, one source familiar with the situation said. But at the same time, this source also said that the US is not pressuring Ukraine to accept or reject

specific concessions and is not involved in the negotiation process. The US National Security Council declined to comment.

Some of the terms Ukraine has said it may be willing to consider seem more feasible than others, but at the end of the day, NATO countries are still skeptical of Russia's engagement.

"It is very close hold, and no one really knows what's going on," the European defense official said. "Ukraine's positions haven't changed -- ceasefire, withdrawal of troops and security guarantees." "Anyone who says they know something about the status of the talks, (they) really don't," the official added. Putin laid out several issues to achieve a ceasefire with Ukraine in a Thursday phone call with Turkish President Recep Tayyip Erdogan, according to Turkish presidential spokesman Ibrahim Kalin. "The first is Ukraine's neutrality," Kalin said in an interview with the Turkish newspaper *Hurriyet* published Saturday, adding that would mean Ukraine agreeing to not become a NATO member. "Second, disarmament and mutual security guarantees in the context of the Austrian model. Third, the process that the Russian side refers to as 'de-Nazification.' Fourth, removing obstacles to the widespread use of Russian language in Ukraine. It is understood that some progress has been made in the first four articles of the ongoing negotiations. It is too early to say that there is full agreement or that an agreement is about to be signed." Kalin said Putin had additional demands that were "the most difficult issues" -- the recognition of the annexation of Crimea and the two so-called republics in Donbas. Kalin said these final two issues "are not acceptable demands for Ukraine and the international community." "If a point is reached in the first four articles and an agreement is reached, there can be a discussion at the leaders' level regarding the fifth and sixth articles," Kalin said in the interview, adding that if the negotiations take place, "it may be possible to reach an agreement and end the war." US Ambassador to the UN Linda Thomas-Greenfield on Sunday declined to set terms on what the US would or would not accept when it came to an agreement between Ukraine and Russia to end the fighting. "This is for the Ukrainians themselves to decide what is too much for them. It is not our decision on that and we support their efforts. So I can't preview what they will end up coming up in their negotiations with the Russians," she told CNN's Jake Tapper on "State of the Union." Asked by Tapper again, if the US would recognize Crimea or Donbas as a part of Russia should that be a part of the agreement, Thomas-Greenfield again declined to answer. "I can't say that at the moment. We certainly have not recognized the independent Donbas regions just declared as independent. But I can't review how we will respond to a negotiated settlement that the Ukrainians come up with the Russians to save the lives of their own people."

The lack of clarity about the status of negotiations is raising additional questions about what Ukraine is willing to agree to and how Russia's demands would be implemented if they ultimately reach some sort of agreement. Zelenksy said Saturday there were "compromises" his country could not make in negotiations with Putin. "Any compromises related to our territorial integrity and our sovereignty and the Ukrainian people have spoken about it, they have not greeted Russian soldiers with a bunch of flowers, they have greeted them with bravery, they have greeted them with weapons in their hands," he told CNN's Zakaria when asked about the Russian demands. "You cannot just make a president of another country to recognize anything by the use of force," he added. Many details of Russia's demands, whether Ukraine would accept them and how Ukraine would even implement them remain unclear, a senior NATO official said. That includes what it would mean for Ukraine to adopt a "neutral" status with the West -- a possibility that one congressional source told CNN has caused heartburn for US officials. "Does that mean they forswear NATO? Does that mean they forswear the (European Union)? Can they not have any other external assistance?" the NATO official said. "My sense is it's going to be a very complex negotiation."

A European diplomat told CNN last week that if Ukraine were to adopt a neutrality policy and also demilitarize, it would effectively be a surrender -- calling such a move "Moscow-style neutrality." The Kremlin has floated the notion that Kyiv could adopt a Swedish or Austrian neutrality policy. However, a Swedish diplomat dismissed the notion of Swedish neutrality, saying the idea that their country is neutral is not true and attempts to try to frame it as such are consistent with longstanding Russian efforts to misrepresent Sweden's national security policy. "Whenever the term 'Austrian neutrality' comes up, it has to be remembered that this is a model of an armed neutrality. This

form of neutrality doesn't mean that a country lies down its arms and hopes that nobody attacks it. It's a neutrality where a country -- at least in theory -- is armed and ready to defend itself against all foreign belligerents," said Martin Weiss, Austria's ambassador to the US. The NATO official added that it is unclear what kind of agreement Russia and Ukraine might come to about the territory Russia has taken control of since invading on February 24. The official said the "hope" expressed by both Russian and Ukrainian officials in recent days appears to be belied by the fact that "some pretty clear differences remain" between the parties. "I think we just need to be mindful that the Russians almost certainly will seek to continue to resupply and will probably continue to fight, up until the time that things are agreed," the official said. "Whatever the solution, if there's diplomatic resolution and there's an agreement, it has to be clear and binding. And it has to be monitorable. ... People will be looking to ensure that the Russians end the war conclusively. And there isn't some lingering threat that remains." While the source familiar with the Biden administration's view of the talks told CNN that some of the terms Ukraine has said it may be willing to consider seem more feasible than others, the source also indicated that the US will be wary of Russia's intentions until Putin shows some signs that he is ready to deescalate.

16. Chemical Weapons Would Violate International Law, NATO Boss Warns Russia (UPI, Adam Schrader, 20 Mar 22)...

NATO Secretary-General Jens Stoltenberg on Sunday warned Russia that the use of chemical weapons in Ukraine would violate international law. "Any use of chemical weapons would be a blatant and brutal violation of international law, the ban on the use of chemical weapons," Stoltenberg told NBC's Meet the Press. "At the same time, we know that Russia has used chemical agents in Europe before, against their own political opponents and Russia has been facilitating and supporting the Assad regime in Syria, where chemical weapons has been used." Stoltenberg added that NATO must prevent the "very bloody, ugly, horrific conflict" from escalating into a full-fledged war between NATO and Russia which could potentially involve the United States directly. His comments come after Linda Thomas-Greenfield, the U.S. ambassador to the United Nations, told CNN that the United States would "respond aggressively" if Russia were to use chemical weapons in Ukraine. "We are concerned that they may use chemical weapons in Ukraine," she said. "We have been clear, if they escalate to this level, we will respond aggressively to what they are doing." Russian officials on Saturday tried to deflect from a possible chemical attack by claiming that Ukrainian "nationalists" would use such methods against Russian troops. Mikhail Mizintsev, chief of Russia's National Defense Management Center, claimed without evidence to Russian state media agency TASS had placed mines in ammonia and chlorine storage facilities. Russia has been known to plant false flags in apparent attempts to justify its own use of such tactics.

Defense Secretary Lloyd Austin on Sunday told CBS that Russian forces were "stalled" in Ukraine in with Putin "moving his forces into a woodchipper." Russia's Ministry of Defense said Sunday that it had targeted ammunition and fuel depots in Ukraine with hypersonic missiles over the weekend, according to The New York Times. It would be the first time Russia had used such missiles if true, though whether the missiles were hypersonic has not been verified. Austin said that the use of such missiles would not be a "game-changer" for Russia's outcome in the war. "I think, again, the reason that he's resorting to using these types of weapons is because he's trying to reestablish some momentum," Austin said. "You kind of question why he would do this. Is he running low on precision-guided munitions?" The Institute for the Study of War said in a report Saturday that Russian forces continue to make limited advances "but are very unlikely to be able to seize their objectives in this way." "The doctrinally sound Russian response to this situation would be to end this campaign, accept a possibly lengthy operational pause, develop the plan for a new campaign, build up resources for that new campaign, and launch it when the resources and other conditions are ready," the report reads. "The Russian military has not yet adopted this approach. It is instead continuing to feed small collections of reinforcements into an ongoing effort to keep the current campaign alive. We assess that that effort will fail."

[Top of the Document]

17. Zelenskyy Says Siege of Mariupol Involved War Crimes (AP, Cara Anna, 20 Mar 22)...

Ukrainian President Volodymyr Zelenskyy said early Sunday the siege of the port city of Mariupol would go down in history for what he said were war crimes committed by Russian troops. "To do this to a peaceful city, what the occupiers did, is a terror that will be remembered for centuries to come," Zelenskyy said in a video address to the nation. Russian forces have pushed deeper into the besieged and battered city, where heavy fighting shut down a major steel plant and local authorities pleaded for more Western help. In the capital, Kyiv, at least 20 babies carried by Ukrainian surrogate mothers are stuck in a makeshift bomb shelter, waiting for parents to travel into the war zone to pick them up. Some just days old, the babies are being cared for by nurses who cannot leave the shelter because of constant shelling by Russian troops who are trying to encircle the city. The fall of Mariupol, the scene of some of the war's worst suffering, would mark a major battlefield advance for the Russians, who are largely bogged down outside major cities more than three weeks into the biggest land invasion in Europe since World War II. "Children, elderly people are dying. The city is destroyed and it is wiped off the face of the earth," Mariupol police officer Michail Vershnin said from a rubble-strewn street in a video addressed to Western leaders that was authenticated by The Associated Press. Details also began to emerge Saturday about a rocket attack that killed as many as 40 marines in the southern city of Mykolaiv the previous day, according to a Ukrainian military official who spoke to The New York Times.

Russian forces have already cut Mariupol off from the Sea of Azov, and its fall would link Crimea, which Russia annexed in 2014, to eastern territories controlled by Moscow-backed separatists. It would mark a rare advance in the face of fierce Ukrainian resistance that has dashed Russia's hopes for a quick victory and galvanized the West. Ukrainian and Russian forces battled over the Azovstal steel plant in Mariupol, Vadym Denysenko, adviser to Ukraine's interior minister, said. "One of the largest metallurgical plants in Europe is actually being destroyed," Denysenko said in televised remarks. The Mariupol city council claimed hours later that Russian soldiers had forcibly relocated several thousand city residents, mostly women and children, to Russia. It didn't say where, and AP could not immediately confirm the claim. Zelenskyy adviser Oleksiy Arestovych said the nearest forces that could assist Mariupol were already struggling against "the overwhelming force of the enemy" and that "there is currently no military solution to Mariupol." Despite the siege in Mariupol, many remained struck by Ukraine's ability to hold back its much bigger, better-armed foe. The United Kingdom's Defense Ministry said Ukraine's airspace continued to be effectively defended. "Gaining control of the air was one of Russia's principal objectives for the opening days of the conflict and their continued failure to do so has significantly blunted their operational progress," the ministry said on Twitter.

Russia is now relying on stand-off weapons launched from the relative safety of Russian airspace to strike targets within Ukraine, the ministry said. In Mykolaiv, rescuers searched the rubble of the marine barracks that was destroyed in an apparent missile attack Friday. The region's governor said the marines were asleep when the attack happened. It wasn't clear how many marines were inside at the time, and rescuers were still searching the rubble for survivors the following day. But a senior Ukrainian military official, who spoke to The New York Times on condition of anonymity to reveal sensitive information, estimated that as many as 40 marines were killed, which would make it one of the deadliest known attacks on Ukrainian forces during the war. Estimates of Russian deaths vary widely, but even conservative figures are in the low thousands. Russia had 64 deaths in five days of fighting during its 2008 war with Georgia. It lost about 15,000 in Afghanistan over 10 years, and more than 11,000 in years of fighting in Chechnya. Russia's number of dead and wounded in Ukraine is nearing the 10% benchmark of diminished combat effectiveness, said Dmitry Gorenburg, a researcher on Russia's security at the Virginia-based CNA think tank. The reported battlefield deaths of four Russian generals — out of an estimated 20 in the fight — signal impaired command, Gorenburg said. Russia would need 800,000 troops — almost equal to its entire active-duty military — to control Ukraine long-term in the face of armed opposition, said Michael Clarke, former head of the British-based Royal United Services Institute, a defense think tank. "Unless the Russians intend to be completely genocidal — they could flatten all the major cities, and Ukrainians will rise up against Russian occupation — there will be just constant guerrilla war," said Clarke.

The Russian military said Saturday that it used its latest hypersonic missile for the first time in combat. Maj. Gen. Igor Konashenkov said Kinzhal missiles destroyed an underground warehouse storing Ukrainian missiles and aviation ammunition in the western region of Ivano-Frankivsk. Russia has said the Kinzhal, carried by MiG-31 fighter jets, has a range of up to 2,000 kilometers (about 1,250 miles) and flies at 10 times the speed of sound. Pentagon press secretary John Kirby said the U.S. couldn't confirm the use of a hypersonic missile. U.N. bodies have confirmed more than 847 civilian deaths since the war began, though they concede the actual toll is likely much higher. The U.N. says more than 3.3 million people have fled Ukraine as refugees. Evacuations from Mariupol and other besieged cities proceeded along eight of 10 humanitarian corridors, Deputy Prime Minister Iryna Vereshchuk said, and a total of 6,623 people left. Vereshchuk said planned humanitarian aid for the southern city of Kherson, which Russia seized early in the war, could not be delivered because the trucks were stopped along the way by Russian troops.

Ukraine and Russia have held several rounds of negotiations aimed at ending the conflict but remain divided over several issues, with Moscow pressing for its neighbor's demilitarization and Kyiv demanding security guarantees. Around Ukraine, hospitals, schools and buildings where people sought safety have been attacked. At least 130 people survived the Wednesday bombing of a Mariupol theater that was being used a shelter, but another 1,300 were believed to be still inside, Ludmyla Denisova, the Ukrainian Parliament's human rights commissioner, said Friday. "We pray that they will all be alive, but so far there is no information about them," Denisova told Ukrainian television. A satellite image from Maxar Technologies released Saturday confirmed earlier reports that much of the theater was destroyed. It also showed the word "CHILDREN" written in Russian in large white letters outside the building. Russian forces have fired on eight cities and villages in the eastern Donetsk region in the past 24 hours, including Mariupol, Ukraine's national police said Saturday. Dozens of civilians were killed or wounded, and at least 37 residential buildings and facilities were damaged including a school, a museum and a shopping center. In the western city of Lviv, Ukraine's cultural capital, which was hit by Russian missiles on Friday, military veterans were training dozens of civilians on how to handle firearms and grenades. "It's hard, because I have really weak hands, but I can manage it," said one trainee, 22-year-old Katarina Ishchenko.

#### 18. US Condemns 'Unconscionable' Forced Deportations of Civilians From Mariupol (Guardian, Lorenzo Tondo, Jon Henley, and Daniel Boffey, 20 Mar 22)...

Forced civilian deportations from Mariupol to Russia are "disturbing" and "unconscionable" if true, the US has said, after Ukrainian officials accused Moscow of transporting thousands of people against their will out of the devastated port city. Linda Thomas-Greenfield, America's ambassador to the UN, said the US had not yet confirmed the allegations, made on Saturday by Mariupol city council and repeated in detail on Sunday by Ukraine's human rights spokesperson, Lyudmyla Denisova. "I've only heard it. I can't confirm it," Thomas-Greenfield told CNN. "But I can say it is disturbing. It is unconscionable for Russia to force Ukrainian citizens into Russia and put them in what will basically be concentration and prisoner camps." As the UN said 10 million people – about a quarter of Ukraine's prewar population – had been displaced by the conflict and Ukrainian authorities accused Moscow of bombing an art school in Mariupol where more than 400 people had taken shelter, Denisova said Russian troops had "kidnapped" residents and taken them to Russia. "Several thousand Mariupol residents have been deported to Russia," she said on Telegram. After processing at "filtration camps", some had been transported to the Russian city of Taganrog, about 60 miles (100km) from Mariupol, and from there sent by rail "to various economically depressed cities in Russia", she said.

Denisova said Ukrainian citizens had been "issued papers that require them to be in a certain city. They have no right to leave it for at least two years with the obligation to work at the specified place of work. The fate of others remains unknown." Russian news agencies have reported that hundreds of people whom Moscow are calling refugees have been taken by bus from Mariupol to Russia. Denisova said the "abductions and forced displacements" violated the Geneva and European human rights conventions and called on the international community to "respond ... and increase sanctions against the terrorist state of the Russian Federation". Resident Anna Iwashyna, 39, who

recently fled Mariupol to Zaporizhzhia, said: "I don't know if people are being taken to Russia by force, but I can say for sure nobody is going there willingly." Iwashyna said conditions in the city were atrocious. "The entire infrastructure has been destroyed," she told the Guardian. "There are no shops, no pharmacies, no medical aid, fires are all around the city, there are no firefighters. There's nowhere to get food." Iwashyna said she had seen "dead bodies on the street, with my own eyes. Right by the Maritime University. There was a missile, it was still stuck into an intersection, and there was a dead person on the sidewalk. I could hear planes all night long, they are bombing and bombing and bombing the city, non-stop." Another resident, former journalist Roman Kruglyakov, left his hometown of Mariupol to stay in a nearby village at the beginning of the war. From March 17 to March 19, he made three trips back to the devastated city to pick up his trapped family members. "Out of the 25 people who I took out, there was not one who wanted to evacuate to Russia," he said. "They all want to go to Zaporizhzhia but not everyone is able to."

Days after Russian shells struck a theatre in the city that was also being used as a shelter, local authorities said Mariupol's G12 art school had been destroyed while women, children and elderly people were inside. There was no immediate word on casualties at the site and no further update on the search for survivors at the theatre. Ukraine's president, Volodymyr Zelenskiy, on Sunday described Russia's siege of the city as "a terror that will be remembered for centuries to come". Bombarded since the start of the invasion, many of Mariupol's residents have been without heat, power or water for more than a fortnight. Local authorities have said at least 2,300 have died, some of whom had to be buried in mass graves. Denisova also accused Russian forces of the murder of 56 elderly people in the town of Kreminna in the Luhansk region after a Russian tank "cynically and purposefully fired at a home for the elderly". Fifteen survivors were "abducted by the occupiers", she said, calling the attack "another act of horrific genocide". Mariupol authorities said on Sunday that nearly 40,000 residents had managed to leave the city in the previous week, mostly in their own vehicles, despite ongoing air and artillery strikes. Ukraine's deputy prime minister, Iryna Vereshchuk, said seven safe routes would again be open across the country on Sunday.

In the north-eastern city of Sumy, authorities evacuated 71 orphaned babies through a humanitarian corridor, the regional governor, Dmytro Zhyvotyskiy, said on Sunday. He said the orphans, most of whom need constant medical attention, would be taken to an unspecified foreign country. But in the capital, Kyiv, authorities said at least 20 babies carried by Ukrainian surrogate mothers were being cared for by nurses in a bomb shelter because of constant shelling, with parents unable to travel into the war zone to pick them up. The head of the UN's refugee agency, UNHCR, said more than a quarter of Ukraine's prewar population had fled their homes to escape the Russian onslaught. "Among the responsibilities of those who wage war, everywhere in the world, is the suffering inflicted on civilians who are forced to flee their homes," Filippo Grandi tweeted. "The war in Ukraine is so devastating that 10 million have fled either displaced inside the country, or as refugees abroad," he said. The UN said 3,389,044 Ukrainians had left the country since Russia's invasion began on 24 February, 90% of them women and children. More than 6.5 million people are internally displaced.

The UN human rights office, OHCHR, said it had confirmed the deaths of 902 civilians in Ukraine since the start of the conflict, adding that most of the casualties were from explosive weapons such as heavy artillery shells, missile and airstrikes, OHCHR said. The actual toll will be significantly higher, it said. As military experts said Russia's largely stalled ground advance was forcing Moscow to switch to a war of attrition, the Kremlin said on Sunday it had deployed another of its new Kinzhal (Dagger) hypersonic missiles, which travel faster than the speed of sound and can change direction mid-flight. Ukraine has confirmed that missile attacks took place on a fuel depot near the southern city of Mykolaiv and an ammunition depot in western Ukraine, but said the missile type had not yet been determined. Russian shelling also heavily damaged the Azovstal metallurgical plant in Mariupol, one of the largest in Europe, Ukrainian officials said. "The economic losses for Ukraine are immense," tweeted an MP, Lesia Vasylenko. The mayor of the encircled northern city of Chernihiv said on Sunday a hospital had been hit in the latest shelling, killing dozens of civilians. "The city is suffering from an absolute humanitarian catastrophe," Vladislav Atroshenko said.

Details are also emerging of a rocket attack that killed as many as 40 marines in Mykolaiv, a Black Sea port city, on Friday, according to the New York Times, which cited an unnamed Ukrainian military official. Nevertheless, the Ukrainian presidential adviser Oleksiy Arestovych said on Sunday that the frontlines between Ukrainian and Russian forces were “practically frozen” as Russia did not have enough combat strength to advance further. “[Over the past day] there were practically no rocket strikes on [Ukrainian] cities,” Arestovych added. Britain’s defence ministry said Russian forces had made “limited progress in capturing cities” but had instead “increased its indiscriminate shelling of urban areas, resulting in widespread destruction and large numbers of civilian casualties”. It warned that Russia would “continue to use its heavy firepower to support assaults on urban areas as it looks to limit its own already considerable losses, at the cost of further civilian casualties.” David Petraeus, the former US military commander and CIA chief, said it was “absolutely confirmed” that Ukrainian forces had killed at least four Russian generals. The Russian forces’ command-and-control structure had “broken down”, he said. “Their comms have been jammed by the Ukrainians. They’re literally stealing cell phones from Ukrainian civilians to communicate among each other.”

#### 19. Russia Says Long-Range Missiles Hit Three Ukrainian Military Facilities (New York Times, Ivan Nechepurenko, 20 Mar 22)...

Russia said on Sunday it had used advanced long-range missiles to hit three military facilities in different parts of Ukraine. There was no immediate comment from Ukrainian officials, and the claims could not immediately be independently verified. The statement from Russia’s defense ministry comes as its ground advances have largely stalled. While Russian forces have faced fierce resistance in and around key cities such as Mariupol, Mykolaiv, and the capital, Kyiv, Ukrainian forces can do little to fend off attacks by cruise and other missiles launched from hundreds of miles away. Russia said on Sunday that its missiles had struck a Ukrainian military training center in the northern town of Ovruch and a large fuel depot near the city of Mykolaiv, a strategic Russian target on the way to the port city of Odessa, which hosts the headquarters of the Ukrainian Navy.

Maj. Gen. Igor Konashenkov, the Russian defense ministry’s spokesman, said in a statement Sunday that Russia struck the fuel depot with a Kinzhal missile, which it claims is hypersonic. Those claims have not been independently verified. That is the same type of missile that Russia claimed it used for the first time on Saturday to strike an ammunition depot in western Ukraine. While the Ukrainian government confirmed that the facility was hit, it did not say whether a hypersonic weapon was used. Mykhailo Podolyak, a Ukrainian presidential adviser, acknowledged on Sunday that Russia was using Kinzhal missiles, but did not specify where or when they had been used. The U.S. defense secretary, Lloyd J. Austin III, told CBS’s “Face the Nation” that he could not confirm or dispute whether Russia was using hypersonic weapons. Cruise missiles launched from the Black Sea on Sunday also destroyed a military factory’s workshops in the northern town of Nizhyn, General Konashenkov said.

#### 20. Russian Mercenaries in Ukraine Linked to Far-Right Extremists (Guardian, Mark Townsend, 20 Mar 22)...

Russian mercenaries fighting in Ukraine, including the Kremlin-backed Wagner Group, have been linked to far-right extremism including an organisation designated by the US as terrorist, analysis reveals. Although Vladimir Putin says his “special military operation” is aimed at the “denazification” of Ukraine, an investigation has found links between pro-Russian forces and violent rightwing extremism, including those directly affiliated with Wagner. One post on the messaging app Telegram, dated 15 March, shows the flag of the Russian Imperial Movement (RIM), a white-supremacist paramilitary organisation which the US lists as terrorist, allegedly flown by Moscow-backed separatists in Donetsk. The post was shared by a pro-Putin channel. Much of the extremist content, posted on Telegram and the Russian social media platform VKontakte (VK), relates to a far-right unit within the Wagner Group called Rusich with others linked to pro-Kremlin online communities, some bearing the name and logo of

## Wagner Group.

Adam Hadley, the executive director of Tech Against Terrorism, a London-based initiative supported by the UN counter-terrorism executive directorate, said their analysis indicated that Russian-backed forces in Ukraine, including the Wagner Group, are “almost certainly connected with extreme far-right organisations”. Hadley added: “Given Putin’s absurd demands for the ‘denazification’ of Ukraine, we suggest he should first root out neo-Nazis in his own ranks before pointing the finger at others.” One of the most secretive organisations in Russia, the Wagner Group doesn’t officially exist. However, reports suggest hundreds of its members are fighting in Ukraine with claims shortly after the invasion that its mercenaries were operating in Kyiv with orders from the Kremlin to assassinate the Ukrainian president Volodymyr Zelenskyy. It is also understood that efforts are being made by private messaging groups in Russia to recruit a new brigade of mercenaries to fight in Ukraine. Recently, the Russian defence minister, Sergei Shoigu, announced that 16,000 fighters from the Middle East had volunteered to fight with the Russian army. One account on VK is dedicated to the Rusich “sabotage and assault reconnaissance group” which appears to be operating in Ukraine, according to a post on 17 March. The Rusich logo features a Slavic Swastika known as a Kolovrat. Another recent VK posting lists Rusich as part of a coalition of separatist groups and militias including the extreme far-right group, Russian National Unity. One image shared on VK by a Rusich-affiliated account shows fighters, seemingly in Ukraine although it has proved impossible to verify, holding a Valknut flag, a symbol also commonly appropriated by white supremacists.

It has been reported that mercenary units recruited to Wagner are being given names like “The Hawks”, possibly to steer away from the group’s reputation after repeated accusations of human rights abuses in its operations in Syria and Libya. The Tech Against Terrorism analysis found a prominent Wagner Group-affiliated Telegram channel sharing an image in May 2021 of the Kolovrat allegedly daubed on a cliff in Palmyra, Syria. It also found Telegram channels – named “Wagner PMC” in Russian – sharing footage and memes as recently as 4 March relating to the torture and beheading of a Syrian captive by Wagner mercenaries in 2017. The Wagner group was first identified in 2014, when backing pro-Russian separatists in the conflict in eastern Ukraine. It is owned by Yevgeny Prigozhin, one of Putin’s closest allies, and has since conducted covert operations across Africa and the Middle East. Military experts believe that mercenaries allow the Kremlin – which has always denied any links with mercenary groups – to keep its death toll down. In an effort to control its narrative, Russia recently opened a criminal case against Facebook’s owner, Meta, accusing it of being an extremist organisation. The move by Russian prosecutors came after the the US tech giant temporarily allowed the use of terms such as “death to the Russian invaders”. Hadley added: “We condemn Russia for weaponising terrorism in this way and subverting international counter-terrorism norms.”

## PREPARE

### 21. Albania: NATO to Open Balkan Airbase Converted From Ex-Soviet Era Facility (Euronews, Daniel Bellamy, 20 Mar 22)...

An old Soviet-era air base in Albania is set to become a tactical base of operations for NATO. It means there will be a NATO base in the western Balkans when it re-opens in 2023. Military spending is now on the rise in much of Europe — most notably in Germany — but also in the Balkans. Tensions are also rising in Albania’s backyard and Balkan rivals Croatia, which is a NATO member, and Serbia, which opposes the alliance, appear to be in a mini arms race. Serbia has bought MiG-29 fighter jets and tanks from its fellow Slavic ally Russia, whilst Croatia has bought 12 Rafale fighter jets from France. Work started in January to upgrade the Kuçovë air base as a modern hub of operations and its ability to host an array of modern era fighter jets.

NATO and Albania have pledged €50 million for the Kuçovë air base which is expected to be operational by the end

of 2023. It's 85 kilometres south of Tirana, the capital, is named after the small nearby town of Kuçovë — which under Albania's communist regime was called Stalin City. It was built in the 1950s using prison labour under leader Enver Hoxha who, despite being communist, resisted joining the USSR. Viktor Vangjeli, 83, served for 27 years in Kuçovë flying MiG-19s before he retired in 1990. He talked about the daily flights countering rare air space violations by neighbours during the Cold War. "The flying intensity during those times under the Cold War has been very high," he said, adding that this air base "was in charge, until 1962, for the coverage of all the country's air space". He said that Kuçovë's conversion to a modern NATO hub would be beneficial to the next generation of Albanian pilots who would be trained to fly modern jets.

After the fall of the communist regime in 1990, Albania's air force had more than 200 MiGs, a type of Soviet era fighter jet, across three air bases. Most of them have now been scrapped and the country's old Russian and Chinese-made jets stopped flying in 2005. For a few years, some old Antonov-2 planes, another Soviet era warplane, were used for agriculture or other purposes. Albania's air force now has some Cougar helicopters and is expecting to get a few Blackhawk ones, but no jets. Albania, a NATO member since 2009, also hopes to join the European Union. It's joined in with the EU's hard-hitting sanctions and has strongly denounced Russia's aggression.

\*\*\*

## OVERVIEW

Secretary of Defense Lloyd Austin notified Polish Defense Minister Mariusz Błaszczak that the U.S. would not support the transfer of Polish MiG-29s to Ukraine, while Secretary of State Antony Blinken stated that the U.S. is investigating how to transfer jets to Ukraine in a way that does not endanger U.S. personnel, Politico reported. Separately, White House press secretary Jen Psaki warned that Russia might use chemical weapons in Ukraine after Russia accused the U.S. of supporting biological weapons development, according to Newsweek. Also of note, in testimony before the HASC, INDOPACOM Commander Adm. John C. Aquilino warned that China was running “a dedicated campaign ... to uproot the rules-based order” and added that U.S. allies and partners recognize the changing threats posed by Chinese modernization, U.S. Naval Institute News wrote.

\*\*\*

## TOP STORIES

1. Blinken: U.S. focused on providing Ukraine jets ‘in the right way’

Politico Online, Mar. 9 (1648) | Samuel Benson

U.S. officials on Wednesday all but shut the door on arming Ukraine with fighter jets, one day after the Pentagon rejected a Polish proposal that would have transferred MiG-29 aircraft to the Ukrainian government via an American airbase in Germany. Defense Secretary Lloyd Austin notified Polish Minister of National Defense Mariusz Błaszczak on a phone call Wednesday that the U.S. would not support a transfer of jets to Ukraine, Pentagon spokesperson John Kirby said.

2. U.S. Says Ukraine ‘Diagnostic, Biodefense’ Labs Have No ‘Biological Weapons’

Newsweek Online, Mar. 9 (2308) | Tom O’Connor

Moscow has alleged to have uncovered a plot by Kyiv to unleash biological or chemical weapons as a pretext for blaming Russia and drawing in further support for Ukraine’s efforts to resist a military incursion from the neighboring nation. The White House weighed in on the affair Wednesday as Press Secretary Jen Psaki addressed the claims directly in a series of tweets. “This is all an obvious ploy by Russia to try...to justify its further premeditated, unprovoked, and unjustified attack on Ukraine,” Psaki wrote.

3. A Chinese Takeover of Taiwan Would Prompt Different Pentagon Response, Top Indo-Pacific Official Says

U.S. Naval Institute News, Mar. 9 (1807) | John Grady

The Pentagon's senior civilian for the Indo-Pacific testified Wednesday that the United States' response to the Chinese aggressively moving to take over Taiwan would be different from Washington's reaction to the Russian invasion of Ukraine. Ely Ratner, assistant secretary for Indo-Pacific security affairs, said when China is the "pacing competitor" in the region, "Taiwan is the pacing scenario." Without going into details in an open hearing, he pointed to a number of security agreements between Taipei and Washington that differ from arrangements between the United States, NATO and Ukraine.

#### DEFENSE DEPARTMENT

4. Next US defense budget will get a boost due to Ukraine invasion -- Pentagon comptroller  
BreakingDefense.com, Mar. 9 (1314) | Valerie Insinna

US defense spending is likely to increase given Russia's ongoing war with Ukraine, the Pentagon's comptroller said today. The boost to US defense budgets is unlikely to be as "dramatic" as Germany's recent pledge to increase modernization funds for its military by €100 billion (\$110 billion), Mike McCord said during remarks at the McAleese and Associates conference today. There will instead likely be a "similar vector impact" to US defense spending, he said.

#### EXECUTIVE/LEGISLATIVE

5. Spending Bill Clears House, Minus Covid Funds

New York Times, Mar. 10 (0300), Pg. A1 | Emily Cochrane

The House on Wednesday passed a sprawling \$1.5 trillion federal spending bill that includes a huge infusion of aid for war-torn Ukraine and money to keep the government funded through September, after jettisoning a package to fund President Biden's new Covid-19 response effort.

6. Harris Lands in Poland Amid Turbulence Over Jets for Ukraine

Associated Press, Mar. 9 (1749) | Aamer Madhani and Lisa Mascaró

Vice President Kamala Harris' trip to Warsaw to thank Poland for taking in hundreds of thousands of Ukrainians fleeing Russia's invasion took an unexpected turn before she even left Washington. She's parachuting into the middle of unexpected diplomatic turbulence over fighter jets.

7. House lawmakers question India's ties to Russia and its partnership with U.S. as competition increases with China in Indo-Pacific

Stars and Stripes Online, Mar. 9 (1922) | Svetlana Shkolnikova

As the U.S. works to deepen relationships in the Indo-Pacific region, some House lawmakers on Wednesday questioned India's readiness to partner with the U.S. against China due to its longstanding ties with Russia. "It's shocking that such a great country has abstained on the issue of the mass murder in Ukraine," said Rep. Joe Wilson, R-S.C. "It just seems so unnatural. The relationship with the Prime Minister Narendra Modi should be with the United States, not in any way associated with the megalomaniac [Russian President Vladimir] Putin."

8. How the Pentagon Says It's Tackling Inflation in Its 2023 Budget Request

Air Force Magazine Online, Mar. 9 (1542) | Greg Hadley

Concern over inflation has impacted the Pentagon's planning for the fiscal 2023 budget request, the Defense Department's top financial official said March 9. But, the budget is "substantively" complete, and space figures to be a foundational part of it, he added. Comptroller Mike McCord, speaking at the McAleese conference, teased that there is a "projected date" for the release of the 2023 budget, which has been delayed for more than a month. But that date hasn't been finalized, and McCord said he still hopes to have the National Defense Strategy, also delayed, rolled out before the budget request.

#### EUROPE

9. White House Warns Russia May Use Chemical Weapons in Ukraine

Associated Press, Mar. 9 (2008) | Zeke Miller

The Biden administration publicly warned Wednesday that Russia might seek to use chemical or biological weapons in Ukraine as the White House rejected Russian claims of illegal chemical weapons development in the country it has invaded. This week, Russian Foreign Ministry spokeswoman Maria

Zakharova — without evidence — accused Ukraine of running chemical and biological weapons labs with U.S. support. White House press secretary Jen Psaki called Russia's claim "preposterous" and said it could be part of an attempt by Russia to lay the groundwork for its own use of such weapons of mass destruction against Ukraine.

#### 10. EUCOM to Poles: forget the MiGs, stick with anti-air & tank weapons for Ukraine

BreakingDefense.com, Mar. 9 (2246) | Colin Clark

In what seems to be the Pentagon's final word on the back-and-forth proposal about shifting Polish fighter jets to Ukraine, the head of America's European Command, who also serves as the top military commander for NATO, has declared that the "transfer of MiG-29 aircraft will not appreciably increase the effectiveness of the Ukrainian Air Force." Instead, Gen. Tod Wolters said, "We believe the most effective way to support the Ukrainian military in their fight against Russia is to provide increased amounts of anti-tank weapons and air defense systems, which is on-going with the international community."

#### 11. Hospital Hit as Attacks on Civilians Grow

New York Times, Mar. 10 (0300), Pg. A1 | Richard Pérez-Peña

Misery deepened in Ukraine, where millions of people were caught in besieged cities, and in Russia, where the West's economic sanctions were biting hard. Russian forces bombarded Ukrainian cities, prevented hundreds of thousands of civilians from escaping and destroyed a maternity hospital on Wednesday, while the Kremlin accused the United States of waging "an economic war" against Russia. The misery wrought by Russia's Ukraine invasion on Feb. 24 deepened further in both countries — destruction and deprivation in Ukraine, and the toll of the West's tightening vise grip on Russia's economy.

#### 12. Invasion Brings NATO New Focus

Wall Street Journal, Mar. 10 (0200), Pg. A1 | Daniel Michaels, Sune Engel Rasmussen and Evan Gershkovich

Troops at Lithuania's Rukla military base have stood at high alert for years, worried about the threat posed by Russia, across the border 62 miles away. Their NATO allies to the west had played down those concerns. Now NATO is pouring resources into the remote outpost. Since President Vladimir Putin launched an invasion of Ukraine on Feb. 24, other North Atlantic Treaty Organization members have sent 600 troops to Rukla and doubled the number of allied forces throughout this tiny country to 3,000. NATO plans to add another 1,000 troops from the U.S. and other countries.

#### 13. West's Tactical Challenge: Navigating Putin's Red Lines

Wall Street Journal, Mar. 10 (0200), Pg. A1 | Stephen Fidler

The U.S. and its allies are walking a fine line in Ukraine, seeking to help the country thwart Russia's invasion while avoiding crossing Moscow's red lines and getting pulled into a direct conflict with a nuclear-armed adversary. So far, Washington and Western European capitals have responded to the steadily increasing violence of Moscow's military offensive with weapons deliveries, intelligence sharing and financial aid to Kyiv, as well as sweeping economic sanctions against Russia.

#### 14. Subtle Shift Raises Hopes For a Diplomatic Solution

New York Times, Mar. 10 (0300), Pg. A17 | Anton Troianovski, Patrick Kingsley and Michael Crowley

When President Vladimir V. Putin launched his invasion two weeks ago, he said a primary goal was the "denazification" of Ukraine. He referred to the Ukrainian government as a "gang of drug addicts and neo-Nazis," making it clear that his aim was to topple it. But in recent days, the language has shifted, with the Kremlin signaling that Mr. Putin is no longer bent on regime change in Kyiv. It is a subtle shift, and it may be a head-fake; but it is prompting officials who have scrambled to mediate to believe that Mr. Putin may be seeking a negotiated way out of a war that has become a much bloodier slog than he expected.

INDO-PACIFIC

15. South Korea's President-elect Wants Tougher Stance on North Korea

Associated Press, Mar. 10 (0133) | Hyung-Jin Kim and Kim Tong-Hyung

South Korea's president-elect Yoon Suk Yeol said Thursday he would solidify an alliance with the United States, build up a powerful military and sternly cope with North Korean provocations, hours after he won the country's hard-fought election to become its next leader. "I'll rebuild the South Korea-U.S. alliance. I'll (make) it a strategic comprehensive alliance while sharing key values like a liberal democracy, a market economy and human rights," Yoon told a televised news conference.

16. Philippines Ready to Back U.S. If It Gets Embroiled in War

Associated Press, Mar. 10 (0050) | Not Attributed

The Philippine president is ready to open the country's "facilities" to American forces under a 1951 mutual defense treaty if Russia's war against Ukraine turns for the worse and embroils the United States in the fighting, Manila's ambassador to Washington said Thursday. Ambassador Jose Manuel Romualdez said President Rodrigo Duterte made the remarks in a recent meeting in Manila where the president also expressed concern over the global economic impact of the unfolding crisis. The Philippines has condemned the invasion and voted yes on a U.N. General Assembly resolution that demanded an immediate halt to Moscow's attack and the withdrawal of all Russian troops from Ukraine.

17. Australia to boost defence force by nearly a third

Agence France-Presse, Mar. 9 (2022) | Not Attributed

Australia will boost its defence forces by some 30 percent by 2040, Prime Minister Scott Morrison said Thursday, describing it as the country's largest military build-up in peacetime.

18. U.S. intensifies intelligence reconnaissance, missile defense around Korean Peninsula

Yonhap News Agency (South Korea), Mar. 9 (1742) | Byun Duk-kun

The United States has intensified its intelligence collection activities around the Korean Peninsula, while its missile defense forces in the region have also been ordered to increase alert amid an increase in North Korean missile activities, the U.S. Indo-Pacific Command (INDOPACOM) said Wednesday. "The United States condemns the recent series of ballistic missile launches by the DPRK," the Hawaii-based Indo-Pacific Command said in a released statement. "In light of this, on March 7, 2022, the U.S. Indo-Pacific Command ordered intensified Intelligence, Surveillance, and Reconnaissance collection activities in the Yellow Sea, as well as enhanced readiness among our ballistic missile defense forces in the region," it added.

CHINA

19. Taiwan says China closed off part of South China Sea to look for crashed plane

Reuters, Mar. 9 (2327) | Not Attributed

China closed off a part of the South China Sea close to Vietnam this month in its hunt for a crashed aircraft, Taiwan's intelligence agency said on Thursday, offering an alternate explanation for an exercise Beijing has called military drills.

MIDDLE EAST

20. Iran nuclear talks stumble over unresolved Russian demands

Reuters, Mar. 9 (1713) | John Irish and Francois Murphy

Parties trying to revive the Iran nuclear deal scrambled on Wednesday to resolve last-minute Russian demands that threaten to scupper negotiations, diplomats said, with the United States appearing unwilling to engage with Russia on the matter.

AIR FORCE

21. Air Force can't buy its first hypersonic ARRW as planned, following budget cut

BreakingDefense.com, Mar. 9 (1728) | Valerie Insinna

The US Air Force's hopes for buying its first hypersonic missiles this year appear to be dead, with Congressional appropriators halving funding for the service's flagship hypersonic weapons program in a new fiscal 2022 omnibus spending bill. The Air Force had requested about \$161 million in the FY22

budget request to buy the first 12 AGM-183A Air Launched Rapid Response Weapon (ARRW) missiles from manufacturer Lockheed Martin. However, the proposed spending bill cuts about \$80 million of that total, stating that procurement of the new weapon is early to need.

22. Pentagon restricted known info about F-35 in controversial 'controlled' tester report

BreakingDefense.com, Mar. 9 (1217) | Valerie Insinna

The section of the controversial "controlled" version of the Pentagon's independent weapons testers' annual report that deals with the F-35 Joint Strike Fighter contains little information that would be a surprise to close watchers of the program, despite claims by the Pentagon that it needed to protect sensitive information from public disclosure. A close reading of the CUI version of the report, which Breaking Defense obtained courtesy of the Project on Government Oversight, revealed no bombshells with regard to the Lockheed Martin-made F-35, the most expensive single weapons program in US history.

ARMY

23. Wormuth predicts stability for modernization funding

InsideDefense.com, Mar. 9 (1508) | Evan Ochsner

Army Secretary Christine Wormuth on Wednesday said she anticipates modernization programs will have continuity in funding at least through fiscal year 2023 and they currently benefit from higher overall defense spending. Still, the Army will have to continue to balance its need for legacy systems and the growing expenses its modernization programs will require over the coming years.

MARINE CORPS

24. Berger: Marine Corps Force Design capabilities 'theater-agnostic'

InsideDefense.com, Mar. 9 (1533) | Not Attributed

Marine Corps Commandant Gen. David Berger stressed today that the capabilities the Marine Corps is pursuing as part of its Force Design 2030 effort are not limited to use in any specific theater. "We know what the pacing threat is, that's critical to informing our force design," Berger said during a Wednesday speech at the McAleese Defense Programs Conference. "But the capabilities are theater-agnostic. Force design is going to enable us to operate a fight to win in an even more diverse set of circumstances, regions and scenarios than we can today."

NAVY

25. Navy's New 30-Year Shipbuilding Plan Will Avoid Details—Again

DefenseOne.com, Mar. 9 (1958) | Caitlin M. Kenney

Navy Secretary Carlos Del Toro said the maritime service is intentionally leaving its long-term plans vague to give "decision space" for leaders to meet unknown threats and needs that may arise. Critics, including top Republicans, have panned the move for preventing lawmakers from being able to critique the Biden administration's plans. Del Toro said he favors transparency and clear definition of the Navy's plans one decade out, but questioned the benefit of speculating too far into the future.

26. Navy offers a new argument for decommissioning cruisers: They're not safe

Defense News Online, Mar. 9 (1808) | Megan Eckstein

Navy Secretary Carlos Del Toro said March 9 the service does not want to continue to operate some of its worst-off cruisers because it's no longer safe. "The wear and tear is significant, and the safety of our people in the United States Navy always has to come first in times of peace, without question. And so it would be irresponsible to continue to upgrade some of those platforms today at great risk to personnel safety," he said at the McAleese Defense Programs Conference.

27. Gilday to put out NAVPLAN update 'within another month'

InsideDefense.com, Mar. 9 (1620) | Not Attributed

Chief of Naval Operations Adm. Michael Gilday will release an update to his navigation plan within the next month. "The navigation plan was always intended to keep the Navy honest on those key

competencies that we have to deliver during what we consider to be a critical decade,” Gilday said today at the McAleese Defense Programs Conference.

#### SPACE FORCE

28. Space programs moving up on DoD’s budget priority list

SpaceNews Online, Mar. 9 (1932) | Sandra Erwin

Pentagon funding for space programs will grow in the coming years as the U.S. military increasingly relies on satellites to conduct operations, the Defense Department’s comptroller Mike McCord said March 9. “Space is probably emerging in our internal reviews as the most important foundational area for everything that we are doing and everything that we need to be doing,” McCord said at the McAleese & Associates’ annual defense programs conference.

#### INSTALLATIONS

29. Aquilino: Fuel Logistics to Be Dispersed in Wake of Red Hill Closure

Seapower Magazine Online, Mar. 9 (1702) | Richard R. Burgess

The commander of U.S. forces in the Indo-Pacific region addressed concerns from Congress about the impact of the closure of the Red Hill fuel depot in Hawaii during March 9 testimony on Capitol Hill. Rep. Mike Rogers, ranking member of the House Armed Services Committee, said in his opening remarks that Navy Secretary Carlos Del Toro’s decision to close Red Hill was made “without laying out the resources to replace that capacity. That’s extremely short-sighted. The response from the department has been the same: the answer is just one policy announcement away. And that’s unacceptable.”

30. Spending bill adds \$150 million toward draining Red Hill fuel tanks in Hawaii

Stars and Stripes Online, Mar. 9 (2057) | Wyatt Olson

A massive \$1.5 trillion omnibus spending bill debated Wednesday in the U.S. House of Representatives includes \$150 million for emptying and permanently closing the Navy’s Red Hill fuel storage facility in Hawaii that was the source of widespread well-water contamination. The money comes in addition to \$100 million included in a stopgap funding bill signed by President Joe Biden last month. That bill keeps the government funded until Friday, theoretically giving Congress time to pass the Fiscal Year 2022 Omnibus Appropriations Bill now in the House.

31. First Afghan Refugees Arrive At New Center in Virginia

Associated Press, Mar. 9 (1141) | Ben Fox

A first group of Afghan refugees have arrived at a new temporary housing facility in Northern Virginia as the U.S. works to resettle people who fled the Taliban takeover of their country in August, the Department of Homeland Security said Wednesday.

#### NOTABLE COMMENTARY

32. Put U.S. Boots in Ukraine to Defend a UN-Approved Security Zone

DefenseOne.com, Mar. 9 (1705) | James Jeffrey

The Ukrainian government should be encouraged to appeal to the United Nations Security Council to pass a resolution under Chapter VI, establishing a Humanitarian Safe Zone with a ceasefire regime in Ukrainian territories abutting its Western neighbors. (A resolution under Chapter VII, which would allow legal enforcement with troops under U.N. control, would be better but undoubtedly impossible.) A model of this kind of peacekeeper border deployment is Resolution 1701, which ended the Israeli incursion into Lebanon in 2006.

33. Russia’s Failure Is China’s Gain

Wall Street Journal, Mar. 10 (0200), Pg. A23 | Seth Cropsey

The Russian invasion of Ukraine has inaugurated a new era of political competition but not a new cold war. The American people and their leaders need to prepare for a new kind of geopolitical competition—more intense, more dangerous and more aggressive than anything since World War II. Bismarck, Metternich and Louis XIV’s world of unrestrained power to achieve national objectives is back. And while the immediate threat is Russia, the more formidable one is China.

34. Why regime change in Moscow is not the goal

Washington Post, Mar. 10 (0115), Pg. A21 | James Hohmann

So far, none dare call it “regime change.” Secretary of State Antony Blinken, Vice President Harris and White House press secretary Jen Psaki have all emphasized in recent days that ousting Russian President Vladimir Putin is not the goal of U.S. policy. “What we want is that he will leave Ukraine,” said Harris.

35. No foot-dragging on Red Hill closure

Honolulu Star-Advertiser, Mar. 9 (N/A), Pg. A12 | Editorial

“There will be no surprises.” A senior Department of Defense official spoke to the Honolulu Star-Advertiser’s editorial board on Monday on behalf of his boss, Secretary of Defense Lloyd Austin, who had just popped off a pretty big surprise: The massive underground fuel tanks at Red Hill will be shut down. Millions of gallons of jet fuel parked just 100 feet above a critical freshwater aquifer will be removed. Austin, who came in with the Biden administration, cannot speak for what the Navy has said and done in years past, the official said, but the secretary promises that from here on, the military will move “in lockstep with the people in Hawaii,” making decisions cooperatively, sharing all information. So — no more surprises. And we do want to believe. But this is not our first rodeo.

\*\*\*

## OVERVIEW

President Biden held a virtual meeting with Indian Prime Minister Narendra Modi as Secretary of Defense Lloyd Austin and Secretary of State Antony Blinken met with their Indian counterparts to highlight a shared vision for a free and open Indo-Pacific, according to the Associated Press. Separately, Pentagon spokesperson John Kirby said the U.S. was monitoring, but could not confirm, claims by Ukrainian President Volodymyr Zelenskyy that Russia intended to unleash chemical weapons on Ukrainian units in Mariupol as part of an impending assault in the east, the Washington Post reported. Also of note, Austrian Chancellor Karl Nehammer met with Russian President Vladimir Putin to reaffirm Europe's commitment to toughening sanctions against Russia as long as the war persisted, while warning that Russia likely intended to intensify the violence, the New York Times wrote.

\*\*\*

## TOP STORIES

### 1. Biden Urges Modi Not to Step Up Indian Use of Russian Oil

Associated Press, Apr. 11 (2245) | Josh Boak, Fatima Hussein and Ashok Sharma

President Joe Biden asked India's Narendra Modi on Monday not to accelerate the buying of Russian oil as the U.S. and other nations try to cut off Moscow's energy income following the invasion of Ukraine. The Indian prime minister made no public commitment to refrain from Russian oil, a source of tension with the U.S. Meeting by video call, Biden told Modi that the U.S. could help India diversify its sources of energy, according to press secretary Jen Psaki. Even though India receives little of its oil from Russia, it stepped up recently with a major purchase as other democracies are trying to isolate Russian President Vladimir Putin.

### 2. New assault in east Ukraine expected

Washington Post, Apr. 12 (0115), Pg. A1 | Dan Lamothe, Kim Bellware and Mary Ilyushina

Ukraine and its international partners are bracing for Russia to launch a new offensive, with the Pentagon on Monday saying there are signs that the Kremlin has begun reinforcing and resupplying its forces in the eastern Donbas region as a top official in Moscow vowed there would be no letup in hostilities before the next round of peace talks.

### 3. A Talk With Putin Deepens the Fear of Worse Attacks

New York Times, Apr. 12 (0300), Pg. A1 | Steven Erlanger and Anton Troianovski

Austria's chancellor visited President Vladimir V. Putin of Russia on Monday -- the first Western leader to see him in person since the Ukraine invasion -- and said he came away feeling not only pessimistic

about peace prospects but fearing that Mr. Putin intended to drastically intensify the brutality of the war.

#### DEFENSE DEPARTMENT

4. After hearing Silicon Valley complaints, Hicks says no 'magical' fix to acquisition

BreakingDefense.com, Apr. 11 (1450) | Valerie Insinna

When more than 15 space- and software-related startups gathered at the Space Force's SpaceWERX innovation hub to speak with Deputy Defense Secretary Kathleen Hicks, it meant an opportunity to share horror stories about bureaucratic red tape they'd encountered while working with the Defense Department — a near universal experience among attendees.

#### EXECUTIVE/LEGISLATIVE

5. U.S. Debates Using Hague Court To Investigate Russian Atrocities

New York Times, Apr. 12 (0300), Pg. A1 | Charlie Savage

The Biden administration is vigorously debating how much the United States can or should assist an investigation into Russian atrocities in Ukraine by the International Criminal Court in The Hague, according to officials familiar with internal deliberations. But laws from 1999 and 2002, enacted by a Congress wary that the court might investigate Americans, limit the government's ability to provide support. And the United States has long objected to any exercise of jurisdiction by the court over citizens of countries that are not part of the treaty that created it -- like the United States, but also Russia.

6. For America's security aid programs, who will run the show?

Military Times Online, Apr. 11 (0900) | Joe Gould

With the world transfixed by Russia's invasion of Ukraine and debates breaking out on Twitter over whether the U.S. should send the country fighter aircraft and missile defense systems, security assistance — usually a wonky topic — is having a moment. But it's not just about public attention. With Democrats holding the reins in Washington, State Department officials have recommended a list of reforms to America's globe-spanning security aid programs.

7. New Head Of Europe Command Expected

Wall Street Journal, Apr. 12 (0200), Pg. A6 | Nancy A. Youssef and Gordon Lubold

A top American Army general in Europe is expected to be elevated to lead all U.S. and allied forces on the continent, U.S. officials said, marking the biggest change to NATO military leadership since Russia invaded Ukraine in February. The Pentagon is also set to name a new general to lead Special Operation forces, the officials said. Both would succeed commanders who are expected to retire this year as part of a normal rotation of commanders.

#### INDO-PACIFIC

8. Despite Russia tensions, U.S. and India deepen defense ties

Defense News Online, Apr. 11 (1932) | Joe Gould

Eyeing China, U.S. and India committed to deeper defense ties in space and cyberspace as well as an expansion of their joint military exercises, officials from both countries announced Monday. Defense Secretary Lloyd Austin and U.S. Secretary of State Antony Blinken met in Washington with their Indian counterparts — Defense Minister Rajnath Singh and External Affairs Minister Subrahmanyam Jaishankar — amid rising tensions between the allies over India's muted criticism of Russia's invasion of Ukraine.

9. India, US to hold dialogue on artificial intelligence

Press Trust of India, Apr. 12 (0137) | Lalit K Jha

India and the US have agreed to hold a dialogue on artificial intelligence to harness opportunities for joint innovation and cooperation in new domains, the two countries announced after the 2+2 ministerial.

10. US has not yet made determination on potential sanctions or waivers to India under CATSAA law – Blinken

Press Trust of India, Apr. 12 (0209) | Lalit K Jha

The US has not yet made any decision on potential sanctions or waivers to India under CATSAA law for its purchase of the S-400 missile defence system from Russia, Secretary of State Antony Blinken has said. The US administration is required under its domestic law, Countering America's Adversaries through Sanctions Act (CAATSA) to impose sanctions on any country that has significant transactions with Iran, North Korea or Russia.

11. Australia to Fund \$1.1 Billion Darwin Port to Stem China Threat

Bloomberg News, Apr. 12 (0022) | Ben Westcott

Australia will build a new A\$1.5 billion (\$1.1 billion) port in Darwin to boost the export of gas and critical minerals, in competition with the city's main port which was controversially leased to a Chinese-owned company in 2015.

12. With Threats All Around, Japan Moves to Shed Its Pacifist Constraints

New York Times, Apr. 12 (0300), Pg. A9 | Motoko Rich

Late in February, just days after the Russian invasion, Ukraine asked Japan to ship an assortment of military equipment, from antitank weapons and ammunition to electronic radar and bulletproof vests. Although it could not compare with the airlift of arms sent by American and European officials, the military aid marked a decisive moment in Japan's evolution away from the pacifist identity it has embraced since the United States pushed to insert a clause renouncing war into Japan's postwar Constitution.

13. U.S. Carrier Group Arrives as North Korea Ramps Up Threats

Bloomberg News, Apr. 12 (0415) | Jon Herskovitz

A U.S. aircraft carrier group was in international waters east of the Korean Peninsula for the first time in nearly five years, reports said, as Pyongyang is poised for provocations that could include its first nuclear test since 2017.

EUROPE

14. Europe Moves to Arm Ukraine as Sanctions Fail to Sway Putin

Bloomberg News, Apr. 11 (1141) | Kevin Whitelaw, Marc Champion and John Follain

Ukraine's allies in Europe are moving beyond their usual emphasis on diplomacy and sanctions in response to Russia's invasion of Ukraine, with a new focus on urgently arming Kyiv as the best chance at changing Vladimir Putin's decision-making.

15. NATO Anti-Aircraft Weapon Donations Aren't Covering Ukraine Losses

Newsweek Online, Apr. 11 (1237) | David Brennan

Slovakia last week became the first country to donate a sophisticated Russian-made S-300 anti-aircraft system to Ukraine, as leaders in Kyiv stress the need for more and better anti-aircraft weapons to blunt Russia's punishing aerial bombardment. But the Slovakian system alone is not enough to replenish Ukraine's mauled anti-aircraft network. As Kyiv prepares to face Russian President Vladimir Putin's renewed offensive in the eastern Donbas region, Ukrainian leaders are still stressing the need to defend their airspace and the importance of Western support in doing this.

16. Russian forces left bombs, death and destruction around Kyiv. Now, a painstaking demining operation is underway

CNN.com, Apr. 11 (2008) | Frederik Pleitgen and Vasco Cotovio

As Russian forces retreated, they left behind scores of unexploded shells and bombs in addition to mines they planted to slow down the Ukrainian advance, to protect their withdrawal, or perhaps, simply to scorch the earth. Russian forces have been accused of regularly using cluster munitions against civilian targets in Ukraine. Earlier this month, the UN Human Rights Monitoring Mission in Ukraine said it received credible allegations that Russian armed forces have used cluster munitions in populated areas at least 24 times.

17. U.S. Army chief of staff on hand as ally Lithuania announces training for Ukrainians

Stars and Stripes Online, Apr. 11 (0934) | John Vandiver

Lithuania will host a mission to train Ukrainian soldiers to use new weaponry that the Baltic country's fellow NATO allies are sending Kyiv to assist in its war against invading Russian forces. Lithuanian defense officials announced the plan Sunday, the same day U.S. Army chief of staff Gen. James McConville was in the country for security talks.

18. Albania's former 'Stalin City' looks West with NATO airbase

Reuters, Apr. 12 (0139) | Not Attributed

In an Albanian city once named for Soviet dictator Joseph Stalin, dozens of Soviet- and Chinese-made planes rust in the open air on a former communist airbase, some with flat tyres, others covered with dust. The site in the central city now called Kucova is being transformed into a modern NATO airbase, a symbol of Albania's westward shift -- and a key military buffer in Europe as Russia wages war in Ukraine. The base, due to be completed in 2023, will give the "alliance an important strategic facility in the Western Balkans, within short reach of the Mediterranean, Middle East and the Black Sea region", the NATO official said.

RUSSIA

19. Russian Navy Taking on Resupply Role Nearly 50 Days Into Ukrainian Invasion

U.S. Naval Institute News, Apr. 11 (1829) | Heather Mongilio

Russian Navy ships in the Black Sea are currently resupplying troops in Ukraine instead of playing an offensive role, a senior defense official said Monday. Day 47 into the Ukrainian invasion, and the Russian Navy continues to mostly support the invasion. The country has a couple dozen ships in the Black Sea and the Sea of Azov, the senior defense official told reporters.

20. Russia's invasion has escalated a brewing battle over space

Los Angeles Times, Apr. 12 (0300), Pg. A5 | Noah Bierman

A 57-second video posted by the Russian government last month caught the attention of scientists and diplomats, but not in a way that inspired optimism about the future of global cooperation in outer space. The dark yet jaunty satirical video, depicting what would be the certain demise of the station, presaged more serious threats to an endeavor that has come to symbolize post-Cold War cooperation in space.

MIDDLE EAST

21. Iran Says Nuclear Deal in 'E.R.' Hanging on U.S. Decision

Bloomberg News, Apr. 11 (0500) | Arsalan Shahla

Iran said the 2015 nuclear deal is alive but lingering in the "emergency room," with its fate resting on a decision by the U.S. that could lift sanctions on Tehran's economy and oil exports. Saeed Khatibzadeh, Iran's foreign ministry spokesman, told reporters the Islamic Republic had finalized all the details needed to revive the landmark accord with other world powers involved in stalled negotiations in Vienna.

AFGHANISTAN-PAKISTAN

22. Pakistan Picks Interim Prime Minister Whose Family Is Dogged by Graft Accusations

New York Times, Apr. 12 (0300), Pg. A6 | Salman Masood and Christina Goldbaum

The Pakistani Parliament selected the opposition leader Shehbaz Sharif to become the country's prime minister on Monday, ushering in a new government after the ouster of Imran Khan and capping a week of political turmoil that pushed the fragile democracy to the brink. Mr. Sharif is the younger brother of Nawaz Sharif, who served as prime minister three times, and like other family members, he has been dogged by accusations of graft and malfeasance that were the focus of several corruption investigations. Now, Shehbaz Sharif's rise to prime minister is seen in some circles as an implicit rebuke of Mr. Khan's professed mission of dismantling Pakistan's political dynasties and rooting out corruption in politics.

AFRICA

23. A Purple Heart reminds us that U.S. troops are still fighting in Northern Africa

Task & Purpose, Apr. 11 (1315) | Max Hauptman

Last week, Master Sgt. Steven Corley, an intelligence noncommissioned officer with 2nd Battalion, 20th Special Forces Group (Airborne) was awarded the Purple Heart during a ceremony in Stuttgart, Germany. Corley was wounded in January “while serving as the leader of a six-person team in northwest Africa where he was responsible for intelligence exploitation and integration with partners and allies.” As Gen. Steven Townsend, the AFRICOM commander, said during the ceremony on Friday, “Wherever you look in Africa, when it’s somewhere tough or dangerous, SOCAFRICA is there.”

24. EU halting military training in Mali but staying in Sahel

Agence France-Presse, Apr. 11 (1505) | Not Attributed

The EU on Monday decided to halt its military training missions in Mali but will keep a presence in the Sahel, the bloc’s top diplomat said on Monday. “We are halting the training missions for the (Malian) armed forces and national guard,” EU foreign policy chief Josep Borrell told a media conference, but added: “The Sahel remains a priority. We’re not giving up on the Sahel, far from it. We want to commit even more to that region.”

ARMY

25. The Army’s transformation begins with these new units

Army Times Online, Apr. 11 (1135) | Todd South

Major changes to the Army’s doctrine, equipment and operations have arrived in upgraded gear, future-focused technology and new ways to do battle. But where these elements converge is in units filled with soldiers. And the Army isn’t letting its soldiers sit around and wait for new gear before figuring out how to fight a peer threat in large scale combat. They’re making major shifts in how big formations contribute while also tinkering with the look, function and capabilities of smaller, subordinate units.

26. Electronic warfare and drone swarms: Here’s the Army’s plan for EDGE 22

BreakingDefense.com, Apr. 11 (0745) | Andrew Eversden

The US Army will be “working heavily” with electronic warfare and experimenting with large drone swarms as part of an upcoming sensor-to-shooter experiment in the Utah desert, according to a senior Army aviation official. “We’ll basically be scrimmaging with our partners and allies,” Maj. Gen. Walter Rugen, director of the Future Vertical Lift Cross-Functional Team, said during his presentation at the Army Aviation Association of America conference in Nashville, Tenn.

MARINE CORPS

27. Four Sikhs Sue Marines Over Ban on Wearing Beards While Deployed

New York Times, Apr. 12 (0300), Pg. A20 | Dave Philipps

A Marine artillery captain named Sukhbir Singh Toor has been on a mission over the past year to become the first Sikh in the United States Marine Corps allowed to openly practice his religion while in uniform. During that time he has won a string of victories against the strict dress standards of the Marine Corps, and he can now wear the beard, long hair and turban required of a faithful Sikh while on duty. But recently, the Marine Corps dug in, refusing to allow him or any other Sikh to wear a beard on a combat deployment or during boot camp, saying that beards would hinder the corps’s ability to function and put lives at risk. On Monday, Captain Toor and three other Sikhs sued the Marine Corps in U.S. District Court for the District of Columbia, saying the corps’s refusal to grant a religious waiver is arbitrary and discriminatory, and violates the constitutional right to free exercise of their religion.

NAVY

28. Surface Navy tackling diversity as part of push for better retention, leadership

Military Times Online, Apr. 11 (1756) | Megan Eckstein

As the U.S. Navy tries to boost the warfighting performance of all its units, the surface force is looking at diversity and leadership as ways to get after that. Commander of Naval Surface Forces Vice Adm. Roy Kitchener said the surface force is the most diverse of all the Navy’s major warfare areas, but he’s not

satisfied and thinks that focusing on diversity and inclusion can help the force gain further advantage over potential adversaries in multiple ways.

29. A Sailor With Diagnosed Mental Health Issues Says He's Being Targeted for Seeking Help  
Military.com, Apr. 11 (1923) | Konstantin Toropin

Jatzael Alvarado Perez began struggling with life aboard the destroyer USS Farragut last year. The ship was in the process of getting ready to deploy, and a combination of the conditions aboard the Mayport, Florida-based ship and long stretches at sea were taking a toll on the 23-year-old sailor. After a couple of false starts, Perez would take the advice of a chaplain and seek help for the growing strains on his mental health, eventually receiving a diagnosis of a mood disorder. Instead of getting that help, though, he's faced repeated disciplinary actions, a positive drug test that suddenly wasn't, allegations of making it all up and, finally, confinement to the ship and a reduction in rank. Eventually, the situation drove his wife to spill everything in a post on Facebook.

#### NATIONAL GUARD

30. Space National Guard put on indefinite hold  
SpaceNews Online, Apr. 11 (1206) | Sandra Erwin

Instead of having a dedicated reserve force, the U.S. Space Force would have a regular active-duty force with full-time and part-time members, according to a proposal the Department of the Air Force submitted to Congress April 1. The proposal approved by Air Force Secretary Frank Kendall would establish in law "a new approach to managing reserve component forces by merging what has traditionally been called active-duty forces and reserve forces into a new component that provides full-time and part-time service options to Guardians," Kendall's spokesman Lt. Col. Justin Brockhoff, said in a statement to SpaceNews.

#### INSTALLATIONS

31. Students, staff remain wary of tap water

Honolulu Star-Advertiser, Apr. 11 (N/A), Pg. A1 | Esme M. Infante

At the 13 Oahu schools affected by the Navy's water contamination crisis, now that their water supply has been declared safe, the faucets are finally flowing. However, trust in the reported safety of the water still is not.

#### NOTABLE COMMENTARY

32. Putin's War Roils U.S.-India Ties

Wall Street Journal, Apr. 12 (0200), Pg. A15 | Walter Russell Mead

The headlines focused on Europe last week as Russia regrouped for another brutal assault on Ukraine, but the Indo-Pacific is also heating up. Kurt Campbell, senior Asia policy maker at the National Security Council, planned a trip to the Solomon Islands to stave off a potential Chinese diplomatic coup, while President Biden added a virtual meeting with Indian Prime Minister Narendra Modi even as Secretary of State Antony Blinken and Defense Secretary Lloyd Austin prepared for in-person meetings with their Indian counterparts. In the long run, both sets of meetings could change world politics more than the struggle in Ukraine.

33. A clear U.S. defense of Taiwan

Los Angeles Times, Apr. 12 (0300), Pg. A11 | Shinzo Abe

Russia's invasion of Ukraine has reminded many people of the fraught relationship between China and Taiwan. But while there are three similarities between the situation in Ukraine and Taiwan, there are also significant differences.

34. Deadliest Weapon in Ukraine Is a Cell Phone

Bloomberg Opinion, Apr. 12 (0200) | James Stavridis

As the war in Ukraine pushes well into its second month, much of the outcome thus far — including Russian failures in executing their battle plans — is the result of logistics. Moscow has struggled abysmally to get gasoline, ammunition and food to its frontline troops. On the Ukrainian side, the flow

of weapons and other materiel from the North Atlantic Treaty Organization and the U.S. has been breathtaking. But one area of warfare hangs in the balance: information. Despite ample video evidence of widespread war crimes by Russian troops, provided by Ukrainian forces and international journalists, the Kremlin is still managing the information war with energy, imagination and fairly effective counternarratives.

35. The U.S. military should be prepared for a humanitarian assistance role in the Ukraine crisis  
Military Times Online, Apr. 11 (2100) | Louis C. Tripoli

At the most recent NATO summit, President Biden announced \$1 billion in new funding for food, clean water, shelter, and medical care for those in Ukraine and those who have fled to neighboring countries, but there may be a role for more direct assistance if requested by the countries that are affected. In addition to these efforts, it is worth considering the U.S. military's humanitarian assistance and disaster response, or HADR, core capabilities for this crisis. U.S. forces have responded to a myriad of global disasters. No matter the disaster, whether a tsunami, earthquake, or epidemic, the U.S. military provided essential resources, transportation, medical supplies and treatment centers, and logistical support in exigent circumstances. Of course, host nations (or NATO) must first request humanitarian assistance from the U.S. before the processes of invoking U.S. military HADR can go forward.

# 0.DEFENSE MORNING CLIPS

As of 0430 Hours, April 11

## OVERVIEW

Russian-launched missiles twice struck the airport in Dnipro, Ukraine, as Ukrainian President Volodymyr Zelenskyy warned this week will be crucial as Russian troops moved “to even larger operations” in east Ukraine, the *Associated Press* reported. Separately, National Security Advisor Jake Sullivan said the U.S. was “surging resources, weapons, military equipment, but also diplomatic resources” to support Ukraine, and has mobilized at “unprecedented scope, scale and speed,” the *Washington Post* wrote. Also of note, Serbia took delivery of HQ-22 surface-to-air missile systems from China, becoming the first European state to operate the Chinese missiles, and raising possible concerns about Serbian belligerence toward Kosovo, according to the *Associated Press*.

## TOP STORIES

### 1. Ukrainian Defenders Dig in as Russia Boosts Firepower

*Associated Press, Apr. 11 (0406) | Adam Schreck and Cara Anna*

A showdown looms in Ukraine after Russia appointed a new military commander and looked to concentrate its attacks in the east, while Ukraine’s president said his troops will hold their ground, urging Western leaders, in particular President Joe Biden, to do more. Western military analysts say Russia’s assault increasingly is focusing on a sickle-shaped arc of eastern Ukraine — from Kharkiv, Ukraine’s second-largest city, in the north to Kherson in the south.

### 2. Ukraine presses for more weapons

*Washington Post, Apr. 11 (0115), Pg. A1 | Taylor Telford, Annabelle Timsit, Bryan Pietsch and Julian Duplain*

Russian forces bombarded several towns in eastern Ukraine on Sunday, destroying an airport and damaging several civilian targets, as the war careens toward a pivotal new phase. The shift of the war and fears of full-scale military confrontation on open terrain prompted Ukrainian officials to again call for Western alliances to step up weapons supply efforts to strengthen Ukraine’s position on the battlefield. Ukrainians continued to flee eastern Ukraine through humanitarian corridors, though authorities said they were stymied by Russian troops violating cease-fires and holding up buses at checkpoints.

### 3. China Makes Semi-secret Delivery of Missiles to Serbia

*Associated Press, Apr. 10 (0938) | Dusan Stojanovic*

Russian ally Serbia took the delivery of a sophisticated Chinese anti-aircraft system in a veiled operation this weekend, amid Western concerns that an arms buildup in the Balkans at the time of the war in Ukraine could threaten the fragile peace in the region.

## **DEFENSE DEPARTMENT**

### **4. Ukraine crisis to headline India-U.S. 2+2 dialogue**

*The Hindu Online (India), Apr. 10 (2250) | Sriram Lakshman and Dinakar Peri*

India and the U.S. will hold their fourth annual '2+2' Defence and Foreign Ministry dialogue on April 11 in Washington, with the Russian invasion of Ukraine looming over the discussions and occupying a prominent place on the agenda. External Affairs Minister S. Jaishankar, who arrived in Washington on Saturday night, and Defence Minister Rajnath Singh, arrived on Sunday, will meet their counterparts, Secretary of State Antony Blinken and Defense Secretary Lloyd Austin, in the first such dialogue of the Biden administration.

### **5. Austin addresses Ukrainian troops in U.S. for training ahead of their return home**

*Washington Examiner Online, Apr. 10 (1842) | Mike Brest*

Defense Secretary Lloyd Austin spoke with some of the Ukrainian forces who received training in the United States and are set to return home shortly. The Ukrainian troops, which had been in the U.S. participating in the prescheduled military education program at the Naval Small Craft Instruction and Technical Training School prior to Russia's invasion of Ukraine, got additional training since the conclusion of the program last month on some of the weapons the U.S. is providing to them.

## **COVID-19**

### **6. With COVID Mission Over, Pentagon Plans for Next Pandemic**

*Associated Press, Apr. 11 (0042) | Lolita C. Baldor*

A COVID-19 patient was in respiratory distress. The Army nurse knew she had to act quickly. That nurse's mission was to get urgent care for her patient. Now, the U.S. military mission is to use the experiences of Cobleigh's team and other units pressed into service against the pandemic to prepare for the next crisis threatening a large population, whatever its nature. Their experiences, said Gen. Glen VanHerck, will help shape the size and staffing of the military's medical response so the Pentagon can provide the right types and numbers of forces needed for another pandemic, global crisis or conflict.

## **EXECUTIVE/LEGISLATIVE**

### **7. White House, Republicans clash on U.S. endgame in Ukraine-Russia war**

*Washington Times Online, Apr. 10 (1043) | Ben Wolfgang*

Deep differences over the endgame in Ukraine came into sharp focus Sunday morning, with Biden administration officials saying that Washington wants to improve Kyiv's position at the negotiating table with Russia as top congressional Republicans argued that the U.S. can help ensure an unmitigated defeat for Moscow.

### **8. Bipartisan group of lawmakers arrives in Poland**

*The Hill Online, Apr. 10 (0746) | Mychael Schnell*

A bipartisan group of lawmakers arrived in Poland this weekend to meet with U.S. forces and allies in the region amid Russia's invasion of Ukraine.

## **EUROPE**

### **9. The wartime president: Ukrainian President Volodymyr Zelenskyy speaks with Scott Pelley in Kyiv**

*CBSNews.com (60 Minutes), Apr. 10 (1926) | Scott Pelley*

On February 24, with the Russian invasion coming at him from three sides, Ukrainian President Volodymyr Zelenskyy reached for his most powerful weapon – his phone. The moment Zelenskyy told his people he refused to flee, Ukraine refused to fall. Leaders don't become legends often, but over these nearly seven weeks, this 44-year-old former comedian inspired his country to stand up to the overwhelming force of Russia. Last Wednesday, we were admitted to Zelenskyy's fortified war rooms to meet the man who stands between the Russian army and the free world. We met President Zelenskyy in the blacked-out hallways of his command center in Ukraine's capital, Kyiv. It is a fortress, crowded with troops, machine guns, mines, explosives and a great deal more.

### **10. Ukraine says 1,200 bodies found near Kyiv as east braces for onslaught**

*Agence France-Presse, Apr. 10 (2226) | Not Attributed*

Ukraine said Sunday it had found more than 1,200 bodies in the Kyiv region, the scene of atrocities allegedly committed by Russian troops, as residents in the country's east braced -- or fled -- ahead of an expected massive offensive.

### **11. Zelenskiy praises Germany's position towards Ukraine after call with Scholz**

*Reuters, Apr. 10 (1932) | Maria Starkova and Ronald Popeski*

Ukrainian President Volodymyr Zelenskiy said on Sunday he had discussed possible additional sanctions on Russia in a call with German Chancellor Olaf Scholz and praised what he said was a more favourable change in Germany's position towards Kyiv.

### **12. US police agencies are sending protective gear to Ukrainian civilians in what experts call an unprecedented move**

*CNN.com, Apr. 10 (1313) | Emma Tucker and Zachary Cohen*

The governors of Iowa and Nebraska announced last week interagency initiatives to donate police protective gear, including military-grade equipment such as helmets and vests, to Ukraine to help civilians defend themselves against Russia's invasion. The agencies join a growing list of police departments -- from California to Ohio to Vermont -- that are donating non-lethal police gear to aid Ukrainian civilians, according to a CNN review of state-by-state efforts and interviews with some of those involved.

**13. Sweden and Finland consider joining NATO amidst Ukraine-Russia war**

*NPR News (Weekend Edition), Apr. 10 (0815) | Ayesha Rascoe*

As Russia continues to wage war in Ukraine, Sweden and Finland are considering joining NATO. Ayesha Rascoe asks former U.S. ambassador to NATO Ivo Daalder about the implications.

**RUSSIA**

**14. U.S. Doubts New Russian War Chief Can End Moscow's Floundering**

*Associated Press, Apr. 10 (1651) | Robert Burns and Hope Yen*

Russia has tapped a new Ukraine war commander to take centralized control of the next phase of battle after its costly failures in the opening campaign and carnage for Ukrainian civilians. U.S. officials don't see one man making a difference in Moscow's prospects.

**15. Ukraine says Russians stole lethal substances from Chernobyl**

*Agence France-Presse, Apr. 10 (0735) | Not Attributed*

Russian forces who occupied the Chernobyl nuclear plant stole radioactive substances from research laboratories that could potentially kill them, Ukraine's State Agency for Managing the Exclusion Zone said on Sunday.

**CHINA**

**16. In Russia's information war, its greatest weapon turns out to be China**

*Washington Post, Apr. 11 (0115), Pg. A10 | Elizabeth Dwoskin*

Russian propaganda about the war in Ukraine cratered last month after Russian state news channels were blocked in Europe and restricted globally. But in recent weeks, China has emerged as a potent outlet for Kremlin disinformation, researchers say, portraying Ukraine and NATO as the aggressors and sharing false claims about neo-Nazi control of the Ukrainian government.

**INDO-PACIFIC**

**17. Keep focus of Ukraine war on issue of sovereignty – PM**

*Straits Times (Singapore), Apr. 11 (N/A), Pg. A1 | Tham Yuen-C*

Seeing the war in Ukraine as a battle between democracies and autocracies complicates the problem and automatically puts Beijing in the wrong camp, making it untenable for China to denounce Russia, said Prime Minister Lee Hsien Loong.

**18. Rising Tensions Fuel Indo-Pacific Arms Sales**

*National Defense Magazine Online, Apr. 10 (1118) | Meredith Roaten*

With tensions rising in the Indo-Pacific and China increasingly intimidating its neighbors, nations in the region are seeking capabilities that will set them up for success in potential future conflicts.

### **23. Water Woes**

*Honolulu Star-Advertiser, Apr. 10 (N/A), Pg. A1 | Sophie Cocke*

The potential water shortage facing urban Honolulu is already threatening to hold up hundreds of units of affordable housing, new residential and commercial projects in Kakaako and a major environmental upgrade to a

sewage treatment plant, among other planned developments – a predicament that could have far-reaching effects on the island’s economy. After a November fuel spill from the Navy’s Red Hill fuel facility contaminated the groundwater and drinking water system that serves Joint Base Pearl Harbor- Hickam and surrounding neighborhoods, the Honolulu Board of Water Supply shut down three of its wells to ensure the fuel didn’t migrate into the municipal water system. The primary well, the Halawa shaft, comprises 20% of the water supply for urban Honolulu.

## **NOTABLE COMMENTARY**

### **24. The U.S. has a big stake in how the Ukraine war ends**

*Los Angeles Times Online, Apr. 10 (0700) | Doyle McManus*

Russia’s invasion of Ukraine, now in its seventh week, shows no sign of abating. Vladimir Putin’s army has abandoned its assault on Kyiv, Ukraine’s capital, but is launching a new offensive in the country’s east. Ukraine’s allies, led by the United States and Britain, have stepped up their supplies of tanks and anti-aircraft weapons. But every war must end some day, whether in a victory for one side or a split-the-difference cease-fire. In Washington and other Western capitals, debate has begun over what terms Ukraine and its allies should seek for ending this one – or what goals they should hold out for.

### **25. The Pentagon Must ‘Campaign’ Against China, Not Hope for a Goal-Line Stand**

*DefenseOne.com, Apr. 10 (0600) | Bryan Clark and Dan Patt*

During the lead-up to Russia’s invasion of Ukraine, the Biden administration released an unprecedented amount of classified intelligence regarding Russian plans, even revealing insider knowledge of Vladimir Putin’s intentions. This attempt at deterrence by detection failed; Putin invaded anyway. But the quality of allied intelligence-gathering and the new National Defense Strategy point toward a potentially better way to dissuade adversaries, through what the Pentagon calls “campaigning.”

### **26. The great mismatch in America’s courtship of South-east Asia**

*Straits Times (Singapore) (Power Play), Apr. 11 (N/A), Pg. A17 | Charissa Yong*

The leaders of Quad, or the Quadrilateral Security Dialogue comprising the United States, Australia, India and Japan, have held multiple virtual meetings since President Joe Biden took office in January last year, and held their first in-person summit in Washington back in September. In contrast, the in-person summit of Asean, or the Association of South-east Asian Nations, and Mr Biden has been almost 1½ years in the making - and has yet to come to pass. The stalled summit is a concern because such meetings are usually an opportune avenue for the US to signal its commitment to the region. They also tend to jump-start deeper cooperation, as the venue where significant announcements are made.

### **27. U.S. Should Show India It’s Better Partner Than Putin**

*Bloomberg Opinion, Apr. 10 (2200) | Editorial*

India has surprised and disappointed many of its fellow democracies by refusing to directly condemn Russia's invasion of Ukraine. Some U.S. officials have even let their frustrations spill out in public. Although understandable, such criticisms are mostly unproductive. The U.S. and its allies should instead concentrate on showing India that the country's interests are better served through partnership with the West, not Vladimir Putin.

## **28. Don't allow Navy to sidestep orders**

*Honolulu Star-Advertiser, Apr. 10 (N/A), Pg. E2 | Editorial*

Very little about the Red Hill saga has been straightforward, so it's only logical for Oahu residents to be skeptical about the Navy's dismissal of a captain in charge.

## **TOP STORIES**

### **1. Ukrainian Defenders Dig in as Russia Boosts Firepower**

Associated Press, Apr. 11 (0406) | Adam Schreck and Cara Anna

KYIV, Ukraine -- A showdown looms in Ukraine after Russia appointed a new military commander and looked to concentrate its attacks in the east, while Ukraine's president said his troops will hold their ground, urging Western leaders, in particular President Joe Biden, to do more.

Ukrainian President Volodymyr Zelenskyy warned Sunday in a nightly address that this week will be as crucial as any during the war, saying "Russian troops will move to even larger operations in the east of our state."

Ukraine's fate as the war shifts south and east depends on whether the United States will help match a surge in Russian weaponry, he said, echoing comments he made in an interview with The Associated Press on Saturday.

"To be honest, whether we will be able to (survive) depends on this," Zelenskyy said in a "60 Minutes" interview. "Unfortunately, I don't have the confidence that we will be receiving everything we need."

Zelenskyy said he was grateful to Biden for U.S. military aid to date but added that he "long ago" forwarded a list of specific items Ukraine desperately needed.

"He has the list," Zelenskyy said. "President Biden can enter history as the person who stood shoulder to shoulder with the Ukrainian people who won and chose the right to have their own country. (This) also depends on him."

Austrian Chancellor Karl Nehammer was due to meet Monday in Moscow with Putin, after meeting with Zelenskyy in Kyiv. Austria, a member of the European Union, is militarily neutral and not a member of NATO.

Also Monday, New Zealand's Prime Minister Jacinda Ardern said it was sending a military transport plane and a support team of 50 to Europe to carry much-needed equipment and supplies to key distribution centers.

More than six weeks of war in Ukraine has flattened cities, killed untold thousands and isolated Moscow economically and politically, and experts say the next phase of the battle may begin with a full-scale offensive that could determine the course of the conflict.

Questions remain about the ability of depleted and demoralized Russian forces to conquer much ground after their advance on the capital, Kyiv, was repelled by determined Ukrainian defenders. Britain's Defense Ministry says Russia is trying to compensate for mounting casualties by recalling veterans discharged in the past decade.

In his Sunday night address, Zelenskyy also accused Russia of trying to evade responsibility for war crimes in Ukraine.

"When people lack the courage to admit their mistakes, apologize, adapt to reality and learn, they turn into monsters. And when the world ignores it, the monsters decide that it is the world that has to adapt to them," Zelenskyy said.

"The day will come when they will have to admit everything. Accept the truth," he added.

Ukrainian authorities accuse Russian forces of committing war crimes against civilians, including airstrikes on hospitals, a missile attack that killed at least 57 people at a train station and other violence.

In another report of atrocities, the village of Buzova outside the capital, Kyiv, charred vehicles and buildings marked an area where local official Taras Didych told Ukrainian media Sunday that bodies showing "evidence of execution" were found after Russian forces withdrew from the region. It was unclear how many bodies were discovered.

Buzova is near Bucha, another of the towns near Kyiv, where hundreds of bodies, many with their hands bound and signs of torture, were found after the Russian retreat. Russia has falsely claimed the scenes in Bucha were staged.

In Washington, a senior U.S. official said Russia has appointed Gen. Alexander Dvornikov, one of its most seasoned military chiefs, to oversee the invasion. The official was not authorized to be identified and spoke on condition of anonymity.

Until now, Russia has had no central war commander on the ground.

Dvornikov, 60, takes over as Russian military prepares to focus on expanding control in Ukraine's east, where Russia-backed separatists have fought Ukrainian forces in the Donbas region since 2014, declaring some areas independent.

He gained a record for brutality as head of Russian forces deployed to Syria in 2015 to back President Bashar Assad's government during the country's devastating civil war.

Russian authorities do not generally confirm such appointments and have said nothing about a new role for Dvornikov, who received the esteemed Hero of Russia medal from President Vladimir Putin in 2016.

U.S. national security adviser Jake Sullivan, speaking Sunday on CNN's "State of the Union," played down the appointment's significance.

"What we have learned in the first several weeks of this war is that Ukraine will never be subjected to Russia," Sullivan said. "It doesn't matter which general President Putin tries to appoint."

Western military analysts say Russia's assault increasingly is focusing on a sickle-shaped arc of eastern Ukraine from Kharkiv, Ukraine's second-largest city, in the north to Kherson in the south.

That could counter Russia's earlier problem of spreading its offensive too widely over too broad a geographic area.

Newly released Maxar Technologies satellite imagery showed an 8-mile (13-kilometer) convoy of military vehicles headed south through Ukraine to Donbas, recalling images of the convoy that stalled outside Kyiv before Russia gave up trying to take the capital.

On Sunday, Russian forces shelled government-controlled Kharkiv and sent reinforcements toward Izyum to the southeast to try to break Ukraine's defenses, the Ukrainian military command said. The Russians also kept up their siege of Mariupol, a key southern port that has been under attack and surrounded for nearly 1 ½ months.

A Russian Defense Ministry spokesman, Maj. Gen. Igor Konashenkov, said Russia's military used air-launched missiles to hit Ukraine's S-300 air-defense missile systems in the southern Mykolaiv region and at an air base in Chuhuiv, a city not far from Kharkiv.

Sea-launched Russian cruise missiles destroyed the headquarters of a Ukrainian military unit stationed farther west in the Dnipro region, Konashenkov said. Neither the Ukrainian nor the Russian military claims could be independently verified.

Missiles twice struck the airport in Dnipro, Ukraine's fourth-largest city, on Sunday, the regional governor said.

In Mariupol, Russia deployed Chechen fighters, reputed to be particularly fierce. Capturing the city on the Sea of Azov would give Russia a land bridge to the Crimean Peninsula, which Russia seized from Ukraine eight years ago.

The city's residents have lacked food, water and electricity since Russian forces surrounded the city and frustrated evacuation missions. Ukrainian authorities think an airstrike on a theater that was being used as a bomb shelter killed hundreds of civilians, and Zelenskyy has said he expects more evidence of atrocities to be found once Mariupol no longer is blockaded.

On Sunday night, Zelenskyy again appealed for more assistance. Speaking with German Chancellor Olaf Scholz, he said he discussed “how to strengthen sanctions against Russia and . . . force Russia to seek peace.”

“I am glad to note that the German position has recently changed in favor of Ukraine. I consider it absolutely logical,” Zelenskyy said.

The Institute for the Study of War, an American think tank, predicted that Russian forces will “renew offensive operations in the coming days” from Izyum, a town southeast of Kharkiv, in the campaign to conquer the Donbas, which comprises Ukraine's industrial heartland.

But in the view of the think tank's analysts, “The outcome of forthcoming Russian operations in eastern Ukraine remains very much in question.”

## **2. Ukraine presses for more weapons**

Washington Post, Apr. 11 (0115), Pg. A1 | Taylor Telford, Annabelle Timsit, Bryan Pietsch and Julian Duplain

Russian forces bombarded several towns in eastern Ukraine on Sunday, destroying an airport and damaging several civilian targets, as the war careens toward a pivotal new phase. The shift of the war and fears of full-scale military confrontation on open terrain prompted Ukrainian officials to again call for Western alliances to step up weapons supply efforts to strengthen Ukraine's position on the battlefield.

Ukraine is preparing for a “massive attack in the east,” its ambassador to the United States, Oksana Markarova, warned Sunday on CBS's “Face the Nation.” Of the Russian forces, she said: “There are so many of them and they still have so much equipment. And it looks like they're going to use all of it. So we are preparing for everything.”

Military analysts have been predicting the movement of the war toward the eastern border that Ukraine shares with Russia in an area known as Donbas. The energy-rich region includes territory where pro-Russian forces have been battling the Kyiv government since 2014.

Ukraine's foreign minister, Dmytro Kuleba, cautioned that although leaders have been trumpeting success in driving Russian forces out of Kyiv, "Another battle is coming, the battle for Donbas," he said Sunday on NBC's "Meet the Press."

The expected Russian offensive could resemble World War II, Kuleba recently told NATO, with large military maneuvers involving thousands of tanks, armored vehicles, artillery and aircraft. With the atrocities mounting in Ukraine, calls have grown to provide the country with offensive weapons that would allow forces to strike inside Russia. Several foreign allies, including the United Kingdom, have pledged new weapons shipments in recent days to help Ukraine in what is expected to be a tougher battle ahead.

Ukrainian President Volodymyr Zelensky on CBS's "60 Minutes" again called on Western countries to step up in providing arms. "They have to supply weapons to Ukraine as if they were defending themselves and their own people," he said in an interview recorded Wednesday and broadcast Sunday. "If they don't speed up, it will be very hard for us to hold on against this pressure."

Zelensky urged even tougher sanctions against Russia and warned that Western nations shouldn't be lulled into complacency thinking that they had staved off World War III by not intervening further.

"I think that today no one in this world can predict what Russia will do. If they invade further into our territory, they will definitely move closer and closer to Europe," he said. "They will only become stronger and less predictable."

Zelensky's message has been relentless since the start of the Russian invasion, when he reportedly said "I need ammunition, not a ride." Foreign Minister Dmytro Kuleba told NATO leaders in Brussels last week that Zelensky had a threefold agenda: "weapons, weapons and weapons."

The United States has been cautious in its approach to providing armaments directly. The country's focus "is on helping the Ukrainians defend their territory in Ukraine and take territory back," Jake Sullivan, President Biden's national security adviser, said on CBS's "Face the Nation."

"The United States is surging resources, weapons, military equipment, but also diplomatic resources to support the Ukrainians," he said. He also discounted the notion that the United States hadn't stepped up, saying the country has mobilized resources at "unprecedented scope, scale and speed."

He noted that some of the steps include sourcing weapons systems that Ukrainian forces are already familiar with, such as the Soviet-era S-300 air defense system provided by Slovakia, to which the United States contributed a

key component. The United States is also exploring systems that would require some training for the Ukrainian forces, Sullivan added.

Senate Minority Leader Mitch McConnell (R-Ky.) said Sunday that the United States needs to be more aggressive in aiding Ukraine. "I think the administration has been better, but they've had to be pushed every step of the way to be more aggressive, sooner," McConnell told Fox News.

Backup can't come soon enough as an eight-mile-long convoy of Russian military vehicles was making its way east, according to satellite images captured Friday and made available by Maxar Technologies, a U.S. space technology firm.

As Russia shifts its military focus, officials in the eastern province of Luhansk urged people to evacuate immediately, saying the region could face a "very ugly and very bloody" fight. Sunday's attacks damaged a school and hit two residential buildings, according to Luhansk's governor, Serhiy Haidai, but no deaths were reported.

Already, more than 4.5 million Ukrainians have fled the country since the Russian invasion on Feb. 24, according to data from the United Nations. That figure is expected to grow as the fighting wears on.

Ukrainians continued to flee eastern Ukraine through humanitarian corridors, though authorities said they were stymied by Russian troops violating cease-fires and holding up buses at checkpoints.

About 2,800 people evacuated conflict areas via humanitarian corridors on Sunday, Ukrainian Deputy Prime Minister Iryna Vereshchuk said - far fewer than the more than 6,600 who fled conflict zones on Friday.

Amid a backdrop of mounting violence in Ukraine and economic devastation in Russia, President Vladimir Putin is expected to meet Austrian Chancellor Karl Nehammer on Monday, marking the first time since the invasion that Putin will have met face to face with a European leader. Nehammer visited Ukraine on Saturday and met with Zelensky.

Biden is scheduled to meet virtually with Indian Prime Minister Narendra Modi on Monday to push the country to abandon its neutral stance on the war. India has continued to buy Russian energy supplies, even as many countries around the globe have cut ties to punish Russia for its actions.

Biden and Modi will discuss the consequences of Russia's war against Ukraine and "mitigating its destabilizing impact on global food supply and commodity markets," White House press secretary Jen Psaki said Sunday in a statement.

Russian forces have now completely withdrawn from the areas around Kyiv and Chernihiv in the north, where their attempt to launch a sweep into the capital was thwarted by fierce Ukrainian resistance, U.S. officials said. Those troops are being refitted and resupplied, apparently for redeployment to the east, the Pentagon said.

In recent days, Ukrainian military officials said, the Russians have begun pushing south, with the eventual aim of seizing the city where a shelling attack on a train station occurred Friday. At least 57 people have died because of the attack and 109 were injured, according to the city's governor.

Rep. Liz Cheney (R-Wyo.) said Sunday during an interview with CNN that the train station attack was "clearly genocide," arguing that European countries that continue to purchase Russian energy supplies are "funding that genocidal campaign."

Ukrainian officials and the state railway company announced new evacuation routes Sunday for civilians in eastern Ukraine. Deputy Prime Minister Iryna Vereshchuk said that "all the routes for the humanitarian corridors in the Luhansk region will work as long as there is a cease-fire by the occupying Russian troops."

The refocus to the east, away from the largest cities, could be a challenge for Ukraine's beleaguered forces and an advantage for Russian troops, Gen. Mark A. Milley, chairman of the Joint Chiefs of Staff, said last week, noting that Russians are more skilled at fighting in rural terrain.

Unlike near Kyiv, where Ukrainian forces were able to hide in forests, the expansive, open spaces of the east will make it harder for the Ukrainians to run guerrilla operations. For their part, Russian forces will be able to muster large mechanized formations of tanks and armored vehicles. Both sides appear positioned to dig in for a long and bloody battle focused in the east that U.S. officials have warned could last months or more.

Accounts of torture, beheadings and bodies used as booby traps for land mines near Ukraine's capital Kyiv, as well as haunting images of mass graves and bound corpses, have increased the urgency of calls for help.

Ursula von der Leyen, the president of the European Commission who visited Bucha, Ukraine, last week, said on CNN's "State of the Union" that "a lot has been done, but more has to be done."

It will take at least two weeks for the bodies of those killed in the recent attacks near Kyiv to be recovered from the rubble, Ukrainian Interior Minister Denys Monastyrsky said in a television interview. After 24 hours of sifting through debris in Bucha, workers uncovered more than 6,500 explosive devices in doorways, washing machines, cars and under helmets, Monastyrsky said.

Ukraine has opened 5,600 war-crimes cases involving about 500 Russian leaders, including Putin, since Russia's invasion, Prosecutor General Iryna Venediktova said Sunday. But the country will face an uphill battle getting Russian officials into court.

The strike on Friday at a railway station in the east was a Russian missile attack that came as evacuees were waiting to escape an expected onslaught in the region, Venediktova said. A missile fragment found near the train station was inscribed with the words "for the children," in Russian.

“These people just wanted to save their lives, they wanted to be evacuated,” Venediktova said, adding that the country has “evidence” it was a Russian strike.

The exodus from Ukraine has caused an outpouring of global support, with donors pledging 9.1 billion euros (\$10 billion) for refugees at an event Saturday convened by Canada and the European Commission.

Pope Francis called for an “Easter truce” and “peace” in Ukraine during a Palm Sunday Mass in St. Peter’s Square at the Vatican.

“Put the weapons down,” he said, according to Reuters, as tens of thousands of people listened to his address. “Let an Easter truce start. But not to rearm and resume combat, but a truce to reach peace through real negotiations.”

Francis, who has repeatedly denounced Russia’s invasion but has not directly referenced Russia or Putin, said the “folly of war” leads people to commit “senseless acts of cruelty,” the Associated Press reported.

In Russia, those who speak out against the war are under increasing threat. At least four teachers have been turned in by students or parents for antiwar speech, in some of the starkest examples of the government’s quest to identify and punish individuals who criticize the invasion.

It’s a campaign with dark Soviet echoes, inspired last month by Putin, who praised Russians for their ability to identify “scum and traitors” and “spit them out like a fly.”

After weeks of denial, Russian officials have acknowledged recently the scores of military casualties suffered by their forces. Kremlin spokesman Dmitry Peskov said the “significant losses of troops” were a “huge tragedy,” an unprecedented admission from a Russian government that has largely insisted the operation in Ukraine is going according to plan.

Now, as it seeks to rebuild its depleted forces for the next phase of battle, Russia is turning to retired soldiers, according to an intelligence briefing Sunday from the United Kingdom’s ministry of defense.

“The Russian armed forces seek to bolster troop numbers with personnel discharged from military service since 2012,” the ministry said. “Efforts to generate more fighting power also include trying to recruit from the unrecognised Transnistria region of Moldova.”

RETURN TO TOP

### **3. China Makes Semi-secret Delivery of Missiles to Serbia**

Associated Press, Apr. 10 (0938) | Dusan Stojanovic

BELGRADE, Serbia -- Russian ally Serbia took the delivery of a sophisticated Chinese anti-aircraft system in a veiled operation this weekend, amid Western concerns that an arms buildup in the Balkans at the time of the war in Ukraine could threaten the fragile peace in the region.

Media and military experts said Sunday that six Chinese Air Force Y-20 transport planes landed at Belgrade's civilian airport early Saturday, reportedly carrying HQ-22 surface-to-air missile systems for the Serbian military.

The Chinese cargo planes with military markings were pictured at Belgrade's Nikola Tesla airport. Serbia's defense ministry did not immediately respond to AP's request for comment.

The arms delivery over the territory of at least two NATO member states, Turkey and Bulgaria, was seen by experts as a demonstration of China's growing global reach.

"The Y-20s' appearance raised eyebrows because they flew en masse as opposed to a series of single-aircraft flights," wrote The Warzone online magazine. "The Y-20's presence in Europe in any numbers is also still a fairly new development."

Serbian military analyst Aleksandar Radic said that "the Chinese carried out their demonstration of force."

Serbian President Aleksandar Vucic all but confirmed the delivery of the medium-range system that was agreed in 2019, saying on Saturday that he will present "the newest pride" of the Serbian military on Tuesday or Wednesday.

He had earlier complained that NATO countries, which represent most of Serbia's neighbors, are refusing to allow the system's delivery flights over their territories amid tensions over Russia's aggression on Ukraine.

Although Serbia has voted in favor of U.N. resolutions that condemn the bloody Russian attacks in Ukraine, it has refused to join international sanctions against its allies in Moscow or outright criticize the apparent atrocities committed by the Russian troops there.

Back in 2020, U.S. officials warned Belgrade against the purchase of HQ-22 anti-aircraft systems, whose export version is known as FK-3. They said that if Serbia really wants to join the European Union and other Western alliances, it must align its military equipment with Western standards.

The Chinese missile system has been widely compared to the American Patriot and the Russian S-300 surface-to-air missile systems although it has a shorter range than more advanced S-300s. Serbia will be the first operator of the Chinese missiles in Europe.

Serbia was at war with its neighbors in the 1990s. The country, which is formally seeking EU membership, has already been boosting its armed forces with Russian and Chinese arms, including warplanes, battle tanks and other equipment.

In 2020, it took delivery of Chengdu Pterodactyl-1 drones, known in China as Wing Loong. The combat drones are able to strike targets with bombs and missiles and can be used for reconnaissance tasks.

There are fears in the West that the arming of Serbia by Russia and China could encourage the Balkan country toward another war, especially against its former province of Kosovo that proclaimed independence in 2008. Serbia, Russia and China don't recognize Kosovo's statehood, while the United States and most Western countries do.

## **DEFENSE DEPARTMENT**

### **4. Ukraine crisis to headline India-U.S. 2+2 dialogue**

*Defence, S&T, climate and public health, building supply chains are high on the agenda*

The Hindu Online (India), Apr. 10 (2250) | Sriram Lakshman and Dinakar Peri

WASHINGTON – India and the U.S. will hold their fourth annual ‘2+2’ Defence and Foreign Ministry dialogue on April 11 in Washington, with the Russian invasion of Ukraine looming over the discussions and occupying a prominent place on the agenda.

External Affairs Minister S. Jaishankar, who arrived in Washington on Saturday night, and Defence Minister Rajnath Singh, arrived on Sunday, will meet their counterparts, Secretary of State Antony Blinken and Defense Secretary Lloyd Austin, in the first such dialogue of the Biden administration.

The last meeting in this format was in October 2020. Last year's meeting was pushed back multiple times, owing to scheduling conflicts, including — notably — a visit from Russian President Vladimir Putin to New Delhi in December 2021.

The agenda for discussion is broad, reflecting the breadth of the “Comprehensive Global Strategic Partnership” between the two countries. The two sides will discuss defence, science and technology (particularly emerging technology), climate and public health (particularly cooperation on managing the COVID-19 pandemic), fortifying and building supply chains, as well as people to people ties, as per the readouts of the talks from the U.S. State and Defense Departments.

India and the U.S. will continue their “close consultations on the consequences of President Putin’s brutal war against Ukraine and mitigating the impact by addressing energy and food prices”, White House Press Secretary Jen Psaki said on Friday. India has raised the issue of commodity price impacts of the war, including at the United Nations. It has also purchased oil at a discounted price from Moscow — a move that has ruffled feathers in the Biden administration. The U.S. has said it is willing to help provide alternatives to India’s sourcing of oil from Moscow — which accounts for 1–2% of its energy imports. This is likely to feature in the week’s discussions.

American President’s Deputy National Security Advisor, Daleep Singh, visited New Delhi in the last week of March to discourage New Delhi from violating U.S. sanctions. India has pushed back against the notion that U.S. sanctions are applicable to third party countries but has also had to work with the fact that the U.S. banking and financial system still underpins much of the global financial system. Discussions around the impact of sanctions and India’s position in the Russia–Ukraine conflict will be part of Monday’s discussions.

“Obviously, it could cover a range of topics, but we expect that [the war in Ukraine ] to be a central one,” Ms. Psaki had said.

In addition to meeting in the 2+2 format, the Defence and Foreign Mministry principals will hold bilateral meeting with their own counterparts on Monday.

#### *Big ticket defence deals under discussion*

Several big ticket defence deals are in the pipeline, especially for the Navy. The purchase of 30 Predator armed drones for the three Services is in advanced stages but has been delayed pending approval from the Defence Acquisition Council.

Another major deal is a Navy tender for around 26 deck based fighter aircraft for its existing INS Vikramaditya and the indigenous aircraft carrier Vikrant which is scheduled to be commissioned in August.

In this context, Boeing is set to demonstrate the compatibility of its F/A-18 Super Hornet Indian Navy’s Shore Based Test Facility (SBTF) in Goa, officials said. Its competitor, French aircraft maker Dassault Aviation, has already carried out demonstration of its Rafale M fighter jet.

A deal for six more P 8I maritime patrol aircraft is in the works, while the Navy will start receiving the first batch of three MH 60R multi role helicopters in June, contracted as part of a deal for 24 helicopters.

#### *Jaishankar to meet several Biden Cabinet members*

While the U.S. Congress is in recess, Mr. Jaishankar is expected to meet officials in the executive branch of the U.S. government, specifically members of the Biden Cabinet. India’s U.S. Ambassador Taranjit Singh Sandhu and his team have been reaching out to U.S. officials and Members of Congress to explain and manage differences

in the relative positions the two countries have on the Russia Ukraine conflict, Mr. Jaishankar is expected to build on these efforts during these talks. He comes to Washington DC after having recent conversations not just with Mr. Blinken but also Russian Foreign Minister Sergei Lavrov and Chinese Foreign Minister Wang Yi, who was in New Delhi on March 25.

On this list of Cabinet meetings is United States Trade Representative (USTR) Katherine Tai — who has led the U.S. side as India and the U.S. relaunched their Trade Policy Forum after four years last November to progress the bilateral trade relationship. A result of those negotiations were the opening up of U.S. markets to Indian mangoes and pomegranate and the Indian market to American pork, cherries and alfalfa hay.

Also on the cards is a meeting between Mr. Jaishankar and U.S. Commerce Secretary Gina Raimondo. The Secretary had tested positive for COVID-19 on Wednesday, one of several guests Gridiron Club Dinner on April 2, an annual dinner hosted by the journalist club to fall ill. She went into home isolation for five days and would return to work after testing negative, the Commerce Department announced on Wednesday.

In addition to interactions at think tanks, a visit by Mr. Jaishankar to Howard University in DC is on the schedule, a U.S. government source indicated to The Hindu. The university is a 'Historically Black College and University (HBCU)', an organisation that educated African American students prior to 1964, i.e., during the segregation era. It is also the alma mater of several powerful Washington residents, notably Vice President Kamala Harris and Gregory Meeks, the chair of the House of Representatives Foreign Affairs Committee.

The Hindu has learnt that a meeting between the External Affairs Minister and National Security Adviser Jake Sullivan is also in the works.

## **5. Austin addresses Ukrainian troops in U.S. for training ahead of their return home**

Washington Examiner Online, Apr. 10 (1842) | Mike Brest

Defense Secretary Lloyd Austin spoke with some of the Ukrainian forces who received training in the United States and are set to return home shortly.

The Ukrainian troops, which had been in the U.S. participating in the prescheduled military education program at the Naval Small Craft Instruction and Technical Training School prior to Russia's invasion of Ukraine, got additional training since the conclusion of the program last month on some of the weapons the U.S. is providing to them.

The group is set to leave the U.S. to return to Ukraine on Sunday, the day Austin spoke with the soldiers.

One of the weapons for which these service members are being trained is the Switchblade tactical unmanned aerial system.

Pentagon spokesman John Kirby affirmed last week that “less than a dozen” Ukrainian forces had been trained to use the small, precise weapons that have the capability to target in “kamikaze” fashion.

“The Secretary thanked them for their service and for their courage, noting the skill with which the Ukrainian Armed Forces are fighting Russia’s unprovoked invasion,” Kirby said in a statement about Austin’s call. “And he pledged continued U.S support for providing and coordinating additional security assistance.”

“The Ukrainian forces received training on patrol craft operations, communications, and maintenance while at NASVSCIATTS,” Kirby added. “Since the conclusion of the NAVSCIATTS course in early March, the U.S. military provided the group additional advanced tactical training and training on the systems the United States has provided to Ukraine, including on the Switchblade UAV.”

The U.S. has provided \$1.7 billion worth of military assistance to Ukraine since Russia invaded on Feb. 24. In the six-plus weeks since then, Russian forces have faltered, facing significant resistance from Ukrainian forces in addition to severe self-inflicted problems. They sought to capture the capital of Kyiv, but they withdrew their troops from the area as they refocus their attention on the Donbas region in the southeastern part of the country.

## **COVID-19**

### **6. With COVID Mission Over, Pentagon Plans for Next Pandemic**

Associated Press, Apr. 11 (0042) | Lolita C. Baldor

WASHINGTON -- A COVID-19 patient was in respiratory distress. The Army nurse knew she had to act quickly.

It was the peak of this year’s omicron surge and an Army medical team was helping in a Michigan hospital. Regular patient beds were full. So was the intensive care. But the nurse heard of an open spot in an overflow treatment area, so she and another team member raced the gurney across the hospital to claim the space first, denting a wall in their rush.

When she saw the dent, Lt. Col. Suzanne Cobleigh, the leader of the Army team, knew the nurse had done her job. “She’s going to damage the wall on the way there because he’s going to get that bed,” Cobleigh said. “He’s going to get the treatment he needs. That was the mission.”

That nurse’s mission was to get urgent care for her patient. Now, the U.S. military mission is to use the experiences of Cobleigh’s team and other units pressed into service against the pandemic to prepare for the next crisis threatening a large population, whatever its nature.

Their experiences, said Gen. Glen VanHerck, will help shape the size and staffing of the military's medical response so the Pentagon can provide the right types and numbers of forces needed for another pandemic, global crisis or conflict.

One of the key lessons learned was the value of small military teams over mass movements of personnel and facilities in a crisis like the one wrought by COVID-19.

In the early days of the pandemic, the Pentagon steamed hospital ships to New York City and Los Angeles, and set up massive hospital facilities in convention centers and parking lots, in response to pleas from state government leaders. The idea was to use them to treat non-COVID-19 patients, allowing hospitals to focus on the more acute pandemic cases. But while images of the military ships were powerful, too often many beds went unused. Fewer patients needed non-coronavirus care than expected, and hospitals were still overwhelmed by the pandemic.

A more agile approach emerged: having military medical personnel step in for exhausted hospital staff members or work alongside them or in additional treatment areas in unused spaces.

"It morphed over time," VanHerck, who heads U.S. Northern Command and is responsible for homeland defense, said of the response.

Overall, about 24,000 U.S. troops were deployed for the pandemic, including nearly 6,000 medical personnel to hospitals and 5,000 to help administer vaccines. Many did multiple tours. That mission is over, at least for now.

Cobleigh and her team members were deployed to two hospitals in Grand Rapids from December to February, as part of the U.S. military's effort to relieve civilian medical workers. And just last week the last military medical team that had been deployed for the pandemic finished its stint at the University of Utah Hospital and headed home.

VanHerck told The Associated Press his command is rewriting pandemic and infectious disease plans, and planning wargames and other exercises to determine if the U.S. has the right balance of military medical staff in the active duty and reserves.

During the pandemic, he said, the teams' make-up and equipment needs evolved. Now, he's put about 10 teams of physicians, nurses and other staff — or about 200 troops — on prepare-to-deploy orders through the end of May in case infections shoot up again. The size of the teams ranges from small to medium.

Dr. Kencee Graves, inpatient chief medical officer at the University of Utah Hospital, said the facility finally decided to seek help this year because it was postponing surgeries to care for all the COVID-19 patients and closing off beds because of staff shortages.

Some patients had surgery postponed more than once, Graves said, because of critically ill patients or critical needs by others. “So before the military came, we were looking at a surgical backlog of hundreds of cases and we were low on staff. We had fatigued staff.”

Her mantra became, “All I can do is show up and hope it’s helpful.” She added, “And I just did that day after day after day for two years.”

Then in came a 25-member Navy medical team.

“A number of staff were overwhelmed,” said Cdr. Arriel Atienza, chief medical officer for the Navy team. “They were burnt out. They couldn’t call in sick. We’re able to fill some gaps and needed shifts that would otherwise have remained unmanned, and the patient load would have been very demanding for the existing staff to match.”

Atienza, a family physician who’s been in the military for 21 years, spent the Christmas holiday deployed to a hospital in New Mexico, then went to Salt Lake City in March. Over time, he said, the military “has evolved from things like pop-up hospitals” and now knows how to integrate seamlessly into local health facilities in just a couple days.

That integration helped the hospital staff recover and catch up.

“We have gotten through about a quarter of our surgical backlog,” Graves said. “We did not call a backup physician this month for the hospital team ... that’s the first time that’s happened in several months. And then we haven’t called a patient and asked them to reschedule their surgery for the majority of the last few weeks.”

VanHerck said the pandemic also underscored the need to review the nation’s supply chain to ensure that the right equipment and medications were being stockpiled, or to see if they were coming from foreign distributors.

“If we’re relying on getting those from a foreign manufacturer and supplier, then that may be something that is a national security vulnerability that we have to address,” he said.

VanHerck said the U.S. is also working to better analyze trends in order to predict the needs for personnel, equipment and protective gear. Military and other government experts watched the progress of COVID-19 infections moving across the country and used that data to predict where the next outbreak might be so that staff could be prepared to go there.

The need for mental health care for the military personnel also became apparent. Team members coming off difficult shifts often needed someone to talk to.

Cobleigh said military medical personnel were not accustomed to caring for so many people with multiple health problems, as are more apt to be found in a civilian population than in military ranks. “The level of sickness and

death in the civilian sector was scores more than what anyone had experienced back in the Army,” said Cobleigh, who is stationed now at Fort Riley, Kansas, but will soon move to Aberdeen Proving Ground in Maryland.

She said she found that her staff needed her and wanted to “talk through their stresses and strains before they’d go back on shift.”

For the civilian hospitals, the lesson was knowing when to call for help.

“It was the bridge to help us get out of omicron and in a position where we can take good care of our patients,” Graves said. “I am not sure how we would have done that without them.”

## **EXECUTIVE/LEGISLATIVE**

### **7. White House, Republicans clash on U.S. endgame in Ukraine-Russia war**

Washington Times Online, Apr. 10 (1043) | Ben Wolfgang

Deep differences over the endgame in Ukraine came into sharp focus Sunday morning, with Biden administration officials saying that Washington wants to improve Kyiv’s position at the negotiating table with Russia as top congressional Republicans argued that the U.S. can help ensure an unmitigated defeat for Moscow.

The dual approaches to the next phase of the Russia-Ukraine conflict come as Moscow reassesses its battle plan after aborting its disastrous campaign to capture Kyiv. Russian forces now are preparing for a major assault on eastern Ukraine, particularly the nation’s disputed Donbas region.

With Russian troops on their heels and with casualties mounting, key Republicans say the U.S. and its NATO allies should dramatically ramp up shipments of offensive weapons to Ukraine, such as tanks and fighter jets.

The goal, they say, isn’t a negotiated settlement but rather a clear defeat for Russian President Vladimir Putin and his forces.

“We want the Ukrainians to win, to win, to defeat the Russians, for the Russians to withdraw from the country. And that ought to be our goal,” Senate Minority Leader Mitch McConnell told “Fox News Sunday,” going on to criticize the administration’s approach to the eventual end of the Russia-Ukraine war.

“They still don’t understand the goal,” the Kentucky Republican said. “The goal is for Ukraine to win.”

Administration officials have made abundantly clear they want to see Russia's invasion of Ukraine end in failure. But they also seem resigned to the fact that Ukrainian President Volodymyr Zelenskyy may have to make concessions to Moscow in order to permanently end the conflict.

White House National Security Adviser Jake Sullivan told CNN's "State of the Union" that U.S. efforts to bolster the Ukrainian military are aimed at giving the country more leverage over the Kremlin.

"Russia retreated [from Kyiv]," Mr. Sullivan said. "And they did so because they faced brave and stiff Ukrainian resistance. But that resistance was armed with American weapons and Western weapons that the United States of America delivered. And we are proud of that. We will continue to do that. And we will continue to take every step we possibly can to help the Ukrainians succeed on the battlefield and to improve their position at the negotiating table."

Critics say the administration should instead focus on Russia's defeat and its unconditional withdrawal from Ukraine.

"It's crucially important that the United States be clear that we are absolutely committed to Zelenskyy's victory," Rep. Liz Cheney, Wyoming Republican, told CNN on Sunday. "We should not be talking about ... improving Zelenskyy's position at the negotiating table. This was about defeating Russian forces in Ukraine."

## **8. Bipartisan group of lawmakers arrives in Poland**

The Hill Online, Apr. 10 (0746) | Mychael Schnell

A bipartisan group of lawmakers arrived in Poland this weekend to meet with U.S. forces and allies in the region amid Russia's invasion of Ukraine.

The group, led by House Minority Leader Kevin McCarthy (R-Calif.), met with Polish Prime Minister Mateusz Morawiecki, Polish Defense Minister Mariusz Błaszczak and U.S. Ambassador to Poland Mark Brzezinski during a stop in Warsaw, according to McCarthy's office.

The lawmakers also met with Ukrainian officials, civil society, refugees who fled Ukraine and members of the 82nd Airborne in northeast Poland.

McCarthy in a statement hailed Poland as an "indispensable strategic partner." Of the more than 4.5 million Ukrainians who have fled during the invasion thus far, roughly 2.59 million have sought refuge in Poland, according to the United Nations Refugee Agency.

“Poland has been an indispensable strategic partner by accepting millions of refugees, working closely with our military forces, and contributing fully to NATO as we all aim to restore peace and prosperity to the region,” McCarthy said in a statement.

“Our visit today should serve as a powerful message to Putin that we condemn his unprovoked attacks. Evil cannot win,” he added.

The minority leader said the group traveled to Poland to make sure that the U.S. and its allies are supporting Ukraine amid the conflict.

“The whole world is watching what’s unfolding in Ukraine,” McCarthy said. “We see the atrocities being committed by Vladimir Putin, and more importantly, we see the bravery of the Ukrainian people. We are here—as representatives of the United States—to ensure we are doing what is right to support Ukrainians as they defend themselves and their democracy.”

Other lawmakers on the trip included House Minority Whip Steve Scalise (R-La.), House Foreign Affairs Committee Ranking Member Michael McCaul (R-Texas), House Permanent Select Committee on Intelligence Ranking Member Michael Turner (R-Ohio) and Reps. Ken Calvert (R-Calif.), French Hill (R-Ark.), Kathleen Rice (D-N.Y.), Stephanie Murphy (D-Fla.), Mike Garcia (R-Calif.) and Michelle Fischbach (R-Minn.).

McCarthy’s office said additional stops will be announced in the coming days. Axios, which first reported on the bipartisan delegation last week, said the lawmakers are also scheduled to visit the Ukrainian border.

The trip comes as Russia’s invasion of Ukraine progresses through its sixth week. Another bipartisan group of lawmakers, led by House Majority Leader Steny Hoyer (D-Md.) and Rep. Fred Upton (R-Mich.), is set to visit Berlin, Copenhagen, Warsaw, a Polish city near the Ukrainian border named Rzeszow, and Kangerlussuaq, Greenland this week.

### **9. The wartime president: Ukrainian President Volodymyr Zelenskyy speaks with Scott Pelley in Kyiv** CBSNews.com (60 Minutes), Apr. 10 (1926) | Scott Pelley

On February 24, with the Russian invasion coming at him from three sides, Ukrainian President Volodymyr Zelenskyy reached for his most powerful weapon – his phone. The moment Zelenskyy told his people he refused to flee, Ukraine refused to fall. Leaders don't become legends often, but over these nearly seven weeks, this 44-year-old former comedian inspired his country to stand up to the overwhelming force of Russia. Last Wednesday, we were admitted to Zelenskyy's fortified war rooms to meet the man who stands between the Russian army and the free world.

We met President Zelenskyy in the blacked-out hallways of his command center in Ukraine's capital, Kyiv. It is a fortress, crowded with troops, machine guns, mines, explosives and a great deal more.

*Scott Pelley:* Are you safe here?

*Volodymyr Zelenskyy, speaking Ukrainian:* Yeah, I'm fine. I feel pretty calm about it. Our guards are worried because there could be an airstrike. But when we get the air-raid evacuation signal we head downstairs.

*Scott Pelley:* Mr. President, what has it been like working under these conditions?

*Volodymyr Zelenskyy, in English:* We, we, found a way to work. We don't have another way.

*Scott Pelley:* You found a way how to work, you don't have any other way.

*Volodymyr Zelenskyy, speaking Ukrainian:* It has to be dark in here, you can't switch the lights on because a bomb could just fly in, during an airstrike.

*Scott Pelley:* You have troops sleeping...

The president and his staff have lived here for 46 days now. The Russian invasion plan expected Kyiv to fall in 3 days. But that relied on one assumption – that Zelenskyy would run.

*Volodymyr Zelenskyy, translation:* When everyone is telling you, you need to go, you need to think. Before I do something, I analyze the situation. I've always done it calmly, without any chaos. I might not be the strongest warrior. But I'm not willing to betray anyone.

*Scott Pelley:* What did you tell your wife and children about your decision?

*Volodymyr Zelenskyy, translation:* I told them this is my choice. And I can't do it any other way. I'm the president of my country. I'm the president of our people. And even if I wasn't president, I would have stayed here. [My family] understood. Not only understood, but fully supported my decision. Fully.

It was the decision that saved Ukraine from immediate collapse.

"Good evening, everyone," he said. "We are all here, our soldiers are here, the citizens of the country are here. We are all here protecting our independence, our country and we're going to continue."

*Scott Pelley:* You had made a decision to give your life for your country if it came to that.

*Volodymyr Zelenskyy, translation:* I don't want to make myself out to be a hero. I love my family. I want to live many more years, but choosing between running or being with my people, of course I'm ready to give my life for my country.

For a man with 44 million lives in his hands, we found Zelenskyy buoyant, gracious, humble and brutally honest.

The day before our visit, an angrier Zelenskyy scolded the UN Security Council "where's the security?" he asked.

*Scott Pelley:* In speaking to NATO, you called them weak. In speaking to the UN Security Council, you said, if you can't help, you shouldn't exist. Not very diplomatic of you. I wonder why you feel the need to speak so bluntly.

*Volodymyr Zelenskyy, translation:* When you are [working] at diplomacy, there are no results. All this is very bureaucratic. That's why the way I'm talking to them is absolutely justifiable. I don't have any more lives [to give]. I don't have any more emotions. I'm no longer interested in their diplomacy that leads to the destruction of my country. A lot of countries have changed their mind about Ukraine and about our people. But I think we've paid too high price for that.

*Scott Pelley:* What must the world understand?

*Volodymyr Zelenskyy, translation:* We are defending the ability of a person to live in the modern world. We are defending the right to live. I never thought this right was so costly. These are human values. So that Russia doesn't choose what we should do and how I'm exercising my rights. That right was given to me by God and my parents.

God was hard to find on our visit to Kyiv's northern suburbs which Russia occupied for weeks. Much of what we found will be difficult to watch. Behind St. Andrew's Church there is a sandy trench not quite full of civilian residents of the town of Bucha. Ukraine stopped the Russians here, 45 minutes from the center of the capital city.

The Russian retreat was so hasty, it seems there was no time to cover up the war crimes. President Zelenskyy visited Bucha two days before our interview.

*Scott Pelley:* What did you see in Bucha?

*Volodymyr Zelenskyy, translation:* Death. Just death.

Last Monday was the first time Zelenskyy saw, with his own eyes, what Russia has done in what Vladimir Putin calls the liberation of Ukraine. The day after our interview, we found civilian neighborhoods in Bucha, blocks and blocks shelled and blasted with no purpose but terror. Bodies and parts of bodies lay in the streets, “left out like trash,” Zelenskyy told us. No one knows how many victims are still in their homes, yet to be found.

*Scott Pelley:* There’s a photograph, Mr. President, of you in Bucha with an expression on your face that you have not allowed your people to see during this war. And I wonder what we’re seeing there. Is that heartbreak? Is it anger?

*Volodymyr Zelenskyy, translation:* It’s anger. It’s anger because we don’t understand [the Russians]. You can’t really understand this world. That there are people on this planet who give these orders and people [who carry them out].

In Bucha, neighborhood relief for the hungry and the homeless looked like World War II in color. Valeriy Matvienko was so angry about the senseless Russian bullet wound in his leg, we can’t repeat what he told us in English.

*Valeriy Matvienko, translation:* Some of the Russians were normal. Some of them were totally crazy. You could walk, and they would shoot sometimes up in the air, sometimes at your legs. So, you have to jump in front of them. [Cars] were run over by Russian tanks. Very brutal. Not human.

*Scott Pelley:* Can you tell me what you saw?

We met Tetyana Dmitriivna, who compressed the occupation into a single word.

*Tetyana Dmitriivna, translation:* Horror. Horror. Gunfire was nonstop day and night. Thanks to God it all passed and we survived. It’s simply a miracle. I had two grandchildren with me in the basement. [I never thought] I would live to see this horror.

*Scott Pelley:* Mr. Zelenskyy told us he couldn’t believe that human beings could do something like this.

*Tetyana Dmitriivna:* We never believed it either. We are simply in shock. All of us.

*Scott Pelley:* What evidence is there of war crimes across Ukraine?

*Volodymyr Zelenskyy, translation:* The Ukrainian Security Service has intercepted communications. There are [Russian] soldiers talking with their parents [about] what they stole and who they abducted. There are recordings of [Russian] prisoners of war who admitted to killing people. There are pilots in prison who had maps with civilian targets to bomb. There are also investigations being done based on the remains of the dead.

*Scott Pelley:* Should Vladimir Putin be prosecuted for war crimes?

*Volodymyr Zelenskyy, translation:* Look, I think everyone who made a decision, who issued an order, who fulfilled an order, everyone who is relevant to this, I believe they are all guilty.

*Scott Pelley:* Do you hold Putin responsible?

*Volodymyr Zelenskyy, translation:* I do believe he's one of them. That's what I believe.

The slaughter of civilians could have been stopped, Zelenskyy told us. He's deeply grateful for the weapons NATO and the U.S. are sending around the clock. But he's bitterly disappointed the allies refuse to impose a no-fly zone over Ukraine. President Biden has called that an invitation to World War III. But in Zelenskyy's view, it's the kind of inaction the world has suffered before.

*Scott Pelley:* Mr. President, in a speech to NATO you said, quote, 'All the people who die will die because of you, because of your weakness.' Are you saying that the West bears some responsibility for these atrocities?

*Volodymyr Zelenskyy, translation:* I remember, all of us remember, books about the second World War, and about the devil in uniform – Adolf Hitler. Are those countries who did not participate in the war responsible? The countries who let German forces march throughout Europe? Does the world carry responsibility for the genocide? Yes. Yes, it does. When you [have the ability to] close the sky – yes it's scary, that a world war could start. It's scary. I understand [that]. And I cannot put pressure on these people because everyone is afraid of war. But whether the world [is responsible] for this, I believe so, yes. I believe so. Stand in front of the mirror every day and ask yourself, were you able to do something? Or were you unable to do something? You will find the answer in the mirror to this question, and to another question – who are you? That's what I believe.

Perhaps Zelenskyy reaches for World War II because of his homeland's history of catastrophe and because he's Ukraine's first Jewish president. Zelenskyy is 44 years old, holds a law degree. He's married with a son and daughter. His family is safe, somewhere in Ukraine. In this war, Zelenskyy is the leading man in a tragedy but he worked his entire career to make people laugh. He was Ukraine's favorite comedian whose sitcom was popular in Russia too.

In his show, called “Servant of the people,” he played a high school history teacher whose anger at corruption in Ukraine explodes into a profane rant. A student posts the tirade and the teacher is elected president.

In 2019, Zelenskyy turned parody into power. He ran on an anti-corruption platform and won 73% of the vote. He was 41 years old. He brought longtime friend and business partner, Andriy Yermak, in as chief of staff.

*Andriy Yermak:* He’s smart. He’s strong. He’s brave. And he is person who is self-made. Zelenskyy is not just the leader of our heroic nation. I think he is the leader of the free world.

*Scott Pelley:* Why do you say President Zelenskyy is the leader of the free world now?

*Andriy Yermak:* Because Ukraine defend not just Ukraine. We defend all democracy.

Zelenskyy has been defending Ukraine since his inauguration day. That green T-shirt which caught the eye of the world was no surprise to Ukrainians. He keeps fatigues in his office because he often visited the battlefield near the Russian border where Ukraine has been in a shooting war with Russia since 2014.

That was when Putin invaded part of Ukraine called the Donbas and seized Ukraine’s Crimea peninsula. In 2014, before Zelenskyy was elected, a Russian anti-aircraft battery in Ukraine shot down an airliner killing 298 civilians.

In our interview, Zelenskyy told us he’s been trying to warn the world that Putin will not stop at Ukraine.

*Scott Pelley:* Mr. President, it appears that the free world has calculated that the suffering of your people is not worth even the risk of a nuclear exchange.

*Volodymyr Zelenskyy, translation:* I think so. That’s how it is. Some are using that politically, as an excuse, by saying, ‘We can’t defend Ukraine because there could be a nuclear war.’ I think that today, no one in this world can predict what Russia will do. If they invade further into our territory, then they will definitely move closer and closer to Europe. They will only become stronger and less predictable.

*Scott Pelley:* President Biden says he is outraged by Bucha. NATO leaders say they are outraged by Bucha. So, what should they do now?

*Volodymyr Zelenskyy, translation:* Weapons, number one. They need to be very serious about it. They definitely understand what I’m talking about right now. They have to supply weapons to Ukraine as if they were defending themselves and their own people. They need to understand this: If they don’t speed up, It will be very hard for us to hold on against this pressure. The second factor is sanctions. Because we’ve found some things in sanctions that are easy for financial experts to circumvent. Russia has been circumventing them, and this is absolutely true. The Western world knows it. This shouldn’t be allowed. This is not a movie, this is real life. Stop fearing the Russian Federation. We’ve shown we are not afraid.

Friday, a Russian missile strike hit a crowd of refugees striving to escape eastern Ukraine by train. At least 50 were killed, five children. Ukrainian President Volodymyr Zelenskyy calls it a war crime. Tonight, Zelenskyy is fighting a powerful Russian assault on Ukraine's East and South. Russia has not seized its strategic objectives so, instead, it's shelling defiant cities to ruin. The one exception, at least now, is Kyiv. In a feat of arms no one expected, Ukraine's outgunned army defeated the massive Russian force that had been ordered to take the capital city.

Kyiv survives, for the moment, a capital of mummified monuments and 19th century grace. Before, it was a bumper-to-bumper city with 3 million residents. But now the streets are congested only by shadows. Air raids are still a danger but, after nearly seven weeks, the siren doesn't quicken the step like it used to.

*Scott Pelley:* Have you won the battle of Kyiv?

*Volodymyr Zelenskyy, translation:* Kyiv. I think, yes, but, this isn't the final victory. I will only be able to tell after we win this war. When we liberate our country, then I will be able to tell. Because Bucha is part of greater Kyiv. Bucha, Irpin, Hostomel if the people of those [towns] were wiped out, then did we win this battle? I'm not sure. We've withstood, and we did not give up what is ours. But whether we won, I can't say.

*Scott Pelley:* No one expected Ukraine to fight Russia to a standstill. And I wonder, how did you manage?

*Volodymyr Zelenskyy, translation:* We united as a nation. Even though [our people] understood that they would be outnumbered tenfold, and there would be no way out, just no way out, we fought for our existence and for survival. That's the combined heroism of everyone – of the people, of the authorities, of the armed forces. We became a single fist.

We saw the Ukrainian punch in the town of Bucha where the remains of a Russian armored column rusted, dead in the street. Neighbors, holed up for weeks, emerged to remember what victory looks like. No one seemed in a hurry to deal with the bits of Russian soldiers in the wreckage. The full story of how the outmanned Ukrainian army stopped the invasion of Kyiv, will fill history books but we already know part of it.

Because the Russians believed that Kyiv would fall in a matter of days, they literally did not bring enough food or fuel for their armored columns. On the other side, the Ukrainians had been trained for years by the California National Guard and other U.S. units. When the invasion happened, the U.S., Britain and other countries flooded Ukraine with light-weight, shoulder-fired anti-tank missiles.

*Scott Pelley:* How much difference have American arms made in this war?

*Volodymyr Zelenskyy, translation:* They're helping. Frankly speaking, I would have wanted more. I don't know if I have the right to say that. But the fact that the United States has helped a lot is true.

Zelenskyy's man in charge of arming Ukraine is chief of staff Andriy Yermak. When we met, he'd just finished a two-hour call with U.S. national security adviser Jake Sullivan and the chairman of the Joint Chiefs, General Mark Milley. Yermak asked for heavier weapons — faster — first there was artillery.

*Andriy Yermak:* The second, we need the tanks. We need the military jets. And we need everything which give to us opportunity to closed our sky.

*Scott Pelley:* When you ask the Biden administration for artillery, tanks, jet airplanes, the administration says what?

*Andriy Yermak:* We had very deep and very detailed conversation. This is American president who has done for Ukraine more than all other president. But then you have the war and we have openly said we need more. It's not enough. We need it as soon as possible. If we receive this support in time, we will win.

A White House official tells us Yermak got a “yes” to his requests. But filling orders takes time. The Ukrainians need Russian-made weapons that they already know how to use. The U.S. is cajoling allies to ship their Russian gear now on the promise that the U.S. will replace it later. America has thrown in nearly \$2 billion in military aid. From the Ukrainian point of view, of course, nothing is fast enough. Russian bombardment is escalating in the East and South. Cities are being shelled to ruin, including Mariupol, with 450,000 residents.

*Scott Pelley:* What are you expecting now in the East and in the South?

*Volodymyr Zelenskyy, translation:* We think this will be a new wave of this war. We don't know how much [Russian weaponry] there will be. But we understand that there will be many times more than there is now. [All] depends on [how fast] we will be helped by the United States. To be honest, whether we will be able to [survive] depends on this. I have 100% confidence in our people and in our armed forces. But unfortunately, I don't have the confidence that we will be receiving everything we need.

*Scott Pelley:* And so what are you asking of President Biden?

*Volodymyr Zelenskyy, translation:* To tell you the truth. Long ago, I asked President Biden for very specific items. He has the list. President Biden can enter history as the person who stood shoulder to shoulder with the Ukrainian people who won and chose the right to have their own country. [This] also depends on him.

*Scott Pelley:* You are frustrated with President Biden?

*Volodymyr Zelenskyy, translation:* No. I'm not disappointed. I don't know how another president in his place would help us, I don't know. It's difficult. We have a good relationship. I think so at least. Ukraine depends on the support of the United States. And I, as the leader of a country at war, I can only be grateful.

As for the other president at war, we asked Zelenskyy if he would meet, now, face to face with Vladimir Putin. He told us it was worth the chance. They wouldn't resolve everything, Zelenskyy said, but they might stop the killing.

*Scott Pelley:* Are you willing to give up any part of Ukraine for peace?

*Volodymyr Zelenskyy, translation:* Overall we are not ready to give away our country. I think we have already given up a lot of [lives]. So, we need to stand firm for as long as we can. But this is life. Different things happen.

*Scott Pelley:* It's negotiable?

*Volodymyr Zelenskyy, translation:* Well, this issue would definitely be raised in the course of negotiations. We understand the Russian side. We understand one of their provisions that is always talked about is to recognize Crimea as Russian territory. I will definitely not recognize that. [And] they would really like to take the southern parts of our country. I clearly understand that questions like this will be raised [in negotiations] if there ever are any. But we were not ready to give up our territory from the beginning. Had we been willing to give up our territory, there would have been no war.

*Scott Pelley:* Mr. President, in almost every speech to your country you say that Ukraine is going to win. What does winning look like to you?

*Volodymyr Zelenskyy, translation:* Victory. First of all, our people would definitely feel victory. They will come back. The return of [refugees] is blood for the body of Ukraine. Without them there is nothing. The bombardments would end. We would recover our territory. There would be no Russian soldiers in our country. Yes, I understand they will not withdraw from Crimea, and we'll be arguing and negotiating for one territory or another in the south of our country, the Donbas. I know exactly what [has to] happen, after which we can say, 'this is victory.' But, if [you don't mind], I'm not going to talk about it just yet.

*Scott Pelley:* Mr. President, we wish you all the luck in the world.

*Volodymyr Zelenskyy, in English:* I need half of it. I think even half will be enough.

Volodymyr Zelenskyy has borrowed more luck than anyone expected. With the reprieve of Kyiv, Ukraine has turned mere admiration into credibility. Its people are suffering grievous loss every hour, but they have proven there was a moment in Kyiv when they silenced the guns of Russia.

## **10. Ukraine says 1,200 bodies found near Kyiv as east braces for onslaught**

Agence France-Presse, Apr. 10 (2226) | Not Attributed

Ukraine said Sunday it had found more than 1,200 bodies in the Kyiv region, the scene of atrocities allegedly committed by Russian troops, as residents in the country's east braced -- or fled -- ahead of an expected massive offensive.

Heavy bombardments hammered Ukraine through the weekend, adding to mounting casualties six weeks into Russia's invasion of its neighbour.

Shelling claimed two lives in northeast Kharkiv on Sunday morning, regional governor Oleg Synegubov said, the day after 10 civilians, including a child, died in bombings southeast of the city.

"The Russian army continues to wage war on civilians due to a lack of victories at the front," Synegubov said on Telegram.

In Dnipro, an industrial city of around a million inhabitants, a rain of Russian missiles nearly destroyed the local airport, causing an uncertain number of casualties, local authorities said.

An AFP reporter saw black smoke in the sky above the facility, but a plane also took off later on Sunday, suggesting its runway was still functioning.

President Volodymyr Zelensky again condemned atrocities against civilians, and, after speaking with German Chancellor Olaf Scholz, said they had agreed "that all perpetrators of war crimes must be identified and punished".

Ukraine's Prosecutor General Iryna Venediktova said the country was examining the alleged culpability of 500 leading Russian officials, including President Vladimir Putin, for thousands of war crimes.

And White House National Security Advisor Jake Sullivan pledged the US would "work with the international community to make sure there's accountability" for what he called "mass atrocities".

At the Vatican, Pope Francis called for an Easter ceasefire to pave the way for peace, denouncing a war where "defenceless civilians" suffered "heinous massacres and atrocious cruelty".

In his nightly address, Zelensky said Russian troops were about to launch "even larger operations" in the east of Ukraine.

"We are preparing for their actions. We will respond," he said.

Residents have been fleeing in their thousands, but Lugansk governor Sergiy Gaiday said many were afraid to leave after a missile strike on a railway station in the city of Kramatorsk on Friday killed 57 people, according to a revised tally issued by local authorities.

“We evacuated “2,700-2,500 people per day, but now there are fewer and fewer,” Gaiday said, adding he was “sure that 20-25 percent” of the region’s population was still there.

“Sometimes we just beg (them) to come out of hiding because we know what comes next,” he said, adding Russian forces would “destroy everything in their path”.

Almost 50 wounded and elderly patients were transported from the east in a hospital train by medical charity Doctors Without Borders (MSF) over the weekend, the first such evacuation since the attack on the Kramatorsk station.

Electrician Evhen Perepelytsia was one of those evacuated after he lost his leg, and almost his life, to shelling in his hometown of Hirske in Lugansk.

“We hope that the worst is over – that after what I’ve been through, it will be better,” said 30-year-old after the train arrived in the western city of Lviv.

Russia’s defence ministry has denied carrying out the Kramatorsk attack.

It said Kyiv and its western allies were continuing to stage “monstrous and merciless” provocations and murdering civilians in the self-proclaimed Lugansk People’s Republic, one of two pro-Russian separatist statelets in Ukraine’s eastern Donbas.

Ukraine on Sunday hit out at the Kremlin and Russian media for laying the groundwork for war “for many years”.

“Russian political elites and propaganda have been inciting hatred, dehumanising Ukrainians, nurturing Russian superiority and laying ground for these atrocities,” Foreign Minister Dmytro Kuleba tweeted on Sunday.

But in an interview with NBC’s “Meet the Press”, Kuleba said he remained open to negotiating with the Russians.

“If sitting down with the Russians will help me to prevent at least one massacre like in Bucha, or at least another attack like in Kramatorsk, I have to take that opportunity,” he said.

Bucha -- where authorities say hundreds were killed, some with their hands bound -- has become a byword for the brutality allegedly inflicted under Russian occupation.

Ukraine's prosecutor Venediktova said 1,222 bodies had been found there and in the broader region around Kyiv so far.

At least two corpses were found inside a manhole at a petrol station on a motorway outside Kyiv on Sunday, an AFP reporter saw.

The bodies appeared to be wearing a mix of civilian and military clothing.

A distraught woman peered into the manhole before breaking down, clawing at the earth and wailing, "My son, my son".

The United Nations said on Sunday that 4,232 civilian casualties had been recorded in Ukraine to date, with 1,793 killed and 2,439 injured.

Austrian Chancellor Karl Nehammer said he would meet Putin on Monday, which would make him the first European leader to visit the Kremlin since the invasion began on February 24.

Nehammer met the Ukrainian leader in Kyiv over the weekend, and his spokesman said he had informed Berlin, Brussels and Zelensky of the trip to Moscow.

Austria is a member of the European Union, but not of NATO.

EU foreign ministers will also meet Monday to discuss a sixth round of sanctions, even as divisions over a ban on Russia gas and oil imports threaten to blunt their impact.

In a bid to shore up international resolve against Moscow, US President Joe Biden is to hold virtual talks on Monday with Indian Prime Minister Narendra Modi, just weeks after saying India had been "shaky" in its response to the invasion.

A US spokeswoman said the two leaders would consult on ways to offset the "destabilizing impact (of the war) on global food supply and commodity markets".

The World Bank on Sunday issued a dire forecast, saying Ukraine's economy would collapse by 45.1 percent this year -- a much bleaker outlook than it predicted even a month ago -- while Russia would see an 11.2 percent decline in GDP.

## **11. Zelenskiy praises Germany's position towards Ukraine after call with Scholz**

Reuters, Apr. 10 (1932) | Maria Starkova and Ronald Popeski

Ukrainian President Volodymyr Zelenskiy said on Sunday he had discussed possible additional sanctions on Russia in a call with German Chancellor Olaf Scholz and praised what he said was a more favourable change in Germany's position towards Kyiv.

"I spoke today with German Chancellor Olaf Scholz about how to bring to account all those guilty of war crimes. About how to strengthen sanctions against Russia and how to persuade Russia to seek peace," Zelenskiy said in his nightly video address, looking relaxed in an armchair.

"I am happy to note that recently Germany's position is changing in Ukraine's favour. And I consider this absolutely logical as a majority of Germans support this policy. I am grateful to them. And I expect that everything we agreed will be implemented. This is very important."

Germany, reluctant in the early stages of the Russian invasion to provide Ukraine with arms, has now agreed to supply anti-tank weaponry and missiles.

Zelenskiy, initially critical of Germany for failing to provide concrete help, particularly in an address to the Bundestag last month, has applauded Berlin's moves.

### **GAS AND OIL IMPORTS**

Scholz said on Friday that Germany could end Russian oil imports this year but stopping gas imports would be tougher because the country would need to build infrastructure to import gas from alternative sources.

Russian oil accounts for 25% of German imports, down from 35% before the Feb. 24 invasion. Gas imports to Germany from Russia have been cut to 40% from 55%, and hard coal imports to 25% from 50%.

A statement from Scholz's office on Sunday on the chancellor's call with Zelenskiy did not mention a discussion of sanctions, saying Zelenskiy had informed Scholz of "the current situation and negotiations between Ukraine and Russia."

Scholz's office said the chancellor condemned what he said were war crimes by Russia's military in Bucha and other parts of Ukraine on the call and that the German government would ensure perpetrators were identified and brought before national and international courts.

Moscow has rejected allegations by Ukraine and Western nations of war crimes. It denies targeting civilians during what the Kremlin calls a "special military operation" to demilitarise and "denazify" its neighbour.

European Commission President Ursula von der Leyen said on Saturday that Russian forces appeared to have committed war crimes by targeting civilians in Ukraine, but that the matter needed to be investigated by lawyers.

Separately, Zelenskiy's office said in a statement the president had held a conference call with Ukrainian officials during which Kyiv's proposals for a sixth package of European Union sanctions had been developed.

## **12. US police agencies are sending protective gear to Ukrainian civilians in what experts call an unprecedented move**

CNN.com, Apr. 10 (1313) | Emma Tucker and Zachary Cohen

The governors of Iowa and Nebraska announced last week interagency initiatives to donate police protective gear, including military-grade equipment such as helmets and vests, to Ukraine to help civilians defend themselves against Russia's invasion.

Nebraska Gov. Pete Ricketts said his state will send 550 pieces of protective gear and Iowa Gov. Kim Reynolds said her state's department of public safety and 18 law enforcement agencies will provide Ukraine with 860 pieces of gear.

The agencies join a growing list of police departments -- from California to Ohio to Vermont -- that are donating non-lethal police gear to aid Ukrainian civilians, according to a CNN review of state-by-state efforts and interviews with some of those involved.

Among the agencies contacted by CNN, and the non-government groups gathering supplies, none have said they're collecting weapons or ammunition.

Many of the police departments involved in these efforts are working with charity organizations and former members of the US military. Some sources with direct knowledge of the varied efforts -- but who are not involved -- spoke to CNN on the condition of anonymity due to concerns about potential legal questions the effort could raise.

It's unprecedented, experts say, for US law enforcement agencies to donate police protective equipment and military-grade gear to a foreign country involved in an ongoing war. The effort also raises questions about the roles of police departments and whether, as domestic law enforcement agencies, they should send equipment to a foreign conflict outside of their jurisdiction.

Because there's no central coordinating group, there's not an easy way to say what's being shipped or whether it's subject to export regulations.

The Ukrainian American Coordinating Council (UACC), a non-profit organization, is at the center of one effort to send regulated, military-grade and police protective items to Ukraine, including ballistic helmets, hard plates, soft armor inserts and vests, the group says.

When Russia's invasion of Ukraine began, the UACC moved quickly to obtain a license from the Department of Commerce to export level III ballistic vests and helmets, as well as a special authorization from the State Department for level IV vests in a limited capacity, according to the organization.

Level III armor is the first level of body armor that provides protection against rifle rounds and level IV is rated by the National Institute of Justice as the highest level of ballistic protection.

In accordance with the UACC's export license, the equipment can only be provided to Ukrainian civilians who have joined territorial defense units to defend their country against Russian troops, according to Mick Safron, an executive member of the board of UACC.

The UACC is partnering with the Ukrainian charitable organization called Come Back Alive, which helps store and distribute the equipment from Lviv warehouses to territorial defenses and "hotspots" across the country, according to the UACC. The foundation has end-user certificates for every territorial defense unit that receives vest and helmet donations, according to Safron.

The UACC acknowledges where Come Back Alive is distributing the donations. However, once the shipments arrive in the country, the UACC does not have control over whether the gear is distributed to the Ukrainian army or police forces, Safron said.

The US Department of Commerce and State Department did not confirm the UACC's claims regarding its export license and special authorization, but the State Department tells CNN that groups seeking to donate military-grade gear and other equipment may be subject to export regulations.

A spokesperson for the Department of Commerce told CNN in a statement that it does not "comment on specific license applications or parties, including whether a party has filed a license application."

The department "has been processing requests for exports to authorized end-users in Ukraine rapidly," according to the statement, which includes applications for licenses to export firearms and ammunition under its "existing processes and authorities."

In an interview with CNN, retired US Army Maj. Gen. Mike Repass -- the former commander of the US Special Operations Command in Europe -- said level IV body armor is "capable of withstanding one or two shots from a Soviet-type round" and the technology is controlled by the State Department for US export.

“However, the provision of Level IV body armor is subject to a lengthy process to get US approval for delivery to Ukraine. It is late-to-need as a result,” Repass added.

Some of the gear being donated by law enforcement departments, including certain types of protective vests, do not qualify as military-grade, meaning they can be sent to Ukraine without approval from the federal government, according to US Army veteran Alex Plitsas, who has been working with several police departments across Connecticut to ship the equipment to Ukraine. A typical vest worn by a police officer, rated to stop most handgun rounds, would not qualify as military-grade.

The State Department is advising groups involved in the donations to consult with the Ukrainian government, “to confirm the items will meet an immediate requirement,” a department spokesperson told CNN. “After that, items must first be assessed to determine how they are controlled for purposes of export ... prospective donors must follow necessary export licensing rules before sending.”

Organizers and police departments involved in this effort tell CNN that their work is legal, and the equipment being donated is reviewed to ensure it meets federal export regulations. But it remains unclear whether federal agencies are fully aware of every item that is being shipped to Ukraine as the US government largely puts the onus on donors to ensure they are following the law.

CNN spoke with several experts about the legality of various efforts to aid Ukraine by sending protective gear and raised the central question of whether the federal government should be authorizing local police departments to intervene in international affairs.

“The answer is, probably not,” said Martin L. Cook, a professor of professional military ethics who taught at US war colleges.

“What gives them the authority to do that? The short answer is nothing,” Cook added. “But do we have a mechanism? I don’t think we do -- to say before a local police department can do such a thing, they have to clear with DOD or state.”

According to Valerie Morkevicius, an associate professor of political science at Colgate University, there might be “really strong and valid ethical reasons for wanting to engage in this type of support.”

Morkevicius emphasized that, generally, people might be more sympathetic to Ukraine due to the circumstances of the war, and their sympathy “might not be misplaced.”

“But we have to think about the broader implications that follow from all this,” she added. “If we want to say it’s OK this time, what are the guideposts we might be shifting for future actions?”

*US police agencies partnering with Ukrainian groups*

When Russia began its military invasion of Ukraine in late February, Pennsylvania police officer Dean Steckclair of Falls Township was approached by his mother-in-law for help.

Steckclair's wife, who is Ukrainian-Lithuanian, had family members stuck in the country and shared stories of civilians who were taking up arms to defend themselves against Russian attacks. She expressed the need for defensive equipment. His mother-in-law asked if the Falls Township police department had any tactical gear such as protective vests and helmets that were not being used to send overseas to Ukraine, he told CNN.

Since then, the agency -- located in Bucks County, which houses a large Ukrainian population -- has collected and donated more than 100 ballistic vests and dozens of helmets as part of its "Operation Urgent Aid" effort and has collaborated with departments in nearby counties to set up drop-off points for donations to send to Ukraine.

It's just one of the many ways that US law enforcement agencies across the country are joining the loosely organized effort at the local and state level. Police departments in Colorado, Connecticut, Vermont, California, New York and Pennsylvania have all announced initiatives to procure and donate protective equipment.

State and police agencies are working with Ukrainian-American groups in the United States and the Ukrainian government, according to Plitsas, the US Army veteran. US agencies, including the State Department, are aware of the ongoing effort involving police departments, he added.

"I believe that we have tapped into something larger than just our desire to help as police officers," Falls Township Police Chief Nelson Whitney told CNN.

"The community, regular citizens of the United States, have come out in large numbers to donate supplies," Whitney said. "This desire to help innocent people who are being killed and injured by an aggressive totalitarian leader like Vladimir Putin is rooted deeply within the American spirit. How could we not help?"

In California, the state's Office of Emergency Services (OES) is working with the National Guard to coordinate donations from state and local law enforcement agencies for "excess/re-sourced ballistic helmets, vests and gloves, as well as safety goggles to provide to Ukrainian citizens in and around the war zone," according to Brian Ferguson, a spokesperson for California OES.

California OES and National Guard have been in "regular communication" with the Ukrainian consular affairs staff on potential humanitarian support, Ferguson said.

The Fairfield Police Department and other agencies in Connecticut, such as Greenwich and Westport, have also collaborated in a joint effort to donate more than 200 previously used ballistic vests and helmets to assist Ukrainian soldiers, the department has announced.

In a letter to the Fairfield Police Department, the Consul General of Ukraine located in Houston specified that “body armor, helmets and other personal protective equipment” was needed for military, police forces, and more than 100,000 civilians that joined “Territorial Defense Forces” since war broke out. That department is among the agencies engaged in this effort.

Colorado’s state government set five locations for police agencies to drop off excess equipment, including in Denver and Colorado Springs. More than 1,000 helmets and 840 sets of body armor were gathered this way from 25 different police agencies.

Police officials in Colorado are increasingly taking interest in helping Ukrainian civilians as an opportunity to “save lives, even if it’s not within our own border,” according to Stan Hilkey, executive director of the Colorado Department of Public Safety, which launched an effort with the state’s Department of Military and Veterans Affairs to collect equipment.

#### *Four shipments of equipment have arrived in Ukraine*

The first shipment of US protective equipment arrived in a Kyiv warehouse on March 23, according to Safron of UACC. It included thousands of hard body armor plates and vests, he said.

Four shipments in total have been delivered to end-points in Ukraine as of this week, Safron said. Two additional shipments that include thousands of vests and helmets -- weighing 45,000 pounds in total -- are currently being prepared to be exported by early next week.

The UACC is shipping gear to Warsaw, Poland -- where some 2.5 million Ukrainian refugees have arrived since the war began -- in bulk quantities in partnership with international shipping company Meest.

Similarly, the UACC relies on Ukrainian-American human rights group Razom as a social media partner to spread the word about the effort. “Meest” means bridge and “Razom” is translated as “together” in Ukrainian.

Part of the third shipment of equipment arrived at one of the Come Back Alive foundation warehouses on Friday, according to Safron. It included 852 pieces of military-grade body armor, as well as 296 helmets, the organization confirmed on Facebook.

Oksana Tscherepenko, a Ukrainian-American citizen who is the vice president of UACC, told CNN that the organization is receiving an overwhelming number of phone calls from police officials and other individuals who want to contribute humanitarian aid and protective gear.

The UACC is also partnering with organizations to set up fundraisers that have received hundreds of thousands of dollars in donations, the organization told CNN.

“The more lives we save the more chance that we have to stay free and to continue our fight in Ukraine for democracy,” Tscherepenko said.

### **13. Sweden and Finland consider joining NATO amidst Ukraine-Russia war**

NPR News (Weekend Edition), Apr. 10 (0815) | Ayesha Rascoe

As Russia continues to wage war in Ukraine, Sweden and Finland are considering joining NATO. Ayesha Rascoe asks former U.S. ambassador to NATO Ivo Daalder about the implications.

AYESHA RASCOE, HOST:

Europe is looking at a changed security landscape. Sweden and Finland have long avoided joining the North Atlantic Treaty Organization but are now considering membership in the Western military alliance. Russian President Vladimir Putin has framed NATO expansion as a threat to Russia, and Moscow warns both countries of serious military and political consequences if they become members. Ivo Daalder is a former U.S. ambassador to NATO and is currently the president of the Chicago Council on Global Affairs. He joins us now. Welcome, Ambassador.

IVO DAALDER: Oh, my pleasure.

RASCOE: Why have Sweden and Finland held out against joining NATO? Like, why did they not see - or why did they see not being a member of NATO as being in their best interests?

DAALDER: So both countries were neutral during the Cold War. They didn't want to be part either of the West or of the East, although, of course, they were vibrant democracies and had a capitalist economy. But they had a relationship with Russia that allowed them to say, we don't want to be part of either of these blocs. After the Cold War, of course, the prospect of having a major military confrontation in the middle of Europe had declined significantly. And both decided that they would rather be part of the European Union. And there was really no reason to be part of NATO. They have cooperated with NATO. They have - are very strong partners. They have, in some cases, even led - be part of military operations both in Afghanistan and in other military operations with NATO. But there was really no urgency. There was no need to be part of NATO. All of that changed on February 24, of course.

RASCOE: So how likely do you think it is now that they'll ask to join?

DAALDER: So it looks like that - and particularly Finland, which is a country that shares an 800-mile border with Russia, is moving quite rapidly to take a positive decision and say, listen. We'd like to be part of NATO.

We'd like to have the protection that NATO provides for our country over and beyond the very significant military forces that Finland itself already has. They've seen a Russia walking into - driving into a neighboring country that posed no threat whatsoever to Russia. And as a result, they think that the same may be happening in their country, and they want the protection of NATO. They want the protection of being part of an organization with 30 other countries who would be committed to defending Finland and Sweden if there was an attack.

Sweden is a little different. They haven't quite moved as far as the Finns. Of course, they don't have a border in the same way as Finland has with Russia. At the same time, Russian ships in the Baltic - in the Baltic Seas and submarines have harassed and sometimes even threatened Sweden. So there, too, there is now a change in saying, maybe we need to be part of this organization.

RASCOE: You know, as we said at the start, Russia has warned both countries against this. I mean, does this also pose a risk to them, say, if Finland does move ahead with trying to join NATO?

DAALDER: Well, it does pose a risk. And it poses a risk for NATO, of course, because the NATO countries, by taking Finland and Sweden into the alliance, commit themselves to defending those countries, which today, of course, they're not necessarily committed to doing, just as they weren't committed to defending Ukraine because Ukraine is not a NATO member. On the other hand, Russia now is looking at the situation in which if they wanted to have a military confrontation with Finland, there's at least a chance that NATO doesn't get involved. Once NATO - they are NATO members, Russia has to take the - into consideration the possibility that if there is a military confrontation with Finland, that means a military confrontation with NATO. It means a military confrontation with the United States. And given the state of the Russian armed forces that we're seeing in Ukraine, it's not clear to me what it is they would be particularly doing that would be an ultimate threat to Finland. So yes, a bluster we are likely to see from Moscow. The reality is the Finns, the Swedes and, I think, NATO will be stronger and better off if both countries become member of the alliance.

RASCOE: Very quickly, how would their membership change the security landscape in Europe?

DAALDER: Well, it would just bring two very significant military powers into the alliance that up to this point were neutral. Norway, of course, which is to their west, is a member of NATO. So it would just solidify the overall European security situation.

RASCOE: OK, that's Ivo Daalder, former NATO ambassador, now president of the Chicago Council on Global Affairs. Thank you.

DAALDER: My pleasure.

## RUSSIA

### 14. U.S. Doubts New Russian War Chief Can End Moscow's Floundering

Associated Press, Apr. 10 (1651) | Robert Burns and Hope Yen

WASHINGTON -- Russia has tapped a new Ukraine war commander to take centralized control of the next phase of battle after its costly failures in the opening campaign and carnage for Ukrainian civilians. U.S. officials don't see one man making a difference in Moscow's prospects.

Russia turned to Gen. Alexander Dvornikov, 60, one of Russia's most experienced military officers and according to U.S. officials a general with a record of brutality against civilians in Syria and other war theaters. Up to now, Russia had no central war commander on the ground.

The general's appointment was confirmed by a senior U.S. official who was not authorized to be identified and spoke on condition of anonymity.

But the White House national security adviser, Jake Sullivan, said "no appointment of any general can erase the fact that Russia has already faced a strategic failure in Ukraine."

"This general will just be another author of crimes and brutality against Ukrainian civilians," Sullivan said. "And the United States, as I said before, is determined to do all that we can to support Ukrainians as they resist him and they resist the forces that he commands."

White House press secretary Jen Psaki echoed that thought. "The reports we're seeing of a change in military leadership and putting a general in charge who was responsible for the brutality and the atrocities we saw in Syria shows that there's going to be a continuation of what we've already seen on the ground in Ukraine and that's what we are expecting," she said.

The decision to establish new battlefield leadership comes as Russia gears up for what is expected to be a large and more focused push to expand Russian control in Ukraine's east and south, including the Donbas, and follows a failed opening bid in the north to conquer Kyiv, the capital.

Dvornikov gained prominence while leading the Russian group of forces in Syria, where Moscow has waged a military campaign to shore up President Bashar Assad's regime during a devastating civil war.

Dvornikov is a career military officer and has steadily risen through the ranks after starting as a platoon commander in 1982. He fought during the second war in Chechnya and took several top positions before being placed in charge of the Russian troops in Syria in 2015.

Under Dvornikov's command, Russian forces in Syria were known for crushing dissent in part by destroying cities, lobbing artillery and dropping what were often crudely made barrel bombs in sustained attacks that have displaced millions of Syrian civilians. The United Nations says the more than decade-long war has killed more than 350,000 people.

In 2016, Russian President Vladimir Putin awarded Dvornikov the Hero of Russia medal, one of the country's highest awards. Dvornikov has served as the commander of the Southern Military District since 2016.

Lt. Col. Fares al-Bayoush, a Syrian army defector, said Sunday that while the situation in Syria is different than in Ukraine because the Russian military was fighting insurgent groups and not Ukraine's professional army, he expects a similar "scorched-earth" strategy.

Al-Bayoush said he believes the aim of naming Dvornikov as Ukraine war commander is to turn the war into "rapid battles" in several places at the same time.

"I expected him to use the scorched earth policy that was used in Syria," al-Bayoush said, referring to Russian-backed attacks in Syria in which cities and towns were put under long sieges while being subjected to intense bombardment that left many people dead and caused wide destruction to infrastructure and residential areas. "He has very good experience in this policy."

"This commander is a war criminal," al-Bayoush said by telephone from Turkey.

Since Russia joined the war in Syria in September 2015, Assad's forces have taken control of most of the country after being on the verge of collapse. The Russian air force carried out thousands of airstrikes since, helping Russian-backed Syrian troops take areas after fighters were forced to choose between an amnesty in return for dropping their arms or being taken by buses into rebel-held areas.

The last major Russian-backed offensive in Syria lasted several months, until March 2020, when a truce was reached between Russia and Turkey, which supported rival sides.

Sullivan on Sunday said the Russian general has a record of brutality against civilians in Syria and "we can expect more of the same" in Ukraine. But he stressed that the U.S. strategy remains the same in supporting Ukraine and its president, Volodymyr Zelenskyy.

"Our policy is unequivocal that we will do whatever we can to help Ukraine succeed," Sullivan said. "Which means that we need to keep giving them weapons so that they can make progress on the battlefield. And we need to keep giving them military support and strong economic sanctions to improve their position, their posture at the negotiating table."

Defense Secretary Lloyd Austin, meanwhile, spoke by video conference Sunday to a small number of Ukrainian troops in the U.S. who are now returning to their country. The group has been in the U.S. since last fall for military schooling and were given training on new drones the U.S. sent to Ukraine last week for the war with Russia.

Austin thanked the Ukrainian troop members for their courage and service and pledged continued U.S. support and security aid, according to Pentagon spokesman John Kirby. Kirby said the small group was given some advanced tactical training, including on the Switchblade armed kamakazi drones, as well as instruction on patrol craft operations, communications and maintenance.

In an interview Saturday with The Associated Press, Zelenskyy acknowledged that despite his hopes for peace, he must be “realistic” about the prospects for a swift resolution given that negotiations have so far been limited to low-level talks that do not include Putin.

Zelenskyy renewed his plea for more weapons before an expected surge in fighting in the country’s east. He said, with frustration in regards to supplies of weapons from the U.S. and other Western nations, “of course it’s not enough.”

Sullivan spoke on CNN’s “State of the Union” and NBC’s “Meet the Press. Psaki spoke on “Fox News Sunday.”

## **15. Ukraine says Russians stole lethal substances from Chernobyl**

Agence France-Presse, Apr. 10 (0735) | Not Attributed

Russian forces who occupied the Chernobyl nuclear plant stole radioactive substances from research laboratories that could potentially kill them, Ukraine’s State Agency for Managing the Exclusion Zone said on Sunday.

Moscow’s forces seized the defunct power plant on the first day of their invasion of Ukraine on February 24. They occupied the highly radioactive zone for over a month, before retreating on March 31.

The agency said on Facebook that Russian soldiers pillaged two laboratories in the area.

It said the Russians entered a storage area of the Ecocentre research base and stole 133 highly radioactive substances.

“Even a small part of this activity is deadly if handled unprofessionally,” the agency said.

Earlier this week Ukraine’s energy minister German Gulashchenko said Russian soldiers exposed themselves to a “shocking” amount of nuclear radiation, saying some of them may have less than a year to live.

“They dug bare soil contaminated with radiation, collected radioactive sand in bags for fortification, breathed this dust,” Gulashchenko said on Facebook on Friday after visiting the exclusion zone.

“After a month of such exposure, they have a maximum of one year of life. More precisely, not life but a slow death from diseases,” the minister said.

“Every Russian soldier will bring a piece of Chernobyl home. Dead or alive.”

He said Russian military equipment was also contaminated.

“The ignorance of Russian soldiers is shocking.”

The Chernobyl power station was the site in 1986 of the world’s worst nuclear disaster.

## **CHINA**

### **16. In Russia’s information war, its greatest weapon turns out to be China**

Washington Post, Apr. 11 (0115), Pg. A10 | Elizabeth Dwoskin

Russian propaganda about the war in Ukraine cratered last month after Russian state news channels were blocked in Europe and restricted globally. But in recent weeks, China has emerged as a potent outlet for Kremlin disinformation, researchers say, portraying Ukraine and NATO as the aggressors and sharing false claims about neo-Nazi control of the Ukrainian government.

With over a billion followers on Facebook alone, China’s state-controlled channels offer Russian President Vladimir Putin a powerful megaphone for shaping global understanding of the war - often called a “special operation” in line with Kremlin rhetoric. Since Russia invaded Ukraine on Feb. 24, researchers say, Chinese channels have touted the false claim that the United States runs bioweapons labs in Ukraine, have asserted that Ukrainian neo-Nazis bombed a children’s hospital which was in fact bombed by Russian troops, and have suggested that Ukrainian President Volodymyr Zelensky was being manipulated by U.S. billionaire George Soros.

Chinese channels also have given airtime and amplification to high-ranking Russian government officials and to presenters from Russian government channels whose shows have been restricted or blocked. Last month, after a host on Sputnik, the Russian state news outlet, posted a video on his personal YouTube channel discussing how neo-Nazis were on the rise in Ukraine, the clip was tweeted by Frontline, a Chinese government outlet.

“With governments and tech platforms moving to censor or limit the spread of Russian propaganda, pro-Kremlin talking points are now being laundered through influencers and proxies, including Chinese officials and state media outlets that obviously do not face the same restrictions that have been placed on Russian state media outlets,” said Bret Schafer, senior fellow and head of the information manipulation team at the Alliance for Securing Democracy, a nonpartisan initiative housed at the U.S. German Marshall Fund that tracks Chinese and Russian state media. “This has allowed the Kremlin to effectively skirt bans meant to limit the spread of Russian propaganda.”

Putin’s success in seeding some of these misleading narratives through proxies and allies is casting doubt on the ability of Western governments and the tech giants to effectively rein in the most pernicious forms of authoritarian propaganda. With China’s help, experts say, Russia also is regaining its ability to cloud the narrative around Europe’s biggest conflict since World War II.

“While the world’s eyes are still on Ukraine, and the journalists are there, it’s going to be hard for the Russian government to make great progress. But they can make progress on the edges,” said Kate Starbird, an associate professor in the Department of Human Centered Design & Engineering at the University of Washington. “And in the long run, if the public is confused enough about what happened, then we might not give our leadership a clear message to take action.”

Since the war’s early days, when the European Commission blocked Russian state channels and Twitter, YouTube and Facebook restricted their reach, Russia has raced to create workarounds. Journalists have uncovered a coordinated campaign to pay TikTok influencers to push pro-Kremlin views, while researchers from the data science company Tremmentum Analytics have documented pro-Russia trolls spamming YouTube videos about Ukraine with pro-Russian comments.

The Russian government also has used its embassies to push out misinformation to tens of thousands of followers on Twitter, YouTube, Facebook, and the messaging app Telegram. According to the Israeli disinformation research group FakeReporter, Russian embassies have created at least 65 new Telegram channels since the war began. Twitter stopped recommending these accounts last week.

Fox News and other right-leaning American outlets also have picked up Russia’s talking points - notably when Fox host Tucker Carlson last month promoted to his prime time audience the baseless claim that Ukraine was developing biological weapons with the assistance of the U.S. government. According to disinformation researchers and the fact-checking group PolitiFact, that claim, which has been circulating for years, is a misleading reference to a public health research partnership between the United States and Ukraine; the White House has called it “preposterous.”

Two weeks ago, the New York Post wrote an article tying the discredited biolab claim to President Biden’s son Hunter, claiming that the younger Biden had helped secure funds for a start-up that worked on the research biolabs

in Ukraine. The Washington Post has reported that Hunter Biden “was not part of a decision” to invest in the start-up.

Meanwhile, highly active online communities, such as anti-vaccine activists and adherents of the radicalized movement QAnon, have seized on the biolab claim and other Russian narratives. An early, prolific spreader of the theory, according to the Anti-Defamation League, was a Virginia man with ties to QAnon.

China is, by far, the Kremlin’s biggest promoter, however. The top four Chinese outlets - CGTN, Global Times, Xinhua News and T-House - command a massive audience with a combined follower count on Facebook of 283 million, according to research from the nonprofit Center for Countering Digital Hate (CCDH). All told, Chinese outlets on Facebook have over 1 billion followers, according to the Alliance for Securing Democracy - far more than the roughly 85 million total followers for Russia’s main channels.

Asked how Facebook was addressing China’s emergence as a vector for Russian propaganda, Facebook shared several examples of fact checks applied to misleading pro-Russian content from Chinese state media. The company did not respond to questions about whether it has restricted Chinese state media accounts or has plans to do so.

Twitter spokeswoman Madeline Broas said the company had placed some limits on Chinese state media for several years, and that it had begun putting highly-visible labels on any tweet that contained a link to Chinese state media. (Previously, such labels were shown only to people who searched for the account.)

YouTube declined to answer questions about Chinese state media. Spokeswoman Elena Hernandez said the company does fact-check misinformation and that it prohibits content that minimizes, trivializes, or denies the existence of well-documented, violent historical events.

The Chinese Embassy in Washington did not respond to a request for comment.

China and Russia have long been allies, extending back to the Cold War, and view their alliance as a bulwark against Western power. The two countries strengthened their bond ahead of the Ukraine invasion, issuing a joint statement on Feb. 4 describing their relationship as a “no limits” friendship.

Russia has refused to acknowledge the invasion, referring to its actions in Ukraine as a “special operation.” Chinese state media immediately adopted that term, according to the Alliance for Securing Democracy’s tracker, with Chinese accounts using it 180 times between Feb. 24 and March 12. The term “invasion” was mentioned 145 times, but more than the third were references to the U.S. invasion of Iraq - an attempt to equate Russian and American military actions.

Chinese media also began to take up neo-Nazi storylines, according to ASD. Chinese diplomats and state media have tweeted about Nazis more than 140 times since the start of the war, according to the tracker. In the year

preceding the war, Chinese state-affiliated accounts tracked by the group tweeted about Nazis only twice. The Azov Battalion, a group partially made up of anti-Russian nationalists and neo-Nazis, has been part of Ukraine's military since 2014. But experts say the controversial battalion does not have major influence in the country whose president, Zelensky, is Jewish.

Lately, China has focused more attention on blaming NATO for the conflict, researchers say. A recent Facebook post from T-House, a millennial-focused outlet, compared Ukraine's potential membership in NATO to Hitler's attempt to conquer Ukraine, according to research by the Center for Countering Digital Hate. "The moves by the US-led #NATO have pushed the #Russia-Ukraine tension to the breaking point," said a recent tweet by China's ambassador to the Asia-Pacific region.

In late March, NATO was the tenth most used key phrase in Chinese tweets, according to the ASD tracker. Meanwhile, China's consul general in Belfast recently tweeted a false claim from Russian state media that Zelensky is hiding in Poland, a NATO member.

China also is giving a boost to Russian presenters whose audiences appear to have been limited by Western bans. The personal talk show for U.K. presenter George Galloway, host of the "Mother of All Talk Shows" on Sputnik, been shared numerous times by several large Chinese outlets such as Global Times. Currently, the Sputnik website that hosted Galloway's show appeared to be blocked in the United Kingdom, according to ASD. But his personal YouTube channel, which does not make visible references to his Sputnik backing, continues to stream it.

Galloway did not respond to a request for comment. In a tweet on Wednesday, Galloway tweeted in response to Twitter's decision to label his account "Russian state media," saying, "Dear @TwitterSupport I am not "Russian State Affiliated media". I work for NO #Russian media. I have 400,000 followers. I'm the leader of a British political party and spent nearly 30 years in the British parliament. If you do not remove this designation I will take legal action."

Experts disagree about how the tech companies should police China and other Russian proxies.

The tech companies have cast their crackdowns on Russian media as drastic actions taken under extraordinary circumstances; they largely do not want to impose blanket bans on state outlets. Experts also have noted that if state outlets are banned for disinformation, the tech companies would face increasing pressure to ban nonstate channels that spread misinformation, such as Fox News.

Instead, the tech companies more recently have opted for transparency, such as fact-checking and labeling. In 2018, YouTube began labeling state media outlets. Twitter did so in 2020, as did Facebook.

But labeling is premised on the idea that informed users will make wise decisions about whether to trust content, and that has had mixed results.

In 2020, George Washington University researchers studying the impact of YouTube labels on content from RT found that they were effective at making people more aware of misinformation, but only when the labels were prominently displayed. A separate study from the Election Integrity Partnership, a consortium of prominent disinformation researchers, found that labeling was inconsistent and that tech platforms failed to prominently show the labels in search results.

Since the Ukraine war began, Twitter has added more prominent labels, saying the move has reduced the reach of Russian propaganda by 30 percent. But some advocates said transparency measures are insufficient in the face of China's global disinformation campaign, and called on the tech giants to do more.

“When there is clear disinformation targeted at foreign populations, the tech companies have a perfectly legitimate moral case for limiting or removing that propaganda,” said Imran Ahmed, chief executive of CCDH, which has researched Chinese state media.

Not all companies have embraced the same level of transparency. TikTok, whose parent company ByteDance is Chinese-owned, started its first pilot project to label a few dozen Russian state outlets last month, and the company has plans to start labeling Chinese outlets. Researchers say state propaganda probably has a massive presence on its service - but it is difficult to detect with such limited labels and without providing researchers the ability to review the platform's data. The company says it is still developing a state media policy.

Rather than adopting ad hoc policies during an emergency like the Ukraine war, platforms should have distinguished long ago between media outlets run by authoritarian governments and outlets, such as PBS or the BBC, that receive support from democratic governments, said Alex Stamos, director of the Stanford Internet Observatory, which is a member of the Election Integrity Partnership.

Stamos, who once was Facebook's chief security officer, argued that social media companies should not give a megaphone to state media outlets from countries, such as China, where free speech is suppressed. Russia would now also fall into that category, he said.

“This is the time,” Stamos said, “for the tech platforms to finally create rules about state media run by authoritarian governments.”

### 17. Keep focus of Ukraine war on issue of sovereignty – PM

#### *Framing it as a conflict between democracies and autocracies complicates the problem*

Straits Times (Singapore), Apr. 11 (N/A), Pg. A1 | Tham Yuen-C

Seeing the war in Ukraine as a battle between democracies and autocracies complicates the problem and automatically puts Beijing in the wrong camp, making it untenable for China to denounce Russia, said Prime Minister Lee Hsien Loong.

If the conflict is instead defined as one about sovereignty, independence and territorial integrity, “even China would not object to that, and would actually privately strongly support that”, he said in a dialogue with The Wall Street Journal editorial board on April 1.

The transcript of PM Lee’s session, which took place during his visit to the United States, was released by his office yesterday.

China’s refusal to condemn Russia’s invasion of Ukraine, and its signing of a “no limits” friendship pact with Russia three weeks before the attack, has come under strong criticism from the West.

“America asks why China does not stand with it. You have to be very careful not to define the problem with Ukraine in such a way that automatically, China is already on the wrong side... by making this a battle of democracies against autocracies,” PM Lee said.

“If you say it is democracies versus Putin’s autocracy, I think that already is difficult. If you say democracies versus autocracies - plural - that already defines China into the wrong camp, and makes things even more difficult.”

The fact is that the war in Ukraine is something many countries do not support, PM Lee noted.

“We all have a problem in Ukraine. I think if we talk about sovereignty, independence and territorial integrity, a lot of countries can come along,” he added.

Singapore, for one, has stood up for the principles of sovereignty and territorial integrity every time the subject has come up in the United Nations, he said.

For a small country, it is an existential issue, PM Lee reiterated.

Outlining why Singapore imposed sanctions against Russia unilaterally, he said: “Mostly, we have not acted independently of the UN’s decisions, and we follow whatever sanctions or decisions that UNSC (UN Security Council) comes up with.

“But from time to time, the UNSC is paralysed, like here. And in this case, it is such a big and egregious violation of international norms that we decided we had to act on our own, UNSC or not.”

PM Lee also said that what has happened in Ukraine has implications for the way events develop in Asia, which could reshape the security architecture in the region.

He noted some “rash people” have talked about a North Atlantic Treaty Organisation-type situation developing in Asia.

But Asia is different, he said. “How do we handle it so that in Asia we have the right institutions in the long term, that we are able to develop mutual interest and interdependence across potentially hostile lines and prevent a fracture?”

Countries are calculating their own responses and what Ukraine means for them, in terms of who will come to their help, and what the prospects are of something hotting up, for example, on Taiwan.

“My own take is that Ukraine does not influence Taiwan’s prospects greatly, one way or the other; that has its own dynamics and historical frame,” he added.

Turning to Japan and South Korea, he noted that the topic of building their own nuclear capabilities has been broached.

Asked if nuclear proliferation might be a deterrent and a stabilising force, PM Lee said one could argue that, “but in real life, a lot of accidents can happen, and people are not necessarily rational, even on the most existential things”.

He said that as the number of nuclear players proliferates, there was no guarantee that they would all understand the nuances of mutual assured destruction - the doctrine based on the deterrent notion that a nuclear attack would be met with a counterattack that could annihilate both sides.

“So, I really do not think proliferation is a good idea, but it will be very hard to prevent. All you can hope to do is to slow it down.”

## NOTABLE COMMENTARY

### **24. The U.S. has a big stake in how the Ukraine war ends**

*It's likely to be paying a lot of the cost*

Los Angeles Times Online, Apr. 10 (0700) | Doyle McManus

Russia's invasion of Ukraine, now in its seventh week, shows no sign of abating. Vladimir Putin's army has abandoned its assault on Kyiv, Ukraine's capital, but is launching a new offensive in the country's east. Ukraine's allies, led by the United States and Britain, have stepped up their supplies of tanks and anti-aircraft weapons.

But every war must end some day, whether in a victory for one side or a split-the-difference cease-fire. In Washington and other Western capitals, debate has begun over what terms Ukraine and its allies should seek for ending this one — or what goals they should hold out for.

At first glance, the question might appear simple: Ukraine and its allies want Putin to end the invasion and withdraw his troops. But the details get complicated quickly.

Some U.S. and European hawks see the unexpected success of Ukraine's armed forces as a golden opportunity to cut Putin down to size and teach a lesson to other autocrats, beginning with China's Xi Jinping.

"The Western objective must be to leave Russia profoundly weakened and militarily crippled ... internally divided until the point that an aging autocrat falls from power," Eliot A. Cohen of Johns Hopkins University, a former official in the George W. Bush administration, wrote recently.

But doves worry about threatening Putin's survival in power to the point that he might consider using nuclear weapons. And some European leaders, led by French President Emmanuel Macron, have searched for a quick end to the war, if only to reduce the damage to their own economies.

In the middle, President Biden and his aides have settled on what sounds like an elegant solution: endorse whatever outcome is acceptable to Ukraine.

"Our job is to support the Ukrainians," Biden's national security advisor, Jake Sullivan, said last week. "They will set the military objectives. They will set the objectives at the bargaining table.... We are not going to define the outcome of this for the Ukrainians. That is up for them to define and us to support them."

The logic is straightforward: The Ukrainians are doing the fighting and suffering horrendous civilian casualties, so they've earned the right to decide what kind of settlement they're willing to accept.

“As long as the Ukrainians are saying they want to keep fighting, we can’t tell them no,” argued Steven Pifer, a former U.S. ambassador to Kyiv.

Ukraine’s president, Volodymyr Zelensky, offered Putin terms for a cease-fire last month and included several concessions: He asked for a Russian withdrawal to the lines each army occupied before the Feb. 24 invasion, which would leave several chunks of Ukrainian territory in Russian hands. He said Ukraine would accept neutral status and give up its effort to become a member of NATO. In return, he said, Ukraine would need ironclad security guarantees to prevent another invasion.

Putin’s aides dismissed the offer as inadequate.

That was before the discovery of widespread atrocities against civilians by Russian troops north of Kyiv, which may have hardened Ukraine’s resolve to keep fighting. Zelensky has said he would submit the terms of any cease-fire to a referendum.

In any case, deferring to the Ukrainians on terms for ending the war is more complicated than it sounds because the likely terms will require active participation by the United States and its allies.

Take Zelensky’s demand for security guarantees. He wants a reliable, binding pledge that if Russia invades again, the United States and its allies will step in with the kind of sanctions and military aid they are supplying now, or more.

“Whether Russia agrees to a settlement or not, Ukraine is going to need security guarantees,” Ivo H. Daalder, a former U.S. ambassador to the North Atlantic Treaty Organization, told me.

“There’s already an organization that does that, and it’s called NATO.... How is NATO going to say no to membership for Ukraine after all of this has happened?”

Another thorny issue will involve U.S. economic sanctions. In any talks over ending the war, Russia is certain to demand that sanctions be lifted. U.S. officials have said that sanctions relief will be up for discussion, but only after Russian troops are out of Ukraine.

“But that was before Bucha,” Daalder said. “The atrocities have made it much more difficult to contemplate lifting any sanctions.”

If a cease-fire takes hold, the United States will also be expected to play a leading role in helping Ukraine rebuild its armed forces, its economy and its shattered cities.

U.S. and allied support after the war will be just as important as it is now. Putin has invaded Ukraine three times since 2014; if his current offensive falls short, he can be expected to plan a fourth. One goal for U.S. policy should be to deter him from trying again.

The most damaging outcome for Putin would be a Ukraine that can regain its independence, defend its borders and show Russians that democracy can prosper in their part of the world. For anyone seeking to settle scores, that would be the best revenge.

## **25. The Pentagon Must ‘Campaign’ Against China, Not Hope for a Goal-Line Stand**

*To dissuade aggression, the U.S. military must continuously persuade its adversaries to doubt their chances of success*

DefenseOne.com, Apr. 10 (0600) | Bryan Clark and Dan Patt

During the lead-up to Russia’s invasion of Ukraine, the Biden administration released an unprecedented amount of classified intelligence regarding Russian plans, even revealing insider knowledge of Vladimir Putin’s intentions. This attempt at deterrence by detection failed; Putin invaded anyway. But the quality of allied intelligence-gathering and the new National Defense Strategy point toward a potentially better way to dissuade adversaries, through what the Pentagon calls “campaigning.”

Most discussion of the new NDS centers on its approach of Integrated Deterrence, in which all instruments of national power are orchestrated to prevent aggression. But the mixed results, at best, from the West’s combination of sanctions, intelligence revelations, and diplomacy suggests that capable, nuclear-armed adversaries like Russia and, more importantly, China may not be stopped by Integrated Deterrence’s threats of last-minute denial or punishment.

The new defense strategy’s inclusion of campaigning as one of its three main lines of effort provides a way for the Pentagon to break from simply trying to deny or punish aggression. Drawn from Marine Corps doctrine, campaigning refers to the orchestration of military activities alongside economic, diplomatic, and information actions to achieve specific goals. Through campaigning, U.S. forces would attempt to undermine adversary attempts at coercion, complicate enemy planning, and develop U.S. warfighting capabilities.

Campaigning may seem like another word for what the U.S. military does every day but is intended to convey a deliberate and methodical approach to cause specific results in a particular context, rather than generally support U.S. allies or deter opponents.

Russia demonstrated a form of campaigning during the lead-up to its invasion of Ukraine and in the months thereafter. In combination with building up foreign exchange reserves to insulate the country from sanctions, Russian leaders threatened cyber attacks, energy warfare, and nuclear escalation to suppress Western retaliation.

Partly in response, U.S. leaders foreswore putting boots in the ground or conducting large cyber operations to protect Ukraine.

Another relevant example is the Cold War, when strategists devised a plan to undermine Soviet leaders' confidence in their plans and capabilities. Rather than relying solely on forces in the Fulda Gap to stop a Warsaw Pact invasion, U.S. and allied militaries developed new capabilities like the Tomahawk missile to threaten the Soviet periphery, sent submarines to the Barents Sea to hold Soviet nuclear missile subs at risk, pursued "Star Wars" missile defenses, and fielded stealth fighters and precision-guided weapons to imperil Soviet reinforcements.

Many of these new technologies did not reach the field before the Cold War ended, and some—like Star Wars—never achieved their ambitions. But the combination of concepts and capability development with persistent U.S. and allied forward operations arguably kept leaders in Moscow off-balance and less likely to initiate aggression.

China is in most ways a more formidable opponent than the Cold War Soviet Union or today's Russia. If threats of denial or punishment did not stop Putin from invading Ukraine, they are even less likely to deter leaders in Beijing from attacking Taiwan. Instead, the United States and its allies will need to pursue a long-term effort at dissuasion, or an effort to reduce the likelihood of an adversary taking an undesirable action.

Campaigning could operationalize dissuasion by creating a feedback loop between U.S. or allied actions and Chinese decision-making. U.S. military posture changes, experiments or demonstrations, exercises, and new tactics and concepts should sway Chinese leaders' assessments of how easily the People's Liberation Army could defeat China's neighbors and at what cost. A well-orchestrated series of U.S. and allied actions could convince officials in Beijing to defer hostilities until they are more confident of success on acceptable terms.

If the U.S. intelligence community's insight into China's internal decision-making is on par with what it demonstrated with Russia, Pentagon planners could use Chinese assessments of U.S. actions to develop and refine a dissuasion campaign over months or years. And if U.S. intelligence lacks the level of penetration it has in Russia, leaders could still rely on observable responses to build a model of Chinese decision-making that would help shape the campaign.

However, analysis is only half the battle. Whether it depends on direct intelligence, models, or both, campaigning requires sustained action to generate surprise and create measurable responses. Persistent engagement has paid off in cyberspace for U.S. Cyber Command and in the media for Ukrainian president Volodymyr Zelensky. The Pentagon could apply persistent engagement across other domains in a campaign against China if U.S. leaders are willing to accept a modest risk of escalation.

U.S. Indo-Pacific Command leaders are concerned China could attempt to forcibly reunite with Taiwan during this decade. Moreover, the failure of deterrence against Russia shows threats of denial or punishment may not be credible against peer militaries fighting in their own back yards. The U.S. military should quickly launch a new

approach toward preventing hostilities against allies and partners. With its emphasis on campaigning, the new defense strategy offers a path to dissuading China rather than waiting to mount a goal-line stand that is unlikely to succeed.

During the lead-up to Russia's invasion of Ukraine, the Biden administration released an unprecedented amount of classified intelligence regarding Russian plans, even revealing insider knowledge of Vladimir Putin's intentions. This attempt at deterrence by detection failed; Putin invaded anyway. But the quality of allied intelligence-gathering and the new National Defense Strategy point toward a potentially better way to dissuade adversaries through what the Pentagon calls "campaigning."

Most discussion of the new NDS centers on its approach of Integrated Deterrence, in which all instruments of national power are orchestrated to prevent aggression. But the mixed results, at best, from the West's combination of sanctions, intelligence revelations, and diplomacy suggests that capable, nuclear-armed adversaries like Russia and, more importantly, China may not be stopped by Integrated Deterrence's threats of last-minute denial or punishment.

The new defense strategy's inclusion of campaigning as one of its three main lines of effort provides a way for the Pentagon to break from simply trying to deny or punish aggression. Drawn from Marine Corps doctrine, campaigning refers to the orchestration of military activities alongside economic, diplomatic, and information actions to achieve specific goals. Through campaigning, U.S. forces would attempt to undermine adversary attempts at coercion, complicate enemy planning, and develop U.S. warfighting capabilities.

## **26. The great mismatch in America's courtship of South-east Asia**

*There is a fundamental mismatch in what the US and Asean want most from each other, and that gap should concern Washington as it gives rival Beijing the opportunity to gloat and court Asean*

Straits Times (Singapore) (Power Play), Apr. 11 (N/A), Pg. A17 | Charissa Yong

Compared with how long the special summit between the US and Asean is taking to be arranged, America's security cooperation with the Quad alliance appears to be moving at the speed of light.

The leaders of Quad, or the Quadrilateral Security Dialogue comprising the United States, Australia, India and Japan, have held multiple virtual meetings since President Joe Biden took office in January last year, and held their first in-person summit in Washington back in September.

In contrast, the in-person summit of Asean, or the Association of South-east Asian Nations, and Mr Biden has been almost 1½ years in the making - and has yet to come to pass.

A meeting planned for end-March was scuppered by scheduling problems. Both sides are still trying to fix a date this spring, but have not agreed on one yet.

The stalled summit is a concern because such meetings are usually an opportune avenue for the US to signal its commitment to the region. They also tend to jump-start deeper cooperation, as the venue where significant announcements are made.

Dr Kurt Campbell of the White House's National Security Council hinted that the US-Asean Special Summit would serve such a purpose.

"I'm confident that once we are able to put this in play, this will help essentially project the future of our relationship with Asean very much in a forward direction," he said at a Centre for Strategic and International Studies (CSIS) virtual conference last Tuesday.

At the same conference, US Deputy Secretary of Commerce Pamela Phan called the summit "a key piece to advancing that relationship".

She added that the Biden administration was considering the summit as a potential venue to launch its Indo-Pacific Economic Framework (IPEF), the long-awaited outline for America's economic strategy in the region.

On the same day, the US announced it would work with Australia and the United Kingdom on hypersonic missiles under the Aukus security pact - a concrete outcome in stark contrast to the ifs-and-maybes with Asean.

The contrast highlights how US-Asean engagement lags behind where both sides want it to be right now.

That gap should concern the US because it gives China, its rival for influence in the region, room to gloat and court Asean.

The Chinese state media Global Times last month called the summit scheduling episode a reflection of America's "bossy style" and an example of how "Asean has been put behind other agendas by the US many times".

The newspaper wrote: "Even if the US-Asean summit is held later this year, doubts remain whether it can really help promote the relationship between the US and Asean.

The US will only focus on topics of its own interests, not care about Asean's demands and concerns at all."

The gap should also concern Asean, given its unease of being sidelined by the Quad as a central component of the region's security architecture, even though the two groupings are very different in nature.

"We can talk as much as we like about how the Quad respects Asean centrality. But if you think about what's happened in the last five years across Democratic and Republican administrations here in the US, where has the US put most of its effort? It's into things like the Quad and Aukus," said American Enterprise Institute senior fellow Zack Cooper.

The US should be aware of this mismatch between rhetoric and reality, and back its words of Asean centrality with deeds.

The most important thing to watch for in the near future will be the IPEF, and how much it matches the region's desire for economic engagement.

#### WHY IS ENGAGEMENT SLOWER?

Logistical difficulties and bad timing can be partially blamed for why US-Asean engagement is slower than desired.

Asean is a much bigger bloc of 10 nations compared with the Quad's four, and it is wildly diverse with very different political systems and economies, making reaching an agreement sometimes akin to herding cats.

The war in Ukraine has undoubtedly also thrown a wrench in plans and US availability - even the Quad leaders' meeting in Japan, originally proposed for late this month, has reportedly been postponed to next month.

But there is a deeper reason - a fundamental mismatch in what the US and Asean want most from each other.

At the top of Asean's wish list, broadly, is more market access and trade liberalisation. But that is politically difficult for Washington to grant, and the Biden administration has signalled it is unlikely to do so.

The US is poised to launch its IPEF, which will promote fair and resilient trade, supply chain resilience, infrastructure, clean energy, and decarbonisation, among others.

Mr Biden first announced America's plans for the IPEF in October last year, at the East Asia Summit, and the White House later said it would be released early this year.

So far, no details have been released of which countries might be included in the framework. But last month, the Commerce Department and Office of the US Trade Representative called for public comments on what the IPEF should entail.

They stopped accepting comments today, and could launch the IPEF "in the next month or so", the Commerce Department's Ms Phan said at the CSIS conference last week.

But it will also fall short of a traditional free trade agreement, given the Biden administration's reluctance to enter into new trade deals and offer increased market access.

Republican Senator and free trade advocate John Cornyn said that the IPEF is being viewed in Congress as a "weak substitute for the real thing".

"This is sort of being offered up as an alternative. But it's not what I would hope for in terms of getting new trade agreements," Mr Cornyn, who represents Texas, said at the CSIS conference.

Senators at a hearing on March 31 also criticised the IPEF's lack of market access, saying it missed the mark on what governments in the Indo-Pacific want.

Democratic Senator Bob Menendez of New Jersey said that ambassadors of countries that may join the IPEF have told him it is "not sufficiently ambitious."

Republican Senator Mike Crapo of Idaho said: "We've got nations in the Indo-Pacific who are crying out for free trade negotiations with us so that they can strengthen their relationship to us economically, rather than being tied to China."

Hudson Institute Japan Chair deputy director Riley Walters wrote that the framework asked governments in the region to impose a higher standard of rules and regulations, without giving them incentive to do so.

"It's like asking for a trade deal with all the enforcement and no market access. It's all stick and no carrot," he wrote in a commentary in The Hill political website last Friday.

In the realm of security, the opposite dynamic is true - the US wants more security cooperation to counter China, which Asean overall is less interested in providing.

Instead, the US is more on the same page with the other members of the Quad and Aukus, speeding up cooperation there, experts note.

“If you ask Quad leaders what the Quad is about, they’ll often say, ‘Well, this really isn’t about balancing against China. It’s about all these other public goods’,” said Dr Cooper at the CSIS conference.

“But at the base level, what do India, the US, Australia and Japan have in common that other countries don’t? We’re willing to balance against China.”

He added: “At its core, what the four Quad countries have most in common is a willingness to actually carry out some tough balancing efforts on the security side.

That’s why it’s a little bit tricky sometimes to deal with Asean, which is basically not willing to carry out a lot of those tough balancing efforts.”

This highlights a tension within US engagement in the region between depth - doing more with fewer countries, or less with more countries, Dr Cooper said.

“It’s a tension between going for more depth in the coalitions we’re trying to build in Asia, working with the countries that are willing to do the most the fastest... or do we try and broaden out that group of countries that we’re working so closely with? And I think what we’ve seen is that actually broadening is really hard,” he said.

But America can and should do a lot more with Asean, Dr Cooper added.

“At the end of the day, if you think in the long term about the countries that the US can do a lot more with... I think a lot of those countries are in South-east Asia.”

## IMPLICATIONS

Meanwhile, China’s economic dominance in the region is growing, something that should worry Washington if its slow pace of engagement with Asean continues.

China’s bilateral trade with South-east Asia grew 6.7 per cent to hit US\$685 billion (S\$934 billion) in 2020, almost double the US and Asean’s trade of US\$362 billion that year.

China has also heavily invested in the region, and has applied to join the Regional Comprehensive Economic Partnership trade agreement.

America will fall further behind if it does not invest more in building its economic ties in the region, in addition to its security links there.

“I still believe it’s very important for us to continue to build those ties in the region, not just from a security standpoint, but from an economic standpoint, as well,” said Mr Cornyn at the CSIS conference.

“To me, that’s the best way to check China’s march towards consolidating their power, both economic and military, in the region.”

That said, there are other areas of cooperation with Asean that the US is doing well in, beyond its security and economic ties.

The US has a particular edge in soft power, as the Asia Society Policy Institute’s Elina Noor, the deputy director of its Washington DC office, pointed out during the CSIS conference.

The Young Southeast Asian Leaders Initiative, a US-sponsored cultural exchange programme, “remains highly, highly popular” among South-east Asian youth, and the US is also involved in a variety of causes that the region’s younger generation is passionate about, such as climate change, she added.

Nonetheless, its economic engagement is still lacking, and the US stepping up on that front is one way it can reassure Asean that it is not just paying lip service to Asean centrality, but also genuinely interested in deepening its commitment to the region.

In contrast, if the US under-investment in Asean continues, both sides will be poorer for it.

## **27. U.S. Should Show India It’s Better Partner Than Putin**

Bloomberg Opinion, Apr. 10 (2200) | Editorial

India has surprised and disappointed many of its fellow democracies by refusing to directly condemn Russia’s invasion of Ukraine. Some U.S. officials have even let their frustrations spill out in public. Although understandable, such criticisms are mostly unproductive. The U.S. and its allies should instead concentrate on showing India that the country’s interests are better served through partnership with the West, not Vladimir Putin.

Russia and China seem to see India’s loyalty as up for grabs. Chinese Foreign Minister Wang Yi recently dropped by New Delhi unannounced to discuss a border dispute. His Russian counterpart Sergei Lavrov followed within days. According to Bloomberg News, Russia is offering to sell crude oil to India at a steep discount and to set up a rupees-for-rubles payment system to avoid restrictions on Russian banks.

Allied officials are right to want to push back on this apparent charm offensive. Allowing India to undermine sanctions would send the wrong signal to the many other countries who haven't yet joined Western efforts to isolate Russia. Having the world's biggest democracy soft-pedal the blatant violation of Ukraine's sovereignty also undercuts the effort to defend vital rules of global conduct. But overtly pressuring India to pick sides would be unwise on two levels.

For one, it would draw charges of hypocrisy. Indian leaders rightly bristle at criticism for buying Russian oil when European countries haven't ceased their own purchases. Second and more important, taking umbrage at India's fence-sitting isn't practical. An estimated 85% of India's major weapons systems rely on Russian equipment. India flies more than 250 Russian-made fighter jets, fields more than 1,200 Russian tanks, and sails seven Kilo-class submarines. With another \$10 billion worth of weapons systems in the pipeline, the country will depend on Russian parts and maintenance for years.

India's long-standing ties with Russia can't be severed overnight. Nor can the U.S. realistically expect India to abandon the strategic autonomy its foreign-policy elite has jealously guarded since independence.

For now, the Biden administration should focus on what it can fix. The first step is to accelerate efforts to help India diversify its weapons purchases. India's dependence on Russia has been compounded by the U.S.'s struggle to offer affordable alternatives: the missile-defense systems the U.S. proposed selling to India, for instance, cost nearly three times as much as the sophisticated Russian S-400 batteries the Indian military ultimately purchased. Even so, the situation is improving. Indian imports of Russian arms fell nearly 50% between 2017 and 2021, while defense trade with the U.S. grew from nearly zero in 2008 to more than \$20 billion in 2020. At talks this week, the U.S. should propose more concrete ways to increase cooperation, including by finding ways to share technology and set up co-production facilities to reduce costs. In the meantime, the administration should issue a waiver for India's S-400 purchase, which would otherwise be subject to sanctions.

Over the longer term, the U.S. and its partners in Europe and Asia must show India that they can address its interests far better than Russia can. However the war in Ukraine ends, the Russian economy and arms industry will struggle for years. Putin's Russia will be unstable, isolated and increasingly dependent on China. By contrast, the European Union and India's partners in the Quadrilateral Security Dialogue, which includes the U.S., Japan and Australia, have the technology, finance and markets India needs not just to modernize its military but to develop its economy: Their total trade with India is nearly 20 times bigger than Russia's. The U.S. should be willing to discuss concessions to expand trade even further.

Indian leaders shouldn't require so much convincing, of course. Russia's despicable invasion of a peaceful neighbor should've crystallized for them the difference between the two sides in this dispute. Few countries have benefited more from the peace, stability and open markets that the West has enabled. The world's democracies should remind India where its true interests lie — and that global leadership carries responsibilities.

*--Editors: Nisid Hajari, Timothy Lavin*

## **28. Don't allow Navy to sidestep orders**

Honolulu Star-Advertiser, Apr. 10 (N/A), Pg. E2 | Editorial

Very little about the Red Hill saga has been straightforward, so it's only logical for Oahu residents to be skeptical about the Navy's dismissal of a captain in charge.

Few could take that action at face value, especially not after the last several months of a water contamination crisis that forced the displacement of many families. At issue is the disposition of an aging fuel-storage facility that has put the nearby public water aquifer at risk for years, so attention to this controversy is intense.

Following a relatively small spill at the Red Hill underground fuel facility several days prior, the Navy on Monday announced that Capt. Albert Lee Hornyak, the commanding officer of NAVSUP Fleet Logistics Center, had been fired. The official reason was described as "a series of leadership and oversight failures" with the spill specifically cited.

But the public was already made wary by previous mammoth spills, most notably a leak of 27,000 gallons eight years ago, and then the water-contamination crisis linked to spills in May and November of last year.

People now also know that in October, Hornyak had been the one to raise concerns about operator error being the cause of the May fuel spill. This finding had followed an investigation by the Navy and came to light only because the contents of the email were leaked — not because the Navy has been forthcoming with this information.

It's clear that disclosure with details about everything that's happened — and will happen, going forward — will have to be driven by local officials, those elected to key offices as well as the state Department of Health (DOH). Even the extent of the most recent spill this month, initially described as a 30-gallon mix of fuel and water, remains murky: a Pacific Fleet official told state lawmakers in a separate email that the spill amounted to 50 gallons. Which was it?

The public should get an accounting of even this small detail and should not be satisfied simply by personnel being relieved of duties. Given that Hornyak had been ringing alarm bells, that dismissal silenced him and, if anything, that adds further to the unease and public suspicions.

The Department of Defense already has decided to defuel the facility, and the manner in which that's done needs to comply with a DOH emergency order, issued Dec. 6.

That state agency already is on record asserting its oversight authority. Most recently, on Friday, it issued a joint release with the state Commission on Water Resource Management, part of the Department of Land and Natural Resources, indicating approval of the Navy's plan to install eight additional monitoring wells at Red Hill.

Things aren't moving along so swimmingly on other aspects of naval compliance, however. Last month, the Health Department announced that the Navy's hiring of a contractor to assess the Red Hill facility for safely defueling the tanks did not align with the DOH emergency order.

That contractor, Simpson Gumpertz & Heger Inc., was hired Jan. 11, with state health officials saying they were notified only hours before the Navy executed the contract. The department said it was concerned the work wouldn't be done independently.

The reason: Surely it was the same lack of trust that local authorities have felt for some time, starting with the halting way information came to light about the water contamination late last year.

The Health Department, along with the federal Environmental Protection Agency, had partnered with the Navy under a memorandum of agreement stemming from the 2014 spill, aimed at finding the best way to safeguard the aquifer.

But that accord soon weakened as the story about the fuel contaminants, largely detected in wells serving military residential areas, played out. An investigation into the incident was conducted, but the full report delivered to military brass in December was never released.

Even if a more comprehensive study is underway, the public still deserves to see the facts that this command report contained.

After the November water contamination, the Navy halted Red Hill operations — and later, pressed by a concerned public, local officials and Hawaii's congressional delegation, the DOD ultimately agreed the fuel needs to be taken out. U.S. Rep. Mazie Hirono on Thursday pressed Defense Secretary Lloyd Austin to restate his commitment to funding the process of defueling the tanks.

It is critical to get the secretary on the record about this. Having the top brass attuned to the situation will provide leverage to keep the Navy on task.

But this must be a sustained effort on the local front, with all hands on deck, to borrow a fitting naval expression. Gov. David Ige is on board, last week telling Hawaii News Now he could issue an emergency order to speed the development of additional wells, underscoring the ongoing worry about the security of Oahu's water supply.

This pointed messaging must continue. State, county and congressional leaders, as well as the public, have to keep up the pressure on the Navy to work with transparency, and to move without delay toward a permanent solution.

## SUMMARY

Following his in-person meeting with Russian President Vladimir Putin, Austrian Chancellor Karl Nehammer told a news conference near Moscow on Monday that he felt not only pessimistic about peace prospects in Ukraine but fearful that Russia intended to drastically intensify the brutality of the war, according to the New York Times. On Tuesday, President Putin warned the West that attempts to isolate his country would fail and said that Russia's military operation in Ukraine would achieve what he said were its "noble" objectives, Reuters reported. Also of note, the New York Times spotlighted a new report published by the Nuclear Weapons Ban Monitor, which claimed that the global number of nuclear-armed warheads is on the rise.

## TWEETS

"U.S. aircraft carrier deploys off Korean peninsula amid tensions with North official," according to a tweet from Reuters. Separately, "Ukraine says checking unverified information that Russia used chemical weapons in Mariupol," Reuters tweeted on Tuesday. And Sen. Jack Reed (D-RI) wrote: "America's submarine fleet is critical to our national security and one of the strongest deterrents in the U.S. military arsenal. I am grateful to [the Southeastern New England Defense Industry Alliance] for continuing to bolster RI's submarine manufacturing workforce."

## TOP STORIES

1. A Talk With Putin Deepens the Fear of Worse Attacks  
New York Times, Apr. 12, Pg. A1 | Steven Erlanger and Anton Troianovski

Austria's chancellor visited President Vladimir V. Putin of Russia on Monday -- the first Western leader to see him in person since the Ukraine invasion -- and said he came away feeling not only pessimistic about peace prospects but fearing that Mr. Putin intended to drastically intensify the brutality of the war. Describing Mr. Putin as dismissive of atrocities in Ukraine, the visiting chancellor, Karl Nehammer, said it was clear that Russian forces were mobilizing for a large-scale assault in eastern Ukraine's Donbas region, the next phase of a war now in its seventh week.

2. Putin warns the West: Russia cannot be isolated - or held back  
Reuters, Apr. 12 Not Attributed

President Vladimir Putin warned the West on Tuesday that attempts to isolate Moscow would fail, citing the success of the Soviet space programme as evidence that Russia could achieve spectacular leaps forward in tough conditions. Russia says it will never again depend on the West after the United States and its allies imposed crippling sanctions on it to punish Putin for his Feb. 24 order for what he called a "special military operation" in Ukraine.

3. A Rising Tally Of Warheads In Arsenals  
New York Times, Apr. 12, Pg. A10 | Rick Gladstone

The global number of nuclear-armed warheads is increasing, according to a watchdog report released Monday that

comes against the backdrop of the Kremlin's veiled threats to use some of its vast stockpile if the war in Ukraine escalates.

## RUSSIA

4. Russia Unleashes New Attacks Overnight on Ukraine's Eastern Region  
Wall Street Journal Online, Apr. 12 | Thomas Grove and Brett Forrest

Russian forces fired on Ukrainian positions and residential areas in the country's east overnight and unleashed new rocket attacks, while fortifying positions there with new deployments of air-defense systems, Ukrainian officials said Tuesday.

5. Russia starting to reinforce positions in eastern Ukraine | U.S. official  
Reuters, Apr. 12 | Idrees Ali and Christopher Gallagher

The United States believes that Russia has started reinforcing and resupplying its troops in Donbas in eastern Ukraine, a senior U.S. defense official said on Monday.

6. Ukraine Calls for More Aid Ahead of Battles in the East  
Wall Street Journal, Apr. 12, Pg. A1 | Matthew Dalton, Yaroslav Trofimov and Mauro Orru

President Volodymyr Zelensky of Ukraine launched a fresh appeal for military aid as the country prepared for some of the heaviest fighting so far in the conflict, while France sent a police unit from its armed forces to Ukraine to investigate possible war crimes, the first disclosed deployment of military personnel from a NATO country in Ukraine.

7. Ukraine says checking unverified information that Russia used chemical weapons in Mariupol  
Reuters, Apr. 12 | Pavel Polityuk and Guy Faulconbridge

Ukraine is checking unverified information that Russia may have used chemical weapons while besieging the southern Ukrainian port city of Mariupol, Ukraine's Deputy Defence Minister Hanna Malyar said on Tuesday. "There is a theory that these could be phosphorous munitions," Malyar said in televised comments, adding: "Official information will come later." Russia's defence ministry did not immediately respond to a request for comment.

8. Russian General Tapped to Lead Invasion  
Wall Street Journal, Apr. 12, Pg. A6 | Evan Gershkovich and Jared Malsin

Russian Army Gen. Aleksandr Dvornikov, the man chosen to lead the next phase of Moscow's war in Ukraine, wrote in a military newspaper in 2018 that in modern warfare, "the main task is not the physical destruction of the enemy, but the complete subordination of him to one's will."

9. U.S. Weighs Future Ties to Kremlin  
Wall Street Journal, Apr. 12, Pg. A6 | Sabrina Siddiqui and William Mauldin

In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

## EUROPE

10. Two US B-52H nuclear bombers take off in West Country  
Bristol Post Online (UK), Apr. 11 | Louisa Streeting

Two nuclear bombers have taken off from the West Country today (April 11) both with outbound journeys towards France.

## CHINA

11. Panel: Beijing Closely Tracking Global Reaction to Ukraine Invasion  
U.S. Naval Institute News, Apr. 11 | John Grady

China's Xi Jinping is closely monitoring what is happening to Russian President Vladimir Putin's reputation following the invasion of Ukraine, retired Marine Corps Gen. James Jones said Monday. Xi is looking at how the world views Putin as a gauge of global reaction he might face should Xi move against Taiwan, Jones argued.

12. China launches three space missions, debuts new rocket configuration  
SpaceflightNow.com, Apr. 11 | Stephen Clark

China launched three more space missions in recent weeks, debuting the country's first rocket to be fitted with strap-on solid-fueled boosters and deploying satellites to image planet Earth and calibrate orbit prediction models, according to Chinese state media.

## KOREAN PENINSULA

13. USS Abraham Lincoln in East Sea in apparent show of force  
Yonhap News Agency (South Korea), Apr. 12 | Not Attributed

A U.S. nuclear-powered aircraft carrier has entered the international waters of the East Sea, informed sources said Tuesday, in an apparent show of America's military might amid concerns over possible North Korean provocations.

14. South Korea, U.S. begin preparatory drills ahead of major combined training  
Yonhap News Agency (South Korea), Apr. 12 | Not Attributed

South Korea and the United States kicked off preliminary military drills on Tuesday ahead of their major springtime combined training later this month, Seoul officials said.

15. U.S. envoy for North Korea to visit Seoul next week  
Yonhap News Agency (South Korea), Apr. 12 | Not Attributed

U.S. Special Representative for North Korea Sung Kim will visit South Korea next week to coordinate policy ahead of the launch of the new administration of President-elect Yoon Suk-yeol, sources said Tuesday.

16. Chinese ambassador warns against a second THAAD battery in South Korea  
Stars and Stripes Online, Apr. 11 | David Choi

South Korea will hazard its improving relationship with China if it deploys a second American-made missile defense battery, China's ambassador in Seoul implied Thursday. The Terminal High Altitude Area Defense system, or THAAD, is a sensitive topic in relations between the two countries, and South Korea "should not be treading in that step again," Chinese Ambassador to South Korea Xing Haiming said in a speech Thursday at the Millennium Hilton Seoul hotel, according to news reports the next day.

## INDO-PACIFIC

17. With Threats All Around, Japan Moves to Shed Its Pacifist Constraints  
New York Times, Apr. 12, Pg. A9 | Motoko Rich

Late in February, just days after the Russian invasion, Ukraine asked Japan to ship an assortment of military equipment, from antitank weapons and ammunition to electronic radar and bulletproof vests. It seemed an all but futile request. Japan, which has forsworn combat since the end of World War II, had not sent military matériel to another country in the midst of fighting a war in more than 75 years. But within a week, the Japanese government had modified its rules governing military exports. And in early March, the country's Self-Defense Forces loaded up a Boeing KC-767 tanker aircraft with bulletproof vests and helmets, bound for the battlefields of Ukraine.

18. LDP to propose enemy base strike capability as part of Japan security review  
Kyodo News Online (Japan), Apr. 12 Not Attributed

A Liberal Democratic Party national security panel has agreed to propose acquiring a so-called enemy base strike capabilities ahead of a planned revision to its National Security Strategy this year — a dramatic shift in the country's exclusively defense-oriented policy under the pacifist Constitution.

## IRAN

19. Defense Minister Gantz: Regional alliance needed against Iran  
Jerusalem Post Online (Israel), Apr. 12 Anna Ahronheim

Defense Minister Benny Gantz called for a regional alliance and an expansion of intelligence cooperation in order to make up for a lack of inspections on Iran's nuclear project. Speaking at a Washington Institute Policy Forum, Gantz said that Iran is continuing its uranium enrichment and is close to 90% enrichment that is suitable for nuclear weapons "once they decide to reach it."

20. Politics, not substance, seen guiding U.S. and Iran on terror listing  
Reuters (Analysis), Apr. 11 Arshad Mohammed and Parisa Hafezi

One of the last obstacles to reviving the 2015 Iran nuclear deal - Tehran's demand to remove its Revolutionary Guards from a U.S. terrorism list - is more an issue of politics than substance, analysts said.

## NUCLEAR WEAPONS

21. 'Battlefield nukes' in Ukraine? A low but complex threat.  
Christian Science Monitor Online, Apr. 11 Anna Mulrine Grobe

In her experience running war games for the U.S. military, Stacie Pettyjohn found that whenever scenarios involved nuclear weapons, participants tended to be flummoxed. "Normally folks playing the U.S. side are at a loss as to what to do," she says. It was not uncommon for teams to unnecessarily escalate hostilities and stumble into the nightmare of nuclear war. "It's one of those things that's terrifying," she said.

## NUCLEAR ENTERPRISE

22. Dr. Marvin L. Adams sworn in as Deputy Administrator for NNSA's Office of Defense Programs  
National Nuclear Security Administration, Apr. 11 | Press Release

Dr. Marvin L. Adams was sworn in today as the Deputy Administrator for Defense Programs of the Department of Energy's National Nuclear Security Administration.

## AIR FORCE

23. Why Missouri has a target on its back for cyberattacks  
KTVI FOX 2 News (St. Louis, MO), Apr. 11 | Emily Manley

Could Missouri's electric power grid be at risk of a cyberattack? It's not commonly discussed inside the Missouri Capitol, but an expert from Washington D.C. is warning lawmakers about the protection the state needs. Dr. Peter Pry is the executive director of the Task Force on National and Homeland Security. He told members of the House Special Committee on Government Accountability that because of Whiteman Air Force Base near Sedalia, Missouri has a target on its back.

## ARMY

24. Units train for nuclear forensics mission during Exercise Prominent Hunt in Delaware

20th CBRNE Command, Apr. 11 | Walter Ham

Highly specialized American Army units from the U.S. Department of Defense's premier all hazards command trained for interagency nuclear forensics missions during Exercise Prominent Hunt at Bethany Beach, Delaware, April 4-7.

#### COMMENTARY

25. Time to relearn nuclear escalation management for the 21st century  
BreakingDefense.com, Apr. 11 | Robbin Laird

No pure conventional warfighting doctrine against 21st century authoritarian powers will work when those powers have the threat of nuclear fire in their pocket. That was always true, but the Ukraine situation has laid it bare and this should have a profound impact on US and allied thinking about dealing with those powers going forward.

26. Biden's Nuclear Strike Policy Is the Same as Russia's  
TheIntercept.com, Apr. 11 | Sara Sirota

During his campaign for president, Joe Biden penned an article in Foreign Affairs titled "Why America Must Lead Again." In it, he laid out his thoughts on the most dangerous arms in the U.S. stockpile. "I believe that the sole purpose of the U.S. nuclear arsenal should be deterring—and, if necessary, retaliating against—a nuclear attack," the then-candidate wrote. "As president, I will work to put that belief into practice, in consultation with the U.S. military and U.S. allies."

27. The space weapons race is here  
Washington Times Online, Apr. 11 | Brandon J. Weichert

Americans rarely think about space as a real place where humans and their important equipment go to work. They don't usually think of it as a place that is not only home to the vital satellites that allow for our advanced society to exist but a zone of strategic competition between the great powers of Earth. As the ultimate strategic high ground in modern warfare, space provides unprecedented military advantages for the nation that dominates this zone.

28. A clear U.S. defense of Taiwan  
Los Angeles Times, Apr. 12, Pg. A11 | Shinzo Abe

Russia's invasion of Ukraine has reminded many people of the fraught relationship between China and Taiwan. But while there are three similarities between the situation in Ukraine and Taiwan, there are also significant differences. The first similarity is that there is a very large military power gap between Taiwan and China, just as there was between Ukraine and Russia. Moreover, that gap is growing larger every year.

#### STATE-RUN MEDIA

29. US claims of China's nukes 'excuse for own expansion'  
Global Times (China), Apr. 12, Pg. 3 | Liu Xuanzun and Guo Yuandan

US military leaders, politicians and media have been repeatedly hyping the so-called China nuclear arsenal expansion, highlighted recently again by a report by the Wall Street Journal, and these speculations are an excuse for the US to expand its own nuclear arsenal and push the "China threat" theory, Chinese experts said on Monday.

30. Russian army uses Kinzhal hypersonic system to destroy Ukrainian command station in Donetsk region –  
Defense Ministry  
Interfax (Russia), Apr. 11 | Not Attributed

The Russian Armed Forces used a hypersonic weapon - a Kinzhal airborne missile system - to destroy the Ukrainian army's command and control station in Donbas.

Ukraine is checking unverified information that Russia may have used chemical weapons while besieging the southern Ukrainian port city of Mariupol, Ukraine's Deputy Defence Minister Hanna Malyar said on Tuesday. "There is a theory that these could be phosphorous munitions," Malyar said in televised comments, adding: "Official information will come later." Russia's defence ministry did not immediately respond to a request for comment.

**8. Russian General Tapped to Lead Invasion**

*Wall Street Journal, Apr. 12, Pg. A6 | Evan Gershkovich and Jared Malsin*

Russian Army Gen. Aleksandr Dvornikov, the man chosen to lead the next phase of Moscow's war in Ukraine, wrote in a military newspaper in 2018 that in modern warfare, "the main task is not the physical destruction of the enemy, but the complete subordination of him to one's will."

**9. U.S. Weighs Future Ties to Kremlin**

*Wall Street Journal, Apr. 12, Pg. A6 | Sabrina Siddiqui and William Mauldin*

In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

### **17. With Threats All Around, Japan Moves to Shed Its Pacifist Constraints**

*New York Times, Apr. 12, Pg. A9 | Motoko Rich*

Late in February, just days after the Russian invasion, Ukraine asked Japan to ship an assortment of military equipment, from antitank weapons and ammunition to electronic radar and bulletproof vests. It seemed an all but futile request. Japan, which has forsworn combat since the end of World War II, had not sent military matériel to another country in the midst of fighting a war in more than 75 years. But within a week, the Japanese government had modified its rules governing military exports. And in early March, the country's Self-Defense Forces loaded up a Boeing KC-767 tanker aircraft with bulletproof vests and helmets, bound for the battlefields of Ukraine.

## COMMENTARY

### **25. Time to relearn nuclear escalation management for the 21st century**

*BreakingDefense.com, Apr. 11 | Robbin Laird*

No pure conventional warfighting doctrine against 21st century authoritarian powers will work when those powers have the threat of nuclear fire in their pocket. That was always true, but the Ukraine situation has laid it bare — and this should have a profound impact on US and allied thinking about dealing with those powers going forward.

### **26. Biden's Nuclear Strike Policy Is the Same as Russia's**

*TheIntercept.com, Apr. 11 | Sara Sirota*

During his campaign for president, Joe Biden penned an article in Foreign Affairs titled "Why America Must Lead Again." In it, he laid out his thoughts on the most dangerous arms in the U.S. stockpile. "I believe that the sole purpose of the U.S. nuclear arsenal should be deterring—and, if necessary, retaliating against—a nuclear attack," the then-candidate wrote. "As president, I will work to put that belief into practice, in consultation with the U.S. military and U.S. allies."

### **27. The space weapons race is here**

*Washington Times Online, Apr. 11 | Brandon J. Weichert*

Americans rarely think about space as a real place where humans and their important equipment go to work. They don't usually think of it as a place that is not only home to the vital satellites that allow for our advanced society to exist but a zone of strategic competition between the great powers of Earth. As the ultimate strategic high ground in modern warfare, space provides unprecedented military advantages for the nation that dominates this zone.

### **28. A clear U.S. defense of Taiwan**

*Los Angeles Times, Apr. 12, Pg. A11 | Shinzo Abe*

Russia's invasion of Ukraine has reminded many people of the fraught relationship between China and Taiwan. But while there are three similarities between the situation in Ukraine and Taiwan, there are also significant differences. The first similarity is that there is a very large military power gap between Taiwan and China, just as there was between Ukraine and Russia. Moreover, that gap is growing larger every year.

## STATE-RUN MEDIA

### 29. US claims of China's nukes 'excuse for own expansion'

*Global Times (China), Apr. 12, Pg. 3 | Liu Xuanzun and Guo Yuandan*

US military leaders, politicians and media have been repeatedly hyping the so-called China nuclear arsenal expansion, highlighted recently again by a report by the Wall Street Journal, and these speculations are an excuse for the US to expand its own nuclear arsenal and push the "China threat" theory, Chinese experts said on Monday.

### 30. Russian army uses Kinzhal hypersonic system to destroy Ukrainian command station in Donetsk region – Defense Ministry

*Interfax (Russia), Apr. 11 | Not Attributed*

The Russian Armed Forces used a hypersonic weapon - a Kinzhal airborne missile system - to destroy the Ukrainian army's command and control station in Donbas.

### **1. A Talk With Putin Deepens the Fear of Worse Attacks**

New York Times, Apr. 12, Pg. A1 | Steven Erlanger and Anton Troianovski

Austria's chancellor visited President Vladimir V. Putin of Russia on Monday -- the first Western leader to see him in person since the Ukraine invasion -- and said he came away feeling not only pessimistic about peace prospects but fearing that Mr. Putin intended to drastically intensify the brutality of the war.

Describing Mr. Putin as dismissive of atrocities in Ukraine, the visiting chancellor, Karl Nehammer, said it was clear that Russian forces were mobilizing for a large-scale assault in eastern Ukraine's Donbas region, the next phase of a war now in its seventh week.

"The battle being threatened cannot be underestimated in its violence," Mr. Nehammer said in a news conference after the 75-minute meeting at Mr. Putin's residence outside Moscow that the visitor described as blunt and direct.

The Austrian chancellor said he had told the Russian president that as long as people were dying in Ukraine, "the sanctions against Russia will stay in place and will be toughened further."

The Kremlin, playing down the meeting's significance in a terse statement, said only that it was "not long by the standards of recent times."

Even as Mr. Nehammer was visiting, Russian forces were bombarding Ukrainian cities and towns, and President Volodymyr Zelensky of Ukraine said "tens of thousands are dead" in Mariupol, the besieged southern city that has been the scene of the most intense destruction of the war.

And Mr. Putin, despite Russia's military blunders in the war, and for all the Western efforts to ostracize him, still appeared in control of the crisis. He has severely repressed any dissent and benefited from widespread domestic support, continuing revenues from oil and gas sales to Europe, the implicit backing of China and the refusal of much of the world to join sanctions against Russia.

Many commentators in the West had criticized the Austrian chancellor -- his country is a member of the European Union but not of NATO -- for having visited Moscow at all, seemingly playing into Mr. Putin's narrative that American-led efforts to isolate Russia would necessarily end in failure.

Mr. Nehammer told reporters afterward that he had tried to confront Mr. Putin with the horrors of war and of the war crimes that Russian troops are accused of having committed in the Kyiv suburb of Bucha and elsewhere. He said he also had told Mr. Putin about the destroyed Russian tanks he saw on a recent visit to Ukraine, to make clear the enormous loss of life that Russia was suffering.

Mr. Nehammer said that Mr. Putin had brushed aside the accusations of war crimes as having been staged by Ukraine.

At the end, Mr. Putin told him: "It would be better if it" -- the war -- "ended soon," Mr. Nehammer said, but the meaning of those words was unclear, since they could either signal that Mr. Putin was prepared for further peace talks or that he could be readying a quick and brutal assault in the Donbas, where Russian-backed separatists have been fighting Ukraine's military since 2014.

"We can have no illusions: President Putin has totally adopted the logic of war, and is acting accordingly," Mr. Nehammer said. "This is why I believe it is so important to permanently confront him with the facts of the war."

How much more brutal the war could become was signaled in an interview with Eduard Basurin, a separatist commander, aired on Russian state television. Mr. Basurin said that with Ukrainian forces ensconced in underground fortifications at a steel plant in Mariupol, storming the redoubt did not make sense. Instead, he said, Russian forces needed to first block the exits and then "turn to the chemical troops who will find a way to smoke the moles out of their holes."

Mr. Putin was silent on Monday but was expected to speak publicly on Tuesday, when he will travel to the Vostochny spaceport in Russia's far east with President Aleksandr G. Lukashenko of Belarus, his ally, to mark the annual Cosmonauts' Day.

The Feb. 24 invasion of Ukraine has increasingly been framed by Mr. Putin as not against that country, but against the West -- specifically, the United States, as the supposed patron of Mr. Zelensky's government and its aspirations to escape Russia's sphere of influence as a former Soviet republic.

Sergey V. Lavrov, Russia's foreign minister, said in a Russian television interview that aired on Monday that what the Kremlin calls its "special operation" in Ukraine is aimed at rolling back American influence -- which the Russian government characterizes as the root of the world's ills.

"Our special military operation is designed to put an end to the reckless expansion, and the reckless course toward complete dominance, of the United States," Mr. Lavrov said.

The United States and European Union have imposed increasingly severe economic sanctions on Russia over the invasion and are sending weapons to Ukraine's military. But they do not want to get drawn into a war with Russia. And the European Union remains reluctant to ban Russian oil and natural gas, which remain critical to the bloc's own economic health.

E.U. foreign ministers met on Monday in Luxembourg and the bloc's foreign policy chief, Josep Borrell Fontelles, said that "nothing is off the table, including sanctions on oil and gas."

While ministers discussed a possible phaseout of Russian oil, more easily replaceable from other suppliers than gas, the meeting also laid bare the bloc's divisions. Austria, Hungary and Germany opposed any effort, for now, to restrict Russian gas imports.

Still, European Union leaders were expected to approve another 500 million euros in funds to repay member states for sending weapons to Ukraine, which would mean a total of 1.5 billion euros so far -- nearly equivalent to the \$1.7 billion in weapons that the United States has authorized.

Russian troops, having retreated from northern Ukraine after a failed effort last month to reach the capital, Kyiv, have been resupplying and regrouping in Russia and Belarus so they can join the battle in eastern Ukraine. But Western officials said on Monday that effort may still take some time.

Ukrainian officials have been warning since last week that civilians in east Ukraine should flee while they can. Mr. Zelensky warned that tens of thousands of Russian troops were preparing a renewed assault there.

If and when the southern port city of Mariupol finally falls, Russian troops can move north to meet up with Russian troops attempting to move south from Izyum and try to encircle the bulk of Ukraine's army, which is concentrated further east, said Mathieu Boulègue, an expert on the Russian military at Chatham House, the London research institution.

That is easier said than done, Mr. Boulègue said, as the battered Russian troops await reinforcements. The Ukrainians, he said, were trying to block the Russians and organize a counterattack that would be more complicated than the fighting around Kyiv, which had forced the Russians to retreat.

Given the reports of Russian atrocities at Bucha, Kramatorsk, Mariupol and other cities, negotiations between the Ukrainian and Russian governments are on hold.

But few believe that the antagonists are ready for real talks, because Mr. Putin needs to show more military gains and because the Ukrainians believe that they can still repel the Russians, said Ivo Daalder, former U.S. ambassador to NATO.

"The Ukrainians think they have an opportunity not just to prevent Russia from gaining more ground in the east but expelling them from there, while Putin needs to find something he can sell as a victory," Mr. Daalder said. "So diplomacy is not going anywhere."

If and when talks on a settlement finally occur, Mr. Putin will inevitably be part of them, said François Heisbourg, a French defense expert. Diplomats deal with leaders of governments, no matter how distasteful, he said.

The West also hopes that increasing economic pain will encourage Mr. Putin to scale down the war and end it. Russia is already in "deep recession" and its economy is expected to shrink by 11 percent this year, the World Bank reported.

But the impact is severe on Ukraine, too. The bank forecast that Ukraine's economy would shrink by about 45 percent this year because of the Russian invasion and the impact of a "deep humanitarian crisis."

Mr. Putin originally named one goal of the war as the "denazification" of Ukraine, falsely labeling as Nazis those who resist Russian domination. An article on Monday in a Russian state newspaper, *Parlamentskaya Gazeta*, written by an adviser to the chairman of Russia's lower house of Parliament, expanded on that concept to define the enemy as "Ukrainian-American neo-Nazism."

The fight also included a "cold war" against enemies of the state inside Russia, the article said, adding: "The denazification of Ukraine is impossible without a parallel denazification of Russia."

It was the latest sign that, even as the war in Ukraine rages, Mr. Putin is priming his security apparatus for an ever-widening intolerance for dissent. The crackdown has accelerated in recent weeks, with pro-war Russians turning in teachers and neighbors who speak out against the war.

Last Friday, Russia closed some of the last remaining independent institutions of civil society, including the Carnegie Moscow Center and the Moscow offices of Human Rights Watch and Amnesty International. It expanded the practice of naming government critics as "foreign agents," for the first time adding a popular musician to the list: the rapper Ivan Dryomin, 25, who goes by the name Face.

## **2. Putin warns the West: Russia cannot be isolated - or held back**

Reuters, Apr. 12 | Not Attributed

President Vladimir Putin warned the West on Tuesday that attempts to isolate Moscow would fail, citing the success of the Soviet space programme as evidence that Russia could achieve spectacular leaps forward in tough conditions.

Russia says it will never again depend on the West after the United States and its allies imposed crippling sanctions on it to punish Putin for his Feb. 24 order for what he called a "special military operation" in Ukraine.

Sixty one years to the day since the Soviet Union's Yuri Gagarin blasted off into the history books by becoming the first man in space, Putin travelled to the Vostochny Cosmodrome in Russia's Far East, 3,450 miles (5550 km) east of Moscow.

"The sanctions were total, the isolation was complete but the Soviet Union was still first in space," Putin said, according to Russian state television.

"We don't intend to be isolated," Putin said. "It is impossible to severely isolate anyone in the modern world - especially such a vast country as Russia."

Russia's Cold War space successes such as Gagarin's flight and the 1957 launch of Sputnik 1, the first artificial satellite from earth, have a particular pertinence for Russia: both events shocked the United States. The launch of Sputnik 1 prompted the United States to create NASA in a bid to catch up with Moscow.

Putin says the "special military operation" in Ukraine is necessary because the United States was using Ukraine to threaten Russia - including via the NATO military alliance - and that Moscow had to defend Russian-speaking people in Ukraine from persecution.

He said on Tuesday that he had no doubts Russia would achieve all of its objectives in Ukraine - a conflict he cast as both inevitable and essential to defend Russia in the long term.

"Its goals are absolutely clear and noble," Putin said. "It's clear that we didn't have a choice. It was the right decision."

Ukrainian forces have mounted stiff resistance and the West has imposed sweeping sanctions on Russia in an effort to force it to withdraw its forces.

Russia's economy is on track to contract by more than 10% in 2022, the biggest fall in gross domestic product since the years following the 1991 fall of the Soviet Union, former finance minister Alexei Kudrin said on Tuesday.

Putin toured the space port in Russia's far east with Belarusian President Alexander Lukashenko.

"Why an earth are we getting so worried about these sanctions?" Lukashenko said, according to Russian state television.

Lukashenko, who has a track record of sometimes saying things that appear to jar with his closest ally's stated positions on a range of issues, has insisted that Belarus must be involved in negotiations to resolve the conflict in Ukraine and has said that Belarus had been unfairly labelled "an accomplice of the aggressor".

[RETURN TO TOP](#)

### **3. A Rising Tally Of Warheads In Arsenals**

New York Times, Apr. 12, Pg. A10 | Rick Gladstone

The global number of nuclear-armed warheads is increasing, according to a watchdog report released Monday that comes against the backdrop of the Kremlin's veiled threats to use some of its vast stockpile if the war in Ukraine escalates.

The report released by the Nuclear Weapons Ban Monitor said the world's nine nuclear-armed states had a combined arsenal of 12,705 nuclear warheads at the beginning of 2022. It said that of those warheads, 9,440 -- or the equivalent to 138,000 Hiroshima bombs -- constituted usable stockpiles for use by aircraft, missiles, ships and submarines. The usable-stockpiles figure was up from a low point of 9,227 warheads in 2017, the report said.

"The war in Ukraine and Vladimir Putin's nuclear threats are yet another stark reminder of the profound dangers of living in a world where some states insist their security must rest on capacity for massive and indiscriminate nuclear violence," Henriette Westhrin, secretary-general of Norwegian People's Aid, which produces and publishes the report, said in a statement.

"We have ended up trusting luck rather than the supposed stabilizing effects of nuclear deterrence."

President Vladimir V. Putin's possible use of nuclear weapons has been a concern for the United States and NATO members as they consider how to defend Ukraine without escalating the conflict with Russia.

Days after the Feb. 24 invasion of Ukraine, Mr. Putin announced that he was putting his nuclear forces into "special combat readiness," which is a heightened alert status reminiscent of some of the most dangerous moments of the Cold War.

## **RUSSIA**

### **4. Russia Unleashes New Attacks Overnight on Ukraine's Eastern Region**

***Ukrainian authorities are still investigating allegations of a Russian chemical attack in Mariupol***

Wall Street Journal Online, Apr. 12 | Thomas Grove and Brett Forrest

Russian forces fired on Ukrainian positions and residential areas in the country's east overnight and unleashed new rocket attacks, while fortifying positions there with new deployments of air-defense systems, Ukrainian officials said Tuesday.

Ukrainian authorities are still investigating allegations by Ukrainian forces that they came under a Russian chemical attack in Mariupol, where Russia is still fighting to consolidate gains in the city, which Moscow sees as crucial to its efforts in taking over eastern Ukraine and pushing westward.

Russia's Defense Ministry said it was launching air and artillery strikes on Ukrainian positions in Mariupol.

The U.K. Defense Ministry said fighting was continuing in Ukraine's south near the cities of Kherson and Mykolayiv and that Russia is continuing to emphasize the eastern Donbas region in a shifting war effort. British intelligence said

Russia would continue to redeploy its troops from Belarus to the Ukrainian east and likely try to take the eastern city of Kramatorsk, the site of a deadly missile attack last week.

Russian Defense Ministry spokesman Maj. Gen. Igor Konashenkov said Tuesday that high-precision air- and sea-based missiles overnight destroyed an ammunition depot and a hangar with Ukrainian aircraft at the Starokostiantyniv military airfield in the western Khmelnytskyi region, as well as an ammunition depot near Havrylivka in the Kyiv region.

Ukraine's General Staff said Russians were boosting air-defense capabilities near Melitopol and Ilovaisk and added that it had repulsed six enemy attacks in the Donetsk and Luhansk regions, destroying four Russian tanks and eight artillery systems. The Ukrainian Air Force said it had downed a Russian plane, two helicopters and four drones.

Ukrainian authorities said they are investigating a claim by their troops in the port city of Mariupol that they came under a Russian chemical weapons attack Monday.

The Ukrainian unit deployed in Mariupol, the Azov regiment, said Russian forces dropped an unknown chemical substance from a drone, causing respiratory and nervous-system symptoms among its troops and civilians. No independent evidence of the attack has emerged from Mariupol.

Railway connections were disrupted overnight in the Russian town of Shebekino, near the Ukrainian border northeast of Kharkiv, the regional governor told Russia's RIA news agency. There were no casualties, he said, and the cause of the disruption was being investigated.

Russia heavily uses the railways to reinforce and resupply its troops preparing the Donbas offensive, and Shebekino, in Russia's Belgorod region, sits on one of its main rail connections to the area. Russia last month said two Ukrainian helicopters launched an airstrike on a fuel depot in Belgorod, a claim Kyiv didn't confirm or deny.

## **5. Russia starting to reinforce positions in eastern Ukraine – U.S. official**

Reuters, Apr. 12 | Idrees Ali and Christopher Gallagher

WASHINGTON -- The United States believes that Russia has started reinforcing and resupplying its troops in Donbas in eastern Ukraine, a senior U.S. defense official said on Monday.

Ukrainian President Volodymyr Zelenskiy said on Monday thousands of Russian troops were massing for a new offensive in the east, and Russia said it would not halt its military operation in Ukraine for any further peace talks.

Despite the resupply efforts in Donbas, the United States did not believe this was the start of a new offensive in the region, the official said, speaking on condition of anonymity.

"We believe that this is an effort to reinforce and resupply their forces in the Donbas, they're still north of Izyum," the official told reporters, referring to a town about 180 km (112 miles) north of the city of Donetsk.

Russian vehicles being sent to the region included command and control elements and support personnel for aircraft and infantry units, the official said.

Last week, Russia completed its withdrawal from around Kyiv and had sent some troops to Belarus to be refit and resupplied.

The official said there was evidence that some of those troops in Belarus were moving east.

Russia still had the vast majority of its battalion tactical groups in Ukraine, including more than 55 groups in the south.

Russia's defense ministry said Russian sea-launched missiles had on Sunday destroyed S-300 anti-aircraft missile systems which had been supplied to Ukraine by a European country.

The official said the United States had seen an airstrike at the Dnipro airfield that destroyed some infrastructure but did not have evidence that any S-300 missile defense system had been destroyed by Russia.

At the weekend, U.S. Defense Secretary Lloyd Austin spoke with a small number of Ukrainian troops who had been in the United States for military education when Russia's invasion started.

The troops were trained on Switchblade drones while they were in the United States and were scheduled to go back to Ukraine on Sunday.

The official was not aware of any current plans to bring Ukrainian forces into the United States for training, but Washington was looking at different options on how Ukrainians could be trained to use those type of drones.

## **6. Ukraine Calls for More Aid Ahead of Battles in the East**

Wall Street Journal, Apr. 12, Pg. A1 | Matthew Dalton, Yaroslav Trofimov and Mauro Orru

President Volodymyr Zelensky of Ukraine launched a fresh appeal for military aid as the country prepared for some of the heaviest fighting so far in the conflict, while France sent a police unit from its armed forces to Ukraine to investigate possible war crimes, the first disclosed deployment of military personnel from a NATO country in Ukraine.

Meanwhile, the Ukrainian government said it was investigating a claim by its troops in the besieged city of Mariupol that they came under a Russian chemical weapons attack Monday. The Russian government hasn't commented publicly about the alleged use of chemical weapons in Mariupol.

In a virtual address to South Korean lawmakers Monday, Mr. Zelensky pressed Seoul to deliver more than the humanitarian assistance and nonlethal aid it has given so far, stating a need for heavier equipment to fight Russian tanks and missiles. "We thank South Korea for the help you have provided, but to survive from the war with Russia we need more help," he said.

Ukraine has stepped up its pleas for heavy military equipment to fight the conventional tank and artillery battles that are expected in the Donbas area of eastern Ukraine. Having failed to capture the capital, Kyiv, Russia has shifted its objective to seizing the parts of the eastern Donbas area it doesn't yet control. Both Ukraine and Russia are moving troops and equipment into the region, with Ukraine redeploying combat units from northern areas that it recovered.

Skirmishes along the contact line in Donbas and nearby regions continue daily, and Russia has continued its long-range missile campaign on Ukrainian infrastructure. The Russian Defense Ministry said Monday that missiles destroyed a weapons and military equipment repair base of the Ukrainian air-defense forces overnight, as well as two ammunition depots. Those claims couldn't be independently verified.

The Ukrainian unit deployed in Mariupol, the Azov regiment, said Russian forces dropped an unknown chemical substance from a drone, causing respiratory and nervous-system symptoms among its defenders and civilians.

No independent evidence of the attack emerged Monday from Mariupol. Oleksiy Arestovych, a senior adviser to the Ukrainian president, said in a social-media post that the government is "checking the information about a possible chemical attack against the defenders of Mariupol."

The Azov regiment, a unit of the Ukrainian military formed from a far-right volunteer force that was created in 2014, has been resisting Russia's military in Mariupol alongside Ukrainian marines and other forces for more than a month, despite being surrounded and cut off from resupply.

Azov's commander, Andriy Biletskiy, said in a video recording that the chemical substance affected three people in the Azovstal industrial area of Mariupol, his unit's stronghold, but didn't cause "catastrophic consequences."

Western officials have warned for weeks that Russia could use chemical weapons in Ukraine, and Russian forces were supporting the regime of President Bashar al-Assad of Syria when its military was credibly accused of using chemical weapons.

Just hours before Monday's alleged attack, Eduard Basurin, military spokesman for the pro-Russian statelet in Donetsk, was quoted by Russia's RIA state news agency as calling for the use of "chemical troops, which will find a way how to smoke the moles out" in Mariupol.

In his nightly address, Mr. Zelensky said the government is preparing "for a new stage of terror against Ukraine," noting Mr. Basurin's comments. "We take this as seriously as possible," Mr. Zelensky said.

Mr. Basurin's Donetsk People's Republic, formed in 2014 and recognized by Moscow as an independent state in February, claims Mariupol as part of its territory and has sent its own fighters there alongside regular Russian troops.

Ukrainian authorities said as many as 10,000 people died in Mariupol in weeks of fighting that leveled much of the city. Some 400,000 people lived in Mariupol before the war.

Officials in the U.S. and U.K. said they were aware of the reports of a potential chemical munition used in Mariupol, but hadn't confirmed their authenticity.

"These reports, if true, are deeply concerning and reflective of concerns that we have had about Russia's potential to use a variety of riot control agents, including tear gas mixed with chemical agents, in Ukraine," Pentagon press secretary John Kirby said in a statement.

Ukrainian and Western authorities separately pushed ahead with investigations into alleged war crimes committed in formerly Russian-held towns in northern Ukraine before Moscow's withdrawal at the end of March. The French government said its gendarmes, a police force that is part of the French army, would assist local authorities in probing any war crimes around Kyiv.

French prosecutors said last week they were probing whether war crimes had been committed in Ukraine following accounts of rape and killings of hundreds of civilians in Bucha and other formerly Russian-occupied towns.

Prosecutors also launched a separate probe on March 16 following the killing two days earlier of a Franco-Irish journalist and his research consultant near Kyiv.

Russia has denied targeting civilians and called the video and photos from Bucha staged.

In Moscow, Austrian Chancellor Karl Nehammer met with President Vladimir Putin of Russia in what was the first meeting between a European leader and Mr. Putin since the start of Russia's invasion.

Austria, which is heavily dependent on Russian natural gas, has been blocking sanctions against Russian energy imports to Europe together with Germany and other nations.

European Union foreign ministers discussed the bloc's efforts to pressure Russia's economy with sanctions at a meeting on Monday, including the possibility of further energy sanctions. "Nothing is off the table, including sanctions

on oil and gas," EU foreign-policy chief Josep Borrell said after the meeting, which was held in Luxembourg. "But today no decision was taken."

The EU approved a fifth package of sanctions on Friday that included the first significant ban on imports of Russian energy -- coal. However, the bloc remains deeply divided over whether to advance with further energy import bans, starting with oil.

## **7. Ukraine says checking unverified information that Russia used chemical weapons in Mariupol**

Reuters, Apr. 12 | Pavel Polityuk and Guy Faulconbridge

KYIV -- Ukraine is checking unverified information that Russia may have used chemical weapons while besieging the southern Ukrainian port city of Mariupol, Ukraine's Deputy Defence Minister Hanna Malyar said on Tuesday.

"There is a theory that these could be phosphorous munitions," Malyar said in televised comments, adding: "Official information will come later."

Russia's defence ministry did not immediately respond to a request for comment.

Russia-backed separatist forces trying to wrest complete control of Mariupol denied using chemical weapons in comments carried by Russian news agency Interfax.

Mariupol's city council wrote on the Telegram messaging service that it was not yet possible to examine the area where the poisonous substance had allegedly been used because of enemy fire. It added that the city's civilian population had minimal contact with the unspecified poison but that Ukrainian soldiers had come into closer contact with it and were now being observed for possible symptoms.

Ukrainian President Volodymyr Zelenskiy warned on Monday that Russia could use chemical weapons in Ukraine.

Britain and the United States have said they are aware of reports that Russia may have already used chemical agents in Mariupol. Britain said it was working with partners to verify the reports.

Russia has previously accused Ukraine of preparing to use chemical weapons, without providing evidence.

Last month the Kremlin said U.S. talk of Russia using such weapons was a tactic to divert attention away from awkward questions for Washington.

Russia's invasion of Ukraine has killed thousands and displaced millions. Moscow calls its actions in Ukraine a "special operation" to destroy Ukraine's military capabilities and capture what it views as dangerous nationalists, but Ukraine and the West say Russia launched an unprovoked war of aggression.

## **8. Russian General Tapped to Lead Invasion**

Wall Street Journal, Apr. 12, Pg. A6 | Evan Gershkovich and Jared Malsin

Russian Army Gen. Aleksandr Dvornikov, the man chosen to lead the next phase of Moscow's war in Ukraine, wrote in a military newspaper in 2018 that in modern warfare, "the main task is not the physical destruction of the enemy, but the complete subordination of him to one's will."

An architect of Russia's military intervention in Syria, where Russian airstrikes hit civilian targets including hospitals, Gen. Dvornikov has since the start of the invasion in February led the troops that have pushed northward from Crimea and captured a swath of territory in southern Ukraine.

He now will become the overall commander, Western officials say, as Russia refocuses on the south and eastern Ukraine's Donbas region after failing to capture Kyiv, the capital, and Kharkiv, the country's second-largest city, in the north, in the face of fierce resistance that inflicted heavy casualties.

Military analysts blame the stalled Russian offensive in part on a divided command structure that led to poor coordination. Now Russia has shifted its forces to the east and unified them under Gen. Dvornikov's command, focusing its goals on seizing territory in the Donbas area it doesn't control, Western officials said.

Moscow hasn't issued an official announcement about his role. Russia's Defense Ministry didn't respond to a request for comment.

Military analysts say Gen. Dvornikov, 60 years old, is a logical choice to lead the new phase of Russia's campaign. In addition to being the most senior officer and tipped to eventually succeed Chief of General Staff Valery Gerasimov, the military analysts said, he has, since 2016, led the Southern Military District, which is responsible for Russia's operations in the Donbas. Moscow first fomented a rebellion there in 2014 -- a claim the Kremlin denies -- and the conflict dragged on for eight years before Russia launched its full-scale invasion in February.

"Dvornikov knows the geography and the theater of military operations best," said Pavel Luzin, an independent Russian military analyst.

The Kremlin might also view him as best-placed to fix the problems the offensive has seen in terms of coordinating its forces, Mr. Luzin said. During military drills in 2020, Gen. Dvornikov oversaw Russia's much-hyped first use of automated systems for coordinating among various wings of the military, Mr. Luzin said.

In his 2018 essay published in the Military-Industrial Courier, Gen. Dvornikov urged the deployment of coordinated operations -- precisely what Russia didn't do.

"Modern military art and the experience of conducting combat operations in local conflicts of the last quarter of a century show that the creation and use of integrated groupings is becoming increasingly important," he wrote.

## **9. U.S. Weighs Future Ties to Kremlin**

### ***Putin's grip on power and alleged atrocities complicate Biden administration's goals***

Wall Street Journal, Apr. 12, Pg. A6 | Sabrina Siddiqui and William Mauldin

WASHINGTON -- In the six weeks since Russia's invasion of Ukraine, the Biden administration has imposed a series of sanctions on Moscow, armed the Ukrainians, mobilized Western allies in opposition to Russian President Vladimir Putin and sought to make him an international pariah.

The response has brought U.S.-Russia relations to their lowest point since the Cold War. Left unclear is the impact on Washington's posture toward Russia in the long term and how permanent the U.S. government's actions would be, should Moscow change its trajectory in Ukraine.

So far, the Biden administration has focused on using sanctions to inflict pain on Russia's energy and financial sectors, its wealthy oligarchs and military complex, in a bid to force Russia to withdraw from Ukraine and end hostilities.

Yet President Biden has also labeled Mr. Putin a war criminal whose actions merit a trial and suggested the Russian president can't remain in power, a remark that prompted a swift White House follow-up that regime change wasn't U.S. policy.

That rhetoric has raised questions about whether the U.S. hopes to see Mr. Putin ousted and put on trial, or would look for a way to resume diplomatic and commercial relations should a cease-fire be achieved between Russia and Ukraine -- or would chart a path somewhere in between.

A return to anything approaching normal while Mr. Putin remains in charge appears unlikely, some former officials and Russia experts say, and Mr. Biden himself has reaffirmed his view that the world would be better off without the current Russian president.

"Once this war is over -- and of course, it may not be over for some time -- it's very hard to see U.S.-Russia relations recovering as long as Vladimir Putin is in power," said Angela Stent, a professor at Georgetown University and a Russia specialist.

National-security officials acknowledge that the Biden administration failed in its goal to have a "stable and predictable" relationship with Russia because of Mr. Putin's invasion, and that ties are unlikely to return to where they stood before the war. But it is too soon to draw up a new overarching approach toward Moscow, they say.

"There will be no relief from sanctions or other costs we have and will continue to impose on Russia until President Putin reverses course and relents in his brutal aggression," State Department spokesman Ned Price said in March, a refrain repeated by top White House officials in recent days.

Maintaining flexibility over the longer term to allow Mr. Putin to seek a diplomatic exit or to respond to changes on the battlefield could have its advantages.

So far, Ukraine and Russia have engaged in several rounds of cease-fire talks to no avail. Should Moscow and Kyiv reach a peace deal, the U.S. and European countries would likely be willing to lift some but not all sanctions on Moscow as part of the arrangement, assuming Ukraine supported the move, former administration officials said. The U.S. and its allies have avoided telegraphing what it would take to lift sanctions.

John Herbst, U.S. ambassador to Ukraine during the George W. Bush administration, said some kind of thaw could be possible with the Russian leader retaining power.

"I despise Putin, but if he tomorrow were to recognize that he can't win in Ukraine, he's stopping the war. . . then our relationship will get better," said Mr. Herbst, who is now at the Atlantic Council think tank in Washington.

After failing to seize Kyiv quickly and oust the government, Russian forces are now regrouping and are expected to launch a new offensive in the Donbas region of Ukraine in coming weeks.

Elsewhere, Russia and the U.S. are expected to continue cooperating on some strategic and security objectives. Biden administration officials point to negotiations with Iran over reviving the Obama-era nuclear accord, in which Russia is a key participant; talks about the reconstruction of Afghanistan following the U.S. withdrawal last summer; and arms control and involvement in the International Space Station.

A State Department spokeswoman said the U.S. government has no intention of suspending diplomatic relations with the Kremlin, despite Moscow's threats to sever such ties. Diplomats with the U.S. Embassy in Moscow, whose numbers have been reduced dramatically, continue to engage with Russian officials.

Still, alleged Russian war crimes are an issue that could complicate relations between the U.S. and Russia.

Officials in the Biden administration and other allied countries have pointed to killings of civilians blamed on Russian forces in the town of Bucha and the city of Mariupol as potential evidence of wartime atrocities for which Russia should be held accountable. The U.S. Justice Department on Wednesday said it was helping foreign prosecutors gather evidence of possible war crimes in Ukraine.

"With the pounding of Mariupol that is happening in front of our eyes and the latest events in Bucha -- that really puts Putin beyond the pale," said Eugene Rumer, a former intelligence officer who leads the Russia program at the Carnegie Endowment for International Peace. "I don't know what leader can sit down with Putin -- even at that long table where world leaders meet with him -- and negotiate something and shake hands on it."

Negotiations to end the war are likely to become more difficult as more allegations of civilian killings emerge, said Michael McFaul, U.S. ambassador to Russia in the Obama administration. "There can be no return to business as usual with Putin as a leader," said Mr. McFaul, now a professor at Stanford University.

### **10. Two US B-52H nuclear bombers take off in West Country**

***One of the bombers flew very near Bristol***

Bristol Post Online (UK), Apr. 11 | Louisa Streeting

Two nuclear bombers have taken off from the West Country today (April 11) both with outbound journeys towards France.

The first B52 Boeing B-52H Stratofortress took off from the RAF base in Fairford, Gloucestershire, shortly after 8am on Monday heading towards the south of France just below Bordeaux to aviation website adsbexchange.com. A second aircraft of the same model departed from the same location later the same day just before 12pm flying slightly further south towards Marseille.

There have been a number of US military aircrafts reported to have departed from the same area in the West Country over the past few weeks. On Thursday, another US nuclear bomber took off from the Fairford base heading towards Denmark.

The Boeing B-52 Stratofortress is an American long-range, subsonic, jet-powered strategic bomber. It is capable of carrying up to 32,000 kg of weapons and has a typical combat range of around 8,800 miles without aerial refuelling.

They were used extensively during the Vietnam War and have seen more recent service in the Gulf Wars and last year during the aerial bombardment of Syria. The jets have been used for heavy bombing missions but also are capable of carrying nuclear payloads. They have been coming in and out of the Oxfordshire base, helping refuel Typhoon jets over eastern Europe as the Ukraine crisis continues.

Since the conflict started in Ukraine, there have been numerous sightings of military jets passing over Bristol.

## **CHINA**

### **11. Panel: Beijing Closely Tracking Global Reaction to Ukraine Invasion**

U.S. Naval Institute News, Apr. 11 | John Grady

China's Xi Jinping is closely monitoring what is happening to Russian President Vladimir Putin's reputation following the invasion of Ukraine, retired Marine Corps Gen. James Jones said Monday.

Xi is looking at how the world views Putin as a gauge of global reaction he might face should Xi move against Taiwan, Jones argued.

Jones, who also served as the national security adviser and top commander in Europe, said the reaction could range from hailing Putin as a world leader who is “welcomed once again to the Munich Security Conference” to condemning him as a war criminal.

“I think the Taiwanese are as willing to defend their homeland” as the Ukrainians have been, he said.

Xi and Putin “have concluded the U.S. commitment to our regional relationships are not what they used to be” when they signed a cooperative agreement package during this year’s Olympics in Beijing, prior to the invasion. With Russian forces stalled, Xi is “walking a tightrope” in his relationship with Putin, said Michelle Flournoy, former civilian policy chief at the Pentagon.

At the Atlantic Council online forum, Jones and Flournoy said in both cases – Ukraine and Taiwan – it is a struggle between democracies and authoritarian rule. The implications of the outcomes in that struggle will be felt in the Middle East, Africa, the Western Hemisphere and in India, which is a United States partner in the Indo-Pacific. Many of those nations chose not to back the U.S. in its United Nations condemnation of the Kremlin’s unprovoked attack on Kyiv. Multiple abstained although the condemnation resolution passed.

Jones said the U.S. is not helping itself with countries – like Saudi Arabia, the United Arab Emirates and others – by not having permanent ambassadors in place to show American engagement with them on economic, security and diplomatic fronts. To them, the lack of ambassadorial presence demonstrates “a void of commitment” by Washington. Flournoy added the lack of U.S. presence at meetings of regional organizations like the Association of South East Asian Nations [ASEAN] allows Chinese influence to grow unchecked.

Looking specifically at Taiwan, Flournoy said, “we really need to help with an asymmetric defense” like Ukraine has used to so far to stall the Russian advance. This would be a shift away from selling Taipei large platforms like F-16 fighters to having them build-up their anti-ship, anti-aircraft and anti-tank missile defenses and maritime defenses. The island would become “a little porcupine” to overcome and slow down an invasion across the Taiwan strait. If others, like the U.S., are to help, “they need time to arrive.”

Flournoy, who recently returned from a trip to Taiwan, said president Tsai Ing-wen has emphasized the readiness of its active forces and is paying new attention to improved reserve forces. At the same time, Taipei has created a mobilization agency to use civilians and their skills in the case of natural disasters and a possible invasion from the mainland. She noted the success the Taiwanese have had in relying on volunteerism to augment its police and fire services.

Both said there was no need to abandon “strategic ambiguity” when it comes to the defense of Taiwan. But, “frankly Beijing is going to pay a lot more attention to our actions than our words,” Flournoy added, like helping Taipei build strong invasion defenses.

“I put the responsibility of de-escalation [of tensions over Taiwan and in the South China Sea] on Beijing.” The message being sent is: “We’re going to do [Freedom of Navigation operations] when you threaten Taiwan” with air and maritime incursions, said Flournoy.

Xi’s “preferred approach is to create so much economic leverage” over Taiwan that there would be no resistance to its total alignment with Beijing. She cited China’s increased economic ties with the island in key industries there like investing in semi-conductors, encouraging Taiwanese businesses to operate across the strait and the increased recruiting of young Taiwanese to work on the mainland for higher pay and more career opportunities.

Taiwan is not the only entity or nation seeing increased Chinese business interest in its activities.

China's economic influence, especially through its Belt and Road infrastructure initiative and regional trade pact, is widely felt across the Indo-Pacific. Washington needs to create a "counter-vortex" of economic investment across the region, Jones said. He noted 25 percent of South Korea's gross domestic product is tied to China and the percentage is growing yearly. "That can affect South Korea's politics at some point," he said.

Likewise, China is Japan's and Australia's largest trading partner.

"We want to keep putting meat on the bones of the Quad," the informal security and economic arrangement between the U.S., Australia, Japan and India, Flournoy said. She called for near-term technology wins in the Australia-United Kingdom-United States [AUKUS] agreement. "We can help with that" in New Delhi's case in wooing India away from its reliance on Russian military systems that date back to the Cold War and still require spare parts to keep the Chinese at bay in the Himalayas.

The military sales relationship, in part, explains India's abstention in condemning the Russian invasion of Ukraine, Flournoy said citing new reports.

Both agreed applying sanctions to Beijing in the case of an invasion of Taiwan would be far more difficult than with Russia because China's economy is much bigger, more diverse and globally engaged, including with the U.S., than Moscow's reliance on energy exports to boost its GDP.

## **12. China launches three space missions, debuts new rocket configuration**

SpaceflightNow.com, Apr. 11 | Stephen Clark

China launched three more space missions in recent weeks, debuting the country's first rocket to be fitted with strap-on solid-fueled boosters and deploying satellites to image planet Earth and calibrate orbit prediction models, according to Chinese state media.

A new version of China's Long March rocket family, the Long March 6A, launched for the first time March 29 with two satellites. The Long March 6A is China's first satellite launcher to feature solid rocket boosters, a thrust configuration commonly used on U.S., European, and Japanese rockets.

The new rocket variant is designed to haul payloads up to 4 metric tons, or 8,800 pounds, into a polar sun-synchronous orbit at an altitude of 700 kilometers, or 435 miles.

The first Long March 6A lifted off at 0950 GMT (5:50 a.m. EDT) on March 29 from the Taiyuan launch base, located in Shanxi province of northern China. Liftoff occurred at 5:50 p.m. Beijing time.

The 164-foot-tall (50-meter) rocket headed south to place its two payloads into a polar orbit. U.S. military tracking data indicated the Long March 6A deployed two satellites into an orbit around 373 miles (600 kilometers) above Earth, at an inclination of 97.8 degrees to the equator, according to publicly-available U.S. military tracking data.

The Long March 6A is a modified version of China's Long March 6 booster, which flies without any strap-on boosters. The Long March 6A debuted a stretched first stage structure, and adds a second kerosene-fueled YF-100 main engine. With the four boosters and two main engines, the Long March 6A generates more than 1.6 million pounds of thrust at liftoff.

The basic Long March 6 rocket configuration flies with a single YF-100 engine. Chinese engineers also introduced a wider second stage for the Long March 6A, supplying additional propellant for the second stage's YF-115 engine.

In a recent analysis, Levitt said Iran would use a removal to argue that it does not engage in terrorism, and that dropping the label would undermine the credibility of U.S. sanctions.

"The IRGC should not be removed from the FTO list until there is evidence it has ceased terrorist activities," he wrote.

## **NUCLEAR WEAPONS**

### **21. 'Battlefield nukes' in Ukraine? A low but complex threat.**

Christian Science Monitor Online, Apr. 11 | Anna Mulrine Grobe

In her experience running war games for the U.S. military, Stacie Pettyjohn found that whenever scenarios involved nuclear weapons, participants tended to be flummoxed.

"Normally folks playing the U.S. side are at a loss as to what to do," she says. It was not uncommon for teams to unnecessarily escalate hostilities – and stumble into the nightmare of nuclear war. "It's one of those things that's terrifying," she said.

Time and again, though, the prospect of "mutual assured destruction" served as a powerful enough deterrent during the real world of the Cold War, and in subsequent decades fears of a nuclear armageddon began, rightly or not, to decline considerably.

Today, however, speculation surrounding Russian President Vladimir Putin's potential use of so-called low-yield, or tactical nuclear weapons in his war on Ukraine is sounding atomic alarms for a new generation.

The prospect of Mr. Putin dipping into his arsenal of battlefield nuclear arms raises the specter of disastrous escalation should NATO retaliate in kind – or the possibility of ushering in a new era in which aggressors can get away with their limited use if it doesn't.

Mr. Putin could also gain concessions through the mere threat to go nuclear, implicit though it has been. "His standard operating procedure is to inject nuclear weapons into nonnuclear crises – hypothetically to induce restraint in his adversaries and raise anxiety, which might make it easier for him to accomplish his objectives," says Adam Mount, director of the Defense Posture Project at the Federation of American Scientists.

Particularly given the Biden administration's efforts to de-escalate when it comes to nuclear rhetoric, analysts stress that the use of such weapons in Ukraine is highly unlikely; keeping it that way will be the challenge in the days and months to come.

"The risk of Russia using a nuclear weapon in Ukraine is very low, and the public concern over nuclear use has far outstripped the nuclear risk," Dr. Mount says.

And that is in keeping with Mr. Putin's "escalate to de-escalate" strategy. "In some ways," Dr. Mount adds, "it's the threat that's meant to do more work than the weapon itself."

### *Davy Crockett and other "small" atomic weapons*

The United States was cavalier about its own development of "small" atomic weapons shortly after the dawn of the nuclear era in the 1950s, when it produced an array of battlefield nuclear land mines, artillery, and warheads.

"It was this idea that 'radiation's not good, but we'll figure it out later,'" says Viktor Sokov, senior fellow at the Vienna Center for Disarmament and Non-Proliferation in Austria.

Among the most infamous in this arsenal was the Davy Crockett Tactical Nuclear Weapon, which weighed about 75 pounds and was designed to be launched by a rocket or a gun, giving it a range of less than 3 miles.

Owing in large part to its "finned watermelon" shape, it was, U.S. military developers learned in Nevada tests, highly inaccurate. Still, the Pentagon built some 2,100 of them before phasing it out of service in 1967.

*Should U.S. revive focus on "low-yield" nuclear weapons?*

By 1991, the U.S. had eliminated thousands of these weapons from its nuclear arsenal. Today, the U.S. has some 230 tactical nukes, with roughly 100 deployed to Europe, according to a Congressional Research Service report released in February. Russia has an estimated 1,000 to 2,000 tactical warheads.

Former President Donald Trump's administration argued that America's reserves of these weapons should once again grow. Gen. John Hyten, then head of U.S. Strategic Command (StratCom), argued in their favor. "If an adversary employs low-yield nuclear weapons on the battlefield, the only option that we have should not just be go big," he said.

"Low yield" is a bit misleading, however, as many of these weapons are between 8 and 10 kilotons. The bomb that the U.S. used in Hiroshima was roughly 15 kilotons – and killed 80,000 people initially, with thousands more dying later of radiation exposure. "There's this idea that, 'Oh, it's under 10 [kilotons] so it's not that bad.' That is definitely a misnomer," says Shannon Bugos, senior policy analyst at the Arms Control Association.

While some of these tactical nuclear weapons received renewed congressional funding under the Trump administration, the Biden administration has not appeared to be interested in moving forward with the program, analysts say.

*Avoiding an escalation in rhetoric*

The administration has certainly declined to amp up any rhetoric around tactical nuclear weapons deployment. In response to news reports last month that Mr. Putin put his nuclear forces on "high alert," Pentagon officials downplayed the tough talk.

When asked about Russia's potential use of tactical nuclear weapons, a senior defense official, speaking on condition of anonymity in a March 31 background briefing, said that there were "no indications at this time that they're preparing to use those kinds of weapons." Pentagon officials have emphasized this point repeatedly.

Indeed, ultimately reports of the "high alert" status of Russian nuclear forces more accurately translated to a "special regime of combat duty," suggesting Mr. Putin was staffing up facilities rather than preparing to launch weapons, says Ms. Bugos.

"There was this breathless nuclear-war-is-right-around-the-corner talk that we saw after Putin's statement," she notes. In the arms control community, however, "We were like, 'Yes, it's concerning,' but things we were monitoring, like Russia rolling out its nuclear-armed ICBMs [intercontinental ballistic missiles] – we weren't seeing that. Those are the signs that to us would be a lot stronger marker of Putin contemplating nuclear use."

This clarity on the part of the Biden administration is a vital U.S. de-escalation strategy, adds Dr. Pettyjohn, now director of the Defense Program at the Center for a New American Security. "One thing you see time and again in war games is how easy it is to misunderstand an opponent."

### *When signals go wrong*

A nuclear near-catastrophe in the midst of a 1983 NATO exercise known as Able Archer offers a case in point. Its purpose was to simulate nuclear escalation as allied defense forces moved from DEFCON 5 to DEFCON 1, which signals the outbreak of nuclear war.

The problem was that exercise was highly realistic and included new codes and the participation of heads of government, leading some Soviet officials to believe it was a ruse for an actual first strike.

In response, the USSR began loading nuclear warheads onto its combat planes. The threat abated when the U.S. military advised against responding in kind or putting NATO forces on a similar state of high alert, and the exercise ended.

Perhaps with this bit of military history in mind, Defense Secretary Lloyd Austin recently ordered the postponement of a scheduled Minuteman III ICBM test.

“Part of our test planning includes over-communicating what we’re doing,” Vice Adm. Jon Hill, director of the Missile Defense Agency, said in a March 28 Pentagon briefing. “If I’m told to back off or delay or change [weapons tests], we will do that,” he said. “We have to be concerned about political-military concerns all the time.”

### *Response “would have to be asymmetric”*

That’s in large part because, though Mr. Putin does not appear to be preparing to use it, Russia’s nuclear arsenal is, like America’s, well-maintained and ready to go.

The final steps rather simply involve moving the warheads from their storage facilities to “mate” them with their “nuclear delivery vehicles,” as the process is known in Pentagon parlance. This does, however, offer a small window for de-escalation.

“It’s reassuring in the sense that you can actually see warheads being moved, and then you have a couple of hours to contact the other side,” says Dr. Sokov.

Still, U.S. military planners are working around the clock to offer responses for a worst-case scenario, such as “if Putin uses a nuke – or nukes plural,” says retired Col. Robert Killebrew, a former instructor in strategy at the U.S. Army War College who wrote a book about the relationship between nuclear and nonnuclear warfare.

Mr. Killebrew estimates that NATO forces “wouldn’t respond in kind” in Ukraine since it would grievously harm civilians and cause the U.S. to lose the support “of about half of NATO right away.”

As a result, “The response would have to be asymmetric,” he says. “And it would have to be devastating.”

The Pentagon is likely “looking for pressure points outside the immediate theater, like the Russian Navy,” Mr. Killebrew adds. We might sink their Black Sea fleet. We have ships in the Black Sea also. The Russian Navy against the U.S. would last about 30 minutes.”

### *Envisioning a new treaty*

Averting any such scenarios is the challenge for the short term. In the long run, arms control experts express hope that these nuclear scares for a new generation could inspire the world to begin limiting such weapons of mass destruction, particularly since low-yield nuclear weapons haven’t been addressed in past nonproliferation treaties.

While the U.S. tended to support slashing their stockpiles, the Russians long relied on low-yield nukes to compensate for their own lack of conventional weapons relative to the U.S., says Dr. Mount of the Federation of American Scientists.

Russia would like the U.S. to reduce its stockpile of conventional arms in exchange, which so far the U.S. has been unwilling to do.

These mutual interests – and the war in Ukraine – could ultimately serve as impetuses to bring the superpowers back to the negotiating table.

Simply getting discussions underway would improve international stability, says Dr. Sokov, particularly with New START nuclear nonproliferation set to expire in 2026.

He worked on negotiations for the START 1 treaty, which went into effect in 1994. In those days, the political atmosphere was “very favorable” and it still took them four years to hammer out the details, even as Russian and U.S. negotiators “worked in complete harmony, really.”

This is not likely to be the case in the years to come, but it would be “a very good development,” he says, “if we could just see these negotiations begin.”

## **NUCLEAR ENTERPRISE**

### **22. Dr. Marvin L. Adams sworn in as Deputy Administrator for NNSA’s Office of Defense Programs**

National Nuclear Security Administration, Apr. 11 | Press Release

WASHINGTON -- Dr. Marvin L. Adams was sworn in today as the Deputy Administrator for Defense Programs of the Department of Energy’s National Nuclear Security Administration.

Confirmed by the U.S. Senate on April 7, Adams now leads NNSA’s mission to maintain a nuclear deterrent that is safe, secure, reliable, and effective. He was sworn in by Secretary of Energy Jennifer Granholm.

“We are excited to have Marv and his creative thinking at NNSA HQ,” said Jill Hruby, DOE Under Secretary for Nuclear Security and NNSA Administrator. “NNSA’s science-based stockpile stewardship activities are an immense responsibility and span a wide range of expertise, from the design and engineering of warhead life extensions to supercomputing for weapons simulations to reinvigorating infrastructure. I’m confident Marv will help us deliver on our mission with the urgency we need.”

“I am honored to be part of NNSA Defense Programs once again, and I will do my best to justify the confidence that President Biden, Secretary Granholm, and Administrator Hruby have placed in me,” said Adams. “This is a critical time for NNSA, as the organization strives to deliver on important commitments while rebuilding infrastructure, restoring lost capabilities, and developing the expertise and technologies needed to meet future challenges.”

Adams is a Fellow of the American Nuclear Society and a Regent’s Fellow of the Texas A&M University System. He received his M.S. and Ph.D. degrees in nuclear engineering from the University of Michigan and his B.S. degree in nuclear engineering from Mississippi State University.

Prior to his confirmation, Dr. Adams served as the HTRI Professor of Nuclear Engineering and Director of National Laboratories Mission Support at the Texas A&M University System, where he was on the faculty since 1992. He was a physicist at Lawrence Livermore National Laboratory from 1986 to 1992, and has remained extensively engaged with the DOE and NNSA national security laboratories since that time. Until his confirmation, he served on the President’s Council of Advisors on Science and Technology; the Stockpile Assessment Team of the Strategic

Advisory Group for U.S. Strategic Command; the National Academies Committee on International Security and Arms Control; and the Predictive Science Panel for Lawrence Livermore and Los Alamos National Laboratory. For LANL, he also chaired the Mission Committee and served on the Science, Technology, and Engineering Committee. He has led and contributed to numerous studies for the U.S. government on matters related to national security.

## **AIR FORCE**

### **23. Why Missouri has a target on its back for cyberattacks**

KTVI FOX 2 News (St. Louis, MO), Apr. 11 | Emily Manley

JEFFERSON CITY, Mo. -- Could Missouri's electric power grid be at risk of a cyberattack? It's not commonly discussed inside the Missouri Capitol, but an expert from Washington D.C. is warning lawmakers about the protection the state needs.

Dr. Peter Pry is the executive director of the Task Force on National and Homeland Security. He told members of the House Special Committee on Government Accountability that because of Whiteman Air Force Base near Sedalia, Missouri has a target on its back.

Pry oversees a congressional advisory board to protect the U.S. from cyberattacks and electromagnetic pulse (EMP) attacks.

"Think of EMP as an anti-technology threat," Pry said. "If you take away the electric grid, that's the basis for everything."

His warning: the state needs to come up with a protection plan.

"Missouri needs to worry about this particular one, especially because of the presence of Whiteman Air Force Base here in the state which hosts the B-2 bomber," Pry said.

The B-2 bomber fleet has been at Whiteman AFB since 1993 and has the ability to deliver both conventional and nuclear munitions.

"The first and most important thing they are going to go after is the one weapon system that can threaten their lives and those are B-2s," Pry said.

Pry said that it's not the state's job to protect the entire nation but to also protect the electric grid in Missouri.

"What we are talking about here are catastrophic black-out scenarios that can basically last not just for ten days, or weeks or months, but forever if the grid is not protected," Pry said.

His recommendation of a protection plan could cost tens of millions of dollars, and if that's too much for the state, he says to start with places like hospitals and police stations.

"It has not been mandated to provide for protection again EMP and cyber, it isn't happening," Pry said. "Government has got to come in and not make it optional for the utilities. Most of the utilities and most of the corporations, if they are not required by government to do it, they're not going to do it."

Rep. Donna Baringer (D-St. Louis) said water and food systems also need to be protected.

"Most of our food comes from farms," Baringer said. "The state of Missouri is very agriculture centered and they have no protection right now if they were to filtrate our food and processing systems."

She recommends the country and even the state spend more money on teaching coding in schools.

“Information technology expertise is the number one critical source that we have to come up with within this country,” Baringer said.

Back in October, Auditor Nicole Galloway released the most common cybersecurity risks of local governments. The top issues were former employees didn't have their access to the computer system removed and passwords weren't changed enough, they were shared by users, and weren't complex enough.

### **24. Units train for nuclear forensics mission during Exercise Prominent Hunt in Delaware**

20th CBRNE Command, Apr. 11 | Walter Ham

BETHANY BEACH, Del. -- Highly specialized American Army units from the U.S. Department of Defense's premier all hazards command trained for interagency nuclear forensics missions during Exercise Prominent Hunt at Bethany Beach, Delaware, April 4-7.

The 20th Chemical, Biological, Radiological, Nuclear, Explosives Command's Nuclear Disablement Team 2 and 3rd CBRNE Response Team, 9th Chemical Company, qualified to serve as a part of the National Technical Nuclear Forensics Ground Collection Task Force.

The Air Force Technical Applications Center also qualified to support the task force during the exercise. NTNF members who have recently served on prepare-to-deploy orders for the task force, including members of NDT 3, 2nd CRT from the 46th Chemical Company, Army Public Health Center and AFTAC, served as observers and controllers during the exercise.

As a part of an interagency task force lead by the FBI, the NTNF Ground Collection Task Force gathers and packages samples of radioactive fallout that enable partner agencies to determine the source.

The NDT 2 and CRT 3 are both part of the 20th CBRNE Command, the U.S. Department of Defense's premier all hazards formation.

Headquartered on Aberdeen Proving Ground, Maryland, the 20th CBRNE Command is home to 75 percent of the Active Duty U.S. Army's Explosive Ordnance Disposal technicians and Chemical, Biological, Radiological, Nuclear specialists, as well as the 1st Area Medical Laboratory, CBRNE Analytical and Remediation Activity, five Weapons of Mass Destruction Coordination Teams and three Nuclear Disablement Teams.

From 19 bases in 16 states, Soldiers and civilians from the 20th CBRNE Command deploy to confront and defeat the world's most dangerous hazards during joint, interagency and allied operations around the world.

Soldiers from the Joint Base Lewis-McChord, Washington-based 3rd CBRNE Response Team, 9th Chemical Company, trained for their NTNF mission of collecting ground samples through crawl, walk and run phases.

“Prominent Hunt promotes tactical and operational readiness to react in a nuclear emergency to meet the Army's current demands,” said 1st Lt. Samantha K. Roberson, the team leader for CRT 3. “This mission specifically gives our Soldiers a further understanding on the radiation and nuclear portion of our mission-essential tasks. These lessons they can internalize and apply to future missions and carry on to their future Soldiers.”

According to Roberson, CRTs have to stay ready for all four weapons of mass destruction threats: chemical, biological, radiological and nuclear.

"This task force gives us a rare opportunity to exercise our radiological and nuclear capabilities. In this particular mission, we stress our ground sampling and escort tasks alongside the FBI and Department of Energy to create a joint task force," said Roberson.

A former enlisted Soldier from Baton Rouge, Louisiana, Roberson was commissioned into the U.S. Army Chemical Corps in August 2019 after earning a bachelor's degree in Environmental Science and Toxicity from the University of Louisiana at Lafayette, Louisiana.

"I felt drawn to the Chemical Corps as it naturally pairs with my degree," said Roberson. "The Chemical Corps has provided me with the opportunity to learn more of what I'm passionate about, while protecting my fellow Soldiers from any CBRN threats."

NDTs directly contribute to the nation's strategic deterrence by staying ready to exploit and disable nuclear and radiological WMD infrastructure and components to deny near-term capability to adversaries. They also facilitate follow-on WMD elimination operations.

As the U.S. Department of Defense's nuclear subject matter experts, Nuclear Disablement Teams serve as an informed interface between the CBRNE Response Team and the Department of Energy technical experts. The U.S. Army's three Nuclear Disablement Teams — NDT 1 "Manhattan," NDT 2 "Iron Maiden" and NDT 3 "Vandals" — are all stationed on Aberdeen Proving Ground, Maryland.

Maj. Stacey M. Yarborough, the deputy team leader for the Nuclear Disablement 3, served as an observer during the exercise.

"The NDTs are the DoD component lead," said Yarborough. "We exercise mission command over elements from a CBRNE Reconnaissance Team, the Air Force Technical Applications Center and augmentations from the 20th CBRNE Headquarters."

Yarborough said NDTs plan and battle track ground collection missions through a variety of Department of Defense communication systems.

"Our Medical Science Officer and Health Physics Technician noncommissioned officers monitor all members of the ground collection team for radiation exposure forward of the DoE hotline," said Yarborough, a Nuclear and Countering Weapons of Mass Destruction officer from Felton, Delaware.

Lt. Col. Ronald C. Lenker, the team leader for NDT 2, served as the task force leader during exercise, a role usually reserved for an FBI Special Agent.

"The Ground Collection Task Force is led by the FBI as the task force leader and the Department of Energy also provides a deputy task force leader," said Lenker. "In this particular scenario, no FBI agent was available, so I'm the acting task force leader for this exercise."

An 18-year Army veteran from Wiconisco, Pennsylvania, who has deployed to Kuwait and Iraq, Lenker has participated in Exercise Prominent Hunt six times, including three exercises as a player and three as an observer and controller.

"Prominent Hunt is extremely important to the NTNF GCTF," said Lenker. "This exercise demonstrates several agencies from the federal government can come together, swiftly form a cohesive task force and accomplish the mission. In this case, attribution for the detonation of a terrorist initiated improvised nuclear device."

Lenker said the task force came together to navigate around obstacles during the exercise. When one system went down, the operations team used a joint mapping tool in Humvee to track the plume of a simulated detonation.

"The highlight for me is seeing my Soldier and Airman teammates overcoming challenges as they arise," said Lenker. "It's this type of problem solving skills that set our military personnel apart from any other military in the world in my opinion."

## **COMMENTARY**

### **25. Time to relearn nuclear escalation management for the 21st century**

***"The US has spent the last three decades siloing nuclear capabilities off into their own box, and hence we are behind the ball on thinking of how to deal with an increasingly desperate foe who sees nuclear weapons not as a final instrument, but as part of the broader orchestra," writes Robbin Laird***

BreakingDefense.com, Apr. 11 | Robbin Laird

*This is the latest in a series of regular columns by Robbin Laird, where he will tackle current defense issues through the lens of more than 45 years of defense expertise in both the US and abroad. The goal of these columns: to look back at how questions and perspectives of the past should inform decisions being made today.*

\*\*\*

No pure conventional warfighting doctrine against 21st century authoritarian powers will work when those powers have the threat of nuclear fire in their pocket. That was always true, but the Ukraine situation has laid it bare — and this should have a profound impact on US and allied thinking about dealing with those powers going forward.

I recently discussed this situation with Paul Bracken, my colleague whom I met when he was working for military strategist Herman Kahn and myself for future National Security Advisor Zbig Brzezinski, where we first started discussing together "thinking about the unthinkable" as a key to deterrence. We represent a legacy of those who dealt with the blending of nuclear and conventional forces in an overall warfighting strategy. Unfortunately, while that discussion ended with the collapse of the Soviet Union, it has sadly returned with the loose alliance of 21st century authoritarian powers.

Let there be no question: with the war in Ukraine, the nuclear weapons issue has returned as a central one in terms of warfighting, deterrence, and escalation management. The problem is, the US has spent the last three decades siloing nuclear capabilities off into their own box, and hence we are behind the ball on thinking of how to deal with an increasingly desperate foe who sees nuclear weapons not as a final instrument, but as part of the broader orchestra.

President Joe Biden has declared that Russia leader Vladimir Putin is a war criminal and must go. The general narrative is that Putin is delusional and will lose in Ukraine, and we should blow past any threats from what is, essentially, a madman. After all, nuclear weapons were never used in the Cold War, despite all the tensions and rhetoric of the time.

But we forget how we navigated the near-nuclear war in 1983, where rhetoric needed to be contained, and how back channels managed the crisis. Those type of structures are in short supply today, which is why I have emphasized over the past few years that the missing piece of the puzzle for dealing with 21st century authoritarian powers are crisis management skills designed not for peer competitors but powers who seek ascendancy over the liberal democracies.

As Bracken put it: "The kinds of capabilities you are referring to, which existed in the 1980s, are simply gone today. The Biden Administration is in a hysteria to convince the public that Vladimir Putin is an evil person. End of story, end of paragraph, that's all you need to know."

What we have now is a new situation which we have not imagined or thought about: urban warfare and threats to use nuclear weapons to stop any NATO attacks on Russian forces and territory. As Bracken noted, "Putin is creating new doctrine here, but he is clearly winging it — and that is dangerous."

Which is to say, the idea of Putin using a nuclear weapon — especially a lower-yield, "tactical" nuclear weapon — as part of an otherwise conventional war cannot be ruled out, especially if Ukrainian forces continue to take back territory and fight off the Russian military. How the US and its allies would respond is incredibly unclear.

The President has said that we would respond in kind to the Russian use of Weapons of Mass Destruction (WMDs). I simply don't think we have anything like proportionate deterrence, and really doubt that NATO has a strategic or operational consensus on any proportionate response to Russia using WMD.

I spent a significant amount of time in Western Europe in the 1980s dealing with the Euromissiles crisis, where there was clearly no consensus among the allies on such weapons, and indeed there was concern on the US side that even if there was a mobilization towards activating the tactical nuclear force, some allies would forcibly stop us. I have spent a great deal of time in Europe since that time, and there clearly is no consensus on how to attack Russia if Russia were to invade NATO territory.

President Donald Trump questioned the usefulness of Article V several times, and in my view, it's better for a president not to raise that question publicly and cast doubts about American commitments. But the reality is if you look at Europe today, there are some states very serious about defense, and more who are not. So, no matter what one claims, the question of who would fight, how they would fight, and actually what the U.S. capabilities and approach are to a nuclear-capable opponent is a key question. That counter terrorism and counter insurgency have dominated operations for the past twenty years has allowed the US defense establishment to not think about this question.

Bracken underscored how he sees this challenge. "I know that people say that it's the threat of World War III that stops the Russians. But it's like Stalin used to say, the NATO treaty is a piece of paper. It does not require that the US go to war to defend Montenegro or France or Britain. It only says that an attack on one is an attack on all. I really wonder if the NATO alliance would hold together if the threat of going nuclear was imminent. [French strategist] Raymond Aron used to come to Hudson meetings and say 'there are no true alliances in the nuclear age.'"

The crisis management elements of this loom especially large. How do you negotiate an end to hostilities? And how do you prepare the ground after a successful negotiation for the new conflict?

Putin has seized the energy and rare earth mineral parts of Ukraine, and is leveling ports on the Black Sea to secure a land bridge in that area. Will anyone really be able to dislodge him without a significant attack on Russia's warfighting capacities on Russia itself? Bracken highlighted this challenge as follows: "There's the whole topic of an armistice, versus a ceasefire, versus an agreed treaty to end the war. It sounds hard at the moment, but I haven't even seen anyone distinguish among these things. It's only a handful of people that are even proposing to consider shifting our policy to getting the war to terminate. What is the future of Ukraine from a US perspective? Finlandization?"

In short, rethinking how to deal with various forms of conflict and warfare with the 21st century authoritarian states, notably because they either are allied with one another or certainly play off of one another, is being driven by the return of the nuclear weapons dimension.

## 26. Biden's Nuclear Strike Policy Is the Same as Russia's

TheIntercept.com, Apr. 11 | Sara Sirota

During his campaign for president, Joe Biden penned an article in *Foreign Affairs* titled “Why America Must Lead Again.” In it, he laid out his thoughts on the most dangerous arms in the U.S. stockpile. “I believe that the sole purpose of the U.S. nuclear arsenal should be deterring—and, if necessary, retaliating against—a nuclear attack,” the then-candidate wrote. “As president, I will work to put that belief into practice, in consultation with the U.S. military and U.S. allies.”

The declaration gave arms control advocates hope that the president would adopt a no-first-use policy — meaning that the U.S. would commit to never initiating a nuclear conflict. Current policy allows the president to strike first in an extreme circumstance, like in response to a devastating chemical attack, which can lower the threshold for nuclear war to break out. But now, at a time when the world is closer to a nuclear exchange than ever, thanks to Russian President Vladimir Putin's devastating war against Ukraine, Biden has gone back on his word.

On March 29, the White House released a short summary of Biden's upcoming strategy on nuclear forces indicating his decision: “The United States would only consider the use of nuclear weapons in extreme circumstances to defend the vital interests of the United States or its allies and partners.”

This effectively makes the U.S. stance on nuclear employment indistinguishable from Russia's. According to its military doctrine, Russia may use a nuclear weapon if it faces an “existential” threat — a fact of which Putin has reminded observers around the world in recent weeks as he pummels Ukraine.

Biden's decision to keep U.S. policy so similar to Russia's amounts to a missed opportunity to build an international coalition against nuclear conflict, disarmament advocates say.

Sen. Ed Markey, D-Mass., co-chair of the Nuclear Weapon and Arms Control Working Group, took to the Senate floor on March 31 to indict the policy: “Unfortunately, our American democracy and Russia's autocracy do share one major thing in common: Both our systems give the United States and Russian presidents the godlike powers known as sole authority to end life on the planet as we know it by ordering a nuclear first strike.”

According to the *Wall Street Journal*, which first reported Biden's decision to maintain first-strike authority on March 25, the president faced pressure from allies to renege on his campaign pledge. He met with European partners late last month amid apparent concerns that Russia may use a nuclear or chemical weapon as part of its war against Ukraine. (NBC reported last week that three U.S. officials admitted there is no evidence that Russia brought chemical weapons near Ukraine.)

Tom Collina, policy director at the nuclear arms control group Ploughshares Fund, argued that rolling back the strike authority could have benefited international efforts against Russia. “Putin is threatening the first use of nuclear weapons to hold Ukraine hostage and keep the US and NATO out,” he wrote to *The Intercept*. “This is nuclear blackmail, and its a dangerous precedent that we must oppose. Its therefore deeply disappointing that the Biden administration just missed a key opportunity to reject first use. Instead, Biden's policy also allows first use and is essentially the same as Russia's, and this undermines Biden's ability to build international opposition to what Putin is doing.”

That may be the case for lawmakers of at least one ally. On April 1, dozens of members of the Progressive Caucus of Japan, a minority coalition to the left of the conservative Liberal Democratic Party fronted by Japanese Prime Minister Fumio Kishida, joined American lawmakers in the Congressional Progressive Caucus to call on Biden to commit to a no-first-use policy. “A U.S. declaration stating that it would never start a nuclear war, supported by Japan, would breathe new life into international efforts to reduce and eventually eliminate the danger of nuclear war,” the

letter, led by CPC Chair Pramila Jayapal, D-Wash., said. The lawmakers cited the importance of such a policy as tensions between the U.S. and China, also a nuclear power, continue to worsen. (China owns significantly fewer nuclear weapons than the U.S. or Russia, but the Defense Department says it's engaging in a buildup.)

Other Democrats have remained quiet or indicated tacit support of the status quo. Republicans took advantage of a Senate Armed Services Committee hearing with the head of U.S. Strategic Command, Adm. Charles Richard, last month to defend the logic of first-strike authority. When Richard said that changes to declaratory policy would harm relationships with allies, the panel's chair, Sen. Jack Reed, D-R.I., did not question the argument, and no other Democrats broached the subject.

Despite the dangers that nuclear weapons pose, Democrats are allowing their fear of appearing weak amid Russia's war on Ukraine to triumph over meaningful reform that could make the world safer. "I'm certainly in favor of making it clear that the United States is not going to be the first to use nuclear weapons," Sen. Chris Murphy, D-Conn., told *The Intercept*. "I'd have to think a little bit more about whether this is the right time or what the mechanism would be to make that policy."

He downplayed the idea, though, that the U.S.'s strike policy is indistinguishable from Russia's: "Russia's policy is whatever is in Vladimir Putin's head at the moment."

While maintaining first-strike authority, Biden's nuclear policy is slated to roll back certain nuclear weapon programs started under the Trump administration. According to the *Wall Street Journal*, he's planning to get rid of the B83 gravity bomb, the largest in the U.S. nuclear stockpile, which was on track for retirement until the previous White House decided to keep it around. Biden's also planning to get rid of a nuclear-armed, sea-launched cruise missile that the Trump administration had greenlighted.

"If media reports are true, President Biden has missed an historic opportunity to reduce the role of existential nuclear weapons in U.S. military strategy."

Biden has, however, reportedly decided to stick with the Trump administration's plan to deploy the "low-yield" W76-2 warhead on nuclear submarines. This class of weapons has lower explosive power compared with the most destructive nuclear weapons, like intercontinental ballistic missiles, potentially lowering the threshold for nuclear war.

Russia notoriously has more low-yield nuclear weapons than the U.S., which has raised concerns about their potential use in the war against Ukraine, especially if Putin believes that he has no other way to defeat the resistance. Murphy called for the U.S. to take action to prevent their proliferation worldwide.

"I think it's time for us to lead a global conversation around the proliferation of these smaller tactical nuclear weapons, because they will ultimately allow a madman to justify using it and believing they can ultimately get away with it," he said.

In the meantime, Biden has foregone his primary chance to rally allies around the push for a no-first-use policy. "If media reports are true, President Biden has missed an historic opportunity to reduce the role of existential nuclear weapons in U.S. military strategy," said Markey in a statement following the *Wall Street Journal* report. "Retaining a warfighting role for U.S. nuclear weapons is a triumph for the trillion-dollar defense industry, but it is a tragedy for everyone counting on the President to keep his campaign promise to make deterrence the sole purpose of nuclear weapons."

*--Sara Sirota is a Politics Reporter at The Intercept. She was previously an Air Force reporter at Inside Defense. She has a master's in security studies from Georgetown University and bachelor's in political science from Colgate University. She hails from New York and is now based in Washington, D.C.*

China is the only major nuclear power in the world to announce the no-first-use policy, and it maintains the minimum level of nuclear capability required to safeguard national sovereignty and territorial integrity, Zhang said, noting that facing the current needs in national defense, China needs to continue to develop its nuclear arsenal, and the US is exaggerating it.

### **30. Russian army uses Kinzhal hypersonic system to destroy Ukrainian command station in Donetsk region – Defense Ministry**

Interfax (Russia), Apr. 11 | Not Attributed

MOSCOW -- The Russian Armed Forces used a hypersonic weapon - a Kinzhal airborne missile system - to destroy the Ukrainian army's command and control station in Donbas.

"A dug-in, well-protected command and control station of the Ukrainian group of forces in Donbas was destroyed with a Kinzhal airborne missile system in the vicinity of the locality of Chasiv Yar in the Donetsk region on the afternoon on April 11," Russian Defense Ministry spokesman Igor Konashenkov said on Monday.

# DEFENSE MORNING CLIPS

As of 0430 Hours, April 12

## OVERVIEW

President Biden held a virtual meeting with Indian Prime Minister Narendra Modi as Secretary of Defense Lloyd Austin and Secretary of State Antony Blinken met with their Indian counterparts to highlight a shared vision for a free and open Indo-Pacific, according to the *Associated Press*. Separately, Pentagon spokesperson John Kirby said the U.S. was monitoring, but could not confirm, claims by Ukrainian President Volodymyr Zelenskyy that Russia intended to unleash chemical weapons on Ukrainian units in Mariupol as part of an impending assault in the east, the *Washington Post* reported. Also of note, Austrian Chancellor Karl Nehammer met with Russian President Vladimir Putin to reaffirm Europe's commitment to toughening sanctions against Russia as long as the war persisted, while warning that Russia likely intended to intensify the violence, the *New York Times* wrote.

## TOP STORIES

### **1. Biden Urges Modi Not to Step Up Indian Use of Russian Oil**

*Associated Press, Apr. 11 (2245) | Josh Boak, Fatima Hussein and Ashok Sharma*

President Joe Biden asked India's Narendra Modi on Monday not to accelerate the buying of Russian oil as the U.S. and other nations try to cut off Moscow's energy income following the invasion of Ukraine. The Indian prime minister made no public commitment to refrain from Russian oil, a source of tension with the U.S. Meeting by video call, Biden told Modi that the U.S. could help India diversify its sources of energy, according to press secretary Jen Psaki. Even though India receives little of its oil from Russia, it stepped up recently with a major purchase as other democracies are trying to isolate Russian President Vladimir Putin.

### **2. New assault in east Ukraine expected**

*Washington Post, Apr. 12 (0115), Pg. A1 | Dan Lamothe, Kim Bellware and Mary Ilyushina*

Ukraine and its international partners are bracing for Russia to launch a new offensive, with the Pentagon on Monday saying there are signs that the Kremlin has begun reinforcing and resupplying its forces in the eastern Donbas region as a top official in Moscow vowed there would be no letup in hostilities before the next round of peace talks.

### **3. A Talk With Putin Deepens the Fear of Worse Attacks**

*New York Times, Apr. 12 (0300), Pg. A1 | Steven Erlanger and Anton Troianovski*

Austria's chancellor visited President Vladimir V. Putin of Russia on Monday -- the first Western leader to see him in person since the Ukraine invasion -- and said he came away feeling not only pessimistic about peace prospects but fearing that Mr. Putin intended to drastically intensify the brutality of the war.

## **DEFENSE DEPARTMENT**

### **4. After hearing Silicon Valley complaints, Hicks says no ‘magical’ fix to acquisition**

*BreakingDefense.com, Apr. 11 (1450) | Valerie Insinna*

When more than 15 space- and software-related startups gathered at the Space Force’s SpaceWERX innovation hub to speak with Deputy Defense Secretary Kathleen Hicks, it meant an opportunity to share horror stories about bureaucratic red tape they’d encountered while working with the Defense Department — a near universal experience among attendees.

## **EXECUTIVE/LEGISLATIVE**

### **5. U.S. Debates Using Hague Court To Investigate Russian Atrocities**

*New York Times, Apr. 12 (0300), Pg. A1 | Charlie Savage*

The Biden administration is vigorously debating how much the United States can or should assist an investigation into Russian atrocities in Ukraine by the International Criminal Court in The Hague, according to officials familiar with internal deliberations. But laws from 1999 and 2002, enacted by a Congress wary that the court might investigate Americans, limit the government’s ability to provide support. And the United States has long objected to any exercise of jurisdiction by the court over citizens of countries that are not part of the treaty that created it - like the United States, but also Russia.

### **6. For America’s security aid programs, who will run the show?**

*Military Times Online, Apr. 11 (0900) | Joe Gould*

With the world transfixed by Russia’s invasion of Ukraine and debates breaking out on Twitter over whether the U.S. should send the country fighter aircraft and missile defense systems, security assistance — usually a wonky topic — is having a moment. But it’s not just about public attention. With Democrats holding the reins in Washington, State Department officials have recommended a list of reforms to America’s globe-spanning security aid programs.

### **7. New Head Of Europe Command Expected**

*Wall Street Journal, Apr. 12 (0200), Pg. A6 | Nancy A. Youssef and Gordon Lubold*

A top American Army general in Europe is expected to be elevated to lead all U.S. and allied forces on the continent, U.S. officials said, marking the biggest change to NATO military leadership since Russia invaded Ukraine in February. The Pentagon is also set to name a new general to lead Special Operation forces, the officials said. Both would succeed commanders who are expected to retire this year as part of a normal rotation of commanders.

## **INDO-PACIFIC**

**8. Despite Russia tensions, U.S. and India deepen defense ties**

*Defense News Online, Apr. 11 (1932) | Joe Gould*

Eyeing China, U.S. and India committed to deeper defense ties in space and cyberspace as well as an expansion of their joint military exercises, officials from both countries announced Monday. Defense Secretary Lloyd Austin and U.S. Secretary of State Antony Blinken met in Washington with their Indian counterparts — Defense Minister Rajnath Singh and External Affairs Minister Subrahmanyam Jaishankar — amid rising tensions between the allies over India’s muted criticism of Russia’s invasion of Ukraine.

**9. India, US to hold dialogue on artificial intelligence**

*Press Trust of India, Apr. 12 (0137) | Lalit K Jha*

India and the US have agreed to hold a dialogue on artificial intelligence to harness opportunities for joint innovation and cooperation in new domains, the two countries announced after the 2+2 ministerial.

**10. US has not yet made determination on potential sanctions or waivers to India under CATSAA law – Blinken**

*Press Trust of India, Apr. 12 (0209) | Lalit K Jha*

The US has not yet made any decision on potential sanctions or waivers to India under CATSAA law for its purchase of the S-400 missile defence system from Russia, Secretary of State Antony Blinken has said. The US administration is required under its domestic law, Countering America’s Adversaries through Sanctions Act (CAATSA) to impose sanctions on any country that has significant transactions with Iran, North Korea or Russia.

**11. Australia to Fund \$1.1 Billion Darwin Port to Stem China Threat**

*Bloomberg News, Apr. 12 (0022) | Ben Westcott*

Australia will build a new A\$1.5 billion (\$1.1 billion) port in Darwin to boost the export of gas and critical minerals, in competition with the city’s main port which was controversially leased to a Chinese-owned company in 2015.

**12. With Threats All Around, Japan Moves to Shed Its Pacifist Constraints**

*New York Times, Apr. 12 (0300), Pg. A9 | Motoko Rich*

Late in February, just days after the Russian invasion, Ukraine asked Japan to ship an assortment of military equipment, from antitank weapons and ammunition to electronic radar and bulletproof vests. Although it could not compare with the airlift of arms sent by American and European officials, the military aid marked a decisive moment in Japan’s evolution away from the pacifist identity it has embraced since the United States pushed to insert a clause renouncing war into Japan’s postwar Constitution.

**13. U.S. Carrier Group Arrives as North Korea Ramps Up Threats**

*Bloomberg News, Apr. 12 (0415) | Jon Herskovitz*

A U.S. aircraft carrier group was in international waters east of the Korean Peninsula for the first time in nearly five years, reports said, as Pyongyang is poised for provocations that could include its first nuclear test since 2017.

## **EUROPE**

### **14. Europe Moves to Arm Ukraine as Sanctions Fail to Sway Putin**

*Bloomberg News, Apr. 11 (1141) | Kevin Whitelaw, Marc Champion and John Follain*

Ukraine's allies in Europe are moving beyond their usual emphasis on diplomacy and sanctions in response to Russia's invasion of Ukraine, with a new focus on urgently arming Kyiv as the best chance at changing Vladimir Putin's decision-making.

### **15. NATO Anti-Aircraft Weapon Donations Aren't Covering Ukraine Losses**

*Newsweek Online, Apr. 11 (1237) | David Brennan*

Slovakia last week became the first country to donate a sophisticated Russian-made S-300 anti-aircraft system to Ukraine, as leaders in Kyiv stress the need for more and better anti-aircraft weapons to blunt Russia's punishing aerial bombardment. But the Slovakian system alone is not enough to replenish Ukraine's mauled anti-aircraft network. As Kyiv prepares to face Russian President Vladimir Putin's renewed offensive in the eastern Donbas region, Ukrainian leaders are still stressing the need to defend their airspace and the importance of Western support in doing this.

### **16. Russian forces left bombs, death and destruction around Kyiv. Now, a painstaking demining operation is underway**

*CNN.com, Apr. 11 (2008) | Frederik Pleitgen and Vasco Cotovio*

As Russian forces retreated, they left behind scores of unexploded shells and bombs in addition to mines they planted to slow down the Ukrainian advance, to protect their withdrawal, or perhaps, simply to scorch the earth. Russian forces have been accused of regularly using cluster munitions against civilian targets in Ukraine. Earlier this month, the UN Human Rights Monitoring Mission in Ukraine said it received credible allegations that Russian armed forces have used cluster munitions in populated areas at least 24 times.

### **17. U.S. Army chief of staff on hand as ally Lithuania announces training for Ukrainians**

*Stars and Stripes Online, Apr. 11 (0934) | John Vandiver*

Lithuania will host a mission to train Ukrainian soldiers to use new weaponry that the Baltic country's fellow NATO allies are sending Kyiv to assist in its war against invading Russian forces. Lithuanian defense officials announced the plan Sunday, the same day U.S. Army chief of staff Gen. James McConville was in the country for security talks.

**18. Albania's former 'Stalin City' looks West with NATO airbase**

*Reuters, Apr. 12 (0139) | Not Attributed*

In an Albanian city once named for Soviet dictator Joseph Stalin, dozens of Soviet- and Chinese-made planes rust in the open air on a former communist airbase, some with flat tyres, others covered with dust. The site in the central city now called Kucova is being transformed into a modern NATO airbase, a symbol of Albania's westward shift -- and a key military buffer in Europe as Russia wages war in Ukraine. The base, due to be completed in 2023, will give the "alliance an important strategic facility in the Western Balkans, within short reach of the Mediterranean, Middle East and the Black Sea region", the NATO official said.

**RUSSIA**

**19. Russian Navy Taking on Resupply Role Nearly 50 Days Into Ukrainian Invasion**

*U.S. Naval Institute News, Apr. 11 (1829) | Heather Mongilio*

Russian Navy ships in the Black Sea are currently resupplying troops in Ukraine instead of playing an offensive role, a senior defense official said Monday. Day 47 into the Ukrainian invasion, and the Russian Navy continues to mostly support the invasion. The country has a couple dozen ships in the Black Sea and the Sea of Azov, the senior defense official told reporters.

**20. Russia's invasion has escalated a brewing battle over space**

*Los Angeles Times, Apr. 12 (0300), Pg. A5 | Noah Bierman*

A 57-second video posted by the Russian government last month caught the attention of scientists and diplomats, but not in a way that inspired optimism about the future of global cooperation in outer space. The dark yet jaunty satirical video, depicting what would be the certain demise of the station, presaged more serious threats to an endeavor that has come to symbolize post-Cold War cooperation in space.

**MIDDLE EAST**

**21. Iran Says Nuclear Deal in 'E.R.' Hanging on U.S. Decision**

*Bloomberg News, Apr. 11 (0500) | Arsalan Shahla*

Iran said the 2015 nuclear deal is alive but lingering in the "emergency room," with its fate resting on a decision by the U.S. that could lift sanctions on Tehran's economy and oil exports. Saeed Khatibzadeh, Iran's foreign ministry spokesman, told reporters the Islamic Republic had finalized all the details needed to revive the landmark accord with other world powers involved in stalled negotiations in Vienna.

**AFGHANISTAN-PAKISTAN**

**22. Pakistan Picks Interim Prime Minister Whose Family Is Dogged by Graft Accusations**

*New York Times, Apr. 12 (0300), Pg. A6 | Salman Masood and Christina Goldbaum*

The Pakistani Parliament selected the opposition leader Shehbaz Sharif to become the country's prime minister on Monday, ushering in a new government after the ouster of Imran Khan and capping a week of political turmoil that pushed the fragile democracy to the brink. Mr. Sharif is the younger brother of Nawaz Sharif, who served as prime minister three times, and like other family members, he has been dogged by accusations of graft and malfeasance that were the focus of several corruption investigations. Now, Shehbaz Sharif's rise to prime minister is seen in some circles as an implicit rebuke of Mr. Khan's professed mission of dismantling Pakistan's political dynasties and rooting out corruption in politics.

### **23. A Purple Heart reminds us that U.S. troops are still fighting in Northern Africa**

*Task & Purpose, Apr. 11 (1315) | Max Hauptman*

Last week, Master Sgt. Steven Corley, an intelligence noncommissioned officer with 2nd Battalion, 20th Special Forces Group (Airborne) was awarded the Purple Heart during a ceremony in Stuttgart, Germany. Corley was wounded in January "while serving as the leader of a six-person team in northwest Africa where he was responsible for intelligence exploitation and integration with partners and allies." As Gen. Steven Townsend, the AFRICOM commander, said during the ceremony on Friday, "Wherever you look in Africa, when it's somewhere tough or dangerous, SOCAFRICA is there."

### **24. EU halting military training in Mali but staying in Sahel**

*Agence France-Presse, Apr. 11 (1505) | Not Attributed*

The EU on Monday decided to halt its military training missions in Mali but will keep a presence in the Sahel, the bloc's top diplomat said on Monday. "We are halting the training missions for the (Malian) armed forces and national guard," EU foreign policy chief Josep Borrell told a media conference, but added: "The Sahel remains a priority. We're not giving up on the Sahel, far from it. We want to commit even more to that region."

## **ARMY**

### **25. The Army's transformation begins with these new units**

*Army Times Online, Apr. 11 (1135) | Todd South*

Major changes to the Army's doctrine, equipment and operations have arrived in upgraded gear, future-focused technology and new ways to do battle. But where these elements converge is in units filled with soldiers. And the Army isn't letting its soldiers sit around and wait for new gear before figuring out how to fight a peer threat in large scale combat. They're making major shifts in how big formations contribute while also tinkering with the look, function and capabilities of smaller, subordinate units.

### **26. Electronic warfare and drone swarms: Here's the Army's plan for EDGE 22**

*BreakingDefense.com, Apr. 11 (0745) | Andrew Eversden*

The US Army will be “working heavily” with electronic warfare and experimenting with large drone swarms as part of an upcoming sensor-to-shooter experiment in the Utah desert, according to a senior Army aviation official. “We’ll basically be scrimmaging with our partners and allies,” Maj. Gen. Walter Rugen, director of the Future Vertical Lift Cross-Functional Team, said during his presentation at the Army Aviation Association of America conference in Nashville, Tenn.

## **MARINE CORPS**

### **27. Four Sikhs Sue Marines Over Ban on Wearing Beards While Deployed**

*New York Times, Apr. 12 (0300), Pg. A20 | Dave Philipps*

A Marine artillery captain named Sukhbir Singh Toor has been on a mission over the past year to become the first Sikh in the United States Marine Corps allowed to openly practice his religion while in uniform. During that time he has won a string of victories against the strict dress standards of the Marine Corps, and he can now wear the beard, long hair and turban required of a faithful Sikh while on duty. But recently, the Marine Corps dug in, refusing to allow him or any other Sikh to wear a beard on a combat deployment or during boot camp, saying that beards would hinder the corps’s ability to function and put lives at risk. On Monday, Captain Toor and three other Sikhs sued the Marine Corps in U.S. District Court for the District of Columbia, saying the corps’s refusal to grant a religious waiver is arbitrary and discriminatory, and violates the constitutional right to free exercise of their religion.

### **28. Surface Navy tackling diversity as part of push for better retention, leadership**

*Military Times Online, Apr. 11 (1756) | Megan Eckstein*

As the U.S. Navy tries to boost the warfighting performance of all its units, the surface force is looking at diversity and leadership as ways to get after that. Commander of Naval Surface Forces Vice Adm. Roy Kitchener said the surface force is the most diverse of all the Navy’s major warfare areas, but he’s not satisfied and thinks that focusing on diversity and inclusion can help the force gain further advantage over potential adversaries in multiple ways.

### **29. A Sailor With Diagnosed Mental Health Issues Says He’s Being Targeted for Seeking Help**

*Military.com, Apr. 11 (1923) | Konstantin Toropin*

Jatzael Alvarado Perez began struggling with life aboard the destroyer USS Farragut last year. The ship was in the process of getting ready to deploy, and a combination of the conditions aboard the Mayport, Florida-based ship and long stretches at sea were taking a toll on the 23-year-old sailor. After a couple of false starts, Perez would take the advice of a chaplain and seek help for the growing strains on his mental health, eventually receiving a diagnosis of a mood disorder. Instead of getting that help, though, he’s faced repeated disciplinary actions, a

positive drug test that suddenly wasn't, allegations of making it all up and, finally, confinement to the ship and a reduction in rank. Eventually, the situation drove his wife to spill everything in a post on Facebook.

## **NATIONAL GUARD**

### **30. Space National Guard put on indefinite hold**

*SpaceNews Online, Apr. 11 (1206) | Sandra Erwin*

Instead of having a dedicated reserve force, the U.S. Space Force would have a regular active-duty force with full-time and part-time members, according to a proposal the Department of the Air Force submitted to Congress April 1. The proposal approved by Air Force Secretary Frank Kendall would establish in law “a new approach to managing reserve component forces by merging what has traditionally been called active-duty forces and reserve forces into a new component that provides full-time and part-time service options to Guardians,” Kendall’s spokesman Lt. Col. Justin Brockhoff, said in a statement to SpaceNews.

## **INSTALLATIONS**

### **31. Students, staff remain wary of tap water**

*Honolulu Star-Advertiser, Apr. 11 (N/A), Pg. A1 | Esme M. Infante*

At the 13 Oahu schools affected by the Navy’s water contamination crisis, now that their water supply has been declared safe, the faucets are finally flowing. However, trust in the reported safety of the water still is not.

## **NOTABLE COMMENTARY**

### **32. Putin’s War Roils U.S.-India Ties**

*Wall Street Journal, Apr. 12 (0200), Pg. A15 | Walter Russell Mead*

The headlines focused on Europe last week as Russia regrouped for another brutal assault on Ukraine, but the Indo-Pacific is also heating up. Kurt Campbell, senior Asia policy maker at the National Security Council, planned a trip to the Solomon Islands to stave off a potential Chinese diplomatic coup, while President Biden added a virtual meeting with Indian Prime Minister Narendra Modi even as Secretary of State Antony Blinken and Defense Secretary Lloyd Austin prepared for in-person meetings with their Indian counterparts. In the long run, both sets of meetings could change world politics more than the struggle in Ukraine.

### **33. A clear U.S. defense of Taiwan**

*Los Angeles Times, Apr. 12 (0300), Pg. A11 | Shinzo Abe*

Russia’s invasion of Ukraine has reminded many people of the fraught relationship between China and Taiwan. But while there are three similarities between the situation in Ukraine and Taiwan, there are also significant differences.

### **34. Deadliest Weapon in Ukraine Is a Cell Phone**

*Bloomberg Opinion, Apr. 12 (0200) | James Stavridis*

As the war in Ukraine pushes well into its second month, much of the outcome thus far — including Russian failures in executing their battle plans — is the result of logistics. Moscow has struggled abysmally to get gasoline, ammunition and food to its frontline troops. On the Ukrainian side, the flow of weapons and other materiel from the North Atlantic Treaty Organization and the U.S. has been breathtaking. But one area of warfare hangs in the balance: information. Despite ample video evidence of widespread war crimes by Russian troops, provided by Ukrainian forces and international journalists, the Kremlin is still managing the information war with energy, imagination and fairly effective counternarratives.

**35. The U.S. military should be prepared for a humanitarian assistance role in the Ukraine crisis**

*Military Times Online, Apr. 11 (2100) | Louis C. Tripoli*

At the most recent NATO summit, President Biden announced \$1 billion in new funding for food, clean water, shelter, and medical care for those in Ukraine and those who have fled to neighboring countries, but there may be a role for more direct assistance if requested by the countries that are affected. In addition to these efforts, it is worth considering the U.S. military's humanitarian assistance and disaster response, or HADR, core capabilities for this crisis. U.S. forces have responded to a myriad of global disasters. No matter the disaster, whether a tsunami, earthquake, or epidemic, the U.S. military provided essential resources, transportation, medical supplies and treatment centers, and logistical support in exigent circumstances. Of course, host nations (or NATO) must first request humanitarian assistance from the U.S. before the processes of invoking U.S. military HADR can go forward.

## TOP STORIES

### **1. Biden Urges Modi Not to Step Up Indian Use of Russian Oil**

Associated Press, Apr. 11 (2245) | Josh Boak, Fatima Hussein and Ashok Sharma

WASHINGTON -- President Joe Biden asked India's Narendra Modi on Monday not to accelerate the buying of Russian oil as the U.S. and other nations try to cut off Moscow's energy income following the invasion of Ukraine. The Indian prime minister made no public commitment to refrain from Russian oil, a source of tension with the U.S.

Meeting by video call, Biden told Modi that the U.S. could help India diversify its sources of energy, according to press secretary Jen Psaki. Even though India receives little of its oil from Russia, it stepped up recently with a major purchase as other democracies are trying to isolate Russian President Vladimir Putin.

"The president also made clear that he doesn't believe it's in India's interest to accelerate or increase imports of Russian energy or other commodities," Psaki said.

At a separate State Department news conference with Secretary of State Antony Blinken, Indian Foreign Minister Subrahmanyam Jaishankar pointedly suggested that Europe, not India, be the focus of Washington's concern about energy purchases from Russia.

"I suspect, looking at the figures, probably our total purchases for the month would be less than what Europe does in an afternoon," he said.

While Biden and Modi ended their session with Biden saying they committed to strengthening their relationship, White House officials could not say if India stood with them in fully condemning Putin, saying the choice ultimately rested with Modi's government. The two leaders will meet in person May 24 in Tokyo for a summit of the Quad, a coalition that also includes Australia and Japan.

At the State Department news conference, Blinken appeared to seek to cajole India into taking a stronger stance on the conflict in Ukraine, appealing to the country's interest in upholding the international rules-based order and pointing out that resource-stretched Indians may be affected by both energy and food shortages caused by the war.

"Russia's aggression stands in stark contrast to the vision that the United States and India share for a free and open Indo-Pacific, and Russia's actions are having a profound impact not just in Europe and Ukraine, but around the world, for example, causing food insecurity and rising prices," Blinken told reporters after the meetings concluded.

India's neutral stance in the war has raised concerns in Washington and earned praise from Russian Foreign Minister Sergey Lavrov, who lauded India this month for judging "the situation in its entirety, not just in a one-sided way."

Biden opened the video conversation by emphasizing the defense partnership between the two countries and by saying the U.S. and India are going to "continue our close consultation on how to manage the destabilizing effects of this Russian war" on food and other commodities.

"The root of our partnership is a deep connection between our people, ties of family, of friendship and of shared values," the U.S. president said.

Modi on Monday called the situation in Ukraine "very worrying," and he noted that an Indian student lost his life during the war. He said he has spoken with Putin and Ukrainian President Volodymyr Zelenskyy, appealing to both of them for peace. India has condemned the killings uncovered in the city of Bucha and has called for an independent investigation.

A senior U.S. official described the Biden-Modi exchange as warm and productive, though the official stressed that India would make its own decisions on how to respond to Putin. The official insisted on anonymity to discuss the meeting.

Biden and Modi discussed how to manage the risks of global instability regarding food, humanitarian relief and climate change, and Modi candidly shared his views about some of the tight links between Russia and China that raise concerns, the official said.

Also Monday, U.S. Defense Secretary Lloyd Austin met in person with Indian Defense Minister Rajnath Singh, and U.S. Secretary of State Antony Blinken met with Indian External Affairs Minister Subrahmanyam Jaishankar.

Austin appealed to India to act together with fellow democracies, a form of government based on the popular consent of the people that stands in contrast to autocracies such as China and Russia.

“Now more than ever, democracies must stand together to defend the values that we all share,” Austin said.

India has refrained from some efforts to hold Russia accountable for its invasion. India abstained when the U.N. General Assembly voted Thursday to suspend Russia from its seat on the 47-member Human Rights Council over allegations that Russian soldiers in Ukraine engaged in rights violations that the U.S. and Ukraine have called war crimes.

The vote was 93-24 with 58 abstentions.

India continues to purchase Russian energy supplies, despite pressure from Western countries to avoid buying Russian oil and gas. The U.S. has also considered sanctions on India for its recent purchase of advanced Russian air defense systems.

Last month, the state-run Indian Oil Corp. bought 3 million barrels of crude from Russia to secure its needs, resisting entreaties from the West to avoid such purchases. India isn't alone in buying Russian energy, however. Several European allies such as Germany have continued to do so, despite public pressure to end these contracts.

Indian media reports said Russia was offering a discount on oil purchases of 20% below global benchmark prices.

Iraq is India's top supplier, with a 27% share. Saudi Arabia is second at around 17%, followed by the United Arab Emirates with 13% and the U.S. at 9%, the Press Trust of India news agency reported.

## **2. New assault in east Ukraine expected**

Washington Post, Apr. 12 (0115), Pg. A1 | Dan Lamothe, Kim Bellware and Mary Ilyushina

Ukraine and its international partners are bracing for Russia to launch a new offensive, with the Pentagon on Monday saying there are signs that the Kremlin has begun reinforcing and resupplying its forces in the eastern Donbas region as a top official in Moscow vowed there would be no letup in hostilities before the next round of peace talks.

U.S. intelligence has observed a massive Russian military convoy making its way south toward Izyum, a strategically important town in northeast Ukraine that Russia seized earlier this month and may use now as a staging point to carry out assaults on larger cities to the south, said Pentagon spokesman John Kirby. The expectation, Kirby added, is that the “same brutal tactics, that same disregard for civilian life and civilian infrastructure, will probably continue” as Russian military commanders concentrate on the Donbas.

The bleak U.S. assessment came amid renewed concerns over the potential for a chemical weapons attack, and as Austria’s chancellor, Karl Nehammer, became the first Western leader to meet face to face with Russian President Vladimir Putin since the incursion began in late February. Nehammer’s trip, according to officials in Vienna, was intended to convey to the Russian leader that, morally, Putin had already lost the war.

“This is not a friendly visit,” the chancellor said in a statement. “I have just come from Ukraine and have seen with my own eyes the immeasurable suffering caused by the Russian war of aggression.”

Amid the global outrage over accusations that Russian troops committed atrocities targeting civilians in areas around the capital, Kyiv, French law enforcement officials prepared to start working on related investigations after arriving in Ukraine on Monday. Prosecutors in France have opened multiple probes into potential war crimes committed against French nationals there.

President Biden, meanwhile, met virtually with Indian Prime Minister Narendra Modi and urged him not to increase Russian energy imports, as the international community seeks to impose greater financial pressure on Moscow to call off its war. Biden said after the meeting that the United States and India are in “close consultation” in managing the “destabilizing” effects of Russia’s actions.

While Russia has pulled back from the suburbs of Kyiv and other parts of northern Ukraine, Putin’s forces continue to attack elsewhere.

Russia has continued to fire artillery, rockets and mortars at the northern city of Kharkiv, Ukrainian military officials said. Russian forces, they said, attempted on Monday to storm the city of Sievierodonetsk in the Donbas region but were unsuccessful.

In a speech relayed via video to South Korean lawmakers, Ukrainian President Volodymyr Zelensky on Monday said the Russian buildup in eastern Ukraine includes “tens of thousands of soldiers and a huge amount of equipment.” With its new offensive, he said, Russia aims to “break our national resistance.”

Zelensky highlighted the destruction in Mariupol, a port city in the south that has been bombarded for weeks.

“There are tens of thousands of dead,” the Ukrainian leader said in his address. “But even despite this, the Russians do not stop the offensive. They want to make Mariupol a demonstratively destroyed city.”

The mayor of Mariupol, Vadym Boychenko, said in an interview with the Associated Press that 10,000 civilians there have been killed. He estimated that the death toll could double amid the Russians’ unrelenting assault, which has made it difficult for rescue workers to reach the dead and the wounded.

The Pentagon also assessed that the number of people killed in Mariupol could be as high as Zelensky described.

“I don’t think anybody’s really going to know until Ukrainian authorities are able to get in there and look and see,” Kirby said. “But if you just look at the imagery, and you see how much the Russians have pounded Mariupol from the air, it’s inconceivable to imagine that there aren’t going to be civilian casualties and that it could be a significant number.”

Zelensky said in a separate video address released late Monday that the government in Kyiv takes “as seriously as possible” an apparent threat to unleash chemical weapons on the Ukrainian units remaining in Mariupol, which earlier in the day claimed on social media that such an attack had already occurred there.

Kirby acknowledged that U.S. officials were aware of those claims but were unable to confirm their veracity, saying that the Pentagon would closely monitor the situation. “These reports, if true, are deeply concerning and reflective of concerns that we have had about Russia’s potential to use a variety of riot control agents, including tear gas mixed with chemical agents, in Ukraine.”

The Russian Embassy in Washington did not immediately respond to a request for comment.

Rescuers on Monday pulled seven more bodies from ruins in Borodyanka, an area northwest of Kyiv that was devastated by airstrikes. The dead there were found in the rubble of two apartment buildings, Ukraine’s emergency services agency said in a Telegram post. Nineteen victims have been removed from the rubble, according to the update, and rescue efforts continue.

A senior European Union official, Josep Borrell, said that he “witnessed the brutal, brutal aggression of the Russian troops against the civilian population” during an official visit to Kyiv with European Commission President Ursula von der Leyen, and that the E.U. would support the work of prosecutors from Ukraine and the International Criminal Court to collect evidence of possible war crimes committed by Russian forces.

Borrell, the E.U.'s high representative for foreign affairs and security policy, predicted that more bloodshed is in store as Russia masses forces in the east and prepares to intensify operations in the next days.

A senior U.S. defense official, speaking on the condition of anonymity under terms set by the Pentagon, said that it was unclear when Russia may launch the new assault but that there were signs it was preparing to do so. So far, this official said, Russia has reinforced its military posture around the city of Donetsk, where Ukrainian forces have battled Russian separatists for several years, by adding artillery units to the southwest.

The convoy now pressing south from the Russian border includes a command element, a support battalion, helicopter support and infantrymen for security, the U.S. official said, calling it "clear evidence" that Russia already is pursuing its goal to seize the Donbas after failing to take Kyiv. Russia has focused the majority of its airstrikes in recent days on the Donbas region, the official said.

Moscow's decision to name Gen. Alexander Dvornikov as its top commander in Ukraine is unlikely to alter Russia's tactics, U.S. officials said. Dvornikov has been dubbed the "butcher of Syria" for the violence his forces inflicted during Russia's military campaign there in the last few years.

"We're probably turning another page in the same book of Russian brutality," Kirby told reporters Monday.

Russia will not pause its military operations in Ukraine before the next rounds of peace talks, Russian Foreign Minister Sergei Lavrov said Monday in an interview with state TV channel Rossiya 24. He added that while Putin had ordered a temporary halt in military action during an early round of talks between Russian and Ukrainian delegates, Moscow has since changed its stance.

"After we became convinced that the Ukrainians were not planning to reciprocate, a decision was made that during the next rounds of talks, there would be no pause until a final agreement is reached and signed," Lavrov said.

In the interview, Lavrov also appeared to recast Moscow's goals, saying its operations in Ukraine are meant to end a course by the United States "towards world domination." Russian officials previously justified their invasion by calling it an effort to "denazify" Ukraine.

Amid the bloodshed, the U.N. Development Program announced a new initiative to support Ukraine over the next two years as it seeks to deal with the devastation and rebuild its institutions for a possible postwar future.

The program will provide on-the-ground services including infrastructure repair, debris removal and new ways to generate income for those who have lost their jobs, U.N. officials said. They cited earlier research finding that the war could wipe out 18 years of socioeconomic progress in Ukraine if it is not resolved decisively, and soon.

### **3. A Talk With Putin Deepens the Fear of Worse Attacks**

*Austria's chancellor said after meeting with Mr. Putin that the Russian president had 'totally adopted the logic of war'*

New York Times, Apr. 12 (0300), Pg. A1 | Steven Erlanger and Anton Troianovski

Austria's chancellor visited President Vladimir V. Putin of Russia on Monday -- the first Western leader to see him in person since the Ukraine invasion -- and said he came away feeling not only pessimistic about peace prospects but fearing that Mr. Putin intended to drastically intensify the brutality of the war.

Describing Mr. Putin as dismissive of atrocities in Ukraine, the visiting chancellor, Karl Nehammer, said it was clear that Russian forces were mobilizing for a large-scale assault in eastern Ukraine's Donbas region, the next phase of a war now in its seventh week.

"The battle being threatened cannot be underestimated in its violence," Mr. Nehammer said in a news conference after the 75-minute meeting at Mr. Putin's residence outside Moscow that the visitor described as blunt and direct.

The Austrian chancellor said he had told the Russian president that as long as people were dying in Ukraine, "the sanctions against Russia will stay in place and will be toughened further."

The Kremlin, playing down the meeting's significance in a terse statement, said only that it was "not long by the standards of recent times."

Even as Mr. Nehammer was visiting, Russian forces were bombarding Ukrainian cities and towns, and President Volodymyr Zelensky of Ukraine said "tens of thousands are dead" in Mariupol, the besieged southern city that has been the scene of the most intense destruction of the war.

And Mr. Putin, despite Russia's military blunders in the war, and for all the Western efforts to ostracize him, still appeared in control of the crisis. He has severely repressed any dissent and benefited from widespread domestic support, continuing revenues from oil and gas sales to Europe, the implicit backing of China and the refusal of much of the world to join sanctions against Russia.

Many commentators in the West had criticized the Austrian chancellor -- his country is a member of the European Union but not of NATO -- for having visited Moscow at all, seemingly playing into Mr. Putin's narrative that American-led efforts to isolate Russia would necessarily end in failure.

Mr. Nehammer told reporters afterward that he had tried to confront Mr. Putin with the horrors of war and of the war crimes that Russian troops are accused of having committed in the Kyiv suburb of Bucha and elsewhere. He said he also had told Mr. Putin about the destroyed Russian tanks he saw on a recent visit to Ukraine, to make clear the enormous loss of life that Russia was suffering.

Mr. Nehammer said that Mr. Putin had brushed aside the accusations of war crimes as having been staged by Ukraine.

At the end, Mr. Putin told him: "It would be better if it" -- the war -- "ended soon," Mr. Nehammer said, but the meaning of those words was unclear, since they could either signal that Mr. Putin was prepared for further peace talks or that he could be readying a quick and brutal assault in the Donbas, where Russian-backed separatists have been fighting Ukraine's military since 2014.

"We can have no illusions: President Putin has totally adopted the logic of war, and is acting accordingly," Mr. Nehammer said. "This is why I believe it is so important to permanently confront him with the facts of the war."

How much more brutal the war could become was signaled in an interview with Eduard Basurin, a separatist commander, aired on Russian state television. Mr. Basurin said that with Ukrainian forces ensconced in underground fortifications at a steel plant in Mariupol, storming the redoubt did not make sense. Instead, he said, Russian forces needed to first block the exits and then "turn to the chemical troops who will find a way to smoke the moles out of their holes."

Mr. Putin was silent on Monday but was expected to speak publicly on Tuesday, when he will travel to the Vostochny spaceport in Russia's far east with President Aleksandr G. Lukashenko of Belarus, his ally, to mark the annual Cosmonauts' Day.

The Feb. 24 invasion of Ukraine has increasingly been framed by Mr. Putin as not against that country, but against the West -- specifically, the United States, as the supposed patron of Mr. Zelensky's government and its aspirations to escape Russia's sphere of influence as a former Soviet republic.

Sergey V. Lavrov, Russia's foreign minister, said in a Russian television interview that aired on Monday that what the Kremlin calls its "special operation" in Ukraine is aimed at rolling back American influence -- which the Russian government characterizes as the root of the world's ills.

"Our special military operation is designed to put an end to the reckless expansion, and the reckless course toward complete dominance, of the United States," Mr. Lavrov said.

The United States and European Union have imposed increasingly severe economic sanctions on Russia over the invasion and are sending weapons to Ukraine's military. But they do not want to get drawn into a war with Russia.

And the European Union remains reluctant to ban Russian oil and natural gas, which remain critical to the bloc's own economic health.

E.U. foreign ministers met on Monday in Luxembourg and the bloc's foreign policy chief, Josep Borrell Fontelles, said that "nothing is off the table, including sanctions on oil and gas."

While ministers discussed a possible phaseout of Russian oil, more easily replaceable from other suppliers than gas, the meeting also laid bare the bloc's divisions. Austria, Hungary and Germany opposed any effort, for now, to restrict Russian gas imports.

Still, European Union leaders were expected to approve another 500 million euros in funds to repay member states for sending weapons to Ukraine, which would mean a total of 1.5 billion euros so far -- nearly equivalent to the \$1.7 billion in weapons that the United States has authorized.

Russian troops, having retreated from northern Ukraine after a failed effort last month to reach the capital, Kyiv, have been resupplying and regrouping in Russia and Belarus so they can join the battle in eastern Ukraine. But Western officials said on Monday that effort may still take some time.

Ukrainian officials have been warning since last week that civilians in east Ukraine should flee while they can. Mr. Zelensky warned that tens of thousands of Russian troops were preparing a renewed assault there.

If and when the southern port city of Mariupol finally falls, Russian troops can move north to meet up with Russian troops attempting to move south from Izyum and try to encircle the bulk of Ukraine's army, which is concentrated further east, said Mathieu Boulègue, an expert on the Russian military at Chatham House, the London research institution.

That is easier said than done, Mr. Boulègue said, as the battered Russian troops await reinforcements. The Ukrainians, he said, were trying to block the Russians and organize a counterattack that would be more complicated than the fighting around Kyiv, which had forced the Russians to retreat.

Given the reports of Russian atrocities at Bucha, Kramatorsk, Mariupol and other cities, negotiations between the Ukrainian and Russian governments are on hold.

But few believe that the antagonists are ready for real talks, because Mr. Putin needs to show more military gains and because the Ukrainians believe that they can still repel the Russians, said Ivo Daalder, former U.S. ambassador to NATO.

"The Ukrainians think they have an opportunity not just to prevent Russia from gaining more ground in the east but expelling them from there, while Putin needs to find something he can sell as a victory," Mr. Daalder said. "So diplomacy is not going anywhere."

If and when talks on a settlement finally occur, Mr. Putin will inevitably be part of them, said François Heisbourg, a French defense expert. Diplomats deal with leaders of governments, no matter how distasteful, he said.

The West also hopes that increasing economic pain will encourage Mr. Putin to scale down the war and end it. Russia is already in “deep recession” and its economy is expected to shrink by 11 percent this year, the World Bank reported.

But the impact is severe on Ukraine, too. The bank forecast that Ukraine’s economy would shrink by about 45 percent this year because of the Russian invasion and the impact of a “deep humanitarian crisis.”

Mr. Putin originally named one goal of the war as the “denazification” of Ukraine, falsely labeling as Nazis those who resist Russian domination. An article on Monday in a Russian state newspaper, *Parlamentskaya Gazeta*, written by an adviser to the chairman of Russia’s lower house of Parliament, expanded on that concept to define the enemy as “Ukrainian-American neo-Nazism.”

The fight also included a “cold war” against enemies of the state inside Russia, the article said, adding: “The denazification of Ukraine is impossible without a parallel denazification of Russia.”

It was the latest sign that, even as the war in Ukraine rages, Mr. Putin is priming his security apparatus for an ever-widening intolerance for dissent. The crackdown has accelerated in recent weeks, with pro-war Russians turning in teachers and neighbors who speak out against the war.

Last Friday, Russia closed some of the last remaining independent institutions of civil society, including the Carnegie Moscow Center and the Moscow offices of Human Rights Watch and Amnesty International. It expanded the practice of naming government critics as “foreign agents,” for the first time adding a popular musician to the list: the rapper Ivan Dryomin, 25, who goes by the name Face.

## EXECUTIVE/LEGISLATIVE

### 5. U.S. Debates Using Hague Court To Investigate Russian Atrocities

*The government is hamstrung from helping the world's war-crimes court by two laws and a policy aimed at barring it from charging Americans*

New York Times, Apr. 12 (0300), Pg. A1 | Charlie Savage

WASHINGTON -- The Biden administration is vigorously debating how much the United States can or should assist an investigation into Russian atrocities in Ukraine by the International Criminal Court in The Hague, according to officials familiar with internal deliberations.

The Biden team strongly wants to see President Vladimir V. Putin of Russia and others in his military chain of command held to account. And many are said to consider the court -- which was created by a global treaty two decades ago as a venue for prosecuting war crimes, crimes against humanity and genocide -- the body most capable of achieving that.

But laws from 1999 and 2002, enacted by a Congress wary that the court might investigate Americans, limit the government's ability to provide support. And the United States has long objected to any exercise of jurisdiction by the court over citizens of countries that are not part of the treaty that created it -- like the United States, but also Russia.

The internal debate, described by senior administration officials and others familiar with the matter on the condition of anonymity, has been partly shaped by a previously undisclosed 2010 memo by the Justice Department's Office of Legal Counsel. Obtained by The New York Times, the memo interprets the scope and limits of permissible cooperation with the court.

The discussions have also been marked by Pentagon opposition to softening the U.S. stance, even as congressional Republicans, long skeptics of the court, have signaled openness to finding a way to help it bring Russian officials to justice.

For now, officials said, the primary focus has been on compiling evidence of apparent war crimes that are still unfolding -- both the details of particular killings and intelligence that President Biden's national security adviser, Jake Sullivan, asserted on Sunday indicates a high-level plan to brutalize the civilian population into terrorized subjugation.

"This was something that was planned," he said on ABC's "This Week," adding, "Make no mistake, the larger issue of broad-scale war crimes and atrocities in Ukraine lies at the feet of the Kremlin and lies at the feet of the Russian president."

But the unresolved deliberations about where to channel such intelligence explain why administration officials have been hazy about where efforts to prosecute Russian war crimes should center -- even as evidence of large-scale atrocities has mounted, prompting Mr. Biden to label Mr. Putin a "war criminal" and to call for a "war crimes trial."

Mr. Sullivan, was vague, for example, at a news briefing last week when a reporter asked whether the president envisioned such a prosecution playing out at the International Criminal Court or some other tribunal.

"We have to consult with our allies and partners on what makes most sense as a mechanism moving forward," he said. "Obviously, the I.C.C. is one venue where war crimes have been tried in the past, but there have been other examples in other conflicts of other mechanisms being set up."

But setting up other venues would raise its own obstacles. Among them, while the United Nations Security Council in the past helped establish special international courts to handle conflicts in places like Rwanda and the former Yugoslavia, Russia can veto any Council resolution seeking to establish a tribunal for Ukraine.

There are reasons to doubt that Mr. Putin and other senior Kremlin officials responsible for the war may ever stand trial, so long as they remain in power and ensconced in Russia. Still, war-crimes indictments, human rights specialists say, serve a "naming and shaming" function even without trials -- and can inhibit defendants' ability to travel abroad.

Another possibility is a nation's court with jurisdiction over war crimes on Ukrainian soil. Germany, for example, has war-crimes and crimes-against-humanity laws that cover the world. Prosecutors there said in March that they had started gathering evidence of deliberate attacks on civilians and civilian infrastructure, and two former ministers filed a complaint there last week asking prosecutors to charge Russian officials.

Ukraine's own prosecutor general has asked for international help in gathering evidence. Attorney General Merrick B. Garland said in recent days that administration officials were working on a multinational effort to shore up Ukraine's efforts, while also holding discussions with European counterparts.

Still, with Ukraine under continuing assault, the capacity of its justice system may be limited. The International Criminal Court, by contrast, is already set up -- and it specializes in conducting this very kind of investigation and prosecution.

Against that backdrop, the State Department has said that the United States "welcomed the fact" that the court has opened an investigation into the war in Ukraine, and Biden administration officials are weighing what the United States can do to help it.

One set of issues is primarily legal. A group of top national security lawyers across the administration has been wrestling with how to navigate the limits imposed by a pair of laws that Congress enacted a generation ago. Those laws curtail the aid the American government may provide to the court, but are ambiguous in places.

The deliberations have centered on a 26-page opinion by the Office of Legal Counsel that interpreted those laws for the executive branch.

The memo looked at the kinds of assistance that the United States had offered to the tribunals for war crimes and genocide in the former Yugoslavia and Rwanda, which proved crucial to making them work -- like sending dozens of experienced Justice Department prosecutors and contributing more than \$500 million to cover operational costs.

But a 1999 appropriations law bars the government from spending funds to support the International Criminal Court. The memo concludes that Congress banned both donating money to the court directly and donating material items, like supplying a computer system or building a courthouse -- and that the law permits no exceptions.

The memo also analyzes a 2002 law, the American Servicemembers Protection Act. It bars giving the court other kinds of support -- like sharing intelligence, training its staff or lending it personnel. The memo concludes that the United States cannot offer general institutional support, but can provide such help for "particular cases."

Unlike the funding ban, the 2002 law permits "rendering assistance to international efforts to bring to justice" a list of offenders from that era, like Saddam Hussein and Osama bin Laden, along with any other foreign citizens who are accused of genocide, war crimes or crimes against humanity.

Even as administration lawyers struggle with how much wiggle room the government has as it tries to hold Russia accountable, there are signs of bipartisan interest in Congress in potentially rescinding or modifying those laws so the United States can more broadly help the court.

Last month, the Senate unanimously passed a resolution by Senator Lindsey Graham, Republican of South Carolina, backing any investigation into war crimes committed by Russian forces and proxies. It praised the International Criminal Court and encouraged "member states to petition the I.C.C." to investigate and prosecute Russian atrocities -- as at least 41 nations have done.

Mr. Graham has since been working with Senator Richard J. Durbin of Illinois, the No. 2 Democrat in the Senate, on what they hope will be fast-track, bipartisan legislation responding to outrage over events in Ukraine.

Their initial focus, Mr. Graham said in an interview, has been on developing legislative language to expand the domestic War Crimes Act so that American courts would have jurisdiction over such crimes by noncitizens abroad.

But Mr. Graham said that the International Criminal Court appeared “to be the only venue that works” for investigating Mr. Putin. He said Congress would also “look at the laws on the books and see if they need to be changed to make sure these investigations can be supported, either financially or to provide any intelligence or manpower.”

A related issue under discussion among administration officials is whether the United States should soften its longstanding objection to the court exercising jurisdiction over citizens from a country that is not a party to its treaty, according to officials.

On the table is whether those decisions should instead depend on whether a particular country has a functioning justice system that can handle allegations of war crimes. The rationale is that it would be legitimate for the court to investigate Russian war crimes because Mr. Putin and his commanders appear to be committing them with domestic impunity.

Pentagon officials, however, are said to be balking. They contended that moving to a case-by-case approach would be shortsighted because it would make it harder for the United States to argue against court investigations into potential war crimes by American forces, officials said.

Some opponents of changing the American position are also said to have pointed to Israel -- an ally that is also not a party to the treaty. The United States has objected to an investigation by the court of potential war crimes by Israeli forces.

But calls for shifting the U.S. position are growing louder.

Mr. Graham asserted that the court was set up to deal with situations only where the rule of law has collapsed -- unlike the court systems in the United States or Israel, he said. By contrast, he argued, “there is no rule of law in Russia any more than there would be in certain parts of Africa” where the court has prosecuted warlords for atrocities.

And in a Washington Post opinion column last week, John Bellinger, a national security lawyer in the George W. Bush administration, and Christopher J. Dodd, a former Democratic senator who was responsible for adding the exception to the 2002 law, argued that “U.S. support for an I.C.C. investigation of Russian war crimes would not constitute a double standard or be inconsistent with U.S. objections to the court’s claimed jurisdiction over U.S. personnel.”

While most of the world’s democracies joined the court a generation ago -- including close U.S. allies like Britain -- many American leaders were wary, fearing that it could be used or misused someday to prosecute American forces.

In 2000, President Bill Clinton signed the 1998 treaty creating the court, known as the Rome Statute, but he also called it flawed and never submitted it to the Senate for ratification. Two years later, Mr. Bush essentially withdrew that signature.

Still, by 2008, Mr. Bellinger -- then the top State Department lawyer -- declared that the United States accepted the “reality” of the court, acknowledging that it “enjoys a large body of international support.” The Obama administration bolstered its efforts to prosecute warlords in Africa, offering rewards for the capture of fugitives indicted by the court.

Relations plunged during the Trump administration, when a top prosecutor for the court tried to investigate the torture of terrorism detainees during the Bush administration. The government imposed sanctions on court personnel, and Secretary of State Mike Pompeo denounced it as corrupt.

But in 2021, the Biden administration revoked those sanctions and a new top prosecutor dropped the investigation.

In light of that history, the unanimous vote for the Senate resolution supporting the International Criminal Court represented a striking change. Mr. Graham attributed that shift to the “war crimes spree” by Mr. Putin.

“I would say this is one of Putin’s bigger accomplishments,” Mr. Graham said. “I didn’t think it was possible but he did it -- and that’s for him to rehabilitate the I.C.C. in the eyes of the Republican Party and the American people.”

## **6. For America’s security aid programs, who will run the show?**

Military Times Online, Apr. 11 (0900) | Joe Gould

WASHINGTON -- With the world transfixed by Russia’s invasion of Ukraine and debates breaking out on Twitter over whether the U.S. should send the country fighter aircraft and missile defense systems, security assistance — usually a wonky topic — is having a moment.

But it’s not just about public attention. With Democrats holding the reins in Washington, State Department officials have recommended a list of reforms to America’s globe-spanning security aid programs.

These programs provide billions of dollars in training, equipment and assistance directly to foreign governments, militaries, and international organizations and groups. They tilted in favor of the Pentagon after the Sept. 11, 2001, attacks; now, the State Department and allies on Capitol Hill say they need to be tilted back.

“It’s time for a reckoning,” Senate Foreign Relations Committee Chairman Robert Menendez, D-N.J., said at a recent hearing, where the State Department offered its reform ideas. Powerful lawmakers indicated they were

supportive, and Menendez said he will spearhead legislation in the coming months with the panel's top Republican, Sen. Jim Risch of Idaho.

The State Department's proposals range from elevating human rights concerns to offering countries more attractive financing for weapons purchases.

The potential for a shakeup comes as the Biden administration rushes aid to Ukraine following Russia's invasion. The administration had already committed about \$2 billion in weapons and other aid to Kyiv, when Congress recently enacted a \$13.6 billion package for the region, with \$3.5 billion for Ukraine.

The U.S. government has spent hundreds of billions of dollars over the last two decades for programs that provide security assistance and cooperation to foreign countries, according to the Congressional Research Service. In particular, this work has become a core mission for the Pentagon since 9/11.

As building up foreign forces in Iraq and Afghanistan became key to post-9/11 national security plans, Congress gave the Defense Department new authorities and funding. From 2001 to 2022, the budgets for those programs tripled to \$18 billion. The proportion managed by the Pentagon grew from 20% to slightly more than half.

Critics of the tilt toward the Pentagon say it relies too much on the military to solve foreign policy problems better handled by, or at least coordinated with, trained diplomats.

And at the center of the current conversation are some high-profile failures of recent years. Despite billions of dollars spent on the Iraqi security forces, for instance, many of them collapsed in the face of attacks from the Islamic State group in 2014. And \$125 billion spent to bolster Afghan security forces didn't stop the same from happening under Taliban pressure last year.

At the recent hearing, Sen. Chris Murphy, D-Conn., said the \$87 billion in U.S. security assistance to Afghanistan "went up in smoke overnight" when the Afghan military collapsed, calling it "an extraordinary waste of money.

"Clearly there is something very wrong with the way in which we are flowing military assistance to partner countries, especially in complicated war zones," Murphy said.

#### *A diplomatic wish list*

The Senate Foreign Relations Committee's recent hearing aired a long-running debate over the State-DoD divide. The assistant secretary of state for political-military affairs, Jessica Lewis, who previously worked for Menendez as his panel's staff director, detailed the department's suggestions for change.

The State Department is asking for more money to improve its workforce, but is primarily seeking process-oriented reforms.

Ever since the Pentagon's resources mushroomed after 9/11, the State Department says it has lacked flexibility. Because of the way aid has historically been structured, Lewis said, nearly all of the \$7 billion in assistance her bureau gets annually is bound by congressional directives; after Egypt, Israel, Jordan and Iraq are accounted for, only \$1.8 billion is left for the rest of the world.

State is now asking for flexibility in peacekeeping operations, and for the funding of some foreign military financing loans to be appropriated by region rather than country.

Lewis also wants to break countries of the "latent expectancy" they'll receive aid in the U.S. budget every year. That could have a trickle-down effect on which countries get to buy their equipment of choice with American dollars.

Another recommendation is to elevate the goal — in Washington's dealings with allies over aid — of making foreign forces more effective, transparent and accountable, and building their capacity. That aligns with Lewis' argument that while security assistance is an important alliance-building tool in America's competition with authoritarian Russia and China, that contest is fundamentally about democratic values and norms.

"We must keep the importance of security sector governance and respect for universal human rights front and center as we consider where to provide security assistance, and as we engage partner nations' security institutions and empower them toward modernization, accountability and reform," she said.

When it comes to acquisition, the DoD needs to better manage requests from allies for equipment outside existing departmental programs, and foreign military financing must provide more competitive loan options, Lewis said. She also said the State Department needs an improved contracting process to expedite urgent arms transfers.

The State Department is asking for more money to also retain and hire experts to better collaborate with the DoD. The State Department has a "political-military workforce that numbers in the low hundreds," in contrast with the Pentagon's security cooperation workforce of 20,000, Lewis said.

"While State actively supports many DoD security sector assistance activities, the Department currently lacks sufficient staff and bandwidth to fully participate in DoD planning processes and to thoroughly review proposed programs, including when some authorities include 'joint formulation' requirements," Lewis said in a statement.

The State Department hasn't framed its proposals as a competition with the Pentagon, but it is asking — in the name of efficiency and coordination — to expand requirements that the DoD get State Department "concurrence" or approval before it executes security assistance programs.

Concurrence requirements already apply to 25 such DoD efforts, but not all in existence, as the State Department would like.

While Lewis did not name specific programs as targets, one that offers the Pentagon broad latitude and could see scrutiny is the 127 Echo program, which funds surrogate forces in counterterrorism missions, often in Africa. The fund has quadrupled to \$25 million since its inception in 2005.

### *Bipartisan support*

Any effort to uproot authorities and funding, to then shift them toward the State Department, would likely face an uphill fight with the Pentagon and potentially with the Senate Armed Services Committee. The committee has on its side the only reliable annual legislative vehicle in the National Defense Authorization Act.

Max Bergmann, a former State Department official who authored security assistance reform recommendations last year, said efforts to shift greater authority to the State Department will succeed only if the White House prioritizes them. In a high-stakes competition with China, the U.S. can't afford for parallel security-assistance bureaucracies to undermine statecraft, he said.

"What is critical is that we have full control over that lever, and not have it be a bureaucratic mess where one hand doesn't know what the other is doing and it's difficult for any senior policymaker in the White House to know what the hell's going on," said Bergmann, now a senior fellow at Center for American Progress.

Meanwhile, members of the Senate Foreign Relations Committee on both sides of the aisle are generally supportive of shifts, arguing for an overhaul of the current setup.

"As the Defense Department continues efforts to cut the State Department out of security cooperation, we've seen a greater focus on short-term tactical capabilities than on sustainable forces aligned with strategic foreign policy," Risch said. "We must address governance challenges like corruption in all our activities, and we need to professionalize our security assistance workforce."

Likewise, a congressional source familiar with Menendez's thinking said the chairman wants an integrated approach to foreign assistance that spans the U.S. government, but is led by the State Department. The idea is to help countries holistically and not measure success in the numbers of units trained or rifles sent.

"You could do these short-term, tactical things for years and the overall security situation in a country doesn't improve because you have governance problems, corruption problems, and all the other things that alienate a populace from its government and [fosters] a terrorist group," said the source, who was not authorized to speak on the record.

Some concerns have surfaced in the House as well. After a series of coups in Mali and other Sahel countries, which were carried out by American- and French-trained and -equipped personnel, House Foreign Affairs

Committee Chairman Gregory Meeks, D-N.Y., and other lawmakers wrote to President Joe Biden on Feb. 4 to express alarm.

“We strongly recommend your administration focus on identifying and addressing the complex challenges surrounding conflict and violence, improve the efficacy of assistance designed to reform national security sectors and institutions, and — given the anti-democratic trends in the region — strengthen governance, civil society, and accountability based on rigorous conflict analysis and diplomacy,” said the letter, led by Rep. Sara Jacobs, D-Calif.

In an exchange with Jacobs at a recent House Armed Services Committee hearing, the deputy undersecretary of defense for policy, Sasha Baker, said the U.S. has restricted security assistance as a result of the coups.

“We work closely with the State Department to ensure that we are vetting all security assistance partners in compliance with U.S. law, with local screening of biometrics as it’s required,” Baker said. “There’s always more that we can do in this space.”

#### *The Pentagon’s efforts*

In an interview with Defense News, the assistant secretary of defense for strategy, plans and capabilities, Mara Karlin, said the Pentagon is already undertaking significant organizational reforms aimed at better coordinating and scrutinizing security assistance programs.

The changes, spearheaded by Undersecretary of Defense for Policy Colin Kahl and executed in December, moved the Defense Security Cooperation Agency — which manages foreign military sales as well as international military education and training — under Karlin’s office. What had been the DoD’s security cooperation programs were combined with elements of the Office of Stability and Humanitarian Affairs.

“Hopefully that helps us take a more strategic approach to security cooperation more broadly,” Karlin said several weeks after she and Lewis testified together before the Senate Foreign Relations Committee.

As required by the 2017 defense authorization act, the Pentagon is critically reviewing its own efforts, Karlin said, noting several studies are underway to evaluate whether its security assistance programs were successful.

“The U.S. military, has worked with partner militaries quite robustly since World War II in particular,” she said. “There was a bit of a sea change in the post-9/11 era, and I think that now as we move forward into a different era, we see the urgent need to look at how and in what ways we’re achieving our goals.”

Beyond the 2022 defense policy bill’s mandate for a commission to study U.S. involvement in Afghanistan from 2001 to 2021, the Pentagon is contracting with an outside agency for a comprehensive assessment of the strategic and operational lessons collected from the war there, Karlin said.

It has other efforts afoot to find and disseminate the lessons from its security cooperation efforts.

“We’re developing a learning and evaluation agenda for partnerships that focus on evidence-based policymaking, which will include the most critical learning questions for security cooperation, and prioritize a range of evidence-building activities, including evaluations, monitoring, research studies and tabletop exercises,” Karlin said. “These are hard issues to figure out, and you need to make some kind of a quantitative and qualitative approach.”

For example, the DoD made public a seven-page internal study of U.S. Africa Command’s maritime security cooperation activities in the Gulf of Guinea from 2007 to 2018. It found those efforts managed to spur Ghana and Senegal to an increased interest in policing their waters. But on the flip side, maintenance and parts issues plagued the effort, which included riverine patrols and offshore interdiction of illegal fishing and human trafficking.

Among the programs up for review is the Counter-ISIS Train and Equip Fund, budgeted at \$500 million for FY23, which supports a range of Syrian and Iraqi forces, including the Kurdish peshmerga, with pay, equipment and infrastructure.

Another is the International Professional Military Education program, which has faced criticism that it duplicated the State Department’s long-running International Military Education and Training program.

Karlin wouldn’t say whether the Pentagon supports the State Department’s legislative reform efforts, but she did note the two are in lockstep philosophically over the importance of security sector governance.

Defense policy legislation in 2017, she explained, worked to streamline what had been a patchwork of security assistance authorities and encouraged greater collaboration between the two departments.

“The vast majority of the security cooperation authorities that we have mandate State Department concurrence,” Karlin said. “Virtually all other security sector assistance in both directions is co-vetted in different forums that we have. There are discretionary authorities on both sides of the river, but our coordination does feel pretty exceptional.”

Asked if the State Department ought to have a broader say in the Defense Department’s security cooperation programs, Karlin said, “I think what we’re finding is that the approach we have right now is working pretty well,” as evidenced by the massive shipments of security aid continuously flowing to Ukraine from the U.S. and its partners.

“Whether it’s something like that or with more longer-term programs, we are quite literally in daily conversations with our colleagues at State,” she said.

[RETURN TO TOP](#)

South Korea's Defense Ministry declined to comment and the U.S. Indo-Pacific Command did not immediately respond to a request for comment.

The show of force comes after North Korea last month ramped up tensions to levels not seen in years by launching its first intercontinental ballistic missile since 2017. It is also apparently restoring tunnels at the Punggye-ri site where it conducted all six of its previous nuclear tests, in what could be the harbinger of an imminent blast from an atomic device.

An atomic test would be the first globally in more than four years and add to concerns about the risks of nuclear brinkmanship amid Russia's war in Ukraine.

North Korea is preparing for some of the biggest events on its political calendar that include nationwide celebrations on Friday that mark the birth of deceased state founder Kim Il Sung -- the grandfather of current leader Kim Jong Un -- and the April 25 anniversary of the foundation of its army.

It has used the celebrations before to show off its military might and hold rallies demonstrating support for its leader. North Korea is looking at a mass rally on Friday and a military parade on April 25, Yonhap reported.

Pyongyang may also try to steal the spotlight from South Korea's inauguration of a new president on May 10 with a nuclear test, the DongA newspaper reported Tuesday, citing an unidentified South Korean government official.

## **EUROPE**

### **14. Europe Moves to Arm Ukraine as Sanctions Fail to Sway Putin**

Bloomberg News, Apr. 11 (1141) | Kevin Whitelaw, Marc Champion and John Follain

Ukraine's allies in Europe are moving beyond their usual emphasis on diplomacy and sanctions in response to Russia's invasion of Ukraine, with a new focus on urgently arming Kyiv as the best chance at changing Vladimir Putin's decision-making.

After six weeks of a war that sanctions have done little to ease -- and no sign that negotiations with Russia will produce any result -- some of the bloc's least likely warriors are calling for more weapons.

On Monday Germany's foreign minister, Annalena Baerbock -- from the traditionally pacifist Green Party -- called for sending "more military equipment, above all heavy weapons." She added: "There is no time to make excuses."

The shift partly comes as European nations accept that sanctions have done little to crimp Russia's ability to fund its military operations, and several nations continue to resist the toughest actions over fears they would also hit their own economies. Many of the measures introduced by the EU, such as restrictions on technology exports, are designed to impact the Russian economy over time.

In terms of short-term impact, the bloc has few tools left at its disposal other than sanctioning Russia's oil and gas -- and on that member states remain divided. An EU diplomat also noted that the bloc's assessment of how to inflict pain on the Russian government doesn't always square with Putin's own strategic calculations.

"Normally, wars have been won and lost on the battlefields," Josep Borrell, the European Union's foreign policy chief, told reporters at a meeting of foreign ministers in Luxembourg on Monday. The bloc approved an extra 500 million euros (\$545 million) to buy more arms for Ukraine.

After the meeting, Baerbock said the ministers agreed to boost their efforts. "We will jointly as the EU, jointly as friends of the Ukraine, intensify in future the delivery of weapons," she told reporters.

Ukraine is bracing for a stepped-up assault on eastern Ukraine, with Russian forces currently regrouping to target the Donbas region. Without an influx of heavy weapons, Ukraine's military will struggle to fend off a Russian advance.

"We now basically stand in front of this equation to decide what is more important: sanctions or weapons," Jean Asselborn, Luxembourg's foreign minister, told reporters on Monday. "My conclusion -- and if you had told me this two months ago, I would have said, are you crazy -- is that it's now weapons."

The new focus on hard power is also driven by a recognition that Europe may be reaching the limits of what it can agree to in terms of additional sanctions on Russia. The EU banned Russian coal last week, but the final deal came only after countries agreed to allow a four-month period for the embargo to kick in.

Foreign ministers from several EU countries pushed for a ban on Russian oil during their meeting on Monday, according to an EU diplomat, but others have been unwilling to take the economic pain from such a step.

The EU is starting to explore ways to limit Russia's revenue from oil sales, short of a full ban. Those include tariffs or an escrow account to freeze the extra profits Moscow is making from oil price spikes following its invasion of Ukraine. But even such compromises will be difficult to strike, with Hungary insisting that any such decision would need to be taken by EU leaders at a summit.

"Whether we buy gas or not, in the next days the Russian army will have the means to wage war, equally," Borrell said after the foreign ministers meeting. "So we have to concentrate on the defensive aspects, that is the priority."

Ukraine, for its part, has asked for a wide range of gear.

“We need air defense systems, we need airplanes, tanks, other armored vehicles, artillery systems, munitions,” Ukrainian President Volodymyr Zelenskiy said Monday in an address to the South Korean parliament. He has also called for the EU and others to embargo Russian oil and gas.

The EU and NATO are beginning to accept that the war in Ukraine could drag on for months and that Kyiv will need a lot more help to continue repelling Russia’s assault. At the same time, there’s no indication that Europe or the U.S. is ready to begin supplying Ukraine with items like fighter jets.

Borrell told EU diplomats the countries must make decisions on weapons deliveries in days and not weeks, and the bloc must do whatever it takes to help Ukraine, according to people familiar with the matter.

There is still some hesitation by governments over what to supply. An EU diplomat noted that countries need some assurances about where the weapons they send will end up, since Kyiv has some unreliable paramilitaries operating. Modern weapons systems also require training, which takes time that Ukraine might not have as it braces for a Russian assault in the country’s east.

## **15. NATO Anti-Aircraft Weapon Donations Aren’t Covering Ukraine Losses**

Newsweek Online, Apr. 11 (1237) | David Brennan

Slovakia last week became the first country to donate a sophisticated Russian-made S-300 anti-aircraft system to Ukraine, as leaders in Kyiv stress the need for more and better anti-aircraft weapons to blunt Russia’s punishing aerial bombardment.

But the Slovakian system alone is not enough to replenish Ukraine’s mauled anti-aircraft network. As Kyiv prepares to face Russian President Vladimir Putin’s renewed offensive in the eastern Donbas region, Ukrainian leaders are still stressing the need to defend their airspace and the importance of Western support in doing this.

Slovakia’s Defense Ministry confirmed to Newsweek that it had sent one S-300 system to Ukraine. The transfer was facilitated by Germany and the Netherlands that sent Slovakia U.S.-made Patriot anti-aircraft systems to free up the S-300, which Slovakia inherited after the dissolution of Czechoslovakia in 1993.

“We believe this system will help save as many innocent Ukrainians as possible from further aggression by Putin’s regime,” the Slovakian Defense Ministry said in a statement released last week.

Ukraine is believed to have had around 100 S-300 batteries before the invasion began, totalling some 300 launchers. Open source figures suggest it has lost at least 21 of the launchers – the equivalent of seven batteries. Newsweek has contacted Ukraine’s Defense Ministry to request comment.

This apparently steady, if slow, erosion of Ukraine’s anti-aircraft inventory is of great concern to leaders in Kyiv. The longer the fighting continues, the more launchers will be destroyed. Ukraine will also eventually run low on missiles.

Russia has already claimed to have destroyed the Slovakian S-300 in a missile strike in Dnipro. Slovakian Prime Minister Eduard Heger’s office dismissed the claim as “disinformation.”

Since the invasion began, Ukrainian officials have called on Western countries to enforce a no-fly zone over Ukraine, a request repeatedly rebuffed by NATO for fear of direct confrontation with Russian forces.

NATO nations also bungled a planned delivery of Russian-made fighter jets to Ukraine, prompting frustration in Kyiv. Providing long-range anti-aircraft systems would go some way to reducing the Russian threat with less danger of escalation.

Ukrainian Foreign Minister Dmytro Kuleba traveled to Brussels to meet with NATO foreign ministers on Thursday. Among his armament requests were “heavy air defense systems” such as the S-300.

Greece and Bulgaria also possess S-300s that could theoretically be sent to Ukraine. But doing so would degrade these nations’ own military readiness. Neither Athens nor Sofia have yet shown any willingness to transfer their S-300s to Ukraine.

The failure to eliminate Ukraine’s anti-aircraft systems was a glaring one by Russia’s armed forces. Ukraine’s air force, long- and medium-range anti-aircraft systems and portable shoulder-launched surface-to-air weapons have all eaten away at the Russian air force. Ukraine claims to have downed 154 aircraft and 137 helicopters since the invasion began on February 24.

Ukraine has received around 25,000 portable anti-aircraft weapons since the start of the invasion, Army General Mark Milley, chairman of the Joint Chiefs of Staff, said on Thursday. The Ukrainians, he said, are “extraordinarily thankful” for this support.

But these shoulder-fired weapons cannot reach targets at high-altitude, like the S-300 and other similar systems can. They also cannot intercept Russian ballistic missiles, which have wrought so much damage on Ukrainian military and civilian targets as well as infrastructure.

The better Ukraine’s long-range anti-aircraft umbrella, the lower Russian aircraft will be forced to fly. This makes them more vulnerable to portable weapons carried by Ukrainian ground forces.

Russian aircraft still enjoy greater freedom in the air than their Ukrainian opponents. Last week, Russian planes were flying around 250 sorties a day, according to the Pentagon. Ukraine's forces, meanwhile, have generally been limited to between five and 10 sorties.

Recent Russian flight activity has been centered in the east and south, where Moscow's troops are thought to be planning to launch a large offensive in the hope of capturing Donbas.

The Russian advance in the east has been limited. Its troops have had more success in the south, establishing a land corridor from the annexed Crimea peninsula to the occupied Donbas.

"Russia has concentrated quite a few planes in that area," Andriy Zagorodnyuk, Ukraine's former defense minister, told Newsweek of the eastern front. Anti-aircraft reinforcements would "of course" make a difference to the military balance in the east, Zagorodnyuk said, if Ukraine can procure them in time.

Andriy Ryzhenko, a retired naval captain and former deputy chief of staff in Ukraine's navy, told Newsweek that the Slovakian S-300 will not make a major difference on its own. "But it helps anyway," he said.

Ryzhenko said Russia's air power is Ukraine's biggest problem. "Air attacks are their only dominance," he explained. "It compensates their losing of ground," he added, referring to Ukraine's successful counter-attacks across all the Russian axes of invasion.

A Russian victory in the east could turn the war in Putin's favor. Success in Donbas may even give Russia a springboard to again threaten Kyiv and the rest of Ukraine's coastline. Another messy defeat like that inflicted on the Russians outside of Kyiv, would further weaken the Putin's position and narrow his options.

## **16. Russian forces left bombs, death and destruction around Kyiv. Now, a painstaking demining operation is underway**

CNN.com, Apr. 11 (2008) | Frederik Pleitgen and Vasco Cotovio

On the outskirts of Kyiv, Lt. Col. Mykola Opanasenko kneels down in a remote field as he winds up a small electrical generator to power a blast.

"Fire," he shouts, before bracing and pressing the trigger. A fraction of a second later, an ear-ringing bang pierces through the otherwise silent countryside.

This is the sixth controlled explosion 34-year-old Opanasenko and his demining unit have carried out since Russia withdrew its forces from the Kyiv region earlier this month. Today, they blew up 16 unexploded artillery shells.

each weighing around 45 kilograms (nearly 100 pounds), in one explosion. They have another 30 shells to go through before the day is over.

Their unit is one of many operating in the region. In total, they say they've destroyed 2.5 tons of ammunition in the past week and a half alone.

"If we are all alive, then everything is successful," Opanasenko says.

As Russian forces retreated, they left behind scores of unexploded shells and bombs in addition to mines they planted to slow down the Ukrainian advance, to protect their withdrawal, or perhaps, simply to scorch the earth.

Mines, ammunition and rusty machine guns from destroyed armored vehicles can be dangerous for civilians now returning to their homes, so Opanasenko's unit goes from village to village, scouring the ground for any of these deadly ordnances that need to be cleared out.

Signs warning of mines can be seen across towns and villages around Kyiv. Units like Opanasenko's will continue their work for months to come across the country as the war rages on, according to Ukraine's State Emergency Service (SES).

"As of now, we need to survey more than 300,000 hectares," the head of the SES, Serhiy Kruk, told journalists last Wednesday.

"Therefore, in cooperation with the Armed Forces and the National Police of Ukraine, we are actively working and doing everything to return people and restore livelihoods," he said, adding Kyiv will be a model for similar efforts in other regions.

At a different location near the capital, Opanasenko shows CNN another dangerous ordnance they've found in a backyard. It's tube shaped, with a blunt red tip and six fin-like attachments at its end.

"It is one of the elements of a cluster bomb dropped from an airplane," he says. "There are about 50 such elements in one bomb."

"This is a highly explosive fragmentation bomb to kill people, designed just to kill people," Opanasenko adds, before taking it away for disposal.

His unit has found several of these explosives around the Ukrainian capital, he says.

Russian forces have been accused of regularly using cluster munitions against civilian targets in Ukraine. Earlier this month, the UN Human Rights Monitoring Mission in Ukraine said it received credible allegations that Russian armed forces have used cluster munitions in populated areas at least 24 times.

Such attacks “may amount to war crimes,” UN human rights chief Michelle Bachelet told the UN Human Rights Council in Geneva.

### *A larger effort*

Mine sweeping goes hand in hand with other clean-up efforts as residents from the Kyiv region begin to embrace their new reality and try and return to what is left of their shattered lives following Russia’s withdrawal.

Around 30,000 people have returned to the area, according to local authorities. Some businesses are reopening, and traffic is significantly increasing. Some military checkpoints have also been removed from the city’s arteries and some public transportation is resuming.

As they do, authorities are continuing to remove debris from the streets, including shells of destroyed tanks and other armored vehicles.

It’s a seemingly endless clean-up task for public officials, especially those who are tasked with collecting bodies caught in the cross fire.

At the main cemetery in Irpin, a Kyiv suburb, rows of graves for soldiers and civilians have been freshly dug.

Here, the military burials take place in quick succession. Russia may be regrouping, shifting its forces towards the East, but the war is not over -- and there’s not a moment to spare.

Tetyana Bliznyuk is surrounded by her husband’s comrades as his body is laid to rest just before the sun sets, the last of the day’s burials for members of Ukraine’s Armed Forces.

When she last saw her husband, Oleksandr Lytkin, he promised her he’d be right back, Bliznyuk says.

“(He was killed by) a mortar shell,” she says, her eyes still swollen red. “I’m very proud of him, he’s a hero.”

“It’s so scary! No one thought this was possible in the 21st century,” she says, adding that the war “must be stopped.”

Her pain is shared by millions around Kyiv, as the death and destruction left by Russia’s invading forces becomes increasingly visible.

### **17. U.S. Army chief of staff on hand as ally Lithuania announces training for Ukrainians**

Stars and Stripes Online, Apr. 11 (0934) | John Vandiver

Lithuania will host a mission to train Ukrainian soldiers to use new weaponry that the Baltic country's fellow NATO allies are sending Kyiv to assist in its war against invading Russian forces.

Lithuanian defense officials announced the plan Sunday, the same day U.S. Army chief of staff Gen. James McConville was in the country for security talks.

Meanwhile, the Pentagon said Sunday that it had concluded a separate training effort with Ukrainian forces in the U.S.

The troops were being trained on operating maritime patrol craft and use of weapons systems, such as the Switchblade drone, that the U.S. is now providing to Ukraine.

"To achieve maximum effect, we will soon organize military training for Ukrainian troops here in Lithuania," Lt. Gen. Valdemaras Rupsys, the Lithuanian defense chief, told local reporters.

The effort will center on training Ukrainian military instructors, who can in turn pass on their weapons knowledge to rank-and-file troops in Ukraine, Rupsys told the Delfi news agency.

Rupsys also held talks with McConville, who told reporters that the Pentagon continues to assess what the future American force structure will look like in countries such as Lithuania, which have been eager for a larger American military presence.

"We have rotational forces here, and our policymakers have said that they will defend every inch of NATO," Delfi quoted McConville as saying. "And they are working through what that will look like as far as rotational or permanent troops as we speak."

For now, there are no immediate plans for U.S soldiers to join the Lithuanian initiative, which is expected to begin in the coming weeks.

"We can't speculate on whether or not that could change in the future," U.S. Army Europe and Africa said in a statement Monday.

The U.S. has long been involved in the training of the Ukrainian military. For years, the Army operated out of a site in western Ukraine that was focused on preparing troops to fight Russian-backed separatists in the eastern region known as the Donbas.

However, because of security concerns, the American training was put on hold less than two weeks before Feb. 24, the date Russia launched its full-fledged invasion.

The Russia-Ukraine war was preceded by a buildup of about 200,000 Russian service members and materiel near Ukraine's borders on three sides.

At the time of the halt in the U.S. training, about 160 National Guard soldiers were relocated from Ukraine to Germany, where they continue to take part in other Army instruction in Europe.

### **18. Albania's former 'Stalin City' looks West with NATO airbase**

Reuters, Apr. 12 (0139) | Not Attributed

In an Albanian city once named for Soviet dictator Joseph Stalin, dozens of Soviet- and Chinese-made planes rust in the open air on a former communist airbase, some with flat tyres, others covered with dust.

The site in the central city now called Kucova is being transformed into a modern NATO airbase, a symbol of Albania's westward shift -- and a key military buffer in Europe as Russia wages war in Ukraine.

The renovation project was agreed in 2018 by the Balkan state and NATO, which has already committed \$55 million (50.4 million euros) to the project, according to Albanian sources.

Construction began at the beginning of the year, ahead of Russia's February 24 invasion of Ukraine that has sparked fears of a spillover into NATO and EU member states.

Though the timing of the Kucova base redevelopment was a coincidence, for some it is a welcome one.

"The changed global security environment has now created considerable impetus for the completion of the (base) renovation plan," a NATO official in Brussels told AFP, speaking on condition of anonymity.

The base, due to be completed in 2023, will give the "alliance an important strategic facility in the Western Balkans, within short reach of the Mediterranean, Middle East and the Black Sea region", the NATO official said.

After decades of global isolation, Albania became a NATO member in 2009.

It was shunned by much of the world under paranoid Communist dictator Enver Hoxha, who forged close ties with the Soviet Union and China before falling out with them over their apparent deviation from true Marxism.

The country embraced the West after the fall of the communist regime in 1990, and today is eager to become an EU member.

The defunct aircraft at the Kucova base are reminders of a chapter of Albania's history many are happy to leave behind -- and a signal to Russia which has sought to extend its influence in the region.

"The construction of this base is a clear message to other players with bad intentions in the Western Balkans region," Albania's Defence Minister Niko Peleshi told AFP.

The construction is certain to irk Moscow, which strongly opposes any NATO expansion into eastern and central Europe -- especially in the Balkans which has traditionally been torn between East and West.

Today, Albania's neighbours Croatia, Montenegro and Northern Macedonia are all part of NATO too.

For Seit Putro, who has worked in the finance department at the base for more than 30 years, it's a welcome confirmation of Albania's political allegiances.

"Once in the East, we are now in our place, next to the West, which is a good step forward for all," he told AFP.

The 350-hectare (865-acre) site in the former 'Stalin City' was built in the 1950s under Hoxha with help from the Soviets, and completed later with a network of the same kind of underground tunnels that were dug across the country in case of nuclear attack.

Once the NATO renovation is finished, it will function as a tactical operational base, kitted out with a refurbished runway more than two kilometres (1.2 miles) long, an updated control tower and new storage units.

It will have the capacity to host state-of-the-art military aircraft and can also be used for refuelling and ammunition storage.

Officials are also hoping the base, which once employed 700 people, will create new jobs in the poor region, 85 kilometres south of the capital Tirana.

It will have a "very positive economic and social impact", said deputy commander of the base, Major Leandro Syka.

The aircraft now languishing on the airbase mainly consist of Chinese and Soviet MiGs, Soviet-made Antonovs and Yak-18s.

At the end of the Cold War, the base had about 200 planes and 40 helicopters, which were put out of commission as they were obsolete.

About 75 remain today, and their fate remains uncertain.

The authorities have to yet to decide whether they will be auctioned, put in a museum or turned into scrap metal.

For some, they hold painful memories from past conflicts.

Former pilot Niazi Nelaj remembers clearly his first flight aboard a Mig-15, which bore bullet marks from combat in distant Asian countries.

But the 85-year-old is happy to see the airbase aligned with NATO, and he believes Albania's previous pivot toward the East was only an "accident of history".

"Albania's natural alliance has always been and will be with the West," he said.

## **RUSSIA**

### **19. Russian Navy Taking on Resupply Role Nearly 50 Days Into Ukrainian Invasion**

U.S. Naval Institute News, Apr. 11 (1829) | Heather Mongilio

Russian Navy ships in the Black Sea are currently resupplying troops in Ukraine instead of playing an offensive role, a senior defense official said Monday.

Day 47 into the Ukrainian invasion, and the Russian Navy continues to mostly support the invasion. The country has a couple dozen ships in the Black Sea and the Sea of Azov, the senior defense official told reporters.

Those ships have contributed to some missile strikes in the Donbas region, but those are a small percentage of the Russian missile attacks, the senior defense official said.

Pentagon Press Secretary John Kirby told reporters Monday that there are no indications the ships are there for minesweeping operations and that the Department of Defense believes the ships are part of resupply efforts for the south of the Donbas region.

"I can't read out Russian naval activity with any great level of specificity," Kirby said.

The United Kingdom has pledged to send anti-ship missiles to Ukraine, although it is unclear what kind.

The senior defense official could not say what missiles the British were sending, referring reporters to Downing Street. He did confirm that the United Kingdom announced they would send coastal defense cruise missiles.

A U.K. defense official told USNI News on Monday the missiles were short-range, Soviet-era anti-ship weapons.

About half a dozen of the Russian warships are in the Sea of Azov, most of them surface combatants, the defense official said. They are there to help resupply efforts in Mariupol, the official added.

Mariupol remains in Ukrainian hands, although the city is still seeing heavy fighting. The city's mayor said 10,000 civilians have died so far in the siege, predicting that the death toll will be higher, according to The Associated Press.

"I think we're all bracing for when the rest of the world gets to see what happens in Mariupol, what has happened [during the siege]," the senior defense official said. "I think we're certainly bracing ourselves here for some potentially really, really horrible outcomes."

While Russia saw more success in the southern part of Ukraine than it did in the north, troops still failed to achieve the goal of capturing population centers like Mariupol, the defense official said.

"They have been no closer to taking Mariupol today than they were last week," the official said.

Mykolaiv is also still under Ukrainian control, while Kherson is currently controlled by Russian troops. The areas between Mykolaiv and Kherson are contested.

## **20. Russia's invasion has escalated a brewing battle over space**

Los Angeles Times, Apr. 12 (0300), Pg. A5 | Noah Bierman

A 57-second video posted by the Russian government last month caught the attention of scientists and diplomats, but not in a way that inspired optimism about the future of global cooperation in outer space.

In it, Russian cosmonauts floated about the International Space Station, hugging and waving goodbye to an American astronaut. Then they entered their portion of the complex and sealed airlock doors behind them. With the video blasting a Russian song, "Farewell," CGI took over and depicted the cosmonauts' segment detaching from the station and drifting away (to the applause of Russian ground controllers).

The dark yet jaunty satirical video, depicting what would be the certain demise of the station, presaged more serious threats to an endeavor that has come to symbolize post-Cold War cooperation in space.

It is also a further sign that friction with the Kremlin, most recently aggravated by Russia's invasion of Ukraine, has seeped into space, exacerbating tensions over the rules of behavior there and halting negotiations over space weapons at a time when the battlegrounds of war are moving to the edges of Earth's atmosphere.

"The whole world is sort of readjusting to this whole notion of not just competition, but possible and even unintentional confrontation with other big powers" over how they use space, said Jessica West, a senior researcher with Project Ploughshares, a peace research group based in Canada.

Space has long been a barometer of the U.S.-Russia relationship. Cold War competition pushed Moscow and Washington toward new human feats in the 1960s, including the U.S. moon landing in 1969. Anxiety over President Reagan's "Star Wars" defensive weapons program drove arms negotiations in the 1980s that portended the end of the Soviet Union.

The 1998 space station agreement -- which also includes the European Union, Japan and Canada -- signaled a new era of shared advancement in the post-Cold War period. For more than two decades, the jointly operated station has been spinning around Earth.

That space detente was waning long before Russia invaded Ukraine in February, and the U.S. and its allies targeted Moscow's space industry in a raft of economic sanctions. For two decades, Russian President Vladimir Putin has pushed for an aggressive expansion of his country's space weapons program.

American officials have alleged, starting in 2009, that the Kremlin was developing anti-satellite missiles and more recently an anti-satellite mobile laser.

Russia launched what it described as an inspector satellite in 2017, prompting deep skepticism from American officials over what they labeled the craft's "abnormal behavior," suggesting it may also have a military use. Two years later, Russia placed a satellite within close range of a U.S. spy satellite, prompting concerns of an unintentional confrontation between the two military powers.

In November, Russia tested a missile that struck a satellite and blasted it into more than 1,500 large pieces of debris, any chunk of which could doom manned and unmanned commercial and military spacecraft, including the crew of the space station, which was forced to take shelter. The U.S. and its allies sharply criticized Russia over the test.

Meanwhile, the Trump and Biden administrations have ratcheted up efforts to counter competition from Russia and China in space. This was underscored by Trump's decision to start a new branch of the military, the Space Force.

The new military branch is one of his few legacies that Biden has embraced, with the White House submitting a recent budget request of \$24.5 billion for the Space Force, a bump of about 40% over the prior year. That's almost as much as the \$26 billion Biden requested for NASA.

Those lingering tensions have complicated attempts to rewrite international rules on space debris, and the invasion of Ukraine has led U.S. officials to put on ice any direct talks between Washington and Moscow over space-related issues.

"We see no need for those discussions while they are in conflict with the Ukrainians," Eric Desautels, acting deputy assistant secretary of State for emerging security challenges and defense policy, said in a recent interview.

Desautels said that Russia and China would like a future treaty that constrains the U.S. from placing space-based missile defenses in orbit. One of the biggest stumbling blocks is defining defensive weapons versus those with offensive capabilities. The U.S. argues that commercial actors could be caught up in more restrictive rules, even if their work lacks a military intent.

Complicating potential negotiations are a raft of economic sanctions imposed on Russia over the Ukraine war. The U.S. has taken intentional aim at the Russian space industry, with Biden vowing on the day of the invasion that U.S. sanctions were designed, in part, at degrading "their aerospace industry, including their space program."

The economic crackdown against Russia has prompted a series of threats from its space officials. The head of Russia's space program, Dmitry Rogozin, tweeted on April 2 in Russian that "the restoration of normal relations between partners in the International Space Station and other joint projects is possible only with the complete and unconditional lifting of illegal sanctions."

Even before the Ukraine invasion, Moscow had indicated that it may leave the partnership in the next few years as it signs new agreements with China on space exploration and lunar research.

Zhanna Malekos Smith of the Center for Strategic and International Studies said Russia has created "strategic fog" with its mixed signals over the space station pact. But she pointed to signs of hope, including the March 30 return from the station of American astronaut Mark Vande Hei, who traveled back with two cosmonauts -- Pyotr Dubrov and Anton Shkaplerov -- in a Russian capsule.

When Shkaplerov handed control of the station to astronaut Thomas Marshburn a day earlier, he said that whatever problems existed on Earth -- "in orbit, we are like one crew."

## MIDDLE EAST

### **21. Iran Says Nuclear Deal in ‘E.R.’ Hanging on U.S. Decision**

Bloomberg News, Apr. 11 (0500) | Arsalan Shahla

Iran said the 2015 nuclear deal is alive but lingering in the “emergency room,” with its fate resting on a decision by the U.S. that could lift sanctions on Tehran’s economy and oil exports.

Saeed Khatibzadeh, Iran’s foreign ministry spokesman, told reporters the Islamic Republic had finalized all the details needed to revive the landmark accord with other world powers involved in stalled negotiations in Vienna.

But he said the U.S. had yet to take a decision on the latest Iranian proposal for how to resolve the standoff over remaining issues between the two countries, which include a Trump-era terrorism designation for Iran’s elite Islamic Revolutionary Guard Corps.

“We haven’t reached the point yet where the U.S. side has shown the will to return to its own obligations under the nuclear deal and the related United Nations resolution,” Khatibzadeh said. Washington must reverse all of the Trump administration’s measures against Iran, imposed as part of its “maximum pressure” strategy, he said.

While the terrorism listing isn’t formally part of the nuclear deal, Tehran has insisted it must be removed in order for the pact to be revived.

Diplomats paused their negotiations last month after Russia inserted new conditions related to western sanctions imposed on Moscow over its war on Ukraine. The Kremlin later backed down, but Tehran and Washington remain deadlocked, especially over the designation of the Guard as a foreign terrorist organization made by then-President Donald Trump.

Reversing that decision could be politically perilous for the Biden administration in an election year, with substantial opposition in both American parties.

Reviving the 2015 deal would ease sanctions on Iran and trigger the return of its crude oil to markets at a time of unprecedented volatility in fuel markets because of Russia’s attack on Ukraine and the ongoing impact of the coronavirus pandemic on supply and demand.

The nuclear accord unraveled after Trump renounced it and reimposed sanctions almost four years ago. Iran responded by escalating its uranium enrichment well beyond limits set by the accord. The confrontation fueled conflicts in the Middle East and a series of attacks on shipping in waterways key for global trade.

## NOTABLE COMMENTARY

### **32. Putin's War Roils U.S.-India Ties**

Wall Street Journal, Apr. 12 (0200), Pg. A15 | Walter Russell Mead

The headlines focused on Europe last week as Russia regrouped for another brutal assault on Ukraine, but the Indo-Pacific is also heating up. Kurt Campbell, senior Asia policy maker at the National Security Council, planned a trip to the Solomon Islands to stave off a potential Chinese diplomatic coup, while President Biden added a virtual meeting with Indian Prime Minister Narendra Modi even as Secretary of State Antony Blinken and Defense Secretary Lloyd Austin prepared for in-person meetings with their Indian counterparts. In the long run, both sets of meetings could change world politics more than the struggle in Ukraine.

The Solomon Islands are a nation in the Pacific between Australia and Hawaii that includes six larger islands and almost 1,000 small ones. That strategic location made it the scene of some of the most bitter fighting in World War II. Instability has been more the rule than the exception since the islands gained independence in 1978. The roughly 700,000 inhabitants speak 80 different languages. The islands hold significant mineral deposits, and the surrounding waters offer rich fishing prospects, but continuing unrest along with pervasive corruption has discouraged foreign investment. The most recent round of rioting, in November 2021, ended only after Australian troops arrived.

Until 2019, the Solomon Islands maintained diplomatic relations with Taiwan. Last month, news broke that the Solomon Islands and Beijing had drafted a security agreement that could allow Chinese military forces onto the islands. The complicated politics of tiny Pacific island nations are less attention-grabbing than missile strikes in the Donbas, but keeping the Western Pacific aligned with Washington might matter more to our future security than the outcome of Vladimir Putin's war.

The high-level meetings between top U.S. and Indian policy makers are even more critical. The war in Ukraine has strengthened the North Atlantic Treaty Organization. The effect on America's relations with India has been more complicated. India has a long history of close military ties with Russia, and many Indian weapons systems today depend on Russian spare parts. Many Indians resent American lectures on India's quest for cheap Russian oil as NATO members continue to subsidize Mr. Putin's war machine by importing as much oil and gas as he is willing to ship.

While India and the U.S. have strengthened their bond over shared concerns about a rising China, they view that problem through different lenses. Americans look at their competition with China through the lens of global politics. Maintaining a balance of power in Eurasia has been a core concept of Anglo-American strategic thought since Elizabeth Tudor fought off the Spanish Armada in 1588. Americans instinctively see the "limitless friendship" between Mr. Putin's Russia and Xi Jinping's China as a geopolitical threat to the global balance of power and see India as a valuable part of a counter-coalition.

Indians see things through a South Asian regional lens, and from that perspective, things aren't looking good. A victory for the Taliban in Afghanistan, instability in Pakistan even as its relations with China deepen, civil war in Myanmar, a major political crisis in Sri Lanka, and China's busily building up its forces on India's northern and northeastern boundaries -- this is not the kind of world that India wants.

Worse, from an Indian perspective, American policy isn't helping. The U.S. withdrawal from Afghanistan effectively strengthened Pakistan at India's expense and suggested that Team Biden doesn't see Indian security as a major concern. American attempts to isolate and punish Myanmar's junta, however morally inspiring, appear to some in Delhi to be making a bad situation worse and creating opportunities for China.

Whatever Indians think of Mr. Putin, New Delhi sees Moscow as a valuable source of weapons, an indispensable partner in Afghanistan, and, if not driven into China's arms, a valuable counterweight to Chinese power in Central Asia and beyond. Western policies intended to weaken and impoverish Russia that drive it deeper into alliance with China, do not, many in New Delhi believe, serve India's interests well.

There's more. The Biden administration casts its global strategy around a struggle between enlightened liberal democracy and the nonliberal world. India's Hindu nationalists are not enlisting in that crusade. They want to defend India's Hindu identity, under threat in their view both from proselytizing monotheistic religions like Islam and Christianity and from a Western liberal ideology that seeks to transform communal and gender relations around the world. The more ideological Americans get about their foreign policy, the more difficult the U.S.-India relationship is likely to become.

The pivot to Asia is about more than moving military assets around on the map. To succeed in the Indo-Pacific, the U.S. must learn to incorporate the outlook of great powers like India into its thinking, even as it gives priority to the stability and friendship of small but strategic states like the Solomon Islands.

RETURN TO TOP

### **33. A clear U.S. defense of Taiwan**

*Russia's war on Ukraine makes a pledge of action against a Chinese invasion of Taiwan necessary*

Los Angeles Times, Apr. 12 (0300), Pg. A11 | Shinzo Abe

Russia's invasion of Ukraine has reminded many people of the fraught relationship between China and Taiwan. But while there are three similarities between the situation in Ukraine and Taiwan, there are also significant differences.

The first similarity is that there is a very large military power gap between Taiwan and China, just as there was between Ukraine and Russia. Moreover, that gap is growing larger every year.

Second, neither Ukraine nor Taiwan has formal military allies. Both countries are forced to confront threats or attacks alone.

Third, because both Russia and China are permanent, veto-wielding members of the United Nations Security Council, the U.N.'s mediation function cannot be relied upon for conflicts in which they are involved. This has been the case with the current Russian attack on Ukraine, and it would also be the case in any crisis over Taiwan.

But the situation surrounding Taiwan is even more uneasy. While Taiwan has no allies, it does have the Taiwan Relations Act, a 1979 U.S. law requiring the United States to provide Taiwan with the military equipment and supplies "necessary to enable Taiwan to maintain a sufficient self-defense capacity." This law has functioned as a form of compensation for America's unwillingness to say explicitly that it will "defend Taiwan" should it be attacked. This arrangement should now change.

In response to Russia's aggression against Ukraine, the U.S. stated early on that it would not deploy its troops in Ukraine's defense. But when it comes to Taiwan, the U.S. has adopted a policy of strategic ambiguity. This is the second point of difference: It remains unclear whether the U.S. would intervene by force in a crisis involving Taiwan.

Because the United States prefers to leave undefined its position on how it would respond to an assault on Taiwan, China has (at least up to now) been discouraged from military adventurism. This is so because China's rulers must account for the possibility that the U.S. would indeed intervene militarily. At the same time, American ambiguity has forced Taiwan to consider the possibility that the U.S. will not intervene militarily, and this has deterred radical pro-independence groups on the island.

The U.S. has maintained its Janus-faced policy for decades. But the third, most important difference between Ukraine and Taiwan suggests strongly that it is time for the U.S. to reconsider its approach. Simply put, whereas Ukraine is an independent state beyond any doubt, Taiwan is not.

Russia's invasion is not only an armed violation of Ukraine's territorial sovereignty, but also an attempt to overthrow the government of a sovereign state with missiles and shells. On this point, there is no controversy in the international community over the interpretation of international law and the U.N. Charter. While the extent to which countries participate in sanctions against Russia has differed, no country has claimed that Russia is not in serious violation of international law.

By contrast, China claims that Taiwan is "part of its own country," and the U.S. and Japanese position is to respect this claim. Neither Japan nor the U.S. has official diplomatic relations with Taiwan, and most countries around the world do not recognize Taiwan as a sovereign state. Unlike in Ukraine, Chinese leaders could claim that any invasion of Taiwan that China launches is necessary to suppress antigovernment activities in one of its own regions and that such acts, therefore, would not violate international law.

When Russia annexed Crimea, the international community ultimately acquiesced, even though Russia had violated Ukrainian sovereignty. Given this precedent, it is not surprising that Chinese leaders may very well expect the world to be more tolerant should they, too, adopt the logic of “regional” -- rather than national -- subjugation.

This logic has made strategic ambiguity untenable. The policy of ambiguity worked extremely well as long as the U.S. was strong enough to maintain it, and as long as China was far inferior to the U.S. in military power. But those days are over. The American policy of ambiguity toward Taiwan is now fostering instability in the Indo-Pacific region, by encouraging China to underestimate American resolve, while making the government in Taipei unnecessarily anxious.

Given the change in circumstances since the policy of strategic ambiguity was adopted, the U.S. should issue a statement that is not open to misinterpretation or multiple interpretations. The time has come for the U.S. to make clear that it will defend Taiwan against any attempted Chinese invasion.

Whenever I met President Xi Jinping during my time as prime minister, I always made it a rule to convey clearly to him that he should not misjudge Japan’s intention to defend the Senkaku Islands, and that Japan’s intentions were unwavering. The human tragedy that has befallen Ukraine has taught us a bitter lesson. There must no longer be any room for doubt in our resolve concerning Taiwan, and in our determination to defend freedom, democracy, human rights and the rule of law.

*--Shinzo Abe was prime minister of Japan from 2006-07 and 2012-20*

### **34. Deadliest Weapon in Ukraine Is a Cell Phone**

Bloomberg Opinion, Apr. 12 (0200) | James Stavridis

As the war in Ukraine pushes well into its second month, much of the outcome thus far — including Russian failures in executing their battle plans — is the result of logistics. Moscow has struggled abysmally to get gasoline, ammunition and food to its frontline troops. On the Ukrainian side, the flow of weapons and other materiel from the North Atlantic Treaty Organization and the U.S. has been breathtaking.

Russia is now forced to reassess its objectives and consolidate its forces in territory it already controlled before the invasion, in the southeastern Donbas region. So far, at least, it is a stunning setback for President Vladimir Putin.

But one area of warfare hangs in the balance: information. Despite ample video evidence of widespread war crimes by Russian troops, provided by Ukrainian forces and international journalists, the Kremlin is still managing the information war with energy, imagination and fairly effective counternarratives.

It's a familiar litany by now: The Ukrainian government is composed of Nazis; corpses of civilians in the cities of Bucha and Irpin are staged; missile strikes on targets like maternity hospitals and train stations are "false flag" operations conducted by the Ukrainians; and it is Ukraine, not Russia, that is preparing to use nerve agents.

For the Russians, this is not a trivial exercise. A significant part of the world will regard this conflict through the diet of information it consumes. As the war drags on, this will greatly influence global willingness to support sanctions and increasingly higher energy prices. Inside Russia, of course, Putin has control over almost every aspect of the media and the Internet, at least for the moment, and he can use that to tap into the nationalism of the Russian people.

But in the rest of the world — particularly China and India, where well over a third of the world's population lives — there are deeply conflicting narratives at work. (China has cautiously supported Russia in the conflict; India is more or less neutral.) The same is true in a significant portion of Latin America and Africa, where there is some sympathy for Putin's claims that the West has somehow threatened Moscow.

The Russian leader points to the U.S. invasions of Iraq and Afghanistan as far worse than his "special operation" in Ukraine. The Russians are experts at manipulating information technically, producing so-called deepfake videos that are marketed globally across propaganda machines like the Russian Television Network, or RT. For example, in mid-March a hacked news clip from Ukrainian TV falsely indicating that President Volodymyr Zelenskiy was surrendering went viral on social media. (In fairness, the Ukrainians have mounted similar disinformation campaigns.)

How can the Western democracies and Ukraine win the battle of information? What are the techniques and tactics of information warfare, which are just as important as providing anti-aircraft and antitank weapons in achieving success?

America must begin with humility as it seeks to make its case. Sometimes people say to me, "Admiral, you're right, we are in a war of ideas." Not quite — in fact, we are engaged in a marketplace of ideas.

We must compete in that marketplace, selling the idea that the Western vision of democracy, liberty, freedom of speech, freedom of the press, and gender and racial equality are inherently and obviously the only worldview that matters. Messaging, especially on the Internet and social media, is central to this soft sell.

In many parts of the world, the U.S. and its allies now have to explain patiently to leaders and citizens why those ideas matter so deeply and what their societies can gain from them. For example, we've got to be able to explain the differences between this war in Ukraine and previous Russian meddling in the Middle East. What is happening in Syria is a moral travesty, but the geopolitical stakes are far higher in Eastern Europe. But if you are a teenager in sub-Saharan Africa or the Andean ridge of South America, those differences are not always obvious.

Second, there is a fraught technological competition. Winning requires resources devoted to telling the stories from the bloody battlefields to the diplomatic boardrooms. Videos have to be crisp and convincing, showing in graphic detail the war crimes being committed daily in Ukraine. This needs to be packaged and moved over the social networks in creative ways that capitalize on the West's advantages — from getting them in the hands of social influencers in dozens of key countries to setting up professional-quality websites that are easy to navigate.

Obtaining, validating and editing the millions of cell phone hits generated every day is a key task. So is working with Big Tech to find ways around the blocking of sites and Internet connections by autocratic powers. Elon Musk's Starlink satellite Internet service, provided free to Ukrainians, is a prime example.

For the U.S. government, all this requires a great deal of interagency cooperation. There is no longer an overarching U.S. information agency as there was during the Cold War. That mission today is broadly conducted by the office of the under secretary of state for public diplomacy and public affairs.

But the State Department budget, never large, has been hammered over the last decade; it needs help to conduct an information campaign effectively. Many other cabinet agencies deal with promoting America's image abroad, including the Departments of Commerce, Defense and Homeland Security. They must sync up messages and move them globally.

The Central Intelligence Agency must continue its deep involvement in obtaining classified information, and disseminating unclassified versions — including inside Russia itself. The Joe Biden administration's unprecedented releases of sensitive intelligence before the Russian invasion were key in lining up an unexpected outpouring of global support for the Ukrainian cause.

The U.S. needs to forge more aggressive international synchronization. For example, visits to Kyiv or videoconferences with Zelenskiy by international leaders should be scheduled as part of a planned campaign, not in the current haphazard fashion. In addition to the European Union and NATO, key allies such as Japan and Australia need to be meshed into a consistent operation.

Unfortunately, the Russians have a significant head start in the information war. For a decade, they have been very effective at intruding into Western democracy, especially by spreading Internet conspiracy theories in the run-ups to national elections in the U.S. and Europe.

The West, however, has a major messaging advantage: Its values are the right ones. Russia is conducting an illegal campaign of brutal war crimes in Ukraine; the Ukrainian people are bravely defending their democracy; the West is providing significant military, diplomatic and economic support; and history will judge Putin's fellow travelers harshly.

But the U.S. cannot simply use its wealth and power to hammer the rest of the world with its argument. Competing in the global marketplace of ideas will require a touch of humility, significant resources, a well-run campaign between nations and government agencies, and above all steady belief in the values we cherish.

### **35. The U.S. military should be prepared for a humanitarian assistance role in the Ukraine crisis**

Military Times Online, Apr. 11 (2100) | Louis C. Tripoli

At the most recent NATO summit, President Biden announced \$1 billion in new funding for food, clean water, shelter, and medical care for those in Ukraine and those who have fled to neighboring countries, but there may be a role for more direct assistance if requested by the countries that are affected.

Since the start of the Russian invasion on February 24, more than 4.1 million people have fled Ukraine and up to 6.5 million have been displaced internally, including about half of Ukrainian children, according to the United Nations.

The initial response from the nations surrounding Ukraine has been generous but may not be sustainable. Strangers have kindly opened their homes, and their governments have offered health services to Ukrainians. Current estimates indicate that 2.6 million Ukrainians have fled to Poland, 609,000 to Romania, 365,000 to Hungary, 387,000 to Moldova, and 281,000 to Slovakia.

However, neighboring nations such as Poland and Romania may soon reach a point where they are overwhelmed by the influx of refugees. Officials in Krakow and Warsaw are looking for assistance managing the displaced persons in Poland. Warsaw's computer system has been unable to keep up with the volume of newcomer information. In Romania, shelter, diapers, formula, and SIM cards remain in high demand. Germany is echoing the similar sentiments as up to 15,000 displaced people arrive daily.

In response, the State Department's United States Agency for International Development, or USAID, dispatched a Disaster Assistance Response Team, or DART, to the region. If warranted, USAID offers assistance to host nations via the Office of Foreign Disaster Assistance, or OFDA.

In addition to these efforts, it is worth considering the U.S. military's humanitarian assistance and disaster response, or HADR, core capabilities for this crisis. U.S. forces have responded to a myriad of global disasters. No matter the disaster, whether a tsunami, earthquake, or epidemic, the U.S. military provided essential resources, transportation, medical supplies and treatment centers, and logistical support in exigent circumstances. Of course, host nations (or NATO) must first request humanitarian assistance from the U.S. before the processes of invoking U.S. military HADR can go forward.

The U.S. military has unmatched capabilities and expertise in expeditionary medicine and logistics, and the need for medical support and supplies is acute. Another core capability of the U.S. military is the response to chemical, biological, or nuclear threats. Given that the Washington Times and other news outlets reported President Biden's warning of Russian chemical attacks in Ukraine, planning for this scenario may be useful. Of course, any assistance that the U.S. military provides would have to be carefully calculated to avoid widening the conflict.

Military HADR is not a long-term solution to a humanitarian problem. Joint Publication 3-29, the official policy of the U.S. military for providing humanitarian assistance by the Joint Chiefs of Staff, states that Foreign Humanitarian Assistance, or FHA, is intended to supplement or complement efforts of host nation civil authorities or agencies with the primary responsibility for providing assistance."

Furthermore, it states that "crisis response and limited contingency operations are typically limited in scope and scale and conducted to achieve a very specific objective in an operational area." In other words, military assistance in humanitarian crises is only designed to be temporary. It serves in a transitional role to help agencies who are on the ground providing direct relief.

The risks of outbreaks of infectious diseases such as COVID-19 among a population already impacted by low vaccination rates is exponentially increased with crowded spaces, lack of sanitation or personal protective equipment, and limited health services brought upon by war conditions. Policy makers also need to consider other infectious disease threats; for example, drug resistant tuberculosis is prevalent in certain areas of the Ukraine.

Host countries and relief agencies must be ready to deal with communicable diseases such as polio, tuberculosis, and COVID-19, while also managing non-communicable diseases and acute conditions that are common in displaced persons all while simultaneously managing the logistics of food and shelter, reuniting families, obtaining host country travel permits, and planning for onward movement and transition of care.

It is expected that there will be injuries related to trauma, either from exposure to weapons or accidents, including burn and inhalation injuries. Some may be victims of torture, rape, or other intentional injury. This situation may require high-level medical, surgical, obstetrical, pediatric, or behavioral healthcare that is beyond the reach of host country or relief organization capability. These factors support making the case for U.S. military HADR presence sooner rather than later.

While the military is not the best long-term solution to a humanitarian problem like this one, if called upon to assist, military planners will set conditions for orderly transfer of HADR operations to host nations, non-governmental organizations, or NGOs, and private agencies.

In addition, the U.S. military has a long history of working with and beside NGOs on many occasions so that transition is seamless. For example, NGOs regularly participate in U.S. Navy medical missions aboard hospital ships. Although several experienced U.S. and international NGOs are on the ground now, the U.S. military's unparalleled HADR operations skills can provide the infrastructure to coordinate disparate efforts.

Many U.S.-based NGOs and private organizations are already providing humanitarian assistance in the region, and, if called upon, it is likely that the U.S. military would explore relationships with these entities, as described in policy. Logistics, operations, and public health capabilities are as important as medical care in this situation, so coordination with a balanced collaborative of organizations, each with unique capabilities, will be paramount for successful relief efforts.

As the world faces a potentially more dangerous phase in the war — one that may include exposure to non-conventional weapons — it is prudent to be ready for a rapid escalation in humanitarian challenges and the limits of host countries in the region to cope with further waves of displacement. A near-term collaboration between U.S. military planners and U.S.-based NGOs and humanitarian organizations is warranted and should be undertaken.

## SUMMARY

The Sea-Launched Cruise Missile-Nuclear program, which the Biden administration decided to defund in its recent budget request, will “feature prominently in a debate over the size and scope of the nuclear arsenal” when the House and Senate Armed Services Committees consider their FY23 defense policy bills, according to POLITICO. Separately, an Air Force spokeswoman told Inside Defense that the service will award Lockheed Martin a contract to continue work on the Mk21A re-entry vehicle, which will eventually carry the LGM-35A Sentinel’s W87-1 warheads. Also of note, a new assessment from the Defense Intelligence Agency says that China and Russia continue to develop and deploy weapons that can attack U.S. satellites even as Beijing and Moscow increase their own fleets of intelligence, surveillance and reconnaissance space vehicles, Breaking Defense reported.

## TWEETS

The Japan Air Self-Defense Force tweeted: “On April 12, JASDF F-2 and JMSDF ships conducted a bilateral exercise with the Abraham Lincoln carrier strike group in the Sea of Japan in order to strengthen the capability of #JapanUSAlliance for effective deterrence and response.” Separately, “More than 1,000 #Ukraine marines surrender in key port of #Mariupol, says #Russia,” according to a tweet from a Reuters editor. And National Defense Magazine wrote: “DepSecDef Hicks voices concern about pace of hypersonic tests.”

## TOP STORIES

1. Political brawl looms over nuclear cruise missile Biden plans to scrap  
POLITICO Online, Apr. 13 | Connor O’Brien

Progressives are on the ropes again in the defense budget debate. A rare victory for arms control advocates in President Joe Biden’s nuclear plans will be clawed back if defense hawks on Capitol Hill have their way in the coming months. A fight is already brewing in Congress over the Biden administration’s decision to defund a new nuclear-tipped sea-launched cruise missile authorized by former President Donald Trump. Republicans are opposing the move, arguing Joint Chiefs chair Gen. Mark Milley and other top officers’ endorsement of the program shows that Biden is defying the advice of top military commanders on U.S. nuclear deterrence.

2. Air Force to issue GBSD re-entry vehicle contract to Lockheed Martin  
InsideDefense.com, Apr. 12 | Shelley K. Mesch

The Air Force plans to award Lockheed Martin a sole-source procurement to continue work on the re-entry vehicle for the Ground Based Strategic Defense system’s nuclear warhead, according to a notice released Tuesday.

3. DIA sees ‘dramatic’ change in space competition; China, Russia ‘mature’ capabilities  
BreakingDefense.com, Apr. 12 | Theresa Hitchens

China and Russia continue to rapidly “mature” their counterspace capabilities, but they also have been modernizing their own space systems at a breathtaking pace since 2019 — in some part to reduce their reliance on US and other

foreign providers, according to a new Defense Intelligence Agency analysis. "It's not just the capability, it's the fact that ... they each have a Space Force," John Huth, DIA defense intelligence officer for space and counterspace, explained in a press briefing today. "And their intent is to make space part of that combined arms effort in any conflict."

## RUSSIA

4. Putin Says Peace Talks Reach 'Dead End,' Vows to Fight On  
Wall Street Journal, Apr. 13, Pg. A1 | Evan Gershkovich, Thomas Grove and Brett Forrest

President Vladimir Putin of Russia said peace talks with Kyiv had reached a "dead end," as Moscow's forces on Tuesday bombarded Ukrainian military positions and residential areas in the country's east and unleashed new rocket attacks. In his first extended comments on the war since last month, Mr. Putin said that without an agreement acceptable to the Kremlin, Russian forces would continue their offensive.

5. Biden calls Russia's war in Ukraine 'genocide'  
Washington Post, Apr. 13, Pg. A2 | Tyler Pager

President Biden on Tuesday referred to Russia as committing "genocide" in Ukraine, a significant escalation of the president's rhetoric and a notable shift that comes as U.S. officials have avoided using the term, which suggests an effort to wipe out all or part of a specific group.

6. Pentagon looks to vastly expand weapons provided to Ukraine  
Washington Post, Apr. 13, Pg. A17 | Dan Lamothe and Karoun Demirjian

The Biden administration is poised to dramatically expand the scope of weapons it is providing Ukraine, U.S. officials said Tuesday, with the Pentagon looking to transfer armored Humvees and a range of other sophisticated equipment.

7. U.S. cannot confirm use of chemical weapons in Ukraine, Blinken says  
Reuters, Apr. 12 | Idrees Ali, Humeyra Pamuk, Daphne Psalcdakis and Ismail Shakil

The United States is not in position to confirm reports of the use of chemical weapons in Ukraine but was working to determine what actually happened, U.S. Secretary of State Antony Blinken said on Tuesday.

8. More than 1,000 Ukraine marines surrender in key port of Mariupol, says Russia  
Reuters, Apr. 13 | Not Attributed

More than 1,000 Ukrainian marines have surrendered in the besieged port of Mariupol, Russia's defence ministry said on Wednesday of Moscow's main target in the eastern Donbas region which it has yet to bring under its control.

9. Putin Vows Return to Moon, Despite Sanctions  
Wall Street Journal, Apr. 13, Pg. A7 | Mauro Orru

Russia will resume its moon-exploration program, President Vladimir Putin said Tuesday, paving the way for a new space race as international space cooperation comes under strain following Russia's invasion of Ukraine.

## CHINA

10. China's military has US aircraft carriers in its sights, but those flattops aren't 'little teacups,' their captains say  
BusinessInsider.com, Apr. 12 | Christopher Woody

In March 1922, the US Navy's first aircraft carrier, the USS Langley, entered service. A century later, some are questioning whether carriers can survive in the wars of the future. The development of increasingly sophisticated anti-ship weapons by capable adversaries, namely Russia and China, has raised doubts about those ships. The doubts about the carrier's future are driven in large part by China's military modernization, which has produced a variety of

long-range weapons and more capable aircraft, ships, and submarines to launch them. China's anti-ship missiles are the major concern, especially the DF-21D and DF-26B ballistic missiles, which are designed for naval targets and sometimes called "carrier killers."

## KOREAN PENINSULA

11. U.S. Navy reveals East Sea drills involving aircraft carrier, stealth jets  
Yonhap News Agency (South Korea), Apr. 13 | Not Attributed

The U.S. military on Wednesday revealed this week's exercise with Japan in the East Sea involving a nuclear-powered aircraft carrier, F-35C stealth jets and other key assets in a show of force amid concerns about possible North Korean provocations.

12. North Korea uses space program to disguise ballistic missile development U.S. military intelligence  
Yonhap News Agency (South Korea), Apr. 12 | Byun Duk-kun

North Korea uses its space program as a disguise to test and advance its ballistic missile capabilities, a U.S. military intelligence report said Tuesday.

13. Drones, cyberattacks suggested as deterrence against N.K. nukes at Seoul forum  
Yonhap News Agency (South Korea), Apr. 13 | Not Attributed

A South Korean government researcher on Wednesday floated the idea of using drones, cyberattacks and high-power microwave (HPM) weapons to counter North Korea's nuclear and missile threats.

14. N.K. slams Biden's defense budget proposal as 'arms buildup frenzy'  
Yonhap News Agency (South Korea), Apr. 12 | Not Attributed

North Korea on Tuesday denounced U.S. President Joe Biden's proposed defense budget increase for the fiscal 2023, casting it as a "frenzy" for a further arms buildup.

## IRAN

15. Iran's Khamenei says nuclear talks 'progressing well'  
Agence France-Presse, Apr. 12 | Not Attributed

Iran's supreme leader Ayatollah Ali Khamenei said Tuesday that negotiations to restore the 2015 nuclear deal were advancing but urged officials not to place all bets on the Vienna talks.

16. Iran Guards commander says death of all U.S. leaders would not avenge Soleimani killing  
Reuters, Apr. 13 | Parisa Hafezi

The killing of all American leaders would not be enough to avenge the U.S. assassination of Iran's Revolutionary Guards' top commander Qassem Soleimani two years ago, a senior Iranian Guards commander said on Wednesday.

## NUCLEAR ENTERPRISE

17. U.S. conducted subcritical nuclear tests in 1st under Biden government  
Kyodo News (Japan), Apr. 12 | Not Attributed

The United States conducted two rounds of subcritical nuclear tests last year, the first such tests under the administration of President Joe Biden, according to the National Nuclear Security Administration.

## AIR FORCE

18. AFGSC conducts Senior Leader Conference at F.E. Warren

90th Missile Wing Public Affairs, Apr. 12 Press Release

Commanders, command chiefs, civic leaders and staff from across Air Force Global Strike Command converged upon F.E. Warren Air Force Base, Wyoming, April 5-8 for the command's spring senior leader conference.

19. Hicks to Congress: Be Patient, Allow Some Failures in New Development Programs Like Hypersonics  
Air Force Magazine Online, Apr. 12 | John A. Tirpak

Deputy Defense Secretary Kathleen Hicks urged Congress to be more patient with the Pentagon as it develops new systems, like hypersonic missiles.

20. Hicks Voices Concern About Pace of Hypersonic Tests  
National Defense Magazine Online, Apr. 12 | Meredith Roaten

The approach to testing and evaluation for hypersonic weapons is one of Deputy Secretary Kathleen Hicks' biggest concerns about the advanced technology programs, she said April 12.

21. Boeing looks to Spirit for B-52 engine upgrades to keep bombers flying  
Wichita Eagle Online (Kansas), Apr. 12 | Matthew Kelly

Boeing has selected Spirit Aerosystems to provide engine parts for a round of upgrades that will help keep B-52 bombers in the sky through at least 2050.

NAVY

22. Navy secretary visits Bremerton, Bangor, touts multi-billion modernization of shipyard  
Kitsap Sun Online (Bremerton, WA), Apr. 12 | Josh Farley

The Navy is "deeply committed" to a multi-billion dollar modernization effort at its shipyards, including its largest in Bremerton, as new generations of aircraft carriers and submarines will require upgraded dry docks and facilities for maintenance work, President Joe Biden's Navy secretary said at Naval Base Kitsap-Bangor on Monday.

COMMENTARY

23. We must acknowledge space as it is: A warfighting domain  
The Hill Online, Apr. 12 | Gen. Kevin Chilton (Ret.)

On Jan. 11, 2007, China launched a direct-ascent anti-satellite weapon (ASAT), which successfully intercepted and destroyed a Chinese satellite. It took fewer than 15 minutes from launch to impact. At the time, I was serving as the commander of Air Force Space Command, the predecessor of the Space Force. We could track the strike, saw its after-effects, but were powerless to offer leaders proactive options in case a U.S. satellite was targeted.

24. Putin is holding GPS hostage – Here's how to get it back  
C4ISRNET.com, Apr. 12 | Dana A. Goward and Rep. John Garamendi (D-CA)

On November 15, 2021 a missile streaked into space from Russia, destroying a retired Russian satellite. The remnant debris endangered other satellites and the International Space Station crew that included Russian cosmonauts.

25. If Ukraine falls, Putin could take aim at the Baltics next  
Washington Post, Apr. 13, Pg. A21 | Michael Gerson

I was with President George W. Bush when he visited Lithuania in 2002, just after the Baltic states had been offered membership in NATO. Bush had been one of the strongest advocates for the inclusion of Lithuania, Estonia and Latvia in the alliance, which would establish the obligation of mutual defense.

26. Consequences of Biden's Iran deal will be dangerously worse for the world  
Washington Times Online, Apr. 12 | James Jay Carafano and Adam Milstein

Negotiations over a new nuclear deal with Iran have stalled. For now. But the talks are expected to resume. Policymakers would be wise to use this lull to take a sober look at the draft deal. They should pay particularly close attention to the dangerous regional consequences that would arise from another flawed deal with Iran.

#### STATE-RUN MEDIA

27. No meetings with Russian top brass on Putin's schedule yet Kremlin spokesman  
TASS (Russia), Apr. 12 Not Attributed

The traditional spring series of meetings with Russia's top military officials has not yet been put on the Russian president's schedule, Kremlin spokesman Dmitry Peskov told reporters on Tuesday.

28. US uses conflict in Ukraine for containing Russia – Chinese Foreign Ministry  
TASS (Russia), Apr. 12 Not Attributed

The US authorities intentionally fuel the conflict in Ukraine for containing China and Russia, Chinese Foreign Ministry spokesperson Zhao Lijian told a news briefing on Tuesday.

29. Taiwan's drills, defense handbook 'futile in resisting reunification'  
Global Times (China), Apr. 13, Pg. 3 | Liu Xuanzun

The island of Taiwan on Tuesday held military exercises and released a civil defense handbook in an apparent move to hype cross-Straits tensions, which was met with a negative reception on the island, and mainland experts said that neither move will be helpful to Taiwan secessionists should a conflict break out.

In his first extended comments on the war since last month, Mr. Putin said that without an agreement acceptable to the Kremlin, Russian forces would continue their offensive.

**5. Biden calls Russia's war in Ukraine 'genocide'**

*Washington Post, Apr. 13, Pg. A2 | Tyler Pager*

President Biden on Tuesday referred to Russia as committing "genocide" in Ukraine, a significant escalation of the president's rhetoric and a notable shift that comes as U.S. officials have avoided using the term, which suggests an effort to wipe out all or part of a specific group.

**6. Pentagon looks to vastly expand weapons provided to Ukraine**

*Washington Post, Apr. 13, Pg. A17 | Dan Lamothe and Karoun Demirjian*

The Biden administration is poised to dramatically expand the scope of weapons it is providing Ukraine, U.S. officials said Tuesday, with the Pentagon looking to transfer armored Humvees and a range of other sophisticated equipment.

**7. U.S. cannot confirm use of chemical weapons in Ukraine, Blinken says**

*Reuters, Apr. 12 | Idrees Ali, Humeyra Pamuk, Daphne Psaledakis and Ismail Shakil*

The United States is not in position to confirm reports of the use of chemical weapons in Ukraine but was working to determine what actually happened, U.S. Secretary of State Antony Blinken said on Tuesday.

**8. More than 1,000 Ukraine marines surrender in key port of Mariupol, says Russia**

*Reuters, Apr. 13 | Not Attributed*

More than 1,000 Ukrainian marines have surrendered in the besieged port of Mariupol, Russia's defence ministry said on Wednesday of Moscow's main target in the eastern Donbas region which it has yet to bring under its control.

**9. Putin Vows Return to Moon, Despite Sanctions**

*Wall Street Journal, Apr. 13, Pg. A7 | Mauro Orru*

Russia will resume its moon-exploration program, President Vladimir Putin said Tuesday, paving the way for a new space race as international space cooperation comes under strain following Russia's invasion of Ukraine.

## CHINA

### 10. China's military has US aircraft carriers in its sights, but those flattops aren't 'little teacups,' their captains say

*BusinessInsider.com, Apr. 12 | Christopher Woody*

In March 1922, the US Navy's first aircraft carrier, the USS Langley, entered service. A century later, some are questioning whether carriers can survive in the wars of the future. The development of increasingly sophisticated anti-ship weapons by capable adversaries, namely Russia and China, has raised doubts about those ships. The doubts about the carrier's future are driven in large part by China's military modernization, which has produced a variety of long-range weapons and more capable aircraft, ships, and submarines to launch them. China's anti-ship missiles are the major concern, especially the DF-21D and DF-26B ballistic missiles, which are designed for naval targets and sometimes called "carrier killers."

## KOREAN PENINSULA

### 11. U.S. Navy reveals East Sea drills involving aircraft carrier, stealth jets

*Yonhap News Agency (South Korea), Apr. 13 | Not Attributed*

The U.S. military on Wednesday revealed this week's exercise with Japan in the East Sea involving a nuclear-powered aircraft carrier, F-35C stealth jets and other key assets in a show of force amid concerns about possible North Korean provocations.

### 12. North Korea uses space program to disguise ballistic missile development – U.S. military intelligence

*Yonhap News Agency (South Korea), Apr. 12 | Byun Duk-kun*

North Korea uses its space program as a disguise to test and advance its ballistic missile capabilities, a U.S. military intelligence report said Tuesday.

### 13. Drones, cyberattacks suggested as deterrence against N.K. nukes at Seoul forum

*Yonhap News Agency (South Korea), Apr. 13 | Not Attributed*

A South Korean government researcher on Wednesday floated the idea of using drones, cyberattacks and high-power microwave (HPM) weapons to counter North Korea's nuclear and missile threats.

### 14. N.K. slams Biden's defense budget proposal as 'arms buildup frenzy'

*Yonhap News Agency (South Korea), Apr. 12 | Not Attributed*

North Korea on Tuesday denounced U.S. President Joe Biden's proposed defense budget increase for the fiscal 2023, casting it as a "frenzy" for a further arms buildup.

## IRAN

### 15. Iran's Khamenei says nuclear talks 'progressing well'

*Agence France-Presse, Apr. 12 | Not Attributed*

Iran's supreme leader Ayatollah Ali Khamenei said Tuesday that negotiations to restore the 2015 nuclear deal were advancing but urged officials not to place all bets on the Vienna talks.

### 16. Iran Guards commander says death of all U.S. leaders would not avenge Soleimani killing

*Reuters, Apr. 13 | Parisa Hafezi*

The killing of all American leaders would not be enough to avenge the U.S. assassination of Iran's Revolutionary Guards' top commander Qassem Soleimani two years ago, a senior Iranian Guards commander said on Wednesday.

## NUCLEAR ENTERPRISE

### 17. U.S. conducted subcritical nuclear tests in 1st under Biden government

*Kyodo News (Japan), Apr. 12 | Not Attributed*

The United States conducted two rounds of subcritical nuclear tests last year, the first such tests under the administration of President Joe Biden, according to the National Nuclear Security Administration.

## AIR FORCE

### 18. AFGSC conducts Senior Leader Conference at F.E. Warren

*90th Missile Wing Public Affairs, Apr. 12 | Press Release*

Commanders, command chiefs, civic leaders and staff from across Air Force Global Strike Command converged upon F.E. Warren Air Force Base, Wyoming, April 5-8 for the command's spring senior leader conference.

### 19. Hicks to Congress: Be Patient, Allow Some Failures in New Development Programs Like Hypersonics

*Air Force Magazine Online, Apr. 12 | John A. Tirpak*

Deputy Defense Secretary Kathleen Hicks urged Congress to be more patient with the Pentagon as it develops new systems, like hypersonic missiles.

### 20. Hicks Voices Concern About Pace of Hypersonic Tests

*National Defense Magazine Online, Apr. 12 | Meredith Roaten*

The approach to testing and evaluation for hypersonic weapons is one of Deputy Secretary Kathleen Hicks' biggest concerns about the advanced technology programs, she said April 12.

### 21. Boeing looks to Spirit for B-52 engine upgrades to keep bombers flying

*Wichita Eagle Online (Kansas), Apr. 12 | Matthew Kelly*

Boeing has selected Spirit Aerosystems to provide engine parts for a round of upgrades that will help keep B-52 bombers in the sky through at least 2050.

## NAVY

### 22. Navy secretary visits Bremerton, Bangor, touts multi-billion modernization of shipyard

*Kitsap Sun Online (Bremerton, WA), Apr. 12 | Josh Farley*

The Navy is "deeply committed" to a multi-billion dollar modernization effort at its shipyards, including its largest in Bremerton, as new generations of aircraft carriers and submarines will require upgraded dry docks and facilities for maintenance work, President Joe Biden's Navy secretary said at Naval Base Kitsap-Bangor on Monday.

## COMMENTARY

### 23. We must acknowledge space as it is: A warfighting domain

*The Hill Online, Apr. 12 | Gen. Kevin Chilton (Ret.)*

On Jan. 11, 2007, China launched a direct-ascent anti-satellite weapon (ASAT), which successfully intercepted and destroyed a Chinese satellite. It took fewer than 15 minutes from launch to impact. At the time, I was serving as the commander of Air Force Space Command, the predecessor of the Space Force. We could track the strike, saw its after-effects, but were powerless to offer leaders proactive options in case a U.S. satellite was targeted.

**24. Putin is holding GPS hostage – Here’s how to get it back**

*C4ISRNET.com, Apr. 12 | Dana A. Goward and Rep. John Garamendi (D-CA)*

On November 15, 2021 a missile streaked into space from Russia, destroying a retired Russian satellite. The remnant debris endangered other satellites and the International Space Station crew that included Russian cosmonauts.

**25. If Ukraine falls, Putin could take aim at the Baltics next**

*Washington Post, Apr. 13, Pg. A21 | Michael Gerson*

I was with President George W. Bush when he visited Lithuania in 2002, just after the Baltic states had been offered membership in NATO. Bush had been one of the strongest advocates for the inclusion of Lithuania, Estonia and Latvia in the alliance, which would establish the obligation of mutual defense.

**26. Consequences of Biden’s Iran deal will be dangerously worse for the world**

*Washington Times Online, Apr. 12 | James Jay Carafano and Adam Milstein*

Negotiations over a new nuclear deal with Iran have stalled. For now. But the talks are expected to resume. Policymakers would be wise to use this lull to take a sober look at the draft deal. They should pay particularly close attention to the dangerous regional consequences that would arise from another flawed deal with Iran.

**STATE-RUN MEDIA**

**27. No meetings with Russian top brass on Putin’s schedule yet – Kremlin spokesman**

*TASS (Russia), Apr. 12 | Not Attributed*

The traditional spring series of meetings with Russia’s top military officials has not yet been put on the Russian president’s schedule, Kremlin spokesman Dmitry Peskov told reporters on Tuesday.

**28. US uses conflict in Ukraine for containing Russia – Chinese Foreign Ministry**

*TASS (Russia), Apr. 12 | Not Attributed*

The US authorities intentionally fuel the conflict in Ukraine for containing China and Russia, Chinese Foreign Ministry spokesperson Zhao Lijian told a news briefing on Tuesday.

**29. Taiwan’s drills, defense handbook ‘futile in resisting reunification’**

*Global Times (China), Apr. 13, Pg. 3 | Liu Xuanzun*

The island of Taiwan on Tuesday held military exercises and released a civil defense handbook in an apparent move to hype cross-Straits tensions, which was met with a negative reception on the island, and mainland experts said that neither move will be helpful to Taiwan secessionists should a conflict break out.

**1. Political brawl looms over nuclear cruise missile Biden plans to scrap**

***Biden threw foreign policy progressives a bone by killing a weapons system Trump proposed. But Republicans on Capitol Hill are ready to bring it back from the dead***

*POLITICO Online, Apr. 13 | Connor O'Brien*

Progressives are on the ropes again in the defense budget debate.

A rare victory for arms control advocates in President Joe Biden's nuclear plans will be clawed back if defense hawks on Capitol Hill have their way in the coming months.

A fight is already brewing in Congress over the Biden administration's decision to defund a new nuclear-tipped sea-launched cruise missile authorized by former President Donald Trump. Republicans are opposing the move, arguing Joint Chiefs chair Gen. Mark Milley and other top officers' endorsement of the program shows that Biden is defying the advice of top military commanders on U.S. nuclear deterrence.

"One way or another, we need to overturn that decision," Rep. Doug Lamborn of Colorado told POLITICO. Lamborn is the top Republican on the House Armed Services Strategic Forces panel, which oversees the U.S. nuclear arsenal.

Whether to continue funding for the program or to allow the administration to shutter it is expected to feature prominently in a debate over the size and scope of the nuclear arsenal when the House and Senate Armed Services Committees consider their annual defense policy bills.

If Congress injects funding to keep the nuclear cruise missile alive, it would be yet another blow to advocates who had high hopes for restrained nuclear policy and defense spending with Biden in the White House. The Congressional Budget Office estimated in 2021 that the new cruise missile and its warhead would cost \$10 billion through 2030, though the nonpartisan scorekeeper conceded the figure is "highly uncertain."

The administration's Nuclear Posture Review — a still-classified blueprint that outlines the long-term designs for the nuclear arsenal — isn't expected to make major changes to nuclear policy and the inventory of weapons. Progressives once hoped that the president would honor his campaign promises and move U.S. nuclear posture to what's known as "sole purpose" (i.e., that nukes would only be used to deter or in response to a nuclear attack), but Russia's war in Ukraine and China's ballooning nuclear arsenal put a quick end to those dreams.

But Biden's defense budget threw a couple bones to the left: It aims to zero out funding for the cruise missile, known as the SLCM-N, and retire the B83 nuclear gravity bomb. Lawmakers clashed over both programs last year.

Republicans have already assailed Biden's \$813 billion fiscal 2023 national defense budget as not enough to counter high inflation and meet the needs of military commanders worldwide. Now, GOP lawmakers are capitalizing on the split with military brass, arguing the administration isn't taking the advice of its top commanders when it comes to nuclear weapons.

U.S. Strategic Command head Adm. Charles Richard, whose outfit oversees the nuclear mission, endorsed the cruise missile to address a "deterrence and assurance gap" in a letter to lawmakers. Gen. Tod Wolters, who leads U.S. forces in Europe, concurred with Richard's assessment in a March 30 House hearing.

Then Milley, who backed the cruise missile during his 2019 confirmation process, told lawmakers last week that his views on the weapon haven't changed and that the president "deserves to have multiple options" in the arsenal.

Republicans are counting on that advice to sway the debate.

"That's all we needed," ranking House Armed Services GOP member Mike Rogers said of Milley's testimony. "I think you'll see bipartisan support for putting it back in."

House Armed Services chair Adam Smith (D-Wash.), who backs canceling the cruise missile, conceded "there's a divide" on the panel over the issue.

"It's something we're going to debate," Smith said. "I don't know how contentious it's going to be."

"Can we make [the Pentagon] make it? I don't know," he added of the developmental cruise missile. "Obviously there are some people that think we can and they're going to try, and I disagree with them."

Biden is also seeking \$34.4 billion to overhaul each leg of the nuclear arsenal — including moving forward with a replacement to the aging intercontinental ballistic missile fleet.

But in a minor win for arms control advocates, the administration elected to cancel the Navy cruise missile, which is one of two new weapons the Trump administration's 2018 nuclear plan proposed adding to the inventory. The other was a sub-launched low-yield ballistic missile that has already entered the fleet.

The four-decade-old B83 bomb, meanwhile, was set to be retired until the Trump administration's posture review revived it.

Canceling the cruise missile and retiring gravity bomb are simply "common sense" moves, according former Rep. John Tierney, executive director of the Council for a Livable World, arguing that Biden's nuclear vision "falls far short" of the changes he should have pursued.

"I think there is an urgency ... to have taken this opportunity to change the stale thinking that they have around here about nuclear policy and move forward, which they failed to do," Tierney said.

Some opponents warn that a sea-launched cruise missile — an earlier version of which was removed from the fleet in the early 1990s and finally retired during the Obama administration — is destabilizing and would contribute to an arms race with China and Russia.

Still other lawmakers argue the missile, which would be outfitted on Navy attack submarines, is redundant and harmful to the boats' mission when low-yield missiles are now deployed on ballistic missile subs.

"We've had arguments before about how many nuclear missiles we need to have an adequate deterrent. This isn't that," Smith said.

"It's not just a matter of, 'Well, isn't more better?'" Smith said. "Putting nuclear missiles on attack submarines will undermine the mission that attack submarines currently engage in."

At a House Armed Services hearing last week, Defense Secretary Lloyd Austin touted the administration's hefty modernization plans while downplaying the decision to slash the cruise missile. He argued the weapon provides "marginal capability" that "is far outweighed by the cost."

Despite splitting with his boss's recommendation to scrap the cruise missile, Milley emphasized to lawmakers that the U.S. still has ample nuclear power without it.

"We have lots of options and we have a significant nuclear capability," Milley told Senate Armed Services on Thursday. "So I don't want any foreign adversary to misread what I'm saying."

Rep. John Garamendi (D-Calif.), a critic of heightened nuclear spending, said he's "very disappointed" but not shocked by where Biden landed on the issue.

"I understand the circumstances which he's in. He's got a war with Russia," Garamendi told POLITICO. "Do you think anybody in this House and the Senate is going to say we need less of anything? The answer's no."

"It's more of the same," Garamendi said. "And particularly more bombs, more delivery systems, more threat."

It's not the first time lawmakers have slugged it out over the sub-launched cruise missile. Democrats on the House Appropriations Committee pushed to defund the administration's \$15 million fiscal 2022 request for research and development efforts for the program, but a compromise funding package ultimately forked over the money.

Biden's previous nuclear weapons budget, submitted last spring before the Nuclear Posture Review was complete, was largely seen as a placeholder.

But "continuity" appears to be the name of the game headed into the fiscal 2023 budget debate. And division among lawmakers over the future of the sea-launched cruise missile is "a very manageable problem" for Congress, said Rep. Jim Cooper (D-Tenn.).

"Trump wanted to look tougher on defense so he threw in a couple things that looked a little tougher. Not really much," Cooper, who chairs the House Armed Services Strategic Forces panel, said in an interview. "And then Biden wants to look a little bit gentler on defense so he has to be a little bit gentler. But only a little bit. The real story is continuity."

"No one is talking about cutting off a leg of the triad. That would be a problem," Cooper said.

## **2. Air Force to issue GBSD re-entry vehicle contract to Lockheed Martin**

InsideDefense.com, Apr. 12 | Shelley K. Mesch

The Air Force plans to award Lockheed Martin a sole-source procurement to continue work on the re-entry vehicle for the Ground Based Strategic Defense system's nuclear warhead, according to a notice released Tuesday.

Under the contract, Lockheed Martin will advance to the engineering and manufacturing development and production and deployment phase of the Mk21A re-entry vehicle, a modification of the legacy Minuteman III's Mk21 that will carry the GBSD's new W87-1 warheads.

The Air Force completed a preliminary design review last March and did not find any additional risks, spokeswoman Leah Bryant told Inside Defense at the time.

The service plans to award a contract in the fourth quarter of fiscal year 2023, pending milestone B approval, Bryant said in an email to Inside Defense Tuesday. A request for proposals will likely be released several months prior, she said.

Lockheed is an expected pick for the deal since it is the only contractor maturing an Mk21A design. In October 2019, the company won a \$108 million technology-maturation and risk-reduction contract.

The program is on track to achieve initial operational capability in FY-30, Bryant said. A flight test is expected later this year, she said.

## **3. DIA sees 'dramatic' change in space competition; China, Russia 'mature' capabilities**

***The bottom line, according to DIA is that space "is being increasingly militarized" around the globe, and the threats to US military and commercial space activities continue to grow, from ground-based ASAT tests, to ISR fleets, to deep space hiding places***

BreakingDefense.com, Apr. 12 | Theresa Hitchens

WASHINGTON -- China and Russia continue to rapidly "mature" their counterspace capabilities, but they also have been modernizing their own space systems at a breathtaking pace since 2019 — in some part to reduce their reliance on US and other foreign providers, according to a new Defense Intelligence Agency analysis.

"It's not just the capability, it's the fact that ... they each have a Space Force," John Huth, DIA defense intelligence officer for space and counterspace, explained in a press briefing today. "And their intent is to make space part of that combined arms effort in any conflict."

Senior DIA space analyst Kevin Ryder added: "China and Russia value superiority in space and as a result, they'll seek ways to strengthen their space and counterspace programs and determine better ways to integrate them within their respective militaries," added

The report says that between 2019 and 2021 "the combined operational space fleets of China and Russia" have grown by approximately 70%, following a 200% increase between 2015 and 2019 across "nearly all major space categories."

"Since early 2019, competitor space operations have also increased in pace and scope worldwide, China's and Russia's counterspace developments continue to mature, global space services proliferate, and orbital congestion has increased," the report says.

The bottom line, according to DIA is that space "is being increasingly militarized" around the globe, and the threats to US military and commercial space activities continue to grow.

"The expansion of Chinese and Russian space and counterspace weapons combined with the general rise of other foreign space capabilities is driving many nations to formalize their space policies to better position themselves to secure the space domain and facilitate their own space services," the report says.

The report, "2022 Challenges to Security in Space," is the second unclassified space threat assessment released by DIA, following the original version in 2019. Aimed at the general public, the report combines a review of past developments based on open source information, as well as what might be characterized as informed speculation about future threats.

The second edition continues to focus on China and Russia, but like it's predecessor also looks briefly at counterspace activities by Iran and North Korea — as well as broader changes in the space environment, such as the proliferation of commercial capabilities and the upwards trend in space debris that could threaten US space assets.

"The second iteration addresses increases in the pace and scope of competitive space operations since early 2019, of which, you are about to hear, have been dramatic," Huth said.

In particular, the report says, China and Russia are "developing various means to exploit the perceived U.S. reliance on space-based systems and challenge the U.S. position in the space domain. Beijing and Moscow seek to position themselves as leading space powers, intent on creating new global space norms," the report says. "Through the use of space and counterspace capabilities, they aspire to undercut U.S. global leadership. Iran and North Korea will continue to develop and operate electronic warfare (EW) capabilities to deny or degrade space-based communications and navigation."

#### *China As An ISR Powerhouse; Details Of Orbital Weapons System Remain A Mystery*

As of January 2022, China's intelligence, surveillance and reconnaissance (ISR) satellite fleet "contained more than 250 systems—a quantity second only to the United States," the report says. The People's Liberation Army (PLA) now owns/operates "about half of the world's ISR systems, most of which could support monitoring, tracking, and targeting

of U.S. and allied forces worldwide, especially throughout the Indo-Pacific region.” And Beijing continues to pursue improvements to these systems that “should increase China’s monitoring capabilities—including observation of U.S. aircraft carriers, expeditionary strike groups, and deployed air wings, making them more susceptible to long-range strikes. ... These capabilities are being augmented with electronic reconnaissance satellites that monitor radar and radio transmissions.”

As for counterspace weapons, DIA notes that while the PLA’s “operational ground-based ASAT missile system is intended to target” satellites in Low Earth Orbit (where many intelligence, surveillance and reconnaissance birds operate), it also “probably intends” to pursue those that can reach both Medium Earth Orbit (the location of GPS satellites) and Geosynchronous Orbit where both US commercial and military satellite communications are stationed.

China has been researching space-based kinetic weapons since at least 2006, the report says, including testing for the first time on July 27, 2021 a “fractional orbital launch of an ICBM with a hypersonic glide vehicle.” That test “demonstrated the greatest distance flown (~40,000 kilometers) and longest flight time (~100+ minutes) of any Chinese land attack weapons system to date.”

Pressed for details on the capabilities of China’s fractional orbital bombardment system, the DIA officials refused to be drawn into details. “This is the first time we’ve seen this tested,” Ryder said. “So it’s a little early right now to be able to determine its full set of capabilities, and those that we have determined ... can’t be discussed in this forum.”

Beijing also considers space-related electronic warfare (EW) and offensive cyber capabilities as “critical” to modern warfare, the report says. “The PLA routinely incorporates in its exercises jamming and antijamming techniques that probably are intended to deny multiple types of space-based communications, radar systems, and GPS navigation support to military movement and precision-guided munitions employment.” It “probably” also is developing jammers specifically to target SATCOM and SAR — with the latter “very likely” aimed at protecting “terrestrial assets by denying imagery and targeting in any potential conflict involving the United States or its allies.”

The PLA further “has multiple ground-based laser weapons of varying power levels to disrupt, degrade, or damage satellites that include a current limited capability to employ laser systems against satellite sensors. By the mid- to late-2020s, China may field higher power systems that extend the threat to the structures of nonoptical satellites.”

#### *Russia, On A Tighter Budget, Bets On Counterspace Systems*

“Russia’s space program is robust but more narrowly focused than China’s. Additionally, Moscow’s budget is more limited than Beijing’s because of competing priorities within Russia’s broader military modernization efforts,” the report notes. Nonetheless, Moscow continues to pursue a range of counterspace systems.

“Russian counterspace doctrine involves employing ground-, air-, cyber-, and space-based systems to target an adversary’s satellites with attacks ranging from temporary jamming or sensor blinding to destruction of enemy spacecraft and supporting infrastructure,” the report finds.

Russia also “employs some of the world’s most capable individual ISR satellites,” including “more than 30 satellites providing electro-optical imagery, a new radar observation platform, missile warning, and electronic and signals intelligence” — half of which belong to the Russian Defense Ministry.

In addition, DIA says, “Russia has fielded a wide range of ground-based EW systems, including mobile systems, to counter GPS, tactical communications, SATCOM, and radars.” This is in accordance with Moscow’s belief that “the information sphere, especially space-enabled information collection and transmission” is “strategically decisive.” Thus, Russia is modernizing “its military’s information attack and defense organizations and capabilities” across the board.

“Russia probably will field lasers that are more capable of damaging satellites in the mid-to-late 2020s. By 2030, Russia may also field higher power systems that extend the threat to the structures of all satellites, not just electro-optical ISR,” the report adds.

DIA also pointed to a host of Russian ASAT testing — including the 2020 test of its Cosmos 2543 satellite that involved a high-speed projectile, and the infamous test last November of a ground-based ASAT missile that created a large debris field in LEO. The military “continues to research and develop sophisticated orbital capabilities that could serve dual-use purposes,” the report adds.

### *Deep Space Worries*

This edition of the DIA report includes a new spotlight on Chinese and Russian Moon and Mars exploration, and potential threats from the increased use of cislunar space for exploration and potential economic exploitation.

“Deep-space operations beyond Earth orbit, sometimes called xGEO, are focused on scientific missions and exploration of the Moon and other celestial bodies. Spacecraft in xGEO are much harder to track and characterize, and could threaten U.S. or allied high-value satellites. Adversaries could also place operational or reserve satellites in deep space so they are much harder to monitor for later use in lower orbits,” DIA states.

And the report assesses that if Russia and China are successful in their deep space activities, the report says, “these efforts will likely lead to attempts by Beijing and Moscow to exploit the moon’s natural resources.”

Asked for details by Breaking Defense, Ryder caveated that “what we’ve seen so far has been more civilian in nature. However, China emphasizes in their writings, civil military integration and dual use purpose space capabilities. So, while we do understand that right now it is civil in nature, we continue to monitor for any possibility of military activity.”

### *Crowded Near Space*

The report also widens its examination of threats from increasing congestion and pollution on orbit, the officials said.

“The collision risk is to all civilian, commercial, and government satellites of all nations. This adds to the difficulty of ensuring safe space operations and the overall stability of the space environment,” the report explains.

The report notes that the “primary risk” is “uncataloged lethal nontrackable debris (LNT), which are objects between 5 millimeters and 10 centimeters in size. An estimated 600,000 to 900,000 pieces of uncataloged LNT are in LEO.”

Further, the report finds that the likelihood of “collisions of massive derelict objects” in LEO also is growing “and almost certainly will continue through at least 2030 because of rising numbers of space launches — especially those with multiple payloads — and continuing fragmentation from collisions, battery explosions, and further ASAT testing events.”

## **RUSSIA**

### **4. Putin Says Peace Talks Reach 'Dead End,' Vows to Fight On**

Wall Street Journal, Apr. 13, Pg. A1 | Evan Gershkovich, Thomas Grove and Brett Forrest

President Vladimir Putin of Russia said peace talks with Kyiv had reached a "dead end," as Moscow's forces on Tuesday bombarded Ukrainian military positions and residential areas in the country's east and unleashed new rocket attacks.

In his first extended comments on the war since last month, Mr. Putin said that without an agreement acceptable to the Kremlin, Russian forces would continue their offensive.

Mr. Putin said that peace talks had stalled after what he called a "fake" situation in Bucha, a town outside of Kyiv where Ukrainian officials reported the discovery of several hundred dead civilians this month after Russian troops retreated.

Ukrainian and Western officials are pursuing investigations into potential war crimes committed there and in other formerly Russian-held towns in northern Ukraine before Moscow's withdrawal at the end of March.

President Biden said Tuesday that Mr. Putin's actions in Ukraine amounted to "genocide," marking the first time his administration has used the term. Later, Mr. Biden said it would be up to legal experts to determine whether the term formally applies to Russian actions. "But it sure seems that way to me," Mr. Biden said.

Mr. Biden, a Democrat, is expected to make public as early as Wednesday an additional \$750 million in military and other support for Ukraine, which would bring U.S. aid to more than \$2 billion since Russia's invasion of the country, according to senior U.S. defense officials. The new package would include Mi-17 helicopters and sea drones that Ukrainian officials said they need to defend against the Russian forces.

Officials said details of the package were still under discussion and some elements might not be included in this round.

Meanwhile, Mr. Putin said Ukrainian negotiators had "deviated from agreements" reached in Istanbul. Kyiv had presented last month its proposal for a neutral status and international security guarantees, but the sides haven't moved closer toward a potential cease-fire.

"We have again returned to a dead-end situation," Mr. Putin said. "Inconsistency about essential matters has been creating well-known difficulties in achieving final agreements on the negotiating track which would be acceptable to us. Unless that happens, the military operation will continue until it concludes and the objectives set at the beginning of this operation are achieved."

Mr. Putin said the main goal of the offensive was "to help people in Donbas," in another sign that his forces would launch an assault on the eastern region. He said that "there is no doubt" the goal will be achieved, speaking during a visit to the Vostochny Cosmodrome, a Russian spaceport in the country's Far East, along with his Belarusian counterpart, Alexander Lukashenko.

The U.K. Defense Ministry said fighting was continuing in Ukraine's south near the cities of Kherson and Mykolaiv and that Russia is continuing to emphasize Donbas in a shifting war effort. British intelligence said Russia would continue to redeploy its troops from Belarus to the Ukrainian east and likely try to take the eastern city of Kramatorsk, the site of a deadly missile attack last week.

Russian Defense Ministry spokesman Maj. Gen. Igor Konashenkov said Tuesday that high-precision air- and sea-based missiles destroyed an ammunition depot and a hangar with Ukrainian aircraft at the Starokostiantyniv military airfield in the western Khmelnytskyi region, as well as an ammunition depot near Havrylivka in the Kyiv region. He said that Russian strikes had targeted Ukrainian positions in Donbas, claiming they had destroyed six strongholds of Ukraine's 24th Separate Mechanized Brigade.

Ukraine's General Staff said Russians were boosting air-defense capabilities near Melitopol and Ilovaik and added that Ukrainian forces had repulsed six enemy attacks in the Donetsk and Luhansk regions, destroying four Russian tanks and eight artillery systems. The Ukrainian air force said it had downed a Russian plane, two helicopters and four drones.

Ukraine's domestic intelligence agency, meanwhile, said it had detained Viktor Medvedchuk, a Ukrainian ally of Mr. Putin, who had been on the run. Mr. Medvedchuk, who headed a pro-Russian political party in Ukraine that authorities shuttered last month, has long had a close relationship with Mr. Putin, who is the godfather of one of Mr. Medvedchuk's children.

The agency posted on Tuesday a picture of Mr. Medvedchuk in handcuffs and wearing military fatigues on its Telegram channel, saying: "No traitor will escape punishment and will be held accountable under Ukrainian law."

Kremlin spokesman Dmitry Peskov said that he couldn't confirm Mr. Medvedchuk's detention, in remarks carried by the Interfax news agency.

Ukrainian authorities are investigating allegations by Ukrainian forces that they came under a Russian chemical attack in Mariupol, where Russia is still fighting to consolidate gains. Moscow sees the city as crucial to its efforts in taking over eastern Ukraine and pushing westward.

The Ukrainian unit deployed in Mariupol, the Azov regiment, said Russian forces dropped an unknown chemical substance from a drone, causing respiratory and nervous-system symptoms among its troops and civilians. No independent evidence of the attack has emerged from Mariupol.

The Russian government hasn't commented about the alleged use of chemical weapons in Mariupol. In Washington, White House press secretary Jen Psaki said the White House couldn't confirm the allegations and was continuing to gather information.

Railway connections were disrupted in the town of Shebekino in Russia's Belgorod region, near the Ukrainian border northeast of Kharkiv, the regional governor told Russia's RIA news agency. There were no casualties, he said, and the cause of the disruption was being investigated.

Russia heavily uses the railways to reinforce and resupply its troops preparing the Donbas offensive, and Shebekino is on one of its main rail links to the area. Russia said last month that two Ukrainian helicopters launched an airstrike on a fuel depot in Belgorod, a claim Kyiv didn't confirm or deny.

## 5. **Biden calls Russia's war in Ukraine 'genocide'**

Washington Post, Apr. 13, Pg. A2 | Tyler Pager

DES MOINES -- President Biden on Tuesday referred to Russia as committing "genocide" in Ukraine, a significant escalation of the president's rhetoric and a notable shift that comes as U.S. officials have avoided using the term, which suggests an effort to wipe out all or part of a specific group.

Biden's initial comment came at an event in Menlo, Iowa, where Biden was decrying the effects of Russian President Vladimir Putin's invasion of Ukraine on the higher prices Americans are paying for gas and food.

"Your family budget, your ability to fill up your tank, none of it should hinge on whether a dictator declares war and commits genocide a half a world away," Biden said.

He later told reporters he intentionally used the word genocide in his speech, though he added that he would "let the lawyers decide internationally whether or not it qualifies." But he said, "It sure seems that way to me."

The United Nations defines genocide as "acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group."

Biden suggested that is exactly what Russia is doing as it commits atrocities in Ukraine, including what evidence suggests was a slaughter of unarmed civilians in the town of Bucha. The president described Russia's actions as going far beyond a military campaign against an adversary, saying it is rather an organized effort to erase Ukraine's identity as an independent nation.

"It's become clearer and clearer that Putin is trying to wipe out the idea of being Ukrainian," Biden said. "The evidence is mounting. It looks different than last week. More evidence is coming out literally of the horrible things that the Russians have done in Ukraine."

Ukrainian President Volodymyr Zelensky, who has repeatedly decried Moscow's actions against his country and appealed for international help, praised Biden's comments, saying they were the "true words of a true leader."

"Calling things by their names is essential to stand up to evil," Zelensky wrote on Twitter. "We are grateful for US assistance provided so far and we urgently need more heavy weapons to prevent further Russian atrocities."

By contrast, Secretary of State Antony Blinken and Jake Sullivan, Biden's national security adviser, had both stopped short of describing Russia's assault as a genocide in recent days. No official agency of the United States has made a determination that Russia's brutalities qualify as a genocide.

"Based on what we have seen so far, we have seen atrocities," Sullivan said last week. "We have seen war crimes. We have not seen a level of systematic deprivation of life of the Ukrainian people to rise to the level of genocide."

Biden's comments Tuesday are the latest example of the president seemingly getting ahead of his own White House in condemning Putin and the war in Ukraine. He often appears torn between his desire to denounce the brutal onslaught and the fact that certain terms have legal definitions that can trigger specific actions.

In mid-March, he called Putin a "war criminal" after weeks of avoiding the term, and at a time when his administration was still determining whether that label officially applied. Since then, administration officials have become more open about calling the atrocities in Ukraine war crimes.

Then, during a trip to Warsaw to bolster the NATO alliance, Biden ad-libbed at the end of a speech and seemingly called for a regime change in Russia, a notion that was and is not the policy of the U.S. government.

"For God's sake, this man cannot remain in power," Biden said. The White House quickly cleaned up the comments and Biden later said he was not "articulating a policy change" but rather expressing his "moral outrage" at Putin's actions.

The term "genocide" was first used by the Polish lawyer Raphaël Lemkin in 1944 to describe the Nazi effort to eradicate the Jews during the Holocaust, and was codified as an international crime in the Genocide Convention of 1948. Russia is among the roughly 150 parties to the convention, which seeks to prevent and punish genocide.

A perpetrator's intent in carrying out killings can be the hardest element to prove, international law experts say, since there can be many reasons to commit violence against members of a group without the goal of eradicating it. Massacres in Cambodia in the 1970s, in Rwanda in 1994 and in Bosnia in the 1990s are among the outbreaks of killing since World War II that have been considered genocides.

Under the United Nations definition, a genocide can be accomplished by anything from killing members of the group directly to inflicting unbearable conditions on them to forcibly transferring their children.

Some analysts have pointed to comments like those published by the Russian state-run news agency RIA-Novosti as potential evidence of Russia's intent. One recent article, as reported in the Guardian, declared that "Ukrainianism is an artificial anti-Russian construct that has no civilizational substance of its own, a subordinate element of an extraneous and alien civilization." It said the name "Ukraine" should be abolished.

Russian forces have dramatically escalated the brutality of their attacks in Ukraine in recent weeks, with the scale of killings and depravity becoming clear in places like Bucha, near the capital, Kyiv. Investigators there have uncovered evidence of torture before death, beheading and dismemberment, and the intentional burning of corpses. Mass graves have been discovered.

Ukraine is also bracing for Russia to launch a new offensive in the eastern part of the country amid fresh concerns about Moscow launching a chemical weapons attack, something that is also prohibited by an international convention that Russia has signed. The Chemical Weapons Convention is enforced by the Organization for the Prohibition of Chemical Weapons, an international body based in The Hague.

Putin said Tuesday that his invasion of Ukraine is going as planned and vowed to continue the war. In a rare news conference, the Russian leader said he had "no choice" but to invade Ukraine, and he added that negotiations with the country - which some participants had described not long ago as making progress - had reached an "impasse."

Biden's comments Tuesday were unexpected not only because his administration has carefully avoided calling the Ukraine war a genocide, but also because his speech was on an entirely different topic. The president, appearing in Iowa, was discussing his plans to keep gas prices down.

He has increasingly taken to calling the current price surge "Putin's Price Hike," and it was in that context that he describe the Russian president's actions as a genocide.

Meanwhile, Biden is working to keep the pressure on Russia and to keep the Western alliance unified.

The United States is expected to significantly expand its military assistance to Ukraine with a new aid package that could be worth \$750 million, U.S. officials said Tuesday. The Pentagon is planning to send armored Humvees, Mi-17 helicopters that can be equipped to attack Russian vehicles, armored Humvees and a range of other equipment.

[RETURN TO TOP](#)

## **6. Pentagon looks to vastly expand weapons provided to Ukraine**

Washington Post, Apr. 13, Pg. A17 | Dan Lamothe and Karoun Demirjian

The Biden administration is poised to dramatically expand the scope of weapons it is providing Ukraine, U.S. officials said Tuesday, with the Pentagon looking to transfer armored Humvees and a range of other sophisticated equipment.

The new aid package could be worth \$750 million, these people said. Like others, they spoke on the condition of anonymity because the transfer has not yet been finalized.

Preliminary plans circulating among government officials and lawmakers in Washington also included Mi-17 helicopters, howitzer cannons, coastal defense drones and protective suits to safeguard personnel in the event of a chemical, biological or nuclear attack, the officials said, though they cautioned that it was not immediately clear if all of those items would end up in the final aid package.

Pentagon spokesman John Kirby declined to comment. On Tuesday night, after this article was published online, another U.S. defense official said the Russian-made helicopters would not be included.

The prospective new delivery, first reported by Reuters, comes on top of the more than \$2.4 billion in U.S. security assistance provided to Ukraine since President Biden took office last year, including \$1.7 billion in aid since Russia launched its invasion Feb. 24.

Ukrainian President Volodymyr Zelensky and his administration have pleaded for more sophisticated weapons to counter the Russian military's technological advantages. Ukraine's military has defied initial expectations and mounted a ferocious resistance, having already staved off a bloody, weeks-long assault on the capital, Kyiv, that was aimed at toppling Zelensky's administration. As a result, Russia has shifted its objectives, consolidating its assault on key cities in the south and in the east.

Ukrainian defense minister Oleksii Reznikov spoke with Defense Secretary Lloyd Austin on Tuesday, Kirby told reporters during a news briefing at the Pentagon. The discussion was part of a "constant dialogue and conversation" between the two officials and focused in part on the weapons and other assistance being provided to Ukraine. Additional details were not disclosed, but Reznikov wrote on Twitter earlier this week that Ukraine is seeking additional unmanned aircraft, air-defense systems, artillery, armored vehicles, combat aircraft and anti-ship missiles.

Some of the weapons expected in the next package are new to Ukrainian troops and would probably require training before they can be used in combat. A senior U.S. defense official, speaking on the condition of anonymity under ground rules set by the Pentagon, told reporters Tuesday that the Biden administration is open to doing so if it fills specific needs for Ukraine.

The United States and its allies have been rushing arms to Ukraine for weeks, with the United States alone sending eight to 10 flights of military assistance into neighboring countries every day, the senior U.S. defense official said. Those deliveries then are moved via ground convoy into Ukraine, which determines how and where the gear gets distributed.

As of Tuesday, the Pentagon was close to completing delivery of the last items in an \$800 million security assistance package approved by Biden on March 16 and a \$100 million set of shipments approved last week, the senior defense official said. The larger package included Switchblade drones that can be armed with explosives and flown into targets, Stinger anti-aircraft missiles, and anti-armor weapons including Javelin missiles. The package approved last week included additional Javelins, after a request from Ukraine as it prepares for a renewed Russian offensive in the east.

"These items are not sitting around very long," the senior defense official said. "Once they get into the transshipment sites, they are palletized and put on trucks, those trucks are picked up by Ukrainian armed forces and taken into Ukraine."

Ukrainian officials also have begun to meet with U.S. defense firms to see how else they might be able to improve their defenses. In one recent example, the Ukrainian ambassador to the United States, Oksana Markarova, met last week with representatives from General Atomics, the maker of Reaper and Predator drones, said C. Mark Brinkley, a company spokesman.

Brinkley said Tuesday the company is "currently exploring options" for supporting Ukraine, something that would require U.S. government approval.

"We have aircraft available now for immediate transfer," Brinkley said. "With support from the U.S. government, those aircraft could be in the hands of Ukrainian military pilots in a matter of days."

Such a transfer, Brinkley said, would expand Ukraine's ability to conduct aerial surveillance of the battlefield and provide "highly lethal strike capabilities not afforded" by smaller unmanned aircraft. Ukrainian pilots already familiar with drone operations would not be "starting from scratch" in learning how to fly them, he said.

In a statement, Markarova acknowledged Tuesday night that she met with General Atomics representatives.

"Together with our team, we discussed with General Atomics the prospects of increasing the capacity of the Armed Forces of Ukraine and the current situation in Ukraine," she said.

When asked what hardware she requested of the company, Markarova's spokeswoman declined to specify, saying Ukraine would prefer to "surprise Russia on the battlefield."

General Atomics supplies the U.S. Air Force with the Reaper and the U.S. Army with the Gray Eagle, an upgraded version of the Predator that was used widely by the U.S. military in Iraq and Afghanistan.

### **7. U.S. cannot confirm use of chemical weapons in Ukraine, Blinken says**

Reuters, Apr. 12 | Idrees Ali, Humeyra Pamuk, Daphne Psaledakis and Ismail Shakil

WASHINGTON -- The United States is not in position to confirm reports of the use of chemical weapons in Ukraine but was working to determine what actually happened, U.S. Secretary of State Antony Blinken said on Tuesday.

Ukraine said earlier it was checking unverified information that Russia may have used chemical weapons while besieging the city of Mariupol.

"We're in direct conversation with partners to try to determine what actually has happened," Blinken told reporters, adding that it had been a focus of concern even before Russia moved its troops into Ukraine.

A senior U.S. defense official on Tuesday said much the same thing about Mariupol, adding that the United States had no information to support the movement of chemical agents by Russia in or near Ukraine.

U.S. President Joe Biden last month said Russia's unsubstantiated accusations that Kyiv had biological and chemical weapons suggested Russian President Vladimir Putin may be laying the groundwork to use them.

Chemical weapons production, use and stockpiling is banned under the 1997 Chemical Weapons Convention. Although condemned by human rights groups, white phosphorous is not banned under the convention.

Russia's defence ministry did not immediately respond to a Reuters request for comment. Russian-backed separatist forces in the east denied using chemical weapons in Mariupol, the Interfax news agency reported.

"There is a theory that these could be phosphorous munitions," Ukraine's Deputy Defence Minister Hanna Malyar said on Tuesday.

Russia's invasion of Ukraine has killed thousands and displaced millions.

Moscow calls its actions a "special operation" to destroy Ukraine's military capabilities and capture what it views as dangerous nationalists, but Ukraine and the West say Russia launched an unprovoked war of aggression.

## **8. More than 1,000 Ukraine marines surrender in key port of Mariupol, says Russia**

Reuters, Apr. 13 | Not Attributed

LVIV, Ukraine -- More than 1,000 Ukrainian marines have surrendered in the besieged port of Mariupol, Russia's defence ministry said on Wednesday of Moscow's main target in the eastern Donbas region which it has yet to bring under its control.

If the Russians take the Azovstal industrial district, where the marines have been holed up, they would be in full control of Mariupol, which would allow Russia to reinforce a land corridor between separatist-held eastern areas and the Crimea region that it seized and annexed in 2014.

Surrounded by Russian troops for weeks, Mariupol would be the first major city to fall since Russia invaded Ukraine on Feb. 24, with the battle for the industrial heartland of Donbas likely to define the course of the war.

Ukraine's general staff said that Russian forces were proceeding with attacks on Azovstal and the port, but a defence ministry spokesman said he had no information about any surrender.

Reuters journalists accompanying Russian-backed separatists saw flames billowing from the Azovstal district on Tuesday.

On Monday, the 36th Marine Brigade said it was preparing for a final battle in Mariupol that would end in death or capture as its troops had run out of ammunition.

Thousands of people are believed to have been killed in Mariupol and Russia has been massing thousands of troops in the area for a new assault, Ukrainian President Volodymyr Zelenskiy said.

Ukraine says tens of thousands of civilians have been trapped inside the city with no way to bring in food or water, and accuses Russia of blocking aid convoys.

Russia's defence ministry said that 1,026 soldiers of Ukraine's 36th Marine Brigade surrendered, including 162 officers.

CHEMICAL WEAPONS WARNING

Chechen leader Ramzan Kadyrov, an ardent supporter of Russian President Vladimir Putin, urged remaining Ukrainians holed up in Azovstal to surrender.

"Within Azovstal at the moment there are about 200 wounded who cannot receive any medical assistance," Kadyrov said in a Telegram post. "For them and all the rest it would be better to end this pointless resistance and go home to their families."

Russian television showed pictures of what it said were marines giving themselves up at Illich Iron and Steel Works in Mariupol on Tuesday, many of them wounded.

It showed what it said were Ukrainian soldiers being marched down a road with their hands in the air. One of the soldiers was shown holding a Ukrainian passport.

Ukrainian Deputy Defence Minister Hanna Malyar has said there was a high risk of Russia using chemical weapons, echoing earlier warnings by Zelenskiy, who on Wednesday told the Estonian parliament by videolink Russia was using phosphorus bombs to terrorise civilians.

He did not provide evidence and Reuters has not been able to independently verify his assertion.

Chemical weapons production, use and stockpiling is banned under the 1997 Chemical Weapons Convention. Although condemned by human rights groups, white phosphorous is not banned.

Russia denies using chemical weapons, saying it had destroyed its last chemical stockpiles in 2017.

Moscow's incursion into Ukraine, the biggest attack on a European state since 1945, has seen more than 4.6 million people flee abroad, killed or wounded thousands and left Russia increasingly isolated on the world stage.

The Ukrainian prosecutor general's office said 191 children had been killed and 349 wounded since the start of the invasion.

The Kremlin says it launched a "special military operation" to demilitarise and "denazify" Ukraine. Kyiv and its Western allies reject that as a false pretext for an unprovoked attack.

#### FOUR PRESIDENTS VISITING KYIV

The presidents of Poland, Lithuania, Latvia and Estonia were on their way to Kyiv to meet Zelenskiy, an adviser to the Polish leader said on Wednesday.

The four join a growing number of European politicians to visit the Ukrainian capital since Russian forces were driven away from the country's north earlier this month.

U.S. President Joe Biden said for the first time that Moscow's invasion of Ukraine amounted to genocide, as Putin said Russia would "rhythmically and calmly" continue its operation and achieve its goals.

Russia has denied targeting civilians and has said Ukrainian and Western allegations of war crimes are fabricated.

Many towns Russia has retreated from in northern Ukraine were littered with the bodies of civilians killed in what Kyiv says was a campaign of murder, torture and rape.

Interfax Ukraine news agency on Wednesday quoted the Kyiv district police chief saying 720 bodies had been found in the region around the capital, with more than 200 people missing.

The General Headquarters of the Armed Forces of Ukraine said Russian forces were maintaining attacks on civilian infrastructure in the Kharkiv region in the northeast and the Zaporizhzhia region in central Ukraine.

At least seven people were killed and 22 wounded in Kharkiv over the past 24 hours, Governor Oleh Synegubov said. A 2-year-old boy was among those killed in the 53 artillery or rocket strikes Russian forces had carried out in the region, he said in an online post.

Reuters could not independently verify the information.

Russia denies targeting civilians. Putin on Tuesday used his first public comments on the conflict in more than a week to say Russia would "rhythmically and calmly" continue its operation, and expressed confidence his goals would be achieved.

Zelenskiy mocked Putin in an early morning address: "How could a plan that provides for the death of tens of thousands of their own soldiers in a little more than a month of war come about?"

[RETURN TO TOP](#)

## **9. Putin Vows Return to Moon, Despite Sanctions**

Wall Street Journal, Apr. 13, Pg. A7 | Mauro Orru

Russia will resume its moon-exploration program, President Vladimir Putin said Tuesday, paving the way for a new space race as international space cooperation comes under strain following Russia's invasion of Ukraine.

Speaking from the Vostochny Cosmodrome in Russia's Far East to commemorate Yury Gagarin's orbiting of the Earth in 1961, Mr. Putin said Russia would resume its lunar program through the launch of its Luna-25 moon probe from the spaceport this year.

"Despite difficulties and attempts to hinder us in this direction from the outside, we will consistently and persistently move ahead with the plans," said Mr. Putin, as cited by Russian state media.

Russia's last lunar mission, Luna-24, dates back to 1976 in what was the third mission from the Soviet Union to bring lunar soil samples to Earth.

Mr. Putin said Russia would continue to develop a new-generation transport vehicle, as well as nuclear space-energy technologies, where Russia has a "clear advantage," but didn't elaborate. He said Russia would significantly expand its constellation of satellites.

The U.S. and Russia have cooperated in space for nearly five decades. The countries' joint habitation of the International Space Station began in November 2000.

Since the U.S. retired its space shuttle fleet in 2011, American astronauts have repeatedly traveled to the space station aboard Russian rockets. Those flights have diminished recently following the success of Elon Musk's private SpaceX in developing launchers that can take astronauts into orbit and dock with the space station.

Now Russia's invasion of Ukraine has threatened international space cooperation. Russia's space agency, Roscosmos, cast doubt on its future involvement in the ISS and said it was halting deliveries of rocket engines to the U.S.

The European Space Agency recently suspended cooperation with Russia on the planned ExoMars rover mission to hunt for signs of life on the red planet, citing the invasion of Ukraine. ESA said it would assess options for a way forward for the mission.

Roscosmos Director-General Dmitry Rogozin recently said that only the full lifting of sanctions would restore normal working relations with other space agencies, an unlikely development as Russia continued to pour reinforcements into eastern Ukraine over the weekend, preparing for what are likely to become the war's biggest battles.

Mr. Putin brushed off the impact of international sanctions on Russia's space program, saying that Gagarin's flight took place while the Soviet Union was in isolation.

"We have done everything in complete technological isolation, and we have achieved such tremendous success," he said.

[RETURN TO TOP](#)

## **CHINA**

### **10. China's military has US aircraft carriers in its sights, but those flattops aren't 'little teacups,' their captains say**

BusinessInsider.com, Apr. 12 | Christopher Woody

In March 1922, the US Navy's first aircraft carrier, the USS Langley, entered service. A century later, some are questioning whether carriers can survive in the wars of the future.

The development of increasingly sophisticated anti-ship weapons by capable adversaries, namely Russia and China, has raised doubts about those ships.

The captains of two of those carriers discounted the concern, saying the US Navy's 11 flattops would be tough to find and hard to stop.

Questions about whether carriers are "obsolete" have come up before, including when Congress was debating whether to build the USS Enterprise, the Navy's first nuclear-powered aircraft carrier, in the late 1950s, Capt. Paul Campagna, the commanding officer of the USS Dwight D. Eisenhower, said.

"I think the aircraft carrier has shown itself to be very enduring. For anyone that's worried about the modern threat that's out there, I'll just say that the carrier is not on an island," Campagna said on April 5 at the Sea Air Space conference in National Harbor, Maryland.

"It deploys with the air wing. It deploys with the strike group. It deploys with a layered defense that goes from the bottom of the ocean and out to space, and anyone who thinks that we're fragile, little teacups out there or something like that is grossly mistaken," Campagna added.

The doubts about the carrier's future are driven in large part by China's military modernization, which has produced a variety of long-range weapons and more capable aircraft, ships, and submarines to launch them.

China's anti-ship missiles are the major concern, especially the DF-21D and DF-26B ballistic missiles, which are designed for naval targets and sometimes called "carrier killers."

The DF-21D was introduced in the mid-2000s, and the DF-26 was first seen in public in 2015. They have long been considered threats to US ships and bases.

China has built targets shaped like US aircraft carriers and destroyers, and hawkish Chinese officials have advocated using those missiles against the real things.

It is unacceptable to continue this status quo, despite dramatically more dangerous conditions. We did not choose this fight, but we must respond to the conditions set forth by our adversaries.

#### **24. Putin is holding GPS hostage – Here's how to get it back**

C4ISRNET.com, Apr. 12 | Dana A. Goward and Rep. John Garamendi (D-CA)

*"GPS is an enormous bargaining chip for Vladimir Putin" – George Beebe, former Chief Russia Analyst at the Central Intelligence Agency*

On November 15, 2021 a missile streaked into space from Russia, destroying a retired Russian satellite. The remnant debris endangered other satellites and the International Space Station crew that included Russian cosmonauts.

Russia's anti-satellite test was meant as a clear message to the U.S.; Russia can destroy American satellites. Two weeks later a Russian news media personality bragged that Russia could bring down all 32 GPS satellites, a move that would affect nearly every facet of American life. The demonstration and subsequent threat would become a prelude to Russia's next major act.

As Russia shot down a satellite, they were also massing troops at their border with Ukraine. When they invaded in February, the threat to American satellites became a particularly ominous deterrent to U.S. support for Ukraine.

U.S. critical infrastructure relies on precise timing and navigation signals from GPS satellites. A member of the National Security Council acknowledged this at a December public meeting saying "GPS is still a single point of failure" for America.

If GPS signals suddenly disappeared, transportation systems would immediately suffer. Everything would slow down, carry less capacity and be more dangerous. Air travel would be less efficient and safe. Delivery services would be hamstrung. Uber and Lyft would be out of business.

Other critical systems would follow over subsequent days. Cellphone towers and internet switches would lose synchronization. Banks could not timestamp transactions. Control systems for electrical grids, sewer and water systems, and many industrial applications would fail or revert to inefficient manual operations.

Putin would not even need not go through the trouble of shooting down satellites and risking all-out war. He could do it with the flip of a switch.

Russia excels at cyber and electronic warfare. Its experts have boasted their abilities could "make aircraft carriers useless." Russian forces regularly jam GPS and other satellite signals in various parts of the world. They also have perfected "spoofing," a technique which sends false signals to make GPS users think they are someplace they are not.

Russian capabilities also reportedly extend into space with nuclear powered electronic warfare satellites. These could jam GPS signals across the face of the planet.

A cyber or jamming attack would have clear advantages over destroying satellites. Cyber-attacks are often difficult to attribute and would be less likely to prompt a shooting war. Putin also would have the flexibility to undo things if they started to get out of hand, or once he got what he wanted.

Just the threat of interfering with GPS can help Putin keep the U.S. at bay.

Unlike Russia, China, and some other countries, the U.S. does not have a terrestrial system to fall back on when essential timing and navigation signals from space are not available.

We had such a system, but instead of security and resiliency, bureaucrats saw unneeded duplication with GPS and it was shutdown. And notwithstanding promises in 2008 and 2015 to establish a land-based backup for GPS, and a 2018 law requiring one to be in operation by the end of 2020, nothing has been done.

GPS is an enormous bargaining chip for Putin, and enables him to impose his own crippling economic and political sanctions on the U.S. at any time.

A GPS outage would have immediate and severe impacts to our economy. Impacts that will grow with time and create huge domestic problems while hindering our ability to act against Russian aggression.

Even a couple hours' disruption would severely undermine public confidence in the government. It will create long lasting political problems and weaken our nation's position on the world stage for decades.

Putin's November anti-satellite test added another consideration and constraint to America's on-going geopolitical calculus.

Yet this is a conundrum of our own making; it is the result of failing to invest in resilient systems despite knowing the potential devastating results.

Establishing one or more widely available alternatives for GPS will help solve this issue, and in the words of a former Obama era official, "take the bullseye off of GPS." It will eliminate a "single point of failure," and make GPS safer by reducing its attractiveness as a target.

Government agencies have identified readily available technologies and services needed to make GPS, and thus America, more secure. The projected annual price tag is a small fraction of the \$1.5B spent on GPS each year, and something that could easily be funded by the recently enacted Bipartisan Infrastructure Framework.

America prides itself on being a nation of laws. The administration must follow the law, implement a GPS backup as soon as possible, and rescue our hostage GPS from Putin.

*--Hon. John Garamendi (D-CA) represents California's 3rd Congressional District and chairs the House Armed Services Readiness Subcommittee; Mr. Dana A. Goward is President of the non-profit Resilient Navigation and Timing Foundation. ## **25. If Ukraine falls, Putin could take aim at the Baltics next**

Washington Post, Apr. 13, Pg. A21 | Michael Gerson

I was with President George W. Bush when he visited Lithuania in 2002, just after the Baltic states had been offered membership in NATO. Bush had been one of the strongest advocates for the inclusion of Lithuania, Estonia and Latvia in the alliance, which would establish the obligation of mutual defense.

At the celebration ceremony, Lithuanian President Valdas Adamkus presented Bush with the Cross of the Order of Vytautas the Great, his country's highest honor. Bush presented Adamkus with a basketball signed by Michael Jordan, revealing a different set of cultural priorities. But Bush's speech that day (which I helped produce) highlighted a greater gift: "Anyone who would choose Lithuania as an enemy," he said, "has also made an enemy of the United

States of America. In the face of aggression, the brave people of Lithuania, Latvia and Estonia will never again stand alone."

You could almost hear three nations exhale in relief. The Baltics have the misfortune of sitting at a bloody geopolitical crossroads, and their last two occupations were particularly horrifying. Nazi German "killing units" murdered hundreds of thousands of Jews. The Soviet Union deported half a million Baltic citizens to gulags or Siberia. The Soviets also imported ethnic Russians to change the ethnic composition of these conquered nations.

The United States never recognized Soviet Russia's illegal occupation of the Baltics. But its and NATO's commitment to prevent any future occupation engendered some controversy. Experts such as George Kennan thought that NATO membership for a former constitutive republic of the U.S.S.R. would needlessly provoke the Russians. And some military observers found the actual NATO defense of the Baltics - on Russia's border and far from NATO's centers of military power - to be a near impossibility.

The argument over the NATO-ization of the Baltics was a prelude to disputes over Russian President Vladimir Putin's intentions in Ukraine and beyond. Some experts bluntly explain - as did the title of a 2014 article by the University of Chicago political scientist John J. Mearsheimer - "Why the Ukraine Crisis is the West's Fault." Mearsheimer contended that Russian leaders "would not stand by while their strategically important neighbor turned into a Western bastion."

In this view, Putin is primarily the defender of the Russian homeland. His soldiers might have the moral restraint of drunken Cossacks, but he is resisting the hubristic expansion of a hostile military alliance.

This conviction, no doubt, is widely shared among Russians, and easily exploitable by their leader. Putin has portrayed his unprovoked attack on Ukraine as another reaction to fascist aggression from the West. His deception runs along well-worn historical grooves. Over the centuries, Russia has faced invasions from across the vast, flat plain reaching from Germany to the heart of Mother Russia. For many older Russians, memories of World War II consist mainly of Western perfidy and Russian indomitability.

Putin has written almost lyrically about the spiritual unity between Kyiv and Moscow. Evidently he bombs only the ones he loves. But his intentions are far more practical. The Putin-NATO divide might not rise to the level of ideological conflict, but it does involve a serious argument about the future of Europe.

Most recent U.S. presidents have maintained that NATO expansion is the natural outcome of a rules-based international order. European countries that meet defined standards on good governance, economic freedom and civilian control of the military can be admitted. This has helped consolidate several democratic transitions in Eastern Europe. It has also helped rectify the terrible wrong of the Yalta agreements, which formally cut Europe into areas of dominance and threw a number of vulnerable nations to the wolves.

Putin's contrasting goal, says former U.S. ambassador to NATO and Russia Alexander Vershbow, is "to pressure the West into accepting some sort of Yalta 2, a Europe divided into spheres of influence with limited sovereignty for everyone but Russia." This would allow him to restore Russian hegemony over its "near abroad."

Why is this conflict between rules and spheres so important? If Putin is engaged in a defensive struggle, then the Ukraine war is mainly about Ukraine. Some will propose that President Volodymyr Zelensky make the necessary concessions - no Ukrainian NATO membership, Russian control of the Donbas region - to end a bloody war. Peace through self-dismemberment.

But if Putin is attempting to reconstruct the Russian sphere of influence in Europe, his success in Ukraine would pave the way for future horrors. The logic that led to Russian aggression in Georgia and Ukraine - no NATO in the Russian sphere - would almost certainly lead toward the Baltics.

The lesson? Ukraine, with aggressive help from NATO, must defeat Russian forces, or the United States might soon face the question: Do we really fight for Lithuania? Though we are obligated, the decision and task would not be easy. Helping draw a NATO redline at Ukraine could help the United States preserve itself from impossible choices of the future.

## **26. Consequences of Biden's Iran deal will be dangerously worse for the world**

### ***Administration should use the lull in negotiations to reconsider the flawed pact***

Washington Times Online, Apr. 12 | James Jay Carafano and Adam Milstein

Negotiations over a new nuclear deal with Iran have stalled. For now. But the talks are expected to resume. Policymakers would be wise to use this lull to take a sober look at the draft deal. They should pay particularly close attention to the dangerous regional consequences that would arise from another flawed deal with Iran.

As matters stand now, the new deal would be even worse than the original. Instead of the “stronger and longer” agreement we’d been promised, the deal now on the table is weaker and will shorten the time for Iran to become a nuclear power. Rather than prevent Iran from getting the bomb, it would pave the way for Tehran to become nuclear and empower its “sanction-free” global terroristic arm – the Islamic Revolutionary Guard Corps.

The most likely outcome of these developments would be a devastating regional war between Israel and Iran, as Tel Aviv tries to prevent Tehran from achieving its stated goal of wiping Israel from the earth. This war would inevitably expand, with Iran attacking Saudi Arabia and the United Arab Emirates.

Even if there is no immediate war, it is only logical that Turkey, Saudi Arabia and Egypt would think it necessary to acquire nuclear arsenals to deter Iran — a dangerous situation that could also lead to a nuclear war.

Let’s consider the rosiest of scenarios with no war or nuclear proliferation. The deal would still release billions of dollars of frozen Iranian funds and lift the current sanctions against the regime. This will empower and embolden Iran’s Islamist dictatorship, just as it did after the original 2015 nuclear deal.

That agreement gave Tehran a windfall, which the regime promptly used to accelerate its uranium enrichment and ballistic missile program. Those funds also enabled the IRGC to escalate its military intervention in Syria and ramp up the transfer of advanced drones and missiles to a lethal network of proxy terror groups: Hezbollah, Hamas, Palestinian Islamic Jihad, Iraqi militias and the Houthi militants in Yemen. These anti-Western terrorist groups target civilians in Israel, Iraq, Saudi Arabia and the United Arab Emirates.

Make no mistake. The Iranian regime remains as staunchly anti-American as ever.

While Iranian diplomats have been engaged in nuclear talks in Vienna, Tehran has orchestrated a series of proxy attacks against U.S. forces in the region and Israel, Iraq, Saudi Arabia and the United Arab Emirates.

These attacks will likely increase after a new Iran deal. U.S. concessions on sanctions would subsidize Iran’s continuing military buildup, proxy terrorist network, internal repression and nuclear program.

Furthermore, the new Iran deal will strengthen Russian President Vladimir Putin, empower the economic and military alliance between Russia and Iran, and open up more ways for Russia to circumvent the U.S. and European sanctions imposed due to its invasion of Ukraine.

There is also the unsettling probability that the Biden administration will make the same mistake that the Obama administration made: Fail to adequately push back against Iran’s destabilizing regional behavior after a nuclear agreement, however flawed, is reached.

Fearful of jeopardizing what it mistakenly considers a legacy achievement, the Biden administration may be even more inclined than it is now to treat Iran with kid gloves.

This complacent passivity will project weakness that could further encourage Iranian hardliners, undermine longstanding U.S. national interests, and demoralize U.S. allies in the region threatened by Iran's aggressive regime and feel betrayed by the Biden administration.

Even worse, Russia and China would be two of the biggest beneficiaries of the deal outside of Iran. Moscow, which already has earned billions of dollars building Iran's nuclear reactors, hopes to sell arms to Tehran for billions more. China, which signed a 25-year, \$400 billion strategic partnership agreement with Tehran last year, will gain increased trade, easier access to a major source of oil imports, and a reinvigorated ally in a critical region.

What's the alternative? The Biden administration needs to think outside the box. The U.S. cannot afford a prohibitively heavy price for a flawed nonproliferation agreement that amounts to little more than a diplomatic speed bump.

Instead, the U.S. should make every effort to deprive the Iranian regime and its terroristic arm of resources that can be used to advance its odious agenda. Simultaneously, Washington should support and encourage Israeli-Arab cooperation to build a breakfront of collective security and economic integration that stiff-arms Iranian expansion. The region also needs an integrated air and missile defense umbrella. There may also be a need for extended nuclear deterrence against a breakout Iranian nuclear threat.

The Middle East has long been a powder keg. The current deal would only make it bigger and shorten the fuse.

*--A Heritage Foundation vice president, James Jay Carafano directs the think tank's research program on matters of national security and foreign affairs. Adam Milstein is the co-founder of the Israeli-American Council, where he serves as a board member and chair emeritus*

## **STATE-RUN MEDIA**

### **27. No meetings with Russian top brass on Putin's schedule yet – Kremlin spokesman**

TASS (Russia), Apr. 12 | Not Attributed

The traditional spring series of meetings with Russia's top military officials has not yet been put on the Russian president's schedule, Kremlin spokesman Dmitry Peskov told reporters on Tuesday.

"[The meetings] have not yet been planned. Evidently, as long as [the special military] operation is under way, the top brass is busy. Naturally, the tradition will continue, but no exact date have yet been set," he said.

The Russian president traditionally holds a series of defense-related meetings twice a year, in May and November. Before the start of the novel coronavirus pandemic, those events included visits to defense enterprises and facilities.

The latest series of those meetings took place in November 2021, when Putin met with top military officials, chief designers and heads of defense enterprises to discuss technological development of the Russian armed forces, including the development of drones.

The 2021 spring series of defense meetings was devoted to long-term development of the Russian armed forces, implementation of the state procurement order, as well as projects in military transport aviation and long-range high-precision weaponry.

### **28. US uses conflict in Ukraine for containing Russia – Chinese Foreign Ministry**

The US authorities intentionally fuel the conflict in Ukraine for containing China and Russia, Chinese Foreign Ministry spokesperson Zhao Lijian told a news briefing on Tuesday.

"US and NATO policies have brought Russia-Ukraine rifts to a critical point. The American side has taken no steps to ease the escalation of tensions, but on the contrary, it has been adding fuel to the conflict, thus forcing other countries to take sides," he said.

"The US is systematically spreading disinformation in order to discredit China and distort its fundamental stance in favor of peace talks. It has been trying to dodge responsibility, staging provocations and trying to derive benefits, find room for maneuver and at the same time contain Russia and China," Zhao said.

Russian President Vladimir Putin on February 24 launched a special military operation in Ukraine in response to a request for help from the leaders of two Donbass republics. He stressed that Moscow had no plans for an occupation of Ukrainian territories. The West responded with the introduction of large-scale sanctions against Russia.

### **29. Taiwan's drills, defense handbook 'futile in resisting reunification'**

Global Times (China), Apr. 13, Pg. 3 | Liu Xuanzun

The island of Taiwan on Tuesday held military exercises and released a civil defense handbook in an apparent move to hype cross-Straits tensions, which was met with a negative reception on the island, and mainland experts said that neither move will be helpful to Taiwan secessionists should a conflict break out.

The armed forces on the island of Taiwan held a series of drills Tuesday morning, with the aim of testing the troops' joint air defense command and control capabilities, a spokesperson at Taiwan's defense authority said, after residents in many places on the island including Taipei and New Taipei City were awakened by the sound of warplanes, media on the island reported on Tuesday.

Taiwan's F-16 and IDF fighter jets simulated Chinese mainland warplanes, Taiwan media reported, but some Taiwan netizens said on social media that the drills are useless.

Also on Tuesday, Taiwan's defense authority released a civil defense handbook aimed at teaching residents on the island how to seek refuge in major emergencies, including a military conflict, Taiwan media reported, saying that the 28-page Chinese-language handbook contains QR codes for users to scan to access directions on where to go and what to do in a major emergency.

The handbook is being issued amid concerns over the possibility that the Chinese mainland could launch a cross-Straits conflict, reports said.

This was also questioned by the public on the island, with many asking if QR codes and a mobile network would still even be functional if communications infrastructures were destroyed.

From a military point of view, both the drills and the handbook are futile in saving "Taiwan independence" secessionist forces should a cross-Straits conflict break out, as the overwhelming capabilities of the Chinese People's Liberation Army (PLA) will render them useless, a Chinese mainland military expert told the Global Times on Tuesday, requesting anonymity.

The secessionist Democratic Progressive Party authority is only deceiving themselves, while also making a political show to hype cross-Straits tensions, the expert said.

PLA warplanes again entered Taiwan's self-proclaimed southwest air defense identification zone on Tuesday, marking a full attendance since the start of April, according to Taiwan media reports.

An aviation brigade based in East China affiliated with the PLA Air Force recently received a new batch of J-16 fighter jets, China Central Television (CCTV) reported on Monday. This type of aircraft has been a frequent participant in the PLA's patrols and drills near the island of Taiwan.

The PLA's commissioning of more advanced fighter jets like the J-16 will eventually replace older fighter jets like the J-7 and the J-8, and contribute to the combat capability of the PLA, analysts said.

Even if a cross-Straits military conflict breaks out, the PLA will only target secessionists, not ordinary people, the expert said, noting that Taiwan's defense authority has an evil intent by issuing the handbook, as it is attempting to hype the "threat" of the mainland.

# DEFENSE MORNING CLIPS

As of 0430 Hours, April 13

## OVERVIEW

As Russian President Vladimir Putin vowed to continue his country's war on Ukraine, President Biden said for the first time that Russia's actions amounted to a "genocide" as President Putin is trying to "wipe out the idea of being a Ukrainian," the *Washington Post* reported. Additionally, a senior defense official revealed that the Biden administration is planning a new \$750 million military aid package for Ukraine to supplement prior shipments of 12,000 weapons for the Ukrainian Army, the *Associated Press* wrote. Also of note, Deputy Secretary of Defense Kathleen Hicks said that U.S. officials were in "continual dialogue" with Ukraine and U.S. allies to provide needed equipment, as the Pentagon planned to meet with military contractors to discuss these efforts, according to the *New York Times*.

## TOP STORIES

### 1. War will persist, defiant Putin says as inquiries begin

*Washington Post*, Apr. 13 (0115), Pg. A1 | Cate Cadell, Dan Lamothe, Mary Ilyushina, Karoun Demirjian and David L. Stern

Russian President Vladimir Putin on Tuesday called the war in Ukraine a "tragedy" but insisted the invasion will continue unabated, as the United States and its allies launched investigations into reports of a possible chemical attack ahead of an imminent Russian offensive in the country's east. Meanwhile, the Biden administration is poised to dramatically expand the scope of weapons it's providing Ukraine, U.S. officials said Tuesday, with the Pentagon looking to send armored Humvees and a range of other equipment.

### 2. Russia Has Yet to Slow a Western Arms Express Into Ukraine

*Associated Press*, Apr. 13 (0012) | Robert Burns

Western weaponry pouring into Ukraine helped blunt Russia's initial offensive and seems certain to play a central role in the approaching, potentially decisive, battle for Ukraine's contested Donbas region. Yet the Russian military is making little headway halting what has become a historic arms express. The Biden administration is preparing yet another, more diverse, package of military support possibly totaling \$750 million to be announced in coming days, a senior U.S. defense official said Tuesday.

### 3. The Pentagon will meet with major military contractors to plan aid for Ukraine

*New York Times Online*, Apr. 12 (1420) | Julian E. Barnes

A top U.S. defense official said on Tuesday that the Pentagon would convene a classified meeting with the leaders of the biggest American military contractors on Wednesday to discuss stepped-up assistance to Ukraine, including ways improve air defenses, anti-ship missiles and weapons to find and destroy Russian artillery. The meeting on

Wednesday, announced by Kathleen H. Hicks, the deputy secretary of defense, will include leaders of eight large military contractors, such as Raytheon Company and Lockheed Martin Corporation. The meeting will discuss how to overcome any potential supply problems — both to replenish American weapons stocks that have been drawn down to help Ukraine and to keep Kyiv supplied as the war continues.

## **DEFENSE DEPARTMENT**

### **4. Pentagon: ‘Roughly Eight to 10 Flights a Day’ Full of Aid for Ukraine Pouring into Europe**

*Air Force Magazine Online, Apr. 12 (1609) | Greg Hadley and John A. Tirpak*

Roughly eight to 10 flights full of supplies and equipment for Ukraine are landing in Eastern Europe every day, Pentagon press secretary John F. Kirby told reporters on April 12, as the U.S. and other nations race to get their aid packages into the hands of Ukrainians combatting Russia’s invasion. “There’s more than 30 other nations contributing various amounts of material — some weapons, some not, some a mix, and we are helping coordinate the deliveries into Ukraine of all that material, not just ours, but of others at various trans-shipment sites in the region,” Kirby said during a briefing hosted by the State Department’s Brussels Media Hub. “And that flow continues.”

### **5. Hicks to Congress: Be Patient, Allow Some Failures in New Development Programs Like Hypersonics**

*Air Force Magazine Online, Apr. 12 (1638) | John Tirpak*

Speaking during an April 12 Defense Writers Group breakfast, Hicks touted the recent successful test of the Lockheed Martin version of the Hypersonic Air-breathing Weapon Concept (HAWC), which set a new record for hypersonic flight under scramjet power. The March flight test likely achieved about 327 seconds of hypersonic flight under scramjet power, versus 200 seconds achieved by the Boeing X-51 Waverider in 2010, based on figures provided by the Defense Advanced Research Projects Agency. The U.S., she said, “has to be willing to fail. I think this is a place we want to increase the trust the Congress has in the Department, as it goes after improvements and capabilities.”

### **6. Pentagon Won’t Merge Commissaries and Exchanges, For Now**

*Military.com, Apr. 12 (1510) | Patricia Kime*

The Defense Department has scuttled plans to merge the Defense Department’s commissary system with the military branches’ three separate exchange services. In an April 4 memo to Pentagon leadership, Deputy Defense Secretary Kathleen Hicks ordered officials to “cease all efforts to consolidate the Defense resale entities.”

### **7. Virginia GOP official resigns after revelation of his call to lynch the defense secretary**

*Military Times Online, Apr. 12 (1505) | Meghann Myers*

The chair of a Virginia electoral board stepped down Monday after pressure from fellow Republicans, including the state's governor, following a resurfaced racist Facebook screed against Defense Secretary Lloyd Austin and retired Army Lt. Gen. Russel Honoré posted in early 2021. The Republican Party of Hampton first called for his resignation Friday.

#### **8. Pentagon does 'not object' to potential transfer of jets from Slovakia to Ukraine**

*Washington Examiner Online, Apr. 12 (1232) | Mike Brest*

The Pentagon would not stand in the way of a possible transfer of Slovakian fighter jets to Ukraine, a senior U.S. defense official told reporters Tuesday. "We certainly would not object to it. We have no right to object to it," the defense official said, noting that the U.S., to its knowledge, was not involved in any of the discussion in facilitating the deal.

### **EXECUTIVE/LEGISLATIVE**

#### **9. Team Biden scrambles to respond to claims of Russia chemical weapon use**

*Politico Online, Apr. 12 (1323) | Alexander Ward and Jonathan Lemire*

Alleged and unconfirmed claims of chemical weapons use by Russia in Ukraine has forced a scramble inside the White House to match President Joe Biden's promise of an "in kind" response while avoiding further escalation of the conflict. The White House is urging caution, noting that the use of chemical weapons remains unverified. U.S. officials, speaking on the condition of anonymity to discuss a sensitive subject, said they have been running scenario-planning exercises on the possible use of chemical weapons, having publicly raised the alarm that Russian President Vladimir Putin may take such a step. The officials said that military options in Ukraine aren't on the table — echoing Biden's repeated position of not wanting to spark World War III.

#### **10. GOP senators say Biden should share more intelligence support to Ukraine**

*Washington Times Online, Apr. 12 (1528) | Mike Glenn*

The Republican members of the Senate Intelligence Committee are pressing the Biden administration to step up its information-sharing with Ukraine following Russia's invasion in late February, which has cost thousands of lives and triggered Europe's largest refugee crisis since World War II.

### **EUROPE**

#### **11. Flow of Moscow Cyberattacks Continues**

*Wall Street Journal, Apr. 13 (0200), Pg. A6 | Dustin Volz and Robert McMillan*

Ukrainian and Western intelligence officials feared Moscow's elite corps of state-sponsored hackers would launch crippling cyberattacks to complement its invasion of Ukraine. Instead the cyberwar has been something closer to Internet trench warfare: A grinding conflict of relentless, if sometimes unsophisticated attacks that have taken casualties but had limited impact on the course of the fight. What Ukraine hasn't seen is a successful type of

massive, strategic-level attack on civilian infrastructure, given the aggression and technical ability that Moscow's elite hackers have displayed in the past. On Tuesday, ESET, a Slovak-based cybersecurity firm, and Ukraine's cybersecurity emergency response team reported that a new strain of malware had been wielded in an attack on high-voltage electrical substations in Ukraine that was scheduled to damage systems earlier this month.

**12. Ukrainian Forces Still Hold Mariupol as Russians Close In**

*U.S. Naval Institute News, Apr. 12 (1719) | Heather Mongilio*

Ukraine still controls its port city of Mariupol despite concerns that it might soon fall to Russia, a senior defense official told reporters Tuesday. "You've seen the devastation that Russian airstrikes have wrought on Mariupol in the city, but our assessment is that the Ukrainians are still fighting for it," Pentagon Press Secretary John Kirby told reporters Tuesday.

**13. U.S., Allies Aim to Force Russia to Shift Money Away From War**

*Associated Press, Apr. 12 (1857) | Fatima Hussein*

The United States and its allies are pushing ahead with sanctions aimed at forcing Vladimir Putin to spend Russia's money propping up its economy rather than sustaining its "war machine" for the fight in Ukraine, a top Treasury Department official said Tuesday. Deputy Treasury Secretary Wally Adeyemo, one of the main U.S. coordinators on the Russian sanctions strategy, said in an interview with The Associated Press that the goal is to make Russia "less able to project power in the future."

## **RUSSIA**

**14. Russian Scientists Say They Have A New System to Monitor Attacks on the Russian Internet**

*DefenseOne.com, Apr. 12 (1102) | Patrick Tucker*

As Russia rains artillery fire down on Ukrainian cities, cyber attackers from around the world have been targeting Russian media, cryptocurrency services, and retail brands with denial of service attacks. A group of Russian scientists say that they've developed a new tool to block such attacks – but even that is an indication that severe economic sanctions are changing life in Russia. Engineers from Samara University developed a tool they called NetTestBox to monitor internet traffic into and out of Russia. "The information obtained by the system allows you to track unauthorized data leaks, see what part of the traffic goes through foreign channels, and, therefore, is vulnerable to external shutdown," according to a Monday article from Russia's Izvestia news outlet. (Like most Russian media, the site is state-controlled.)

## **INDO-PACIFIC**

**15. USS Abraham Lincoln operating in Sea of Japan following North Korea missile tests**

*Navy Times Online, Apr. 12 (1843) | Diana Stancy Correll*

The aircraft carrier Abraham Lincoln and its carrier strike group are operating off the Korean peninsula for the first time since 2017. The operations in the Sea of Japan follow North Korea's test-firing of an intercontinental ballistic missile in March.

**16. North Korea uses space program to disguise ballistic missile development – U.S. military intelligence**

*Yonhap News Agency (South Korea), Apr. 12 (1534) | Byun Duk-kun*

North Korea uses its space program as a disguise to test and advance its ballistic missile capabilities, a U.S. military intelligence report said Tuesday. The report also noted the North may be trying to acquire space and weapons technologies by hacking into aerospace companies.

**17. U.S., Australia Pressure Solomon Islands on China Military Pact**

*Bloomberg News, Apr. 13 (0308) | Ben Westcott*

Australia has publicly asked the Solomon Islands to “consider not signing” its draft security deal with the Chinese government, ramping up pressure on the Pacific country to ditch the controversial agreement. It comes after U.S. Deputy Secretary of State Wendy Sherman spoke with Solomon Islands Foreign Minister Jeremiah Manele on Tuesday about plans for an American embassy in the Pacific nation. The two officials also talked about “joint efforts to broaden and deepen engagement between our countries in support of a free and open Indo-Pacific region,” U.S. State Department spokesman Ned Price said in a statement Tuesday.

## **CHINA**

**18. China's military has US aircraft carriers in its sights, but those flattops aren't 'little teacups,' their captains say**

*Business Insider Online, Apr. 12 (1106) | Christopher Woody*

The doubts about the carrier's future are driven in large part by China's military modernization, which has produced a variety of long-range weapons and more capable aircraft, ships, and submarines to launch them. China's anti-ship missiles are the major concern, especially the DF-21D and DF-26B ballistic missiles, which are designed for naval targets and sometimes called “carrier killers.”

## **MIDDLE EAST**

**19. Iran Supreme Leader Optimistic Though Nuclear Talks Stalled**

*Associated Press, Apr. 12 (1409) | Nasser Karimi and Jon Gambrell*

Iran's supreme leader on Tuesday insisted negotiations over Tehran's tattered nuclear deal “are going ahead properly,” even after repeated comments by American officials that an agreement to restore the accord may not happen.

## **AFRICA**

**20. The New Scramble for Africa: China Seen Outpacing U.S.**

*Voice of America News, Apr. 12 (1409) | Kate Bartlett*

Former President Barack Obama “pivoted” toward Africa, his predecessor Donald Trump away from it and current U.S. leader Joe Biden has had his hands full with the pandemic at home and now the war in Ukraine. But in an address to lawmakers on Capitol Hill last week, the commander for U.S. forces in Africa pointed to China’s dominance in a region vital to America’s security and economic growth and warned that Washington ignores Africa at its peril.

**SPACE**

**21. China’s orbiting hypersonic missile part of growing space-based arsenal, DIA warns**

*Washington Times Online, Apr. 12 (1451) | Bill Gertz*

China’s test of an orbiting hypersonic missile last year demonstrated Beijing’s longest range land attack weapon and is part of a growing arsenal of space warfare capabilities, according to a Defense Intelligence Agency report on space threats released Tuesday. “The loss of space-based communication and navigation services could have a devastating impact on warfighters during a conflict — that’s one of the most serious scenarios anticipated,” DIA Director Lt. Gen. Scott Berrier said in releasing the report.

**AIR FORCE**

**22. Air Force positions autonomous drones, networked weapon systems as top priorities**

*Fedscoop.com, Apr. 12 (1424) | Jon Harper*

The Air Force is asking Congress for more than \$100 million in additional R&D funding for autonomous drones and networked weapon systems as the Pentagon pursues more cost-effective ways to match up against China. The technology is a top priority for Air Force leaders as they look toward the future operating environment and fiscal constraints that will limit the number of manned planes that the service can buy for Next-Generation Air Dominance (NGAD) and other programs.

**ARMY**

**23. Army still failing to process some naturalizations for foreign-born recruits, judge says**

*Military Times Online, Apr. 12 (1943) | Davis Winkie*

Despite an August 2020 court order that forced the Army to abolish minimum time-in-service requirements for foreign-born recruits requesting expedited U.S. citizenship, the service has failed to adequately implement the new rules, a federal judge said last month. The original court order came after the American Civil Liberties Union won a lawsuit arguing that the Defense Department unlawfully added time in service requirements and restrictive processing procedures to an expedited citizenship pathway available to troops through the Immigration and Nationality Act.

**24. Power struggle: How the U.S. Army is tackling the logistics of battlefield electricity**

*Defense News Online, Apr. 12 (0900) | Jen Judson*

In generations past, infantry officers' primary needs were ammunition, an extra pair of dry socks and enough water in the field. But soldiers today need vast stores of power just to manage daily operations, from the batteries that power the Samsung-based Nett Warrior system that connects soldiers to the electricity that keeps command posts and operations centers running.

## **MARINE CORPS**

**25. First to fight: Is this the end of the Corps as America's 911 force?**

*Military Times Online, Apr. 12 (1517) | Philip Athey*

First to fight long has been both a recruiting slogan and an enduring Marine mantra. Marines take pride in the Corps' history of showing up first, as America's 911 force. But those wars have ended, and a new war is on the horizon: China. It's the biggest threat the commandant has his eyes on. And it's the proclaimed reason he quickly and drastically has been working to change the Marine Corps.

## **NAVY**

**26. Navy secretary visits Bremerton, Bangor, touts multi-billion modernization of shipyard**

*Kitsap Sun Online (Bremerton, WA), Apr. 12 (1345) | Josh Farley*

The Navy is "deeply committed" to a multi-billion dollar modernization effort at its shipyards, including its largest in Bremerton, as new generations of aircraft carriers and submarines will require upgraded dry docks and facilities for maintenance work, President Joe Biden's Navy secretary said at Naval Base Kitsap-Bangor on Monday. "Recapitalizing the shipyards is incredibly important," said Carlos del Toro, a Navy veteran who commanded a destroyer during his 22-year career as a Navy officer. "... These are major, major investments."

**27. 'Lightning Carrier' Concept Shows How Navy, Marine Corps Can Fly More F-35Bs from Amphibs**

*DefenseOne.com, Apr. 12 (1541) | Caitlin Kenny*

The Navy and Marine Corps recently proved they can operate an amphibious assault carrier as if it were a fixed-wing aircraft carrier, which officials said will give them more options for how to use these ships in the future. The demonstration showed the services can operate amphibious assault carriers with fifth-generation aircraft, like a smaller aircraft carrier, if needed. The exercise had the 20 aircraft operating at a high tempo, the release said. These amphibious assault carriers normally carry a mix of rotary wing aircraft like the MV-22B Osprey helicopters and some F-35Bs, along with several hundred Marines that respond to combat or humanitarian operations as part of a Marine Expeditionary Unit.

**28. The Navy's shipbuilder oversight offices are underutilized, watchdog agency reports**

*Defense News Online, Apr. 12 (1831) | Geoff Ziezulewicz*

The Navy has in recent years been plagued by a series of high-profile shipbuilding problems that have delayed construction, sent costs skyrocketing and impacted quality and performance across platforms. Although the sea service has an oversight tool within major private shipbuilding yards that could help improve things, it remains hindered, according to a Government Accountability Office report released this week.

**29. Navy to Deploy Four Cargo Drones on an Aircraft Carrier this Year**

*U.S. Naval Institute News, Apr. 12 (1918) | Sam LaGrone*

A quartet of logistics drones capable of carrying up to 50-pound payloads will embark on a U.S. aircraft carrier later this year to see if the unmanned aerial vehicles are practical at sea. The test, led by the experimentation and prototyping division at the Naval Air Warfare Center Aircraft Division (NAWCAD), is a response to Military Sealift Command and Naval Air Forces Atlantic seeking a faster way to send critical parts to warships underway.

## **SPACE FORCE**

**30. Russia is jamming GPS satellite signals in Ukraine, U.S. Space Force says**

*Space.com, Apr. 12 (1338) | Elizabeth Howell*

Another piece of space infrastructure for Ukraine is under attack, according to an NBC report. Jammers from Russian forces besieging the country are targeting global positioning system (GPS) satellites that are used for navigation, mapping and other purposes, the report said, quoting the U.S. Space Force.

## **MODERNIZATION & TECHNOLOGY**

**31. Into the Military Metaverse: An empty buzzword or a virtual resource for the Pentagon?**

*BreakingDefense.com, Apr. 12 (1935) | Andrew Eversden*

To understand the future of the military and the metaverse, Breaking Defense spoke with key Pentagon officials, outside experts and representatives from industry. While there are varying levels of enthusiasm, there is a growing agreement that as long as the military enters the virtual world with clear (if augmented) eyes, it could greatly benefit American warfighters in ways ranging from immersive combat planning to hyper-realistic virtual training to truly experiencing weapons systems in ways that have never before been possible. But as with technological leaps in the past, if the metaverse can't avoid becoming an empty buzzword thrown at every problem by leaders who don't fully grasp the concept, the Pentagon could end up wasting millions of dollars chasing a virtual dream.

## **NOTABLE COMMENTARY**

**32. Stop Buying Uranium From Russia**

*Wall Street Journal, Apr. 13 (0200), Pg. A13 | Sen. John Barrasso (R-WY)*

Europe has been rightly criticized for getting hooked on Russian energy. Now America must free itself from Russian uranium. I have introduced legislation to do this. Our nuclear supply chain should begin with American-mined uranium and end with American fuel. It is time to put Mr. Putin's nuclear cash cow out to pasture.

**33. If Ukraine falls, Putin could take aim at the Baltics next**

*Washington Post, Apr. 13 (0115), Pg. A21 | Michael Gerson*

Why is this conflict between rules and spheres so important? If Putin is engaged in a defensive struggle, then the Ukraine war is mainly about Ukraine. Some will propose that President Volodymyr Zelensky make the necessary concessions - no Ukrainian NATO membership, Russian control of the Donbas region - to end a bloody war. Peace through self-dismemberment. But if Putin is attempting to reconstruct the Russian sphere of influence in Europe, his success in Ukraine would pave the way for future horrors. The logic that led to Russian aggression in Georgia and Ukraine - no NATO in the Russian sphere - would almost certainly lead toward the Baltics.

**34. How the Pentagon's bad inflation math made a hollow budget**

*BreakingDefense.com, Apr. 12 (0934) | John Ferrari*

A staggering 8.5%. This is the US government's March inflation rate in the Consumer Price Index (CPI), released today. About a month ago, my colleague, Elaine McCusker and I wrote that the Pentagon should, in its FY23 budget release, not hide behind "rosy assumptions and passing the buck" to wish away inflation. Unfortunately, the Defense Department's 2023 budget not only ignores the rising inflation, it does just what we said they shouldn't do, and the new CPI figures should continue to raise the cause for alarm.

## TOP STORIES

**1. War will persist, defiant Putin says as inquiries begin**

*Washington Post, Apr. 13 (0115), Pg. A1 | Cate Cadell, Dan Lamothe, Mary Ilyushina, Karoun Demirjian and David L. Stern*

Russian President Vladimir Putin on Tuesday called the war in Ukraine a "tragedy" but insisted the invasion will continue unabated, as the United States and its allies launched investigations into reports of a possible chemical attack ahead of an imminent Russian offensive in the country's east.

Putin said there was no clear end to the conflict and "no choice" but to forge ahead with the invasion, brushing off the impacts of punitive sanctions during a visit to the Amur region in Russia's far east where he met with Belarusian President Alexander Lukashenko.

"We will act rhythmically, calmly, according to the plan that was originally proposed by the General Staff," he said.

“What is happening in Ukraine is a tragedy, no doubt about that. But we had no choice. It was just a matter of time” before an attack on Russia, he added.

Putin also said peace negotiations had reached a deadlock, blaming the Ukrainian side. “Kyiv moved away from the Istanbul agreements, so we are back to an impasse.” Putin said, referring to negotiations in the Turkish city late last month. “Yesterday, I was told that the Ukrainian side has changed something in its negotiating position. I don’t know the details yet.”

Meanwhile, the Biden administration is poised to dramatically expand the scope of weapons it’s providing Ukraine, U.S. officials said Tuesday, with the Pentagon looking to send armored Humvees and a range of other equipment.

The new aid package could be worth \$750 million, these people said. They spoke on the condition of anonymity because the transfer has not yet been finalized.

Preliminary plans circulating among government officials and lawmakers in Washington included Mi-17 helicopters, howitzer cannons, coastal defense drones and protective suits to safeguard personnel in the event of a chemical, biological or nuclear weapons attack, the officials said, though they cautioned that it was not immediately clear whether all of those items would end up in the final package. A defense official said late Tuesday that helicopters will not be included.

President Biden on Tuesday said the war amount to a “genocide,” saying that Putin is trying to “wipe out the idea of being a Ukrainian.” Senior administration officials had earlier been unwilling to use the word “genocide” to describe Russia’s actions.

The United States and its allies have launched investigations into reports that Russian forces had used chemical weapons in the battered city of Mariupol. Deputy Mayor Sergei Orlov told the BBC on Tuesday that the city council has confirmed a “chemical poisoning” delivered via a Russian drone, but senior Ukrainian officials have been careful not to confirm the use of chemical weapons pending an investigation.

The reports stem from a claims by the Azov Battalion - a Ukrainian paramilitary group associated with far-right nationalism - that civilians were exposed to an “unknown” harmful substance but are now in a “relatively satisfactory” condition with some experiencing high blood pressure, heartburn, dryness around the eyes and throat, and a condition where blood rushes to the face.

The United States will face a “host of difficulties” in verifying the attack because of a lack of access to the region, said a senior U.S. defense official on Tuesday.

“These are difficult things to prove even when you are more proximate, and we are not. ... And so I think you can understand we want to be very careful here before making a proclamation,” the official said, speaking on the condition of anonymity under ground rules set by the Pentagon.

Secretary of State Antony Blinken told reporters Tuesday that “we have credible information that Russian forces may use a variety of riot control agents” to weaken Ukrainian soldiers and civilians in an effort to besiege Mariupol, a strategic port city.

Ukrainian Deputy Defense Minister Hanna Malyar cited “a theory” that the weapons could have been phosphorous munitions. White phosphorous is not considered a chemical weapon and as such is not explicitly banned by international humanitarian laws, but it has the capacity to severely harm civilians.

An eight-mile convoy of Russian troops and weapons has begun maneuvering 37 miles north of Izyum, a Ukrainian city strategically situated to the north of Mariupol and occupied by Russian forces. It is likely to become a staging ground for fresh attacks, according to the Pentagon.

The armored group, which includes a command element and combat enablers, could at least partially resupply other forces in the region, the senior U.S. defense official said.

Poor weather in the eastern Donbas region is expected to slow any immediate Russian advances, according to Ukrainian officials. In a television interview on Tuesday, Serhiy Haidai, the regional governor of Luhansk, said that forecasts for heavy rain in the coming days are “100 percent to our advantage,” as Russian forces will probably be forced to move in column formations along major roads, making them an “easy target.”

Russian airstrikes, however, have continued to hammer cities in Ukraine’s south and east. Russia has launched 1,540 missiles at Ukraine since the war began, according to the latest figures released by the Pentagon.

Haidai said in a separate social media post on Tuesday that morgues in the Luhansk region were “overflowing” following shelling attacks. He said that cemeteries in some areas were inaccessible and volunteers and that utility workers took advantage of periods between shellings to bury the dead in temporary graves carved out by tractors. In areas under Russian occupation, organized burials are not possible, leaving residents to bury the dead in yards, he said.

High-level foreign figures have continued to pledge support for the embattled country, including a delegation of religious leaders from the United States, Europe and Israel that arrived in Ukraine on Tuesday to speak with refugees. However, German President Frank-Walter Steinmeier reportedly scrapped plans for a potential trip to Kyiv after Ukrainian President Volodymyr Zelensky indicated he would not meet with him, according to Bild, a German daily.

Steinmeier appeared to acknowledge the rejection during an appearance in Warsaw, where he said a visit “was not wanted in Kyiv.” The snub highlights friction between Zelensky and the German government, which has balked at calls for a blanket embargo of Russian energy imports and sidestepped commitments to send heavy weapons to Ukraine.

Putin on Tuesday said that the “sanctions blitzkrieg” against Russia had failed as a deterrent and that the economy remained stable, as Russian officials separately threatened legal action against governments that have sanctioned Moscow.

Standard & Poor’s cut Russia’s credit rating on Friday after it defaulted on its sovereign debt by paying dollar-denominated bondholders in rubles. S&P said those bondholders can’t expect to convert the payments to dollars because of sanctions. Alongside a raft of other financial measures, the United States has barred Russia from using funds held in American banks to pay its debts.

Russian Finance Minister Anton Siluanov and Kremlin spokesman Dmitry Peskov called the default a “man-made” crisis by Western governments. “We will sue, because we have taken all the necessary steps to ensure that investors receive their payments,” said Siluanov.

Globally, the conflict is “violently disrupting” international trade in food and agriculture products, exacerbating the global poverty crisis, according to new reports from aid groups. Oxfam warned in a report released Tuesday that 263 million more people are expected to lapse into extreme poverty this year as the invasion continues to cause a spike in food and energy prices.

Inside Ukraine, the economic toll of the conflict has already reached hundreds of billions of dollars, according to Finance Minister Serhiy Marchenko. The cost of damage to critical infrastructure is currently about \$120 billion, while further damage to social and military infrastructure could add up to “more than \$500 billion,” he said in an interview with Sky News on Tuesday, calling on Russia to pay reparations after the war is over.

Zelensky said Monday in his nightly address that retreating Russian forces left “tens if not hundreds of thousands” of unexploded shells and mines in northeastern Ukraine, further complicating the region’s recovery.

“They consciously did everything to make the return to these areas after de-occupation as dangerous as possible,” he said.

In a boost for the Kyiv government, one of Putin’s trusted Ukrainian allies and friends, oligarch Viktor Medvedchuk, was recaptured Tuesday by Ukraine’s internal security service after weeks in hiding, according to the presidential administration.

Ukrainian Interior Minister Denis Monastyrsky said this weekend that more than 6,500 explosive devices were found within a 24-hour period as the cleanup continues, including in locations he believes were targeting soldiers, police and rescuers such as doorways, washing machines and under helmets.

In the northern city of Bucha, which is recovering after a brutal month-long occupation, Mayor Anatoly Fedoruk said in a news conference that the city had opened a second mass grave on Tuesday to bury 56 people killed in the conflict. Bucha has so far recovered 403 bodies, but that number is expected to rise, he said.

A total of 2,671 people were able to escape via humanitarian corridors in eastern Ukraine on Tuesday, according to Ukrainian Deputy Prime Minister Iryna Vereshchuk. A UNICEF report estimated that almost two-thirds of Ukrainian children have been displaced during the conflict.

## **2. Russia Has Yet to Slow a Western Arms Express Into Ukraine**

Associated Press, Apr. 13 (0012) | Robert Burns

WASHINGTON -- Western weaponry pouring into Ukraine helped blunt Russia's initial offensive and seems certain to play a central role in the approaching, potentially decisive, battle for Ukraine's contested Donbas region. Yet the Russian military is making little headway halting what has become a historic arms express.

The U.S. numbers alone are mounting: more than 12,000 weapons designed to defeat armored vehicles, some 1,400 shoulder-fired Stinger missiles to shoot down aircraft, and more than 50 million rounds of ammunition, among many other things. Dozens of other nations are adding to the totals.

The Biden administration is preparing yet another, more diverse, package of military support possibly totaling \$750 million to be announced in coming days, a senior U.S. defense official said Tuesday. The official spoke on condition of anonymity to discuss plans not yet publicly announced. The additional aid is a sign that the administration intends to continue expanding its support for Ukraine's war effort.

These armaments have helped an under-gunned Ukrainian military defy predictions that it would be quickly overrun by Russia. They explain in part why Vladimir Putin's army gave up, at least for now, its attempt to capture Kyiv, the capital, and has narrowed its focus to battling for eastern and southern Ukraine.

U.S. officials and analysts offer numerous explanations for why the Russians have had so little success interdicting Western arms moving overland from neighboring countries, including Poland. Among the likely reasons: Russia's

failure to win full control of Ukraine's skies has limited its use of air power. Also, the Russians have struggled to deliver weapons and supplies to their own troops in Ukraine.

Some say Moscow's problem begins at home.

"The short answer to the question is that they are an epically incompetent army badly led from the very top," said James Stavridis, a retired U.S. Navy admiral who was the top NATO commander in Europe from 2009 to 2013.

The Russians also face practical obstacles. Robert G. Bell, a longtime NATO official and now a professor at the Sam Nunn School of International Affairs at Georgia Tech University, said the shipments lend themselves to being hidden or disguised in ways that can make them elusive to the Russians — "short of having a network of espionage on the scene" to pinpoint the convoys' movements.

"It's not as easy to stop this assistance flow as it might seem," said Stephen Biddle, a professor of international and public affairs at Columbia University. "Things like ammunition and shoulder-fired missiles can be transported in trucks that look just like any other commercial truck. And the trucks carrying the munitions the Russians want to interdict are just a small part of a much larger flow of goods and commerce moving around in Poland and Ukraine and across the border.

"So the Russians have to find the needle in this very big haystack to destroy the weapons and ammo they're after and not waste scarce munitions on trucks full of printer paper or baby diapers or who knows what."

Even with this Western assistance it's uncertain whether Ukraine will ultimately prevail against a bigger Russian force. The Biden administration has drawn the line at committing U.S. troops to the fight. It has opted instead to orchestrate international condemnation and economic sanctions, provide intelligence information, bolster NATO's eastern flank to deter a wider war with Russia, and donate weapons.

In mid-March, a Russian deputy foreign minister, Sergei Ryabkov, said arms shipments would be targeted.

"We warned the United States that pumping weapons into Ukraine from a number of countries as it has orchestrated isn't just a dangerous move but an action that turns the respective convoys into legitimate targets," he said in televised remarks.

But thus far the Russians appear not to have put a high priority on arms interdiction, perhaps because their air force is leery of flying into Ukraine's air defenses to search out and attack supply convoys on the move. They have struck fixed sites like arms depots and fuel storage locations, but to limited effect.

On Monday the Russians said they destroyed four S-300 surface-to-air missile launchers that had been given to Ukraine by an unspecified European country. Slovakia, a NATO member that shares a border with Ukraine,

donated just such a system last week but denied it had been destroyed. On Tuesday the Russian Ministry of Defense said long-range missiles were used to hit two Ukrainian ammo depots.

As the fighting intensifies in the Donbas and perhaps along the coastal corridor to the Russian-annexed Crimean Peninsula, Putin may feel compelled to strike harder at the arms pipeline, which Ukrainian President Volodymyr Zelenskyy has called vital to his nation's survival.

In the meantime, a staggering volume and range of war materiel is arriving almost daily.

"The scope and speed of our support to meeting Ukraine's defense needs are unprecedented in modern times," said John Kirby, the Pentagon press secretary. He said the approximately \$2.5 billion in weapons and other material that has been offered to Ukraine since the beginning of the Biden administration is equivalent to more than half of Ukraine's normal defense budget.

One example: The Pentagon says it has provided more than 5,000 Javelin missiles, which are among the world's most effective weapons against tanks and other armored vehicles and can even take down a low-flying helicopter. The missile, shaped like a clunky dumb bell and weighing 50 pounds (23 kilograms), is fired by an individual soldier; from its launch tube it flies up at a steep angle and descends directly onto its target in what is known as a "curveball" shot hitting the top of a tank where its armor is weakest.

The specific routes used to move the U.S. and other Western materials into Ukraine are secret for security reasons, but the basic process is not. Just this week, two U.S. military cargo planes arrived in Eastern Europe with items ranging from machine guns and small arms ammunition to body armor and grenades, the Pentagon said.

A similar load is due later this week to complete delivery of \$800 million in assistance approved by President Joe Biden just one month ago. The weapons and equipment are offloaded, moved onto trucks and driven into Ukraine by Ukrainian soldiers for delivery.

Kirby said the material sometimes reaches troops in the field within 48 hours of entering Ukraine.

### **3. The Pentagon will meet with major military contractors to plan aid for Ukraine**

New York Times Online, Apr. 12 (1420) | Julian E. Barnes

A top U.S. defense official said on Tuesday that the Pentagon would convene a classified meeting with the leaders of the biggest American military contractors on Wednesday to discuss stepped-up assistance to Ukraine, including ways improve air defenses, anti-ship missiles and weapons to find and destroy Russian artillery.

Washington's \$1.7 billion in assistance to Ukraine since the start of Russia's invasion, including the provision of thousands of Stingers and Javelin missiles, has forced American military contractors to step up production of older weapons systems, both for Ukraine's need and to replenish the United States military's stocks.

The Pentagon is now examining what additional longer-range weapons to supply to Ukraine, as well as making sure that the government in Kyiv receives basics it needs, like additional artillery shells. U.S. military officials want American military contractors to begin work on supplying Ukraine for a possible long conflict with Russia.

The meeting on Wednesday, announced by Kathleen H. Hicks, the deputy secretary of defense, will include leaders of eight large military contractors, such as Raytheon Company and Lockheed Martin Corporation. The meeting will discuss how to overcome any potential supply problems — both to replenish American weapons stocks that have been drawn down to help Ukraine and to keep Kyiv supplied as the war continues.

The Pentagon is working with the American companies to identify which of them has the right military capabilities for Ukraine and can “move expeditiously to get it in there,” Ms. Hicks said.

“What can we do to help them?” she told reporters at a meeting of the Defense Writers Group. “What do they need to generate supply?”

Ms. Hicks did not discuss specific weapon systems that the United States would supply. But other defense officials, speaking on the condition of anonymity to discuss the agenda of the classified meeting, said the discussions would focus on weaponry in five areas.

Improving Ukraine's air defenses and its ability to shoot down Russian aircraft is one of Kyiv's most urgent concerns. In addition, the United States is looking at how to improve Ukraine's coastal defenses, such as with missiles that can be fired at Russian ships, and Ukraine's supply of anti-personnel weapons, like Claymore mines and other weapons used to kill enemy infantry. The Pentagon also wants contractors to examine demining equipment and counter-battery technology, radar that can track and locate enemy artillery, that Ukraine could use.

Ms. Hicks said U.S. officials were in a “continual dialogue” with Ukraine and American allies about how best to provide the equipment that Ukraine had requested. Ms. Hicks said some of the most important supplies it needs are the basics: artillery rounds and other forms of ammunition.

But she added that the United States would continue to look at other capabilities the Ukrainians have requested “to give them a little more range and distance.”

## DEFENSE DEPARTMENT

### **4. Pentagon: ‘Roughly Eight to 10 Flights a Day’ Full of Aid for Ukraine Pouring into Europe**

Air Force Magazine Online, Apr. 12 (1609) | Greg Hadley and John A. Tirpak

Roughly eight to 10 flights full of supplies and equipment for Ukraine are landing in Eastern Europe every day, Pentagon press secretary John F. Kirby told reporters on April 12, as the U.S. and other nations race to get their aid packages into the hands of Ukrainians combatting Russia’s invasion.

“There’s more than 30 other nations contributing various amounts of material – some weapons, some not, some a mix, and we are helping coordinate the deliveries into Ukraine of all that material, not just ours, but of others at various trans-shipment sites in the region,” Kirby said during a briefing hosted by the State Department’s Brussels Media Hub. “And that flow continues.”

All told, more than two dozen countries ranging from Japan to Canada to North Macedonia have pledged to send billions of dollars worth of military equipment to Ukraine, presenting a daunting logistical challenge as those nations look to deliver that equipment at speed.

It’s an issue that U.S. Transportation Command boss Gen. Jacqueline D. Van Ovost addressed several times at the end of March when appearing before Congress.

“We work very closely with European Command as they integrate with Ukraine and prioritize the needs of Ukraine, so that we are able to ship and get [material] close to Ukraine and onward-moved very quickly, as we manage not only the nodes or the airports and seaports to get stuff there, but the people that work there and the flow in,” Van Ovost said during a House Armed Services subcommittee hearing.

In a Senate hearing, Gen. Tod D. Wolters, head of U.S. European Command, praised TRANSCOM for delivering “miracles at the point of need” in the Ukraine-Russia war. Similarly, Kirby touted the Defense Department’s ability to track, ship, and deliver aid.

“There’s roughly eight to 10 flights a day coming in to these trans-shipment sites from all over the world. And that stuff is not sitting around in warehouses,” Kirby said. “We’re helping get it on pallets and helping it get on trucks and helping it get into Ukraine every single day.”

In mid-March, President Joe Biden authorized an \$800 million package of defensive assistance for Ukraine, followed by another \$100 million in early April. Kirby said on April 12 that the Pentagon expected those packages to be completed in a matter of days and delivered “by the middle of this month.”

Speaking during a Defense Writers Group event on April 12, Deputy Defense Secretary Kathleen Hicks said there are packages of U.S. military aid to Ukraine soon to be announced that will include longer-ranged weapons than have been provided so far. She did not name the weapons.

“Those are presidential decisions,” Hicks said of the new aid packages, and “I don’t want to get in front of those.” However, the Pentagon is “moving quickly” on weapons that would “provide a little more range and distance” than what has been given to date, and “you’ll see more in the coming days,” she told defense reporters.

The new weapons would be in addition to Javelin man-portable anti-tank weapons and Stinger shoulder-fired anti-aircraft weapons, Hicks said. She said Stingers and Javelins, as well as artillery rounds and “other ammunition” are “incredibly important” to Ukraine, noting, “We’ve moved a lot of that, and that will continue,” she said.

When asked if the U.S. would provide weapons that Ukraine could launch into Russia, Hicks said the U.S. is in continuing talks with Britain and 30 other countries about how best to provide “capability that the Ukrainians request” that sends “a clear signal, in terms of the U.S./Russian dynamic.”

Ukraine has requested aircraft, or a NATO-established no-fly zone over the country, as well as other weapons.

The U.S. is reviewing “a wide range of systems,” for Ukraine, she said. In addition to weapons and cash aid, the U.S. has been providing intelligence assistance to Ukraine, “which I would call ‘high-end’ help,” Hicks said.

The urgency to get that equipment into Ukraine fast has increased as Russia has begun to reposition its forces and focus its efforts on eastern Ukraine, raising fears that the war’s brutality could increase even more and become, in the words of one Pentagon official, a “knife fight.”

“We are mindful of the time,” Kirby acknowledged, noting the Pentagon has shortened the time it takes to actually get equipment into Ukrainian hands “down to between four to six days.”

Calling that speed “unprecedented” across his time in the Pentagon, Kirby did note that not all shipments have been that fast.

One of the most high-profile pieces of the U.S. defensive aid packages being sent is the batch of Switchblade drones — loitering munitions that are sometimes referred to as “kamikaze” drones. The Pentagon confirmed on April 6 that a small number of Ukrainian troops, already in the U.S. for professional military education, were being trained to operate the Switchblades, and on April 10, Defense Secretary Lloyd J. Austin III held a video call with those service members on the same day they were slated to return home.

“He ... wanted to know [how] they felt the training went, and he was quite gratified to hear that they were pleased by what they were trained on, not just in terms of Switchblade, but other things,” Kirby said of Austin’s

Navy Pelosi appointed him to conduct a review of the Capitol's security infrastructure, interagency processes and command and control following the Jan. 6, 2021, attack by supporters of President Donald Trump.

David Dietrich, an electoral board member from Hampton, Virginia, called them the n-word and called for "a good public lynching."

"Even in light of those truly irresponsible, mean-spirited — indeed, wicked — comments, [Austin's] going to be focused on leading the department forward and, and trying to continue to set an example going forward," Pentagon spokesman John Kirby told Military Times Tuesday. "That's where his head is."

As secretary, Austin has spoken frequently about the importance of diversity, equity and inclusion when it comes to the readiness of the military, a force that is more than 40% non-white.

"No matter who you are, no matter ... where you came from, what your background is, he believes that if you're qualified, and you want to serve this country, you should be able to do it. And you'll be able to do it without fear of discrimination or harassment," Kirby said. "And in his view, there's no place in the Department of Defense for comments like that, or for actions that come from comments like that."

Multiple polls of Military Times readers have noted white supremacist attitudes in the force, with more than a third of respondents noting they had seen or experienced racist behavior.

In addition to diversity and inclusion training and education, the Pentagon is also working to remove reminders of racist history from its installations. A commission has proposed renaming nine Army posts memorializing Confederate military officers, as well as hundreds of buildings, roads and other items meant to honor the Confederacy.

## **8. Pentagon does 'not object' to potential transfer of jets from Slovakia to Ukraine**

Washington Examiner Online, Apr. 12 (1232) | Mike Brest

The Pentagon would not stand in the way of a possible transfer of Slovakian fighter jets to Ukraine, a senior U.S. defense official told reporters Tuesday.

Slovakia, which has already provided military technology to the Ukrainian military that the United States has back-filled, could provide MiG-29 fighter aircraft, Prime Minister Eduard Heger said Monday, according to Politico, though it's unclear how many the country would provide.

"We certainly would not object to it. We have no right to object to it," the defense official said, noting that the U.S., to its knowledge, was not involved in any of the discussion in facilitating the deal.

Earlier during the war in Ukraine, the U.S. nixed a proposed Polish deal that would provide Ukraine with MiG-29 aircraft because the Polish wanted to transfer the planes to U.S. custody first. The Pentagon called the possible deal “high-risk” and not “tenable.”

The defense official specified that the objection to the previous possible agreement was the role in getting the planes to Ukraine, not Poland’s idea to provide the aircraft.

“I want to stress again, from the very beginning, we said that these are sovereign decisions that nations can make, and we respect them, and if a nation wants to provide fixed-wing fighter aircraft to Ukraine, then that’s up to them to decide and for them to speak to. And what our goal again, our objections to the previous proposal was that the country in question expressed the desire to transfer them into our custody for us to deliver to Ukraine,” the official said.

“That is what we objected to. We did not object to the idea of the provision of fixed-wing aircraft to Ukraine, and that will be a decision in this case for Slovakia to make,” the official continued.

The Slovakian government is looking to move away from relying on MiGs because the upkeep on such aircraft requires a “relationship” with Russia, Heger said, noting that they’re waiting two more years to receive U.S.-made F-16s.

Ukrainian leaders continued to press Western governments for additional military resources as Russia has changed its operating tactics to focus on the Donbas region, the eastern and southeastern part of the country. The U.S. alone has provided \$1.7 billion in military aid since Russia invaded.

Last week, Slovakia provided the Ukrainians with an S-300 air defense system, and U.S. European Command repositioned one Patriot missile system to Slovakia in return.

## EXECUTIVE/LEGISLATIVE

### **9. Team Biden scrambles to respond to claims of Russia chemical weapon use**

*The administration has said Russian chemical weapons use in Ukraine would trigger a ‘proportional’ U.S. response. Its pledge may soon be tested*

Politico Online, Apr. 12 (1323) | Alexander Ward and Jonathan Lemire

Alleged and unconfirmed claims of chemical weapons use by Russia in Ukraine has forced a scramble inside the White House to match President Joe Biden’s promise of an “in kind” response while avoiding further escalation of the conflict.

The White House is urging caution, noting that the use of chemical weapons remains unverified. U.S. officials, speaking on the condition of anonymity to discuss a sensitive subject, said they have been running scenario-planning exercises on the possible use of chemical weapons, having publicly raised the alarm that Russian President Vladimir Putin may take such a step. The officials said that military options in Ukraine aren't on the table — echoing Biden's repeated position of not wanting to spark World War III.

The word used by multiple U.S. officials who've been involved in contingency planning for such an attack for at least a month is "proportional," meaning America and its allies intend to respond in a manner befitting the potential war crime.

Instead, some suggested America and its allies could impose further sanctions on Moscow or further bolster Ukraine's defenses with advanced weaponry. Biden aides have also speculated that the use of chemical weapons may be the final impetus for European nations to stop importing Russian energy, funds for which have fueled Putin's war machine and filled his country's coffers.

Before doing any of that, the first step is to confirm a Ukrainian military group's charge that Russia on Monday deployed a chemical substance in Mariupol. The Azov regiment, a frontline fighting unit that has fought Russia in the Donbas since 2014 and has been tied to neo-Nazi groups and white supremacists, said Russian troops dropped a chemical weapon from a drone and poisoned at least three people, though the group said the affected soldiers are not facing disastrous health effects. If true, that'd be the first known use of chemical weapons in the war since Russia invaded Ukraine on Feb. 24.

U.S. and European officials have yet to substantiate the accusation. Experts say a preliminary assessment could be made using photos or videos, if they exist, while U.S. or Western officials on the ground collect samples for more conclusive verification. Ukraine could also invite the Organization for the Prohibition of Chemical Weapons, a global watchdog headquartered in the Netherlands, to send a rapid-response team to the site for investigation.

Officials cautioned Tuesday that such a determination may not be imminent. It may take some time to assess if chemical weapons were used, just as it did during the conflict in Syria back in 2013.

"There's no independent verification in that area, so it's likely to be a long time," a European official told POLITICO. There are a "host of difficulties" in verifying the claims, a senior U.S. defense official told reporters Tuesday. "These are difficult things to prove even when you are more proximate, and we are not."

Additionally, U.S. officials raised questions about the credibility of the Azov regiment, noting that the far-right group might be eager to provoke a larger confrontation. They also noted that Ukrainian officials, who have been quick to accuse Russia of atrocities, have not definitively declared that illicit weapons were used.

To that point, during his Monday address Ukrainian President Volodymyr Zelenskyy did not confirm chemical weapons had been deployed, but did say he took the recent threat of their use in Mariupol by Russian-backed separatists “as seriously as possible.” But Anton Gerashchenko, an adviser to the minister of Internal Affairs in Ukraine, hours beforehand tweeted that “Chemical weapons are used” in Mariupol.

Ned Price, the State Department spokesperson, told CNN hours later that the U.S. is working with Ukraine “to try and determine what exactly has transpired here.” British foreign minister Liz Truss added on Twitter that, “Any use of such weapons would be a callous escalation in this conflict and we will hold Putin and his regime to account.”

The U.S. has long warned that Russia might launch chemical weapons in Ukraine, prompting Biden to tell reporters in Europe last month that his administration would act swiftly if Putin’s troops went that far. “The nature of the response would depend on the nature of the use,” he said, adding “it would trigger a response in kind.”

It’s unclear as of now what the administration deems a “proportional” response to the alleged chemical weapons use in Mariupol. Publicly, Western officials condemn the use of all chemical weapons. But privately they acknowledge that there is a wide-range of lethality in such weapons – in other words, that there’s a big difference between a canister of chlorine and a sarin bomb dropped on a school. More severe consequences, they note, would be doled out in response to the potential use of more dangerous weapons.

What is clear, though, is that some response seems imminent were the international community to verify the Azov regiment’s accusation. “Any confirmed use of prohibited chemical weapons would trigger severe consequences for Russia,” said Andrew Weber, formerly the Pentagon’s top nuclear, biological and chemical weapons official during the Obama years.

The current moment echoes former-President Barack Obama’s “red line” in Syria, in which he pledged that chemical weapons use by Syrian President Bashar al-Assad would trigger a U.S. response.

A year after Obama’s infamous remark, Assad’s forces killed more than 1,400 people with sarin gas. In response, then-Vice President Biden promised a crowd at the American Legion that “those who use chemical weapons against defenseless men, women and children should and must be held accountable.”

Ultimately, the Obama administration struck a deal with Russia to remove 600 metric tons of Syria’s chemical stockpile. Biden praised that decision at the time, crediting the White House for moving the world to act in the face of a “fundamental violation of human rights.” But the merits of the deal were soon thrown into doubt when Syrian forces oversaw additional chemical attacks in 2017 and 2018.

In response to those assaults, then president Donald Trump authorized strikes on Syrian targets.

“We cannot allow atrocities like that,” he said ahead of the second response.

Those strikes were largely symbolic responses. In the first instance, the Trump administration fired missiles at a Syrian air base from which planes had dropped the chemical weapons but gave advance notice to Russia to keep assets away from the targets. In so doing, it didn't ignite a larger global conflict, but it also didn't destroy the entirety of Syria's chemical weapons program.

Current administration officials insist that the situation is dramatically different now and that Biden has made no such red-line declaration either.

Striking Russia would be far more dangerous than hitting Syrian government targets. Moscow, armed with the world's largest nuclear arsenal and advanced cyber capabilities, could respond in a way that escalates the conflict outside of Ukraine's borders. As such, what is being considered now as a response to a confirmed chemical weapons attack are new sanctions, more weapons shipments to Ukraine or even a cyberattack.

"We will select the form and nature of our response based on the nature of the action Russia takes, and we'll do so in coordination with our allies. And we've communicated to the Russians ... that there will be a severe price if Russia uses chemical weapons," national security adviser Jake Sullivan told reporters in March, backing Biden's comments.

## **10. GOP senators say Biden should share more intelligence support to Ukraine**

*Hill presses White House for more action in face of Russian invasion*

Washington Times Online, Apr. 12 (1528) | Mike Glenn

The Republican members of the Senate Intelligence Committee are pressing the Biden administration to step up its information-sharing with Ukraine following Russia's invasion in late February, which has cost thousands of lives and triggered Europe's largest refugee crisis since World War II.

Senator Marco Rubio of Florida and his GOP colleagues sent a letter Monday to Director of National Intelligence Avril N. Haines underscoring the need to share more U.S. intelligence with Ukraine's forces on Russia's plans and resources in the seven-week war.

"We remain deeply concerned that not enough is being done to share critical intelligence that would assist the Ukrainians as Russian forces move to secure territory in the southern and eastern parts of the country," the senators wrote.

Senator Rubio was joined in the letter by Sens. Richard Burr of North Carolina; James E. Risch of Idaho; Susan Collins of Maine; Roy Blunt of Missouri; Tom Cotton of Arkansas, John Cornyn of Texas and Ben Sasse of Nebraska.

“We urge you to ensure that our intelligence agencies proactively share intelligence with the Ukrainians to help them protect, defend and retake every inch of Ukraine’s sovereign territory – which includes Crimea and the Donbas,” the senators wrote.

On Tuesday, Deputy Secretary of Defense Kathleen Hicks said the administration has been providing intelligence support to Ukraine, saying it had been “vital” to the Ukrainians’ success on the battlefield in holding back the larger and better-armed Russian forces.

“They’ve been very clear about that, publicly, as well,” she said during a briefing to the Washington, D.C.-based Defense Writers Group. “We will continue to look at the types of capabilities that the Ukrainians are asking for.”

## **EUROPE**

### **11. Flow of Moscow Cyberattacks Continues**

Wall Street Journal, Apr. 13 (0200), Pg. A6 | Dustin Volz and Robert McMillan

Ukrainian and Western intelligence officials feared Moscow’s elite corps of state-sponsored hackers would launch crippling cyberattacks to complement its invasion of Ukraine. Instead the cyberwar has been something closer to Internet trench warfare: A grinding conflict of relentless, if sometimes unsophisticated attacks that have taken casualties but had limited impact on the course of the fight.

Some attacks have been bothersome, slowing some Ukrainians’ internet service or knocking it out, defacing websites, and destroying files on a small number of computers. Others have accomplished little more than keeping Ukraine’s cyber-defenders busy. Recently, as Russia’s strategic aims appear to be shifting to eastern Ukraine, more alarming attacks on Ukraine’s energy sector have been discovered, suggesting the next phase of the war could include a more active cyber conflict.

What Ukraine hasn’t seen is a successful type of massive, strategic-level attack on civilian infrastructure, given the aggression and technical ability that Moscow’s elite hackers have displayed in the past.

Still, the cyber fight has been “relentless,” according to Tom Burt, Microsoft Corp.’s vice president of customer security and trust. Microsoft has seen “at least one order of magnitude increase in the frequency and severity of the attacks since before the invasion,” Mr. Burt said.

“This is full-on, full-scale cyberwar,” he said.

Moscow has routinely denied allegations of cyberattacks against other countries and said recently its government websites were facing unprecedented cyber disruptions.

While cybersecurity analysts and intelligence officials are working to understand why the scale of the Russian cyber-offenses has been so much more limited than feared, several theories have emerged.

Russian strategists assumed the conventional campaign would wrap up in a matter of days and didn't appear to deploy their toughest cyber weapons, said U.S. officials. Ukraine's cyber defenses have improved in recent years, under constant attack from Russian hackers. Some of Russia's intelligence agencies may be waging propaganda and disinformation campaigns instead of launching offensive strikes, analysts say. And Russia may have overestimated its capabilities and underestimated Kyiv's.

"We're seeing B- or C-team players out of Russia," said Matthew Olney, a director with Cisco Systems Inc.'s Talos cybersecurity division. "It's fairly easy to track these folks -- they are not overly creative."

For Victor Zhora, the state cyberprotection agency's deputy chief, the current cyberwar in Ukraine began on Jan. 14 -- weeks before the first Russian tanks rolled in. On that day, hackers took government websites offline and tried to install their destructive "wiper" software designed to render computer systems inoperable.

Since then, Ukraine's government and critical business networks have faced a constant drumbeat of smaller-scale but still tactically significant attacks.

During the conflict, tests of internet services in Ukraine have shown a 16% reduction in connectivity, compared with the weeks before the war started, say researchers at the Georgia Institute of Technology's Internet Outage Detection and Analysis project, which measures internet outages.

In addition, Ukraine has suffered hacks of government and corporate networks, phishing attacks, cyberattacks on citywide camera systems, near-daily attempts to install wiper software, and even tactical cyberattacks launched in conjunction with military strikes, according to representatives of Ukraine's State Service of Special Communications and Information Protection, and U.S. companies that are helping to defend these systems.

On Tuesday, ESET, a Slovak-based cybersecurity firm, and Ukraine's cybersecurity emergency response team reported that a new strain of malware had been wielded in an attack on high-voltage electrical substations in Ukraine that was scheduled to damage systems earlier this month.

The malware was similar to what was used in a previous grid attack in 2016 and was believed to be the handiwork of a notorious hacking unit within Russia's GRU military intelligence agency known as Sandworm, researchers said.

Officials didn't name the targeted utility but said it was privately run and that about two million people lived in the region that could have lost power. Though it was unsuccessful in knocking power offline, experts expressed alarm.

Yet, since the Ukrainian war began the worst hasn't come to pass. The Russians haven't taken down the Ukrainian power grid and they haven't caused a global cyber catastrophe.

## **12. Ukrainian Forces Still Hold Mariupol as Russians Close In**

U.S. Naval Institute News, Apr. 12 (1719) | Heather Mongilio

Ukraine still controls its port city of Mariupol despite concerns that it might soon fall to Russia, a senior defense official told reporters Tuesday.

Mariupol has been a target for most of the nearly 50-day Russian invasion of Ukraine. Russia used amphibious landing ships in the early days of the invasion to bring troops outside of the port city.

While it took the Russians longer than expected to reach Mariupol, Moscow bombarded the city with missiles, hitting a maternity hospital and residences.

"You've seen the devastation that Russian airstrikes have wrought on Mariupol in the city, but our assessment is that the Ukrainians are still fighting for it," Pentagon Press Secretary John Kirby told reporters Tuesday.

Mariupol is a strategic target because the city would give Russia control of the Sea of Azov and create a land bridge to Crimea, Kirby said. It would also help Russia with its attacks on the Donbas region, the focus of Russia's invasion the past couple of weeks.

"So it has significance on many levels," Kirby said. "It also has great significance to the Ukrainian people, because of what it represents to their economic life ... because it is their city and it's part of their country, and they haven't given up on it, and we're not giving up on them either."

Russia continues to use airstrikes on Mariupol and the Donbas region, Kirby said. However, Moscow is also firing missiles from surface combatants in the Sea of Azov, he said, adding that it's unclear if any have landed in Mariupol.

Russia has been supplementing its airstrikes with missiles from ships, he said.

Russia continues to have approximately a couple dozen warships in the Black Sea, with around five ships in the Sea of Azov, a senior defense official told reporters Tuesday. A mix of minesweepers and frigates are operating in the Sea of Azov, while surface combatants and landing ships are in the Black Sea.

Mariupol has been hit hard by Russian fire, with the mayor of the city telling the Associated Press that 10,000 civilians had been killed and the death toll is expected to climb.

There are reports that Moscow has used chemical weapons on the city, AP reported, but the Pentagon could not confirm this, a senior defense official said Tuesday.

### **13. U.S., Allies Aim to Force Russia to Shift Money Away From War**

Associated Press, Apr. 12 (1857) | Fatima Hussein

WASHINGTON -- The United States and its allies are pushing ahead with sanctions aimed at forcing Vladimir Putin to spend Russia's money propping up its economy rather than sustaining its "war machine" for the fight in Ukraine, a top Treasury Department official said Tuesday.

Deputy Treasury Secretary Wally Adeyemo, one of the main U.S. coordinators on the Russian sanctions strategy, said in an interview with The Associated Press that the goal is to make Russia "less able to project power in the future."

On the same day that inflation notched its steepest increase in decades, Adeyemo said reducing supply chain backlogs and managing the pandemic are key to bringing down soaring prices that he related to the ongoing land war in Ukraine, which has contributed to rising energy costs.

"Let's be clear that the increase in energy prices was caused by President Putin's invasion, and we're going to continue to see volatility in those markets as long as President Putin continues his illegitimate invasion of Ukraine," he said. He added that the Biden administration was "committed to doing everything we can to lower the cost of energy for the American people."

As Treasury Secretary Janet Yellen's No. 2, Adeyemo is tasked with developing a sanctions strategy that many economists have equated to economic warfare with Russia. He's also leading Treasury's efforts to rebuild the American economy from the pandemic with equity at the fore.

Adeyemo discussed the next steps the U.S. and its allies will take to inflict financial pain on Russia and the complications the war has on rising costs to Americans back home.

The U.S. and its allies will next target the supply chains that contribute to the construction of Russia's war machine, Adeyemo said, which includes "everything from looking at ways to go after the military devices that have been built to use not only in Ukraine, but to project power elsewhere."

"What that means practically is that with less money, Russia will have less money to invest in their military," he said.

Adeyemo said Putin recently admitted that the Russian economy was going to have to transform. Adeyemo interpreted that to mean that “the Russian economy is less flexible, it’s smaller, it’s less able to project power into the future.”

Adeyemo’s work includes coordinating with U.S. allies to develop thousands of unprecedented sanctions on Russia’s leadership and its Central Bank, which is intended to cripple the country’s financial system.

Germany in particular faces international pressure to curb its business ties with Russia, which provides the European superpower with natural gas.

“Our German counterparts and my European counterparts in general are working as hard as possible to make plans to get off of Russian energy as quickly as possible, including last week’s announcement that they were going to ban Russian coal in the near term,” Adeyemo said. “And our expectation is that they’re going to take these steps.”

In the U.S., the economy has proven to be a struggle for the Biden administration as the strong job gains of the past year have also yielded the worst inflation in more than four decades.

The Labor Department reported Tuesday that prices in March climbed 8.5% from a year ago, the steepest increase since December 1981. While inflation began to increase before Russia invaded the Ukraine, the war has strained supplies of oil and gasoline. Half of the past month’s increase in consumer prices came from gas.

This economic volatility is a challenge to other work that Adeyemo is tasked with for Treasury — leading an equitable pandemic-related economic recovery through Treasury’s Office of Recovery Programs, which marks its one year anniversary this week.

Adeyemo said he had recently visited Memphis to see how the city was using American Rescue Plan dollars to help people pay their rent. Overall, he said, “we’ve seen 80% applied towards low income households, 40% to African American households and 20% to Latinx households.”

He said it was imperative that remaining relief money under the program be used to help small businesses, including through the State Small Business Credit Initiative, which allows states to increase access to credit for small businesses.

“Lots of communities are thinking through ways to not only use the money to address the immediate crisis, but how they build their communities better into the future in order to make sure that people have economic opportunity,” he said.

## RUSSIA

### **14. Russian Scientists Say They Have A New System to Monitor Attacks on the Russian Internet** *Attacks on Russian web services have grown considerably since the start of the invasion*

DefenseOne.com, Apr. 12 (1102) | Patrick Tucker

As Russia rains artillery fire down on Ukrainian cities, cyber attackers from around the world have been targeting Russian media, cryptocurrency services, and retail brands with denial of service attacks. A group of Russian scientists say that they've developed a new tool to block such attacks—but even that is an indication that severe economic sanctions are changing life in Russia.

Engineers from Samara University developed a tool they called NetTestBox to monitor internet traffic into and out of Russia. “The information obtained by the system allows you to track unauthorized data leaks, see what part of the traffic goes through foreign channels, and, therefore, is vulnerable to external shutdown,” according to a Monday article from Russia’s Izvestia news outlet. (Like most Russian media, the site is state-controlled.)

The testbox will “allow us to detect our country’s disconnections from international data exchange points and help assess the impact of unfriendly actions on [the Russian internet]. The system can be used to form a secure and independent digital space from other countries,” the article said.

Sam Bendett, an adjunct senior fellow at the Center for a New American Security and an adviser at the CNA Corporation, said the development is another symptom of the sanctions on Russian IT.

“For years, the Russian infosec industry was preparing for a possible disconnect from international Internet data exchanges. Now, with the unprecedented IT sanctions that are impacting Russia’s high-tech industry, some in Russia think that threat may come to fruition. This NetTestBox is only a prototype, but similar technologies probably already exist in the Russian infosec ecosystem,” he told Defense One.

Since the start of Russia’s expanded invasion of Ukraine, attackers from around the world have been targeting Russian internet services with distributed denial of service, or DDOS, attacks. Considered less severe than a “hack,” a cyber attack suggesting penetration of a victim computer or multiple computers in a network, a DDOS attack floods the target with internet traffic, making the site inaccessible from outside.

DDOS attacks against Russian media, internet service providers, cryptocurrency sites, and retail sites—in that order—have been on the rise in the first quarter of this year, according to a new report published today by Cloudflare. The company, which specializes in helping sites prevent or recover from DDOS attacks, estimates that Russia became the fourth biggest DDOS target in the period from January until the end of March, up from the sixth largest target in the final quarter of last year.

“The majority of HTTP DDOS attacks that targeted Russian companies originated from Germany, the U.S., Singapore, Finland, India, the Netherlands, and Ukraine. It’s important to note that being able to identify where cyber attack traffic originates is not the same as being able to attribute where the attacker is located,” Cloudflare notes in the report.

## **INDO-PACIFIC**

### **15. USS Abraham Lincoln operating in Sea of Japan following North Korea missile tests**

Navy Times Online, Apr. 12 (1843) | Diana Stancy Correll

The aircraft carrier Abraham Lincoln and its carrier strike group are operating off the Korean peninsula for the first time since 2017.

The operations in the Sea of Japan follow North Korea’s test-firing of an intercontinental ballistic missile in March.

“The Abraham Lincoln Carrier Strike Group is conducting bilateral operations with the Japan Maritime Self-Defense Force in the Sea of Japan,” Cmdr. Hayley Sims, a spokesperson for the 7th Fleet, said in an email to Navy Times. “Routine bilateral operations like this one reassure our allies and partners of the U.S. commitment to maintaining a free and open Indo-Pacific.”

“Our training enhances the credibility of conventional deterrence by demonstrating the strength of our bilateral partnerships,” Sims said.

On March 24, North Korea test-fired an intercontinental range ballistic missile marking the first time Pyongyang has carried out a long-range test since 2017 and the 12th weapons launch of 2022.

The same day, Secretary of Defense Lloyd Austin and South Korea’s Minister of National Defense Suh Wook spoke on the phone about the test, and Austin emphasized that the U.S. commitment to South Korea is unwavering, according to the Pentagon.

“The two leaders pledged to continue close consultations between military authorities of the ROK and the U.S. going forward and agreed on the importance of maintaining a robust U.S.-ROK combined defense posture,” the Department of Defense said in a statement.

The Lincoln departed San Diego Jan. 3 for a regularly scheduled deployment. The deployment is significant, in part, because it’s the first to include Marine Fighter Attack Squadron 314 the Marine Corps’ first F-35C

The four drones will further refine requirements for future systems, Christina Allee with the NAWCAD experimentation office told USNI News.

“These demonstrations help both AIRLANT and MSC start defining the concept of operations and how they would integrate these capabilities,” she said.

“Part of doing this is not just looking for the technology but it’s also working, enabling the fleet to identify how they would do the concept of operations.”

NAVAIR has used the Blue Water UAS program as an example of how best to use tools for rapid research and development to meet fleet needs.

“In many instances, especially in the UAV market, industry has really made a substantial investment over the last five years, probably outpacing [the Defense Department] in many areas,” Schmidt said.

“If you started out with just a basic requirement in the standard acquisition process, it may be two years or more before you even get the ability to start to look at candidates. These guys are out there doing it right now today, in less than a year.”

## **SPACE FORCE**

### **30. Russia is jamming GPS satellite signals in Ukraine, U.S. Space Force says**

*‘Ukraine may not be able to use GPS,’ a Space Force official told NBC*

Space.com, Apr. 12 (1338) | Elizabeth Howell

Another piece of space infrastructure for Ukraine is under attack, according to an NBC report.

Jammers from Russian forces besieging the country are targeting global positioning system (GPS) satellites that are used for navigation, mapping and other purposes, the report said, quoting the U.S. Space Force.

“Ukraine may not be able to use GPS because there are jammers around that prevent them from receiving any usable signal,” Gen. David Thompson, the Space Force’s vice chief of space operations, told NBC Nightly News Monday (April 11).

“Certainly the Russians understand the value and importance of GPS and try to prevent others from using it,” Thompson added. He noted that Russia has not directly attacked any satellites in orbit, but the Space Force is keeping an eye out for such possibilities.

Specifically, Russia is targeting the Navstar system of satellites used by the United States and made available openly to many countries around the world, Thompson said. (Russia has its own independent system, called GLONASS, while the Europeans have one called Galileo and China has one called Beidou.)

Navstar uses 24 main satellites that each orbit the Earth every 12 hours. The system works by sending synchronized signals to users on Earth. Because the satellites move in different directions, the user receives their signals at slightly different times. When four satellites are available, GPS receivers can use their signals to calculate the user's position, often to within just a few feet.

Ukraine is also suffering from a lack of Internet connectivity as a result of the Russian attacks, which began Feb. 24 and are ongoing. SpaceX, at Ukraine's request, has shipped thousands of Starlink terminals to the country to provide an independent set of infrastructure.

In early March, SpaceX CEO Elon Musk noted that Starlink signals have also been jammed, although his company is adapting. "Some Starlink terminals near conflict areas were being jammed for several hours at a time," Musk wrote via Twitter on March 1. "Our latest software update bypasses the jamming."

## MODERNIZATION & TECHNOLOGY

### **31. Into the Military Metaverse: An empty buzzword or a virtual resource for the Pentagon?**

*'You think about, like, a picture's worth 1,000 words, the video clip's worth a million words – well, how much is it worth to be able to literally experience it based on anywhere you are?'*

BreakingDefense.com, Apr. 12 (1935) | Andrew Eversden

SOMEWHERE BETWEEN REALITY AND A VIRTUAL EXISTENCE -- In December, a small office within the stoic Air Force bureaucracy hosted a meeting with some 250 people, gathered in a conference room with the usual whiteboards, sticky notes and yellow folders.

But the conference room didn't exist, and the attendees were hundreds of miles apart, spread from the United States to Japan, all wearing Oculus headsets.

With that meeting, visitors entered into the beating heart of the explosive, if uncertain, hype-cycle of the metaverse, a concept that has percolated for decades but was brought fully into the mainstream last year when Facebook rebranded as Meta.

Now, the metaverse, essentially interconnected virtual worlds likely accessed through virtual or augmented reality, is gripping the consumer world and expanding. The NBA's Brooklyn Nets have filed trademarks for

And while it seems unlikely that right now a soldier would have a persistent virtual presence that follows them around, it could provide for more accurate training. More data flow could allow soldiers to train against the performance characteristics of an enemy. Or, if the soldier's virtual presence was uploaded with their matching physical profiles, it could provide for more realistic training that could highlight the physical limitations of a soldier and their squads.

"If it makes sense to have a persistent digital persona that, let's say, matches your real-world physical characteristics so that in all the different simulations and training tools, you are at your correct level of performance relative to the other people you're working with — if that's the right way to solve the problem, I'm confident the military will do it," Luckey said.

[RETURN TO TOP](#)

## NOTABLE COMMENTARY

### **32. Stop Buying Uranium From Russia**

Wall Street Journal, Apr. 13 (0200), Pg. A13 | Sen. John Barrasso (R-WY)

In 2018 I asked on these pages, "Why is the U.S. relying on adversaries to supply it with uranium?" Since then, a large U.S. supplier -- Russia -- has gone from adversary to aggressor to having its leaders accused of war crimes.

Vladimir Putin's Ukraine invasion exposed the foolishness of relying on despotic regimes for resources, particularly energy. Under pressure from Congress, President Biden belatedly banned Russian oil, natural-gas and coal imports. But he continues to ignore the fuel powering 20% of U.S. electricity generation -- uranium. More than 90% of the uranium that fuels U.S. power plants is imported, and Russia is the third-largest supplier. In 2021 Russian imports cost almost \$1 billion, money that helped underwrite Mr. Putin's war machine.

The U.S. is a global leader in commercial nuclear-reactor technologies. Why are we a laggard when it comes to fueling them?

A robust domestic nuclear-fuel supply chain would make the U.S. more energy secure. We can tap large uranium reserves in my home state, Wyoming, and elsewhere. Russia's state-owned nuclear-energy corporation, Rosatom, however, has flooded the market with subsidized fuel since 1991, the U.S. government says. That has driven America's only uranium conversion facility to shut down and its only enrichment facility to reduce output.

Mr. Putin has a personal interest in the success of Rosatom, a company he founded in 2007. Rosatom is a global full-service nuclear company. It builds and fuels reactors and removes spent fuel. It is an important source of Russian revenue. Rosatom has become a significant lever of Russian foreign policy. Mr. Putin personally pitched Rosatom's services to India, Egypt and Turkey. The company also has a \$10 billion contract to expand Iran's

Bushehr plant. Worryingly, Mr. Biden seems so eager for an Iran nuclear deal that he appears willing to waive sanctions on both countries so this contract can proceed.

The U.S. cannot develop a commercial capability to compete against Rosatom while we depend on foreign uranium. In 2020 Congress capped Russian uranium imports. Now we need to end them.

We must also establish a strategic uranium reserve to spur domestic production. Congress appropriated \$75 million to the Energy Department to establish one in 2020, yet the department hasn't purchased a single ounce of U.S. uranium.

Complementing efforts to produce more ore, we need an enrichment capability to produce high-assay, low-enriched uranium, or HALEU, for advanced reactors like TerraPower's Natrium being built in Wyoming.

Today, only Rosatom and the Energy Department are capable of producing HALEU. It's bad enough that we rely on Russian fuel for existing reactors. The same dependence for advanced reactors is unacceptable. The department should form partnerships with the private sector to establish a commercial HALEU-enrichment capability and in the meantime make its stockpile of enriched uranium available.

Europe has been rightly criticized for getting hooked on Russian energy. Now America must free itself from Russian uranium. I have introduced legislation to do this. Our nuclear supply chain should begin with American-mined uranium and end with American fuel. It is time to put Mr. Putin's nuclear cash cow out to pasture.

*--Mr. Barrasso, a Republican, is a U.S. senator from Wyoming*

[RETURN TO TOP](#)

### **33. If Ukraine falls, Putin could take aim at the Baltics next**

Washington Post, Apr. 13 (0115), Pg. A21 | Michael Gerson

I was with President George W. Bush when he visited Lithuania in 2002, just after the Baltic states had been offered membership in NATO. Bush had been one of the strongest advocates for the inclusion of Lithuania, Estonia and Latvia in the alliance, which would establish the obligation of mutual defense.

At the celebration ceremony, Lithuanian President Valdas Adamkus presented Bush with the Cross of the Order of Vytautas the Great, his country's highest honor. Bush presented Adamkus with a basketball signed by Michael Jordan, revealing a different set of cultural priorities. But Bush's speech that day (which I helped produce) highlighted a greater gift: "Anyone who would choose Lithuania as an enemy," he said, "has also made an enemy of the United States of America. In the face of aggression, the brave people of Lithuania, Latvia and Estonia will never again stand alone."

You could almost hear three nations exhale in relief. The Baltics have the misfortune of sitting at a bloody geopolitical crossroads, and their last two occupations were particularly horrifying. Nazi German “killing units” murdered hundreds of thousands of Jews. The Soviet Union deported half a million Baltic citizens to gulags or Siberia. The Soviets also imported ethnic Russians to change the ethnic composition of these conquered nations.

The United States never recognized Soviet Russia’s illegal occupation of the Baltics. But its and NATO’s commitment to prevent any future occupation engendered some controversy. Experts such as George Kennan thought that NATO membership for a former constitutive republic of the U.S.S.R. would needlessly provoke the Russians. And some military observers found the actual NATO defense of the Baltics - on Russia’s border and far from NATO’s centers of military power - to be a near impossibility.

The argument over the NATO-ization of the Baltics was a prelude to disputes over Russian President Vladimir Putin’s intentions in Ukraine and beyond. Some experts bluntly explain - as did the title of a 2014 article by the University of Chicago political scientist John J. Mearsheimer - “Why the Ukraine Crisis is the West’s Fault.” Mearsheimer contended that Russian leaders “would not stand by while their strategically important neighbor turned into a Western bastion.”

In this view, Putin is primarily the defender of the Russian homeland. His soldiers might have the moral restraint of drunken Cossacks, but he is resisting the hubristic expansion of a hostile military alliance.

This conviction, no doubt, is widely shared among Russians, and easily exploitable by their leader. Putin has portrayed his unprovoked attack on Ukraine as another reaction to fascist aggression from the West. His deception runs along well-worn historical grooves. Over the centuries, Russia has faced invasions from across the vast, flat plain reaching from Germany to the heart of Mother Russia. For many older Russians, memories of World War II consist mainly of Western perfidy and Russian indomitability.

Putin has written almost lyrically about the spiritual unity between Kyiv and Moscow. Evidently he bombs only the ones he loves. But his intentions are far more practical. The Putin-NATO divide might not rise to the level of ideological conflict, but it does involve a serious argument about the future of Europe.

Most recent U.S. presidents have maintained that NATO expansion is the natural outcome of a rules-based international order. European countries that meet defined standards on good governance, economic freedom and civilian control of the military can be admitted. This has helped consolidate several democratic transitions in Eastern Europe. It has also helped rectify the terrible wrong of the Yalta agreements, which formally cut Europe into areas of dominance and threw a number of vulnerable nations to the wolves.

Putin’s contrasting goal, says former U.S. ambassador to NATO and Russia Alexander Vershbow, is “to pressure the West into accepting some sort of Yalta 2, a Europe divided into spheres of influence with limited sovereignty for everyone but Russia.” This would allow him to restore Russian hegemony over its “near abroad.”

Why is this conflict between rules and spheres so important? If Putin is engaged in a defensive struggle, then the Ukraine war is mainly about Ukraine. Some will propose that President Volodymyr Zelensky make the necessary concessions - no Ukrainian NATO membership, Russian control of the Donbas region - to end a bloody war. Peace through self-dismemberment.

But if Putin is attempting to reconstruct the Russian sphere of influence in Europe, his success in Ukraine would pave the way for future horrors. The logic that led to Russian aggression in Georgia and Ukraine - no NATO in the Russian sphere - would almost certainly lead toward the Baltics.

The lesson? Ukraine, with aggressive help from NATO, must defeat Russian forces, or the United States might soon face the question: Do we really fight for Lithuania? Though we are obligated, the decision and task would not be easy. Helping draw a NATO redline at Ukraine could help the United States preserve itself from impossible choices of the future.

#### **34. How the Pentagon's bad inflation math made a hollow budget**

*If inflation trends keep, AEI's John Ferrari says DoD will see buying power plummet even as it spends billions*  
BreakingDefense.com, Apr. 12 (0934) | John Ferrari

While consumers are feeling the pinch of inflation in everyday life, the US military is feeling it to the tune of billions of dollars in spending power. In the op-ed below, AEI's John Ferrari argues the military should've seen it coming, and now Congress must act to rescue a defense budget based on flawed economic assumptions.

A staggering 8.5%. This is the US government's March inflation rate in the Consumer Price Index (CPI), released today.

About a month ago, my colleague, Elaine McCusker and I wrote that the Pentagon should, in its FY23 budget release, not hide behind "rosy assumptions and passing the buck" to wish away inflation. Unfortunately, the Defense Department's 2023 budget not only ignores the rising inflation, it does just what we said they shouldn't do, and the new CPI figures should continue to raise the cause for alarm.
